The Department of Biology collaborates with scientists across many disciplines, such as the School of Systems Biology and the Department of Environmental Science and Policy to offer a broad spectrum of coursework in the biological sciences to biology majors as well as to students in other departments, schools, and colleges.

Undergraduate Programs
The bachelor’s degree programs in biology provide a sound liberal arts education with substantial experience in quantitative and analytical thought, along with preparation for a related profession. In addition to ensuring the strong background necessary for graduate study in the many fields of biological science, the broad range of courses available at Mason allow students to develop careers in many areas, including secondary school teaching, environmental management, microbiology, molecular biology, biotechnology, genetics, and natural history. Alternatively, students may prepare for postgraduate studies in medicine, dentistry, veterinary medicine, wildlife management, fisheries biology, or marine science.

The department also offers the Medical Laboratory Science, BS.

Additional information can be found at the Department of Biology’s website (http://biology.gmu.edu) or by visiting the department in Exploratory Hall, Suite 1200.

Graduate Programs
The Biology, MS is offered by the School of Systems Biology. The Department of Biology supports the concentration in Evolutionary Biology within the MS degree. Students interested in this concentration should consult the Department of Biology’s website (http://biology.gmu.edu) for a list of faculty and their research interests.

Student Clubs
A variety of biologically-oriented student clubs are available for students. Each club has its own website; for more information, visit the Department of Biology’s website (http://biology.gmu.edu).

Faculty

Department Faculty

Professors
Gillevet, Lawrey, Rockwood

Associate Professors
Birchard, Christensen, Edwards, Forkner, Grant, Weeks

Term Professors
Polayes, Kocache

Term Associate Professors
Laemmerzahl, Madden, Tondi, Verhoeven

Term Assistant Professors
Crerar, Davis, Fondufe, Masterson, Olmo, Scherer, Schwebach

Adjunct Faculty
Beck, Brown, Buckley-Beason, de Mauro, Diaz, Einhorn, Guo, Hermoso, Holbeck, Hurnell, Jones, Munse, Ravi, Shirazi, Skacel, Starolis, Tomson, Van der Ham, Veerareddy, Visseren, Warmer, Wood-Salvesen

Affiliate Faculty

Requirements & Policies

Requirements

Advising
All biology majors are strongly encouraged to see an academic advisor regularly to help in planning their schedule so that they can graduate on time. Biology majors should see an advisor for permission to register prior to their first semester, again after completing 60 credits, and lastly after completing 90 credits.

Medical Laboratory Science, BS majors must see the director of the medical laboratory science program to obtain permission to register each semester.

Students returning from suspension are required to meet with the director of undergraduate studies or designee prior to being allowed to register.

For more information on advising or to set up an appointment, visit the Department of Biology’s website (http://biology.gmu.edu).

Residency Requirement for Transfer Students
Students majoring in biology are required to complete 16 credits in the major at the 300 and 400 levels at Mason in addition to meeting the university residency requirement of at least 30 credits at Mason.

Policies

Policy on Using Biology Program Laboratories
Only authorized experiments and exercises may be carried out in any research or teaching laboratory and must be done under the supervision
of a university faculty or staff member. No unauthorized work is allowed in any laboratory.

Policy on Using Organisms in Classes
Direct observations of actual organisms are considered an essential part of learning biology at all levels. Direct observations of organisms may involve the use of living or preserved specimens, dissections of organisms or parts of organisms, and microscopic examination of organisms or parts of organisms. All use of live animals conforms to National Institutes of Health guidelines for the use and care of laboratory animals. Activities specified above may be a required part of a course and thus serve as a basis for grading in the course. Any questions about the administration of this policy should be directed to the course coordinator or instructor.

Writing-Intensive Requirement
Mason requires all students to complete at least one course designated as “writing intensive” in their majors at the 300-level or above. Students majoring in biology fulfill this requirement by successfully completing BIOL 308 Foundations of Ecology and Evolution. Medical laboratory science majors fulfill the requirement by completing MLAB 300 Science Writing.

Minor in Biology
Information about this minor can be found on the Biology Minor page.

Premedical, Predental, Prepharmacy, and Preveterinary Students
Web: prehealth.gmu.edu (http://prehealth.gmu.edu)

Many students planning to enter medical, dental, pharmacy, veterinary, optometry, or other health professional schools choose to pursue a major in biology. These students should consult the health professions advising web site on required coursework and overall preparation.

Teacher Licensure
Students who wish to become teachers should pursue either the Biology, BA or the Biology, BS in addition to obtaining teaching certificates through the College of Education and Human Development. For more information, visit the Graduate School of Education’s website (https://gse.gmu.edu).

Biology for Non-majors
Students who are not majoring in science or mathematics and wish to fulfill their natural science requirement may enroll in the biology classes listed in the Mason Core Natural Science section. Chemistry, physics, and mathematics majors should consult their faculty advisor to determine which biology courses to take.
