Participation in Theater Department productions with the GMU Players is expected of all declared majors. Up to 4 practicum credits, 1 credit per assignment can be awarded for satisfactory completion of performance and production assignments in the major, including faculty or guest-directed GMU Players main stage, studio, or Theater of the First Amendment (TFA) productions.

TFA, a professional theater in residence within CVPA, offers students the chance to work closely with professional artists. TFA productions regularly employ student assistants in stage management, directing, design, dramaturgy, technical crews, and production and company management. Students are eligible to audition for age-appropriate roles or understudy assignments in TFA productions and may participate in the Membership Candidate Program through the Actors’ Equity Association.

Course Descriptions

Course Numbering

General Information
Course titles are followed by numbers in parentheses (0:0:0), separated by colons. The first number refers to the number of credits; the second number, hours of lecture or seminar per week; and the third number, hours of laboratory or studio per week. For independent study, readings, topics, or similar courses, individual instructors set hours.

Undergraduate
Courses numbered 499 and below are undergraduate courses. Course numbers in the 100 series are customarily taken by freshmen, the 200 series by sophomores, the 300 series by juniors, and the 400 series by seniors. The number designations of the course descriptions in this chapter have the following significance:

- A single number (HIST 301) indicates the course is complete within a single semester, and the semester course may be taken separately with credit toward a degree.
- A double number separated by a comma indicates that the subject matter or content of the course extends through two semesters, but that either semester may be taken by itself. Unless otherwise specified, the first semester is not prerequisite to the second semester.

Graduate
Graduate courses are divided into the following categories:

- 500–699: Open only to graduate students admitted to master’s or doctoral programs; other bachelor’s degree holders; and approved, advanced undergraduate students. Advanced undergraduate students who have secured the permission of the department offering the course may select from these courses to accumulate the hours necessary to complete an undergraduate degree. With the written permission of the dean of their college, they may take these courses for reserve graduate credit.
- 700–799: Open only to students admitted to graduate degree or certificate programs.
- 800–999: Primarily doctoral courses open only to students admitted to graduate degree programs.

Degree programs may extend permission to enroll bachelor’s degree holders.

Courses with the following numbers are reserved for the uses designated:

- 600–609: Limited applicability, graduate-credit courses, normally intended for in-service professional development and not directly leading to a graduate degree. A limited number of credits from these courses may be applied to a graduate degree.
- 798: Master’s research
- 799: Master’s thesis
- 800: Studies for the doctor of philosophy in education program
- 998: Doctoral dissertation proposal
- 999: Doctoral dissertation research
- 790, 890: Supervised practicum
- 794, 894: Internship
- 796, 896: Directed reading and research courses for master’s and doctoral students

Semester Notation
Some course descriptions include one of the following semester notations. Although circumstances may cause a unit to deviate occasionally from these notations, students should use this information to plan their programs of study.

- f: usually available only in the fall semester
- f,sum: available only in fall and summer
- f,s, sum: usually available every semester
- af, as: offered only in alternate fall or spring semesters
- ay: offered only in alternate fall or spring semesters
- ir: offered on an irregular basis at the discretion of the department or school
Courses

Accounting (ACCT)
School of Management (SOM)

If a student takes noncore, upper-level business courses before admission to SOM, those courses will not count on an undergraduate degree application for any major in the school, except as general elective credit. A grade of C or higher must be presented on the graduation application for each upper-level course in the major. Course prerequisites are strictly enforced. Degree status is defined as formal admission to SOM.

203 Survey of Accounting (3:3:0) Prerequisite: grade of C or higher in ECON 103. Introduction to accounting from the viewpoint of those who prepare and use financial information. Topics include using accounting information; creating financial statements; an overview of the firm’s operating, financing, and investing activities; and an introduction to product costing, operating budgets, and capital investment decisions. Lecture, recitation format; requires attendance in weekly lecture and weekly recitation.

301 Financial Accounting and Managerial Decision Making (3:3:0) Prerequisite: grade of C or higher in ACCT 203 or equivalent, and sophomore standing. Examines financial accounting from the viewpoint of both users and preparers of financial statements, emphasizing use of financial statement information to make financing, operating, and investing decisions.

311 Managerial and Cost Accounting (3:3:0) Prerequisites: degree status, and grade of B minus or higher in ACCT 301. Develops skills in identifying business processes, transforming data into useful information, and making managerial decisions. Designed for students in all areas of management, especially those whose career aims include cost management. Topics include analyzing and managing costs, developing cost systems that facilitate decision making, identifying opportunities for improving business process, creating financial and operating budgets for planning and control, and developing measures to assess performance.

331 Intermediate Financial Accounting I (3:3:0) Prerequisite: degree status and grade of B minus or higher in ACCT 301. This course deals with the accounting process used to measure and report economic events. The primary goals are to understand the role financial reporting plays in providing decision-useful information; understand the economics underlying business transactions and learn the generally accepted accounting principles (GAAP) that set the reporting and disclosure requirements for those transactions; evaluate the efficacy of GAAP; and understand the motivations that lead managers to select one accounting principle over another. Topics include bonds, owners’ equity, cash flows, accounting changes, and accounting for investments, income taxes, leases, and pensions.

351 Taxation and Managerial Decision Making (3:3:0) Prerequisites: degree status and grade of C or higher in ACCT 331. This course introduces fundamental topics in taxation using a business-entities approach. Specific topics include gross income, deductions, losses, and property transactions. The course emphasizes the identification of planning and compliance issues and the application of tax law to resolve those issues. Both tax and nontax factors affecting decision making are considered.

361 Accounting Information Systems (3:3:0) Prerequisites: degree status and grade of B minus or higher in ACCT 301. Introduction to accounting information systems, focusing on a conceptual basis for transaction processing. Handling and processing of transactions in revenue, expenditure, and payroll cycles serves as platform for developing and manipulating accounting information within a computerized transaction-processing and electronic data environment.

372 Business Analysis and Valuation (3:3:0) Prerequisites: degree status and of C or higher in ACCT 331. Expands on students’ ability to use financial statement information for business valuation and financial analysis transactions including credit analysis, risk assessment, risk management, bankruptcy prediction, and equity valuation. Uses actual case studies to provide in-depth analysis of the use of financial statement information.

382 Financial Analysis and the Business Life Cycle (3:3:0) Prerequisites: degree status; grade of C or higher in ACCT 301. Uses multidisciplinary approach to analyze major events in the financial lifecycle of business firms. Topics include start-up activities such as obtaining venture capital and selecting the appropriate business form; high-growth transactions such as stock-option arrangements and initial public offerings; complex corporate structure issues including mergers and alliances; multi-jurisdictional operations, especially consolidated financial statements, foreign tax credits, currency translations, and currency hedges; downsizing the firm via spin-offs, divestitures, plant closings, and asset sales; and bankruptcy proceedings, including loan workouts.

411 Advanced Managerial Accounting (3:3:0) Prerequisites: degree status, and grade of C or higher in ACCT 301 and ACCT 311. Managerial uses of accounting information in planning, controlling, motivating and decision making. Emphasizes quantitative and behavioral aspects of managerial accounting.

433 Advanced Financial Accounting (3:3:0) Prerequisite: degree status and grade of C or higher in ACCT 332. The course focuses on advanced topics in financial accounting. Students will study accounting business combinations, preparation of consolidated financial statements, accounting for foreign currency transactions, translation and remeasurement of foreign currency financial statements, partnership accounting, interim and segment reporting, and Securities and Exchange Commission reporting issues.

451 Advanced Federal Taxation (3:3:0) Prerequisites: degree status and grade of C or higher in ACCT 351. Federal
taxation of corporations, partnerships, fiduciaries, and gratuitous transfers.

461 Assurance and Audit Services (3:3:0) Prerequisites: degree status and grades of C or higher in ACCT 331 and 361. Introduction to audit and other assurance services' objectives, theory, and practices. Focuses on developing skills for interpreting business strategies and identifying related business risks, describing internal control solutions to those risks, identifying evidential sources, providing assurance about those risks and controls, and designing strategies to provide assurance services about the reliability of business information.

462 Honors Seminar in Accounting (3:3:0) Prerequisites: accounting major, senior standing, and permission of the instructor. The course will provide an in-depth study and analysis of contemporary developments and topics of interest in accounting. The topics and format will vary. Enrollment in this course is limited and competitive.

472 Government and Not-for-Profit Accounting (3:3:0) Prerequisites: degree status; grade of C or higher in ACCT 331. Introduction to accounting for nonbusiness organizations. Focuses on developing understanding of governmental, not-for-profit, charitable organizations, and the federal government.

491 Seminar in Accounting (3:3:0) Prerequisite: degree status and grade of C or higher in ACCT 331. Advanced study of accounting concepts and selected topics.

499 Independent Study (1–3:0:0) Prerequisites: 9 credits in upper-level accounting courses and degree status. Research and analysis of selected problems or topics in accounting. Must be arranged with an instructor, and students must receive written approval from the associate dean for undergraduate programs before registration. Written report required. May be repeated for maximum 6 credits if topics vary.

741 Information Technology Auditing (3:3:0) Prerequisite: admission to MSA or MBA program, or permission of program director. Introduces methodologies to assess security and control issues concerning accounting and other information systems. Key feature of course is applying computer-assisted audit tools and techniques to test effectiveness of application controls.

742 Corporate Governance and Ethics (3:3:0) Prerequisite: admission to MSA or MBA program, or permission of program director. Focuses on developing understanding of corporate governance issues and ethical decision making. Topics include examination of internal and external international governance issues, and ethical analysis in current business environment.

743 Corporate Financial Reporting (3:3:0) Prerequisite: admission to MSA or MBA program, or permission of program director. Addresses contemporary issues in corporate financial reporting. Focuses on role of financial reporting in providing decision-useful information to participants of capital market, and theoretical and empirical assessments of its performance.

744 Fraud Deterrence and Detection (3:3:0) Prerequisite: admission to MSA or MBA program, or permission of program director. Introduces strategies and techniques for fraud prevention and detection. Focuses on financial fraud such as bribery, contract rigging and kickbacks, embezzlement, fraudulent financial reporting, payroll fraud, and misappropriation of inventory and other assets.

796 Independent Studies/Directed Readings (1–3:0:0) Prerequisite: permission of instructor. Research and analysis of selected problems or topics in accounting not otherwise available in curriculum. Approval of faculty member and program director required. May be repeated for up to 3 credits.

Administration of Justice (ADJ)

100 Introduction to Criminal Justice (3:3:0) Overview of the American system of criminal justice, covering theories of justice, criminal law, policing, courts and associated pre- and post-trial legal processes, punishment and corrections, and juvenile justice.

300 Research Methods and Analysis (4:3:1) Prerequisite: ADJ 100. Required for all ADJ majors. Students are strongly encouraged to take ADJ 300 before or during the first semester of enrolling in 300-level courses. Emphasizes asking clear, researchable questions and using appropriate evidence to answer them. Students learn to use a broad range of evidence, including quantitative and qualitative information. Covers design and analysis of surveys, government archives, case studies, and interpretations of events in journals. Examines ethical implications of information technologies.

301 Public Law and the Judicial Process (3:3:0) Prerequisite: ADJ 100. Covers American judicial organization and operation, role of the Supreme Court in policy formation, and selected constitutional principles.

302 Sociology of Delinquency (3:3:0) Prerequisite: ADJ 100 and SOCI 101, or permission of instructor. Presents theories of juvenile delinquency and societal reactions to it; gender differences in rates and types; historical overview; development of juvenile justice system; and critical assessment of juvenile justice and its alternative.

303 Experiencing the Criminal Justice System (3:3:0) Prerequisite: ENGL 362; COMM 100, 101, or 104; and 60 credits. Experiential learning course designed to give pre-service ADJ students a firsthand, practical journey through the criminal justice process and system.

304 Computer Crime, Forensics, and Auditing (3:3:0) Prerequisites: IT 103 and 223. Covers computer crime, relevant laws, agencies, standards, auditing, logging, forensics, and related software. Explores legal principles such as chain of evidence, electronic document discovery, eavesdropping, and entrapment. Hands-on experience with forensics tools.

305 Crime and Crime Policy (3:3:0) Prerequisite: ADJ 100. Explores and evaluates how crime is defined and measured, and examines crime patterns and trends. Provides an overview and critical assessment of the major theories of crime at the individual, neighborhood, and structural levels. Considers policies intended to reduce crime.

306 Criminal Justice Ethics (3:3:0) Prerequisite: 60 credits, or permission of instructor. Analyzes ethical principles relevant for those working in criminal justice.
307 Social Inequality, Crime, and Justice (3:3:0) Prerequisite: ADJ 100. Explores the significance of social inequality (especially race and gender inequality) for several crime and criminal justice issues. Examines the effect of gender and race on rates of criminal offending and victimization and explanations for the variation in offending and victimization.

308 Human Rights and Justice (3:3:0) Prerequisite: ADJ 100. Studies the norms, laws, and systems for the promotion and protection of human rights. Provides a foundation for understanding historical, legal, political, economic, and ethical aspects of human rights. Examines ideological and cultural perspectives, sources of violations, the United Nations, regional and national mechanisms, special issues (e.g., women, torture, children, minorities), and the role of nongovernmental organizations.

400 Applied Criminal Psychology (3:3:0) Uses overview of psychological and criminological theories to apply behavioral science theory to practical application in forensic settings. Focuses on analysis of various crime scenes, and characteristics of offenders.

401 Policing in America (3:3:0) Prerequisite: ADJ 100. Fundamental issues relevant to contemporary public policing in America: role and history of police; impact on crime, disorder, and other social problems; discretion and its control; moral hazards; police legitimacy and public support; police culture and the police organization; and community policing.

402 Sociology of Punishment and Corrections (3:3:0) Prerequisite: ADJ 100. Covers theories on forms of punishment systems; punishment and corrections as a product of historical, cultural, and political changes; differences by race and gender in punishment and corrections; problems of social control and violence in prisons; alternative rehabilitation; and community prevention strategies.

403 Community Corrections (3:3:0) Prerequisite: ADJ 100. Studies the purposes and goals of community-based corrections and its various components, including pretrial diversion, probation, parole, and emerging alternatives to traditional incarceration. Addresses issues related to offenders returning to the community and critical issues facing jails, community corrections, and the management of offenders in community settings. Examines the role of community-corrections within the broader correctional system.

404 Crime Victims and Victimization (3:3:0) Prerequisite: ADJ 100. Explores experiences of crime victims, distribution of the risks of victimization, and causes and consequences of victimization. Also considers nature and influence of victim’s rights advocates.

405 Law and Justice around the World (3:3:0) Prerequisite: ADJ 100. Comparative inquiry into the models of legal and justice systems around the world. Considers how social and legal norms are created, and how different societies exercise powers of social control. Evaluates justice models in action, including law and courts, policing, corrections, and juvenile justice.

406 Family Law and the Justice System (3:3:0) Prerequisite: ADJ 100. Introduction to the elements of family law, and exploration of its influence on American social life and contemporary notions of justice. Topics include marriage and parenting, divorce, custody and support, nontraditional families, and domestic violence.

407 Law and Society (3:3:0) Prerequisite: ADJ 100 or GOVT 301. Explores relationship between law and society, including concept of law; origin, development, and role of law in society; and relationship between law and social change. Considers different approaches to the study of law and society, and assesses methodologies.

408 Criminal Courts (3:3:0) Prerequisite: ADJ 100 or GOVT 301. Studies the workings, advantages, and frailties of criminal courts, and explores whether the system works effectively and efficiently.

409 Community Policing (3:3:0) Prerequisite: ADJ 100. Study of community policing, particularly in the United States. Covers history and development of community policing, community relations, problem solving, and issues of organizational change.

422 Controversial Legal Issues (3:3:0) Prerequisite ADJ 100. Focuses on the study of law as an institution that continuously interacts with other social institutions at the individual, community, state, and federal levels. Examines how constitutional and statutory laws are interpreted by the courts to determine and define the law through contemporary, controversial, legal issues. Explores how the courts, using the law, resolve today’s most controversial issues.

423 Constitutional Law: Civil Rights and Liberties (3:3:0) Prerequisite: GOVT 103. Studies 1st Amendment freedoms of speech, press, assembly, association, and religion; the right to privacy; and 14th Amendment right to equal protection.

424 Constitutional Law: Criminal Process and Rights (3:3:0) Prerequisite: GOVT 103. Studies constitutional law pertaining to the rights of the criminally accused from investigation and evidence through attorney, trial, and punishment stages at federal and state levels.

425 Criminal Justice Management (3:3:0) Explains the management function for current and future criminal justice managers. Emphasizes communication, motivation, leadership skills, and organizational development.

460 Surveillance and Privacy in Contemporary Society (3:3:0) Prerequisite: ADJ 100. Philosophical perspectives, historical context, technological developments, and institutional changes that surround controversies about privacy and surveillance in contemporary society. Explores public and private institutions conducting surveillance, how they calculate and manage risk, and legal constraints on surveillance activities.

461 Introduction to Homeland Security (3:3:0) Prerequisite: ADJ 100. Examines governmental actions designed to prevent, detect, respond to, and recover from acts of terrorism and national disasters. Focuses on efforts to align federal, state, local, tribal, private sector, and nongovernmental preparedness, incident management, and emergency response plans into the effective and efficient national structure necessary for the protection of the United States.

462 Law Enforcement and Homeland Security (3:3:0) Prerequisite: ADJ 100. Examines the effect of 9/11 on law enforcement organizations in the United States and explores the evolving relationship between the military, federal, state, and local law enforcement agencies in the post-9/11 era. Emphasis on understanding the entire framework of homeland security in the United States and the unique issues faced by local law enforcement.
471/SCI 471 Prevention and Deterrence of Crime (3:3:0)
Theoretical and practical strategies for crime prevention and
deterrence. Discusses social, environmental, and mechanical
developments, police courts, and correctional elements of
law enforcement in terms of current effectiveness and future
potential for crime prevention.

475 Theory and Politics of Terrorism (3:3:0) Explores
origins of terrorism, tracing development from early states
to a modern mode of conflict. Presents national, regional,
and global perspectives.

479 Preparation for Internship (3:3:0) Prerequisites: ADJ
100, 300, 303; and at least 21 credits of other upper-level
courses required for the ADJ major. Preparation for intern-
ship in a justice organization or justice-related work activity.
Students develop a relationship with a prospective internship
sponsor and develop a plan for the internship and the research
to be reported.

480 Internship in Justice Administration (3–12:0:0)
Prerequisite: ADJ 479. Before enrolling, students must have
a plan approved by the instructor. Application of classroom
learning to an applied justice setting. Students maintain daily
journals, conduct research, and deliver written and oral
reports. Seminars are held three times during the semester
for discussion and oral presentation. Minimum of 50 hours
of on-the-job work time required for each credit. Students
may take the course for 3, 6, or 9 credits. Course may be
taken more than once, but total accumulated credits may not exceed 12. Students using the internship to satisfy skills for
the justice professional must accumulate a total of 9 cred-
its.

490 Special Topics in Administration of Justice
(1–3:1–3:0) Recent developments in the field. Content var-
ies. Recent topics covered workplace violence and interna-
tional terrorism. May be repeated for credit four times.

491 Honors Seminar I (3:3:0) Prerequisites: admission to
the ADJ honors program. First of a two-course sequence;
subject varies. Course includes readings, individual or group
projects, and discussion of seminar papers.

492 Honors Seminar II (3:3:0) Prerequisites: ADJ 491.
Second of a two-course sequence. Subject varies. Course
includes readings and discussion of seminar papers, leading
to a research project under the direction of a faculty member.
Oral exam on the research and report may be required.

499 Independent Study in Administration of Justice
(1–3:0:0) Prerequisite: ADJ 100. Open to majors in ADJ
and public and international affairs, with 90 credits and
permission of instructor and program. Reading and research
on a specific topic under the direction of a faculty member.
Written report is required; an oral exam or report may also
be required. Degree requirements to be fulfilled by a par-
ticular independent study determined by student’s advisor.

500 Special Topics in Administration of Justice
(1–3:1–3:0) Recent developments in the field. Content var-
ies. Recent topics have covered violence in the workplace
and international terrorism. May be repeated for credit.

Adult Education (EDAL)
Graduate School of Education

541 Understanding Adult Learners (6:6:0) Examines a
variety of adult learning issues, including theory, develop-
mental psychology, and motivation and experience. Adult
learners are considered in terms of individual learning needs,
incentives, support systems, and learning style differ-
ences.

542 Arranging Conditions for Adult Learning (6:6:0)
Focuses on linking adult learners to resources, and establish-
ing the environment for learning. Covers program develop-
ment processes, teaching and learning strategies for adults,
technology and adult learning, workplace learning, and
learning organizations.

African American Studies (AFAM)
African American Studies Program

200 Introduction to African American Studies (3:3:0)
Interdisciplinary introduction to the field of African Ameri-
can studies. Includes comparative analysis of approaches,
methodologies, and key concepts related to the study of
people of African descent in the United States, continental
Africa, and throughout the African diaspora. Lectures and
discussion integrate attention to such issues as diversity and
multiculturalism from national and global perspectives.

390 Special Topics in African American Studies (3:3:0)
Study of selected topics related to African American studies.
Topics include foundations of African American literature;
African American literature of the 20th century; the African
American experience in the United States from Reconstruc-
tion to the present; music, film, and civil rights; and black
political thought.

490 Internship (3:3:0) Prerequisites: AFAM 200 and 60
credits. Credit to be determined by the African American
Studies Program.

499 Independent Study (1–3:0:0) Prerequisites: under-
graduate senior status and permission of the director.
Investigation of an area related to African American studies
according to individual interest, with emphasis on research.

Alternative Education (EDAE)
Graduate School of Education

600 Alternative Education for At-Risk Youth (1:1:0)
Overview of the nature of at-risk students, why alternative
education programs exist, and the types of alternative pro-
grams available locally, statewide, and nationally.

601 Curriculum and Methods in Alternative Education
(3:3:0) Identifies and develops expertise in various instruc-
tional strategies, adaptations, and modifications used with
at-risk students in the context of alternative education envi-
ronments. Emphasizes motivation, scheduling, standards of
learning, and technology.

602 Preparing Students for Employment and Living
Independently (2:2:0) Explores postsecondary options and
opportunities for at-risk students in alternative programs.
Covers integration of career development, passing the GED,
in individual transition plans, obtaining employment, using
technology, and locating resources.

603 Communication and Management Strategies for
Alternative Education (3:3:0) Focuses on techniques to
manage crisis management, resolve conflicts, implement
peer mediation, and develop positive peer and adult relation-
ships. Emphasizes strategies for working successfully with families, diverse populations, substance abusers, and dually diagnosed students.

604 Multidisciplinary and Interagency Collaboration (3:3:0) Examines the Comprehensive Services Act of Virginia and other legislation concerning at-risk youth. Emphasizes agency functions, case management, collaboration, identifying resources, and networking.

Anthropology (ANTH)

Sociology and Anthropology

114 Introduction to Cultural Anthropology (3:3:0) For non-Western credit. Overview of major ideas and approaches in the study of cultures around the world. Surveys kinship, social organization, political economy, religious beliefs, and other aspects of non-Western cultures.

120 Introduction to Archaeology (3:3:0) Introduction to survey of anthropological archaeology. Includes development and use of contemporary theory, and field and lab methods.

299 Independent Study (1–3:0:0) Prerequisite: ANTH 114, or permission of instructor. Individual study in anthropology on topic organized in advance by student and instructor.

300 Civilizations (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. For non-Western credit. Cross-cultural and transtemporal examination of complex societies and civilizations. Explores developmental schema for rise, articulation, spread, and decline of historic and contemporary civilizations.

301 Native North Americans (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. For non-Western credit. Exploration of native North American cultures and selected aspects of Indian-white historical relations. Emphasizes cultural persistence as well as change.

302 Peoples and Cultures of Latin America (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. For non-Western credit. Examines Latin American cultures and selected aspects of historical record.

303 Peoples and Cultures of Selected Regions (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. Examines cultures of a specific region such as Middle East, Amazonia.

304 Peoples and Cultures of the Pacific (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. For non-Western credit. Survey of 20th-century Melanesian, Polynesian, and Micronesian cultures. Case studies of interplay between cultural systems and island ecology.

305 Foraging Societies (3:3:0) Prerequisite: 60 credits, 6 credits of anthropology including ANTH 120, or permission of instructor. For non-Western credit. Examines early human societies with emphasis on environmental, technological, and cultural aspects of hunting and gathering as a successful means of adaptation.

306 Peoples and Cultures of Island Asia (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. For non-Western credit. Examines cultures of the Island Asia culture region, focusing on native cultures of Indonesia, Borneo, and the Philippines.

307 Ancient Mesoamerica (3:3:0) Prerequisite: ANTH 120, 60 credits, or permission of instructor. Examines the peoples and cultures of ancient Mesoamerica, including Olmec, Maya, Teotihuacan, and Aztec societies. Major topics include the rise of civilization, the development of the Mesoamerican cultural tradition, the growth of cities, trade, exchange, writing systems, political organization, religion, conflict, and the archaeological study of this indigenous heritage.

309 Peoples and Cultures of India (3:3:0) Prerequisites: ANTH 114 and 60 credits, or permission of instructor. Examination of South Asia, with emphasis on India. Includes general overview of prehistory and history; impact of colonialism; contemporary Indian culture, including the changing relations of caste and class, family organization, and the roles of women, religion, and ideology; and current trends in economic development and socioeconomic differences in different parts of the country.

310 Social Organization and Kinship (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. Examines social organization, kinship, descent, and kinship terminologies in mainly non-Western cultures, emphasizing the meaning of specific cultural systems and cross-cultural similarities and differences.

311 Peoples and Cultures of Mainland Southeast Asia (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. For non-Western credit. Survey of societies of mainland Southeast Asia, with emphasis on successive waves of outside cultural influences and relations between contrasting ethnic groups in modern states. Focuses on Thailand and Malaysia.

312 Political Anthropology (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. Examines cultural and ecological contexts of political structures and competition for power in selected societies; and cross-cultural and comparative approaches to study of political conflict, leadership, values, and symbolism.

313 Myth, Magic, and Mind (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. For non-Western credit. Examines religion as a cultural system. Topics include mythology, ritual, symbolism, and dogma. Emphasizes cross-cultural and predominantly non-Western material.

315 Socialization Processes: Family, Childhood, Personality in Cross-Cultural Perspective (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. Examines aspects of the cultural transmission process in specific local cultures selected from various world culture regions, with emphasis on transmission of cultures.

322 Historical Archaeology (3:3:0) Prerequisite: ANTH 120, 60 credits, or permission of instructor. Examines materials, theories, and methods of archaeology derived from and applied to historical sites, as they complement archival records.

324 Warfare, Violence, and Sacrifice in Antiquity (3:3:0) Prerequisites: ANTH 120, 60 credits, or permission of instructor. Examines origin and nature of conflict in human
society with an emphasis on the ancient past. Major topics include the possible role of violence in human evolution, cross-cultural studies of conflict in indigenous society, warfare in early states, and sacrifice as a ritual practice.

325 Field Techniques in Archaeology (3–6:0:0) Prerequisite: ANTH 120, 60 credits, or permission of instructor. Intensive study of archaeological field techniques by directed group projects in site survey, site testing, recording techniques, and stratigraphy through discussions, demonstrations, and hands-on experience. May be repeated for maximum 6 credits.

330 Peoples and Cultures of Selected Regions: Non-Western (3:3:0) Examines cultures of a specific region such as Africa and the Middle East. Focuses primarily on non-Western cultures.

331 Refugees (3:3:0) Prerequisites: ANTH 114, 60 credits, or permission of instructor. Introduction to causes and consequences of forced dislocation as a global issue. Covers formally recognized refugees, as well as people such as internally displaced persons and asylum seekers who are in refugee-like circumstances. Focuses on understanding the personal experiences of refugees, and examining efforts on their behalf at national and international levels.

332 Cultures in Comparative Perspective (3:3:0) Prerequisite: ANTH 114, or permission of instructor. For non-Western credit and credit toward BA in sociology. Examines the varieties of cultural experience. Several cultures are studied in depth, with attention to local histories, global contexts, and shifting perspectives on the practice of ethnography.

333 Humanitarian Action (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. Examines humanitarian action, drawing on anthropology’s holistic and comparative perspectives developed to ground understanding of humanitarian action within larger cultural contexts. Attention to cultural, biological, environmental, and political sources of humanitarian crises, and actual and potential responses to them. Focuses on large-scale response to social emergencies as culturally informed behavior.

340 Comparative Perspectives on Immigration (3:3:0) Considers the dimensions and meanings of the immigrant experience in the United States, with a focus on the diversity of immigrants and refugees who have arrived during the past 30 years. Emphasis on the social context in which immigration occurs and on the bearing of institutional and cultural influences on patterns of adaptation, assimilation, and exclusion from the host society.

360 Evolution, Sex, and Society (3:3:0) Prerequisite: ANTH 135, 60 credits, or permission of instructor. Inquiry into the biological dimensions of humans as culture-bearing animals. Topics include altruism, aggression, primate social organization, morphology, comparative ethnology, and microevolutionary genetic differentiation.

365 Race and Racism (3:3:0) Prerequisite: ANTH 135, 60 credits, or permission of instructor. Examines biological dimensions of human variation, and the beginnings of race as a concept. Discusses evolution of human biodiversity in culturally distinct human groups related to environment, physiology, genetics, nutrition, and disease. Explores use of scientific analyses of human biodiversity.

370 Environment and Culture (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. Examines relationships among environment, culture, and human behavior with an emphasis on cultural ecological explanations in mainly non-Western contexts.

371 Psychological Anthropology (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. Survey of issues in study of relationships between cultural and psychological variables. Major topics viewed cross-culturally include personality, mental illness, projective systems, cognition, and learning.

375 Anthropological Perspectives on History (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. Use of ethnographic, archaeological, linguistic, and documentary data, in light of anthropological theory, to interpret the past and processes of change among indigenous peoples throughout the world.

380 Language and Culture (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. Anthropological analyses of language behavior, origins, and change, emphasizing interplay of language, culture, anthropology, and linguistics.

381 Health, Healing, and Culture (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. Surveys the discipline of medical anthropology, focusing on traditional medical beliefs and the diverse responses to modern scientific medicine in developing countries and among cultural minorities in the United States.

382 Urban Anthropology (3:3:0) Prerequisites: ANTH 114 and 60 credits, or permission of instructor. Uses tools and resources of social and cultural anthropology to study life in cities, including urban poverty, migration, urban planning, and discrimination. Case studies draw from different urban environments around the world, including Washington, D.C., and New York City.

385 Gender, Class, and Ethnicity in Latin America (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. Examines bases for gender differences and similarities across a variety of societies and cultures in Latin America. Examines interrelationships among constructions of gender, class, and ethnicity.

390 Theories, Methods, and Issues I (3:3:0) Prerequisites: ANTH 114 and 60 credits, or permission of instructor. First of a two-course sequence that reviews the major theoretical traditions and schools of thought in anthropology. Required for anthropology majors.

395 Work, Technology, and Society: An IT Perspective (3:3:0) Prerequisites: ANTH 114, 60 credits, or permission of instructor. Introduction to the anthropology of work, technology, and society, with emphasis on information technology. Covers general conceptual issues of information technology and also involves specific practical exercises with computers, their operating systems, the logic of automated production, databases, and web-based communication. Attention also directed to social and ethical issues raised by contemporary information technology.

396 Issues in Anthropology: Social Sciences (3:3:0) Prerequisites: ANTH 114, 60 credits, or permission of instructor. Topic of contemporary interest in anthropology, focusing on social science topics of interest.
399 Issues in Anthropology (3:3:0) Prerequisite: ANTH 114 and 60 credits, or permission of instructor. Topic of contemporary interest in anthropology, changing from semester to semester, and focusing on topics such as sex roles, anthropology and ethics, and primate social organization. May be repeated for credit.

400 Engaging the World: Anthropological Perspectives (3:3:0) Prerequisites: ANTH 114, 60 credits, completion of all general education requirements, or permission of instructor. Examines selected topics with emphasis on the integration of different kinds of knowledge and the balancing of alternative ways of assessing meaning and relevance. Topics usually drawn from issues of global economic processes, civic rights and responsibilities, the environment, and migration. Student papers and oral presentations receive formal review by multiple faculty members, to which the students must then respond. Satisfies general education synthesis requirement.

410 Research Design and Methods in Bioanthropology (3:3:0) Prerequisites: 60 credits and 6 credits of anthropology, including ANTH 120 or 135; or permission of instructor. Research design in bioanthropology and archaeology. Topics include critique of case studies, framing problems, field strategies, measuring variables, sampling, analysis, and interpretation of results.

420 Interpretation in Archaeology (3:3:0) Prerequisite: 6 credits of anthropology including ANTH 120, or permission of instructor. Explores theoretical and methodological issues in archaeology. Considers patterns and contexts of archaeological remains, analytic problems, and interpretation of material culture.

425 Public Archaeology (3:3:0) Prerequisite: 6 credits of anthropology including ANTH 120, or permission of instructor. Considers public significance of archaeology and anthropological contributions to public concerns such as antiquities legislation and cultural resource management.

427 Historic Cemetery Survey (4:4:0) Prerequisite: ANTH 120, or permission of instructor. Explores demographic, stylistic, and religious aspects of historic cemeteries. Students learn to survey, record, and analyze gravestone data through field projects.

428 Patterns in Prehistory (3:3:0) Prerequisite: 60 credits, or permission of instructor. Explores diversity of prehistoric cultures in light of major cultural development: hunting-gathering, agriculture, pastoralism, and complex societies.

430 Research Methods in Archaeology (3:3:0) Prerequisite: ANTH 120, 60 credits, or permission of instructor. Studies archaeological research process through discussions of current archaeological methodologies and student participation in designing and critiquing research projects.

435, 436 Special Projects: Anthropology (1–3:0:0) Prerequisites: ANTH 120 or 135, 60 credits, and permission of instructor. Lab or field project leading to a written report of the research. Research and paper completed under instructor’s guidance.

440 Public Anthropology: Seeking Solutions in the Public and Private Sectors (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. Focuses on anthropologists’ contributions to major policy issues in development agencies in the United States and abroad. Covers techniques that lead to prevention or management of social and cultural conflict.

450 Qualitative Methods: Non-Statistical Approaches in Culture and Social Research (3:3:0) Prerequisites: 60 credits and 6 credits of anthropology including ANTH 114, or permission of instructor. Explores some of the most useful nonquantitative research techniques in social sciences, and offers practice in their application.

488 Gender, Sexuality, and Culture (3:3:0) Prerequisite: ANTH 114, 60 credits, or permission of instructor. Examines how gender, sexuality, race, and class come together as analytically distinct, yet practically intertwined, systems of meaning and practice. Examples highlight questions of political economy and history while focusing on specific ethnographic or historical readings.

490 Theories, Methods, and Issues II (3:3:0) Prerequisites: 60 credits and 9 credits of anthropology, or permission of instructor. Second of a two-course sequence that reviews major theoretical traditions and schools of thought in anthropology. Required for anthropology majors, and usually taken as a senior seminar.

492 Contemporary Controversies in Anthropology (3:3:0) Prerequisites: 60 credits and 9 credits of anthropology including ANTH 390, or permission of instructor. Examines recent important works, issues, and controversies in anthropology.

495 Internship (3–6:0:0) Prerequisite: ANTH 120, 60 credits, or permission of instructor. Supervised project in applying anthropology: public archaeology, development anthropology, museums. May be repeated for maximum 6 credits.

496 On Evolution (4:2:2) Prerequisites: 60 credits and 9 credits of anthropology, or permission of instructor. Considers evolution as biological as well as cultural concept. Parallels and contrasts among conceptual approaches allow a critique of the potential of evolution as a unifying biosocial theory.

499 Independent Research (1–3:0:0) Prerequisite: 60 credits, 9 credits of anthropology, or permission of instructor. Individual research on a topic to be organized in advance by student and instructor. May be repeated for credit.

535 Anthropology and the Human Condition: Seminar I (3:3:0) Prerequisite: graduate standing or permission of instructor. Examines some of the major theorists of 19th- and early 20th-century cultural theory. Marx, Freud, Durkheim, and Weber are surveyed as foundational thinkers for reading the works of such 20th-century theorists as Boas, Malinowski, Benedict, and Sapir.

536 Anthropology and the Human Condition: Seminar II (3:3:0) Prerequisite: ANTH 535. Examines contemporary theorists of anthropology, covering ongoing debates over epistemology and the multiple strands that inform anthropological theory and practice.

555 Policy and Culture (3:3:0) Examines the relevance of cultural processes to policymaking and the culture of policymaking organizations. Topics include development, welfare policy, environmental and energy policy, regulation and risk; health care, immigration policy; and the war on drugs.
560 Human Osteology (4:3:3) Prerequisites: course in human evolution or anatomy, and senior or graduate standing, or permission of instructor. Examines structure and function of human skeletal system. Discussions include age criteria, pathology, epigenetic traits, biomechanics, and phylogenetic relationships.

568 Human Origins (3:3:0) Prerequisite: graduate standing, or permission of instructor. Detailed survey of the genetic, morphological, and behavioral origins of hominids. Discusses current interpretations and debates.

576 American Cultures (3:3:0) Prerequisite: graduate standing, or permission of instructor. Examines U.S. cultures and explores concept of an American culture. Course readings and discussions explore underpinnings of the American experience, document broad historical shifts, and detail the experience of diverse groups of Americans, thus forming the basis for a critical, analytical, and comparative discussion of American life and life in America.

580 Evolution and Human Ecology (3:3:0) Prerequisite: graduate standing, or permission of instructor. Examines complex relationships among human cultures, biocultural adaptation, and the natural world from an evolutionary perspective.

573 Social Organization (3:3:0) Prerequisite: graduate standing, or permission of instructor. Detailed examination and re-evaluation of the basic concepts of kinship and social organization in light of contemporary anthropological concerns. Several classical and contemporary texts develop key issues of social organization. Review of traditional concepts of classical anthropology introduces discussion of the nature of the broad epistemological shift that occurred in the last quarter of the 20th century.

613 Ethnography (3:0:3) Prerequisite: graduate standing, or permission of instructor. Literally, "writing about (a) people," ethnography is the defining practice of social-cultural anthropology. The product of participant-observation fieldwork, ethnography brings together evidence and interpretation, providing a key means for developing and testing theories of culture. Course surveys key classical and contemporary ethnographies, introducing the breadth and scope of ethnographic practice in anthropology. Discussions highlight methodological questions.

614 Ethnopsychology: Self, Subject, and Culture (3:0:3) Prerequisite: graduate standing, or permission of instructor. The emerging field of ethnopsychology, in Catherine Lutz’s words, is “concerned with the way in which people conceptualize, monitor, and discuss their own and other’s mental and/or behavioral processes.” Course examines roots of the ethnopsychological enterprise, reviews several recent approaches to the description and analysis of folk psychological material, and investigates the relationship between folk psychology and other aspects of social life.

615 Ritual and Power in Social Life (3:3:0) Prerequisite: graduate standing, or permission of instructor. Domains of religion and politics are conjoined by questions of power: its deployment, distribution, and forms of resistance it engenders. Drawing on a variety of theoretical orientations in the social sciences, including structuralism, semiotics, psychoanalysis, and performance theory, course investigates connections among religious thought, ritual practice, and political action.

617 Political Economy (3:3:0) Prerequisite: graduate standing, or permission of instructor. Human societies have always engaged in complex political relations and economic exchanges. The cultural meanings people create are shaped by, and in turn shape, systems of power. Political economy is the attempt to understand the relationship between politics and economics, at the juncture of local meanings and global histories. Course reviews major works and models of political economy, especially as they relate to social and cultural analysis.

620 Theory: Archaeology and Biological Anthropology (3:3:0) Prerequisite: course in archaeology, or permission of instructor. Examines theoretical approaches in archaeology, paleoanthropology, and biological anthropology.

625 Research Design and Methods in Archaeology and Biological Anthropology (3:3:0) Prerequisite: course in archaeology, or permission of instructor. Examines research strategies and methods in archaeology, paleoanthropology, and biological anthropology.

630 Anthropology and Humanitarian Action (3:3:0) Prerequisite: graduate standing. Examines humanitarian action from an anthropological perspective, with attention to the cultural, biological, environmental, and political dimensions of humanitarian crises and actual and potential responses.

631 Refugees in the Contemporary World (3:3:0) Prerequisite: graduate standing. Explores major refugee flows since the mid-20th century, emphasizing mechanisms for providing assistance, asylum, and resettlement.

632 International Migration in Comparative Perspective (3:3:0) Prerequisite: graduate standing, or permission of instructor. International migration in the contemporary world, focusing on the full range of economic, political, and social reasons for migration and the effects of different national policies on that process.

635 Regional Ethnography (3:3:0) Prerequisite: graduate standing, or permission of instructor. In-depth study of peoples and cultures of a specific world region (Latin America, East Asia, the Pacific, United States). Content may include cultures defined by diaspora, migration, and other global forces and processes. May be repeated for credit when content differs.

640 Applied Anthropology (3:3:0) Prerequisite: graduate standing, or permission of instructor. Explores the application of contemporary anthropological ideas, theories, and methods to find solutions to practical problems as defined by various organizations and institutions including business, government, nongovernmental organizations, and various institutions.

645 Ethnography and Literature (3:3:0) Prerequisite: graduate standing, or permission of instructor. Explores relations between ethnography and literature. Most anthropological knowledge is transmitted in written text known as “ethnographies.” Ethnographic techniques can be used in novels, travel literature, biography, and autobiography. Course explores these uses, alongside anthropological ethnographies, to arrive at a better understanding of ethnography: what constitutes it, and how it is defined and practiced.

650 Ethnographic Methods and Research Design (3:3:0) Prerequisite: graduate standing, or permission of instructor. Reviews and examines major research methods commonly
employed in cultural anthropological field study, with emphasis on ethnographic research design and the use of standard ethnographic techniques. Includes practice in designing ethnographic research project, and using ethnographic methods and techniques in a field setting.

655 Nationalism, Transnationalism, and States: Local and Global Perspectives (3:3:0) Prerequisite: graduate standing, or permission of instructor. Explores different approaches to understanding the interaction of nationalism, transnationalism, and states given the apparently simultaneous dissolution of demographic, economic and cultural borders, and of modernist social science paradigms.

660 Social Science and Critical Theory (3:3:0) Prerequisite: graduate standing, or permission of instructor. Surveys key ideas of the Frankfurt School and its legacies today, including the critique of ideology; aesthetic theory; instrumental rationality; and analyses of the state, culture, and society. Writing by members of the Frankfurt School draws on many philosophical and methodological strands: radical humanism, Marxist analysis, cultural criticism, psychoanalysis, and political sociology.

670 Regional Studies in Archaeology (3:3:0) Prerequisite: permission of instructor. Regional survey of specific culture area in archaeology to be chosen by student and instructor.

675 Laboratory Techniques (4:3:3) Prerequisite: course in archaeology, and permission of instructor. Covers techniques of data collection, analysis, and management in archaeology and biological anthropology.

677 Anthropology and History (3:3:0) Prerequisite: graduate standing, or permission of instructor. Considers anthropological approaches to the study of history, the ways in which people construct their histories, and social historians’ effort to incorporate anthropological and ethnographic orientations into their accounts. Attention to tensions between culture and power in the constitution of historiography, and to methodological challenges of interpreting qualitative and quantitative data.

680 Readings in Archaeology (3:3:0) Prerequisite: permission of instructor. Directed readings and research on a specific topic in archaeology to be chosen by student and instructor. May be repeated for maximum 6 credits.

682 Readings in Biological Anthropology (3:3:0) Prerequisite: permission of instructor. Directed readings and research on a specific topic in biological anthropology chosen by student and instructor. May be repeated for maximum 6 credits.

684 Independent Study in Sociocultural Anthropology (1–6:3:0) Directed reading and research on a specific topic, agreed on by student and faculty member, resulting in a written project. May be repeated for maximum 6 credits.

685 Language and Culture (3:3:0) Prerequisite: graduate standing, or permission of instructor. Survey of research on the relationship between language and culture, and the many ways the study of language has enhanced understanding of the nature of culture. Course material drawn from anthropology’s four traditional subdisciplines (cultural, linguistic, prehistoric archaeology, and physical), as well as neighboring fields such as sociolinguistics, psycholinguistics, literary theory, and ethnology.

687 Culture and Curing (3:3:0) Prerequisite: graduate standing, or permission of instructor. Explores the wide variety of cultural interpretations of health, illness, and curing. Examines a number of different curing systems, both traditional and modern, and compares them with cosmopolitan biomedicine. Several book-length case studies cover a wide variety of cultural groups, health topics, and theoretical orientations.

690 Internship (1–6:0:0) Prerequisite: graduate standing in anthropology with 3 credits of methods and 12 credits in program, or with permission of primary advisor. All internships must be approved by faculty advisor to ensure suitability to the student’s course of study. Introduction to applied anthropology through approved work and study at a museum, institute, agency, or other approved site. May be repeated for maximum 6 credits.

699 Contemporary Issues in Sociocultural Anthropology (3:3:0) Prerequisite: graduate standing, or permission of instructor. Explores current issues and debates in sociocultural anthropology. Variable topics.

710 Contemporary Issues in Archaeology and Biological Anthropology (3:3:0) Prerequisites: ANTH 620 and 625, completion of 24 graduate credits, and approval of graduate advisor. Contemporary research developments and the ways in which various scientific disciplines and theoretical approaches are integrated in the study of biocultural evolution, adaptation, and diversity.

721 Culture, Power, and Conflict (3:3:0) Prerequisite: graduate standing, or permission of instructor. Explores power and social conflict through the lens of cultural analysis. Special attention to the role of cultural differences in the structuring of conflict, and to the deployment of cultural theory in formulating a practice of conflict resolution.

750 Ethnographic Genres (3:3:0) Prerequisite: graduate standing, or permission of instructor. “Genre” refers to kind, sort, or type. Course surveys the various modes of representation anthropologists use in elaborating participant-observation fieldwork, as well as how these styles refer to and construct ethnographic “others.” Explores a set of central philosophical and methodological issues in social-cultural anthropology such as framing, perspective, authority, reflexivity, and politics of style.

769 Gender, Sexuality, and Culture (3:3:0) Prerequisite: graduate standing, or permission of instructor. Utilizes interdisciplinary material within an overall anthropological perspective on body meanings and practices. Readings highlight questions of political economy and history, focusing on specific ethnographic or historical contexts, to develop an understanding of how gender, sexuality, race, and class become analytically distinct yet intertwined systems of meaning and practice.

797 Anthropology Colloquium (1:1:0) Prerequisite: graduate standing in anthropology, or permission of graduate coordinator. Public forum for the presentation and discussion of contemporary anthropological research.

798 Thesis Proposal (3–6:0:0) Prerequisite: Completion of 18 credits, including all core courses. Work on research proposal that forms basis for master’s thesis.

799 Master’s Thesis (1–5:0:0) Prerequisite: Completion of ANTH 798 and approval of thesis proposal. Master’s thesis research and writing under direction of thesis committee.
Arabic (ARAB)

Modern and Classical Languages

101 Introduction to the Arabic Language (3:3:1) Introduction to Arabic language, dialects, countries, and culture. Beginning modern standard and classical Arabic, with emphasis on the written language, script and phonology. Basic grammar covering gender, numbers, cases, prepositions, nominal sentences, and basic conversation and greetings.

102 Introduction to the Arabic Language (3:3:1) Prerequisite: ARAB 101, or permission of instructor. Introduction to developing reading skills in formal settings. Emphasizes modern standard Arabic in oral communication. Beginning grammar level focuses on verbal sentences, present tenses, questions, and compound nouns.

110 Elementary Arabic (6:6:1) Introduces elements of grammar, vocabulary, oral skills, listening comprehension, and reading. Students may not receive credit for ARAB 110 if they have received credit for ARAB 101, 102, or 109. Lab work required.

201 Intermediate Arabic I (3:3:1) Prerequisite: ARAB 102 or equivalent. Further development of listening, speaking, reading, and writing skills. Advanced level of vocabulary. Grammar covers past tenses, subordinated conjunctions, and introduction to passive voice. Also introduces Arabic dictionary.

202 Intermediate Arabic II (3:3:1) Prerequisite: ARAB 201 or equivalent. Emphasis on application of language skills to reading, composition, and discussion. Focuses on language structure, format of developing vocabulary from verbs, covering different derivations, and language patterns. Leads to learning the use of Arabic dictionary in depth. Grammar covers passive voice and verbal nouns.

210 Intermediate Arabic (3:3:1) Prerequisite: ARAB 110 or appropriate placement score. Continuation of the development of basic components of the language, with focus on listening, speaking, reading, and writing skills. Introduces students to the cultures and histories of Arabic-speaking regions. Lab work required.

250 Gateway to Advanced Arabic (3:3:1) Prerequisites: ARAB 210, appropriate placement score, or permission of department. Integration of advanced intermediate-level Arabic reading, writing, listening, and speaking skills and the development of critical thinking and understanding authentic texts from the Arabic world. Taught in Arabic.

325 Major Arab Writers/Stories (3:3:0) Prerequisite: ENGL 101, or permission of instructor. Studies works of major Arab writers or collections such as The Arabian Nights. Writers and tales to be studied vary. Course work in English; knowledge of Arabic language helpful but not required. May be repeated once for credit with permission of department.

330 Reading and Conversation I (3:3:0) Prerequisites: ARAB 202, appropriate placement score or permission of instructor. Courses I and II must be taken in sequence. Development of conversational fluency and reading skills in modern standard Arabic through class discussion, reports, and presentations. Readings include selections from newspapers, journals, magazines, web sites, literary works, and other sources.

331 Reading and Conversation II (3:3:0) Prerequisites: ARAB 330, appropriate placement score or permission of instructor. Continuation of ARAB 330.

Art History (ARTH)

History and Art History

Students taking ARTH courses should expect to participate in field trips or assignments outside the classroom at area museums.

101 Introduction to the Visual Arts (3:3:0) Introduction to the content and principles of the visual arts. Approach varies with instructor.

102 Symbols and Stories in Art (3:3:0) Themes and imagery in art from early Greece to the modern era.

103 Introduction to Architecture (3:3:0) Introduces study, principle, and understanding of art of architecture. Approach varies with instructor; may be historical, geographical, technical, or thematic. Field trips required.

150 Freshman Seminar (3:3:0) Prerequisite: freshman standing. Focuses on skills and methods of learning as well as subject matter as a way of introducing the discipline of art history. Topics vary.

200, 201 Survey of Western Art (3:3:0) Major periods, monuments, and themes of Western art and architecture. Introduces Washington, D.C., museum collections and a historical framework for further study in art history. Designed as a two-course sequence, but each part may be taken independently without prerequisite. ARTH 200 covers prehistory, the ancient world, and the Middle Ages; ARTH 201 covers the art of the Renaissance, the baroque period, and modern Europe and the Americas.

203 Survey of Asian Art (3:3:0) For non-Western credit. Introduces arts of South, Southeast, and east Asia. Examines aspects of culture and history of Asia. Discusses monuments and artifacts in a variety of media and their relation to social and historical contexts.

204 Survey of Latin American Art (3:3:0) Introduces arts of Latin America from pre-Columbian to modern era. Discusses important examples of painting, sculpture, and architecture in relation to culture and history of region.

Each 300-level course is generally offered once every two years.

303 National Traditions (1–3:1–3:0) Prerequisite: 24 credits. Studies traditions of art and architecture within a single selected country or historical region. Topic varies. May be repeated for credit with different course content.

311 Design of Cities (3:3:0) Prerequisite: 24 credits. Explores problems in urban design in a particular geographical region or historical period. Approach varies with instructor, and may involve archaeological or theoretical approaches appropriate to the specific context. May be repeated when course content is different.

315 Modern Architecture (3:3:0) Prerequisite: 24 credits. Studies in modern architecture from the Beaux Arts movement to the present; an investigation of stylistic, structural, or theoretical innovations.

319 Art and Archaeology of the Ancient Near East (3:3:0) Prerequisite: 24 credits. For non-Western credit. Aspects
of the art, archaeology, and culture of ancient Near East and Bronze Age Mediterranean. Approach varies depending on instructor; emphasis may be on Mesopotamia, Iran, Egypt, Anatolia, the Levant, or the Aegean.

320 Art of the Islamic World (3:3:0) Prerequisite: 24 credits. For non-Western credit. Introduction to Islamic art, from the time of Muhammad to present. Cultural and regional approach, utilizing local museum collections.

321 Greek Art and Archaeology (3:3:0) Prerequisite: 24 credits. History of ancient Greek architecture, sculpture, and painting.

322 Roman Art and Archaeology (3:3:0) Prerequisite: 24 credits. History of Roman architecture, sculpture, and painting.

324 From Alexander the Great to Cleopatra: The Hellenistic World (3:3:0) Prerequisite: 24 credits. Arts of the Hellenistic age within the context of history and culture of the period. Explores the powerful dynasties ruling wealthy empires; achievements in learning and literature housed in the Great Library at Alexandria; baroque sculpture adorning the Altar of Zeus at Pergamon; and Roman collectors of Greek art and antiques.

333 Early Christian and Byzantine Art (3:3:0) Prerequisite: 24 credits. Aspects of medieval art and culture in eastern Mediterranean world. Topics may include late antiquity, early Christianity, and the Byzantine empire and its neighbors. Designed to take advantage of unique local museum resources. Specific focus varies with instructor.

334 Western Medieval Art (3:3:0) Prerequisite: 24 credits. Aspects of art and architecture in medieval Europe, from the fall of the Roman Empire through the Gothic period. Specific focus may vary with instructor. May be repeated when course content is different.

340 Early Renaissance Art in Italy, 1300–1500 (3:3:0) Prerequisite: 24 credits. Studies in architecture, sculpture, and painting in the age of Giotto, Ghiberti, Masaccio, and Botticelli.

341 Northern Renaissance Art (3:3:0) Prerequisite: 24 credits. Studies in the art of France, Germany, and the Netherlands in the age of Van Eyck and Dürer.

344 Baroque Art in Italy, France, and Spain, 1600–1750 (3:3:0) Prerequisite: 24 credits. Studies in architecture, sculpture, and painting in the age of Caravaggio, Bernini, Velazquez, and Poussin.

345 Northern Baroque Art, 1600–1750 (3:3:0) Prerequisite: 24 credits. Studies in architecture, sculpture, and painting in the age of Rubens, Van Dyck, Rembrandt, and Vermeer.

350 History of Photography (3:3:0) Prerequisite: 24 credits. Development of photography from origins in France in the 19th century to the present.

359 Art of the 18th and 19th Centuries (3:3:0) Prerequisite: 24 credits. Introduction to the art and architecture of the 18th and 19th centuries. Topics focus on specific art forms, media, geographic regions, or the thematic categories. May be repeated once for credit when topic differs.

360 Nineteenth-Century European Art (3:3:0) Prerequisite: 24 credits. Movements from neoclassicism to symbolism discussed in relation to social, cultural, political, and technological changes in Europe.

362 Twentieth-Century European Art (3:3:0) Prerequisite: 24 credits. Study of major movements (fauvism, cubism, futurism, constructivism, surrealism, and expressionism) and important artists in 20th-century painting and sculpture. Focus may vary.

371 American Architecture and Material Culture (3:3:0) Prerequisite: 24 credits. Studies in the history of American architecture or decorative arts in cultural context. Topics range from 17th century to 20th century, depending on instructor.

372 Studies in 18th- and 19th-Century Art of the United States (3:3:0) Prerequisite: 24 credits. Developments in visual culture and the changing status of art practitioners throughout these periods. Focus is either chronological (Colonial Period, Gilded Age) or thematic (19th-century genre scenes, the American landscape and national identity). May be repeated once for credit with different topic. Lecture, discussion.

373 Studies in 20th-Century Art of the United States (3:3:0) Prerequisite: 24 credits. Developments in 20th-century American visual culture across all media. Focus may vary (postwar American “realisms,” women artists and feminist art). May be repeated once for credit with different topic. Lecture, discussion.

374 Art Now (3:3:0) Prerequisite: any course in art history or art studio, or permission of instructor. Explores visual art production since 1980, drawing on regional resources. Examines social, institutional, and political issues in recent art and its markets. Requires students to work collaboratively and make several field trips, including one Saturday bus trip to New York. Specific topics and assignments vary with the changing art season and instructor. Lecture, discussion.

376 Twentieth-Century Latin American Art (3:3:0) Prerequisite: 24 credits. Major movements and important artists in 20th-century Latin American art discussed in relation to social, cultural, and political conditions in the region.

380 African Art (3:3:0) Prerequisite: 24 credits. For non-Western credit. Focuses on sub-Saharan African art in terms of styles and aesthetics; materials and techniques; and geographical, social, cultural, and religious contexts. Specific focus may vary with instructor.

382 Arts of India (3:3:0) Prerequisite: 24 credits. For non-Western credit. History, culture, and arts of south Asia from earliest civilizations along the Indus River to onset of Western colonialism. Emphasizes role of material evidence in the creation of the South Asian history and how political, social, and religious developments affected the arts. Discusses monuments and artifacts in a variety of media in relation to historical contexts.

383 Arts of Southeast Asia (3:3:0) Prerequisite: 24 credits. For non-Western credit. Examines various cultural and artistic traditions of ancient Southeast Asia, from the earliest archaeological evidence to onset of colonialism. Lectures
and discussions focus on material culture of the great civilizations that arose within borders of modern Thailand, Cambodia, Indonesia, Burma (Myanmar), Vietnam, Laos, and Malaysia.

384 Arts of China (3:3:0) Prerequisite: 24 credits. For non-Western credit. Explores the complex and dynamic history of China by examining ways in which social, religious, and political shifts have given rise to new and variant forms of material culture.

385 Arts of Japan (3:3:0) Prerequisite: 24 credits. For non-Western credit. Art and architecture of Japan, with particular attention to the ways political changes, religious movements, and social developments influenced and shaped those creations. Discusses monuments and artifacts in a variety of media in relation to social and historical contexts.

386 The Silk Road (3:3:0) Prerequisite: 24 credits. Explores luxury arts and material culture of Eurasian trade routes between Mediterranean and China in historical, religious, and social contexts. Emphasizes cultural interactions in medieval Central Asia.

393 Art History Internships (3–6:0:0) Prerequisite: art history major or minor, and permission of instructor. Internship with a professional arts institution, organization, or individual in the Washington, D.C., area. Project to be arranged by student in consultation with faculty instructor and field supervisor. Strongly recommended for advanced art history students seeking exposure to professional work in visual arts. May be taken for 3 to 6 credits, or repeated for up to 6 credits.

394 The Museum (3:3:0) Prerequisites: 6 credits in art history at the 300-level, and completion or concurrent enrollment in all other required general education courses. Examines history, theory, practice, ethics, and current problems of collecting and displaying art and artifacts to the public. Emphasizes issues central to museums in Washington, D.C., or museums in other locations; focus varies with instructor.

399 Special Topics in the History of Art (3:3:0) Topics vary. At least one 400- or 500-level course is offered each semester; each topic area is generally offered every two years.

400 Historiography and Methods of Research in Art History (3:3:0) Prerequisites: ENGL 302, and 6 credits in art history at the 300 level; or permission of instructor. Historical investigation of theories, methods, and critiques involved in the discipline of art history. Approach or focus may vary with instructor. May be repeated for credit.

420 Advanced Studies in Ancient Art (3:3:0) Prerequisite: ENGL 302, and 300-level course in ancient art; or permission of instructor. Studies a particular area of ancient art of the Mediterranean, Near East, or Middle East. Topics may be art form or medium, geographical area, theme, function, or context. May be repeated for credit.

430 Advanced Studies in Medieval or Islamic Art (3:3:0) Prerequisite: ENGL 302, and a 300-level course in medieval or Islamic art; or permission of instructor. Studies a single topic in medieval or Islamic art. May focus on a particular period, region, or medium, or may explore cultural interconnections within medieval Eurasian world. May be repeated for credit.

440 Advanced Studies in Renaissance and Baroque Art (3:3:0) Prerequisite: ENGL 302, and 300-level course in Renaissance or baroque art; or permission of instructor. Studies a particular aspect of Renaissance or baroque art. Topics may be monographic, thematic, or concentrated on the art of a smaller time period or a particular area. May be repeated for credit.

460 Advanced Studies in 20th-Century European Art (3:3:0) Prerequisite: ENGL 302 and 300-level course in the art of 19th- or 20th-century Europe or the Americas; or permission of instructor. Study of a particular topic in 20th-century European art. Course may focus on a specific period, region, movement, medium, or theoretical issue, or explore cultural connections and transfer between regions.

471 Advanced Studies in Art of the United States (3:3:0) Prerequisite: ENGL 302 and 300-level course in American art. Studies a particular area of American art, focusing on a form, such as landscape or genre painting; theme, such as nationalism, regionalism, or iconography of the family; or movement, American modernism. May be repeated for credit.

472 Advanced Studies in 20th-Century Latin American Art (3:3:0) Prerequisite: ENGL 302 and 300-level course in 19th- or 20th-century art of Europe or the Americas, or permission of the instructor. Study of a particular topic in 20th-century Latin American art. Course may focus on a specific period, region, movement, medium, or theoretical issue, or explore cultural connections and transfer between regions.

482 Advanced Studies in Asian Art (3:3:0) Prerequisite: ENGL 302, and 300-level course in any area of Asian art; or permission of instructor. For non-Western credit. Seminar-style discussions on a specific topic in Asian art. May focus on the art of a particular period, movement, reign, or region, as well as theoretical issues or works in a particular medium. Content varies; course may be repeated for credit.

490, 491 Independent Study in Art History (3:0:0), (3:0:0) Prerequisites: 60 credits, ENGL 302, permission of instructor and chair, plus 9 credits in art history beyond ARTH 200, 201. Intensive study of a particular artist, period, or theoretical problem to be conducted by an individual student in consultation with instructor. Study proposal submitted before registration.

492, 493 Honors Directed Readings, Honors Directed Research (3:3:0), (3:3:0) Prerequisites: admission to art history honors program, ENGL 302, and permission of instructor. Linked individualized courses, usually given by same instructor. ARTH 492 involves directed readings, and ARTH 493 culminates in research paper related to subject of readings. Students must have completed at least one course in the field, or with the professor, chosen for these honors courses. The 3 credits of readings should be taken before the 3 research credits, or they may be taken concurrently.

499 Advanced Studies in Art History (3:3:0) Prerequisite: ENGL 302 and 300-level course, or permission of instructor. For non-Western credit. Seminar-style discussion on specific subjects in art history. Topics may vary. May be repeated for credit.

593 Art History Internships (3–6:0:0) Prerequisite: baccalaureate degree or equivalent, or permission of instructor.
Internship with a professional arts institution, organization, or individual in the Washington, D.C., area. Project to be arranged by student in consultation with faculty instructor and field supervisor. Recommended for advanced art history students seeking exposure to professional work in visual arts. May be taken for 3 to 6 credits, or repeated for up to 6 credits.

594 The Museum (3:3:0) Prerequisite: baccalaureate degree or equivalent, or permission of instructor. Examines history, theory, practice, ethics, and current problems of collecting and displaying art and artifacts to the public. Emphasizes issues central to museums in Washington, D.C., or museums in other locations. Specific focus may vary with instructor.

596 Independent Study (1–3:0:0) Prerequisite: baccalaureate degree or equivalent, or permission of instructor. Independent reading and research on specific project under direction of department member. Written report is required. May be repeated for credit.

599 Special Topics in the History of Art (3:3:0) Prerequisite: baccalaureate degree or equivalent, or permission of instructor. Topics vary.

600 Methods and Research in Art History (3:3:0) Prerequisite: admission to the art history MA program. Investigates theories, methods, and research strategies in discipline of art history. Designed for first-semester students in art history MA program; foundation for further graduate-level work in the program.

696 Independent Directed Readings (3:0:0) Prerequisites: admission to art history MA program, and permission of instructor. Taken in final semester of art history MA. Designed to prepare students for comprehensive exams by integrating past work and filling gaps in expected knowledge before the exam.

699 Topics in Art History (3:3:0) Prerequisite: graduate standing. Research seminar on aspects of art history. Topics vary, but course entails extensive critical readings and discussion, development of bibliographies, and advanced-level research papers.

Art and Visual Technology (AVT)
College of Visual and Performing Arts

101 New Majors Colloquium (1:1:0) Required of all AVT majors. May be taken prior to declaring the major or during the first semester as a declared AVT major. Provides a common core experience of contemporary perspectives on the broad range of professional career options open to studio art majors. Lectures address practical concerns but emphasize social, ethical, and philosophical aspects of visual arts professions.

103 Introduction to the Artist’s Studio (3:1:2) For nonmajors only. Through projects, readings, class critiques, visuals, and field trips, students explore materials, techniques, concepts, and processes essential to understanding the language of visual arts and the artist’s role. Develops imaginative thinking and sensitivity to visual environment.

104 Studio Fundamentals I (4:2:4) Explores elements and principles of two-dimensional design, establishment of visual vocabulary, and critical analysis that supports conceptual development. Studio projects build fundamental knowledge, skills, understanding of precedents, and contemporary practices in visual arts.

105 Studio Fundamentals II (4:2:4) Prerequisite: AVT 104 or permission of instructor. Explores elements and principles of three-dimensional design, establishment of visual vocabulary, critical analysis that supports conceptual development. Studio projects explore form and composition, time-based media, materials, precedents, and contemporary practices in visual arts.

180 Computers in the Creative Arts (3:1:2) Introduces computing from artist’s perspective. Emphasizes computer use for artistic creation and research. Overview of hardware, software, operating systems, peripherals, two-dimensional graphics, and web design.

204 Visual Thinking (3:3:0) Explores the ways contemporary artists use principles of design and perception to challenge how we see our world physiologically, psychologically, or socially. Examples drawn from film, photography, new media art, and other contemporary artistic media.

206 Color (4:2:4) Prerequisite: AVT 104 or permission of instructor. Color theory and principles of color interaction, including additive, subtractive, and partitive color experience, study of harmony, contrast, focus, space, opacity, transparency, temperature and value in both wet and dry media, and related applications of color technology.

215 Typography (4:2:4) Prerequisites: AVT 104 and 180, or permission of instructor. Introduction to history and use of type. Reading and projects develop awareness of type as a linguistic and visual communication tool. Introduces typographic design elements, including color, hierarchy, integration with imagery, structure, and content.

222 Drawing I (4:2:4) Introduction to fundamentals of drawing, with emphasis on observational study and the effective and expressive use of line, mass, value, perspective, and formal composition. AVT majors encouraged to take AVT 222 with AVT 104.

232 Painting I (4:2:4) Introduction to the basic methods and principles of painting with a focus on observation, paint application, formal composition, color mixing, and the articulation of form.

243 Printmaking I (4:2:4) Introduction to basics of hand printing. Emphasis on translation and transferal of images, tools, equipment, and technical skills for making a well-defined print. Presentations and field trips focus on aesthetic concerns of making multiple images.

252 Photography I (4:2:4) Introduces basic principles and aesthetics of photography, 35-mm camera operation, and darkroom practices, including film processing and print development.

253 Introduction to Digital Photography (4:2:4) Introduction to the digital camera as a tool for electronic photographic image making. Students will be introduced to principles and aesthetics of digital photography and also learn basic image-editing skills in a computer environment.

262 Sculpture I (4:2:4) Projects in sculpture with emphasis on contemporary theory and issues, the development of individual concepts, and the exploration of materials, tools, and processes. Faculty demonstrations, lectures, gallery and museum visits, and regular student work critiques.
272 Interdisciplinary Arts (4:4:2) Introduces contemporary interdisciplinary art practice through readings and studio projects in performance and installation. Provides students with opportunities to deepen understanding of conceptual art, nontraditional media practices, and collaborative practice in visual arts.

280 Introduction to Digital Arts (4:2:4) Prerequisite: AVT 104 and 180, or permission of instructor. Investigates ways in which contemporary artists employ tools of digital culture. Students create meaningful works of art that demonstrate conceptual awareness and technical skill.

300 Artsbus Attendance (0:0:0) Students travel to New York or other destinations aboard the AVT Artsbus to attend faculty-selected exhibitions. AVT majors must satisfactorily complete course once for each semester they are enrolled as majors, up to five times. Repeatable up to three times per semester. Graded S/NC (satisfactory/no credit).

301 Visual Voices Colloquium (1:1:0) Students attend AVT Visual Voices lecture series during the semester and complete assignments related to the topics covered. AVT majors must accumulate at least 3 credits in this colloquium to graduate. May be repeated each semester up to a total of 8 credits.

305 Creative Processes (3:3:0) Study of the creative process in general, with emphasis on the inspiration, working methods, and final creations of various artists. Students explore their own creative processes through journal keeping, collaborative exercises, and projects.

307 Aesthetics (3:3:0) Interdisciplinary course examines broad range of contemporary art and culture to engage an expansive conception of aesthetic experience. Students engage with historical and contemporary aesthetic theories, build heightened aesthetic sensibility, and explore their personal aesthetic.

309 Art as Social Action (3:3:0) Interdisciplinary exploration of work by citizen-artists whose art making engages the social world. Students learn about the history of socially engaged art making and experiment with individual and collaborative projects addressing social issues.

311 Graphic Design Methods and Principles (4:2:4) Prerequisite: AVT 215 or permission of instructor. Focuses on developing design solutions requiring demographic, historical, and/or cultural research. Course strengthens design and typography skills, introduces conceptual problem solving, audience considerations, and broad-based tools designers use to develop effective visual communications.

313 Editorial Design (4:2:4) Prerequisite: AVT 311 or permission of instructor. Development and production of long-form design projects (magazines, newspapers, catalogs, and other serial and/or multipage publications). Emphasizes on narrative, consistency, structure, clarity. Addresses information design issues, and reinforces conceptual skills and integration of imagery and text.

318 History of Graphic Design (3:3:0) Survey of design history. Looks at print and web design as both a reaction to and shaper of the broader culture (including other fine and applied arts) through the study of major movements and designers.

323 Drawing II (4:2:4) Prerequisite: AVT 222 or permission of instructor. Students develop observational, sketching, and rendering skills. Introduction to a range of materials, methods, formal concepts, drawing in series, and critique vocabulary.

324 Figure Drawing (4:2:4) Prerequisite: AVT 222 or permission of the instructor. Drawing with an emphasis on the observational study of the human body. Human anatomy and proportion are examined through a series of methodological approaches, including gesture, contour, mass, and modeling.

326 Nontraditional Approaches to Drawing (4:2:4) Prerequisites: AVT 222 or permission of instructor. This course encourages students to challenge some traditional approaches to drawing by creating innovative works that combine familiar drawing techniques with a variety of materials, approaches, and unusual formats.

333 Painting II (4:2:4) Prerequisite: AVT 232 or permission of instructor. Course focuses on the development of formal and technical skills, with an emphasis on paint application, color interaction, and support building and preparation. Concepts, methodologies, and approaches relevant to contemporary painting are introduced.

336 Experimental Painting (4:2:4) Prerequisite: AVT 232 or permission of instructor. Using contemporary painting practices as starting place, students explore a variety of experimental and conceptual approaches to painting.

337 Figurative Painting (4:2:4) Prerequisite: AVT 232 or permission of instructor. Working primarily with live models, students explore the human form as the main subject for a variety of visual and expressive inquiries.

343 Printmaking II (4:2:4) Prerequisite: AVT 243 or permission of instructor. An introduction to relief, screenprint, and intaglio printing, including the study of historical antecedents and their relevancy to contemporary printmaking. Students learn reductive and additive techniques in preparing printing surfaces.

345 Artists’ Books as Visual Language (4:2:4) Prerequisites: AVT 180 or permission of instructor. Introduces the artist’s book as both physical structure and creative association of words and images. Students learn techniques of bookmaking, binding, and traditional and digital printmaking to produce an artist-made book with narrative and sequential elements.

346 Digital Printmaking (4:2:4) Prerequisites: AVT 180 or permission of the instructor. A beginning course in hand printing digitally processed images. Projects focus on electronic means of creating and manipulating imagery. Students achieve skills in multiple steps and incremental development required in making prints.

353 Photography II (4:2:4) Prerequisite: AVT 252 or permission of instructor. Continuation of Photography I, with further investigation into the aesthetics of photography through experimentation with new films, developers, papers, and development of a portfolio of photographic images.

354 Digital Photo (4:2:4) Prerequisites: AVT 252 and 180, or permission of the instructor. A computer-intensive class in which students create digital images from the viewpoint of a photographic artist. Emphasis on digital photo techniques, including making digital negatives, concept development, and visual aesthetics.
356 Studio Lighting I (4:2:4) Prerequisite: AVT 353 or permission of instructor. Introduces theory, concepts, and applications of photographic studio lighting using both artificial and natural light sources with an emphasis on the ability to control and manipulate light.

363 Sculpture II (4:2:4) Prerequisite: AVT 262 or permission of instructor. Expands on the principles and processes introduced in Sculpture I, developing a higher level of technical competence and critical sophistication. Lectures, independent student research, and gallery and museum visits required. Vigorous critiques.

370 Entrepreneurship in the Arts (4:2:4) Combined lecture and studio course in developing entrepreneurial skills in arts. Special focus on developing communication skills and planning strategies, as well as on nurturing skills that enable students to creatively solve problems and think about opportunities.

371 Visual Perception and the Arts (3:3:0) Review of major approaches to the study of visual perception. Topics include analysis of picture perception, visual thinking, the relationship between symbolic and nonsymbolic thinking and representation, and how pathologies of vision affect art production.

372 Hip Hop Culture (3:3:0) Examines hip hop as an art form within a continuum of cultural expression. Explores multilayered social, political, and aesthetic aspects of hip hop, historical causes and precedents, and contemporary derivatives and implications.

373 Performance Studio (4:2:4) Prerequisite: AVT 272 or permission of instructor. Studio course focused on theory and practice of collaborative performance art. Detailed analysis of creation and production processes from interdisciplinary perspective in conjunction with practical training in multimedia technologies, body sculpture, and theater of images.

374 Sound and Vision (4:2:4) Prerequisite: AVT 180 or 280, or permission of instructor. Explores the function and use of sound in conjunction with time-based media and installation. Students learn digital tools for selection, editing, processing, and integration of sound and music (postproduction) into video, animation, and installation projects.

376 Live Movies (4:2:4) Prerequisite: AVT 272 or permission of instructor. Advanced performance studio emphasizing cinematic forms and multimedia technologies. Also covers sound design, scenic design and materials, production planning, and interdisciplinary approaches to narrative and content in performance. Students collaborate on production projects.

377 Cyberpunk (4:6:0) Traces the ways that cinema, music, fiction, cultural theory, visual art, television, theater, and performance have embraced and been shaped by cyberpunk and cyberculture. Includes readings, writings, discussion, screenings, guest speakers, and research projects.

378 The African American Experience in the Performing Arts (3:3:0) Through lectures, slides, audio recordings, videos, and films, students examine African American contributions to cultural fabric of American forms and institutions. Artistic contributions examined in aesthetic, political, historical, and social contexts.

382 Digital Art and Animation (4:2:4) Prerequisite: AVT 280 or permission of instructor. Introduces conceptual, technical, and aesthetic practices of two-dimensional computer animation. Students learn to animate hand-drawn and computer-generated images. Students work to develop and create an imaginative and meaningful short animation with sound.

383 Three-Dimensional Digital Art (4:2:4) Prerequisite: AVT 382 or AVT 390, or permission of instructor. Students create thoughtful and imaginative, three-dimensional scenes with scaled objects, surface textures, lights, and shadows. These scenes serve as environments for short animations. Emphasis on idea generation, contemporary practices, visual aesthetics, and technique.

390 Digital Media and Video Art (4:2:4) Prerequisite: AVT 280 or permission of the instructor. Integrates study of contemporary art theory, montage theory, and artistic practices with application to new media and technology. Special focus on video, visual digital, video art, sound design, and the sociopolitical implications of digital work.

392 Gallery Practices (4:2:4) Prerequisite: 3 credits of AVT or ARTH, junior standing, or permission of instructor. Introduction to practices of the contemporary art gallery, including curatorship, exhibition planning and installation, care and proper handling of artwork, technology in the gallery, collaborating with outside curators, documentation, budget, publicity, and educational and docent activities.

393 Field Experience in the Arts (1–6:0:0) Prerequisite: junior standing and permission of instructor and academic advisor. Introductory working and learning experience with an organization or individual in the arts, or as a teaching assistant. Placement documentation to include 45 hours of work per credit. May be repeated for credit for maximum 6 credits.

394 Honors Seminar (1:1:0) Prerequisite: by invitation to qualified honors students. Offers highly motivated students opportunities to interact with art world professionals through field trips, research, critiques, and creative assignments. Students accrue credits toward graduation with AVT honors. Repeatable for up to 8 credits.

395 Writing for Artists (3:3:0) Prerequisite: ENGL 302 or permission of instructor. Practical writing seminar in which students practice typical writing needs of creative professionals, including artist’s statements, grant proposals, and reviews, while also exploring ways in which artists have used writing, books, and language in art making.

396 Introduction to Art Teaching and Learning (3:3:0) Prerequisites: junior standing, completion of ENGL 302, and completion of at least 20 credits of AVT course work (including AVT 307); or permission of art education advisor. Prior to enrollment, students must complete art education inquiry form. Explores art-teaching profession through readings, discussion, hands-on activities, and visits to diverse area public schools. Students discover a variety of ways that art is taught and evaluated to meet multiple educational needs of today’s PK–12 students.

399 Special Topics in Art and Visual Technology (1–6:1–6:0–6) Explores topical studies in AVT including theoretical and critical aspects of art or studio production. Topics and credit vary with instructor. May be repeated when taken under different topics.
414 Corporate Design and Branding (4:2:4) Prerequisites: AVT 252 or 253, AVT 311, and AVT 395, or permission of instructor. Fundamentals of branding and identity design. Topics include logo development, product packaging, marketing and advertising collateral, web branding, and broadcast advertising development. Special attention is given to the creation of a graphics standards guide.

415 Web Design and Usability (4:2:4) Prerequisites: AVT 252 or 253, AVT 311, and AVT 395 or permission of instructor. Introduces students to web design, usability, and the use of popular applications for static, interactive, and motion-based web development.

419 Topics in Graphic Design (1–6:1–6:0–6) Prerequisites: AVT 311 and AVT 313 or 414. Rotating subjects give students a deep look into and appreciation of a specific topic in design practice. Topics and credit vary with instructor. May be repeated when taken under different topics.

422 Drawing III (4:2:4) Prerequisite: AVT 323 or permission of instructor. Builds on intermediate drawing skills, emphasizing individual exploration and expressive techniques. Along with rigorous observational study, students work from a variety of sources to develop a broad understanding of visual solutions within contemporary art practice.

423 Drawing IV (4:2:4) Prerequisite: AVT 422 or permission of instructor. Students learn and practice advanced drawing skills and techniques in a variety of media and formats. Emphasis on development of content, personal sources, techniques, presentation strategies, and methods of analysis through critique.

432 Painting III (4:2:4) Prerequisite: AVT 333 or permission of instructor. Intermediate course with an emphasis on developing personal content, concepts, painting strategies, and a practical understanding of contemporary ideas in painting.

433 Painting IV (4:2:4) Prerequisite: AVT 432 or permission of instructor. In this capstone course, students engage in a self-directed studio practice through the development of content, personal sources, techniques, presentation strategies, and methods of analysis through critique.

434 Painting V (4:2:4) Prerequisite: AVT 433 or permission of instructor. Students work rigorously and independently, advancing individual studio practice through in-depth dialogue with faculty and formal group critiques. Emphasis on individual decision making, personal initiative, and critical vocabularies.

435 Painting VI (4:2:4) Prerequisite: AVT 434 or permission of instructor. Advanced directed research in painting. Employing rigorous concepts, presentation strategies, and in-depth critique, students develop independent projects into a cohesive body of work.

442 Printmaking III (4:2:4) Prerequisites: AVT 343 or permission of the instructor. An intermediate print media course with an emphasis on a wider variety of tools and concepts that investigate photo-based imagery and advance personal narrative.

443 Printmaking IV (4:2:4) Prerequisites: AVT 442 or permission of the instructor. An advanced print media course that uses hand-drawn, digital, and photo-based imagery. Students explore traditional and new printmaking techniques in a series of related prints and explore their relevancy to contemporary printmaking.

444 Printmaking V (4:2:4) Prerequisites: AVT 443 or permission of the instructor. Advanced print media course incorporating three-dimensional applications of hand printmaking. Students develop concepts in digital printmaking, book making, sculptural prints, and installation works. Explores issues in contemporary printmaking through critical discussions, reading, and writing assignments.

445 Printmaking VI (4:2:4) Prerequisites: AVT 444 or permission of the instructor. Students produce a body of print media work reflecting their interests, including the broader context of social, cultural, and contemporary issues. Students engage in collaborative studio practices and independent projects to integrate multiple visual technologies.

452 Advanced Photographic Printing I (4:2:4) Prerequisite: AVT 353 or permission of instructor. Advanced darkroom course with emphasis on fine art and craft of black-and-white photographic print. Students produce a personal portfolio based on technical instruction, contemporary photographic approaches, and critical discussions.

453 Advanced Photographic Printing II (4:2:4) Prerequisite: AVT 452 or permission of instructor. Intensive continuation of AVT 452. Students produce a photographic portfolio based on technique, content, personal expression, photographic criticism, and knowledge of contemporary trends. Includes critical discussions, and reading and writing assignments.

454 Alternative Photo Processes (4:2:4) Prerequisites: AVT 353 or permission of instructor. Introduction to 19th century and nontraditional photographic processes including cyanotype, van dyke, gum bichromate, liquid emulsion, and image transfer. Exploration and discussion of photography’s influences, application, and use in other mediums.

455 Advanced Digital Photo (4:2:4) Prerequisites: AVT 354 or permission of instructor. Continuation of 354 Digital Photo with further exploration into digital techniques and personal expression. The semester is spent developing and creating a portfolio of photographic images.

456 Large Format Photography (4:2:4) Prerequisites: AVT 353 or permission of instructor. An introduction to basic concepts, controls, and exposure theories of large format photography. Students develop an aesthetic knowledge of the view camera’s potential working with 4” x 5” view cameras in the studio and field.

457 Documentary Photography (4:2:4) Prerequisites: AVT 452 or permission of instructor. Introduces documentary photography: techniques, history, choices, and ideas necessary to create meaningful photo essays that incorporate a personal, committed, in-depth approach to seeing and depicting lives and situations.

458 Advanced Studio Lighting (4:2:4) Prerequisites: AVT 356 or permission of instructor. The advanced study of photographic studio lighting concepts using electronic strobes and power packs with emphasis placed on constructing studio materials, metering techniques, staging complex sets, and on-location photography.

459 About Photography: Practice and Research (4:2:4) Prerequisites: one course from AVT 452–458 or permission of instructor. A combined studio and lecture course investigating photography’s history, critical theory, and practice. Lectures, discussions, readings, and projects focus on a medium that has enormously influenced art and culture.
462 Sculpture III (4:2:4) Prerequisite: AVT 363 or permission of instructor. Advanced studio course for continued individual, conceptual, and critical development in sculpture. Biweekly seminar, independent research, museum and gallery visits, vigorous individual and group critiques, required documentation, and portfolio preparation supporting studio projects.

463 Sculpture IV (4:2:4) Prerequisite: AVT 462 or permission of instructor. Intensive studio course for advanced sculpture students to further individual, conceptual, and critical development. Students produce a body of work based on technical exploration, critical discussion, reading, and writing.

464 Sculpture V (4:2:4) Prerequisite: AVT 463 or permission of instructor. Advanced studio course for rigorous and independent production of sculpture. Weekly topical seminar, vigorous critiques, museum and gallery visits, professional documentation, and research resulting in a body of work to be exhibited.

465 Sculpture VI (4:2:4) Prerequisite: AVT 464 or permission of instructor. Continuation of advanced work in AVT 465. Students work rigorously and independently, gaining insights into personal process and direction through one-on-one critical dialogue with faculty and formal group critiques. Emphasizes individual decision making and personal initiative.

472 Critical Theory in the Visual Arts (3:3:0) Prerequisite: ARTH 374 or permission of instructor. Examination of currents in theory and criticism that inform contemporary practice and critical analysis in the visual arts.

482 Advanced Two-Dimensional Digital Art (4:2:4) Prerequisites: AVT 280 or permission of instructor. In-depth look at advanced digital imaging techniques and contemporary practices. Students are required to create a portfolio of large-format high-resolution digital prints and further develop visual critical analysis skills through active participation in critiques.

483 Internet Art (4:2:4) Prerequisite: AVT 382 or AVT 390, or permission of instructor. Investigates Internet as space for making art while detailing a selection of tools, concepts, issues, and history pertaining to Internet art.

487 Advanced Digital Media (4:2:4) Prerequisite: AVT 382 or AVT 390, or permission of instructor. Integrates media art techniques, including rotoscoping, stop motion, layer compositing, hand drawing, and experimental animation, with digital video editing and DVD authoring. Special focus on intersection of traditional techniques, installation, and contemporary media art theory.

489 Internship in Art and Visual Technology (1–6:0:0) Prerequisite: senior standing, completion of 12 concentration credits, and permission of instructor. Unpaid professional-level work experience in a professional organization or with an individual artist, related to the student’s concentration and career plans. Placement documentation to include 45 hours of work per credit. May be repeated for credit for maximum 12 credits.

491 Independent Study in Art and Visual Technology (1–6:0:0), (1–6:0:0) Prerequisite: senior standing, completion of 12 concentration credits, and permission of instructor. Opportunity for development of advanced skills and concepts in a field of interest. Study proposal must be approved by instructor prior to registration. Project documentation to include 45 hours of work per credit. May be repeated for credit for maximum 24 credits.

493 Teaching Visual Thinking Through Media, PK–12 (3:3:0) Prerequisite: AVT 396 or permission of art education advisor. Investigates range and appropriateness of media and materials that encourage creative expression in the art classroom for PK–12 students, and expands the artist-teacher’s visual repertoire. Incorporates art history, criticism and aesthetics, as well as language arts and other content areas that challenge students’ artistic growth and human development.

494 Teaching Critical Response to Art, PK–12 (3:3:0) Prerequisite: AVT 396 or permission of art education advisor. Develops visual literacy and critical-thinking skills for application to the PK–12 classroom by examining theoretical models and applying strategies to expand knowledge about art and artifacts. Includes intensive writing, readings, discussions, museum work, research and Internet skills, and studio work.

497 Senior Project (4:2:4) Prerequisites: senior art and visual technology major, completion of 12 concentration credits, and completion of or concurrent enrollment in all required general education courses. Capstone course in which students develop and present a cohesive body of work along with written materials and documentation. Students participate in critiques with visiting artists or AVT faculty and in workshops supporting professional goals.

498 Senior Design Project (4:2:4) Prerequisites: senior art and visual technology major, completion of AVT 311, 313, and 414, and completion of or concurrent enrollment in all required general education courses. Capstone course in which students develop and present a design project exploring the possibilities of personal or professional expression. Students participate in critiques with visiting artists or AVT faculty and in workshops supporting professional goals.

522, 523 Drawing V, VI (4:2:4), (4:2:4) Prerequisite: admission to AVT graduate program or permission of instructor for AVT 522; AVT 522; or permission of instructor for 523. Drawing on an advanced level, emphasizing individual decision-making and personal initiative.

526 Independent Study (1–6:1–6:0) Prerequisite: BA or equivalent, or permission of instructor. Independent reading and research on specific project under department faculty member’s direction. Written reports required. May be repeated for credit.

599 Special Topics in Art and Visual Technology (1–6:1–3:0–6) Prerequisite: admission to AVT graduate program, or permission of instructor. Exploration of topical studies in AVT, including theoretical and critical aspects of art or studio production. Topics and credit vary with instructor. May be repeated when taken under different topics.
600 Research Methodologies (3:3:0) Prerequisite: admission to AVT graduate program, or permission of instructor. Graduate seminar focusing on development of independent research project in student’s area of emphasis. Explores principal methods of researching and documenting art and arts practice. Along with traditional methods of library research, emphasizes new processes of examination and investigation through the use of computer-aided research systems.

605 Issues and Research in Art Education (3:3:0) Prerequisite: admission to the MAT program and permission of instructor. Readings and projects explore historical and contemporary ideas, issues, philosophies, pedagogy, and research in art education. Investigates teachers’ use of research-oriented questions and data to explore classroom issues and improve teaching and learning.

610 Graduate Seminar (1–4:0:0) Prerequisite: admission to AVT graduate program, or permission of instructor. Seminar course required of all AVT graduate students four times during course of study. Students present their work or the work of contemporary artists for discussion and peer and faculty critiques. Special focus on developing public communication and presentation skills on contemporary issues in the arts. Repeatable for 4 credits.

615 Technology for Art Teachers (3:3:0) Prerequisite: admission to the MAT program and permission of instructor. Addresses use of technology in PK–12 art classroom. Focuses on research, presentation and instruction, and image creation. Students develop technology-enhanced teaching units for different grade levels and explore related issues, including copyright, plagiarism, and appropriation.

616 Networked Art Practice (5:2:6) Prerequisite: admission to AVT graduate program, or permission of instructor. Studio, lecture course investigating art as networked activity. Particular attention focused on Internet as context for creation, distribution, and patronage of art.

620 Theory, Criticism and the Visual Arts (3:3:0) Prerequisite: admission to AVT graduate program, or permission of instructor. Cross-disciplinary graduate seminar focusing on key theories and themes that have informed 20th- and 21st-century arts practice. Explores theory and criticism in a variety of contexts, from popular to scholarly, and considers the role of artists as thinkers and writers.

622 Advanced Drawing (4:2:4) Prerequisite: admission to AVT graduate program, or permission of instructor. Advanced directed research in drawing with continued development of individual aesthetic. Study of historical and philosophical precedents integral.

632 Graduate Painting I (5:2:6) Prerequisite: admission to AVT graduate program, or permission of instructor. Entering students are expected to be competent painters, with technical proficiency, a disciplined process, and a directed personal vision. Students work rigorously and independently toward the understanding and mastery of techniques, methods, and concepts relevant to formal expression of personal content. Students expected to participate in critical discourse with supervising faculty. Achievement measured by faculty review board at midsemester and term’s end.

633 Graduate Painting II (5:2:6) Prerequisite: AVT 632, or permission of instructor. Building on research and practices established in Graduate Painting I, students continue to develop strategies for the expression of personal vision and style. Progress tracked and assessed through periodic one-on-one critical discussions with supervising faculty. Achievement measured by faculty review board at midsemester and term’s end.

634 Advanced Graduate Painting (5:2:6) Prerequisite: AVT 633, or permission of instructor. Working independently on a cohesive body of work, students must demonstrate a thorough understanding and mastery of techniques, methods, and concepts relevant to their own practices, and be able to discuss their work within the context of historical and contemporary art practices. Progress tracked and assessed through periodic one-on-one critical discussions with supervising faculty. Achievement measured by faculty review board at midsemester and term’s end.

642, 643 Graduate Printmaking I, II (5:2:6), (5:2:6) Prerequisite: admission to AVT graduate program, or permission of instructor. Directed research and practice in printmaking focuses on individualized development of content and technique. Explores intellectual and expressive aspects of printmaking process.

644 Advanced Graduate Printmaking (5:2:6) Prerequisite: AVT 643, or permission of instructor. Intensive course of creative exploration in print media that furthers students’ independence through production of individualized body of work reflecting interests within the broader contexts of contemporary social, technological, and cultural issues. Students also engage in collaborative studio practices to integrate visual technologies in their work. These may include digital imaging, drawing, graphic design, painting, performance, photography, and sculpture.

652 Graduate Photography I (5:2:6) Prerequisite: admission to AVT graduate program, or permission of instructor. Critical theory and directed practice in photography focusing on development of a personal voice and working method through intellectual activity and creative work. Emphasizes ability to explore concepts, develop skills, and evolve as a communicator of ideas and photographic artist.

653 Graduate Photography II (5:2:6) Prerequisite: admission to AVT graduate program, or permission of instructor. Continuum of Graduate Photography I, an intensive critique class concentrating on the development of creative work with emphasis on articulating responses to others’ work, the cultural climate, and issues involved in one’s own work as it progresses. Weekly classes share equal time with critical theory and hands-on studio work. Includes readings, visiting artists and lecturers, and field trips.

654 Advanced Graduate Photography (5:2:6) Prerequisite: AVT 653, or permission of instructor. Advanced graduate photography course. Intensive critique class concentrating on the development of creative work with emphasis on articulating responses to others’ work, the cultural climate, and issues involved in one’s own work as it progresses. Weekly classes share equal time with critical theory and hands-on studio work. Includes readings, visiting artists and lecturers, and field trips.

662 Graduate Sculpture I (5:2:6) Prerequisite: admission to AVT graduate program, or permission of instructor. Intensive studio course that furthers student independence through production of a body of work reflecting interests, including a broader context of social, cultural, and contempo-
porary issues. Emphasizes self-evaluation, critical discussion, reading, and writing.

663 Graduate Sculpture II (5:2:6) Prerequisite: AVT 662 or permission of instructor. Intensive studio course that furthers student independence through production of a body of work reflecting interests, including a broader context of social, cultural, and contemporary issues. Emphasizes self-evaluation, critical discussion, reading, and writing.

664 Advanced Graduate Sculpture (5:2:6) Prerequisite: AVT 663 or permission of instructor. Emphasizes individual creative production and development, with periodic exposure of student’s work and ideas to the critical attention of the AVT teaching faculty and other graduate students. Writing and reading components.

667 Two-Dimensional Art Making: Form, Theme, and Context (4:2:4) Prerequisite: admission to the MAT program and permission of the instructor based on a portfolio review. Through studio work and research on basic and innovative drawing strategies, students explore expressive visual qualities, composition, and color. Students develop professional portfolios that incorporate meaningful themes and contexts for developing visual literacy in PK–12.

668 Three-Dimensional Art Making across Cultures (4:2:4) Prerequisite: admission to the MAT program and permission of the instructor. Explores the diversity of art forms in world cultures and work of traditional and contemporary artists. Students learn basic three-dimensional art-making techniques, including ceramics and fibers, and learn to design three-dimensional art instruction for PK–12 levels.

670 Teaching Practicum (3:3:0 or 6:6:0) Prerequisite: admission to AVT graduate program or permission of instructor. Supervised classroom teaching practicum in Mason’s undergraduate program or community college program. May be repeated for total 6 credits.

672 Performance Studio I (5:2:6) Prerequisite: admission to AVT graduate program or permission of instructor. Introductory studio course looking at performance as a visual art practice and focusing on time, space and the body. Emphasizes artist as performer. Students study the work of performance practitioners, make short performance pieces, document and exhibit their work, and go to galleries and performances locally and in New York. Substantial research project required.

673 Performance Studio II (5:2:6) Prerequisite: admission to AVT graduate program or permission of instructor. In-depth studio course focusing on collaborative practice of performance art. Analyzes creation and production processes from an interdisciplinary perspective in conjunction with practical training in multimedia performance, complemented by screenings, readings, guest artists, and field trips.

674 Advanced Performance Studio (5:2:6) Prerequisite: AVT 673 or permission of instructor. Advanced laboratory for creating and producing performance art. Emphasizes new technologies and their applications, multimedia scriptwriting and storyboarding, and the creation of audiovisual performance. Students work independently and also contribute to collaborative production.

675 Advanced Performance Topics (5:6:2) Prerequisite: AVT 673 or permission of instructor. Opportunity for advanced study in interdisciplinary arts topics including African American experience in the performing arts, cyber-punk, global motion, interarts figures, live movies, writing and performance. May be repeated for maximum 15 credits when taken under different topics.

676 Sound and Music for Video and Animation (5:2:6) Prerequisite: admission to AVT graduate program or permission of instructor. Combined lecture and studio course focusing on selection, editing, processing, and integration of sound and music (postproduction) into video and animation. Studies time, frequency, and amplitude domain and processing. Students produce sound and music for 15-minute film or animation due at semester end.

678 Interface and CD-ROM Design (5:2:6) Prerequisite: admission to AVT graduate program or permission of instructor. Combined lecture and studio course in multimedia interface and CD-ROM design. Focuses on exporting traditional visual and aural artistic aesthetic to the computer environment within a multimedia context. Assigned class readings augmented and supported by presentations of various digital interfaces and CD-ROM examples. Discusses commercial, entertainment, and educational titles, as well as CD-ROM experimental art works. Studio time divided between AVT labs and area multimedia facilities. Students conceive, design, and develop two CD-ROM or Kiosk Interfaces due at midterm, and complete a dual platform CD-ROM project due at semester end.

681 The Art of 2D Animation (5:2:6) Prerequisite: admission to AVT graduate program or permission of instructor. Designed to broaden range of visually expressive time-based media from cell animation and stop motion animation to rotoscoping and two-dimensional digital animation. Emphasizes idea generation, concept development, and visual aesthetics.

682 The Art of 2D Digital Art (5:2:6) Prerequisite: admission to AVT graduate program or permission of instructor. Overview of two-dimensional computer-imaging applications in the arts, including painting, printmaking, mixed media, illustration, video, and animation. Lectures combine technical and aesthetic material, including image processing for artists and color reproduction. Emphasis on developing advanced studio portfolio.

685 Video Art (5:2:6) Prerequisite: admission to AVT graduate program or permission of instructor. Explores video as medium that is transforming art and is transformed by art. Emphasizes developing an approach to personal narrative, creative skills and construction of meaning, as well as on acquiring technical skills.

686 Three-Dimensional Digital Art (5:2:6) Prerequisite: admission to AVT graduate program or permission of instructor. Teaches how to create realistic, three-dimensional scenes with scaled objects, surface textures, lights, and shadows. Emphasizes idea generation, concept development, visual aesthetics, and technical abilities. Students required to render a portfolio of high-resolution images.

687 Advanced Digital Media (5:2:6) Prerequisite: admission to AVT graduate program or permission of instructor. Advanced course in digital media, including layer compositing, digital video editing, rotoscoping, and cell animation. Emphasizes integrating traditional techniques with software applications, and publishing projects to CD-ROM, DV tape, DVD, and Internet.
688 Digital Animation (5:2:6) Prerequisite: admission to AVT graduate program or permission of instructor. Study of digital two-dimensional and three-dimensional animation practices. Introduces lighting, camera movement, object motion, timing, and texture mapping as students plan and produce a short animation. Emphasizes idea generation, concept development, visual aesthetics, and technical abilities.

691 Elementary Art Education (3:3:1) Prerequisite: admission to the MAT program and permission of instructor. Concepts and methods in early childhood and elementary art education. Students spend three hours per week in class and one hour per week of required field experience in public schools and other educational settings.

692 Secondary Art Education (3:3:1) Prerequisite: AVT 691 or permission of instructor. Concepts and methods in secondary art education. Students spend three hours per week in class, and one hour per week of required field experience in the public schools and other educational settings.

693 Apprenticeship (3:3:0 or 6:6:0) Prerequisite: admission to AVT graduate program or permission of instructor. Apprenticeship at a local business conforming to students’ interests in visual information technologies. May be repeated for total 6 credits.

695 Internship in Art Education (Student Teaching) (6:0:0) Prerequisite: completion of all other MAT program requirements. Corequisite: AVT 696. Full-time internship in which students teach in elementary and secondary schools with guidance from cooperating mentor teachers. College supervisors make periodic site visits to observe, assess, and evaluate progress.

696 Seminar for Student Teachers (1:2:0) Corequisite: AVT 695. Weekly professional seminar focused on needs and concerns of student teachers. Covers issues as they emerge in practice, and concludes with an “Art of Teaching Art” exhibit of work by students of preservice teachers.

796, 798, 799 Directed Project, Directed Reading, Thesis (1–9:0:0), (3:0:0), (1–3:0:0) Prerequisite: admission to AVT graduate program or permission of instructor. Three courses comprising the MFA comprehensive experience for AVT students. Involves a study of historical basis for studio and class, and one hour per week of required field experience in the public schools and other educational settings.

601 Fund Raising/Development in Arts (3:3:0) Prerequisite: admission to graduate program in master of arts in arts management or permission of instructor. Overview for students seeking general knowledge, as well as introductory course for those who will complete the fund-raising concentration. Teaches role of fund raising as management function and part of overall strategic intention of arts organizations, presenting fund raising as a multifaceted, team-based process. Analyzes tools and techniques for effective fund raising.

602 Seminar in Arts Management (3:3:0) Prerequisite: admission to graduate program in CVPA or permission of instructor. Develops tools and techniques necessary for successful pursuit of a management career in visual and performing arts. Introduces wide range of arts organizations, working arts administrators, and institutional models through guest lectures, readings, field trips, and analysis of institutional data. Students gain understanding of organizational structures and functions of arts organizations as well as a theoretical model for general management and practical tools.

603 Arts in Society (3:3:0) Prerequisite: admission to a master’s program in CVPA or permission of instructor. Examines role of visual and performing arts as social and cultural institutions, with emphasis on historic traditions and trends that have most directly influenced contemporary American practice. Consideration is given to the essential functions of art in society in an effort to address questions: Why do we require art at all? What constitutes good or bad art? What is the value of art? What encouragements or impediments does our society offer to the creative artist or arts institution? How do the various forms differ in their traditions, philosophical underpinnings, and current manifestations? How can arts managers participate in the cultural conversation to the benefit of art forms, artists, and the institutions they serve?

604 Public Relations and Marketing Strategies for the Arts (3:3:0) Prerequisite: admission to a graduate program in CVPA or permission of instructor. MAM 602 should be taken prior to or concurrently with MAM 604. Teaches strategic way of thinking about audience, community, and markets. Structured into four modules, beginning with fundamentals of strategic planning. Students learn about external and internal environments and the interplay among them; discuss marketing fundamentals pertaining to arts audiences; and are introduced to fundamentals of applied marketing media and advertising fundamentals. Designed as fundamentals course for elective concentration in marketing and public relations.

605 Arts Audiences (3:3:0) Prerequisite: admission to CVPA graduate program or permission of instructor. Introduces theory and practice of creating commitment of arts audiences for performing and visual arts. Students explore different perspectives such as psychological, anthropological and business-minded.

606 Board of Directors (3:3:0) Prerequisite: admission to master of arts in arts management or permission of instructor. Board development including oversight and management of a board, as well as understanding board functions. Board relationships, including volunteers, are essential through all of the stages of a management career.

607 Fund Raising/Development in Arts II (3:3:0) Prerequisite: admission to arts management program or permission of instructor.
of instructor. Focus on two active arts organizations and create a development plan and various proposals specifically geared to their situations. The course focuses on practical application of development principles, writing and communications skills, and strategic thinking and planning.

609 Facilities Management (3:3:0) Prerequisite: admission to arts management program or permission of instructor. Bridging strategic planning and marketing; audience development; financial management and board and volunteer management, with issues of scheduling, ticketing and sales, mission integration and strategic challenges of new facilities, and growth and operations of existing ones.

704 Finance and Budgeting for Arts Organizations (3:3:0) Prerequisite: admission to CVPA graduate program, or permission of instructor. Introduces budget and finance as fundamentals of the budget process, specifically tailored to needs of arts organizations. Provides overview of accounting as tool to manage and control arts organizations. Involves laboratory component for teaching software application frequently encountered in fiscal operation of arts organizations.

705 Budgeting/Finance for Arts Organizations II (2:2:0) Prerequisites: MAM 704. Introduces budgeting, planning, and finance as fundamentals of the strategic planning process and management control, specifically tailored to the needs of arts organizations.

706 Festivals and Special Events (3:3:0) Prerequisite: admission to arts management program or permission of instructor. Technical aspects of events and festival management. Topics such as cultural understanding, tourism, sponsorship, fund raising and development, logistics of scheduling and contracts, and the relationship to larger venues, marketing and sales, and budgeting.

710 Arts Policy (3:3:0) Reviews current state of nonprofit arts field, then familiarizes students with the most common rationales for public support of the arts and respective roles of federal, state, and local governments and private policy actors. Examines dilemmas that arts organizations face in balancing the need for government support and artistic integrity with push and pull of the market. Compares U.S. policies to those of other developed countries.

711 Directed Readings and Project Course (1–6:1–6:0) Opportunity to engage in a more intensive study or project in arts management. Students partner with faculty member for intensive readings and project in strategy and planning in the arts, fundraising and development, entrepreneurial project work, arts marketing, arts policy and law, or other specialized areas pertinent to arts administration.

712 Grant Writing in the Arts (1:1:0) Prerequisite: admission to master of arts in arts management or permission of instructor. Places components of grant-writing process within broader context of nonprofit management. Introduction to perspectives of grant seeker and maker. The grant-writing process: research, proposal writing, terminology, oral, and written techniques and specific focus. Discover resources and compelling writing skills pertaining to proposal and letters of intent.

740 Internal Internship-Laboratory Rotation (2:0:6) Prerequisite: admission to master of arts in arts management. 12 credits taken within the master in arts management program; or permission of program director. Required for developing practical application. Builds on apprenticeship as a core means of teaching applied concepts of arts management. Augments use of Center of the Arts and active arts environment, both performing and visual, as a learning laboratory. Builds on practical learning, and provides internal training as preparation for external internship. (minimum 84 hours).

750 Arts Entrepreneurship I (3:3:0) Prerequisite: admission to master of arts in arts management or permission of instructor. Lecture course in discovering and developing entrepreneurial skills in the artist and the arts. Special focus will be placed on developing communication skills, planning strategies, and nurturing the skills and attitudes that enable students to creatively solve problems and identify opportunities. This entrepreneurial perspective is in line with the Mason experience and widely applicable outside the business world, in fields such as politics, education, and the arts. Assigned readings will be augmented and supported by presentations, lectures, and meetings with successful art and nonart entrepreneurs in the region. At mid-term, students will conceive, develop, and present a for-profit or nonprofit business plan strategy, which includes a business model(s), market overview, and management structure. The final project will include adding a revenue model, developing revenue streams, constructing a partnership acquisition strategy, and technical and information technology strategy to the business plan strategy. The semester concludes with a 15- to 20-minute public presentation of the business plan summary before a panel of entrepreneurs and business and nonprofit managers.

751 Arts Entrepreneurship II (3:3:0) Prerequisite: Arts Entrepreneurship I or permission of instructor. Advanced lecture course in discovering and developing entrepreneurial skills in the artist and the arts. Special focus will be given to developing business financial planning skills, developing a funding strategy, and the marketing and sales of the arts. Assigned readings in the class will be augmented and supported by presentations, lectures, and meetings with successful art and nonart entrepreneurs in the region. At midterm, students/student teams will conceive, develop, and present three-year projected cash flows, income statements, accompanying financial assumptions, and funding plans for a for-profit or nonprofit business plan. The final project will include determining market verticals, targeting those verticals and building a multimedia event-based marketing campaign, which includes schedule and expenses. The semester concludes with a 15- to 20-minute public presentation of their business financials and marketing campaigns before a panel of entrepreneurs, business, and nonprofit managers.

760 Current Issues in Arts Management (3:3:0) Prerequisite: admission to master of arts in arts management program, 9-credit standing; or permission of program director. Strategic decision making within the complex web of social, political, economic, personal, and ethical dimensions. Analysis of cases, using learned skills in planning, financial
Astronomy (ASTR)

Physics and Astronomy

103 Astronomy (3:3:0) Not for physics majors. Introduction to origin of life, Earth, planets and sun, stars, galaxies, quasars, nature of space radiation, and general theory of relativity.

111 Introductory Astronomy: The Solar System (3:3:0) ASTR 111 and 112 can be used to fulfill a 4-credit lab science requirement; not for physics majors. Topics include history of astronomy, evolution of the solar system, properties of planets, scientific method, critical thinking, nature of light, and principles of telescope design.

112 Introductory Astronomy Lab: The Solar System (1:0:3) Laboratory course associated with ASTR 111. ASTR 111 and 112 can be used to fulfill a 4-credit lab science requirement; not for physics majors.

113 Introductory Astronomy: Stars, Galaxies, and the Universe (3:3:0) ASTR 113 and 114 can be used to fulfill a 4-credit lab science requirement; not for physics majors. Topics include electromagnetic radiation, stellar evolution, interstellar medium, galaxies, cosmology, scientific method, and critical thinking.

114 Introductory Astronomy Lab: Stars, Galaxies, and the Universe (1:0:3) Laboratory course associated with ASTR 113. ASTR 113 and 114 can be used to fulfill a 4-credit lab science requirement; not for physics majors.

301 Astrobiology (3:3:0) Prerequisites: MATH 113 and PHYS 160. Physical science perspective on origin and evolution of life on Earth and how life, in turn, has significantly influenced Earth’s evolution. Topics include origin of Earth, mechanisms and sites for origin of life, coevolution of life and Earth’s atmosphere, habitability of planets, and search for extraterrestrial life.

302 Foundations of Cosmological Thought (3:3:0) Examines scientific, historical, and philosophical foundations and development of cosmological thought from antiquity to the present. Emphasizes qualitative understanding of the development of cosmology concluding with the present concept of origin and evolution of universe. No advanced background in mathematics or natural sciences required.

328/PHYS 328 Introduction to Astrophysics (3:3:0) Prerequisites: PHYS 262 and MATH 214. Topics include physical concepts; magnitudes of stars; Hertzsprung-Russell diagram; stellar radiation; stellar structure and evolution; white dwarfs, red giants, supernovas, neutron stars, and black holes; interstellar matter, dust, and molecules; cosmic rays and magnetic fields; galactic structure, galaxies, quasars, and intergalactic matter; high energy astrophysics, cosmology and general relativity; and models of the universe.

390 Topics in Astronomy (1–4:1–4:0) Selected topics not covered in fixed content courses. May not be included for credit by physics majors in the 45 credits of physics courses required for BS degree, or in 31 credits of physics courses required for BA degree.

401 Computer Simulation in Astronomy (3:3:0) Prerequisites: MATH 213 and ASTR 328. Techniques and methods to simulate astronomical phenomena using a computer. Examples taken from a wide variety of astronomical phenomena, including radiation transfer in astrophysical objects, self-gravitating systems, hydrodynamics, and stellar models. Emphasizes hands-on projects.

402 Methods of Observational Astronomy (3:3:0) Prerequisites: ASTR 111, 112, 113, 114. Collection and analysis of data covering radio, microwave, infrared, visible, ultraviolet, X-ray, and gamma ray astronomy. Topics include electromagnetic spectrum, coordinate systems, motion of celestial objects, telescopes, detectors, statistics, and noise, interferometry, and spectroscopy. This course meets the writing intensive requirement.

403 Planetary Sciences (3:3:0) Prerequisites: MATH 213 and PHYS 160. Introduction to the physics and chemistry of planets and their natural satellites, asteroids, and comets. Topics include history of the solar system; origin and evolution of planets, their internal structure and atmospheres; and analytical techniques used in remote and in situ study.

404 Galactic Astronomy (3:3:0) Prerequisites: ASTR 214, ASTR 328, and PHYS 308. Comprehensive introduction to observational and theoretical aspects of the study of galaxies. Topics include our own galaxy, normal galaxies and their hierarchical structures (groups and clusters), star forming and active galaxies, and colliding galaxies.

408 Senior Research (3:3:0) Prerequisites: 15 credits of ASTR courses. Students may not receive more than 6 credits of ASTR 408 and 409. Independent work under guidance of faculty member on research project in experimental, observational, or theoretical astronomy. Written report on project required. May be taken twice with department permission.

409 Astronomy Internship (3:3:0) Prerequisites: 75 credits, 15 ASTR credits, and permission of department. See department for other requirements and application procedure prior to enrollment. Students may not receive more than 6 credits of ASTR 408 and 409. On-the-job experience for astronomy majors in industry or government laboratories, including summer research programs. Students work in observational, experimental, or theoretical astronomy, and prepare written report at end of internship.

428/PHYS 428 Relativity and Cosmology (3:3:0) Prerequisites: MATH 214; PHYS 303, 305, and 262; or permission
of instructor. Special relativity; four-dimensional space-time; general relativity; non-Euclidean geometries, geodesics, and field equations; tests of general theory of relativity; black holes; cosmology; models of the universe; remnant blackbody radiation; big bang cosmology; thermodynamics; and the universe.

490 Astronomy Capstone (3:3:0) Prerequisites: completion of ASTR core courses or concurrent enrollment in final core courses. Capstone course providing a learning experience, integrating knowledge from previous astronomy courses with selected readings from current scientific papers and an opportunity to effectively present that synthesis. Emphasizes student participation and student-led class discussions. Required of all astronomy majors.

530/CSI 661 Astrophysics (3:3:0) Prerequisites: PHYS 303, 305, 308; MATH 214. Survey of contemporary astrophysics. Topics include physical concepts, stellar spectra, Hertzsprung-Russell diagram, stellar atmospheres, stellar structure, interstellar matter, stellar evolution, high-energy phenomena, hydrodynamical processes in astrophysics, accretion disk formation, and shock formation.

535/CSI 660 Space Instrumentation and Exploration (3:3:0) Prerequisites: PHYS 262 and MATH 213. Survey of instruments, devices, and methods for space and planetary exploration, including remote sensing of Earth and other solar system bodies, and planned manned and unmanned missions by the United States and other countries.

590 Selected Topics in Astronomy and Astrophysics (1–6:0–6:0) Advanced topics from recent theoretical or observational developments and their applications. Satisfies needs of professional community to keep abreast of current developments.

680 Physics of Interstellar Media (3:3:0) Prerequisites: PHYS 402 or permission of instructor. Physical processes in the interstellar media. Topics include the production and transfer of radiation, ionization and recombination, atomic and molecular excitation, dust physics, gas heating and cooling, and star formation.

703 Planetary Sciences (3:3:0) Prerequisites: MATH 213 and PHYS 160. This course will cover the processes and events that have played a central role in the origin and evolution of the solar system, with special emphasis on the terrestrial planets. The unique history of Earth and how it has evolved into a habitable world will be covered in detail.

704 Galactic Astronomy (3:3:0) Prerequisites: MATH 214, ASTR 328, and PHYS 308. Comprehensive introduction to observational and theoretical aspects of the study of galaxies. Topics include our own galaxy, normal galaxies and their hierarchical structures (groups and clusters), star forming and active galaxies, and colliding galaxies.

760/PHYS 760 Space Plasma Physics (3:3:0). Prerequisite: PHYS 622 or 513, or permission of instructor. Covers plasma processes involved in today's space physics research, including different regimes of plasma; basic concepts in kinetic, fluid, and MHD plasmas; and existent waves in these media. Also covers basics of shocks, discontinuities, transport and acceleration of particles such as cosmic rays, reconnection, and MHD instabilities.

761/CSI 761 N-Body Methods and Particle Simulations (3:3:0) Prerequisites: PHYS 613 and CSI 717, or permission of instructor. Study of particle methods as a tool to solve variety of physical systems. Emphasizes study and development of numerical results, and visualization of these results in complex physical systems. Applications and projects include stellar and galaxy dynamics, smoothed particle hydrodynamics, plasma simulations, and semiconductor device theory. Includes algorithms on parallel and vectorized systems.

764/CSI 764 Computational Astrophysics (3:3:0) Prerequisite: ASTR 530 or permission of instructor. Study of statistical mechanics concepts important in astrophysics. Presentation of unified approach to particle acceleration and interaction theory based on analytical and numerical analysis of Boltzmann and Liouville equations. Discussion of computational methods relevant for particle transport problems, with emphasis on Fokker-Planck and Monte-Carlo solution techniques. Applications from space sciences include studies of cosmic ray acceleration, photon comptonization, particle transport in the near-Earth environment, energy transport in stellar atmospheres, and self-gravitating system dynamics.

765/CSI 765 High-Energy and Accretion Astrophysics (3:3:0) Prerequisites: PHYS 502 and 513, and ASTR 530; or permission of instructor. Overview of the field of atomic and nuclear physics, including nuclear reactions of use to high-energy astrophysics. Discusses radiation processes in cosmic plasmas emphasizing quantum mechanical calculations; stellar evolution and nucleosynthesis; computational models of stellar evolution; binary stars and accretion disks; numerical models of the structure of accretion disks; compact stars, white dwarfs, neutron stars, and black holes; acceleration processes and cosmic rays; interstellar medium and propagation of cosmic rays; high-energy processes in the center of galaxies; and ground- and space-based techniques and observations.

766/CSI 766 Relativity and Cosmology (3:3:0) Prerequisites: ASTR 530 and MATH 314, or permission of instructor. Special relativity, four-dimensional space-time, general relativity, non-Euclidean geometries, geodesic and field equations, test of general relativity theory, black holes, cosmic background radiation, thermodynamic considerations in cosmology, and cosmological models.

769/CSI 769 Topics in Space Sciences (3:3:0) Prerequisite: permission of instructor. Selected topics in space sciences not covered in fixed-content space sciences courses. May be repeated for credit as needed.

790 Advanced Topics in Astronomy and Astrophysics (1–6:0–6:0) Prerequisite: graduate standing and permission of instructor. Advanced topics from recent theoretical or observational developments and applications. Satisfies need of professional community to keep abreast of current developments.

796 Directed Reading and Research (1–6:0–6:0) Prerequisite: admission to master's program and permission of instructor. Reading and research on a specific topic in astronomy, astrophysics, or related field under direction of faculty member. May be repeated as needed.

798 Research Project (3:0:0) Prerequisite: 9 credits and permission of instructor. Research project chosen and completed under guidance of graduate faculty member resulting in an acceptable technical report. May not be repeated.
799 Master’s Thesis (1–6:0:0) Prerequisite: 9 credits, and permission of instructor. Research project chosen and completed under guidance of graduate faculty member resulting in an acceptable technical report and oral defense acceptable to three-faculty-member thesis committee. May not be repeated.

998 Doctoral Dissertation Proposal (1–12:0:0) Prerequisites: admission to physics doctoral program and permission of advisor. Covers development of a research proposal under the guidance of a dissertation director and the doctoral committee. The proposal forms the basis for the doctoral dissertation. May be repeated as needed; however, no more than 24 credits in ASTR/PHYS 998 and ASTR/PHYS 999 may be applied toward satisfying doctoral degree requirements in the physics PhD program. Out of the 24, no more than 12 credits of ASTR/PHYS 998 may be applied.

999 Doctoral Dissertation (1–12:0:0) Prerequisite: admission to doctoral candidacy in physics doctoral program and permission of advisor. Doctoral research performed under direction of dissertation director. May be repeated as needed; however, no more than 24 credits in ASTR/PHYS 998 and ASTR/PHYS 999 may be applied toward satisfying doctoral degree requirements in the physics PhD program.

Athletic Training (ATEP)

School of Recreation, Health, and Tourism

228 Introduction to Athletic Training (3:3:0) Includes athletic trainer's role in sports medicine, mechanisms of athletic injuries, tissue response to injury, blood-borne pathogens, introductory techniques of the assessment and evaluation of athletic injuries and emergency procedures, general illness common with athletes, and dermatological conditions.

229 Clinical Experiences in Introductory Athletic Training (3:3:0) Prerequisite: ATEP 228. Introduces clinical skills commonly used in athletic training. Includes athletic training room organization and procedures; protective sports equipment; construction of protective devices; and application of protective taping, braces, wrapping, and protective pads. Assignments include the application of skills with athletic teams.

310 Athletic Injury Recognition of the Lower Extremity and Thorax (3:3:0) Prerequisites: BIOL 124, 125; HEAL 110, 205; ATEP 228, 229, 315; current CPR certification; 2.50 major GPA. An analysis of injury mechanisms of specific injuries to the lower extremity and thorax.

315 Clinical Evaluation Skills for Lower Extremity and Thorax (3:3:0) Corequisites: BIOL 124, 125; HEAL 110, 205; ATEP 310; current CPR certification; 2.50 major GPA. An analysis of injury evaluation and muscle isolation techniques of specific injuries to the lower extremity and thorax. Assignments include the application of skills with athletic teams.

320 Athletic Injury Recognition of the Upper Extremity, Head and Neck (3:3:0) Prerequisites: BIOL 124, 125; HEAL 110, 205; ATEP 228, 229, 325; current CPR certification; 2.50 major GPA. An analysis of injury mechanisms of specific injuries to the upper extremity, head and spine.

325 Clinical Evaluation Skills for the Upper Extremity, Head and Neck (3:3:0) Corequisites: BIOL 124, 125; HEAL 110, 205; ATEP 228, 229, 320; current CPR certification; 2.50 major GPA. An analysis of injury evaluation and muscle isolation techniques of specific injuries to the upper extremity, head and spine. Assignments include the application of skills with athletic teams.

350 Therapeutic Modalities (3:3:0) Prerequisites or corequisites: BIOL 124, 125; HEAL 110, 205; ATEP 310, 315, 320, 325, 354, 357. Study of the physical principals, physiological effects, indications, and contraindications of therapeutic modalities used in athletic training. Also covers indications, contraindications, physiological effects, special programs, and resistance methods used in the prevention and rehabilitation of athletic injuries.

354 Rehabilitation of Athletic Injuries (3:3:0) Prerequisites: BIOL 124, 125; HEAL 110, 205; ATEP 228, 229, 310, 315, 320, 325, 350, 354; current CPR certification; 2.50 major GPA. A study of the indications, contraindications, physiological effects, special programs, and resistance methods used in the prevention and rehabilitation of athletic injuries.

357 Treatment and Rehabilitation Clinical Techniques (3:3:0) Prerequisites or corequisites: BIOL 124, 125; HEAL 110, 205; ATEP 228, 229, 310, 315, 320, 325, 350, 354; current CPR certification; 2.20 major GPA. Practical experience in the therapeutic modalities commonly used in athletic training, and special programs and rehabilitation methods used in the prevention and rehabilitation of athletic injuries. Assignments include the application of skills with athletic teams.

413 Management Skills in Athletic Training (3:3:0) Prerequisites: BIOL 124, 125; HEAL 110, 205; PHED 200; ATEP 228, 229, 310, 315, 320, 325, 350, 354, 357; PRLS 405, 410; current CPR certification; 2.50 major GPA. Practical experience in the administration of an athletic training program on collegiate, clinical, professional, and secondary school levels.

441 Practicum in Athletic Training (3:3:0) Prerequisites: BIOL 124, 125; HEAL 110, 205; PHED 200; ATEP 228, 229, 310, 315, 320, 325, 350, 357; PRLS 405, 410; current CPR certification; 2.50 major GPA. Techniques and procedures in the care and prevention of athletic injuries in a selected environment under certified athletic trainer supervision. Involves at least 300 hours of participation.

Bachelor of Individualized Study (BIS)

300 Understanding Multidisciplinary Studies (3:3:0) Open only to pre-BIS students and BIS majors. Focuses on literature and issues relevant to interdisciplinary and multidisciplinary studies and the BIS program. Students explore selected topics, develop and gather feedback on individualized concentration proposals, and review BIS issues and program requirements.

390 The Research Process (3:3:0) Prerequisites: BIS 300, 2.00 or above in ENGL 302. Open only to pre-BIS students and BIS majors. Focuses on skills to develop a research topic, find and organize relevant information, examine and critique evidence, establish criteria, and create plan to complete senior project.

399 Special Topics (1–3:1–3:0) Prerequisite: open only to degree students in BIS. Selected topics reflecting interest in specialized areas.
489 Directed Readings and Research (1–3:0:0) Open only to pre-BIS students and BIS majors. Individualized sections by arrangement. Readings and research on a topic directly relevant to student’s core concentration. Guided by instructor with expertise. Topics must be approved by instructor and BIS director prior to enrollment.

490 Senior Project (3:0:0) Prerequisite: BIS 390; corequisite: BIS 491. Open only to BIS majors. Individualized sections by arrangement. Capstone course in BIS core concentration. Project, thesis, or internship on a topic directly relevant to student’s concentration. Guided by student’s faculty advisor. Topics must be approved by faculty advisor committee member and BIS director prior to enrollment. Grade of C or better is required to graduate with a BIS degree.

491 Senior Project Presentation (1:1:0) Prerequisite: BIS 390; corequisite: BIS 490. Open only to BIS majors. Focuses on preparation and delivery of a formal presentation of student’s BIS 490 project. Includes review of basic presentation techniques.

495 Career Practicum (1–6:1–6:0) Prerequisite: permission of instructor and BIS director. Supervised experience in application of specified area.

Biodefense (BIOD)

Public and International Affairs

604 Introduction to Biodefense I: Bacterial and Toxin Agents (3:3:0) Covers pathology, metabolism, and threat of bacterial agents that can be used as biological weapons.

605 Introduction to Biodefense II: Viral Agents (3:3:0) Covers pathology, metabolism, and threat of viral agents that can be used as biological weapons.

607 Introduction to Biodefense/Threat Analysis III: Toxins (3:3:0) Discusses the threat of toxins as biological weapons. Special focus on microbiological toxins, including botulinum toxin, and biochemical action of toxins. Comparison to chemical weapons and debate about classification as such.

609 Biodefense Strategy and Policy (1–4:1–3:0–6) Prerequisite: BIOD 604 and 605 or permission of instructor. Introduces students to the biodefense and biosecurity strategies and policies of the United States, other nations, and international organizations. Evaluates the effectiveness of these policies in strengthening defenses, improving intelligence, increasing oversight, enhancing nonproliferation, and reinforcing norms. Examines the interaction of biodefense and biosecurity with homeland, national, and international security.

610 Advanced Topics in Biodefense (1–4:1–3:0–6) Prerequisite: BIOD 604 and 605 or permission of instructor. Different topics, depending on instructor’s specialty. Topics include legal, ethical, scientific, and political aspects of biodefense, emphasizing current problems and research. May be repeated when topic is different.

620 Health and Security (3:3:0) Prerequisite: BIOD 604 and 605 or permission of instructor. Explores issues emerging from the interaction of health and security that represent novel challenges to policymakers confronting a rapidly changing security landscape. Presents the major lines of discourse in the academic literature examining links between health and security. The impact of the AIDS epidemic on national and regional security, the role of health issues in post-Cold War conflict situations, and the security implications of advances in the life sciences.

621 Ethics and International Security (3:3:0) Challenges students to wrestle with dilemmas raised by the desire to behave ethically in an international system in which consensus about ethical matters is absent. Students will develop, apply, and justify their own perspective on an ethical problem related to international security using ethical theory and social science research. Ethical issues related to nuclear, biological, and chemical weapons that confront researchers, policymakers, and practitioners will be addressed.

622 Negotiating in the International Arena (3:3:0) Provides students with the concepts and tools for analyzing complex negotiation processes and introduces them to the challenges facing international negotiators. Students will read about the frameworks and perspectives that have guided the scholarly research on negotiation, as well as the latest findings from that research; analyze complex cases of actual negotiations in the security, trade, and environmental areas; and negotiate key issues on the agendas of nations and international organizations.

702 Biodefense Colloquium (1:1:0) Forum for presentation and discussion of original and current research in biodefense. May be repeated for credit.

705 Intelligence: Theory and Practice (3:3:0) Prerequisite: BIOD 604 and 605, or permission of instructor. Theory and practice of intelligence, including the intelligence cycle, organization of the intelligence community, and the origins and impact of recent reforms. Examines the capabilities and limitations of the different collection disciplines, analytic methodologies and pathologies, and the relationship between intelligence and policy. Analyzes challenges posed by collecting and analyzing intelligence on weapons of mass destruction programs conducted by states and terrorists.

706 Nuclear, Biological, and Chemical Weapons Policy and Security (3:3:0) Prerequisites: BIOD 604 and 605, or permission of instructor. Explores the causes, conduct, and consequences of the proliferation of nuclear, biological, and chemical weapons. Covers the historical, technological, normative, and strategic factors that have promoted and restrained the spread of these weapons. Addresses the motives for states to develop these weapons and the debate over the security implications of nuclear, biological, and chemical weapon proliferation.

709 Nonproliferation and Arms Control (3:3:0) Prerequisites: BIOD 604 and 605, or permission of instructor. Examines the array of national and international measures used to slow, halt, and reverse the spread of nuclear, biological, chemical, and missile weapons. Explores the theory and practice of proliferation to provide insights into the supply and demand aspects of proliferation.

710 Approaches to Bioweapon Medical Treatment and Response (3:3:0) Prerequisites: BIOD 604 and 605. Examines research, treatment, and preparedness strategies against natural and human-made biological agents. Focuses on various strategies, including immunological, pharmaceutical, and medical treatment methodologies and designs.

722 Examining Terrorist Groups (3:3:0) Prerequisites: BIOD 604 and 605, or permission of instructor. Introduction
to terrorism including the history and evolution of terrorism, case studies of key terrorist groups, the current nature of the terrorist threat and counterterrorism strategies.

723 Legal Dimensions of Homeland Security (3:3:0)  
Prerequisites: BIOD 604 and 605, or permission of instructor.  
Introduces the impact of legal issues on homeland security and biodefense. Topics include the origins of the Department of Homeland Security, the relationship between public health and law enforcement, the role of the military in homeland security, trade-offs between privacy and security, legal aspects of public–private cooperation in biodefense and homeland security, quarantine authority and enforcement, ensuring compliance with international treaties, and implementing biosecurity regulations.

725 Terrorism and Weapons of Mass Destruction (3:3:0)  
Prerequisites: BIOD 604 and 605, or permission of instructor.  
Examines the capabilities and intentions of terrorists to acquire and use chemical, biological, radiological, and nuclear (CBRN) weapons. The course provides an in-depth understanding of the history of CBRN terrorism, the current challenges posed by this threat, and the range of national and international policy tools available to address this threat.

726 Agroterrorism and Food Security (3:3:0)  
Prerequisites: BIOD 604 and 605, or permission of instructor.  
Analyzes the threat of agricultural terrorism, including assessments of the chemical and biological agents used to disrupt agriculture and livestock, and the national and global economic and social impacts of these disruptions. Also examines strategies for enhancing the security of the food production and supply systems.

751 Biosurveillance (3:3:0)  
Prerequisites: BIOD 604 and 605, or permission of instructor.  
Provides an understanding of the capabilities required to provide reliable early warning of disease outbreaks and identify their etiologic agents. Assesses strengths and limitations of physicians, laboratories, epidemiologists, aerosol sensors, and syndromic surveillance systems. Considers challenges posed by the integration and analysis of the information collected by these sources.

752 The Role of the Military in Homeland Security (3:3:0)  
Prerequisites: BIOD 604 and 605, or permission of instructor.  
Analyzes the role that the armed forces play in homeland security, including historical and legal developments, the role of the National Guard, capabilities for crisis and consequence management, and case studies of military assistance to civilian authorities in response to riots, terrorist incidents, and natural disasters.

760 National Security Technology and Policy (3:3:0)  
Prerequisites: BIOD 604 and 605, or permission of instructor.  
Introduces students to the intersection of science, technology, and policy in national security. Will examine the players in the formation of science policy; the roles they play; how the types, uncertainties, and availability of data affect science policy debates; and how science policy decisions are made. Topics to be covered include weapons of mass destruction, nonlethal weapons, nanotechnology, bioengineering, energy security, and pandemic influenza.

761 Dispersal Patterns of Biological Agents (3:3:0)  
Prerequisites: BIOD 604 and 605, or permission of instructor.  
Introduction to military and terrorist methods of dispersal patterns. Covers physics of aerosols; engineering and mechanics of building ventilation systems; and mechanical dissemination, including hand-held, automatic, vehicle, and truck-mounted systems. Includes viability of specific agents involved.

762 Into the Hot Zone: Working in a High Threat Environment (2:2:0)  
Prerequisites: BIOD 604 and 605, or permission of instructor.  
Introductory course covers methodology of working in a Biosafety Level 3 or 4 environment. Special attention to responding to biowarfare or bioterrorism-related event.

766 Development of Vaccines and Therapeutics (3:3:0)  
Analyzes the process of developing new medical countermeasures against biological weapons and emerging infectious diseases such as SARS and pandemic influenza. Special attention is paid to the scientific, technical, political, regulatory, and economic obstacles to developing new vaccines and therapeutics. Examines the causes and potential solutions of public and private sector failures.

780 Master’s Supervised Internship (1–6:0:0)  
Prerequisite: permission of program director or advisor.  
Internship under supervision of qualified professional in biodefense at a government agency, consulting firm, industrial firm, or other acceptable agency.

793 Directed Studies in Biodefense (1–3:0:0)  
Prerequisite: permission of the instructor and program director.  
Individualized study of topics not otherwise available in graduate program. May involve reading assignments, tutorials, lectures, papers, presentations, or lab or field study, determined in consultation with instructor.

798 Master’s Research Project in Biodefense (3:0:0)  
Prerequisite: 24 credits in BIOD and permission of project director.  
Research project related to student’s concentration under supervision of faculty advisor. Student produces substantial and original contribution to the field of biodefense on the model of an article in a scholarly journal. Graded S/NC.

799 Master’s Thesis in Biodefense (1–6:0:0)  
Prerequisite: 24 credits in BIOD and permission of thesis committee.  
Master’s thesis research under direction of thesis committee. Graded S/NC.

810 Advanced Seminar in Biodefense (3:3:0)  
Prerequisite: BIOD 604 and 605, or permission of advisor.  
Explores issues of contemporary and emerging concern in biodefense and biosecurity. Topics may include legal, ethical, scientific, economic, and political aspects of biodefense and biosecurity. May be repeated for credit twice when topic is different.

890 Doctoral Supervised Internship (1–6:0:0)  
Prerequisite: permission of program director or advisor.  
Internship under supervision of qualified biodefense professional at government agency, consulting firm, industrial firm, or other acceptable agency.

899 Directed Research in Biodefense (1–12:0:0)  
Prerequisite: approval of program director.  
Research on a pertinent topic in biodefense; scope and subject determined by instructor.

996 Doctoral Reading and Research (1–9:0:0)  
Independent reading and research on specific biodefense topic under faculty member’s direction. Specific arrangements for designing scope and area of study to be determined in consultation with instructor. May involve literature searches and review, workshops, tutorials, or other formats. May be repeated for credits.
998 Doctoral Dissertation Proposal (1–12:0:0) Development of a research proposal, which forms the basis for doctoral dissertation under guidance of dissertation director committee. Only 12 credits may be applied to the degree. Graded S/NC.

999 Doctoral Dissertation (1–12:0:0) Prerequisite: Completion of 998 and advancement to candidacy. Doctoral dissertation research undertaken under direction of dissertation chair. Graded S/NC.

Bioengineering (BENG)

Electrical and Computer Engineering

401 Bioengineering Instrumentation and Design (4:4:0) Prerequisites: BIOL 213; ECE 320 and 333, or permission of instructor. Introduces students to the engineering design process with special focus in medical and biological applications. Tools to be explored range from specialized software (LabView, OrCad, Matlab) to laboratory and machine shop facilities. The semester culminates in the presentation of a group project. Students are expected to leverage their background and apply it to a problem in bioengineering.

402 Bioengineering Instrumentation and Design Laboratory (1:0:3) Prerequisites: BIOL 213, ECE 320 and 333, or permission of instructor. Corequisite: BENG 401. Introduces a project-based laboratory where students are exposed to all available tools from several electrical and computer engineering disciplines. Students will physically implement their own team-based project using a subset of those tools. Projects are then demonstrated during oral presentations toward the end of the semester.

492 Senior Advanced Design Project I (2:2:0) Prerequisites: 90 credit hours applicable to the BSEE degree and COMM 100 and ENGL 302. Conception of senior design project in bioengineering and determination of feasibility of proposed project. Work includes developing preliminary design and implementation plan.

493 Senior Advanced Design Project II (2:2:0) Prerequisites: BENG 492, preferably in the preceding semester. Implementation of project for which preliminary work was done in BENG 492. Project includes designing and constructing hardware, writing required software, conducting experiments or studies, and testing complete system. Requires oral and written reports during project and at completion. Completing this course with a C or better satisfies university’s general education synthesis requirement.

Bioinformatics (BINF)

Bioinformatics and Computational Biology

354 Foundations in Mathematical Biology (3:3:0) Prerequisites: completion or concurrent enrollment in all other required general education courses; chemistry and integral calculus; or permission of instructor. Interdisciplinary introduction to life sciences for physicists, chemists, engineers, and mathematicians. Combines knowledge from natural sciences, social and behavioral sciences, quantitative reasoning, and information technology. Covers selected topics in ecology, physiology, biochemistry, and behavior. May include biochemical reaction kinetics, Hodgkin-Huxley model for cellular electrical activity, continuous and discrete population interactions, and neural network models of learning. Techniques utilized include ordinary differential equations, difference equations, algebraic equations, and computer simulations.

401 Bioinformatics and Computational Biology I (3:3:0) Prerequisites: BIO 231, IT 108, IT 208, or CS 112 (instead of IT 108 and IT 208), STAT 344, or STAT 250. Topics are presented as three-week units: protein sequence, structure prediction, and modeling methods; nucleic acid sequence and structure prediction, and evolutionary models; gene structure prediction in prokaryotes and eukaryotes; image analysis, and biomedical applications.

402 Bioinformatics and Computational Biology II (3:3:0) Prerequisites: BINF 401 and BINF 403. Topics are presented as three-week units: the design and use of parallel genomics platforms, mapping the measurements to biomolecules; approaches for inferring biological pathways; simulation methods for the dynamics of biomolecules; systems approaches to biology.

403 Bioinformatics and Computational Biology Lab I (1:0:3). Corequisite: BINF 401. Laboratories will introduce students to bioinformatics tools designed to answer research problems in the topics covered in lectures, such as sequence alignment, sequence pattern recognition, structural conformation modeling, phylogenetic analysis methods and image comparisons.

404 Bioinformatics and Computational Biology Lab II (1:0:3) Prerequisites: concurrent enrollment in BINF 402 and passing grades in BINF 401 and 403. Laboratories will introduce students to research bioinformatics tools relevant to lecture topics such as: the correspondence of measured fragments to parent biomolecules, inference methods for gene and protein networks, predicting system outputs given specified inputs.

491 Senior Thesis in Bioinformatics (1:1:3) Prerequisites: the bioinformatics minor core classes. A project is chosen and completed under the guidance of a Bioinformatics Department faculty member. An oral progress report with a poster at the fall semester Bioinformatics Student Research Day is required.

492 Senior Thesis in Bioinformatics (1:1:3) Prerequisite: BINF 491. A project is chosen and completed under the guidance of a Bioinformatics Department faculty member. A written thesis in standard format is required.

630 Bioinformatics Methods (3:3:0) Prerequisites: graduate standing, or permission of instructor. Introduction to methods and tools for pairwise sequence comparison, multiple sequence alignment, phylogenetic analysis, protein structure prediction and comparison, database similarity searches, and discovery of conserved patterns in protein sequence and structures.

631 Molecular Cell Biology for Bioinformatics (3:3:0) Prerequisites: undergraduate background in biochemistry or cell biology, or permission of instructor. Intensive review of biochemistry, molecular biology, and cell biology necessary to begin research in bioinformatics. Topics include protein biochemistry, nucleic acids biochemistry, DNA replication, transcription, and translation, recombinant DNA technology, genomics, molecular structure of genes and chromosomes, and gene expression and control.

633 Molecular Biotechnology (3:3:0) Prerequisites: graduate standing or permission of instructor. Introduction
to the theory and practice of molecular biotechnology, with emphasis on the application of tools in today’s society. Includes study of recombinant DNA technology, genomics, and bioinformatics as applied to commercially important products. Lectures reflect more recent advances and applications in the commercial aspects of biology.

634 Bioinformatics Programming (3:3:0) Prerequisite: graduate standing and computer programming experience, or permission of instructor. Introduces programming, control structures, file input/output, subroutines, regular expressions, debugging, introduction to relational databases. Emphasizes bioinformatics applications including DNA sequence analysis, parsing FASTA and GenBank files, processing BLAST output files, SQL, or equivalent query language.

636 Microarray Methodology and Analysis (3:3:0) Prerequisite: BINF 633, or permission of instructor. Theory and practice of analysis including genetics, biochemistry, and tools for analyzing global gene expression, and detection and quantification of genes and gene products.

637 Forensic DNA Sciences (3:3:0) Prerequisite: graduate standing or permission of instructor. Intensive introduction to parameters affecting data QC and analysis, including factors arising from biochemistry, chemistry, genetics, statistics, instrumentation, and software.

639 Introduction to Biometrics (3:3:0) Prerequisites: programming experience such as CSI 603 and 604, or permission of instructor. Introduction to methods for measuring humans. Topics include face, speaker, fingerprint, and shoeprint recognition; and handwriting analysis. Students develop computer programs to perform many of these tasks.

650 Introduction to Bioinformatics Database Design (3:3:0) Prerequisites: BINF 634 or equivalent, or permission of the instructor. Students will acquire skills needed to exploit public biological databases, and establish and maintain personal databases that support their own research; such skills include learning underlying data models and the basics of DBMS and SQL.

690 Numerical Methods for Bioinformatics (3:3:0) Prerequisites: calculus and knowledge of a programming language, such as CS 112 and MATH 113, or permission of instructor. Computational techniques for solving scientific problems focusing on applications in bioinformatics and computational biology. Students develop the ability to convert a quantitative problem into computer programs to solve the problem. Emphasizes efficiency and readability of code.

701/BIOS 701 Biochemical Systematics (Biochemistry) Core for Doctoral Studies in Biosciences and Bioinformatics (3:3:0) Prerequisite: admission to PhD program in biosciences or bioinformatics, CHEM 663, or equivalent. Introduction to biochemical systems to investigate complex, multicomponent, dynamic functions of cellular systems. Such studies employ myriad conceptual and technical approaches in their application. Articles from current literature are basis of course offering. The application of molecular techniques within biosciences is now universal. The cell: What is its structure and how does it function? This is the underlying question of course.

702/BIOS 702 Research Methods (3:3:0) Prerequisite: admission to PhD program in bioinformatics or biosciences.

Trains students in research methodologies for life sciences. Covers the three phases of biological research projects: experimental design, data collection, and data analysis.

703 Bioinformatics Lab Rotation (1:0:1) Prerequisite: permission of instructor. Short-term introductory research on a specific topic in computational sciences and informatics under direction of faculty member. May be repeated.

704 Colloquium in Bioinformatics (1:1:0) Prerequisite: graduate standing. Seminar presentations in a variety of areas of bioinformatics and computational biology by SCS faculty, staff, advanced PhD students, and professional visitors. May be repeated for credit.

705 Research Ethics (1:1:0) Prerequisite: permission of instructor. Examine ethical issues in scientific research, reflecting on purpose and reviewing foundational principles for evaluating ethical issues. Provides skills for survival in scientific research through training in moral reasoning, and teaching of responsible conduct. Students learn to apply critical thinking skills to design, execution, and analysis of experiments and analysis of ethical issues in research, including use of animals and humans, standards in computer community, and research fraud. Guidelines for data ownership, manuscript preparation, and conduct of people in authority may be presented and discussed.

730 Biological Sequence Analysis (3:3:0) Prerequisites: BINF 702 or previous courses in programming, molecular biology, and probability, or permission of instructor. Fundamental methods for analyzing nucleic acid and protein sequences, including pairwise and multiple alignment, database search methods, profile searches, and phylogenetic inference. Development of probabilistic tools, including hidden Markov models and optimization algorithms. Survey of current software tools.

731 Protein Structure Analysis (3:3:0) Prerequisite: permission of instructor, or previous courses in molecular biology, biochemistry, and computer programming. Computational methods for analyzing, classifying, and predicting three-dimensional protein structures. Covers theoretical approaches, techniques, and computational tools for protein structure analysis.

732 Genomics (3:3:0) Prerequisites: BINF 730 or previous courses in biology, numerical methods, and programming; or permission of instructor. Surveys computational tools and techniques to study whole genomes, and explores biological basis of genome analysis algorithms. Topics include genome mapping, comparative genomics, and functional genomics.

733 Gene Expression Analysis (3:3:0) Prerequisites: programming experience and course in molecular biology, or permission of instructor; S-Plus or Matlab experience may be helpful. Analyzes gene expression data. Topics include cluster analysis and visualization of expression data, inference of genetic regulatory networks, and theoretical models of genetic networks.

734 Advanced Bioinformatics Programming (3:3:0) Prerequisites: BINF 634, or permission of instructor. Topics include algorithm design, complex data structures, object oriented programming, relational databases, designing modules, and graphics and web programming. Students complete a bioinformatics programming project.
739 Topics in Bioinformatics (3:3:0) Prerequisite: permission of instructor. Selected topics in bioinformatics not covered in fixed-content bioinformatics courses. May be repeated for credit.

740 Introduction to Biophysics (3:3:0). Prerequisites: undergraduate courses in general physics, calculus, and biology. Introduces biophysics, focusing on physical and chemical concepts and their relation to rapidly expanding interdisciplinary interfaces among biology, chemistry, and physics. Reveals multiscale nature of biophysics, and includes exploration of macroscopic and microscopic applications.

741 Introduction to Computer Simulations of Biomolecules (3:3:0). Prerequisites: BINF 690 and 701, and knowledge of computer programming language; or permission of instructor. Course in differential equations is recommended. Mathematical and computational methods for analysis of cellular and subcellular processes. Topics may include ion channels, whole cell models, intracellular signaling, biochemical oscillations, pathway modeling, parameter estimation, and sensitivity analysis.

796 Directed Reading and Research (3:3:0) Reading and research on specific topic in computational sciences and informatics under direction of faculty member. May be repeated.

798 Research Project (3:0:0) Prerequisites: 12 graduate credits and permission of instructor. Project chosen and completed under guidance of graduate faculty member that results in acceptable technical report.

799 Master’s Thesis (1–6:0:0) Prerequisites: 12 graduate credits and permission of instructor. Course in differential equations is recommended. Mathematical and computational methods for analysis of cellular and subcellular processes. Topics may include ion channels, whole cell models, intracellular signaling, biochemical oscillations, pathway modeling, parameter estimation, and sensitivity analysis.

820 Advanced Topics in Molecular Cell Biology (3:3:0). Prerequisites: BINF 631 or equivalent. Advanced molecular and cellular biology foundation for BINF students. Topics may include cell structure, biomembranes and cell architecture, cell signaling, receptor activation, gene expression and control, protein targeting and trafficking, and cell cycle regulation.

831 Structural Genomics Project (3:3:0). Prerequisite: BINF 731, or permission of instructor. Covers knowledge-based, large-scale protein structure analysis; classification and prediction of protein structure and function; and other current research topics in structural genomics. Projects address entire research enterprise from developing and defending proposal to peer-reviewed publication.

841 Research Topics in Biomolecular Simulations (3:3:0). Prerequisite: BINF 741, or permission of instructor. Research-oriented course combining lectures and work on individual projects in biomolecular simulations. Topics include protein and peptide aggregation, binding, and unfolding and folding.

996 Doctoral Reading and Research (1–12:0:0) Prerequisites: admission to doctoral program and permission of instructor. Reading and research on specific topic in computational sciences and informatics under direction of faculty member. May be repeated.

998 Doctoral Dissertation Proposal (1–12:0:0) Prerequisite: permission of advisor. Covers development of research proposal, which forms basis for doctoral dissertation, under guidance of dissertation director and doctoral committee. May be repeated.

999 Doctoral Dissertation (1–12:0:0) Prerequisite: admission to doctoral candidacy. Doctoral dissertation research under direction of dissertation director. May be repeated, but no more than 24 credits in BINF 998 and 999 may be applied to doctoral degree requirements.

Biology (BIOL)

Molecular and Microbiology

103 Introductory Biology I (4:3:3) Survey course suitable for any major. Topics include chemistry of life, cell structure and function, Mendelian genetics, evolution, and diversity of life. May not be taken after BIOL 200 level or above courses have been taken. f, sum

104 Introductory Biology II (4:3:3) Students are strongly urged to take BIOL 103 prior to BIOL 104. Survey course suitable for any major. Topics include animal (including human) structure, function, homeostatic mechanisms, organ systems, behavior, higher plant systems, and major concepts in ecology. May not be taken after BIOL 200 level or above courses have been taken. sp, sum

105 Introductory Biology I Laboratory (1:0:3) Prerequisite: Permission of BIOL 103/104 coordinator and department chair. Not available to students who have taken BIOL 103 or the equivalent. The chemical basis of life, the structure and function of the cell, Mendelian and human genetics, and the major animal phyla are presented.

106 Introductory Biology II Laboratory (1:0:3) Prerequisite: Permission of BIOL 103/104 coordinator and department chair. Not available to students who have taken BIOL 104 or the equivalent. The structure and function of major organ systems of animals and an examination of the structure and function of plants, emphasizing the higher plants.

124, 125 Human Anatomy and Physiology (4:3:3), (4:3:3) Must be taken in sequence. Does not satisfy natural science requirement for B4 in CAS. Introduction to structure and function of body's major organ systems. f,s,summer

213 Cell Structure and Function (4:3:3) For science majors and preprofessionals in life sciences. Introduction to cell chemistry, metabolism, and genetics. f,s,summer

225 Human Reproduction and Sexuality (3:3:0) Not available for biology major or minor credit. Examines anatomy and physiology of human reproductive systems, physiology of sexual intercourse, normal pregnancy, birth, congenital conditions, sex determination and its expression, diseases of reproductive organs, and technical developments related to reproduction. f

246 Introductory Microbiology (3:3:0) Prerequisite: C or better in BIOL 124 and 125, one year of general biology, or permission of instructor. Corequisite: BIOL 306. Not avail-
available for biology major credit. Not available to students who have taken BIOL 213 or 418. Introduction to microbial cell structure, physiology, and pathogenicity. Emphasizes control of microorganisms, host-parasite interactions including immunology, and viral and bacterial pathogens. f, s

301 Biology and Society (3:3:0) Prerequisites: BIOL 103 and 60 credits, or permission of instructor. Not available for biology major or minor elective credit. Biological problems facing society including pollution, cloning, emerging diseases, global warming, and overpopulation. See Schedule of Classes for current topic; may be repeated if topic is different.

303 Animal Biology (4:3:3) Prerequisite: C or better in BIOL 213, or permission of instructor. Emphasizes structure and function of vertebrates, but surveys all animal groups and protozoa. Also covers evolutionary theory, and evolutionary history of major animal groups. f, s, sum

304 Plant Biology (4:3:3) Prerequisite: C or better in BIOL 213, or permission of instructor. Introduction to study of plants, their structure, development, nutrition, and ecology. Emphasizes flowering plants, but surveys all groups and their phylogenetic relationships. f, s, sum

305 Biology of Microorganisms (3:3:0) Prerequisite: C or better in BIOL 213, or permission of instructor. Corequisite: BIOL 306. Morphology, physiology, and pathogenicity of certain groups of bacteria, fungi, and viruses; stresses host-parasite interactions. f, s, sum

306 Biology of Microorganisms Laboratory (1:0:3) Corequisite: BIOL 246 or 305. Laboratory techniques in culturing, staining, and identifying microorganisms. f, s, sum

307 Ecology (4:3:3) Prerequisites: BIOL 303 and 304, or permission of instructor. Physical environment, energy flow, structure and function of populations, dynamics of communities, and succession. f, s, sum

309/GEOL 309 Introduction to Oceanography (3:3:0) Prerequisites: GEOL 101 and BIOL 103, or 213 or EVPP 110, or permission of instructor. Introduction to chemical, biological, and geological aspects of oceanic environment. May include field trip. f

311 General Genetics (4:3:3) Prerequisites: BIOL 213, 303, 304, 305, 306 all completed with no more than one D: or permission of instructor. Basic principles of heredity and modern developments in this field. f, s, sum

312 Biostatistics (4:3:2) Prerequisites: BIOL 303 and 304, or permission of instructor. Use of probability and descriptive and inferential statistical techniques in interpreting biological data. f

313 Human Genetics for the Social Sciences (3:3:0) Prerequisite: one year of biology, or permission of instructor. Not available for biology credit. Emphasizes topics of interest to students in social sciences, but open to any non-biology major. Topics include human genome and its inheritance; nature versus nurture; genetic disease; genetics of sex determination, intelligence, personality, and mental illness; genetic differences within and between populations; and evolution of human beings. s, odd

318 Conservation Biology (3:3:0) Prerequisites: BIOL 307, 311. Introduction to science used to identify species in need of conservation, and techniques to manage and protect organisms.

320 Comparative Chordate Anatomy (4:2:6) Prerequisite: BIOL 303, or permission of instructor. Compares anatomy and morphology of major chordate groups. Lab emphasizes shark, mudpuppy, cat, and rabbit. af

322 Developmental Biology (4:3:3) Prerequisites: BIOL 303 and 311, or permission of instructor. Principles of embryonic development and differentiation in animal species at cellular, molecular, tissue, and whole organism levels. f

326 Animal Physiology (3:3:0) Prerequisites: BIOL 213, 303, and 60 credits. General consideration of animal function emphasizing common life problems and methods for solving them. Topics include intercellular communication (nervous and endocrine), metabolism, water and solute balance, and cardiovascular and respiratory physiology.

327 Animal Physiology Laboratory (2:1:3) Prerequisites or corequisites: BIOL 326 and permission of instructor. Investigation of invertebrate and vertebrate physiology. Emphasizes responses to environmental changes.

331 Invertebrate Zoology (4:3:3) Prerequisite: BIOL 303, or permission of instructor. Survey of invertebrate phyla, excluding insects, showing morphology, phylogeny, and general biology of these groups.

332 Insect Biology (4:3:3) Prerequisite: BIOL 303, or permission of instructor. Survey of insects including taxonomy, morphology, physiology, behavior, ecology, and economic importance.

333 Vertebrate Zoology (4:2:6) Prerequisite: BIOL 303, or permission of instructor. Phylogeny and systems of major vertebrate groups. Emphasizes ecological adaptation. Lab includes field studies of local fauna.

342 Plant Morphology (4:3:3) Prerequisite: BIOL 304, or permission of instructor. Origin and development of organs, tissue systems, and life cycles of green plants, with phylogenetic comparisons from algae to angiosperms.

344 Taxonomy of Flowering Plants (4:3:3) Prerequisite: BIOL 304, or permission of instructor. Study of terminology and identification of flowering plants with emphasis on local flora.

345 Plant Communities (4:3:3) Prerequisite: BIOL 304, or permission of instructor. Plant associations and formations and their successions in North America. Three Saturday or Sunday field trips required.

350 Freshwater Ecosystems (4:3:3) Prerequisites: CHEM 211/212, and either EVPP 110/111 or BIOL 307. Studies physical, chemical, and biological processes in lakes, streams, and wetlands. Lectures, field trips, and lab exercises teach physical and chemical aspects of aquatic systems and life cycles, and adaptations of aquatic organisms.

371 Animal Distributions (3:3:0) Prerequisites: BIOL 303 and 304, or permission of instructor. Relations of North and South American faunas with other regions in light of continental drift. Emphasizes vertebrates.

377 Applied Ecology (3:3:0) Prerequisite: 8 credits of biology, geology, or chemistry; 60 credits; or permission of instructor. Introduction to ecosystem concepts and their applications to natural and managed ecosystems.

385 Biotechnology and Genetic Engineering (3:3:0) Prerequisites: BIOL 311; CHEM 211, 212; MATH 110 or 113. Emphasizes theory and applications, including signifi-
cance and societal implications of biotechnology applied to medicine, agriculture, and environment.

402 Applied and Industrial Microbiology (3:3:0) Prerequisites: BIOL 213, 305, 306; CHEM 211, 212; or permission of instructor. Biology of microorganisms of ecological and industrial significance. Includes food production, spoilage and preservation, fermentation technology, waste disposal, water purification, biodeterioration, and decomposition.

403 Techniques in Applied and Industrial Microbiology (1:0:3) Prerequisites: BIOL 213, 305, 306; CHEM 211, 212. Corequisite: BIOL 402, or permission of instructor. Lab exercises illustrate basic and applied methodologies, including isolation of commercially useful strains. Discusses production and purification of industrial products.

404 Medical Microbiology (3:3:0) Prerequisites: BIOL 305 and 306. Basic principles of infectious diseases caused by bacteria and viruses. Discusses genetics and molecular mechanisms of pathogenicity.

405 Microbial Genetics (4:3:3) Prerequisites: BIOL 305 and 306. Study of structure and function of bacterial DNA, emphasizing mechanisms of gene transfer, expression and regulation. Introduces DNA repair, mutation, and life cycles of bacteriophage.

406 Microbial Physiology and Metabolism (4:3:3) Prerequisites: BIOL 305 and 306. Study of complexity and diversity of microbial physiology and metabolism with emphasis on bacteria. Nutrition, growth, transport, and anaerobic and catabolic processes are emphasized. Laboratory includes quantification of cellular macromolecules, enzyme purification and kinetics, column chromatography, and bacterial responses to environmental stimuli.

407 Microbial Diversity (4:3:3) Prerequisites: BIOL 305 and 306. Studies effect of microorganisms on ecological and medical phenomena. Stresses evolution of microbial species, biochemical cycling, and species interactions. Laboratory stresses use of cultural, biochemical, and phylogenetic methods to study microbial isolation, metabolism, and identification.

411 Advanced General Genetics (3:3:0) Prerequisites: 2.00 or better in BIOL 311, or permission of instructor. Topics include quantitative genetics, extrachromosomal inheritance, and special techniques such as mutation screening, development genetics, cancer genetics, behavior genetics, evolutionary genetics, and ethics of genetic technology.

417 Selected Topics in Molecular and Cellular Biology (1–4:0–3:0–6) Prerequisites: BIOL 311 or 482, or permission of instructor. Study of current topics in molecular and cellular biology. Lecture, laboratory. Topics vary. May be repeated for credit.

421 Genetics of Human Diseases (3:3:0) Prerequisite: BIOL 311. Emphasizes strategies used for identification of genes involved in human genetic diseases. Both monogenic and complex human genetic diseases, as well as principles of genetic screening and counseling, will be presented.

422 Stem Cell Biology and Regenerative Medicine (3:3:0) Prerequisite: BIOL 311. A broad overview of the biological principles governing stem cell populations. The functional roles stem cells play in regulating normal development and contributing to disease-state pathologies. An examination of the therapeutic potential of stem cells through “regenerative medicine.”

425 Human Physiology (3:3:0) Prerequisite: BIOL 213, 303, or permission of instructor. Organ system approach to study of homeostasis, including cardiovascular, respiratory, renal, digestive, endocrine, and nervous system functions.

433 Selected Topics in Plant Biology (1–4:1–4:0–6) Prerequisite: BIOL 304, or permission of instructor. Lecture or field course in botany. Topic varies with instructor’s specialty.

440 Field Biology (1–4:0–2:3–9) Prerequisites: BIOL 303, 304, and 60 credits, or permission of instructor. Directed field studies emphasizing ecology and behavior. Topics vary but include design of field manipulations, data collection and analysis, and introduction to organisms of study site. Students bear cost of required field trips. May be repeated once with permission of department chair. Total limit for 440, 495, and 497 is 6 credits toward 44 credits required for BS, and only 4 credits toward 32 credits for BA, not to exceed 4 credits in any one semester.

446 Environmental Physiology (3:3:0) Prerequisite: BIOL 326, or permission of instructor. Physiological responses of animals to environmental factors and changes in natural environment. Topics include biorythms and adaptation to temperature, high pressure, and altitude. Emphasis on vertebrates.

449 Marine Ecology (3:3:0) Prerequisite: BIOL 307 and BIOL/GEOL 309, or permission of instructor. Plants and animals of marine environments and physical and chemical conditions that affect their existence.

452 Immunology (3:3:0) Prerequisites: BIOL 213, 305, 306, and 311; or permission of instructor. Topics include structure and function of immunoglobulins, role of cell-mediated immunity, protective role of immune system, and disease and injury related to malfunctions of immune system.

453 Immunology Laboratory (1:0:3) Prerequisite or corequisite: BIOL 452. Techniques relevant to BIOL 452, including enzyme-linked immunobassorbant assay, immunoassay, protein electrophoresis, and immune fixation.

459 Fungi and Ecosystems (3:3:0) Prerequisite: BIOL 304, course in microbiology, or permission of instructor. Considerers impact of fungi on ecosystems in terms of biogeochemical cycling, primary and secondary production, and regulating community structure and populations of individual species through their activities as symbionts and parasites. Discusses role of fungi in ameliorating pollutants produced by anthropogenic activities.

465 Histology (4:3:3) Prerequisites: BIOL 303 and 60 credits, or permission of instructor. Microscopic structure of animal tissues and organs, with emphasis on vertebrates.

471 Evolution (3:3:0) Prerequisite: BIOL 311, or permission of instructor. Process of evolution emphasizing role of
472 Introductory Animal Behavior (3:3:0) Prerequisites: BIOL 213, 303, or permission of instructor and 60 credits. Corequisite: BIOL 473. Study of mechanisms, functions, and evolution of behavior.

473 Introductory Laboratory in Animal Behavior (1:0:3) Corequisite: BIOL 472. Field or laboratory study in animal behavior with emphasis on mechanisms, functions, and evolution of behavior. Stresses experimental design and analysis of data. Writing-intensive laboratory.

482 Introduction to Molecular Genetics (3:3:0) Prerequisites: BIOL 213, 305, and 306, or permission of instructor. Basic concepts of structure and function of genetic material at molecular level.

483 General Biochemistry (4:4:0) Prerequisites: BIOL 213; CHEM 313, 314; or permission of instructor. Structure and function of proteins, carbohydrates, and lipids. Enzymology, and metabolism and its control.

484 Eukaryotic Cell Biology (3:3:0) Prerequisites: BIOL 311, 483; MATH 110 or 113; or permission of instructor. Structure and function of cell membranes and organelles with regard to cellular transport, sorting, compartmentalization, signaling, motility, and cell division.

485 Eukaryotic Cell Biology Laboratory (1:0:3) Corequisite: BIOL 484 or permission of instructor. Laboratory experiments using cell biology techniques, including microscopy, spectrophotometry, centrifugation, chromatography, and electrophoresis.

486 Molecular Biology and Biotechnology Laboratory (2:0:6) Prerequisites: BIOL 385 or 482. Introduction to theory, techniques and practices used in modern molecular biotechnology laboratories.

492 Senior Seminar (1:1:0) Prerequisites: BIOL 307 and 311, and 90 credits. Capstone course. fs

493 Honors Research in Biology (1:0:0) Prerequisite: admission to the Biology Honors Program. Laboratory or field investigation under supervisor’s guidance.

494 Honors Seminar in Biology (1:1:0) Prerequisites: admission to department honors program, and permission of instructor. Weekly seminar course dealing with recent advances in biology. Topics selected from recent publications in field. May be repeated for credit six times. fs

495 Directed Studies in Biology (1–2:0:0) Prerequisite: permission of instructor and department chair. Study of a topic not otherwise available to student. May involve reading assignments, tutorials, lectures, papers, presentations, or field or laboratory study, determined in consultation with instructor. May be taken for 1 to 2 credits and repeated once for a total of 2 credits. Total limit for 440, 495, and 497 is 6 credits toward 44 credits required for BS, and only 4 credits toward 32 credits for BA, not to exceed 4 credits in any one semester.

497 Special Problems in Biology (1–4:0:0) Prerequisites: 60 credits, and permission of instructor and department chair. Lab or field project leading to written report of research. Research and paper completed under instructor’s guidance. Total limit for 440, 495, and 497 is 6 credits toward 44 credits.

501 Microbial Diversity: An Organismal Approach (3:3:0) Prerequisite: undergraduate course in microbiology, or permission of instructor. In-depth study of nonpathogenic microbial world, emphasizing detection, enumeration, and classification of microorganisms; their physiological and evolutionary relationships; and biotechnological applications.

506 Selected Topics in Microbiology (1–4:1–3:0–6) Prerequisites: BIOL 305, 306, or permission of instructor. Topic depends on instructor’s specialty. May be repeated only with permission of department chair.

507 Selected Topics in Ecology (1–4:1–3:0–6) Prerequisite: course in ecology and permission of instructor. Topic depends on instructor’s specialty. May be repeated only with permission of department chair.

508 Selected Topics in Animal Biology (1–4:1–3:0–6) Prerequisite: BIOL 303, or permission of instructor. Topic depends on instructor’s specialty. May be repeated only with permission of department chair.

515 Introduction to Neurobiology (2:2:0) Prerequisite: completion of 60 credits, including PSYC 372; or BIOL 213 and 303. Introduction to neurobiology with an overview of embryological development of nervous system in evolutionary context. Regional and systems neuroanatomy is introduced by study of mammalian visual system with a comparative perspective.

516 Mammalian Neurobiology (3:2:3) Prerequisite: BIOL 515. Functional anatomy of mammal brains emphasizing regional and systems neuroanatomy of humans. Correlates with material from clinical neurology, where possible. Laboratory component includes brain dissections and clinical correlations.

518 Conservation Biology (3:3:0) Prerequisite: BIOL 307, 311, or equivalent. Introduction to science used to identify species in need of conservation, and techniques to manage and protect organisms.

520 Systematics in Complex Angiosperm Families (3:1:6) Prerequisite: BIOL 344 or 534, or permission of instructor. Morphology and speciation of more complex families such as Poaceae, Cyperaceae, and Asteraceae. Laboratory emphasizes identification of specimens, and acquaintance with taxonomic literature.

532 Animal Behavior (3:3:0) Prerequisite: permission of instructor. Ecological aspects of animal behavior.

533 Selected Topics in Plant Biology (1–4:1–3:0–6) Prerequisite: BIOL 304, or permission of instructor. Topic depends on instructor’s specialty. May be repeated only with permission of department chair.

534 Advanced Plant Taxonomy (3:1:6) Prerequisite: course in plant taxonomy, or permission of instructor. Laboratories consist of field trips, and collection and identification of specimens.

535 Ancient Plants and their Environment (3:3:0) Prerequisite: BIOL 304, course in paleontology, or permission of instructor. Study of factors involved in origin, history, and extinction of fossil plants, including adaptations, paleoecology, and major geological events.
536 Ichthyology (4:3:3) Prerequisite: course in ecology or permission of instructor. Studies systematics, evolution, physiology, ecology, and behavior of fishes. Lab time used for field trips, practice in identifying species, and hands-on experience with lecture subjects.

537 Ornithology (4:2:6) Prerequisite: course in ecology, or permission of instructor. Study of evolution, systematics, physiology, ecology, and behavior of birds, emphasizing field work.

538 Mammalogy (4:2:6) Prerequisite: course in ecology, or permission of instructor. Study of evolution, systematics, physiology, ecology, and behavior of mammals, emphasizing field work.

539 Herpetology (4:2:6) Prerequisite: course in ecology, or permission of instructor. Study of evolution, systematics, physiology, ecology, and behavior of amphibians and reptiles, emphasizing field work.

540 Tropical Ecosystems (4:3:3) Prerequisite: course in ecology, or permission of instructor. Terrestrial, aquatic, and marine ecosystems in tropics, emphasizing plant communities, plant-animal interactions, and role of humans in the tropics. Field trip to tropics required as part of laboratory.

546 Estuarine and Coastal Ecology (4:3:3) Prerequisite: course in ecology, and permission of instructor. Emphasizes marine biology of estuarine and coastal habitats of Chesapeake Bay region, and factors affecting distribution and abundance of organisms. Laboratory provides training in field measurement of physical and chemical parameters, and collection and identification of local organisms. Extended field trips made to mid-Atlantic sites.

547 Terrestrial Plant Ecology (4:3:3) Prerequisite: course in ecology. Considers community organization, development, productivity, and mineral cycling; interactions between plants and competitors; herbivores; and environmental factors, especially light, water, and soil. Field work and laboratory emphasize data collection and statistical analysis.

553 Advanced Topics in Immunology (3:3:0) Prerequisite: BIOL 452, or permission of instructor. Comprehensive study of immunologic mechanisms as they pertain to immunologic diseases and transplantation.

556 Advanced Topics in Microbial Physiology and Metabolism (3:3:0) Prerequisite: BIOL 305, 306, or permission of instructor. Comprehensive study of microorganisms including growth, nutrition, transport, autotrophic and heterotrophic metabolism, regulation, and differentiation.

559 Fungi and Ecosystems (3:3:0) Prerequisite: BIOL 304 or a course in microbiology, or permission of instructor. Considers impact of fungi on ecosystems in terms of their effects on biogeochemical cycling, primary and secondary production, and regulating community structure and populations of individual species through their activities as symbionts and parasites. Discusses role of fungi in ameliorating pollutants produced by anthropogenic activities.

561 Comparative Animal Physiology (3:3:0) Prerequisite: BIOL 326, or permission of instructor. Detailed study of selected physiological systems of invertebrates and vertebrates, emphasizing current research.

563 Virology (3:3:0) Prerequisite: BIOL 482, or permission of instructor. Fundamental concepts of nature of viruses, virus classification, cultivation, and biochemistry. Emphasizes bacteriophage and animal viruses.

564 Techniques in Virology (1:0:3). Prerequisites: BIOL 563, virology, and entrance into the PhD/biosciences or MS/biology program; or permission of instructor. Basic techniques of animal virus propagation, isolation, and quantitation.

566 Cancer Genomics (3:3:0) Prerequisite: course in genetics or biochemistry. Review of modern concepts in cancer biology including taxonomy of human tumors, common cancer syndromes, and genome instability. Genetic and molecular studies of tumor cell proliferation, migration, invasion, and death.

568 Advanced Topics in Molecular Genetics (3:3:0) Prerequisite: BIOL 482, or permission of instructor. Comprehensive study of regulatory mechanisms controlling gene expression in viruses, prokaryotes, and eukaryotes, emphasizing current research.

572 Human Genetics (3:3:0) Prerequisite: BIOL 311, or permission of instructor. Inheritance of humans emphasizing current problems, including genetic control of metabolic diseases, effects of radiation and chemical agents in environment, and directed genetic change.

573 Developmental Genetics (3:3:0) Prerequisite: BIOL 311, or permission of instructor. Genetic approaches to problem of eukaryotic development, emphasizing current research on regulation of gene enzyme systems.

574 Population Genetics (3:3:0) Prerequisites: BIOL 307 and 311, or permission of instructor. Genetic structure and dynamics of populations, both real and ideal.

575 Selected Topics in Genetics (1--4:1--3:0--6) Prerequisite: BIOL 311, or permission of instructor. Different topics in different years, including molecular, developmental, physiological, and classical genetics, emphasizing current problems and research. May be repeated once with permission of department chair.

576 Microbial Ecology of Soils (3:3:0) Prerequisites: BIOL 305, 306, or permission of instructor. Detection, identification, and physiological role of microorganisms in soils from root zone to deep subsurface. Emphasizes interactions of microorganisms, viruses through protests, and their functions in soil.

577 Biogeochemistry: A Global Perspective (3:3:0) Prerequisites: introductory courses on ecology and chemistry, or permission of instructor. Structure and function of ecosystems, their interactions as components of landscapes, and contributions to global environment. Emphasizes biogeochemical cycles of natural, disturbed, and managed ecosystems, and their integration at landscape and global level as related to current ecological problems such as transfer of nonpoint source pollutants, atmospheric deposition, stratospheric ozone depletion, and global change.

578 Mutation, DNA Repair, and Environmental Contamination (3:3:0) Prerequisites: BIOL 307 and 311. Overview of relationship between environmental contamination and genetic damage. Covers types of contamination that result in mutations, and molecular mechanisms of DNA damage and repair.
579 Molecular Evolution and Conservation Genetics (3:3:0) Prerequisite: BIOL 311. Corequisite: BIOL 471, or permission of instructor. Evolution of genes and gene families at molecular level, including gene duplication and divergence, positive and negative selection, genetic drift, and molecular clocks. Also includes selected applications in conservation genetics, such as molecular phylogenetics and estimates of population size.

580 Computer Applications for the Life Sciences (3:3:0) Prerequisites: 12 credits of biology and one year of college mathematics, or permission of instructor. Studies computer use in biological sciences. Combines lectures, supervised exercises on mainframe and microcomputers. Students present seminar on advanced application, and complete project using computer to fulfill major assignment associated with another course or employment.

583 General Biochemistry (4:4:0) Prerequisites: BIOL 213; CHEM 313, 314; or permission of instructor. Structure and function of proteins, carbohydrates and lipids, enzymology, and metabolism and its controls. Emphasizes chemistry of nitrogen compounds.

584 Eukaryotic Cell Biology Laboratory (1–2:0:1–3–6) Prerequisites: BIOL 484 or BIOL 682, or permission of instructor. Selected topics of laboratory procedures used in the study of eukaryotic cells. May be repeated one time with permission of program director.

587 Soil Ecology (3:3:0) Prerequisite: introductory course in general ecology or environmental science, or permission of instructor. Introduction to physical, chemical, and biological processes that govern development of soils and their ecological functions. Emphasizes central role that plants, microbes, and animals play in soil processes. Provides some training in system of soil classification and current methods to study soils.

588 Global Changes in Climate and Ecology (3:3:0) Prerequisites: introductory courses in general ecology or environmental science, or permission of instructor. Focuses on global-level changes that influence ecology. Introduces climate system—past, present, and future—emphasizing links between ecological systems and changes in climate, land use, and element cycling. Topics include responses of forests, oceans to climate change; effects of elevated carbon dioxide on plants; effects of ultraviolet radiation on aquatic systems; salt marsh responses to sea level rise; global eutrophication; desertification; carbon sequestration; and public policy implications of global change science.

589 Teaching Practicum (1:0:3) Prerequisites: permission of instructor, chair, and course coordinator (if any). Experience teaching biology in laboratory or in field under supervision of faculty member. Undergraduate assists instructor. May be repeated once.

607/EVPP 607 Fundamentals of Ecology (3:3:0) Overview of concepts in physiological, population, community, and ecosystem ecology. Restricted to graduate students with little or no background in ecology.

608 Topics in Biology (1–4:1–4:0–9) Prerequisite: employment or anticipated employment as science teacher. Not available for credit toward MS in biology, or PhD in environmental science and public policy. Inservice course to strengthen and update teacher’s knowledge of biology. Topics include organismal biology, cell biology, ecology, microbiology, or genetics. May be repeated for credit with permission of department chair.

610 Bioremediation: Theory and Applications (3:3:0) Prerequisites: course in microbiology and organic chemistry, or permission of instructor. Provides basis for understanding proper application of bioremedial technologies to treatment for hazardous wastes. Includes evaluation of data to determine successful treatment.

611 Techniques in Environmental Microbiology (2:0:4) Prerequisite: laboratory course in microbiology, or permission of instructor. Open first to those enrolled in BIOL 610. Laboratory exercises illustrate techniques to demonstrate microbial degradation, detection of microbes, isolation, and evaluation of physiological and genetic characteristics.

622 Methods and Principles of Animal Taxonomy (3:1:6) Prerequisite: course in evolution, or permission of instructor. Theoretical basis of techniques in animal classification, emphasizing practical application to laboratory problem dealing with a particular animal group.

640 Environmental Biology (3:3:0) Prerequisite: course in ecology, or permission of instructor. Patterns of climate and weather, tectons, soil formation, and surface water and groundwater movements.

643 Microbial Ecology (4:3:3) Prerequisite: course in microbiology, or permission of instructor. Study of relationships between microorganisms and their natural environment, and methodology for observing their natural environment and biochemical activities in that environment.

648 Population Ecology (3:3:0) Prerequisite: course in ecology or permission of instructor. Survey of ecological models and theory. Topics include population growth and regulation; competition; predator-prey, herbivore-plant, and parasite-host interactions; mutualism; and metapopulation ecology.

649 Biological Resource Management (3:3:0) Prerequisite: course in ecology, or permission of instructor. Applies modern ecological theories and methods to biological resource management in developing and developed countries. Explores problems in achieving optimum productivity of specific resources and application of systems analysis.

665 Environmental Hazards to Human Health (3:3:0) Prerequisites: courses in animal physiology and organic chemistry, or permission of instructor. Health effects of chemical contaminants of air, water, and food resulting from industrialized society. Includes identifying, evaluating, and controlling hazards.

666 Human Genetics Concepts for Health Care (4:4:0) Prerequisites: BS degree or enrollment in accelerated MS program. Course in cell or molecular biology. Not available to students who have taken BIOL 572. Principles of genetically determined diseases with emphasis on clinical aspects of these diseases, genetic counseling, and laboratory methods used in human genetics. Extended studies students preparing to enter medical or dental school are welcome.

668 Advanced Techniques in Molecular Biology (4:2:6) Prerequisite: BIOL 568, or permission of instructor. Experimental studies using current methods for purification and characterization of biologically important compounds. Provides training for research in molecular biology.
669 Pathogenic Microbiology (3:3:0) Prerequisites: courses in microbiology and biochemistry. Molecular mechanisms of bacterial pathogenicity, and immune response in infectious diseases.

670 Environmental Law for Biologists (3:3:0) Prerequisite: course in ecology, environmental biology, or permission of instructor. Study of laws and regulatory issues such as National Environmental Policy Act and Clean Water and Clean Air Acts. Emphasizes critical evaluation of alternatives to unresolved issues in environmental policies.

680 Experimental Design and Analysis for the Life Sciences (4:3:3) Prerequisite: course in biostatistics, or permission of instructor. Advanced course in applying probability and statistics to research in life sciences. Examples drawn from environmental, medical, physiological, genetic, and chemical biology.

682 Advanced Eukaryotic Cell Biology (3:3:0). Prerequisites: BIOL 483, CHEM 313, 314; or permission of instructor. Structure and function of biomembranes, cytoskeleton, and transport systems. Also discusses protein trafficking, cell cycle, and cell adhesion molecules.

690 Introduction to Graduate Studies in Biology (2:2:0) Required of all new MS students in biology. May be repeated for credit.

691 Current Topics in Biology (1–4:1–3:0–6) May be repeated for credit.

692 Seminar in Biology (1:1:0) Topics vary. May be repeated for credit.

693 Directed Studies in Biology (1–8:0:0) Prerequisites: permission of instructor, chair, and graduate committee. May not be used to fulfill explicit undergraduate prerequisites for graduate work. Study of topic not otherwise available in graduate program. May involve any combination of reading assignments, tutorials, lectures, papers, presentations, or laboratory or field study, determined in consultation with instructor.

695 Seminar in Molecular, Microbial, and Cellular Biology (1:1:0) Review and discussion of recent literature in specialized area. Includes student presentations. May be repeated for credit.

715 Microbial Physiology (3:3:0). Prerequisites: undergraduate lecture/lab course in microbiology, and course in biochemistry. Comprehensive study of functioning of microbial cells, with emphasis on pathogens. Stresses growth, cell cycle, and cell adhesion molecules.

718 Techniques in Microbial Pathogenesis (3:0:3). Prerequisites: admission to biosciences PhD or biology MS program, and permission of instructor. Laboratory based class in which students perform current techniques in microbial pathogenesis.

720 Microbial Metabolism (3:3:0). Prerequisites: undergraduate lecture/lab course in microbiology, and course in biochemistry. Discussions of catabolic and anabolic pathways of bacterial pathogens, and regulation and integration of these pathways.

745 Environmental Toxicology (3:3:0) Prerequisites: courses in ecology and physiology, or permission of instructor. Study of nature, distribution, and interaction of toxic chemicals released into the environment. Emphasizes effects on nonhuman biota, detection and fate of chemicals, and implications for government regulation.

793 Research in Biology (1–3:0:0) Prerequisites: 8 graduate credits in BIOL, and permission of instructor and chair. Library, laboratory, or field investigation under supervisor’s guidance. May be repeated for total 3 credits.

798 Master’s Research Project (1–3:0:0) Prerequisites: permission of instructor and department chair. Students who take BIOL 793 may not receive more than 6 credits total for both BIOL 793 and 798. Experimental or theoretical research project chosen and completed under guidance of graduate faculty member. Comprehensive report acceptable to student’s advisory committee is required. Graded S/NC.

799 Thesis (1–6:0:0) Prerequisites: 8 graduate credits in BIOL, and permission of instructor and department chair. Students who take BIOL 793 may not receive more than 6 credits total for both BIOL 793 and 799. Thesis research under direction of supervisor. Graded S/NC.

800 Studies for the Doctor of Philosophy in Education (variable credit) Prerequisite: admission to PhD in education program to study in biology. Program of study designed by student’s discipline director and approved by student’s doctoral committee. Students participate in research of discipline director, and produce paper reporting original contributions. Paper presented in subsequent PhD summer seminar. Enrollment may be repeated.

See EVPP, Environmental Science and Public Policy, for additional related course work.

Bioscience Management (MSBM)

School of Management

603 Managerial Economics and Decisions of the Firm (3:3:0) Prerequisite: admission to MSBM program. Provides fundamental understanding of how microeconomics concepts are usefuly applied to managerial decision-making. Fully explores principles of microeconomic theory, including market supply and demand, production and cost functions, industry structure, and product and resource pricing.

613 Financial Reporting and Decision Making (3:3:0) Prerequisite: admission to MSBM program. Foundation course focusing on economics and analysis of business transactions and related financial reporting issues. Topics include introduction to accounting framework in financial reporting; and analysis of financial statements, economic events’ impact on financial reports, and impact of accounting method choices on financial reports.

623 Marketing Management (3:3:0) Prerequisite: admission to MSBM program. Develops abilities to make marketing decisions in a wide variety of bioscience organizational and competitive situations. Emphasizes technology to aid in analysis, decision making, and communication of decisions to relevant stakeholders. Case studies, team work, and projects.

643 Managerial Finance in Bioscience Management (3:3:0) Prerequisite: admission to MSBM program. Introduces theory and practice of finance within corporations as applied to life sciences organization and industry. Topics include intertemporal choice, valuation, capital budgeting, capital structure, working capital management, and risk/return analysis.
Legal and Ethical Aspects of Bioscience Management (3:3:0) Prerequisite: admission to MSBM program, or permission of instructor. Introduces contemporary legal and ethical doctrines as applied to the life sciences organization and industry, and examines how they can be applied to guide and enhance the decision-making processes of managers in a global economy. Discusses intellectual property issues. Lecture, class discussion, cases, and projects.

Organizational Behavior and Human Resource Management (3:3:0) Prerequisite: admission to MSBM program. Emphasizes development of conceptual tools for understanding and analyzing individual and group behavior in bioscience organizations and organizational processes. Considerable focus on developing relevant skills for working in groups and teams. Lectures, discussions, case analyses, and in-class exercises.

Best Practices in R&D Management (3:3:0) Prerequisite: admission to MSBM program, or permission of instructor. Deals with management of R&D in corporations and outside funding agencies. Management of R&D project portfolio; third and fourth generation R&D management practices; and climate for R&D funding, including government policy from perspective of firms and institutions receiving funding, and the agencies funding projects. Studies corporate, institutional, and governmental perspectives.

Project and Cost Management (3:3:0) Prerequisite: completion of bioscience management core requirements, or permission of instructor. Focuses on project scheduling, time-cost trade-offs, budgeting, cost control, and project monitoring. Emphasizes cost-management aspects of projects in bioscience industries. Uses software, case studies.

Analysis of the Bioscience Industries (3:3:0) Prerequisite: admission to MSBM program, or permission of instructor. Develops knowledge of status of bioscience and bioinformatics industry and its companies and segments. Students analyze bioscience companies using Porter’s Five Forces Model, examine industry segments, and create electronic database with their findings and analysis.

Bioscience Management Capstone Project (3:3:0) Prerequisite: admission to MSBM program, or permission of instructor. Teams undertake strategic evaluation and plan for bioscience-driven business initiatives. Teams present their results, including analysis of competitive forces and the value chain; recommendations including changes in goals and organizational design; plan of action integrating marketing, human resource development, organizational theory, finance, and bioscience product research and development; and implementation plan using theories of communication and change management, to include business case and business plan.

Bioscience Product Development and Risk Management (3:3:0) Prerequisite: admission to MSBM program, or permission of instructor. Explores best practices in product development in the life sciences (bioinformatics, bioscience, genomics, biotechnology, and pharmaceutical) Students analyze practices in terms of gaining competitive advantage in an industry where new technologies and economic models for products are constantly being developed. Life science projects and product development efforts categorized and analyzed to develop and maintain the most favorable project or product asset portfolio to successfully carry out business goals and strategies. Analyzes effect of bioscience project investments on organization’s financial worth and performance, and bioscience industry segments and companies from perspective of choosing appropriate partnerships.

Global Aspects of Bioscience Management (3:3:0) Prerequisite: admission to MSBM program, or permission of instructor. Students spend a week in an international residency under faculty leadership. Primary focus is dealing with globalization of the life science industries, international markets for life science products and global developments in R&D, virtual global organization, and project management across cultures. Features corporate site visits, and presentations by professors from international universities and practitioners.

Biosciences (BIOS)

Molecular and Microbiology

Biochemical Systematics (3:3:0) Prerequisites: general biochemistry. Introduces biochemical systems to investigate complex, multicomponent, dynamic functions of cellular systems. Readings include articles from current literature in molecular biosciences. Application of molecular techniques within biosciences is now universal, and underlying questions is, “What is the structure of a cell, and how does it function?”

Research Methods (3:0:0) Prerequisite: admission to PhD program in biosciences. Trains students in research methodologies, techniques, and data analysis in life sciences. Divided into three modules that introduce separate but equally significant components of any research project: parameters required to outline and synthesize a problem, techniques of measurement and analysis used by life scientists, and approaches for data analysis and interpretations.

Laboratory Rotation (1:0:4) Prerequisite: admission to PhD program in biosciences. Intensive introduction to research laboratory in biosciences. Students read background material pertinent to problem under study, learn and practice research methods of laboratory, and formulate short final project that may be proposal or actual project, demonstrating some mastery of techniques and approaches employed. Should be repeated three times (except by permission of concentration director).

Topics in Biosciences (1:1:0) Prerequisite: admission to PhD program in biosciences. Required of all students during each semester prior to advancement to candidacy. Combines invited seminars from internal and external faculty with graduate student seminars. Seminar presentation required for advancement to candidacy, generally given in last semester before candidacy. Includes discussion section led by course coordinator. Should be repeated three times (except by permission of concentration director).

Current Topics in Biosciences (1–3:1–3:0) Prerequisite: admission to biosciences PhD or biology MS program. Studies current topic in biosciences. Topics vary. May be repeated for credit with permission of concentration director.

Laboratory Methods in Functional Genomics and Biotechnology (3:2:3) Prerequisite: admission to PhD program in biosciences, or permission of instructor. Current laboratory techniques in molecular biology and genomics, including nucleic acid isolation, gene cloning and sequencing, gel blot analysis, PCR, in vitro mutagenesis, and theory
and practice of DNA microarray analysis of gene expression. Topics may vary from year to year depending on advances in field.

741 Genomics (3:3:0) Prerequisites: at least one undergraduate course in genetics and molecular biology, or permission of instructor. Genetic structure and function at whole genome level. Includes some sequence analysis, comparative genomics, classical genetics, and development genetics, as well as analysis of synteny groups, isochores, gene families, genetic complexity. C value paradox, directed discovery of gene functions, and animal models of human disease. Readings from recent texts and primary research literature. Students expected to give one or two oral presentations of primary research papers, as well as complete midterm and final exams.

742 Biotechnology (3:3:0) Prerequisites: undergraduate course work in genetics and molecular biology. Theory and applications of biotechnology. Includes promoter design, gene fusions, protein targeting, techniques of protein purification, construction of transgenic organisms, cloning of animals and plants, ethical and legal issues. This is a relatively new area of study that is rapidly changing; course strives to keep students abreast of current literature.

743 Genomics, Proteomics, and Bioinformatics (3:3:0). Prerequisite: admission to biosciences PhD or biology MS program. Fundamental methods for analyzing genomic and proteomic data, including nucleic acid and protein sequences, pair-wise and multiple alignment, database search methods, clustering and presentation of data, prediction modeling, and survey of available software and freeware tools.

744 Molecular Genetics (3:3:0) Prerequisites: undergraduate course work including BIOL 311, CHEM 313, 314, 315, and 318; equivalents; or permission of instructor. Develops understanding of principles of modern molecular genetics and methods of investigation of genomes of pro- and eukaryotes, including types of genetic manipulations conducted in research laboratories today.

760 Seminar in Molecular Systematics (1-3:1-3:0) Presentations and discussion by students and faculty of research papers and projects.

761 Dispersal Patterns of Biological Agents (3:3:0). Prerequisites: admission to biosciences PhD or biology MS program, and permission of instructor. Introduces military and terrorist methods of dispersal patterns. Covers physics of aerosols, engineering and mechanics of building ventilation systems, and mechanical dissemination including handheld, automatic, vehicle, and truck-mounted systems. Also covers viability of specific agents involved.

762 Phylogenetic Analysis (4:3:3) A consideration of molecular systematics techniques in biology, especially cladistics and phenetics methods. Species concepts, biological nomenclature, and classifications will also be discussed. Laboratory will emphasize phylogenetic methods using online sources of comparative data.

765 Molecular Systematics (3:3:0) Comparative evolutionary techniques applied to molecular data. Use of molecular techniques, molecular, databases, and analytical techniques will be covered.

767 Molecular Evolution (3:3:0) A review of the diversity and organization of genomes and evolutionary processes that operate at the molecular level. Emphasis will be placed on processes of molecular evolution and techniques used to analyze these processes.

899 Directed Studies in Biosciences (1–12:0:0) Prerequisite: permission of research advisor. Studies of specialized topics in biosciences. Specific arrangements for designing scope and area of study to be determined in consultation with instructor. May involve literature searches and review, workshops, or tutorials.

899 Directed Research in Biosciences (1–12:0:0) Prerequisite: permission of research advisor. Research on a pertinent topic in biosciences. Scope and subject of research to be determined by instructor.

998 Doctoral Dissertation Proposal (1–6:0:0) Prerequisite: permission of research advisor. Research and writing of research proposal for doctoral dissertation. Graded S/NC.

999 Doctoral Dissertation Research (1–24:0:0) Prerequisite: approved dissertation proposal. Research in concentration pertinent to students’ program of study. Maximum of 24 credits can be applied toward degree. Graded S/NC.

Business Legal Studies (BULE)

School of Management

If a student takes noncore, upper-level business courses before acceptance to the School of Management, those courses will not count on an undergraduate degree application for any major in the school, except as general elective credit. A grade of C or higher must be presented on the graduation application for each upper-level course in the major. Course prerequisites are strictly enforced. Degree status is defined as formal admission to SOM.

302 Legal Environment of Business (3:3:0) Prerequisite: sophomore standing. This course surveys the legal environment of business, emphasizing legal concepts and legal reasoning to prepare students to recognize legal problems and formulate appropriate responses. Topics include business ethics, torts, crimes, contracts, and other topics. Lecture, discussion, cases.

402 Commercial Law (3:3:0) Prerequisites: BULE 302; degree status. Survey of commercial law emphasizing the Uniform Commercial Code. Lecture, discussion, cases.

Minor in Business (MSOM)

School of Management

Prerequisite for all MSOM courses is completion of 29 credits (sophomore standing).

300 Managing Financial Resources (3:3:0) May not be taken for credit by SOM majors. Students who have received credit for both ACCT 203 and FNAN 301 cannot also receive credit for MSOM 300. Focuses on using basic concepts of accounting and financial management to make investment, credit, and operating decisions for an organization. Emphasizes financial reports to aid planning and control of organizational activities.

301 Managing People and Organizations (3:3:0) May not be taken for credit by SOM majors. Students cannot receive credit for both MGMT 301 and MSOM 301. Introduces key issues in management, organizational behavior, and human
302 Managing Information in a Global Environment (3:3:0) May not be taken for credit by SOM majors. Students cannot receive credit for both MIS 301 and MSOM 302. Provides overview of strategic role of information, need for information systems, organizing information, integration of information systems in management processes and decision making, and related discussions in electronic commerce.

303 Marketing in a Global Economy (3:3:0) May not be taken for credit by SOM majors. Students cannot receive credit for both MKTG 301 and MSOM 303. Presents marketing principles, concepts, strategies, and analytical tools used by profit and nonprofit organizations to market ideas, products, and services to selected target groups. Emphasizes how to develop, promote, distribute, and price firm’s offerings in dynamic economic, social, political, and global environment.

304 Entrepreneurship: Starting and Managing a New Enterprise (3:3:0) May not be taken for credit by SOM majors. Explores behaviors required to successfully launch a new business, tools to identify and evaluate opportunities, and the issues critical to a new firm. Issues include organizational structure, effective marketing strategy, operational logistics, legal issues, financial projections, financing options, and available support structures.

305 Managing in a Global Economy (3:3:0) May be taken for credit by SOM majors only if taken to satisfy the global understanding requirement for general education. Multidisciplinary approach to global economy from viewpoint of managing international business. Introduces unique aspects of managing in global economy including theory and political economy of international trade and foreign direct investment, global monetary system, and strategy of international business.

306 Managing Projects and Operations (3:3:0) May not be taken for credit by SOM majors. Students cannot receive credit for both OM 301 and MSOM 306. Introduces project management and operations management concepts and tools including project planning, scheduling, monitoring, and control; process design, selection and improvement; supply chain management; inventory management; and quality assurance.

Character Education (EDCE)

Graduate School of Education

600 Philosophical and Theoretical Perspectives on Character Education (3:3:0) Prerequisite: admission to Character Education Program. Analyzes and evaluates theories and models of character education that fit with different philosophical perspectives. Analyzes character education in the United States and other countries.

601 How Students Learn Values and Ethics (3:3:0) Prerequisite: admission to Character Education Program. Applies theories to practice to increase learning through the study of moral and ethical development theories and how students learn personal, prosocial, and civic values.

602 Comprehensive Character Education Frameworks (3:3:0) Prerequisite: admission to Character Education Program. Analyzes comprehensive character education frameworks that have emerged from research and practice, examining framework components and their applications to character education initiatives.

603 Global and Ethical Perspectives on Teaching Diverse Learners (3:3:0) Prerequisite: admission to Character Education Program. Analyzes ethical and moral dimensions of classroom interactions using developmental framework and foundation of democratic principles. Evaluates school politics and policies, and provides overview of prevailing ethical points of view.

604 Character Education Curriculum and Programs (3:3:0) Prerequisite: admission to Character Education Program. Analyzes and evaluates quality of programs and curriculum materials for character education using program, implementation, and curriculum standards.

605 Character Education Assessment and Evaluation (3:3:0) Prerequisites: EDCE 602, 603, and 604. Applies assessment standards and audit tools to analyze and evaluate formative and summative assessments of programs for character education. Utilizes backward design model.

606 Leadership in Character Education: An Internship in Program Development, Curriculum, Instruction, or Assessment (3:3:0) Prerequisites: EDCE 602, 603, 604, and 605. A 150-hour, on-site internship focusing on one of the following: instructional strategies, curriculum or program development, using resources, or assessment.

607 Educational Research for Character Educators (3:3:0) Prerequisites: EDCE 600, 601, 602, 603, and 604. Prerequisite or corequisite: EDCE 605. Studies and applies fundamental concepts and methods of educational action research. Emphasis on researching how students learn personal, prosocial, and civic values, and teacher and school effectiveness in this area.

Chemistry (CHEM)

Chemistry and Biochemistry

CHEM 211, 212 are prerequisites to all other undergraduate CHEM courses numbered 301 or above.

101 Introduction to Modern Chemistry (3:3:0) Not open to students majoring in chemistry. Credit will not be given for this course and CHEM 103. Fundamental principles of chemistry. Physical and chemical discoveries and properties of matter presented along with their application and impact on way of life. Topics include atomic and molecular structure, nuclear chemistry, and chemistry in Earth and atmosphere. No previous knowledge of chemistry assumed or required.

102 Introduction to Organic and Biological Chemistry (3:3:0) Prerequisite: CHEM 101, 103, or 211. Not open to students majoring in chemistry. Course cannot be used in place of CHEM 313 or 314. Credit will not be given for this course and CHEM 104. Structure and properties of major classes of organic compounds with particular reference to organic molecules and their relationship to manmade polymers and biopolymers including carbohydrates, lipids, proteins, and nucleic acids. Primarily intended for those interested in applying principles of organic chemistry and biochemistry to related areas such as genetics, microbiology, physiology, and nutrition.

103, 104 Chemical Science in a Modern Society (4:3:3) CHEM 103 is a prerequisite for CHEM 104. Not open to...
students majoring in chemistry. Credit will not be given for both this course and CHEM 211, 212. Terminal course in chemistry for nonscience and nursing majors. Principles and application of chemistry. Topics are those described for CHEM 101 and 102 but with lab to enhance scientific experience.

155, 156 Introduction to Environmental Chemistry I and II (4:3:3) Prerequisite for 156: CHEM 155. Credit will not be given for this course and CHEM 103, 104. Basic chemical principles of Earth’s water, air, and soil systems, presented in the context of understanding environmental issues. Includes Saturday morning field trips to sites of past and present environmental contamination, alternating with Saturday morning laboratory activities.

201 Introductory Chemistry I (3:3:0) Does not fulfill degree requirements for laboratory science course. Credit will not be given for this course and CHEM 211 or 103. General chemistry course for students interested in science, engineering, mathematics, or computer science who do not require a lab. Fundamental principles of atomic and molecular structure; chemical bonding; basic concepts of chemical reactions and thermochemistry; and properties of gases, liquids, and solids.

202 Introductory Chemistry II (3:3:0) Prerequisite: CHEM 201 or 211. Does not fulfill degree requirements for laboratory science course. Credit will not be given for this course and CHEM 212 or 104. Second-semester general chemistry course for those interested in science, engineering, mathematics, or computer science who do not require a lab. Fundamentals of reaction rates and equilibrium. Topics include kinetics, properties of solutions, ionic equilibrium, chemical thermodynamics, electrochemistry, and nuclear chemistry.

211, 212 General Chemistry (4:3:3), (4:3:3) CHEM 211 is prerequisite to 212. Credit will not be given for this course and CHEM 103, 104. Basic facts and principles of chemistry, including atomic and molecular structure, gas laws, kinetics, equilibrium, electrochemistry, nuclear chemistry, and properties and uses of the more important elements and their compounds. Students majoring in science, engineering, or mathematics should choose this course sequence.

251 General Chemistry for Engineers (4:3:3) Enrollment restricted to students intending to major in engineering. Students who need two semesters of chemistry should enroll in CHEM 211. Credit will not be given for this course and CHEM 211. Fundamental principles of chemical structure and reactivity including atomic and molecular structure; chemical bonding; structures of ionic, covalent, and metallic lattices; oxidation reduction; electrochemistry and chemistry of metals; and introduction to organic chemistry and polymers.

300 Chemistry of Semiconductor Processing (3:3:0) Prerequisite: completion of 30 credits, or permission of instructor. Does not satisfy chemistry course requirements for BS in biology. Cannot be used as a chemistry elective toward BA, BS, or minor in chemistry, and does not fulfill premedical requirements. Chemical aspects of the manufacture of semiconductor devices. Topics include oxidation of silicon, photoresists, plasma etching, removal of metal contaminants by acid etching, and analysis of semiconductor thin films.

313, 314 Organic Chemistry (3:3:0) Corequisite for CHEM 313: CHEM 315; corequisite for CHEM 314: CHEM 318. CHEM 313 is a prerequisite for CHEM 314. Theoretical, synthetic, industrial, and biological aspects of the chemistry of carbon compounds.

321 Elementary Quantitative Analysis (4:2:0) Principles of chemical analysis emphasizing ionic equilibria. Lab consists of gravimetric, volumetric, and instrumental methods illustrating principal types of quantitative determinations.

322 General and Biochemical Equilibrium (2:2:0) Prerequisite: CS 103, 112, or 161. Study of general and biochemical equilibria in gas phase, ionic, and heterogeneous systems. Topics include gas reactions, polyfunctional acids and bases, complexation formation, solubility and free energy relationships, and the use of computer algorithms to solve equilibrium problems.

331, 332 Physical Chemistry I, II (3:3:0) Prerequisite: MATH 113, 114. Prerequisite or corequisite: PHYS 243 or 160. CHEM 331 is prerequisite to 332. Yearlong survey covering topics including thermodynamics, equilibria, kinetics, solution properties, elementary quantum theory, electrochemistry, atomic and molecular structure, and nuclear chemistry.

333, 334 Physical Chemistry for the Life Sciences I, II (3:3:0) Prerequisites: CHEM 211, 212; MATH 113. CHEM 333 is prerequisite to CHEM 334. Corequisite or prerequisite: MATH 114. Credit will not be given for both this course sequence and CHEM 331, 332. Yearlong survey of principles of physical chemistry emphasizing application in biological sciences. Topics include first and second laws of thermodynamics, free energy and chemical equilibria, kinetics, transport properties, molecular interactions, molecular structure, spectroscopy, statistical thermodynamics, and x-ray diffraction.

336 Physical Chemistry Lab I (2:1:3) Prerequisite or corequisite: CHEM 331 or 333. Quantitative experimental study of physicochemical principles. CHEM 336 and 337 constitute an introduction to the practice and theory of experimental physical chemistry. One-hour recitation.

337 Physical Chemistry Lab II (2:1:3) Prerequisite or corequisite: CHEM 332 or 334. Continuation of CHEM 336. One-hour recitation.

341 Fundamental Inorganic Chemistry (3:3:0) Descriptive chemistry including chemical properties, reactions, and reaction mechanisms of inorganic elements and compounds. Topics include main group and transition elements, organometallic compounds, and bioinorganic chemistry.

350 Computer Techniques for Chemistry (3:3:0) Prerequisite: CHEM 313. Introduction to computer software, both commercial and online, emphasizing applicability to chemistry topics. Techniques include spreadsheet programming, graphing and statistics, molecular modeling, and chemical information search and retrieval.

401 The Research Experience (3:1:6) Prerequisites: completion or concurrent enrollment in all other required
general education courses. Introduction to research on current problem in chemical sciences, under supervision of faculty advisor. Includes literature search, writing research proposal, attendance at scheduled seminars, written report including impact statement, and oral presentation.

422 Instrumental Analysis (3:3:0) Prerequisites: CHEM 314, 321, and 331. Introduces theories of analysis by instrumental methods. Basic electronics applied to chemical measurements. Topics include introduction to theory of spectroscopy including ultraviolet, visible, and infrared, and electrochemical methods of analysis; theory of Fourier transform techniques such as FT-IR and FT-NMR; and theory of advanced pulse techniques.

423 Instrumental Analysis Laboratory (2:0:6) Prerequisite: CHEM 422. Laboratory-based introduction to quantitative analysis of organic and inorganic substances by using modern analytical instrumentation. Laboratory highlights practice of atomic and molecular spectroscopy, spectrophotometry, chromatography, voltammetry, and potentiometry in relation to chemical experimentation.

441 Properties and Bonding of Inorganic Compounds (3:3:0) Prerequisites: CHEM 314 and 332. Interpretation of physical and chemical properties of inorganic compounds in terms of currently used bonding concepts. Topics include molecular symmetry and applications of symmetry, structure and bonding in ionic solids; and stereochemical, electronic, and magnetic properties of transition metal complexes and metal atom cluster compounds.

445 Inorganic Preparations and Techniques (2:0:6) Prerequisites: CHEM 321 and 441. Application of techniques of inorganic chemistry to preparation, purification, and spectroscopic characterization of selected substances.

446 Bioinorganic Chemistry (3:3:0) Prerequisite: CHEM 314. Application of inorganic coordination chemistry and physical methods in study of structure and function of metal ion sites in biomolecules. Properties of transition metal ions, ligand field theory. Topics include iron cytochromes, zinc and copper enzymes, cobalamin, iron sulfur proteins, oxygen transport, iron storage, electron transfer, inorganic model compounds, metals in medicine, and toxicity of inorganic species.

451, 452 Special Projects in Chemistry (2:0:6) Prerequisites: Chemistry major or minor, 90 credits, and permission of department research committee. Introduction to chemical research or development. Includes literature search, conferences, and lab. Written and oral technical reports required.

455, 456 Honors Research in Chemistry (3:1:6) Prerequisites: CHEM 313, 314, 321, 331–332 or 333–334; admission to Chemistry Department Honors Program; and permission of department research committee. Credit will not be given for both these courses and CHEM 451, 452. Introduction to research on current problem in chemical sciences under supervision of faculty advisor. Includes literature search, laboratory or theoretical work, conferences with faculty advisor, attendance at regularly scheduled seminars, and oral and written presentations.

463 General Biochemistry I (4:4:0) Prerequisites: CHEM 313, BIOL 213. Brief introduction to biochemistry, followed by in-depth look at amino acids and proteins, 3-D structure, folding and dynamics, their specialized function, and primary metabolism. Emphasizes enzymes and their chemical mechanisms, and metabolism.

464 General Biochemistry II (3:3:0) Prerequisite: CHEM 463/BIOL 483. Continuation of general biochemistry, focusing on secondary metabolism, cell signaling, and processes of replication, transcription, and translation. Emphasizes important biochemistry research topics; much material drawn from current biochemical literature.

465 Biochemistry Lab (2:0:6) Corequisite: CHEM 463. Introduction to modern biochemical experimental methods of studying chemical and physical properties of biological molecules. Includes separation, identification, and characterization of biomolecules.

467 The Chemistry of Enzyme-Catalyzed Reactions (3:3:0) Prerequisites: CHEM 313 and 463. Examples of enzyme mechanisms demonstrate how chemical principles are employed by living organisms. Specific enzyme mechanisms used to illustrate principles from organic, inorganic, and physical chemistry. Discusses techniques to monitor enzyme reactions.

468 Bioorganic Chemistry (3:3:0) Prerequisites: CHEM 314 and 463. Basic understanding of chemical nature of biomolecules and biomacromolecules. Includes synthesis of biomolecules such as amino acids, proteins, carbohydrates, and lipids. Lectures focus on biophysical properties and synthesis, using practical examples and visual aids.

470 Laboratory Instructional Methods for Chemistry (3:1:6). Prerequisite: CHEM 314. Lecture and laboratory experience teaching chemistry in laboratory. Students work closely with faculty member and are responsible for all aspects of teaching undergraduate laboratory techniques. Students also learn techniques for acquisition and storage of chemicals and laboratory apparatus, safety, disposal of chemical waste, and literature of chemical education.

500 Selected Topics in Modern Chemistry (3:3:0) Topics of interest in analytical, biological, environmental, geological, geochemical, inorganic, organic, and physical chemistry. May be repeated for credit with different topics. Credit not allowed toward major in chemistry.

505 Hazardous Materials Waste Management (1–3: 0). Prerequisite: CHEM 313 or permission of instructor. Comprehensive review of subjects most frequently encountered in hazardous chemicals management.

513 Synthetic and Mechanistic Organic Chemistry (3:3:0) Prerequisites: CHEM 313 and 314. General review of synthetic pathways and applications to new topics, emphasizing fused ring aromatics, heterocyclics, natural products, and biologically active compounds. Includes relationship of applied organic chemistry to consumer products, including drugs and agricultural chemicals. Organic core course.

521 Theory of Analytical Processes (3:3:0) Prerequisite: CHEM 422 or permission of instructor. Theory of signal and noise, mass transport phenomena, thermodynamics, and ionics in analytical chemistry. Applications made to Fourier transform techniques such as FT-IR and FT-NMR, convolution and correlation spectroscopy, chemical sensors, chromatography, flow injection analysis, ion transport in membrane, and interpretation of analytical signals. Analytical core course.

529 Instrumental Techniques of Analysis (2:0:6) Prerequisites: CHEM 321 and 422 or 521, or permission of department. Principles and operation of modern instrumentation, emphasizing applications to analysis of chemical, biological,
and environmental samples. Methods include combined capillary column gas chromatography and mass spectrometry, high-performance liquid chromatography, optical methods, surface analysis methods, magnetic resonance spectroscopy, atomic emission and absorption spectrometry, and electroanalytical methods. With approval of research committee, students choose methods studied.

531 Elements of Physical Chemistry (3:3:0) Prerequisite: CHEM 314; PHYS 243, 245; and MATH 113; or permission of instructor. Intensive overview of concepts, techniques, and models of physical chemistry as they apply in many branches of chemistry and allied sciences. Topics include properties of gases, first and second laws of thermodynamics, phase and chemical equilibrium, chemical kinetics, atomic and molecular structure, and spectroscopy. Emphasizes developing practical skill in using tools of physical chemistry. Extensive use of spreadsheet models to investigate chemical and physical systems.

554 Geochemistry of Environmental Hazards (3:2:3) Prerequisite: CHEM 314 or permission of instructor. Introduction to origins and reactions of hazardous substances in air, water, and soil environments. Covers movement of trace organic and inorganic substances in geochemical cycle, with particular reference to transport processes that influence air and water quality.

563, 564 Biochemistry (3:3:0) Prerequisites: CHEM 313 and 314. CHEM 563 is prerequisite to CHEM 564. Previous course in biology recommended but not required. Important biological compounds, including proteins, carbohydrates, lipids, and nucleic acids, and their interrelations.

579 Special Topics (1–6:1–6:0) Prerequisites: CHEM 314 or permission of instructor. Current topics in chemistry, depending on instructor’s specialty. May be repeated with different topics, with department approval.

613 Modern Polymer Chemistry (3:3:0) Prerequisite: CHEM 513 or permission of instructor. Synthetic and analytical chemistry of synthetic macromolecules. Topics include polymer solutions, molecular weight determination, spectroscopy, thermal analysis, x-ray crystallinity, polymerization types, and commercial and electroactive polymers. Organic core course.

614 Physical Organic Chemistry (3:3:0) Prerequisite: CHEM 314 or permission of instructor. Principles underlying molecular structure, reactivity, and reaction mechanisms. Topics include valence-bond and molecular-orbital theory, electronic interpretation of organic reactions, stereochemistry, conformational analysis, kinetics and thermodynamics of organic reactions, and photochemistry. Organic core course.

617 Organic Structural Spectroscopy (3:3:0) Prerequisite: CHEM 314 or equivalent. Spectroscopic determination of organic molecular structure using 1H, 13H, 19F, and 31P nuclear magnetic resonance spectroscopy and infrared, mass, ultraviolet and visible, and Raman spectroscopy. Organic core course.

620/PHYS 533 Modern Instrumentation (3:2:2) Prerequisite: CHEM 422 or permission of instructor. Methods of sensing and measurement of radiation, particles, pressure, concentrations of specific elements and compounds. Topics include basic operational amplifier circuits for analog signals, digitizing devices and computerized data collection, noise and noise-reduction methods, and specialized instrumentation systems for various areas of chemistry and physics.

624 Principles of Chemical Separation (3:3:0) Prerequisite: CHEM 422 or 521, or permission of instructor. Theories and models of separation with applications to analyses of a wide range of chemical, biological, and environmental samples. Topics include high-resolution gas and high-performance liquid chromatography. Emphasizes theory of reverse phase, normal phase, ion exchange, size exclusion, and affinity based separations. Also presents instrumentation such as detectors, pumps, and columns, and data acquisition. Analytical core course.

625 Electroanalytical Chemistry (3:3:0) Prerequisites: CHEM 321 and 331. Review of basic electrochemistry. Emphasizes analysis and research for applications of modern electrochemical techniques such as chronoamperometry; cyclic, stripping, and AC voltammetry; pulse polarography; coulometry; electrochemical sensors; and instrumentation.

633/CSI 711 Chemical Thermodynamics and Kinetics (3:3:0) Prerequisites: CHEM 331 and 332. Advanced study covering application of kinetics to the elucidation of reaction mechanisms, and application of statistical thermodynamics to theory of elementary reaction rates. Physical core course.

646 Bioinorganic Chemistry (3:3:0) Prerequisite: CHEM 441 or permission of instructor. Applies inorganic coordination chemistry and physical methods to understand structure and function of metal ion sites in biomolecules. Biochemical roles of metal centers in oxygen transport, metalloenzymes, and electron transfer. Topics include iron cytochromes, zinc and copper enzymes, cobalamins, iron sulfur proteins, inorganic model compounds, and metals in medicine. Inorganic core course.

651 Environmental Chemistry of Organic Chemicals (3:3:0) Prerequisite: one semester of physical chemistry, or permission of instructor. Study of principles governing multimedia distribution and fate of organic chemicals in environment. Overview of origin and occurrence of major classes of natural and anthropogenic organic chemicals in environment. Environmental core course.

670 Teaching Practicum (1–2:0:0) Prerequisites: enrollment in graduate program and demonstrated proficiency in English language. Preparatory lecture and laboratory teaching in chemistry. Students work closely with faculty and are responsible for all aspects of teaching undergraduate laboratory techniques.

690 Graduate Seminar (1:1:0) Prerequisite: attendance at minimum 70 percent of departmental seminars in semester preceding each enrollment. Selected topics from recent chemical theory and applications, designed to inform about current developments in chemical sciences. Requires, in last semester, seminar presentation on student’s research or another topic acceptable to department. Three credits of CHEM 690 required for MS degree; an additional 3 credits required after admission to PhD program.

728/CSI 712 Introduction to Solid Surfaces (3:3:0) Prerequisite: CHEM 422 or equivalent. Introduces properties of solid surfaces. Topics include gas adsorption isotherms, surface area measurement techniques, real and clean surfaces, physisorption and chemisorption, methods of gas adsorption and desorption, measurement of heats of adsorption, desorp-
tion kinetics, electron spectroscopies and surface sensitivities, instrumentation; and principles of vacuum technology.

730/CSI 782/PHYS 711 Statistical Mechanics (3:3:0) Prerequisite: permission of instructor. Statistical methods, systems of particles, thermodynamics, macroscopic parameters, the ideal gas, kinetic theory, quantum statics, and transport processes.

732/CSI 713 Quantum Chemistry (3:3:0) Prerequisite: CHEM 332. Illustration of fundamental concepts of quantum mechanics with applications to chemical systems, including atomic and molecular electronic structure and properties, molecular symmetry, and intermolecular forces. Physical core course.

733 Polymer Physical Chemistry (3:3:0) Prerequisite: CHEM 332 or permission of instructor. Physical chemistry of macromolecules including molecular weight, conformation, configuration, characteristics of the glassy state, methods for studying polymer morphology (XRD, SEM, TEM, optical microscopy), electronic structure and behavior, band theory, conduction mechanisms, intrinsically conductive polymers, polarization, dielectric behavior, triboelectric behavior, piezoelectric behavior, and nonlinear optical properties.

736/CSI 783/PHYS 736 Computational Quantum Mechanics (3:3:0) Prerequisite: PHYS 502, 510, or permission of instructor. Study of fundamental concepts of quantum mechanics from computational point of view, review of systems with spherically symmetric potentials, electron atom solutions to Schrodinger's equation, electron spin in many electron systems, atomic structure calculations, algebra of many electron calculations, Hartree-Fock, self-consistent field method, molecular structure calculations, scattering theory computations, and solid-state computations.

798 Research Project (3–6:0:0) Prerequisites: permission of department; 6 credits of CHEM 798 or 799, but credit will not be given for both. Experimental or theoretical research project chosen and completed under guidance of graduate faculty member. Requires comprehensive report acceptable to advisory committee, and final oral exam on report. Graded S/NC.

799 Master's Thesis (1–6:0:0) Prerequisite: permission of department. Laboratory thesis research and writing under direction of supervisor. Minimum of 3 credits for first two enrollment periods. Graded S/NC.

Chinese (CHIN) Modern and Classical Languages

101 Elementary Chinese (3:3:1) Introduction to Mandarin, including basic grammar, oral expression, listening comprehension, reading, and writing. Language lab integral.

102 Elementary Chinese (3:3:1) Prerequisite: CHIN 101. Continuation of CHIN 101. Lab work required.

109 Intensive Elementary Chinese (6:6:2) Equivalent to CHIN 101 and 102 taught in single semester. Recommended for students who desire training in Chinese language to an intermediate level of competence in a relatively short period of time. Students may not receive credit for CHIN 109 if they have received credit for CHIN 101 or 102. Lab work required.

110 Elementary Chinese (6:6:1) Introduces elements of grammar, vocabulary, oral skills, listening comprehension, and reading. Students may not receive credit for CHIN 110 if they have received credit for CHIN 101, 102, or 109. Lab work required.

201 Intermediate Chinese I (3:3:1) Prerequisite: CHIN 102 or equivalent. Further development of skills acquired in CHIN 101 and 102, including grammar, oral expression, listening comprehension, reading, and writing. CHIN 201 and 202 must be taken in sequence. Lab work required.

202 Intermediate Chinese II (3:3:1) Prerequisite: CHIN 201 or equivalent. Continuation of CHIN 201. Lab work required.

209 Intensive Intermediate Chinese (6:6:2) Prerequisite: CHIN 102, 109, appropriate placement score, or permission of instructor. Equivalent to CHIN 201 and 202 taught in single semester. Recommended for students who desire training in Chinese to an intermediate level of competence in a relatively short period of time. Students may not receive credit for CHIN 109 if they have received credit for CHIN 101 or 102. Lab work required.

210 Intermediate Chinese III (3:3:1) Prerequisite: CHIN 110 or appropriate placement score. Continuation of the development of basic components of the language, with focus on listening, speaking, reading, and writing skills. Introduces students to the cultures and histories of Chinese-speaking regions. Lab work required.

250 Gateway to Advanced Chinese (3:3:0) Prerequisites: CHIN 210, appropriate placement score, or permission of department. Integration of advanced intermediate-level Chinese reading, writing, listening, and speaking skills, and the development of critical thinking about authentic texts from around the globe. Taught in Chinese.

300 Reading Skills Development (3:3:0) Prerequisite: CHIN 202, appropriate placement score, or permission of instructor. Develops reading proficiency, emphasizing vocabulary and grammar of standard written Chinese. Introduction to discourse structure, sociolinguistic and cultural knowledge, and strategies for reading Chinese at advanced level.

301 Advanced Grammar and Syntax (3:3:0) Prerequisite: CHIN 300, appropriate placement score, or permission of instructor. In-depth review of Chinese grammar and syntax. Provides extensive practice in controlled and free writing, emphasizing fundamental difficulties and points of interference between English and Chinese.

305 Chinese for the Business World (3:3:0) Prerequisite: CHIN 300, or permission of instructor. Introduces terminology and structure of business Chinese. Emphasizes acquiring vocabulary and developing facility in Chinese business articles and correspondence. May be repeated for credit with permission of department when content is different.

310 Survey of Chinese Literature (3:3:0) Prerequisites: ENGL 101, or permission of instructor. Introduces outlines of Chinese literature to the 19th century, presented through literary sources arranged in roughly chronological order. Readings include poetry; fiction; personal essays; documents of philosophy, history, and religion; and transcribed oral records. Knowledge of Chinese language helpful but not required. Course work in English. May be repeated for credit
once when course content is different, with permission of department.

311 Modern Chinese Literature in Translation (3:3:0)
Prerequisite: ENGL 101, or permission of instructor. Introduction of outlines of modern Chinese literature from early 20th century to post-Mao era, presented through literary sources arranged in roughly chronological order. Readings include poetry, fiction, personal essays. Knowledge of Chinese language helpful but not required. Course work in English. May be repeated for credit once when course content is different, with approval from department.

318 Introduction to Classical Chinese (3:3:0)
Prerequisites: CHIN 202, appropriate placement score, or permission of instructor. Introduces basic structures and vocabulary of Classical Chinese, which still has a large influence on the formal written prose of modern newspapers and documents.

320 Contemporary Chinese Film (3:3:0)
Explores China from 1949 to present through cinematic and literary representations. Discussions focus on representations of cultural, social, and political changes in the movies. Also introduces critical readings that address issues of gender and youth, family, ethnicity, modernity and the nation, as well as visuality and memory. Knowledge of Chinese language helpful but not required. Course work in English.

324 Major Chinese Writers (3:3:0)
Prerequisite: ENGL 101, or permission of instructor. Studies works of major Chinese writers. Writers vary. Course work in English. May be repeated for credit up to two times with permission of department. Knowledge of Chinese helpful but not required.

328 Asian American Women Writers (3:3:0)
Introduction to selected works by female writers of Chinese, Filipino, Indian, Japanese, and Korean descent. Analyzes themes, form, style, language, and structure of a variety of works, mainly novels and short stories. Assesses role and significance of writings as part of ethnic American and women’s literature by exploring questions of identity formation and disintegration, and how they are rooted in gender, social status, ethnicity, community, geography, and generational conflict. Knowledge of Asian languages not required. Course work in English.

355 Readings in Chinese Poetry and Poetics (3:3:0)
Prerequisite: CHIN 300, or permission of instructor. Close readings and discussions of primary texts covering major periods in Chinese poetry to 1949. Analyzes variety of themes, forms, and styles. Knowledge of Chinese required. May be repeated once for credit.

365 Readings in Chinese Fiction after Mao (3:3:0)
Prerequisite: CHIN 300, or permission of instructor. Close readings and discussions of primary texts after Cultural Revolution. Analyzes themes, subjects, language, and styles. Knowledge of Chinese required. May be repeated once for credit.

480 Fourth-Year Chinese I (3:3:0)
Prerequisites: CHIN 300 and 301; appropriate placement score or permission of instructor. Advanced work in major grammatical and lexical topics of Chinese. Applies theoretical principles to guided written and oral exercises.

481 Fourth-Year Chinese II (3:3:0)
Prerequisites: CHIN 300, 301, 480; and appropriate placement score or permission of instructor. Advanced work in major grammatical and lexical topics of Chinese. Applies theoretical principles to guided written and oral exercises.

Civil and Infrastructure Engineering (CEIE)

100 Environmental Engineering around the World (3:3:0)
Introduces environmental engineering as practiced in different societies around the world. Environmental engineering is broadly defined as organizational and physical infrastructure to manage natural resources. Focuses on how different societies respond to environmental challenges related to engineering opportunities. Issues include construction of large dams to manage rivers; use of forecast climate and weather data to improve agriculture, emergency response, or water supply; collection and treatment of wastewater; public health and pollution control; disposal of waste nuclear materials; and management of significantly polluted sites.

197, 297, 397 Industrial Internship I-A, II-A, III-A (0:0:0)
Civil and infrastructure engineering majors only. Prepares for summer work experience in civil and infrastructure engineering positions with land development, architecture/engineering, and construction firms, or government.

198, 298, 398 Industrial Internship I-B, II-B, III-B (0:0:0)
Prerequisites: CEIE 197, 297, 397; and ENGR 183. Civil and infrastructure engineering majors only. Supervised 10-week summer work experience in civil and infrastructure engineering positions with land development, architecture/engineering and construction firms, or government.

199, 299, 399 Industrial Internship I-C, II-C, III-C (1:1:0)
Prerequisites: CEIE 198, 298, 398. Evaluation of summer work experience in civil and infrastructure engineering positions with land development, architecture/engineering and construction firms, or government. Requires written report and presentation.

230 Hydraulics (3:3:0)
Prerequisite: PHYS 160. Principles of fluids in equilibrium and motion. Topics include hydrostatic pressure; continuity, Bernoulli, and momentum equations; viscosity flow problems; measuring instruments; and applications to closed conduits and open channels.

300 Engineering Computation and Design (3:2:3)
Prerequisite: ENGR 183. Introduces civil engineering design process. Includes methods, technologies for spatial data acquisition, emphasizing land measurements, mapping, and surveying. Covers processing field data to incorporate into computer-aided design systems; conversion of raw data into finished design documents, including schematic layouts, digital terrain models, preliminary plans, topographic maps, detailed design plans, cut sheets, cross-sections and profiles; 2D and 3D computer-aided design techniques; and application of digital computation. Includes design projects.

301 Engineering and Economic Models in Civil Engineering (3:3:0)
Prerequisite: STAT 344 and basic spreadsheet knowledge, or permission of instructor. Applies planning, analysis, control, and engineering economic models to life cycle of physical infrastructure. Introduces infrastructure design process and application of quantitative and probabilistic models. Presents applications of model building for engineering economics; decision making; forecasting; resource scheduling and allocation; estimating; work measurement and
materials; and quality and process control in water, transportation, environmental, energy, and telecommunications infrastructure systems and the built environment. f

305 Soil Mechanics (3:3:0) Prerequisite: ENGR 210. Covers formulation and engineering characteristics of soils. Includes strength and deformation characteristics, consolidation and bearing capacities, and corrective measures. Introduces foundation design fundamentals. s

311 Structural Analysis (3:2:3) Prerequisites: PHYS 160, MATH 114, ENGR 210, ENGR 310. Basic concepts and assumptions of structural analysis, including statical and geometric redundancy and related degrees of redundancy. Analyzes, by integration of deformation, simple structural members. Includes virtual work method to analyze deformations of simple structural systems such as articulate beams, trusses, frames, and arches. Analyzes statically determinate trusses. Covers method of forces to analyze statically indeterminate systems, method of displacements to analyze geometrically indeterminate systems, and symmetry and antisymmetry in structural analysis. Uses computer programs for structural analysis. f, s

340 Water Resource Engineering (3:2:3) Prerequisite: CEIE 230. Introduces principles and practice of water resources engineering. Covers analytic methods and computer models to design and evaluate water resource projects such as flood control and river basin development. Topics include hydrology; governing principles, common models, and typical applications for water resource systems; and design of storm water management systems and sanitary sewers. Laboratory and field work required on selected topics. f, s

360 Introduction to Transportation Engineering (3:2:3) Prerequisites: ENGR 210, ENGL 302, and CEIE 290. Introduces transportation systems and the factors that influence their planning, design, and operation. Topics include fundamentals of urban travel, travel demand forecasting, and traffic flow; principles of highway design; highway capacity and level of services; introduction to traffic control; traffic signal control systems; intersection design; speed zoning and control; and introduction to Intelligent Transportation Systems and travel demand management. Requires laboratory, field work on selected topics. Fulfills writing-intensive requirement for civil and infrastructure engineering major. f, s

367 Behavior of Concrete and Steel Structures (3:3:0) Prerequisite: CEIE 311. Covers structural design process. Analysis and design of simple steel structural and simple reinforced concrete members, including tension members, beams, and columns; and bolted and welded connections in steel structures. Uses computer programs to analyze, design, and optimize complex structural systems. f, s

400 Civil Engineering Planning and Management (3:3:0) Prerequisites: CEIE 360 and 340; corequisites: CEIE 440 and 455. Quantitative and qualitative analysis in planning, design, construction, and management of engineering systems and facilities. Introduces policies, programs, and regulations that influence land development, history-enabling legislation, governing and regulating bodies, control of site plan development, and approval process. Examines structure, function, and purpose of urban design systems and how they can be achieved. Discusses physical relationships among development, land use, transportation, energy, communications, and water systems. Studies public- and private-sector urban development industry. Other topics include innovation, competition, new technology, and environmental issues. Requires design projects. f

410 Geographic Information Systems in Engineering (3:3:0) Prerequisites: CS 112 or ENGR 117, CEIE 360 and CEIE 455. Credit is not given for both CEIE 410 and 510. Introduces geographic information systems (GIS) and their application in environmental, transportation, land-use planning, and other situations. Explores methods, technologies for spatial data acquisition, specification, storage, manipulation, query, thematic analysis, presentation, and application in the design process. Introduces relationships, integration of GIS with computer-aided design and global positioning system. Hands-on projects. f

411 Introduction to Design and Inventive Engineering (3:3:0) Outlines major stages of design process. Covers conceptual versus detailed design; design theories, including axiomatic and inferential; basic assumptions and industrial applications of proactive design; design evaluation, including multiatribute utility models; and network computing in design. Covers inventive problem-solving methods, including brainstorming, Synectics, TRIZ, and morphological analysis. Includes computer tools to support design creativity. Features collaborative design: fundamentals and group projects dealing with civil engineering problems provided by industry.

440 Water Supply and Distribution (3:2:3) Prerequisite: CEIE 230. Focuses on analysis and design of public water supplies. Topics include supply evaluation; water quality and quantity requirements; treatment requirements and methods; hydraulic analysis of water distribution systems including line sizing, fire protection, pumps, valves, and storage; environmental impact assessments; and federal, state, and local government laws and regulations related to public water systems. Requires laboratory, field work on selected topics. f

450 Environmental Engineering Systems (3:3:0) Prerequisite: CEIE 455. Credit is not given for both CEIE 450 and 550. Introduces systems analysis in environmental engineering. Applies linear and dynamic programming, computer modeling, and other systems analysis methodologies to solve environmental engineering problems related to air, soil, and water pollution. Reviews experimental design approaches to characterize environmental sites. s, odd years

452 Wastewater Management (3:3:0) Prerequisite: CEIE 455. Credit is not given for both CEIE 452 and 552. Explores design fundamentals to treat wastewater. Topics include environmental regulations; wastewater characterization; pretreatment systems; biological, physical, and chemical treatment; treatment and disposal of wastewater sludge; and financing and management. Also covers consequences of environmental policies; environmental impact assessments; and federal, state, and local government laws and regulations related to wastewater collection, treatment, and disposal. s, even years

455 Introduction to Environmental Engineering (3:3:0) Prerequisite: 3 credits of chemistry. Credit is not given for both CEIE 455 and 555. Introduces principles of environmental engineering management and design pertaining to water supply and treatment, wastewater treatment, solid waste management, air pollution control, noise pollution measurement and control, and environmental impact assessment. f

456 Environmental Law (3:3:0) Credit is not given for both CEIE 456 and 556. Introductory course in the study of environmental laws as they pertain to urban systems infrastructure
management. Reviews the National Environmental Policy Act, Clean Air Act, Clean Water Act, Safe Drinking Water Act, Resource Conservation and Recovery Act, Comprehensive Environmental Response, Compensation, and Liability Act, and other environmentally related legislation. Also reviews laws for allocation of surface and groundwater supplies, and reviews environmental law databases.

460 Public Transportation Systems (3:3:0) Prerequisite: CEIE 360. Credit is not given for both CEIE 460 and 560. Analyzes public transportation systems in terms of their role in urban transportation. Topics include history of public transportation in the United States, quantitative performance attributes of different modes, analytical techniques for planning and operation, and management and administrative concepts.

461 Traffic Engineering (3:3:0) Prerequisite: CEIE 360 or 365. Credit is not given for both CEIE 461 and 561. Elements of traffic engineering analysis; system components of traffic operations: driver, vehicle, and roadway; traffic flow design elements including volume, density, and speed; intersection design elements including traffic control device warrants, signal timing, delay, capacity, and accident countermeasures; and terminal design elements including inflow, outflow, and circulation.

462 Urban Transportation Planning (3:3:0) Prerequisite: CEIE 360 or 365. Credit is not given for both CEIE 462 and 562. Technical and qualitative aspects of urban transportation planning process. Topics include urban travel characteristics and data collection methods; urban transportation modeling system, including land use, trip generation, trip distribution, mode choice, and trip assignment models; site traffic impact studies; environmental impacts; project and plan evaluation; and technology options for urban transport.

463 Construction Systems (3:3:0) Prerequisite: CEIE 301. Overview of the modern construction industry and principles and practices of construction management. Topics include project planning, construction administration, the contract environment, equipment operations, cost estimation and scheduling, and legal theories. Current industry trends are emphasized as are the uses of modern scheduling and cost-estimating software and online databases.

490 Senior Design Project (3:3:0) Prerequisite: CEIE 367, 400. Capstone design experience. Integrates all design fundamentals employed by a typical civil engineering design team. Major team efforts include land use, transportation, water and sewerage, stormwater, site analyses, economic and regulatory considerations, sectioning, grading, and siting. Students focus on teamwork, interdisciplinary interaction, and tradeoff decision making. Design team analyzes all aspects of a major urban project, develops solutions to design problems, and produces project report and oral presentation. Design effort completed and report is prepared, presented, and evaluated. Primary course goal is to produce design for contemporary civil infrastructure project.

498 Independent Study in Civil Engineering (1–3:0:0) Prerequisite: 60 credits; must be arranged with an instructor and approved by department chair before registering. Directed self-study of special topics of current interest. May be repeated for maximum 6 credits if topics are substantially different.

499 Special Topics in Civil Engineering (3:3:0) Vary with nature of topic. Topics of special interest to undergraduates.
financing and management. Includes consequences of environmental policies; environmental impact assessments; and federal, state, and local government laws and regulations related to wastewater collection, treatment, and disposal. s, even years

555 Introduction to Environmental Engineering (3:3:0) Credit is not given for both CEIE 455 and 555. Introduces principles of environmental engineering management and design pertaining to water supply and treatment, wastewater treatment, solid waste management, air pollution control, noise pollution measurement and control, and environmental impact assessment. f

556 Environmental Law (3:3:0) Credit is not given for both CEIE 456 and 556. Introductory course in the study of environmental laws as they pertain to urban systems infrastructure management. Reviews the National Environmental Policy Act, Clean Air Act, Clean Water Act, Safe Drinking Water Act, Resource Conservation and Recovery Act, Comprehensive Environmental Response, Compensation, and Liability Act, and other environmentally related legislation. Also reviews laws for allocation of surface and groundwater supplies, and reviews environmental law databases. s

560 Public Transportation Systems (3:3:0) Prerequisite: CEIE 360. Credit is not given for both CEIE 460 and 560. Analyzes public transportation systems in terms of their role in urban transportation. Topics include history of public transportation in the United States, quantitative performance attributes of different modes, analytical techniques for planning and operation, and management and administrative concepts. f, odd years

561 Traffic Engineering (3:3:0) Prerequisite: CEIE 360 or 365 or equivalent. Credit is not given for both CEIE 461 and 561. Covers elements of traffic engineering analysis; system components of traffic operations: driver, vehicle, and roadway; traffic flow design elements including volume, density, and speed; intersection design elements including traffic control device warrants, signal timing, delay, capacity, and accident countermeasures; and terminal design elements including inflow, outflow, and circulation. f

562 Urban Transportation Planning (3:3:0) Prerequisite: CEIE 360 or 365 or equivalent. Credit is not given for both CEIE 462 and 562. Covers technical and qualitative aspects of urban transportation planning process. Topics include urban travel characteristics and data collection methods; urban transportation modeling system, including land use, trip generation and distribution, mode choice, and trip assignment models; site traffic impact studies; environmental impacts; project and plan evaluation; and technology options for urban transport. s

565 Design of Transport Systems (3:3:0) Prerequisite: CEIE 360. Covers street and highway facilities design emphasizing interaction among driver, vehicle, and geometric design elements. Design of interchanges and intersections; highway roadside safety and tort liability; pavement design, maintenance and safety; edge dropoff; clear zone concept; roadside barriers; guardrail treatments; traffic calming; pedestrian and bicycle and transit design challenges; and work-zone traffic control. Provides skills to understand interaction among driver, vehicle, and environment, and how to incorporate better design practices. Also introduces concepts of forgiving highway design and highway tort liability.

600 Civil Engineering Infrastructure Planning and Management (3:3:0) Study of planning and management practices applicable to the life cycle of the physical urban infrastructure including roads, sewers, water distribution and other pipelines, telecommunications, and energy distribution systems. Includes study of relationship of urban growth and infrastructure reinvestment; mechanisms of deterioration; direct and indirect methods of assessment and degradation models; capital finance, budgeting, and programming; planning integration and coordination; quantitative applications in planning; uncertainty and reliability; public-private partnerships; operation and maintenance strategies; and future issues.

601 Infrastructure Modeling (3:3:0) Prerequisite: CEIE 605. Concepts of modeling for infrastructure engineering. Covers modeling, simulation, optimization, deterministic and stochastic models, and limitations of modeling approaches. Also includes multiple objective, multiple decision maker problems, and case studies in areas such as transportation, water resources, the environment, energy, telecommunications, and construction. s

605 Infrastructure Systems Analysis (3:3:0) Prerequisite: STAT 344. Probability and statistics topics for analysis of infrastructure systems. Includes Bayesian decision theory, decision trees, Monte Carlo analysis, stochastic models, and economic analysis of infrastructure projects and systems. f

610 Construction Systems and Management (3:3:0) Prerequisite: permission of instructor. Studies applications of construction management concepts and techniques to the production of constructed system. Explores construction industry and environment through project cycle design and construction phases, emphasizing estimating, planning, scheduling, labor, money, materials, machines, time, and information. Uses popular scheduling software with class projects and case study.

632 Groundwater Systems Modeling (3:3:0) Prerequisite: CEIE 601. Introduces groundwater hydrology and modeling, including quantity and quality aspects. Topics include characterization of subsurface regime; well hydraulics; consideration of two-dimensional steady and unsteady state flows; exploration of modeling approaches; simulation and optimization modeling; contaminant transport; parameter estimation; and design of systems to control groundwater quantity and quality.

660 Urban Transportation Planning (3:3:0) Prerequisite: CEIE 601. Quantitative and qualitative techniques in urban transportation planning. Topics include different levels of urban transportation planning; technical transportation planning process, including travel demand estimation, establishment of transportation strategies, and utility analysis; and activity center planning including onsite vehicle and pedestrian circulation, transportation interface, environmental planning, and planning administration.

663 Intelligent Transportation Systems (3:3:0) Prerequisite: CEIE 561 or 562. Advanced transportation system operations and safety through the use of wireless and wireline communications; integrated transportation systems; in-vehicle technologies; industry standards; and systems architecture. Provides skills to apply advanced technologies to transportation systems to improve operational and safety performance. Provides nontraditional tools to address issues of congestion and improved safety performance.
670 Civil Engineering Decision Methods and Tools (3:3:0)
Prerequisite: CEIE 605. Principles of decision making and knowledge acquisition to build knowledge-based decision support tools for civil, environmental, and infrastructure engineering. Includes solving complex problems from several areas of urban systems engineering; and using various decision-support tools based on Bayesian decision theory and principles of artificial intelligence, including knowledge-based systems and learning systems.

671 Best Engineering Management Practices (3:3:0)
Prerequisite: graduate standing. Covers strategies to identify and implement best engineering management practices. Addresses development of performance standards. Introduces quality-improvement methods and standards, including Quality Functional Development, ISO 9000, Baldrige Excellence Award, and the Six Sigma method. Presents relevant national and engineered standards, statistical norms, rules of thumb, selected statistics from comparative projects, excerpts from performance records, and performance targets. Covers case studies relating to management of infrastructure projects. Includes introduction to benchmarking methods, addressing criteria to select benchmarking program or process.

680 Introduction to Infrastructure and Security Engineering (3:3:0)
Prerequisite: BS in civil engineering, or permission of instructor. In-depth review of present and proposed practices and issues to manage civil infrastructure, focusing on performance and security through the full life cycle, including planning, design, and construction of new, rehabilitated, modified, and recycled or decommissioned components. Covers asset-management methods and their effectiveness in managing all types of risk. Profiles policies leading civil infrastructure industry toward adoption of such methods, and examines industry case studies. Special attention to vulnerability assessment and risk management in context of broad sampling of potential threats.

681 Security of Structural Systems (3:3:0)
Prerequisite: BS in civil engineering, or CEIE 367. Basic concepts of security of structural systems; analytical models of behavior of structural systems under various security threats; computer simulation of security threats, including blasts and fire; generation of terrorist scenarios and of preventive structural measures; design for security; out-of-the-box approaches to development of preventive structural measures; lessons learned; and intelligent structural security systems.

683 Water and Wastewater Systems Security (3:3:0)
Prerequisite: BS in civil engineering, or CEIE 440 and 455. Examines overall security of water and wastewater systems. Covers theory and methods to define water and wastewater infrastructure as physical and organizational systems. Explores concepts of infrastructure systems security; identifies actors, interactions in organizational infrastructure, and threats to water and wastewater infrastructure; describes behavior of physical and organizational infrastructures under stress; examines history of threats or attacks against water and wastewater systems; and explores evolution of design, operations, and maintenance paradigms in response to changes in threats. Covers proactive responses to security threats through vulnerability assessments, and models of organizational and physical infrastructure system.

685 Civil Engineering Information Management (3:3:0)
Advanced course covering all phases of information management life cycle from conceptual design and data collection through systems development, archiving, and disposal. Covers software engineering such as structured analysis, rapid prototyping, and object-oriented analysis as applied to urban systems infrastructure problem solving. Reviews database technology, spreadsheets, communications software, customized applications software, groupware, and graphics software including computer-aided design and geographic information systems. Covers selection and use of appropriate software to match specific engineering problems related to the design, construction, and management of civil engineering infrastructure. Includes design and development of system for engineering application.

686 Transportation System Security and Safety (3:3:0)
Prerequisite: BS in engineering or permission of instructor. Focuses on critical transportation systems infrastructure and operations, and technologies for predicting and managing damage and disruptions caused by potential threats, including natural and technological disasters and terrorist threats. Includes asset management, methodologies for assessing vulnerabilities, potential impact of damage and disruption, applying state-of-the-art technologies and R&D processes for harnessing best analysis methods, and technologies for hardening transportation infrastructure systems. Includes sensing and surveillance using satellite and aerial remote sensing imagery, application of GIS and spatial information technologies, information and communication, intelligent transportation systems, hardening systems, and making intelligent choices for implementing technology advances to transportation security and safety.

690 Topics in Civil Engineering (3:3:0)
Prerequisite: determined by topic. Topics not covered in the regular civil engineering offerings. Course content may vary each semester. Course may be repeated with change in topic.

762 Transportation System Planning Models (3:3:0)
Prerequisite: CEIE 562 or 660; CEIE 601. Covers transportation systems analysis; theory, mathematical structure, and applications of transportation planning models; network analysis and equilibrium; dynamic and stochastic equilibrium models; modal choice analysis; discrete choice models of transportation demand; and model estimation and aggregation.

767 Traffic Engineering Modeling and Analysis (3:3:0)
Prerequisites: CEIE 561, 601. Covers basic principles of simulation; queuing theory and traffic signal operations at individual intersections, arterials and networks; applying models related to traffic signalization; optimization and traffic simulation; and developing skills to select most appropriate model for given scenario.

795 Civil and Infrastructure Engineering Seminar (0:1:0)
Prerequisite: graduate standing. Invited speakers, faculty, and CEIE graduate students lecture on current topics and research. Partially fulfills MS in civil and infrastructure engineering seminar requirement; required for master’s candidates during semester they complete research project or thesis.

796 Directed Reading (1–3:0:0)
Prerequisites: graduate standing and permission of instructor. Reading on specific topic under direction of faculty member. May be repeated with change in topic.

798 Research Project in Civil Engineering (3:3:0)
Prerequisite: permission of instructor; corequisite: CEIE 795. Analyzes and investigates contemporary problem in civil, environmental, and infrastructure engineering. Requires prior approval by faculty member who supervises student’s work. Written report also required.
799 Master’s Thesis (1–6:0:0) Prerequisites: 18 credits of graduate-level course work and permission of instructor. Research project chosen and completed under guidance of graduate faculty member that results in technical report acceptable to three-faculty-member committee, and an oral defense.

Classical Studies (CLAS)

Modern and Classical Languages

240 Greek and Latin Elements in English (3:3:0) Prerequisite: ENGL 101 or equivalent, or permission of instructor. Studies formation of English vocabulary derived from Greek and Latin prefixes, stems, and suffixes to increase word power in English (vocabulary, style). Special emphasis on bioscientific, medical, and legal terminology. Intended for native and non-native speakers of English. Literary texts illustrate word analyses, vocabulary uses.

250 Classical Mythology (3:3:0) Prerequisite: ENGL 101 or equivalent, or permission of instructor. Illustrates role of classical myths in classical and modern literature and art. Course work in English.

260 The Legacy of Greece and Rome (3:3:0) Prerequisite: ENGL 101 or equivalent, or permission of instructor. Introduces history, culture, and literature of Greece and Rome through close readings of central passages from classical literature dealing with some of the most important aspects of human existence. Illustrates importance of classical antiquity for the Western tradition. Course work in English.

340 Greek and Roman Epic (3:3:0) Prerequisite: ENGL 101 or equivalent, or permission of instructor. Examines development of classical epic as genre, from beginnings with Homer to transformations in the works of later Greek and Roman authors. Course work in English.

350 Greek and Roman Tragedy (3:3:0) Prerequisite: ENGL 101 or equivalent, or permission of instructor. Follows development of tragedy from its origins to the works of Aeschylus, Sophocles, and Euripides, and its reappearance in the Roman world in the tragedies of Seneca. Considers influence of Greek tragedy on later cultures. Course work in English.

360 Greek and Roman Comedy (3:3:0) Prerequisite: ENGL 101 or equivalent, or permission of instructor. Studies forms, contexts, and developments of comedy as a dramatic form in Greco-Roman world. Traces development of New Comedy in Hellenistic age, and translation and adaptation of New Comedy by Roman dramatists Plautus and Terence. Course work in English.

370 Greek and Roman Historians (3:3:0) Prerequisite: ENGL 101 or equivalent, or permission of instructor. Examines writings of major Greek and Roman historians, including Herodotus, Thucydides, Sallust, Livy, and Tacitus; their interpretations of the past; and their influence. Course work in English.

380 Greek and Roman Novels (3:3:0) Prerequisite: ENGL 101 or equivalent, or permission of instructor. Examines novels written in antiquity, and influences on postclassical and modern literature. Emphasizes works of Longus, Heliodorus, Petronius, and Apuleius. Course work in English.

290 Topics in Classical Literature and Culture (3:3:0) Prerequisite: ENGL 101 or equivalent, or permission of instructor. Certain topics may have other CLAS courses as prerequisites. Studies forms, contexts, and developments of distinctive literary genre or cultural phenomenon in Greco-Roman world. Course work in English. May be repeated once for credit.

499 Senior Seminar in Classical Studies (3:3:0) Prerequisites: modern and classical languages majors concentrating in classical studies, 90 credits, and permission of instructor. Individual research on specialized topic culminating in seminar paper. Fulfills writing-intensive requirement. Subject of seminar determined by instructor in consultation with student. Permission must be obtained in advance. Students may present no more than 3 credits for graduation.

Climate (CLIM)

Climate Dynamics

101 Weather, Climate, and Society (3:3:0) Prerequisites: none. This course provides a survey of the scientific and societal issues associated with weather and climate variability and change. The course will examine physical phenomena observed in the Earth’s weather and climate, providing sufficient scientific and technical background to enable students to critically examine arguments being discussed by policymakers and the public at large. The course will also review the current debate on climate change from a scientific point of view, with a focus on those aspects that have the largest potential impact on global society.

710 Introduction to Physical Climate System (3:3:0) Prerequisites: BS or MS in mathematics or a physical science, or permission of instructor. Provides modern understanding of ocean, atmosphere, and land based on fundamental physical laws. Describes current climate and physical processes by which climate is maintained. Covers theoretical models of general circulation of atmosphere, including time mean and transient behavior. Describes basics of ocean circulation, and interactions between ocean and atmosphere. Reviews past climate change; stratosphere and its interactions with troposphere; and role of land processes in modulating climate.

711 PHYS 676 Introduction to Atmospheric Dynamics (3:3:0) Prerequisites: BS or MS in mathematics or a physical science, or permission of instructor. Covers basic conservation laws of mass, momentum, and energy; and scaling analysis of equation of motion and thermodynamic equation. Discusses balanced flows in atmosphere, such as geotropic wind and its vertical shear, and thermal wind relationship. Also explores circulation and vorticity; role of atmospheric boundary layer in mass, momentum, and energy transfer; synoptic scale motions; and role of gravity and Rossby waves in controlling general circulation of atmosphere.

712 Physical and Dynamical Oceanography (3:3:0) Prerequisites: BS or MS in mathematics or a physical science, or permission of instructor. Introduces climatology and dynamics of oceans. Covers nature of seawater, heat, and salt budgets; general circulation of the ocean, including the Gulf Stream and thermohaline circulation; dynamics of wind-driven ocean circulation; and processes influencing biological and chemical behavior.

713 Atmospheric-Ocean Interactions (3:3:0) Prerequisites: CLIM 712 or 711 or equivalent, or permission of instructor. Provides comprehensive observational and mechanistic understanding of El Niño and Southern Oscillation (ENSO).
phenomena. Topics include observations and theories of seasonal and interannual changes in ocean circulation and temperature and interactions with atmosphere; equations of motion and theories of wind-driven circulation; mixed layer observations and theories; midlatitude and equatorial ocean waves; interannual variability and atmosphere-ocean coupling; and tropical oceanography and meteorology.

714 Land-Climate Interactions (3:3:0) Prerequisites: BS or MS in mathematics or physical science, or permission of instructor. Interdisciplinary course providing detailed description of surface energy and water balance over land, and radiative and turbulent transfer. Introduces numerical techniques for modeling land surface and applications in weather, climate, and hydrologic forecasting and simulation. Includes hands-on experience with land surface models in computer laboratory, including sensitivity experiments to reinforce theoretical concepts. Exposure to contemporary research through reading and reviewing seminal journal papers.

715 Numerical Methods for Climate Modeling (3:3:0) Prerequisites: CLIM 712 or 711 or equivalent, or permission of instructor. Foundation and theory of computational methods for atmosphere and ocean modeling, with special emphasis on finite-difference and spectral methods. Topics include accuracy, consistency, convergence and stability; time stepping schemes; nonlinear computational stability; energy and enstrophy conserving schemes for momentum equations; staggered and curvilinear grids; alternate vertical coordinate systems; implicit and split-explicit barotropic mode solution; pressure gradient errors and vorticity constraints; spectral methods for atmospheric models; and treatment of model physics.

750 Geophysical Fluid Dynamics (3:3:0) Prerequisite: CLIM 711, or permission of instructor. Introduces geophysical fluid dynamics, the study of rotating stratified flows. Covers hydrostatics; equations of motion, gravity wave dynamics, and stratified flow; effects of rotation, midlatitude dynamics, Rossby number and quasigeostrophic expansion; beta plane approximation; and equatorial Kelvin and Rossby waves.

751 Predictability of Weather and Climate (3:3:0) Prerequisites: CLIM 711 or equivalent, or permission of instructor. Covers fundamental aspects of weather and climate predictability. Using simple dynamical models, illustrates basic theorems on divergence of trajectories in phase space and fundamental periodicity properties of flow. Explores paradigms of turbulence, barotropic and baroclinic instability, and optimal linear growth to describe fundamental error growth mechanisms. Examines examples from real weather forecasting systems. Studies predictability of time averages with simple dynamical models and experiments using complex general circulation models and historical data analysis. Emphasizes roles of boundary conditions of sea surface temperature and soil moisture.

752 Ocean Circulation Theory (3:3:0) Prerequisites: CLIM 712 or 711 or equivalent, or permission of instructor. Description and theory of large-scale ocean circulation and how it affects climate. Focus is on ubiquitous flow structures such as gyres, equatorial currents, and meridional overturning cells. The class examines how the circulation follows from wind and thermohaline forcing and from physical principles. The influence of the circulation on heat transport and climate variability is also discussed. Conceptual guideposts include barotropic gyres, Ekman cells, potential vorticity, western intensification, the interplay of gravity and the Earth’s rotation, advective-diffusive balance, multiple flow states, and Rossby waves.

753 General Circulation of the Atmosphere (3:3:0), Prerequisites: CLIM 710 and 711. Overview and several theoretical perspectives of atmospheric transport of energy, moisture, and angular momentum, and how these processes fundamentally affect the climate on various time scales.

759 Topics in Climate Dynamics (3:3:0) Prerequisites: permission of instructor. Covers selected topics in climate dynamics not covered in fixed-content courses. May be repeated for credit when offered with different content.

796 Directed Reading and Research (1–6:0:0) Prerequisites: admission into climate dynamics doctoral program and permission of instructor. Reading and research on a specific topic in climate dynamics under the direction of a faculty member. May be repeated as necessary.

991 Climate Dynamics Seminar (1:1:0) Prerequisites: graduate standing. Presentations in climate dynamics field by Mason faculty and invited speakers. May be repeated for credit; however, a maximum of 3 credits may be applied toward the climate dynamics PhD.

996 Doctoral Reading and Research (1–6:0:0) Prerequisites: admission into climate dynamics doctoral program and permission of instructor. Reading and research on a specific topic in climate dynamics under the direction of a faculty member. May be repeated as necessary.

998 Doctoral Dissertation Proposal (1–12:0:0) Prerequisites: doctoral standing and permission of instructor. Covers development of research proposal under guidance of dissertation director and doctoral committee. Proposal forms basis for climate dynamics doctoral dissertation. Course may be repeated, but no more than 12 credits of CLIM 998 may be applied to doctoral degree requirements.

999 Doctoral Dissertation (1–12:0:0) Prerequisites: admission to doctoral candidacy and permission of instructor. Doctoral dissertation research under direction of dissertation director. May be repeated, but no more than 24 credits total in CLIM 998 and 999 may be applied to doctoral degree requirements.

College of Humanities and Social Sciences (CHSS)

101 Presenting and Processing Information Using Technology (1–3:0–3:0–3) Prerequisite: varies with topic. Presents practical experience in computer applications. Topics vary; most require laboratory work. May be repeated for credit when course content differs.

200 Introduction to Science and Society (2:2:0) Provides students in the interdisciplinary minor in science and society with general background information and a common frame of reference for developing an individualized core of course work. Students design a plan for their course work in the minor, envision the specific topic they will address, and begin preliminary preparation for CHSS 400.

313 Mystery, Madness, and Murder (3:3:0) Prerequisite: completion or concurrent enrollment in all other required general education courses. Multidisciplinary approach to
taboo topics that fascinate and frighten us. Instructors from disciplines across the arts and sciences bring expertise and diverse perspectives to provocative issues such as cannibalism and serial murder. Students learn to think critically and objectively while examining use in myth, literature, and popular culture.

390 Peer Tutoring in Writing across the Disciplines (1:0:0) Prerequisites: grade of A in ENGL 302, 60 credits, and overall GPA of 3.00 or higher with a GPA in major of 3.50 or higher. Student must submit two faculty recommendations and a sample of recent academic writing, and complete an interview with the director of the Writing Center. Experiential learning course in teaching of writing across disciplines. Students receive Writing Center training in theory and techniques of tutoring writing, and work a minimum of 3 hours per week in Writing Center. Focus is on practical application of writing theory and pedagogy from course readings, development of tutoring skills, and self-reflection through journals and final paper. May be repeated up to three times.

395 Technology Apprenticeship (3:1:0) Prerequisites: 30 credits; GPA of 2.50 or higher; ability to use Internet browser; and skills in keyboarding, data entry, and word processing. Experiential learning course in using technology in instruction. Students receive up to 45 hours of instruction and work 90 hours with faculty members, assisting with technology project. Students submit faculty recommendation and application to technology apprenticeship coordinator. May be repeated once for credit.

400 Perspectives on Science and Society (1:1:0) Prerequisite: CHSS 200 and completion of 17 credits toward the minor in science and society. Capstone course for the interdisciplinary minor in science and society. Helps students integrate material from their individualized core of courses and make explicit connections among the various disciplines. Provides opportunity for students to share their experiences, expanding their breadth of knowledge in this important and timely area of study.

485 International Internship (3–9:0:0) Prerequisites: 60 credits, 2.50 GPA, and successful completion of application and selection process. Students should contact faculty director one semester prior to semester of enrollment. Work at overseas locations under faculty director and site supervisor. Predeparture orientation; minimum 45 hours of work for each credit (in 3-, 6-, and 9-credit increments); and written assignments as specified in learning contract approved by faculty director, including journals, work products and reports, reflective essays, and research papers.

490 Faculty-Student Research Apprenticeship (3:0:0) Prerequisites: 60 credits, and permission of instructor. Open only to recipients of the provost’s Faculty-Student Apprenticeship Award. Introduces scholarship in action in major field of study. Complements and enriches required course material, and provides undergraduates the unique opportunity to work collaboratively with faculty on research projects.

College Teaching (CTCH) Higher Education

601 The Community College (3:3:0) Studies institutional character of the community college, including history, purpose, clientele, organization, finance, and social function. Studies issues currently faced by community colleges.

602 College Teaching (3:3:0) Describes issues that affect teaching and learning, and provides basic tools to use in college classroom. Teaches how to plan course, develop syllabus, promote learning among diversity of students, and implement classroom assessment techniques.

603 Technology in Higher Education (3:3:0) Prerequisites: basic familiarity with computer operations. Overview of technology issues in higher education and hands-on experience with select technology tools to enhance productivity and classroom and online learning. Examines issues related to using technology in administration, teaching and learning, and guides in developing policies and effective technology-enhanced learning activities for students.

604 The Scholarship of Teaching and Learning (3:3:0) Overview of the movement in higher education in scholarship of teaching and learning. Focuses on ways students learn, how learning can be improved, and different methods of conducting research into teaching and learning.

605 Curriculum and Program Design and Assessment (3:3:0) Prerequisites: CTCH 601 or 602, and 603. Prepares for designing, implementing, and assessing new courses, curricula, and programs. Examines relationships of courses and curricula to larger programs and institutional goals. Explores program planning and implementation such as documenting need, generating cost estimates, and assembling strong case for new programs.

606 Diversity in Higher Education (3:3:0) Explores instructional interactions and communication strategies for diverse learner populations. Includes discussion of sociological, behavioral, and cognitive theory on culture.

621 Higher Education in the United States (3:3:0) History of higher education from colonial period to the present. Examines philosophic, political, social, and economic forces that have influenced development. Reviews today’s issues and challenges.

622 Organization and Administration in Higher Education (3:3:0) Provides concepts of organization and administration in contemporary institutions from macro to micro perspectives. Studies theory and practices of the organization as it relates to governance, structure, and management of the institution.

624 Finance and Fiscal Management in Higher Education (3:0:0) Overview of higher education finance and fiscal management.

626 Assessment in Higher Education (3:3:0) Focuses on political and historical context of assessment in higher education, and teaches strategies for classroom, program, and institutional assessment. Develops skills in survey and focus group research, and teaches how to develop and implement assessment plan.

641 Introduction to Counseling (3:3:0) Introduces profession and its practice in various settings. Examines history and development of counseling; national associations; ethical code; standards for preparation and credentials; and roles, functions, and responsibilities.

643 Counseling Theory and Practice in Higher Education (3:3:0) Study of historical contemporary approaches to counseling. Emphasizes applications of theoretical models as appropriate for higher education.

644 Student Services in Higher Education (3:3:0) Focuses on development and organization of student personnel
programs and services in institutions of higher learning. Covers philosophy, methods, and techniques.

645 The Contemporary College Student (3:3:0) Analyzes changing demographics, barriers, and developmental issues facing college students. Studies impact of college environment on student development, and interaction between students of varying subcultures and the environment. Examines technology issues and their impact.

685 Practicum (3:3:0) Prerequisites: Admission to certificate, MAIS/CCT or MAIS/Higher Education program; approval of advisor and practicum coordinator; 12 credits of core requirements; and 3 additional credits. Serves as an essential part of the certificate and MAIS programs. Supervised on-the-job experience in approved college or university setting or public agency involved in higher education. Develops skills applicable to college-based teaching or higher education administration or policy. Approval of practicum coordinator needed one semester before registration. Minimum 150 hours of work and participation in internship seminar. Graded S/NC.

792 Special Topics in Higher Education (1–6:1–6:0) Prerequisite: admission to doctoral program, or permission of instructor. Covers current issues in teaching and learning in higher education. May be repeated for credit when topic is different.

821 History of Higher Education in the United States (3:3:0) Key issues and moments in the history of higher education are examined as a way to understand current structures, cultures, policies, and purposes. Historical perspective will also be used to consider the near future of higher education. Students will examine current trends and possible futures for a specific topic by doing historical research on the issue.

826 Advanced Institutional and Program Assessment in Higher Education (3:3:0) Examination of educational assessment and evaluation, practices, and methods. Students critique and design an evaluation study and an evaluation report. Reviews ethical issues and impact of assessment and evaluation for students, employees, and programs.

830 Ethics in Higher Education: Personal, Organizational, and Institutional Realities (3:3:0) Explores theories, definitions, and applications of ethics across multiple higher education settings, with particular attention to critical theory contributions. Includes an in-depth analysis of major complex ethical issues in higher education settings using ethical frameworks.

885 Doctoral Internship in College Teaching and Administration (3:1:0) Prerequisites: admission to doctoral program, approval of advisor and internship coordinator, 18 credits of education core requirements, and 6 additional credits in knowledge area. Students must contact the program at least one semester before enrolling. Supervised internship at community college, four-year college/university, or non-teaching higher-education setting such as government agency or administrative office. Develops skills applicable to college-based teaching or higher education administration or policy. Minimum 180 hours of work and participation in internship seminar. Graded S/NC.

897 Directed Reading in Higher Education (1–6:0:0) Prerequisite: admission to doctoral program and permission. Independent reading on topic agreed on by student and instructor.

998 Doctoral Dissertation Proposal (1–3:0:0) Prerequisite: completion of at least one internship and all other course work and qualifying exams. Contact program for permission to register. Work on research proposal that forms basis for doctoral dissertation. Graded S/NC.

999 Doctoral Dissertation (1–12:0:0) Prerequisite: CTCH 998, two internships, and appointed dissertation committee. Doctoral dissertation research and writing under direction of dissertation committee. Graded S/NC.

College of Visual and Performing Arts (CVPA)

College of Visual and Performing Arts

101 Arts Pass (2:2:0) Introduction to appreciation of the arts through lecture, demonstration in visual art, music, dance, and theater. Emphasizes aesthetic principles in modern society. Students attend performances and exhibitions, and develop analytical skills through written journal and discussion. May be repeated for total 4 credits.

102 Experiencing the Arts (3:1:2) Reserved for high school students enrolled in CVPA. Introduces collaborative and interdisciplinary arts experiences in visual art, music, dance, theater, film, and media through daily intensive immersion in the arts for two and one half weeks. Not repeatable. Graded S/NC.

105 Special Topics in the Arts (1–3:1–3:0) Exploration of topical studies on the arts. Subject matter varies. May be repeated for a maximum 12 credits when taken under different topics.

305 Seminar in Arts Management (3:3:0) Prerequisite: junior standing, admission to arts administration minor, or permission of instructor. Covers planning, programming, presentation, funding, and communications in managing visual and performing arts. Includes guest speakers, case analyses, and semester-long individual and group projects.

308 Cross-Cultural Arts Appreciation (3:3:0) Provides cumulative arts experience by tying subject matter to major cultural production of Center for the Arts. Subject matter varies. May be repeated for maximum 12 credits when taken under different topics.

399 Special Topics in the Arts (1–6:1–6:3) In-depth presentation and exploration of topical studies on the arts. Subject matter varies. May be repeated for maximum 24 credits when taken under different topics.

430 Topics in Arts and Wellness (1–3:1–3:0) Prerequisite: junior standing, or permission of instructor. In-depth presentation and exploration of topical studies in arts and wellness or related areas such as injury prevention, performance enhancement, and health and wellness training. Topic depends on instructor. May be repeated for up to 9 credits taken under different topics.

498 Field Experience in the Arts (3–6:0:0) Prerequisite: junior standing; completion of 6 credits in CVPA courses in area of residency; CVPA 305; or permission of instructor. Apprenticeship, internship, or project with organization or individual in the arts. Must be prearranged with division director before enrollment. May be repeated for maximum 6 credits.

499 Research/Performance/Topics in the Arts (3–6:0:0) Advanced research, performance, or exploration of topical studies in arts. May be repeated for maximum 6 credits.
530 Topics in Arts and Wellness (1–3:103:0) Prerequisite: 90 hours or permission of the instructor. In-depth presentation and exploration of topical studies in arts and wellness and/or related areas (e.g., injury prevention, performance enhancement, health and wellness training to educators and arts professionals). Topic depends on instructor. May be repeated up to 9 credits taken under different topics.

592 Special Topics in Interdisciplinary Arts Studies (1–3: 3:0) Prerequisite: undergraduate degree or equivalent, or permission of instructor. Topics in interdisciplinary arts. May be repeated for maximum 12 credits.

599 Independent Study (1–6:1–6:0) Prerequisite: undergraduate degree or equivalent, or permission of instructor. Independent reading, performance, or research on specific project under direction of selected faculty member. May include attendance in parallel undergraduate course. May be repeated for total 12 credits.

Communication (COMM)

100 Public Speaking (3:3:0) Presents principles to develop effective presentations for public and professional settings while integrating appropriate technologies. Emphasizes analyzing audience; composing meaningful, coherent messages; conducting responsible research; developing effective arguments; and improving delivery skills to strengthen confidence and credibility.

101 Interpersonal and Group Interaction (3:3:0) Presents principles to develop appropriate and effective communication strategies in one-to-one and small group communication settings. Emphasizes analyzing and assessing communication skills to create and sustain effective communication in personal and professional relationships.

140 Forensics Seminar in Creative Arts (1:0:6) Prerequisite: audition. Intensive work in creative forensics events, including theatrical criticism and informative, persuasive, extemporaneous, after-dinner, and impromptu speaking. May be taken four times.

141 Forensics Seminar in Recreational Arts (1:0:6) Prerequisite: audition. Intensive work in recreational forensics events, including dramatic duo, program interpretation, poetry interpretation, dramatic interpretation, and prose interpretation. May be taken four times.

142 Forensics Seminar in Debate: Affirmative Strategies (1:0:6) Work in affirmative research, case construction, and oral presentation, directed toward affirmative analysis of intercollegiate debate proposition. May be taken four times.

143 Forensics Seminar in Debate: Negative Strategies (1:0:6) Work in negative research, case attacks, and oral presentation directed toward negative analysis of intercollegiate debate proposition. May be taken four times.

145 Newspaper Workshop I (1:1:2) Practical experience in writing, editing, or business aspects of newspaper production at Broadside or other papers. Coordinated by newspaper faculty advisor. May be repeated for total 3 credits.

148 Radio Workshop I (1:1:3) Prerequisite: 100-level COMM course, or permission of instructor. Practical experience in production, news writing, promotions, advertising, public relations, programming, or newscasting for student radio station WGMU. May be taken three times.

150 Communication Skills for International Students (3:3:0) Prerequisite: international student in first year of study in the United States, non-native speakers of English with some difficulty speaking clearly and accurately, or permission of instructor. Introduction to speaking, listening, and nonverbal skills required to communicate appropriately in university study.

157 Video Workshop (1:1:2) Students who have already completed or are in COMM 355 are not eligible to take this course. Practical experience in learning production basics including camera, video, and lighting. May be taken three times.

200 Introduction to Communication (3:3:0) Introduces the field of communication, including perspectives on theory and research, topical areas within the discipline, basic research methodologies, and a survey of theories in those areas. Covers basic procedures for theory-building, research, and writing about communication. May be repeated only once.

201 Small Group Communication (3:3:0) Prerequisite: COMM 101 or equivalent course. Principles of communicating effectively in small group situations. Emphasizes problem-solving group communication. Practice in working cooperatively with others to complete projects using systematic approach to problem solving.

202 Mass Media and Communication Systems (3:3:0) Study of the development of various telecommunications and media systems in the United States, including print media, motion pictures, recording industry, telegraphy and telephony, broadcasting and cable, and new communications technologies.

203 Introduction to Journalism (3:3:0) American journalism including history and First Amendment components; role of professional journalist; print, broadcast, and computer-assisted news operations; economics of publishing; and effect of new technologies. Serves as starting point for those interested in journalism careers, and as orientation for those interested in learning more about news business operations.

230 Case Studies in Persuasion (3:3:0) Examines common persuasive message strategies and approaches. Covers basic principles of persuasive process. Case studies include advertisements, speeches, and persuasive activities from all segments of society.

255 Introduction to Media Literacy (3:3:0) Principles and practices of media literacy. Emphasizes critical viewing, listening, and reading media skills; and media effects on consumer.

260 Basic Debate Theory and Practice (3:1:3) Theory and practice of formal debate, including approaches to analytical reasoning, research, delivery, and conceptual basis for debate. Does not require tournament participation.

261 Theories of Argumentation (3:3:0) Analyzes argument within communicative settings. Emphasizes deductive and inductive forms of reasoning, fallacies in reasoning, tests of evidence, and models for such analyses.

299 Research Practicum in Communication (1–3:0:0) Introduces research methods in communication in the context
of assisting with faculty research. Individualized sections taught by arrangement with full-time faculty. Methods taught vary, but generally include data collection, data analysis, and report construction.

300 Foundations of Public Communication (3:3:0) Prerequisites: 3 credits of 100- or 200-level COMM courses, or 60 credits; grade of C or better in COMM 250. Theories and principles of public communication, emphasizing methods of persuasion, critical analysis, speaker-listener alignments in public setting, and measurements of effective public communication.

301 Foundations of Interpersonal Communication (3:3:0) Prerequisite: 3 credits of 100- or 200-level COMM courses, or 60 credits; grade of C or better in COMM 250. Theories and principles of interpersonal communication emphasizing models of communication, verbal and nonverbal message systems, and analysis of communicative relationships.

302 Foundations of Mass Communication (3:3:0) Prerequisite: 3 credits of 100- or 200-level COMM courses, or 60 credits; grade of C or better in COMM 250. Theories and principles of mass communication emphasizing effects, the media as institution, and role of society.

303 Writing across the Media (3:3:0) Prerequisites: 30 credits and ENGL 302. Prerequisite for all communication media writing courses. Introductory course focusing on writing for newspapers, press releases, broadcast and advertising; and computer-assisted reporting. Lab work required.

305 Foundations of Intercultural Communication (3:3:0) Prerequisite: 3 credits of 100-200-level COMM courses or 60 credits; grade of C or better in COMM 250. Analyzes communication variables as they relate to intercultural encounters. Emphasizes culture’s influence on communication process, particularly influence of verbal and nonverbal communication on how message is interpreted.

306 Issues in Intercultural Communication (3:3:0) Prerequisite: COMM 305, or permission of instructor. Continuation of COMM 305. Applies basic principles of intercultural communication to analyze specific situations involving communication and cultural differences.

307 Field Study in Communication (3:3:0) Prerequisite: permission of instructor. Structured communication learning experience: one to three weeks of travel in a foreign environment involving another country or relevant U.S. co-cultures. Students must complete appropriate readings, laboratory assignments, and personal learning paper to process communication concepts and experiences. May be repeated once with a different field of study.

310 Oral Interpretation (3:3:0) Principles and theories of oral interpretation. Practice in oral communication of prose, poetry, and drama.

320 Business and Professional Communication (3:3:0) Study of basic theories and skills of communication in professional contexts, including interviewing, relationship maintenance, small group teams, and public presentations. Emphasizes developing practical and critical thinking skills.

326 Rhetoric of Social Movements and Political Controversy (3:3:0) Prerequisite: COMM 300. Social and political forces of contemporary era from communication perspective, emphasizing political leadership, pressures for social and political change, and transformations in communicative environment.

330 Principles of Public Relations (3:3:0) Prerequisites: 3 COMM credits and 60 credits, or permission of instructor. Surveys nature, history, scope, and practice of public relations in business, trade associations, nonprofit organizations, and educational and government institutions. Covers principles, practice of public relations, including media relations, issues management, and public service announcements; marketing and research; planning and publicity for special events; house publications; and institutional advertising.

332 Nonverbal Communication (3:3:0) Prerequisite: 3 COMM credits. Theory, principles, and methods to analyze nonverbal communication. Emphasizes physical behavior, facial expression, personal space and territoriality, physical appearance, vocal cues, and environment.

335 Organizational Communication (3:3:0) Prerequisite: COMM 100, 101, or 301; or permission of instructor. Theory, practice, and methods to analyze communication in organizations. Emphasizes process and structure, interaction formats, mechanisms for modification, and career paths in organizational communication.

340 Forensics Seminar in Creative Arts (1:0:6) Prerequisites: 4 credits of COMM 140, or 60 credits and audition. Intensive work in various types of creative forensics events, including rhetorical criticism and informative, persuasive, extemporaneous, after-dinner, and impromptu speaking. May be taken four times.

341 Forensics Seminar in Recreational Arts (1:0:6) Prerequisites: 4 credits of COMM 141, or 60 credits and audition. Intensive work in various types of creative forensics events, including dramatic duo, program interpretation, poetry interpretation, dramatic interpretation, and prose interpretation. May be taken four times.

342 Forensics Seminar in Debate: Affirmative Strategies (1:0:6) Prerequisites: 4 credits of COMM 142, or 60 credits and audition. Work in affirmative research, case construction, and oral presentation directed toward affirmative analysis of intercollegiate debate proposition. May be taken four times.

343 Forensics Seminar in Debate: Negative Strategies (1:0:6) Prerequisites: 4 credits of COMM 143, or 60 credits and audition. Work in negative research, case attacks, and oral presentation directed toward negative analysis of intercollegiate debate proposition. May be taken four times.

344 Parliamentary Procedure (1:1:0) Prerequisite: 60 credits, or permission of instructor. Procedures of parliamentary law as practiced in voluntary organizations. Practice in leading groups that conduct business according to Roberts Rules of Order, Newly Revised. Brief review of other parliamentary manuals.

345 Newspaper Workshop II (1:1:2) Prerequisite or corequisite: 3 credits of COMM 143, COMM 351, or permission of instructor. Practical experience in writing and editing for student newspaper or other papers. May be taken three times.

346 Yearbook Workshop (1:1:2) Practical experience in promotion, marketing, and sales of video yearbook, or practical experience working on Senior Expressions, a print
supplement to the video yearbook. May be taken three times.

348 Radio Workshop II (1:1:3) Prerequisite: COMM 148, or permission of instructor. Intense practical application of previously acquired skills in production, promotions, advertising, public relations, programming, or news writing for student radio station WGMU. May be taken three times.

349 Student Leadership Seminar (1:3:0) Prerequisite: 60 credits, or permission of instructor. Introduction to leadership concepts. Experiential seminar focusing on practical application of leadership concepts in student organization.

350 Mass Communication and Public Policy (3:3:0) Prerequisite: COMM 102, 202, or 302; or permission of instructor. Investigates how matters of public importance are communicated via various mass communication channels. Emphasizes regulations to minimize influence of mass media on public decision-making, and media manipulation by pressure groups, politicians, and media gatekeepers.

351 News Writing and Reporting (3:3:0) Prerequisite: COMM 303. Experience in actual news gathering. Students write and report for print and online outlets. Numerous in-class and out-of-class writing assignments train students in unique styles of print and online journalism.

352 News Editing: Print and Beyond (3:3:0) Prerequisite: COMM 303. Copy preparation, headline writing, news judging, and layout for various forms of print and electronic formats. Introduces working on news copy desks.

354 Radio Production (3:1:4) Prerequisite: COMM 302, or permission of instructor. Theory and practice of operational radio broadcasting. Topics include programming, production, and promotion aspects of commercial and non-commercial radio.

355 Video I: Principles and Practices (3:3:2) Prerequisite: All for Video II level courses. Basic video production techniques. Emphasizes camera, audio, lighting, and editing. Lab work required.

356 Video: Performance and Writing (3:3:0) Writing for video, performance skills for on-air work, interviewing.

357 Video II: Producing and Directing (3:2:4) Prerequisite: COMM 355 or portfolio assessment. Introduces techniques, theory, and practices in producing, directing, and distributing video productions.

359 Media Management (3:3:0) Principles, practices of media management from general techniques to operation of individual departments within a media organization.

360 Video II: Video Editing (3:2:3) Prerequisite: COMM 355 or portfolio assessment. Focus on advanced techniques in editing analog and digital, and visual communication theories of video editing.

361 Online Journalism (3:3:0) Prerequisite: COMM 303, or permission of instructor. Focuses on online journalism, research, reporting, webpage and weblog creation, and writing for Internet.

362 Argument and Public Policy (3:3:0) Develops argumentative skills while examining contemporary public policy. Applies methods of argumentative analysis to design, implementation of public policy. Students learn by constructing, examining, and using public argument.

363 Advanced Media Production (1:1:3) Prerequisite: two completed in area of media production focus. Practicum for students with production experience; students produce a final resume in area of expertise.

365 Women and Media (3:3:0) Prerequisite: COMM 302, or permission of instructor. Introduces concepts of power, influence of mass media. Allows students to see themselves as products, producers of media influence, and gives sense of women’s roles as media professionals and consumers.

366 Visual Communication (3:3:0) Prerequisites: IT 103 and COMM 355. Teaches visual communication theories and applies them to creation of videos, web pages, multimedia production, Computer Based Training (CBT) and other technologies. Covers limits of visual communication in terms of perception, economics, and technology. Partial distance course includes viewing video modules, and using electronically mediated discussion.

369 Telecommunications Systems (3:3:0) Prerequisite: 60 credits, or permission of instructor. Studies evolution and operation of telecommunications systems from wireline telegraphy to wireless voice, video, and data services. Topics include communication coding systems, analog and digital modulation schemes, twisted pair telephony, broadband coaxial cable, and high-power direct-to-home digital satellite.

370 Feature Writing (3:3:0) Prerequisite: COMM 303. Introduces aspiring journalists to research techniques and critical writing skills needed to produce publishable magazine or newspaper feature stories.

371 Sports Writing and Reporting (3:3:0) Prerequisite: COMM 303 or permission of instructor. Experience in actual sports-related news gathering and reporting. Covers writing and reporting on sports-related subjects for print and online media. Numerous in-class and out-of-class writing assignments train students in the unique style of covering sports events, reporting breaking news, and writing feature stories.

373 Business and Economic Journalism (3:3:0) Prerequisite: COMM 303 or permission of instructor. Writing and reporting about business and the economy with focus on understanding financial news, and reporting about companies, trade, and markets for print, broadcast, and online media. Students practice through in-class and out-of-class writing assignments.

374 Political Journalis (3:3:0) Prerequisite: COMM 303 or permission of instructor. Writing and reporting about politics, elections and campaigns, and the legislative and executive branches of government for print, broadcast, and online media. Students practice the style and substance of covering political news through in-class and out-of-class writing assignments. A unique collaboration with C-SPAN including video conference opportunities with political and media personalities.

375 Mass Communication Advertising and Promotions (3:3:0) Prerequisite: COMM 302, or permission of instructor. History, regulation, and ratings of advertising, as well
as media buying, advertising campaigns, and strengths and weaknesses of media vehicles used in advertising.

380 Media Criticism (3:3:0) Examines practical criticism of a wide variety of media texts including television programs, newspapers, articles, films, photographs, and advertisements. Introduces principles of major contemporary modes of analysis for systematically interpreting visual and verbal forms of communication.

389 Association Communication (3:3:0) Prerequisite: 60 credits, or 3 credits of lower-division COMM courses. Principles of editing and journalism applied to publications, public relations, and advertising needs within corporate environment. Job requirements of editorial positions in public relations, publications, and information as defined by trade associations, nonprofit organizations, and large corporations.

390 Case Studies in Public Relations (3:3:0) Prerequisite: COMM 330. Focuses on current issues in corporate, government, and nonprofit public relations.

391 Writing for Public Relations (3:3:0) Prerequisite: COMM 303. Focuses on public relations writing including news releases, client memos, broadcasting, speeches, brochures, journals, and advertisements. Includes writing styles, formats, organization, and writing research.

399 Special Topics in Communication (1–3:3:0) Prerequisite: permission of instructor. Topics vary; some require laboratories. May be repeated.

400 Research Methods in Communication (3:3:0) Prerequisites: COMM 250; and at least two of COMM 300, 301, 302 or 303. Explores applications for primary research methodologies used in communication. Research project, with focus on survey, critical ethnographic, or experimental methodologies.

401 Interpersonal Communication in the Workplace (3:3:0) Prerequisite: COMM 301, or permission of instructor. Comprehensive study of theories and research associated with dynamics of interpersonal relationships in the workplace. Emphasizes individual motivation, interpersonal needs, communication styles, leadership, problem solving, decision making, diversity, interpersonal conflict, individual adaptation to organizational change, and influence of technology on workplace relationships.

412/GOVT 412 Politics and the Mass Media (3:3:0) Prerequisite: GOVT 103, or permission of instructor. Covers responsibilities, freedoms of mass media in a democracy; and media influence on citizens' opinions, elections, and decisions of public officials.

420 Senior Seminar in Theories of Communicative Interaction (3:3:0) Prerequisite: minimum satisfactory grade in COMM 250, 300, 301, and 302. Explores primary theories explaining human communicative behavior, including traditional rhetorical, contemporary social science, critical, and mass communication.

425 Honors Seminar in Communication (3:3:0) Prerequisite: 80 credits, cumulative GPA of 3.50. Examines foundations, connectedness, and applications of numerous communication theories across the discipline. Honors project required.

430 Persuasion (3:3:0) Prerequisite: COMM 230 or permission of instructor. Theories of persuasive communication including traditional and contemporary attitudinal change; relationship among speaker, message, and audience; and relationship between attitudinal and behavioral change.

431 Information Technology and the Political Process (3:3:0) Prerequisite: 60 credits or permission of instructor. Studies impact of information network of wire and wireless communications and computers on political process in advanced industrial countries.

432 Political Communication (3:3:0) Studies how political communication shapes development of “political reality.” Examines interactions between media and politics with respect to the ways communication functions in political settings.

434 Interviewing (3:3:0) Prerequisite: 60 credits. Offers practical application, skill development, and theoretical and critical assessment of computer-mediated communication. Discusses culture and language, functional and dysfunctional communication, social interaction, critical perspectives and ideology, freedom and responsibility, and images of future. Students contract for course assignments within course categories.

450 Internship in Communication (3:1:5) Prerequisite: 75 credits, major or minor in telecommunications or electronic journalism, 15 credits in COMM for majors, 12 credits for non-COMM majors, and permission of department. See department for procedures. On-the-job training in communication through approved field work study programs. Internships arranged and supervised by Department of Communication through internship coordinator. Related class work in resume preparation and job interviewing. May be repeated up to a maximum of 6 credits.

451 Facilitating Communication Education (3:1:5) Theory and practice in facilitating learning of communication principles and skills. Students work as instructor aides in lower-division classes under supervision of faculty member. Activities include facilitating small-group activities, and individually critiquing oral performances.

452 Media Production Practicum (3:1:0) Prerequisite: COMM 302, 348, or 355. Theory and practice in creation, distribution, and response to media productions. Students complete minimum 150 hours of work as assistants to engineers, producers, directors, and organizers of media production facilities on campus, under supervision of faculty members. Activities include working on telecourses, public relations videos, and multimedia projects; aiding in creating in-house productions for departments; and working as cable caster for master control campus operations.

454 Free Speech and Ethics (3:3:0) Prerequisites: COMM 300, 302; or permission of instructor. Major issues surrounding roles of speech, press, and electronic media in society. Includes history of free speech and press issues in society, government role in regulating marketplace of ideas, and responsibility of individual in free society.

455/HIST 455 History of Print Journalism (3:3:0) Prerequisite: 3 credits in COMM or HIST courses. Development of print journalism, emphasizing interaction of technology,
456 Comparative Mass Media (3:3:0) Prerequisite: COMM 302 or permission of instructor. Survey of major foreign mass media systems as they compare with American system. Focuses on broad dimensions of international mass media, and describes issues facing global journalism and media systems. Provides substantive framework to critically evaluate various national media systems.

465 Topics in Communication and Gender (3:3:0) Topics may include gender and culture, women as rhetors, male and female communication, and communication and gender roles. Examines specific interests, ideally in seminar setting. Course may be repeated with department approval.

469 Structure of the Telecommunications Industry (3:3:0) Prerequisite: 90 credits or permission of instructor. Explores complex interrelationships that affect modern telecommunications and how major mergers, acquisitions, regulatory decisions, congressional initiatives, or engineering breakthroughs can profoundly affect telecommunications industry at any given time. Serves as capstone seminar in telecommunications minor.

475 Journalism Law (3:3:0) Prerequisite: 60 credits or permission of instructor. Examines law as it relates to working journalist. Topics include libel, invasion of privacy, free press and fair trial, First Amendment, broadcast regulation, access to media, advertising, and effect of new technologies on these issues. Uses case approach to study leading court decisions in mass media law.

499 Independent Study in Communication (3:0:0) Prerequisites: 75 credits and permission of department. Study of a selected area in communication. Independent study application must be processed before start of semester in which work is to take place. May be repeated. Communication courses at the 500 level open to postbaccalaureate students or advanced undergraduates with permission of department.

504 Communication and Interpersonal Conflict (3:3:0) Focuses on interpersonal interactions, including dyadic and small-group levels in various settings such as friendships, marriage, family, and workplace. Examines factors that generate conflicts, and communication strategies and skills that help shape conflict interaction toward productive ends.

506 Communication in International Organizations (3:3:0) Analyzes communication variables as they relate to organizational and managerial functions in international organizations. Topics include developing understanding of how cultural differences influence managerial activities, and learning to deal effectively with differences.

510 Studies in Oral Interpretation (3:3:0) Examines role of oral communicator in selection, adaptation, and performance of literature. Topics vary depending on genre being considered. May be repeated three times for credit if each course devoted to a different genre.

530 Theories of Small Group Communication (3:3:0) Advanced-level theory and practice of small group interaction. Examines current research, focusing on learning applications of theories to relevant settings.

542 Directing Debate Activities (3:3:0) Theory and practice of competitive debate. Emphasizes traditional and contemporary theories; administrative activities related to direction of a debate program; and methods of instruction, including analysis of current debate topic. Designed for novice and experienced debate coaches.

551 Developing Students’ Speaking and Listening Skills (3:3:0) Emphasizes development of assignments that develop communication facilitation skills in children and adolescents. Covers five communication functions and their development to integrate basic skills at elementary level and direct teaching at secondary level, and philosophies of communication education and curriculum development as well as competency assessment.

554 Telecommunications Policy and Regulation (3:3:0) Reviews history and principles of telecommunications regulation. Studies relevant policy-making and regulatory institutions and their roles in charting U.S. telecommunications course. Examines role of citizens and lobby groups in regulatory process.

590 Seminar in Communication (3:3:0) Intensive study of specific topics; content varies. May be repeated for credit.

600 Introduction to Graduate Studies (3:3:0) This course offers a broad introduction to the field of communication in terms of communication-based theories and research.

601 Communication in Professional Relationships (3:3:0) Explores theoretical perspectives and relevant research to communication strategies and skills for various professional roles and situations. Relates theoretical foundations to practice, assessing theories and applications in individual professional fields.

602 Theories and Research of Mass Communication (3:3:0) Explores theories that have guided development of mass media. Emphasizes major scientific and humanistic approaches to mass media effects.

604 Communication Research Practicum (3:3:0) Prerequisites: COMM 634 or permission of instructor. Helps communication master’s students determine focus for program of study, thesis, and projects. Includes readings in applied communication research, and exercises in topic selection, analysis.

605 Intercultural Communication (3:3:0) Analyzes communication variables related to communication across cultures. Topics include nonverbal communication, time conceptualizations, perceptions and attitudes, values, social organization patterns, cultural norms, language, ethics, conflict across cultures, and research in intercultural communication.

620 Health Communication (3:3:0) Examines interpersonal communicative processes associated with health in consumer-provider, family, and health communication campaign contexts. Particular attention to understanding cultural differences in perceptions of and communication about health and disease.

621 Media Advocacy for Nonprofit Organizations (3:3:0) Drawing from scholarship in media studies, critical theory, and public health campaign literature, provides graduate-level introduction to media advocacy strategies for nonprofit organizations with limited financial resources.
630 Theories of Public Relations (3:3:0) Provides a survey of public relations theories and major ethical issues. Examines ways theories relate to organizations, mass and international communication research, rhetoric, persuasion, and social movements.

631 Approaches to Group Facilitation (3:3:0) Introduces various theoretical and practical approaches to group facilitation with in-depth focus and practice in one approach. Students participate in group sessions, analyze videotapes of decision-making groups, and practice methodologies for facilitating group interaction.

634 Theories of Interpersonal Communication (3:3:0) Prerequisite: COMM 301 or permission of instructor. Analyzes contemporary theories, concepts, and approaches to improving interpersonal communication. Examines interpersonal communication research.

635 Organizational Communication (3:3:0) Analyzes communication systems, processes in public and private organizations. Topics include conflict management, group decision making, interviewing, technical presentations, and using various channels for improving internal and external communication.

636 Communication Consulting (3:3:0) Investigates theories providing foundation for communication consulting. Provides theoretical information and mechanisms for application necessary to modify communicative behavior within organizations.

637 Risk Communication (3:3:0) Research on sharing information about physical hazards such as toxic waste, radiation, disease, injury, and biohazards. Topics include communication concerning workplace safety, environmental problems, risk assessments, and scientific uncertainties.

650 Research Methodologies in Communication (3:3:0) Prerequisite: graduate standing. Introduces various research methods used by communication professionals. Focus is to achieve understanding and knowledge of social scientific research, qualitative and quantitative, and critical analysis through use and application.

651 Communication in the Classroom (3:3:0) Communication theories and skills to manage communicative environment in classroom. Considers nonverbal aspects of space, time, action, and form as they affect teaching choices. Covers verbal patterns for skills of classroom management, including questioning skills, enhancement of students’ self-concept, systematic feedback, parental communication, and student development.

653 Graduate Communication: Research and Teaching (3:3:0) Investigates theoretical and philosophical implications of communication instruction. Exposes graduate students to principles and practices of teaching college communication courses at upper and lower divisions.

655 Theories of Visual Communication in Telecommunications (3:3:0) Theories of visual communications and how they are used in creating images for web sites, video productions, corporate presentations, virtual reality, computer graphics. Explores problems of fitting messages to various telecommunications media, how target audience perceives the visual image, and aesthetic demands of products imposed by new technologies.

656 Global Communication (3:3:0) Study of global telecommunications channels and artifacts of international mass communication, with focus on discussion of problems of free flow of information, roles of nations and international organizations in fostering global communication, and other technologies. Develops perspectives on worldwide social, political, educational, and economic development.

675 Content Analysis (3:3:0) Introduces content analysis, a research technique for making replicable and valid inferences about text in sources such as news articles, advertisements, and television programs. Students design and conduct research using content analysis techniques.

694 Communication Internship (3–6:1–2:0) Prerequisites: 18 graduate credits and permission of department. Students work in approved, professional-level communication positions, meeting regularly with internship supervisor from department. Requires paper, journal, minimum 60 hours work for each credit of enrollment. Students usually enroll in internships at end of program of study.

696 Directed Readings and Research (1–3:0:0) Prerequisite: permission of department. Reading and research on specific topic under direction of faculty member. Written report required; oral or written exam may be required. May be repeated for maximum 6 credits.

705 Intercultural Health and Risk Communication (3:3:0) Examines intercultural health and risk communication interventions, including health communication campaigns, public relations and advertising for health organizations, and how the media and Internet present health information.

706 Strategic Communication (3:3:0) Prerequisite: COMM 630 or permission of the instructor. Examines commonalities of strategic communication campaigns across fields (e.g., military, diplomacy, health, politics, marketing, public relations) in order to understand strategic communication, compare fields, and emphasize strategic and evaluative research across fields.

720 Consumer-Provider Health Communication (3:3:0) Examines relational communication research and practice. Examines the role of interpersonal communication in health care delivery, health promotion, disease prevention, risk communication, as well as in promoting personal and psychosocial well being.

721 E-Health Communication (3:3:0) Explores the use of computer-mediated communication technologies in health care and health promotion, including examination of technology in health information dissemination, health education, health communication interventions, and the management of health care delivery.

725 Qualitative Methods (3:3:0) Examines qualitative research in communication. Emphasis is placed on techniques of naturalistic inquiry such as observation, interviewing, focus group methods, and ethnography, as well as tools for analyzing and reporting qualitative data.

735 Crisis Communication (3:3:0) Prerequisite: permission of the instructor. Examines crisis communication contexts
with a particular emphasis on the role of communication in a variety of crises and how the media and Internet present crisis information to the public.

750 Research Methods II (3:3:0) Prerequisite: COMM 650. Extends basic research knowledge and skills learned in COMM 650 Research Methods I. Students will be taught to analyze and synthesize literature, develop theoretical linkages, and construct measurement scales.

798 Communication Studies Project (3:3:0) Final research seminar for all MA in communication students. Students discuss practical and theoretical issues related to project or thesis. Includes readings related to underlying theoretical, methodological, and ethical issues facing contemporary communication researchers and practitioners.

799 Master’s Thesis (1–6:0:0) Prerequisite: 24 graduate credits and approval of thesis proposal by faculty committee. Original research endeavor related to student’s concentration in communication under supervision of faculty committee. Graded S/NC.

800 Studies for the Doctor of Philosophy in Education (variable credit) Prerequisite: admission to doctoral program in communication. Program of studies designed by student’s discipline director and approved by doctoral committee. Students participate in research activity of discipline director, and write paper reporting original contributions. May be repeated.

806 International Public Relations (3:3:0) Prerequisite: COMM 706 or permission of instructor. Provides a survey of international public relations with an emphasis in three areas: applied knowledge for actual international practice, relevant theory, and ethical issues.

820 Health Communication Campaigns (3:3:0) Explores use of communication campaigns to promote health and reduce health risks, examines how health communication campaigns are designed, implemented, and evaluated, and describes the role of communication research throughout the campaign process.

890 Special Topics in Communication (3:3:0) Prerequisite: PhD rank or permission of instructor. Selected topics reflecting specialized areas in communication. Content varies. May be repeated.

896 Independent Study (3:3:0) Prerequisite: PhD rank or permission of instructor. Independent reading on a topic agreed on by student and faculty member. Content varies. May be repeated.

999 Doctoral Dissertation Research (3:3:0) Prerequisite: Completion of COMM 998. Research on an approved dissertation topic under the direction of dissertation committee. May be repeated. No more than 18 credits of COMM 998 and 999 may be applied to doctoral degree requirements. Graded S/NS.

Comparative Literature (CL)

300 Introduction to Comparative Literature (3:3:0) Prerequisite: 60 credits. Introduces methods of comparative literature through study, in translation, of selected theme or motif as it appears in various periods, genres, or national literatures. Readings drawn from English, American, or European literature; on occasion, non-Western literature featured.

514 Theories of Comparative Literature (3:3:0) Prerequisites: CL 300 and 90 credits, or permission of instructor. Intensive study of major theories of comparative literature, with special emphasis on international movements and characteristic themes. Students work with texts in foreign language of their concentration; other texts studied in translation.

Computational and Data Sciences (CDS)

College of Science

101 Introduction to Computational and Data Sciences (3:3:0) Introduction to the use of computers in scientific discovery through simulations and data analysis. Covers historical development and current trends in the field.

301 Scientific Information and Data Visualization (3:3:0) Prerequisites: CDS 101, CS 211, MATH 125, MATH 113. The techniques and software used to visualize scientific simulations, complex information, and data visualization for knowledge discovery. Includes examples and exercises to help students develop their understanding of the role visualization plays in computational science and provides a foundation for applications in their careers.

302 Scientific Data and Databases (3:3:0) Prerequisites: STAT 354, MATH 125. Data and databases used by scientists. Includes basics about database organization, queries, and distributed data systems. Student exercises will include queries of existing systems, along with basic design of simple database systems.

401 Scientific Data Mining (3:3:0) Prerequisite: CDS 302. Data mining techniques from statistics, machine learning, and visualization to scientific knowledge discovery. Students will be given a set of case studies and projects to test their understanding of this field and provide a foundation for future applications in their careers.

410/MATH 447 Modeling and Simulations I (3:3:0) Prerequisites: MATH 214 or 216, and 446. Numerical differentiation and integration, initial-value and boundary-value problems for ordinary differential equations, methods of solution of partial differential equations, iterative methods of solution of nonlinear systems, and approximation theory.

411 Modeling and Simulation I (3:3:0) Prerequisites: CDS 410 or Math 447. This course covers the application of modeling and simulation methods to various scientific applications, including fluid dynamics, solid mechanics, materials science, molecular mechanics, and astrophysics. It will also provide an introduction to modeling and simulation software, as well as high-performance computing.

421 Introduction to Computational Fluid Dynamics (3:3:0) Prerequisites: MATH 446, proficiency in at least one computer programming language and computer operating system, or permission of instructor. The course will cover
the governing equations of fluid dynamics; numerical discretization of the governing equations and popular techniques for solving flow problems; applications of CFD to some classic fluid dynamics problems; and setting up the CFD simulation using a CFD software package. At the end of the course, students will understand the process of developing a geometrical model of the flow, applying appropriate boundary conditions, specifying solution parameters, and visualizing the results. The students are expected to complete several computer projects, including writing their own CFD computer program to analyze simple fluid flow problems, as well as setting up the CFD simulation using a CFD software package.

461 N-Body Simulation Methods (3:3:0) Prerequisites: PHYS 510 and MATH 446. Covers particle methods to solve variety of physical systems. Emphasizes study and development of numerical results, and visualization of these results in complex physical systems. Applications and projects include stellar and galaxy dynamics, smoothed particle hydrodynamics, plasma simulations, and semiconductor device theory algorithms on parallel and vectorized systems.

486 Topics in Computational and Data Sciences (3:3:0) Prerequisite: permission of instructor. Covers selected topics in computational and data sciences not covered in fixed-content courses.

487 Electronic Structure Computations (3:3:0) Prerequisite: PHYS 308. Covers computational aspects of materials science, such as first-principles methods of electronic structure calculations of solids, clusters, and molecules, as well as the use of empirical potentials. Examples will be drawn from metals, insulators, and semiconductors. The students will be directed to construct simple codes and guided in the use of the more sophisticated available computational packages.

Computational Sciences and Informatics (CSI) Courses

600/SYST 500 Quantitative Foundations for Computational Sciences (3:3:0) Not applicable to 48-credit course total for CSI PhD. Prerequisites: MATH 213 and 214. Accelerated review of mathematical tools for scientific applications and analysis. Topics include vectors and matrices; differential and difference equations; linear systems; Fourier, Laplace, and Z-transforms; and probability theory.

601 Computational Science Tools I (1:1:0) Not applicable to 48-credit course total for CSI PhD. Prerequisites: year of college calculus, and course in computer programming. Introduces basic tools in computational science. Covers UNIX, editors, LaTeX, HTML, and graphics. Emphasizes application and use rather than theory. Substantial portion of instruction delivered via distance-learning web interface.

602 Computational Science Tools II (1:1:0) Not applicable to 48-credit course total for CSI PhD. Prerequisites: CSI 601, and knowledge of matrix algebra. Introduces basic tools in computational science. Covers MATLAB, MAPLE, and GNUPlot. Emphasizes application and use rather than theory. Substantial portion of instruction delivered via distance-learning web interface.

603 Introduction to Scientific Programming I (1:1:0) Not applicable to the 48-credit course total for CSI PhD. Prerequisite: CSI 601, or permission of instructor. Introduces programming in C or Fortran. Emphasizes application and languages rather than theory. Features lecture-lab combination. Assignments completed via distance-learning web interface.

604 Introduction to Scientific Programming II (1:1:0) Not applicable to 48-credit course total for CSI PhD. Prerequisites: CSI 601 and 603, or permission of instructor. Introduces programming in object-oriented language such as C++. Features lecture-lab combination.

605 Software Construction Tools for Scientists (1:1:0) Not applicable to 48-credit course total for CSI PhD. Prerequisite: CSI 601, or permission of instructor. Introduces use of scientific visualization tools for data analysis. Teaches use of specific packages on rotating basis. Packages include PV-WAVE, S-Plus, SV, XMGR, and pnm tools.

607 Database Tools for Scientists (1:1:0) Not applicable to 48-credit course total for CSI PhD. Prerequisites: CSI 601 and 602, or permission of instructor. Introduces database tools. Covers relational model used in Oracle and other database packages. Includes database design concepts, table operations, triggers, sequences, and introduction to structured query language (SQL).

610 Introduction to Computational Sciences (3:3:0) Not applicable to 48-credit course total for CSI PhD. Prerequisites: CSI 601, 602, 603, 604, 605, and 700; or permission of instructor. Introduces computational architecture, and scientific software development. Includes software design, construction, and validation techniques commonly used in industry. Also introduces high-performance computing.

615 Quantum Computation (3:3:0). Prerequisites: undergraduate course in quantum physics, and undergraduate degree in physical or computer sciences, or permission of instructor. Introduces field of quantum computation. Emphasizes scientific principles involved and presentation of strengths and weaknesses of approach. Topics include basic quantum physics and quantum algorithms.

632 Global Ecology (3:3:0) Prerequisites: general chemistry, general physics, introductory statistics, and calculus. Intensive review to begin research in global change. Covers basic principles of physiological ecology; population dynamics; dynamics of ecological communities and ecosystems; biogeography; biological diversity; and dynamics of biosphere, including effects of life on atmosphere, oceans, and solid surfaces.

638 The Policy Process for Scientists (3:3:0). Prerequisite: graduate standing. Introduces relationship among government, science, scientists, and issues and processes that shape
science policy. Emphasizes examples taken from space weather and meteorology.

639 Ethics in Scientific Research (3:3:0) Reviews purpose of scientific research and principles for evaluating ethical issues. Teaches skills for survival through training in moral reasoning and responsible conduct. Discusses ethical issues and applying critical-thinking skills to design, execution, and analysis of experiments. Issues include using animals, humans in research; ethical standards in computer community; research fraud; and currently accepted guidelines for data ownership, manuscript preparation, and conduct of those in authority.

654 Data and Data Systems in the Physical Sciences (3:3:0) Prerequisite: competency in programming at CSI 601–607 level, or permission of instructor. Introduces data issues associated with modern physical sciences. Examines data access, formats, browsing, analysis, visualization, and data information systems in federated environments. Uses examples from physical sciences, including astronomy and space sciences; Earth sciences; Earth observing and other examples from physical sciences, including astronomy and information systems in federated environments. Uses examples from physical sciences, including astronomy and space sciences; Earth sciences; Earth observing and other fields of physics; and model output data and associated special issues. Introduces mathematical techniques particularly important for large databases.

655/PHYS 575 Introduction to Physics and Chemistry of the Atmosphere (3:3:0) Prerequisites: PHYS 305 and 262. Introduces basic physical and chemical processes that operate in Earth’s atmosphere. Emphasizes concepts that provide global description of current atmospheric state, and processes that relate to global change and atmospheric evolution. Covers equilibrium structure, radiative transfer models, thermodynamics of various atmospheric layers, and various processes defining these layers.

659 Dispersal Methods of Hazardous Releases (3:3:0) Prerequisite: CSI 655, or permission of instructor. Covers physics of aerosols; engineering, mechanics of building ventilation systems; and mechanical dissemination utilizing hand-held, automatic, vehicle, and truck mounted systems. Also discusses basic concepts, theories, and models of pollutant dispersal in atmosphere, and related atmospheric systems affecting dispersal of biological agents.

660/ASTR 535 Space Instrumentation and Exploration (3:3:0) Prerequisites: PHYS 262, MATH 213, or equivalent; or permission of instructor. Surveys instruments, devices, and methods for space and planetary exploration. Covers remote sensing of Earth and other solar system bodies; and planned manned and unmanned missions by the United States and other countries.

661/ASTR 530 Astrophysics (3:3:0) Prerequisites: PHYS 303, 305, 308; MATH 214. Survey of contemporary astrophysics. Topics include physical concepts, stellar spectra, Hertzsprung-Russell diagram, stellar atmospheres, stellar structure, interstellar matter, stellar evolution, high-energy phenomena. Covers the solar magnetic field, solar flares, coronal mass ejections, particle acceleration mechanisms, the solar wind, and the Earth’s magnetic field, radiation belt, geomagnetic storms, and ionospheric disturbances.

670 Economic Systems Design (3:3:0) Prerequisite: course in linear and nonlinear optimization, and course in linear algebra; or permission of instructor. Introduces analytical and engineering principles used to develop exchange systems. Covers behavioral aspects of auction systems; matching, assignment, and transportation problems; and information markets. Introduces methods for testbedding systems using experimental economics.

672/STAT 652 Statistical Inference (3:3:0) Prerequisites: STAT 544, or permission of instructor. Covers critical aspects of probability, random variables and distributions, characteristic functions, stochastic convergence, optimal estimation, maximum-likelihood estimation, asymptotic theory, Bayesian methods, likelihood-ratio tests, statistical decision theory, sequential methods.

678/STAT 658 Times Series Analysis and Forecasting (3:3:0) Prerequisites: STAT 544 or CSI 672, or permission of instructor. Modeling stationary and nonstationary processes; autoregressive, moving average and mixed model processes; hidden periodicity models; properties of models; autocovariance and autocorrelation functions, and partial autocorrelation function; spectral density functions; identification of models; estimation of model parameters, and forecasting techniques.

685 Fundamentals of Materials Science (3:3:0) Prerequisite: undergraduate degree in physics, chemistry, materials, electrical or mechanical engineering, or related sciences; or permission of instructor. Covers fundamental concepts, methods, and applications of materials science; structure of modern materials such as metallic alloys and compounds, ceramic materials, semiconductors, polymers, and nanostructured materials; materials properties including mechanical, thermal, and electric; experimental methods of materials characterization; application of computers in materials science; and elements of materials design.

687/PHYS 512 Solid State Physics and Applications (3:3:0) Prerequisite: PHYS 502 or equivalent. Covers crystal structures, binding, lattice vibrations, free electron model, metals, semiconductors and semiconductor devices, superconductivity, and magnetism.

700/MATH 685 Numerical Methods (3:3:0) Prerequisites: MATH 214 and 203, and some programming experience. Covers computational techniques for solving science, engineering problems. Develops algorithms to treat typical problems in applications, emphasizing types of data encountered in practice. Covers theoretical development as well as implementation, efficiency, and accuracy issues in using algorithms and interpreting results. When applicable, uses computer graphical techniques to enhance interpretation.

701 Foundations of Computational Science (3:3:0) Prerequisites: competency in UNIX and programming at CSI 601–604 level, and CSI 700; or permission of instructor. Covers mapping of mathematical models to computer software, including all aspects of developing scientific software such as architecture, data structures, advanced numerical algorithms, languages, documentation, optimization, validation, verification, and software reuse. Examples in bioinformatics, computational biology, computational physics, and global change demonstrate scientific advances enabled by computation. Class projects involve working in teams to develop software that implements mathematical models,
using software to address important scientific questions, and conducting computational experiments with it.

702 High-Performance Computing (3:3:0) Prerequisites: CSI 700 and 701; or permission of instructor. Hardware and software associated with high-performance scientific computing. Computer architectures, processor design, programming paradigms, parallel and vector algorithms. Emphasizes importance of software scalability in science problems.

703 Scientific and Statistical Visualization (3:3:0) Prerequisite: STAT 354 or CS 652, or permission of instructor. Covers visualization methods used to provide new insights and intuition concerning measurements of natural phenomena, and scientific and mathematical models. Presents case studies from myriad disciplines. Topics include human perception and cognition, introduction to graphics laboratory, elements of graphing data, representation of space-time and vector variables, representation of 3-D and higher dimensional data, dynamic graphical methods, and virtual reality. Work on a visualization project required. Emphasizes software tools on Silicon Graphics workstation, but other workstations and software may be used.

709 Topics in Computational Sciences and Informatics (3:3:0) Prerequisites: admission to PhD program, and permission of instructor. Covers selected topics in computational sciences and informatics not covered in fixed-content computational sciences and informatics courses. May be repeated for credit as needed.

710 Scientific Databases (3:3:0) Prerequisite: INFS 614 or equivalent, or permission of instructor. Study of database support for scientific data management. Covers requirements and properties of scientific databases, data models for statistical and scientific databases, semantic and object-oriented modeling of application domains, statistical database query languages and query optimization, advanced logic query languages, and case studies such as the human genome project and Earth-orbiting satellites.

711/CHEM 633 Chemical Thermodynamics and Kinetics (3:3:0) Prerequisites: CHEM 331 and 332. Advanced study of thermodynamics and kinetics. Covers application of kinetics to elucidation of reaction mechanisms, and application of statistical thermodynamics to theory of elementary reaction rates.

712/CHEM 728 Introduction to Solid Surfaces (3:3:0) Prerequisite: CHEM 422 or equivalent. Introduces properties of solid surfaces. Includes gas absorption isotherms, surface-area measurement techniques, real and clean surfaces, physisorption and chemisorption, methods of gas absorption and desorption, measurement of heats of adsorption, desorption kinetics, electron spectroscopies and their surface sensitivities, instrumentation needed, and principles of vacuum technology.

713/CHEM 732 Quantum Chemistry (3:3:0) Prerequisite: CHEM 332. Illustrates fundamental concepts of quantum mechanics with applications to chemical systems, including atomic and molecular electronic structure and properties, molecular symmetry, and intermolecular forces.

714 Spectroscopy and Structure (3:3:0) Prerequisite: CHEM 332. Covers quantum mechanics of the interaction of atoms and molecules with electromagnetic radiation. Also covers modern spectroscopic methods as applied to the elucidation of molecular structure and dynamics.

715 Quantum Complexity Theory (3:3:0). Prerequisite: CSI 615 or equivalent, or permission of instructor. Discusses fundamental aspects of complexity theory and its applications from perspective of quantum physics. Explores current research in emerging field of quantum complexity theory, and discusses related issues in quantum algorithms.

716 Quantum Information Theory (3:3:0). Prerequisites: CSI 615, and CSI 783 or 784; or permission of instructor. Introduces quantum information theory and its practical applications to information processing and secure communications. Emphasizes applications involving commercial and defense systems.

717 Quantum Computer Programming (3:3:0). Prerequisite: CSI 615 or equivalent, or permission of instructor. Covers methods for programming quantum computers. Topics include quantum computing concepts, currently known algorithms for quantum computers, denotational semantics, existing languages for quantum computers, application of logic programming to quantum computers, and programming for different types of novel computer architectures.

718 Quantum Computer Realization (3:3:0). Prerequisites: CSI 615, and 784 or equivalent; or permission of instructor. Introduces physical implementation of quantum computation, and practical applications to developing scalable quantum computers. Special emphasis on various schemes for achieving practical quantum computers.

719 Topics in Computational Chemistry (3:3:0) Prerequisite: permission of instructor. Covers selected topics in computational chemistry not covered in fixed-content computational chemistry courses. May be repeated for credit as needed.

720 Fluid Mechanics (3:3:0) Prerequisites: CSI 700 and 780; or permission of instructor. Covers basic and advanced fluid mechanics and continuous hypothesis to define fluids. Introduces tensor analysis; Euclidean and Lagrangian representations of fluid flow; Laplace’s equation; continuity equation; Navier-Stokes equations; Bernoulli’s theorem and Crocco’s form of the equations; steady and unsteady flows; potential, incompressible, and compressible flows; gravity and sound waves; gas dynamics; and viscous flows.

721 Computational Fluid Dynamics I (3:3:0) Prerequisites: course in partial differential equations such as MATH 678 or equivalent; knowledge of linear algebra at level of MATH 603 or CSI 740/MATH 625; coding experience in FORTRAN or C; or permission of instructor. Covers fundamentals including spatial and temporal approximation techniques for partial differential equations, solution of large systems of equations, data structures, solvers of the Laplace full potential equation, and simple Euler solvers. Includes two major projects Laplace solver, and 2-D Euler solver on unstructured grids. Students expected to write their own codes.

722 Computational Fluid Dynamics II (3:3:0) Prerequisite: CSI 721 or permission of instructor. Covers more advanced topics in computational fluid dynamics, including high-resolution schemes for hyperbolic PDEs, advanced Euler solvers, Navier-Stokes solvers, grid generation, adaptive mesh refinement, efficient use of supercomputing hardware, and future trends. Projects include topics in grid generation and adaptive refinement. Students expected to write their own codes.
723 Fluid Mechanics II (3:3:0) Prerequisite: CSI 720 or permission of instructor. Covers gas dynamics, shock waves, method of characteristics, boundary layer flows, instabilities, and turbulence modeling. Special topics include biological, non-Newtonian, and free surface flows; aeroelasticity; and magneto-hydrodynamics.

729 Topics in Continuum Systems (3:3:0) Prerequisite: permission of instructor. Covers selected topics in the computational aspects of continuum systems not covered in fixed-content courses in dynamical systems. May be repeated for credit as needed. Possible topics are smooth-particle hydrodynamics, radiation hydrodynamics, algorithms for continuum systems, adaptive grids for continuum computations, spectral methods in computational fluid dynamics, algorithms for concurrent machines, formation of high-energy particle jets in astrophysical applications, application to Earth atmospheric problems, and flow considerations in molten materials.

739 Topics in Bioinformatics (3:3:0) Prerequisite: permission of instructor. Selected topics in bioinformatics not covered in fixed-content bioinformatics courses. May be repeated for credit as needed.

740/MATH 625 Numerical Linear Algebra (3:3:0) Prerequisites: MATH 203 and some programming experience. Covers computational methods for matrix systems; theory and development of numerical algorithms for the solution of linear systems of equations, including direct and iterative methods; analysis of sensitivity of system to computer round off; and solution of least squares problems using orthogonal matrices. Also covers computation of eigenvalues and eigenvectors, singular value decomposition, and applications.

742/MATH 687 The Mathematics of the Finite Element Method (3:3:0) Prerequisite: MATH 446 or 685, or permission of instructor. The finite element method is commonly used for developing numerical approximations to problems involving ordinary and partial differential equations. Course develops underlying mathematical foundation, examines specific types of finite elements, analyzes convergence rates and approximation properties, and uses method to solve important equations. Students develop their own codes and are expected to complete independent projects.

744 Linear and Nonlinear Modeling in the Natural Sciences (3:3:0) Prerequisite: permission of instructor. Develops tools of mathematical modeling while carrying out numerical simulations. Considers examples from across the sciences. Topics include basic issues such as models, simplification, linearity, and nonlinearity; dimensionless parameters; dimensional analysis; models involving differential equations; examples from population growth and chemical kinetics; models involving partial differential equations; diffusion, transport, nonlinearity and shocks; probabilistic modeling; perturbation methods; extrapolation; and introduction to stability.

746/MATH 772 Wavelet Theory (3:3:0) Prerequisites: knowledge of convolution and Fourier transforms of sequences; some familiarity with Hilbert space theory helpful but not required; knowledge of scientific programming language. Studies theory and computational aspects of wavelets and wavelet transform. Emphasizes computational aspects of wavelets. Defines Fast Wavelet Transform in one and two dimensions, and develops appropriate numerical algorithms, and theory of wavelet bases on the real line.

747 Nonlinear Optimization and Applications (3:3:0) Prerequisites: MATH 213 and 216, or permission of instructor. Introduction to practical aspects of nonlinear optimization. Covers applications of optimization algorithms to solving problems in science and engineering. Applications include data analysis, materials science, nanotechnology, mechanics, optical design, shape design, and trajectory optimization.

748/MATH 629 Symbolic Computation (3:3:0) Prerequisites: undergraduate degree in scientific discipline and course in abstract algebra. Provides mathematical and computational background for computational algebraic geometry and its applications. Includes algebra, geometry, algorithms, concept of Groebner bases, automatic theorem proving, and serial and parallel algorithms and their complexity. Topics are related to applications in engineering and computer science. Students expected to complete projects.

749 Topics in Computational Mathematics (3:3:0) Prerequisite: permission of instructor. Selected topics in computational mathematics not covered in fixed-content computational mathematics courses. May be repeated for credit as needed.

750 Earth Systems and Global Changes (3:3:0) Prerequisite: course in ecology, environmental geology, or atmospheric physics; or permission of instructor. Introduces global system interactions responsible for global environmental change. Discusses natural causes of past and present global changes, and how human activities affect them; and ecological and human consequences of global changes. Topics include climate and hydrological systems, global warming, deforestation, ozone depletion, ecological system dynamics, introduction to climate and global change monitoring, satellite instrumentation and calibration, and model predictions.

758 Visualization and Modeling of Complex Systems (3:3:0) Prerequisite: permission of instructor. Covers elements of modeling and analysis of Earth and space sciences data and systems. Concentrates on sample projects and student-initiated projects to use visualization and graphical analysis techniques as they apply to modeling of complex data sets and systems. Uses several different analysis and visualization packages. Spacecraft data sets from the Naval Research Laboratory (NRL) Backgrounds Data Center and other NRL data sets are available for course projects; perusal of web data sets also possible. Modeling and analysis accompanied by appropriate readings from current literature.

761/ASTR 761 N-Body Methods and Particle Simulations (3:3:0) Prerequisites: PHYS 613/CSI 780 and CSI 700, or permission of instructor. Covers particle methods to solve variety of physical systems. Emphasizes study and development of numerical results, and visualization of these results in complex physical systems. Applications and projects include stellar and galaxy dynamics, smoothed particle hydrodynamics, plasma simulations, and semiconductor device theory algorithms on parallel and vectorized systems.

763 Statistical Methods in Space Sciences (3:3:0) Prerequisite: ASTR 530 or permission of instructor. Covers statistical and data analysis methods applicable to problems in space science, remote sensing, and astrophysics. Includes parametric and nonparametric hypothesis testing, parameter
estimation, correlation analysis, time series analysis, spatial analysis, and image reconstruction. Emphasizes imperfect nature of data, experimental sets and hypothesis. Examples drawn from current space science research.

764/ASTR 764 Computational Astrophysics (3:3:0)  
**Prerequisite:** ASTR 530. Covers statistical mechanics concepts important in astrophysics. Presents unified approach to particle acceleration and interaction theory based on analytical and numerical analysis of Boltzmann and Liouville equations. Discusses computational methods relevant to particle transport problems, with emphasis on Fokker-Planck and Monte Carlo solution techniques. Applications from space sciences include studies of cosmic ray acceleration, photon comptomization, particle transport in the near-Earth environment, energy transport in stellar atmospheres, and self-gravitating system dynamics.

765/ASTR 765 High-Energy and Accretion Astrophysics (3:3:0)  
**Prerequisite:** PHYS 502, ASTR 530, and PHYS 613/CSI 780; or permission of instructor. Overview of atomic and nuclear physics. Covers nuclear reactions of use to high-energy astrophysics; radiation processes in cosmic plasmas, emphasizing quantum mechanical calculations; stellar evolution and nucleosynthesis; computational models of stellar evolution; binary stars and accretion disks; numerical models of the structure of accretion disks; compact stars, white dwarfs, neutron stars, and black holes; acceleration processes and cosmic rays; interstellar medium and propagation of cosmic rays; high-energy processes in the center of galaxies; and ground- and space-based techniques and observations.

766/ASTR 766 Relativity and Cosmology (3:3:0)  
**Prerequisites:** ASTR 530 and MATH 314; or permission of instructor. Covers special relativity, four-dimensional space-time, general relativity, non-Euclidean geometries, geodesic and field equations, test of general relativity theory, black holes, cosmic background radiation, thermodynamic considerations in cosmology, and cosmological models.

769/ASTR 769 Topics in Space Sciences (3:3:0)  
**Prerequisite:** permission of instructor. Selected topics in space sciences not covered in fixed-content space sciences courses. May be repeated for credit as needed.

771/STAT 751 Computational Statistics (3:3:0)  
**Prerequisites:** STAT 544, 554, and 652. Covers basic computationally intensive statistical methods and related methods, which would not be feasible without modern computational resources. Covers nonparametric density estimation including kernel methods, orthogonal series methods and multivariate methods, recursive methods, cross-validation, nonparametric regression, penalized smoothing splines, the jackknife and bootstrapping, computational aspects of exploratory methods including the grand tour, projection pursuit, alternating conditional expectations, and inverse regression methods.

772 Statistical Learning (3:3:0)  
**Prerequisites:** CSI 672 or equivalent, or permission of instructor. The course focuses on statistical learning theory by introducing the statistical and optimization background essential for developing new efficient statistical learning algorithms. Also discusses applications of statistical learning algorithms to the solution of important problems in many areas of science.

773/STAT 663 Statistical Graphics and Data Exploration (3:3:0)  
**Prerequisite:** 300-level course in statistics; STAT 554 strongly recommended. Exploratory data analysis provides a reliable alternative to classical statistical techniques, which are designed to be the best possible when stringent assumptions apply. Topics include graphical techniques such as scatter plots, box plots, parallel coordinate plots, and other graphical devices; re-expression and transformation of data; influence and leverage; and dimensionality reduction methods such as projection pursuit.

775/OR 719/STAT 719 Computational Models of Probabilistic Reasoning (3:3:0)  
**Prerequisites:** STAT 652 or 664, or permission of instructor. Introduces theory and methods for building computationally efficient software agents that reason, act, and learn environments characterized by noisy and uncertain information. Covers methods based on graphical probability and decision models. Students study approaches to representing knowledge about uncertain phenomena, and planning and acting under uncertainty. Topics include knowledge engineering, exact and approximate inference in graphical models, learning in graphical models, temporal reasoning, planning, and decision-making. Provides practical model building experience. Students apply what they learn to semester-long project of their own choosing.

776/IT 746 Stochastic Calculus (3:3:0)  
**Prerequisites:** STAT 652, ECE 630 or 632, or permission of instructor. Introduces modern theory of stochastic calculus. Covers stochastic integrals, martingales, counting processes, diffusion processes, and Ito-type processes in general. Considers applications of these methods to engineering, biology, and economics.

777 Principles of Knowledge Mining (3:3:0)  
**Prerequisites:** INFS 614 or equivalent, or permission of instructor. Principles and methods for synthesizing task-oriented knowledge from computer data and prior knowledge, and presenting it in human-oriented forms such as symbolic descriptions, natural language-like representations, and graphical forms. Topics include fundamental concepts of knowledge mining; methods for target data generation and optimization; statistical and symbolic approaches; knowledge representation and visualization; and new developments such as inductive databases, knowledge generation languages, and knowledge scouts.

778/IT 776 Real Analysis and Statistics (3:3:0)  
**Prerequisites:** STAT 652; ECE 620, 621, or 630; or permission of instructor. Advanced calculus and linear algebra needed for doctoral work in statistics and related fields. Covers topology, vector spaces, matrices, continuity, differentiation, sequences and series of real numbers and real-valued functions, Riemann and Riemann-Stieltjes integrals, and multidimensional calculus. Presents applications in probability and statistics, including response surface methodology.

779 Topics in Computational Statistics (3:3:0)  
**Prerequisite:** permission of instructor. Selected topics in computational statistics not covered in fixed-content computational statistics courses. May be repeated for credit as needed.

780 PHYS 613 Computational Physics and Applications (3:3:0)  
**Prerequisites:** PHYS 502; FORTRAN, C, or C++ programming; or permission of instructor. Applies numerical methods to study of variety of physical systems, with emphasis on modeling and simulation. Develops numerical algorithms and simulation codes to gain understanding of mechanisms, processes in physical systems. Includes several projects drawn from such areas as atomic and molecular
interactions, molecular dynamics, lattice dynamics, quantum systems, chaos, percolation, random walks, aggregation mechanisms of soft solids, nanomaterials, and nonlinear dynamics.

781 Plasma Science (3:3:0) Prerequisites: PHYS 513 or PHYS 722/CSI 785; PHYS 711/CSI 782/CHEM 730; or permission of instructor. Study of ionized matter, theory, and some computation with application to astrophysics, industrial plasma processing, magnetosphere, and ionosphere problems. Vlasov and fluid equations derived and applied in plasma science, including study of plasmas with and without magnetic fields.

782/PHYS 711/CHEM 730 Statistical Mechanics for Modeling and Simulation (3:3:0) Prerequisites: PHYS 502 and CSI 780, or permission of instructor. Studies microcanonical, canonical, and grand canonical ensembles and fluctuations, as well as Fermi-Dirac and Bose-Einstein statistics. Modeling of ideal, dilute, and diatomic gases, liquids, and crystals. Also covers Liouville equation and simulation in classical statistical mechanics. Introduces Brownian motion, kinetic theory, and transport processes.

783/PHYS 736/CHEM 736 Computational Quantum Mechanics (3:3:0) Prerequisites: PHYS 502 and PHYS 613/CSI 780, or permission of instructor. Studies fundamental concepts of quantum mechanics from computational point of view, review of systems with spherically symmetric potentials, many electron atom solutions to Schrödinger’s equation, electron spin in many-electron systems, atomic structure calculations, algebra of many-electron calculations, Hartree-Fock self-consistent field method, molecular structure calculations, scattering theory computations, and solid-state computations.

784/PHYS 684 Quantum Mechanics (3:3:0) Prerequisite: PHYS 502 or permission of instructor. Studies fundamental concepts of quantum mechanics, time evolution, Schrödinger and Heisenberg formalism, harmonic oscillators, propagators, Feynman path integrals, rotations and angular momentum, angular momentum eigenvalues and eigenstates, Bell’s inequality, symmetries, conservation laws, degeneracy, perturbation theory, WKB methods, and scattering theory.

785/PHYS 685 Electromagnetic Theory (3:3:0) Prerequisites: PHYS 513 and PHYS 613/CSI 780, or permission of instructor. Advanced study of electric and magnetic fields. Topics include electrostatic and magnetostatic fields, boundary-value problems in field theory, multipole, simple radiating systems, relativistic electrodynamics, and radiation by moving charges.

786 Molecular Dynamics Modeling (3:3:0) Prerequisite: PHYS 613/CSI 780 or CHEM 633/CSI 711, or permission of instructor. Introduces simulation methods in physical chemistry sciences. Covers computational approaches to modeling molecular and condensed matter systems, including interatomic and molecular potentials, molecular dynamics, time averages, ensemble distributions, numerical sampling, thermodynamic functions, response theory, transport coefficients, and dynamic structure. Includes stochastic simulations such as Brownian motion, Langevin dynamics, Monte Carlo methods and random walks, and introduction to cellular automata.

787 Computational Materials Science (3:3:0) Prerequisites: PHYS 512/CSI 687 and PHYS 736/CSI 783, or permission of instructor. Covers selected topics in computational aspects of condensed matter, such as methods of electronic structure calculations, surface science, molecular clusters, lattice dynamics, nanomaterials, semiconductors, superconductivity, quantum Hall effect, magnetism, Hubbard model, mesoscopic systems, and liquids.

788/PHYS 728 Simulation of Large-Scale Physical Systems (3:3:0) Prerequisites: PHYS 613/CSI 780 and CSI 700, or permission of instructor. Study of diverse, large-scale physical systems emphasizing modeling and simulation of these multifaceted systems. Several projects are undertaken, drawn from such areas as many-body dynamics, atmospheric structure and dynamics, high-temperature plasmas, stellar structure, hydro dynamical systems, galactic structure and interactions, and cosmology.

789/PHYS 780 Topics in Computational Physics (3:3:0) Prerequisite: permission of instructor. Selected topics in computational physics not covered in fixed-content computational physics courses. May be repeated for credit as needed.

796 Directed Reading and Research (1–6:0:0) Prerequisite: permission of instructor. Reading, research on specific topic in computational sciences and informatics under direction of faculty member. May be repeated as necessary.

798 Research Project (3:0:0) Prerequisites: 12 graduate credits, and permission of instructor. Project chosen and completed under guidance of graduate faculty member, resulting in acceptable technical report.

799 Master’s Thesis (1–6:0:0) Prerequisites: 12 graduate credits, and permission of instructor. Project chosen and completed under guidance of graduate faculty member, resulting in acceptable technical report (master’s thesis) and oral defense. Graded S/IP.

819 Quantum Information Science Topics (3:3:0). Prerequisite: permission of instructor. Selected topics in quantum information science not covered in fixed-content computational sciences courses. Course may be repeated for credit as needed.

853 Atmospheric Transport and Dispersion (3:3:0) Prerequisite: CLIM 710 or 711 or equivalent, or permission of instructor. Develops basic concepts, theories, and models describing pollutant dispersal in atmosphere. Discusses related atmospheric systems affecting transport, transformation, and removal of air pollutants, with strong emphasis on fundamental issues associated with hazard prediction. Content essential for students engaging in graduate research in atmospheric transport and dispersion modeling.

854 Computing and Communication Systems for Earth Observing (3:3:0) Prerequisite: EOS 754 or permission of instructor. In-depth study of computing and communications systems, emphasizing performance issues and capacity for sustaining modern Earth-observing systems. Covers functional breakdown of ground-receiving stations, international communications standards for space data telemetry (such as CCSDS) and their impact on data fidelity and processing, and instrumentation for ground stations and tradeoff between onboard versus ground-station processing. Also covers computer system performance appreciation and limitations; implications of data product levels and standards for processing, input/output, and storage requirements; and applications of high performance computing, storage hierarchies, and
parallel input/output concepts and systems for speeding data access and processing.

873 Computational Learning and Discovery (3:0:0) Prerequisite: CS 580 or equivalent, or permission of instructor. Presents modern ideas, theories, and methods for computational learning and discovery, along with relevant applications including medical diagnosis, Earth science data analysis, and neuronal modeling. Includes background elucidation of fundamental concepts in computational learning, addressing discovery of equations, theory of causality, and comparison with biological and cognitive models. Students make presentations on topics of their research interest, and work on projects involving state-of-the-art systems.

876/IT 876 Measure and Linear Spaces (3:3:0) Prerequisite: IT 776/CSI 778, or permission of instructor. Covers measure theory and integration, convergence theorems, and the theory of linear spaces and functional analysis, including normed linear spaces, inner product spaces, Banach and Hilbert spaces, Sobolev spaces, and reproducing kernels. Topics include wavelets, applications to stochastic processes, and nonparametric functional inference.

877/IT 877 Geometric Methods in Statistics (3:3:0) Prerequisite: STAT 751 or permission of instructor. Develops foundations of geometric methods for statistics. Topics include n-dimension Euclidean geometry; projective geometry; differential geometry, including curves, surfaces, and n-dimensional differentiable manifolds; and computational geometry, including computation of convex hulls, tessellations of two-, three-, and n-dimensional spaces, and finite element grid generation. Examples include applications to scientific visualization.

885 Atomistic Modeling of Materials (3:3:0) Prerequisite: CSI 685, 700, and 786; or permission of instructor. Advanced course focusing on utilization of atomistic modeling and computer simulation techniques to analyze structure of crystalline materials. Introduces modern methodology of large-scale atomistic simulations, and provides hands-on experience through numerous examples and homework assignments based on simulation package SOLD (Simulator of Lattice Defects). Provides background knowledge on theory of lattice defects (point defects, interfaces, dislocations) and thermal and mechanical properties of solid materials (plastic deformation, fracture).

888 Topics in Quantum Systems (3:3:0) Prerequisite: PHYS 736/CSI 783 or PHYS 732/CSI 784; or permission of instructor. Selected topics in quantum systems in physics and chemistry not covered in fixed-content courses, in quantum mechanics. May be repeated for credit as needed. Possible topics are new spectroscopic methods, density functional theory, energy transfer and fluorescence, nuclear magnetic resonance, Mossbauer spectroscopy, advanced computational considerations in atomic or molecular structure, nuclear scattering theory, quantum considerations in condensed matter problems, and quantum gravity.

890 Research Colloquium in Computational Sciences and Informatics (1:1:0) Presentations in specific research areas in computational sciences and informatics by SCS faculty and staff members, and professional visitors. May be repeated for credit, but maximum 3 credits of CS 898, 899, and 991 may be applied to PhD.

893 Colloquium in Computational Sciences and Informatics (1:1:0) Presentations in a variety of areas of computational sciences and informatics by SCS faculty and staff members, and professional visitors. May be repeated for credit, but maximum 3 credits of CS 898, 899, and 991 may be applied to PhD.

909 Advanced Topics in Computational Sciences and Informatics (3:3:0) Prerequisite: permission of instructor. Covers selected topics in computational sciences and informatics not covered in fixed-content courses. May be repeated for credit as necessary.

972/IT 972 Mathematical Statistics I (3:3:0) Prerequisite: STAT 652 or equivalent. Focuses on theory of estimation, exploring method of moments, least squares, maximum likelihood, and maximum entropy methods. Details methods of minimum variance unbiased estimation. Other topics include sufficiency and completeness of statistics, Fisher information, Cramer-Rao bounds, Bhattacharyya bounds, asymptotic consistency and distributions, statistical decision theory, minimax and Bayesian decision rules, and applications to engineering and scientific problems.

973/IT 973 Mathematical Statistics II (3:3:0) Prerequisite: CSI 972. Continuation of CSI 972. Concentrates on theory of hypothesis testing. Topics include characterizing the decision process; simple versus simple hypothesis tests; Neyman Pearson Lemma; and uniformly most powerful, unbiasedness, invariance, randomized, and sequential tests. Applies testing principles to situations in normal distribution family and other families of distributions.

976/IT 976 Statistical Inference for Stochastic Processes (3:3:0) Prerequisite: CSI 776 or permission of instructor. Covers modern theory of parameter estimation and hypothesis testing for stochastic processes, counting processes with random intensities, and solutions to stochastic differential equations driven by martingales. Considers applications to engineering, biology, and economics.

978/IT 978 Statistical Analysis of Signals (3:3:0) Prerequisite: STAT 544 and 658, or equivalent. Advanced course in analysis of discrete- and continuous-time signals using methods of stochastic differential equation and time series. Presumes familiarity with methods of harmonic analysis and times series modeling. Topics include state-space modeling and eigen-value processing, nonlinear modeling of signals, non-Gaussian stochastic process structure, detection and estimation of vector-valued signals, robust signal detection, and array processing and target tracking.

979/IT 979 Advanced Topics in Computational Statistics (3:3:0) Prerequisite: permission of instructor. Covers selected topics in computational statistics not covered in fixed-content computational statistics courses. May be repeated for credit as needed.

980 Advanced Topics in Large-Scale Physical Simulation (3:3:0) Prerequisite: permission of instructor. Covers simulation of physical systems not covered in fixed-content physical simulation courses. May be repeated for credit as needed.

991 Seminar in Scientific Computing (1:1:0) Considers selected topics in specific area of computational sciences and informatics not covered in fixed-content courses or as extension of fixed-content courses. Format for presentation is seminar with student participation. May be repeated for credit, but maximum 3 credits of CS 898, 899, and 991 may be applied to PhD.
996 Doctoral Reading and Research (1–6:0:0) Prerequisite: admission to doctoral program, and permission of instructor. May be repeated as needed.

998 Doctoral Dissertation Proposal (1–12:0:0) Prerequisite: permission of advisor. Covers development of research proposal under guidance of dissertation director and doctoral committee. Proposal forms basis for doctoral dissertation. Course may be repeated as needed, but no more than 12 credits of CSI 998 may be applied to doctoral degree.

999 Doctoral Dissertation (1–12:0:0) Prerequisite: admission to doctoral candidacy. Involves doctoral dissertation research under direction of dissertation director. May be repeated as needed, but no more than 24 credits in CSI 998 and 999 may be applied to doctoral degree.

Computational Social Science (CSS)

600 Introduction to Computational Social Science (3:3:0) Graduate-level introduction to computational concepts, principles, and modeling approaches in social sciences, emphasizing simulations and elements of complexity theory as they apply to social phenomena. Survey includes systems dynamics, cellular automata, and agent-based models.

605 Object-Oriented Modeling in Social Science (3:3:0) Prerequisite or corequisite: CSS 600, or approval by instructor and program director. Presents and applies concepts and principles from object-based modeling paradigm. Emphasizes Unified Modeling Language (UML) to render structure and operation of complex social systems and processes.

610 Computational Analysis of Social Complexity (3:3:0) Prerequisite or corequisite: CSS 600, or permission of instructor. Provides hands-on examination of agent-based models in social sciences by examining and experimenting with variety of social-simulation projects conducted in modeling environments such as Swarm, Repast, Ascape, and MASON (Multi-Agent Simulator of Networks and Neighborhoods).

620 Origins of Social Complexity (3:3:0) Prerequisite or corequisite: CSS 600, or permission of instructor. Examines when, where, and how social complexity emerged in human societies, emphasizing long-term analysis and comparative information processing in four civilizations of the ancient world: West Asia, East Asia, Andean Peru, and Mesoamerica.

625 Complexity Theory in the Social Sciences (3:3:0) Prerequisite or corequisite: CSS 600. Examines social phenomena including language, terrorism, the Internet, warfare, and wealth based on power laws and far-from equilibrium nonlinear dynamics. Emphasizes data analysis, and modeling and interpreting complexity-theoretic dynamics.

630 Comparative Computational Social Science (3:3:0) Prerequisite or corequisite: CSS 600, or permission of instructor. Applies comparative method for analyzing different types of computational models in the social sciences. Strong cross-domain and interdisciplinary emphasis akin to comparative economic systems, government, or linguistics.

635 Cognitive Foundations of Computational Social Science (3:3:0) Prerequisite or corequisite: CSS 600 and 610, or permission of instructor. Examines cognitive foundations and information processing in computational social agents, and compares to comparable human cognitive phenomena, including emotions, trust, and reciprocity. Emphasizes modeling project.

640 Human and Social Evolutionary Complexity (3:3:0) Prerequisite or corequisite: CSS 600 and 620, and permission of instructor. Examines long-term evolution of human and societal complexity from global, cross-cultural perspective, emphasizing computational aspects leading to today’s globalization. Global history from the computational social science perspective.

643 Land-Use Modeling Techniques and Applications (3:3:0) Prerequisite or corequisite: CSS 600, or permission of instructor. Survey of literature on spatially explicit empirical models of land-use change. Hands-on experience developing and running simple models. Techniques include statistical models, mathematical programming models, cellular automata, agent-based models, and integrated models.

645 Spatial Agent-Based Models of Human-Environment Interactions (3:3:0): Prerequisite or corequisite: GEOG 631 or CSS 600, or permission of instructor. CSS 600 may be taken concurrently. Discusses key challenges in spatial modeling of human-environment interactions. Reviews agent-based modeling applications in urban and rural interactions, agriculture, forestry, and other areas. Hand-on development of simple ABM models. Investigates linkages between GIS and ABM.

650 Physics Methods for Analyzing Social Complexity (3:3:0) Prerequisite or corequisite: CSS 600, and permission of instructor. Surveys complexity theoretic tools including strange attractors, Ising models, correlation functions, ergodic theory, power spectra, meanfield theory, and renormalization group. Emphasizes application to social, economic, or political systems.

655 Social Systems Dynamics (3:3:0) Prerequisite or corequisite: CSS 600. Introduces systems dynamics modeling of social systems governed by levels/rates or stocks/flows processes, with applications to global modeling, terrorism, urban dynamics, organizations, and social and international conflict.

660 Computational Social Science of Spacefaring Civilization (3:3:0) Prerequisite or corequisite: CSS 600 and 610, and permission of instructor. Focuses on goals, resources, history, and modeling issues concerning human and social dimensions of space program using CSS. Design and development of socially viable human communities in extreme environments.

692 Social Network Analysis (3:3:0) Prerequisite or corequisite: GEOG 631 or CSS 600, or permission of instructor. Examines social networks and compares to comparable human cognitive phenomena, including emotions, trust, and reciprocity. Emphasizes modeling project.

693 Topics in Computational Social Science (3:3:0) Prerequisite: permission of instructor. Selected topics in computational social science not covered in fixed-content computational social science courses. May be repeated for credit as needed.

796 Directed Reading and Research (3:3:0) Prerequisite: permission of instructor. Reading and research on specific topic in computational social science under direction of a faculty member. May be repeated as necessary.
798 Research Project (3:0:0) Prerequisites: 12 graduate credits from core requirements, and permission of instructor. Project chosen and completed under guidance of graduate faculty member, resulting in acceptable technical report.

799 Master’s Thesis (1–6:0:0) Prerequisites: 12 graduate credits from CSS core, and permission of instructor. Project chosen and completed under guidance of graduate faculty member, resulting in acceptable technical report (master’s thesis) and oral defense. Graded S/IP.

898 Research Colloquium in Computational Social Science (1:1:0) Presentations in specific research areas in computational social science by Center for Social Complexity-associated faculty and professional visitors. May be repeated for credit, but maximum 3 credits of CSS 898 and 899 may be applied toward PhD.

899 Colloquium in Computational Social Science (1:1:0) Presentations in variety of areas of computational social science by Center for Social Complexity-associated faculty and professional visitors. May be repeated for credit, but maximum 3 credits of CSS 898 and 899 may be applied toward PhD.

909 Advanced Topics in Computational Social Science (3:3:0) Prerequisite: permission of instructor. Covers selected topics in computational social science and socioinformatics not covered in fixed-content courses. May be repeated for credit as necessary.

909 Doctoral Reading and Research (1–12:0:0) Prerequisites: admission to doctoral program, and permission of instructor. Reading and research on specific topic in computational social science under direction of faculty member. May be repeated as necessary.

998 Doctoral Dissertation Proposal (1–12:0:0) Prerequisite: permission of advisor. Covers development of research proposal, which forms basis for doctoral dissertation, under guidance of dissertation director and doctoral committee. May be repeated as needed, but no more than 12 credits of CSS 998 may be applied toward satisfying doctoral degree requirements.

999 Doctoral Dissertation (1–12:0:0) Prerequisite: approval of dissertation proposal. Doctoral dissertation research under direction of dissertation director. May be repeated as needed, but no more than 24 credits in CSS 998 and 999 may be applied toward satisfying doctoral degree requirements.

Computer Science (CS)

Computer Science

101 Preview of Computer Science (2:2:0) Corequisite: CS 112. All computer science majors are required to take this course within their first year. Offers a broad overview of computer science designed to provide students with an introduction to the field of computer science and an orientation to the Computer Science Department and the computing environment at the university. Includes a project to introduce problem solving using computers.

105 Computer Ethics and Society (1:1:0) Prerequisite: 12 credits of undergraduate course work. Intensive introduction to legal, social, and ethical issues surrounding software development and computer use. Stresses professional conduct, social responsibility, and rigorous standards for software testing and reliability. Examines issues such as liability, ownership of information, and computer crime.

112 Introduction to Computer Programming (4:3:1) Prerequisite: satisfaction of prerequisites for MATH 113. This course introduces the use of computer programming as a problem-solving tool. Topics in procedural programming include expressions, control structures, simple data types, input/output, graphical interfaces, testing, debugging, and programming environments.

123 Computing: From the Abacus to the Web (3:3:0) Prerequisites: none. Students may not take this course for credit once they have successfully completed CS 211. This course, intended for nonmajors, will give students the ability to relate to existing and emerging technologies (such as e-mail, the Internet, search engines, blogs, computer games, and robotics) by educating them on the underlying computer science concepts. Historical, social, and technical issues related to each topic will be discussed.

211 Object-Oriented Programming (3:3:1) Prerequisite: CS 112. This course continues to focus on problem solving, testing, and debugging and introduces object-oriented programming. Topics include classes, inheritance, packages, collections, exceptions, and polymorphism. Examples in the course may include the use of basic data structures.

222 Computer Programming for Engineers (3:3:0) Prerequisites: CS 112. A second course in computer programming. Introduces object-oriented programming and elementary data structures. The emphasis is on problems and language features relevant to engineers. (Intended as terminal course in computer programming.)

225 Culture and Theory of Games (3:3:0) Explores the theory, history, culture, and lore of games with particular emphasis on the varieties of computer game environments.

261 Introduction to a Second Language (1:1:0) Prerequisite: grade of C or better in CS 211. Not available for credit for CS majors. Advanced programming using Java programming language. Other languages may be offered at times.

262 Introduction to Low-Level Programming (1:1:0) Prerequisites: grade of C or better in CS 211. Introduction to the language C, as well as operating system concepts, in UNIX, to prepare students for topics in systems programming.

306 Synthesis of Ethics and Law for the Computing Professional (3:3:0) Prerequisite: CS 105, junior standing (at least 60 credit hours). Corequisite: all required general education courses. Computers science majors may use this course to satisfy the general education synthesis requirement, so long as they have not previously taken CS 305 for credit. Practical course to become effective computer professional. Examines legal and ethical issues surrounding computer technology and its use, as well as the foundation building that is necessary to deal with those challenges. Applies philosophical bases for ethical decision making to modern concerns raised by computers and technology. Addresses topics covered by CS 105 in a more intensive manner and focuses on the emerging legal and ethical issues involved in e-commerce and widespread use of the Internet.
310 Data Structures (3:3:0) Prerequisite: CS 211. Corequisite: CS105. This course continues to focus on object-oriented programming with an emphasis on tools and techniques for developing moderate to large programs. Topics include use and implementation of linear and nonlinear data structures, and the design and analysis of elementary algorithms.

325 Introduction to Game Design (3:3:0) Prerequisite: CS 211. Game design, in various electronic entertainment technologies, involves a diverse set of skills and backgrounds from narrative and art to computer programming. This course surveys the technical aspects of the field, with an emphasis on programming.

330 Formal Methods and Models (3:3:0) Prerequisites: grade of C or better in CS 211 and MATH 125. Abstract concepts that underlie much advanced work in computer science, with major emphasis on formal languages, models of computation, logic, and proof strategies.

332/SWE 332 Object-Oriented Software Design and Implementation (3:3:0) Prerequisite: CS 211. In-depth study of software design and implementation using a modern, object-oriented language with support for graphical user interfaces and complex data structures. Topics covered will be specifications, design patterns, and abstraction techniques, including typing, access control, inheritance, and polymorphism. Students will learn the proper engineering use of techniques such as information hiding, classes, objects, inheritance, exception handling, event-based systems, and concurrency.

363 Comparative Programming Languages (3:3:0) Prerequisite: grade of C or better in CS 367. Key programming mechanisms described independently of particular machines or languages including control, binding, procedural abstraction, and types. Systematically surveys diverse high-level language capabilities.

365 Computer Systems Architecture (3:3:0) Prerequisite: grade of C or better in ECE 303 or 331. Computer subsystems and instruction set architectures. Single cycle, multiple-cycle, and pipeline architectures. Memory hierarchy, cache, and virtual memory input-output processing.

367 Computer Systems and Programming (3:3:0) Prerequisite: Grade of C or better in CS 262 or 222 and ECE 301 or 331. Introduces students to computer systems from the perspective of a programmer. Topics covered include data representation, assembly and machine-level representation of high-level language programs, the memory hierarchy, linking, exceptions, interrupts, processes and signals, virtual memory, and system-level I/O. This course serves as a foundation for courses on compilers, networks, operating systems, and computer architecture, where a deeper understanding of systems-level issues is required.

391 Advanced Programming Lab (1:0:1) Corequisite: grade of C or better in CS 310 and permission of instructor. Programming-intensive lab course. Students refine problem-solving and programming skills while gaining experience in teamwork. Focuses on data structures, recursion, backtracking, dynamic programming, and debugging. Central focus is applying familiar and new algorithms and data structures to novel circumstances.

421/SWE 421 Software Requirements and Design Modeling (3:3:0) Prerequisite: CS 211. An introduction to concepts, methods, and tools for the creation of large-scale software systems. Methods, tools, notations, and validation techniques to analyze, specify, prototype, and maintain software requirements. Introduction to object-oriented requirements modeling, including use of case modeling, static modeling, and dynamic modeling using the Unified Modeling Language (UML) notation. Concepts and methods for the design of large-scale software systems. Fundamental design concepts and design notations are introduced. A study of object-oriented analysis and design modeling using the UML notation. Students participate in a group project on software requirements, specification, and object-oriented software design.

425 Game Programming I (3:3:0) Prerequisite: CS 325 and 367. The course will provide an introduction to technologies and techniques used in modern computer games. Teams will explore the various facets of a complete design, using sophisticated tools. The course will involve a project in which a game is prototyped; this prototype and initial design will serve as the starting point for the project in CS 426.

426 Game Programming II (3:3:0) Prerequisite: CS 425. This project-oriented course is a continuation of CS 425 with an emphasis on the implementation of a complete game.

440 Language Processors and Programming Environments (3:3:0) Prerequisites: grade of C or better in CS 310, 330, and 367. Survey of basic programming language processors and software development tools such as assemblers, interpreters, and compilers. Topics include design and construction of language processors, formal syntactic definition methods, parsing techniques, and code-generation techniques.

450 Database Concepts (3:3:0) Prerequisite: grade of C or better in CS 310 and 330. This course covers basics to intermediate knowledge for the design, implementation, and use of relational database systems. The main topics include the Entity-Relationship (ER) and Entity-Enhanced Relationship (EER) models for database design, Relational Algebra (RA), Structured Query Language (SQL), SQL programming techniques, functional dependencies and normalization, object and object-relational databases, and security. Students will practice to design, develop, and implement a relational ORACLE database and use the database for queries, transaction processing, and report generation.

451 Computer Graphics (3:3:0) Prerequisites: grade of C or better in MATH 203, CS 310, and CS 367. Basic graphics principles and programming. Topics include scan conversion, transformation, viewing, lighting, blending, texture mapping, and some advanced graphics techniques.

455 Computer Communications and Networking (3:3:0) Prerequisites: grade of C or better in CS 310 and 367, and STAT 344. Data communications and networking protocols, with study organized to follow layers of Internet Protocol Suite (TCP/IP family of protocols). Topics include role of various media and software components, local and wide area network protocols, network performance, and emerging advanced commercial technologies.

468 Secure Programming and Systems (3:3:0) Prerequisite: grade of C or better in CS 310 and CS 367, or permission of instructor. Fundamental principles and techniques for implementing secure computer systems. Topics include security and cryptography basics, vulnerability analysis, secure software development, and distributed system security. Projects involve designing and programming basic security tools, secure programs, and distributed systems.

471 Operating Systems (3:3:0) Prerequisites: grade of C or better in CS 310 and 367. Issues in multiprogramming. Covers concurrent processes and synchronization mechanisms; processor scheduling; memory, file, I/O, and deadlock management; performance of operating systems; and projects dealing with synchronization in multiprogrammed OS and virtual memory management.

475 Concurrent and Distributed Systems (3:3:0) Prerequisite: grade of C or better in CS 310 and 367, or permission of instructor. Practical issues in designing and implementing concurrent and distributed software. Topics include concurrent programming, synchronization, multitreading, local- and wide-area network protocols, distributed computation, systems integration, and techniques for expressing coarse-grained parallelism at the application level. Projects involve network programming at application level.

480 Introduction to Artificial Intelligence (3:3:0) Prerequisites: grade of C or better in CS 310 and 330. Principles and methods for knowledge representation, reasoning, learning, problem solving, planning, heuristic search, and natural language processing and their application to building intelligent systems in a variety of domains. Uses LISP, PROLOG, or expert system programming language.

482 Computer Vision (3:3:0) Prerequisite: grade of C or better in MATH 203, STAT 344, and CS 310. Basic principles of visual perception and their implementation on computer systems. Topics include early visual processing, edge detection, segmentation, intrinsic images, image modeling, representation of visual knowledge, and image understanding. Students complete projects involving real images.

483 Analysis of Algorithms Prerequisite: grade of C or better in CS 310 and 330 and MATH 125. Analyzes computational resources for important problem types by alternative algorithms and their associated data structures, using mathematically rigorous techniques. Specific algorithms analyzed and improved.

484 Data Mining (3:3:0) Prerequisite: grade of C or better in CS 310 and STAT 344, or permission of instructor. Basic principles and methods for data analysis and knowledge discovery. Emphasizes developing basic skills for modeling and prediction, on one side, and performance evaluation, on the other. Topics include system design; data quality, preprocessing, and association; event classification; clustering; biometrics; business intelligence; and mining complex types of data.

490 Design Exhibition (3:3:0) Prerequisites: grade of C or better in CS 421, 483; two other CS 400-level courses; and senior standing. Capstone course focusing on design and successful implementation of major software project, encompassing broad spectrum of knowledge and skills, developed by team of students. Requires final exhibition to faculty-industry panel.

498 Independent Study in Computer Science (1–3:0:0) Prerequisites: 60 credits, major in computer science, and permission of instructor. Research and analysis of selected problems or topics in computer science. Topic must be arranged with instructor and approved by department chair before registering. May be repeated for maximum 6 credits if topics substantially different.

499 Special Topics in Computer Science (3:3:0) Prerequisites: 60 credits and permission of instructor; specific prerequisites vary with nature of topic. Topics of special interest to undergraduates. May be repeated for maximum 6 credits if topics substantially different.

540 Language Processors (3:3:0) Prerequisites: MATH 125; and CS 365, 310, and 330. Basic programming language processors such as assemblers, interpreters, and compilers. Topics include design and construction of language processors, formal syntactic definition methods, parsing techniques, and code generation techniques. Lab includes construction of language processors, and experience with programming environments.

555 Computer Communications and Networking (3:3:0) Prerequisites: STAT 344 or equivalent. Techniques and systems for communication of data between computational devices and layers of Internet Protocol Suite. Topics include role of various media and software components, local and wide area network protocols, network design, performance and cost considerations, and emerging advanced commercial technologies. Emphasizes TCP/IP family of protocols.

571 Operating Systems (3:3:0) Prerequisites: CS 310 and 365. Models of operating systems. Major functions including processes, memory management, I/O, interprocess communication, files, directories, shells, distributed systems, performance, and user interface.

580 Introduction to Artificial Intelligence (3:3:0) Prerequisites: CS 310 and 330. Principles and methods for knowledge representation, reasoning, learning, problem solving, planning, heuristic search, and natural language processing and their application to building intelligent systems in a variety of domains. LISP, PROLOG, or expert system programming language.

583 Analysis of Algorithms (3:3:0) Prerequisites: CS 310 and 330, and MATH 125. Topics include analyzing sequential and parallel algorithmic strategies such as greedy methods, divide and conquer strategies, dynamic programming, and approximation algorithms; and analyzing specific algorithms falling into these classes, NP-Hard and NP-Complete problems.

600 Theory of Computation (3:3:0) Prerequisites: CS 583 and discrete mathematics. Introduction to logic and proof techniques, formal languages, automata theory, and computational complexity. Specific topics include regular and context-free languages, Turing machines, NP-completeness, and undecidability.

631 Object-Oriented Design Patterns (3:3:0) Prerequisite: SWE 619 or 620, or CS 540 or 571; or graduate course in object-oriented programming or equivalent. Principles of object-oriented design through design patterns. Studies selection of appropriate object-oriented structure after system requirements or requirements specification of software system have been developed. Design patterns created in logic view of software system. Studies generalized design solutions
for generalized software design problems, and reuse of design patterns. Once developed, design patterns may be specified in any object-oriented language.

633 Computational Geometry (3:3:0) Prerequisite: CS 583. Basic principles and methods for computing in field of geometric modeling. Emphasizes data structures used to represent geometric objects, and algorithms for manipulating those data structures. Topics include range searching, polygon triangulation, convex hulls, motion-planning, visibility, and mesh generation.

635 Foundations of Parallel Computation (3:3:0) Prerequisites: CS 583, and 540 or 571; or equivalent. Covers three major parallel computing paradigms: MIMD computation, SIMD computation, and data flow computation. Emphasizes interfaces between algorithm design and implementation, architecture, and software. Examines parallel algorithms and parallel programming languages relative to architecture of particular parallel computers.

640 Advanced Compilers (3:3:0) Prerequisites: CS 540 and 583, or equivalent. Examines advanced compiler techniques such as code optimizations for sequential and parallel machines; compilers for logical, functional, or object oriented languages; and other topics in current literature.

645 Programming Language Semantics (3:0:0) Prerequisites: CS 540, language processors. This course introduces basic concepts and techniques in the foundational study of programming languages. The central theme is the view of individual programs and whole languages as mathematical objects about which precise claims may be made and proved. Particular topics include operational techniques for formal definition of language features, type systems and type safety properties, polymorphism and subtyping, and foundations of object-oriented programming.

650 Database Engineering (3:3:0) Prerequisites: CS 540, 583, and 571. Data models for network, hierarchical, object-oriented, and relational management information systems. Covers development (including internal structures) of a database system.

662 Computer Graphics Game Technologies (4:3:1) Prerequisite: CS 652. Topics include modeling, rendering, and simulation in real time. Addresses some graphics game techniques including collision detection, levels of detail, physics-based simulations, textures, maps, and shadows.

668 Computer Architecture Systems (3:3:0) Prerequisite: CS 571 or 540, or equivalent. Examines principles and practices relating computer architecture to programming execution and efficiency. Presents new approach that stresses performance and cost of architecture. Examines principles of compiler and OS implications, instructions sets, basic processors, pipelines, and memory-hierarchy. Topics may include RISC machines, cache memories, register usage, and vector machines.

671 Advanced Operating Systems (3:3:0) Prerequisite: CS 571, or permission of instructor. Advanced topics in design and implementation of microkernel-based, object-oriented, and distributed operating systems. Specific topics include support for interprocess communication, interaction between computer architecture and operating systems, distributed file systems, transactions, and distributed shared memory.

672 Computer System Performance Evaluation (3:3:0) Prerequisites: CS 571 and MATH 351, or permission of instructor. Theory and practice of analytical models of computer systems. Topics include queuing networks, single and multiple class mean-value analysis, models of centralized and client-server systems, software performance engineering, and web servers performance.

675 Distributed Systems (3:3:0) Prerequisites: CS 571 or permission of instructor. Issues in design and implementation of distributed systems and applications. Topics include distributed communication paradigms, middleware, coordination and synchronization, distributed transactions, consistency and replication, fault-tolerance and reliability, and peer-to-peer systems.

680 Natural Language Processing (3:3:0) Prerequisites: CS 540 and 580. Explores principles of designing computer programs that respond appropriately to questions, commands, and statements expressed in human language, particularly English. Role of knowledge representation and linguistic theory. Students become familiar with current literature to implement a limited natural language processor.

681 Designing Expert Systems (3:3:0) Prerequisite: CS 580. Design, construction, and evaluation of software systems that solve problems generally deemed to require human expertise. Focuses on study and use of relevant languages, environments, mathematics, and logic. Case studies of successful systems. Programming projects include development of tools or small-scale systems.

682 Computer Vision (3:3:0) Prerequisite: CS 580 and 583. Study of computational models of visual perception and their implementation in computer systems. Topics include early visual processing, edge detection, segmentation, intrinsic images, image modeling, representation of visual knowledge, and image understanding.

683 Parallel Algorithms (3:3:0) Prerequisite: CS 583; CS 635 recommended. Examines design and analysis of parallel algorithms. Material focuses on algorithms for both theoretical and practical models of parallel computation. Considers algorithm design and analysis for PRAM and existing SIMD and MIMD type architectures. Topics include sorting, graph algorithms, numerical algorithms, and computational complexity.

684 Graph Algorithms (3:3:0) Prerequisite: CS 583. Data structures and analytical techniques to study graph algorithms. Data structures include disjoint sets, heaps, and dynamic trees. Algorithms include minimum spanning trees, shortest path, maximum flow, and graph planarity.

685/ECE 651/SYST 672 Intelligent Systems for Robots (3:3:0) Prerequisite: One of CS 580, ECE 650, SYST 611 or 555, or equivalent. Reviews developments in intelligent autonomous systems. Studies applications of artificial intelligence, computer vision, and machine learning to robotics.
Topics include analysis and design of algorithms and architectures for planning, navigation, sensory data understanding, sensor fusion, spatial reasoning, motion control, knowledge acquisition, learning concepts and procedures, self-organization, and adaptation to environment.

686 Image Processing and Applications (3:3:0) Prerequisites: CS 583 and either STAT 344 or MATH 351, or equivalent. Concepts and techniques in image processing. Discusses methods for image capture, transformation, enhancement, restoration, and encoding. Students complete projects involving naturally occurring images.

687 Advanced Artificial Intelligence (3:3:0) Prerequisite: CS 580. Explores foundational issues of artificial intelligence, such as roles of knowledge and search, formalization of knowledge and inference, and symbolic versus emergent approaches to intelligence. Studies advanced programming techniques for artificial intelligence, relationship to foundational issues, and important application areas for artificial intelligence. Major programming project required.

688/IT 688 Pattern Recognition (3:3:0) Prerequisites: CS 580 or equivalent. Explores statistical pattern recognition and neural networks. Pattern recognition topics include Bayesian classification and decision theory, density (parametric and nonparametric) estimation, linear and nonlinear discriminant analysis, dimensionality reduction, feature extraction and selection, mixture models and EM, and vector quantization and clustering. Neural networks topics include feed-forward networks and back-propagation, self-organization feature maps, and radial basis functions. Course emphasizes experimental design, applications, and performance evaluation.

695 Topics in Computer Science (3:3:0) Prerequisites: completion of two core courses, and permission of instructor. Special topics in computer science not occurring in regular computer science sequence. May be repeated for credit when subject distinctly different.

697 Independent Reading and Research (1–3:0:0) Prerequisites: graduate standing; completion of at least two of core courses CS 540, 571, 580, and 583; and permission of instructor. In areas of importance but insufficient demand to justify a regular course, students may undertake a course of study under supervision of consenting faculty member. Students usually submit written statement of course content and tentative reading list as part of request for approval. Literature review, project report, or other written product usually required.

700 Quantitative Methods and Experimental Design in Computer Science (3:0:0) Prerequisites: STAT 344, at least two 600-level courses in computer science, and doctoral status. Integrated treatment to models and practices of experimental computer science. Topics include scientific methods applied to computing, workload characterization, forecasting of performance and quality metrics of systems, uses of analytic and simulation models, design of experiments, interpretation and presentation of experimental results, hypothesis testing, and statistical analyses of data. Involves one or more large-scale projects.

706 Concurrent Software Systems (3:3:0) Prerequisites: CS 571 and SWE 621 or 631, or equivalent. Topics include concurrent programming languages and constructs; and specification, design, verification, and validation of concurrent programs. Students required to solve concurrent programming problems and check solutions by using verification, testing, and debugging tools.

719/IT 809 Scaling Technologies for E-business (3:3:0) Prerequisites: at least one operating system and one networking course, and admission to IT&E doctoral program. Discusses, from quantitative point of view, characteristics of most important technologies used to support implementation of e-business sites. Includes topics such as hardware and software architectures of e-business sites, authentication, payment services, understanding customer behavior, workload characterization, scalability analysis, and performance prediction. Term paper and project required.

732/IT 822 Software Maintenance and Reuse (3:3:0) Prerequisites: CS/SWE 621 or equivalent, data structures, principles of modern programming, and discrete mathematics; or permission of instructor. Perfective maintenance, reuse of software components and patterns, evolving software systems, principles of object-oriented analysis and development. Presents issues regarding technologies supporting perfective software maintenance and reuse.

735 Concurrency (3:3:0) Prerequisite: CS 635 or 706, or equivalent. Studies techniques, tools for specifying and verifying concurrent and distributed programs. Topics may include model checking, temporal logic, process algebra, and test generation. Automated verification tools used to specify and verify concurrent programs.

750/IT 750 Theory and Applications of Data Mining (3:3:0) Prerequisites: CS 688 or permission of instructor. Concepts and techniques in data mining and multidisciplinary applications. Topics include databases; data cleaning and transformation; concept description; association and correlation rules; data classification and predictive modeling; performance analysis and scalability; data mining in advanced database systems, including text, audio, and images; and emerging themes and future challenges. Term project and topical review required.

752 Interactive Graphics Software (3:3:0) Prerequisite: CS 652. Advanced graphics methods and tools. Topics include visualization, modeling, rendering, animation, simulation, virtual reality, graphics software tools, and current research topics.

753/IT 815 Parallel Computation (3:3:0) Prerequisites: CS 635 or CSI 801. Covers topics illustrating contemporary thinking on architectures, application, development environments, algorithms, operating systems, language requirements, and performance.

755 Advanced Computer Networks (3:3:0) Prerequisite: CS 555. Current and emerging issues in advanced computer networks and applications. Topics include software systems associated with packet and cell-switched networking architectures and protocols, high-performance LANs, scheduling and congestion control, mobile networking, multimedia applications, and next generation of Internet.

756 Performance Analysis of Computer Networks (3:3:0) Prerequisite: CS 656 or equivalent. Analytical and simulation techniques for modeling and analyzing computer networks. Examines elementary queuing analysis; networks of queues; routing and flow controls; and applications to local and wide area networks, Internet, and emerging networking technologies.
758/IT 758 Networked Virtual Environments (3:3:0)
Theory and practice of advanced distributed simulation via networks using highly realistic graphic environments. Networked virtual environment principles, networking technology for distributed simulation, networked multimedia concepts, virtual simulation concepts, efficiency/performance issues, and online conferencing/virtual classrooms. Term project required.

771/IT 817 Neural Networks (3:3:0) Prerequisite: CS 688, or permission of instructor. Studies adaptive and competitive principles using distributed and parallel computation. Topics include background from statistics, control, adaptive signal processing, and neurosciences. Basic models, such as those suggested by Grossberg, Hopfield, and Kohonen, discussed in terms of analytical characteristics and applications. Neural networks assessed as universal approximators. Connections to fuzzy approach established through the Radial Basis Function approach. Presents applications to perception, knowledge-based systems, and robotics.

773 Real-Time Systems Design and Development (3:3:0) Prerequisite: CS 656 or 671. Real-time systems and principles supporting design and implementation. Emphasizes fundamental results from real-time scheduling theory, and relevance to computer system design. Topics include system design issues for real-time applications involving communication networks, operating systems, databases, and multimedia.

774/IT 835 Computational Vision (3:3:0) Prerequisites: CS 68 and 686; or permission of instructor. Studies recent advances in development of machine vision algorithms and knowledge-based vision systems. Topics include scalespace; Gabor and wavelet processing; distributed and hierarchical processing using neural networks; motion analysis; active, functional, and selective perception; object and target recognition; expert systems; data fusion; and machine learning. Emphasizes system integration in terms of perception, control, action, and adaptation. Presents applications to robotics, intelligent highways, inspection, forensic, and data compression.

775/IT 844 Advanced Pattern Recognition (3:3:0) Prerequisite: CS 68 or permission of instructor. Covers statistical pattern recognition, neural network, and statistical learning theory approaches. Topics include decision theory and Bayes' theorem, density (parametric and nonparametric) estimation, linear and nonlinear discriminant analysis, SVM and kernel methods, SRM and model selection, performance evaluation, mixture of experts (AdaBoost), dimensionality reduction, feature selection and extraction, and clustering. Emphasizes experimental design, applications, and performance evaluation.

776/IT 852 Graphical Real-Time Simulation (3:3:0) Prerequisite: CS 652 or IT 875. Current research in advanced computer graphics, and applications in realistic real-time simulations. Topics include physically based modeling, real-time simulation, distributed interactive simulation (DIS), network virtual environments (NVE), and virtual reality (VR).

777 Human-Computer Intelligent Interaction (3:3:0) Prerequisites: CS 580, and 652 or 682; or permission of instructor. Current and emerging issues in human-computer intelligent interaction, and human-centered systems and their applications. Topics include video processing, visualization, virtual environments, adaptation and tutoring, image and scene modeling, analysis and synthesis, face and gesture recognition, and speech and natural language processing. Term project and topical review required.

778/IT 778 Biometrics (3:3:0) Prerequisites: CS 688 or permission of instructor. Basic principles and methods for automatic authentication of individuals. Technologies include face, fingerprint and iris recognition, and speaker verification. Additional topics cover multimodal biometrics, system design, performance evaluation, and privacy issues. Term project required.

780/INFS 780 Data Mining in Multimedia Databases (3:3:0) Prerequisite: INFS 755 or CS 750 or permission of instructor. This course covers advanced algorithms for data management, learning, and mining large multimedia databases. Issues related to handling such data including feature selection, high dimensional indexing, interactive search and information retrieval, pattern discovery, and scalability to large datasets are discussed. Mining techniques and data types to be covered include texts/web, images, videos, DNA, temporal, spatial, spatiotemporal databases, graph mining, stream mining, and data visualization.

782 Machine Learning (3:3:0) Prerequisite: CS 681, 687, or 688; or permission of instructor. Surveys machine learning concerning development of intelligent adaptive systems that are able to improve through learning from input data or from their own problem-solving experience. Topics provide broad coverage of developments in machine learning, including basic learning strategies and multistrategy learning.

785 Knowledge Acquisition and Problem Solving (3:3:0) Prerequisite: CS 680, 681, or 687; or permission of instructor. Principles and major methods of basic stages of knowledge acquisition such as systematic elicitation of expert knowledge, knowledge base refinement, and knowledge base optimization in the context of general problem-solving methods. Includes case studies of successful knowledge acquisition and problem-solving systems, and projects involving development or application of knowledge acquisition tools for knowledge-based systems.

795 Advanced Topics in CS (3:3:0) Prerequisite: admission into computer science PhD program. Advanced topics not occurring in regular sequence. May be repeated for credit when subject differs. Satisfies MS breadth requirement only if explicitly stated in syllabus in given section. Only one such course should be used for breadth requirements.

798 Project Seminar (3:3:0) Prerequisite: 18 credits applicable toward MS in computer science. Master’s degree candidates undertake a project using knowledge gained in MS program. Topics chosen in consultation with advisor. Meets project or thesis requirement for MS in computer science.

799 Thesis (3–6:0:0) Prerequisite: 18 credits applicable toward MS in computer science. Original or expository work evaluated by committee of three faculty members.

800 Computer Science Colloquium (1:0:0). Prerequisites: Admission to CS PhD program. This course introduces PhD students to research topics in computer science. Students are required to attend colloquia including talks by distinguished speakers, faculty candidates, and Mason faculty. This course can be taken twice for credit.
803, 804 Doctoral Tutorial in Information Technology (3:3:0) Individualized intensive study of information technology. May be repeated as needed.

811/IT 811 Research Topics in Machine Learning and Inference (3:3:0) Prerequisite: CS 580 or 681, or permission of instructor. Presents unifying principles that underlie diverse methods, paradigms, and approaches to machine learning and inference. Reviews most known learning and inference systems, discusses strengths and limitations, and suggests most appropriate areas of application. Hands-on experience by experimenting with state-of-the-art learning and inference systems, and working on projects tailored to research interests.

818/IT 818 Topics in Computer Systems (3:3:0) Discussion of current research topics in computer systems. Topics vary according to faculty interest. Possible topics include peer-to-peer computing, high-performance distributed computing, sensor and ad hoc networks, autonomic computing, virtualization, and web services and middleware.

850/IT 915 Research Topics in Parallel Computation (3:3:0) Prerequisite: CS 815. Discusses current research topics that vary according to student and faculty interest. Possible topics include formal models of concurrency, specification and design of parallel programming languages, logic programming in a parallel environment, and parallel distributed processing (neural networks).

880/IT 910 Research Topics in Artificial Intelligence (3:3:0) Prerequisite: graduate course in artificial intelligence. Special topics in artificial intelligence not occurring in regular computer science sequence. Requires substantial student participation. Subject matter may include continuation of existing 600- or 700-level courses in artificial intelligence or other topics. May be repeated for credit when subject matter differs.

884/IT 940 Advanced Topics in Computer Vision and Robotics (3:3:0) Prerequisite: CS 682 or 685, or permission of instructor depending on topics offered. Covers recent developments. Topics motivated by applications to autonomous robotic systems, mobile robot navigation, multirobot systems, human-computer-environment interaction, image/video search and analysis, content discovery, and visual surveillance. Topics include 3D structure and motion recovery, motion understanding, map building and localization, object detection and recognition, and target tracking. Projects and experimental evaluation emphasized. Course may be repeated with change of topic.

895 Research Topics in CS (3:3:0) Prerequisite: admission into computer science PhD program, or permission of instructor. Advanced topics not occurring in regular sequence. May be repeated for credit when subject differs. Only one such course should be used for breadth requirements.

998 Doctoral Dissertation Proposal (1–12:0:0) Work on research proposal that forms basis for doctoral dissertation. May be repeated as needed. No more than 24 credits of CS 998 and 999 may be applied to doctoral degree requirements.

999 Doctoral Dissertation (1–12:0:0) Formal record of commitment to doctoral dissertation research under direction of faculty member in computer science. May be repeated as needed. No more than 24 credits of CS 998 and 999 may be applied to doctoral degree requirements.

**Conflict Analysis and Resolution (CONF)**

Institute for Conflict Analysis and Resolution

Unless otherwise noted, all nondepartmental majors and extended study students require permission of instructor to register for graduate-level CONF classes.

101 Conflict and Our World (3:3:0) Brief history of field, survey of key conflict resolution themes and theories, and intervention methods. Overview includes general factors of conflict and its resolution; and nature of conflict in interpersonal, group, organizational, and international situations.

202 Dialogue and Difference (3:3:0) Communicating effectively across differences of age, gender, language, culture, and political orientation, and in different contextual situations is a skill useful for every individual. It is also integral to the success of any attempt to resolve conflict, whether individual, group/institutional, or global. Through this course, students will gain an understanding of the challenges of communicating across differences and the skills required to communicate effectively. Students will engage in preparing and analyzing communication strategies and over the term will participate in a dialogue group that explores the meaning and experience of difference on the Mason campus.

240 Social Dynamics of Terrorism, Security, and Justice (3:3:0) Terrorism is a significant factor in conflict worldwide, yet the underlying causes and conditions that give rise to terrorist activity are often misunderstood and misrepresented. Through case studies of terrorist groups around the world, this course presents students with an analytic framework to account for terrorist acts and organizations. Course lectures and materials will also explore the various social dynamics underlying the development of terrorism and responses to it. Topics include, but are not limited to, defining terrorism, recruitment into violent groups, dynamics of terrorist organizations, counterterrorism and human rights concerns, the role of religious and political ideologies in terrorism and counterterrorism, media coverage of terrorism, and effects of terrorism on social structures and processes.

300 Conflict Resolution Techniques and Practice (3:3:0) Prerequisites: CONF 101 or permission of instructor. Advanced consideration of CONF 101 topics, introduction of core notion of reflective practice, conflict resolution techniques, practice, third party roles, and ethics.

301 Research and Inquiry in Conflict Resolution (3:3:0) Prerequisites: CONF 101 or permission of instructor. Introduces social science research methods at undergraduate level. Covers basic epistemology of social research, including quantitative and qualitative methods, emphasizing participatory action research, and evaluation and assessment work.
302 Identity Conflicts and their Resolution (3:3:0) Covers deeply rooted, intractable, or protracted social conflicts around core issues of identity, including race, ethnicity, religion, and nationalism. Explores cultural, symbolic, and discursive approaches to identity conflict.

320 Interpersonal Conflict Analysis and Resolution (3:3:0) Covers conflict at micro level, introducing theories drawn from various disciplines including psychology, anthropology, and conflict resolution. Uses readings, case studies, and role plays to develop ability to analyze and intervene in interpersonal conflicts. Also prepares for further course work for interpersonal conflict concentration.

330 Community, Group, and Organizational Conflict Analysis and Resolution (3:3:0) Covers conflict at mezzo level, introducing theories of social harmony and conflict, drawing on sociology, social psychology, community psychology, organizational psychology, administration of justice, philosophy, and conflict resolution. Uses case studies, class presentations, and group projects to develop ability to analyze conflict and make recommendations for change. Also prepares for further course work for community and organizational conflict concentration.

340 Global Conflict Analysis and Resolution (3:3:0) Covers conflict at macro level, introducing theories of international and global violence and conflict, drawing from disciplines of international relations, political science, intercultural communication, and conflict resolution. Covers impact of globalization, and structural causes of conflict. Uses class discussions, case studies, and final paper to develop analytical skills to help in analysis of conflict. Prepares for further course work for international conflict concentration.

375 Special Programs Field Experience (1–6:0:0) Prerequisite: Permission of instructor and director, controlled enrollment form required. Learning experience in the application of conflict analysis and resolution (CAR) skills in special program settings. Provides supervised practice in CAR techniques, leadership, program implementation, and strategies to facilitate conflict resolution in educational institutions or community settings.

385 International Field Experience (3:3:0) Prerequisites: CONF 101, and permission of instructor. Investigates conflict theory through international field experience including participation in formally organized course offered by Center for Global Education or another form of international field experience approved by program director. May be repeated for up to 6 credits.

393 Philosophy, Conflict Theory, and Violence (3:3:0) Prerequisite: CONF 101 or permission of instructor. Examines causes, sources, and origins of group violence with particular attention to group violence of ethnicity conflict. Explores alternative proposals that explain why violence becomes primary, or at least viable, form of revolving conflict in some societies.

399 Special Topics in Conflict Analysis and Resolution (3:3:0) Examines selected topics relating to analysis or resolution of conflict. Topics vary but may include historical examination of conflict, social issues stemming from conflict, ethical issues in intervention, globalization, human rights, sources of conflict, or relationship of particular identity domains to conflict. May be repeated for up to 9 credits if topics vary.

490 Integration (3:3:0) Prerequisites: CONF 101 and degree status; or permission of instructor. Capstone course in which students reflect on what they have learned, integrating knowledge from course work and synthesizing it to cognate body of knowledge. Includes class discussion and final project that demonstrates understanding of conflict theory and reflective practice.

495 Organizations and Actors in the Conflict Field (3:3:0) This seminar acquaints students with the work of professionals in the conflict field through lectures, guest speakers, and field trips to organizations and institutions located in the region. Topics will vary and may include the role and structure of nongovernmental organizations engaged in conflict resolution, the ethical challenges facing conflict practitioners, and the translation of theoretical concepts into practical action.

499 Independent Research in Conflict Analysis and Resolution (1–3:0:0) Prerequisites: CONF 101 and permission of instructor. Readings and research conducted on individual basis in consultation with instructor. Student may not present more than 3 credits for graduation credit.

501 Introduction to Conflict Analysis and Resolution (3:3:0) Prerequisite or corequisite for all MS CONF majors. Introduces field of conflict analysis and resolution. Examines definitions of conflict and diverse views of its “resolution.” Explores thinking about human behavior, and social systems as they relate to origins of conflict and role of conflict in violent and peaceful social change. Considers appropriate responses to conflict at interpersonal, intergroup, industrial, communal, and international levels.

502 Intensive Introduction to Conflict Analysis and Resolution (3:3:0) Introduces field of conflict analysis and resolution. Examines the origins of social conflict, the practices and strategies for responding to conflict, and frameworks for constructive intervention. Considers interpersonal, community, and large-scale intergroup conflict.

595 Selected Topics (3:3:0) Prerequisite: CONF 501. Topics vary each semester and are announced each academic year.

601 Theories of Conflict and Conflict Resolution (3:3:0) Prerequisite: CONF 501 or 801. Examines major theories of conflict causation and motivation. Emphasizes need for theories to inform processes of conflict resolution. Weaves together ideas from conventional disciplines with new approaches, especially with regard to causes and methods of resolving deep-rooted conflict.

610 Philosophy and Methods of Conflict Research (3:3:0) Prerequisite: CONF 501 or 801. Introduces students to the philosophies behind social science research and the methods for conducting research in the field of conflict resolution. Focuses on the identification of research problems associated with particular conflict situations, selection of appropriate research methods, and the design of effective research projects.

611 MS Research I (3:3:0) Prerequisite: CONF 501 and 610. Builds on CONF 610. Guides students through design, execution, interpretation, analysis, presentation, and evaluation of field research in conflict and resolution.

642 Integration of Theory and Practice (3:3:0) Prerequisite or corequisite: CONF 501, 601, 610, and 713. Taken in last semester of master’s student course work. Assists in developing students’ own theories of conflict and conflict.
resolution by reviewing and integrating prior course work. Students expected to demonstrate holistic comprehension by writing major essay of publishable quality.

650 Conflict Analysis and Resolution Advanced Skills (3:3:0) Prerequisite or corequisite: CONF 501 or 502. Introduces innovative practices and provides structure to reflect on and improve ability to work within conflict settings. Considers the intersection of theory and practice, with special attention to the challenges of translation, adaptation, and transfer of skills and models.

651 Conflict Analysis and Resolution for Collaborative Leadership in Community Planning (3:3:0) Prerequisite or corequisite: CONF 501 or 502. Covers designing collaborative processes to work with diverse stakeholders to build meaningful and lasting shared agreements. Considers applications in land use, development, or other community-planning contexts.

652 Conflict Analysis and Resolution for Prevention, Reconstruction, and Stabilization Contexts (3:3:0) Prerequisite or corequisite: CONF 501 or 502. Considers conflict analysis and resolution approaches to designing, implementing, and evaluating holistic cross-sectoral, conflict-sensitive initiatives in areas of potential violence and post-conflict reconstruction and stabilization contexts.

653 World Religions, Diplomacy, and Conflict Resolution (3:3:0) Prerequisite or corequisite: CONF 501 or 502. Analyzes ways world religions play role in conflicts, war, diplomacy, peace making, and conflict resolution.

656 Integrating Complementary Approaches in Conflict Analysis and Resolution (3:3:0) Prerequisite or corequisite: CONF 501 or 502. Covers range of skills in group facilitation processes, with emphasis on conflict analysis and resolution approaches to improve group communication. Includes skill-building exercises.

657 Facilitation Skills (3:3:0) Prerequisite or corequisite: CONF 501 or 502. Covers diversity and difference in conflict analysis and resolution that integrate multiple approaches, stakeholders, and methods. Applies to social conflicts in local and international contexts.

658 Diversity and Difference in Conflict Analysis and Resolution (3:3:0) Prerequisite or corequisite: CONF 501 or 502. Covers elements of cultural diversity, understanding and awareness; and creative ways of approaching issues of diversity, identity, worldviews, and territory. Considers individuals, organizations, communities and nations.

659 Leadership in Conflict Analysis and Resolution (3:3:0) Prerequisite or corequisite: CONF 501 or 502. Covers roles and styles of leadership in interpersonal, organizational, community, group, and international conflicts. Considers cultural roles of leaders as insider-partials, negotiators, facilitators, and mediators.

660 Conflict Assessment and Program Evaluation (3:3:0) Prerequisite or corequisite: CONF 501 or 502. Covers assessment methods appropriate to conflict contexts, and related evaluation approaches and techniques for use in areas of peace building, community processes, or interpersonal conflict.

668 Applied Integration for Graduate Certificates (3:3:0) Prerequisites: CONF 501 or 502; CONF 660; and CONF 650, 651, 652 or 653. Capstone course facilitating integration of learning in the graduate certificate programs, and appropriate mentored application and experiential learning.

690 Practicum in Conflict Analysis and Resolution (6:1:5) Prerequisite: CONF 501 or 801, and 713. Two semesters, 3 credits per semester. In-depth field study of ongoing conflict situations, and design and delivery of intervention processes to manage or resolve conflicts.

694 Internship (1–6:0:1–6) Prerequisite: 21 credits, including CONF 713. Under direction of internship coordinator, students spend at least 160 hours on project involving study, resolution of conflict for each 3-credit internship. Students are expected to mesh theory and practice through observation and experience. Includes comprehensive report analyzing experiences.

695 Selected Topics (3:3:0) Topics vary; they are announced each academic year.

697 Directed Reading (1–3:0:1–3) Independent reading at master’s level on specific topic related to conflict analysis and resolution, as agreed to by student and faculty member. May be repeated up to 6 credits.

701 Theories of Social Harmony (3:3:0) Prerequisite: CONF 501 or 801; CONF 601 recommended but not required. Explores theories that define and explain social harmony and cooperation. Examines social institutions that manage and mediate conflict at all levels. Draws from major social science theorists from a variety of disciplines.

702 Peace Studies (3:3:0) Examines diverse meanings of peace, conflict, and violence, and then reviews different issues relevant to understanding peace and conflict, including the sources of war, poverty and economic disparities, and ecological degradation. Other topics to be covered are peace keeping, peace building, sustainable development, ecological preservation, nonviolence, and peace movements.

703 Conceptions of Practice (3:3:0) Prerequisites: CONF 501, 601, 713. Provides framework for integrating theory and practice in conflict resolution. Reviews types of practice and theories of intervention and change, discusses analytic process of assessment and diagnosis before intervention. Considers how research can be incorporated into practice, and how thoughtful practice generates research questions. Includes methods of program evaluation and action research. Students encouraged to identify, develop their own theories.

708 Identity and Conflict (3:3:0) Explores complex interrelations of social identity and postmodern conflicts in society. Emphasizes the role of identity in processes of conflict resolution and transformation. Critical rethinking of ethnic, national, and religious identities as both generators and outcomes of conflict are an important part of the course. Extends knowledge on structure and dynamics of identity-based conflicts and develops a framework for their resolution. Course includes lectures, simulations, and case studies.

709 War, Violence, and Conflict Resolution (3:3:0) Prerequisite: CONF 501 or 801. Considers various theories, causes, and conditions of violence, and applies them to variety of cases: family abuse, religious and ethnic violence, terrorism, revolution, and warfare. Applies insights from study of initiation, escalation, management, resolution, and prevention of violence to theories about resolving deep-rooted conflicts.
711 The Conventions of Statistical Methodology (3:3:0)
This course introduces students to study design, data collection, and measurement. Teaches students how to identify research problems, formulate research questions, and hypotheses. Exposes students to various design strategies and provides a working knowledge of indicator construction, validity threats, and sampling techniques. The course moves on to take up in detail a variety of approaches as exemplified by such topics as the experimental method, survey methodology, longitudinal/pooled data studies, and game theoretical approaches. Emphasis is placed on recognizing the relationship between theoretical and substantive questions; the methodology employed and the analytical strategies that are utilized. The course will focus on developing the conceptual tools necessary to design and assess empirical research studies, and the technical and basic computer skills necessary to conduct statistical research.

713 Reflective Practice in Interpersonal-Multiparty Conflicts (3:0:3) Prerequisite or corequisite for all CONF majors: CONF 501 or 801. Introductory skill-building course integrating conflict theory and practice using reflective practitioner model. Students learn necessary skills for third-party facilitation and mediation, including active listening, empathy, paraphrasing, reframing, and negotiation, and analytical skills of problem solving and creation of transformational processes. Cases for practice focus on interpersonal and intergroup conflict.

714 Reflective Practice in Organizational or Community Conflict (3:0:3) Prerequisites: CONF 501 or 801 and 713. Moves from conflicts that are simply described to those with multilevel components, such as community and organizational conflicts. Expands skills acquired in CONF 713 by adding recording chronology, identifying roles played by various participants, observing turning points in process, and precisely stating agreed-on solution.

715 Reflective Practice in International Conflict and Civil Strife (3:0:3) Prerequisites: CONF 501, 713, and 714. Continues study of resolution processes as applied to highly complex systems, especially where one party denies legitimacy of existing political authority. Considers third-party options for intervention in revolutionary and international conflicts, building communication and trust among parties, and implementing agreements.

720 Ethnic and Cultural Factors in Conflict Resolution (3:3:0) Prerequisite: CONF 501 or 801. Examines the role culture plays in genesis, structuring, and resolution of processes of conflict within and between groups. Special attention to ethnicity and other subcultural markers of identity in complex social systems as generators and outcomes of conflict. Explores relevance of variables to success or failure of conflict resolution.

721/SOCI 523 Conflict and Race (3:3:0) Prerequisite: CONF 501 or 801. Addresses historic analyses of racial and ethnic identity conflicts and their resolution.

722 Conflict and Religion (3:3:0) Prerequisite: CONF 501 or 801. Explores role of religious ideas, practices, and organizations in conflict, war, peace making, and conflict resolution.

723 Conflict and Gender (3:3:0) Prerequisite: CONF 501 or 801. Examines constructs of gender and conflict as they relate to critical analysis of theory and practice. Reviews feminist theories for contributions to social and conflict theories. Uses narratives to explore how gender, power dynamics interact in conflict.

726 Moral and Philosophical Foundations of Conflict (3:3:0) Prerequisite: CONF 501 or 801. Explores major historical and contemporary positions on the intellectual, moral, and religious foundations for analyzing and resolving conflict. Enhances critical abilities in metacritique, dialectics, and intellectual self-appropriation.

727 Cross-Cultural Analysis of Conflict (3:3:0) Prerequisite: CONF 501 or 801. Introduces techniques of participant observation and anthropological research. Provides insights into cross-cultural fieldwork experience, an important skill to facilitate working with groups outside own “‘worldview.’” Highly recommended for students interested in understanding diverse groups and gaining insights into world views and values held by different people.

728 Human Rights Theory and Practice in Comparative Perspective (3:3:0) Prerequisite: CONF 501 or 801, or permission of instructor. Introduces major controversies and debates surrounding use of human rights theory and practice cross-culturally. After basic study of human rights philosophy, uses case studies from around the world to examine problems and potential of human rights in today’s globalized world.

729 Approaches to Violence (3:3:0) Prerequisite: CONF 501 or 801. Explores violence from variety of intellectual and political perspectives. Readings are wide-ranging and interdisciplinary, addressing levels of analysis from biological to nation-state and transnational processes.

730 Structural Sources of Conflict (3:3:0) Prerequisites: CONF 501 or 801, and 601 for MS; or 803 for PhD. Examines how structures and institutions affect behavior and give rise to conflictual relationships at all social levels, from interpersonal to the international. Explores role of conflict resolution as political process providing opportunities for nonviolent system change.

731 Conflict in Organizations (3:3:0) Prerequisite: CONF 501 or 801. Explores intersection and dynamics of organizational behavior and dimensions of conflict. Involves theoretical perspectives and case examinations of conflict analysis and resolution. Practices strategies for prevention and intervention. Field research in greater metropolitan area integrates course content.

732 Conflict in Development (3:3:0) Prerequisite: CONF 501 or 801. Examines the relationship between processes of political and economic change and conflict; the relationship between democratization and conflict; the relationship between structural adjustment policies and conflict; and the challenges of postconflict reconstruction.

733 Law and Justice from a Conflict Perspective (3:3:0) Prerequisite: CONF 501 or 801. Contrasts legal processes and institutions with alternative approaches to dispute resolution. Defines and distinguishes among legal, “alternative dispute resolution,” and problem-solving analysis as methods for resolving rather than controlling conflict. Asks to what extent legal procedures are truly applicable to resolving deep-rooted conflict.

735 Global Context of Conflict (3:3:0) Prerequisite: CONF 501 or 801. Advances skills and knowledge base in critical analysis and creative problem-solving. Examines root causes of conflict in global context in terms of gender inequality,
cultural differences, unequal North and South relations, militarism, economic oppression, genocide, maldevelopment, religious and ethnic struggles, and environmental scarcity. Students develop their own conceptual tool boxes to analyze conflicts in different parts of the world.

736 Globalization and International Conflict (3:3:0)  
Prerequisite: CONF 501 or 801. Explores economic, political, social, and cultural meanings of globalization; how they affect conflict processes at international level; and when and under what conditions globalization promotes cooperation or conflict.

738 Researching Conflict in Health Systems (3:3:0)  
Capstone seminar; final course in graduate certificate program in conflict resolution for health professionals. Involves conducting research and analyzing specific conflict situation in depth. Builds on theory, research, and practice learned in previous courses for this certificate.

739 Collective Action, Social Movements, and Globalization (3:3:0)  
Prerequisite: CONF 501 or 801. Explores how people translate underlying grievances into collective action. Examines how groups organize, frame issues and develop strategies and tactics to pursue agendas, and how processes of globalization have influenced social movement dynamics.

740 Conflict Roles, Resources, and Ethics (3:3:0)  
Prerequisites: CONF 501 or 801, 713. Analyzes and critiques nature and roles in conflicts. Uses theoretical perspectives, case histories to understand how settings affect roles. Includes ethical assessment of interventions in variety of conflict settings.

741 Negotiations (3:3:0)  
Prerequisite: CONF 501 or 801. Uses negotiating experiences to construct framework for thinking about and analyzing negotiation processes. Frame-work then used to organize review of research literature on rhythms and patterns of negotiation, and to analyze actual cases. Interweaves exercises, class projects with state-of-the-art concepts and findings.

743 Dynamics of Conflict Termination (3:3:0)  
Prerequisite: CONF 501 or 801. Investigates a number of themes relating to war termination with an emphasis on contemporary civil war. Examines how the nature of civil war, political and historical attention on a number of contemporary cases, raises questions relating to settlement, and series of themes relating to peace implementation and peace building.

745 Leadership Roles in Conflict and Conflict Resolution (3:3:0)  
Prerequisite: CONF 501 or 801. Leadership responses to conflict are affected by several variables, including race, ethnicity, and gender. Explores roles of leadership decision-making styles as agents of conflict across range of conflict scenarios at interpersonal, community, organizational, and international levels.

746 Peace Building (3:3:0)  
Prerequisite: CONF 501 or 801. Building on initiatives of United Nations and other multilateral organizations, explores dynamics of post-conflict peace building. Prepares students of conflict resolution to play innovative roles in reconstruction of civil societies.

747 Reconciliation (3:3:0)  
Prerequisite: CONF 501 or 801. Explores processes of acknowledgment, reconciliation, forgiveness, and restitution. Reviews literature, case studies, and other research to assess applicability and impact of these efforts.

748 Comparative Peace Processes (3:3:0)  
Prerequisites: CONF 501 or 801, and 601 or 803. Compares case studies drawn from actual peace processes, both successful and unsuccessful, to illuminate principles and complexities.

749 World Religions, Violence, and Conflict Resolution (3:3:0)  
Prerequisite: CONF 501 or 801. Examines how world religions play a role in conflict and conflict resolution. Investigates how values, world view, and hermeneutics influence strategies for successful conflict interventions.

750 Evaluation of Conflict Resolution Initiatives (3:3:0)  
Prerequisite: CONF 501 or 801. Examination of models and methodologies for evaluation of conflict resolution initiatives. Evaluation approaches taught will include action evaluation, program evaluation, formative evaluation, and summative evaluation. Students will be expected to complete an evaluation design for an actual conflict resolution-related initiative as the major course requirement and participate in the class evaluation project.

795 Professional Development Seminars (1–3:1–3:0)  
Prerequisite: CONF 501 or 801. These 1- and 2-credit courses are scheduled nonconventionally using weekends, concentrated presentations, and intersession periods to develop advanced professional skills. Possible topics include marketing conflict resolution services, academic course design, training design, mediation, facilitation, family practice, fundraising, writing for publication, advanced field research techniques, and grassroots applications of conflict resolution. May be repeated.

798 Thesis Proposal (1:0:0)  
Prerequisites: CONF 501 and 610. Covers development of research proposal for masters’ thesis, including framing a question, and literature review; and designing appropriate methodology. Students form master’s thesis committee and review Human Subject Review Board’s guidelines and procedures.

799 Master’s Thesis (1–6:0:1–6)  
Prerequisites: CONF 501, 713, 610. Two semesters, usually taken as 3 credits per semester. Original research or analysis under direction of thesis committee.

801 Introduction to Conflict Analysis and Resolution (3:3:0)  
Prerequisite or corequisite for all PhD CONF students. Introduces field of conflict analysis and resolution for doctoral students. Examines definitions of conflict and diverse views of resolution. Explores thinking about human behavior and social systems as they relate to origins and role of conflict in violent and peaceful social change. Considers appropriate responses to conflict at interpersonal, intergroup, industrial, communal, and international levels.

802 Theories of the Person (3:3:0)  
Prerequisites or corequisite: CONF 801. Understanding human conflict requires knowledge of human behavior, motivation, and perception. Reviews and critically analyzes several psychological theories for application to conflict analysis and resolution theory and practice.

803 Structural Theories (3:3:0)  
Prerequisites: CONF 801. Understanding social conflict and potential for conflict resolution requires that both conflict and cooperation be perceived in relation to patterns of social change. Course reviews and critiques significant theories of social change to establish a basis for creative conflict analysis and resolution.
810 Philosophy and Conflict Research (3:3:0) Prerequisite: CONF 801. Philosophy of knowledge acquisition. Assesses close link between ways we think and ways we build and test theories about the world. Explores and critiques thinking of major 20th-century thinkers from the social sciences, thus forming a critical framework for working with multiple research methodologies.

811 Advanced Quantitative Research Methods (3:3:0) Prerequisites: CONF 711, 801 and 810. Building on logic of inquiry, introduces steps in research process to prepare dissertation and implement published research. Covers wide array of quantitative research approaches in social sciences, with emphasis on conflict analysis.

812 Advanced Qualitative Research Methods (3:3:0) Prerequisite: CONF 801 and 810. Continuation of steps in research process to prepare dissertation and implement published research. Builds on CONF 811 by examining qualitative research approaches used in social sciences, with emphasis on conflict analysis.

890 Practicum in Conflict Analysis and Resolution (6:1:5) Prerequisites: CONF 801 and 713; two semesters. In-depth field study of ongoing conflict situations. Design and delivery of intervention processes to manage or resolve conflicts.

897 Directed Reading (3:3:0) Independent reading at doctoral level on a specific topic related to conflict and conflict resolution as agreed to by student and faculty member.

900 Integrating Theory, Practice, and Method in Conflict Analysis (3:3:0) Prerequisites: CONF 801 and 802, and at least 9 additional credits of required doctoral courses. Analyzes theoretical basis undergirding methods of research in conflict resolution. Explores how theory is built through reciprocal influence of research and practice. Assists students to fill in gaps in their knowledge and prepare for comprehensive examinations. Prepares students to write integrated research proposals.

998 Doctoral Dissertation Proposal (1–6:1–6:0) Prerequisite: successful completion of all course work and doctoral qualifying exams. Work on research proposal that forms basis for doctoral dissertation. May be repeated.

999 Doctoral Dissertation Research (1–12:0–12) At least 12 credits of 998 and 999 must be accumulated toward degree. Research on approved dissertation topic under direction of committee. Student’s dissertation proposal must be approved before registering for 999.

Counseling and Development (EDCD)

Graduate School of Education

500 In-Service Educational Development (1–6:1–6:0) Prerequisite: employment in professional capacity by sponsoring division or agency. Offered at request of school division or other educational agency. Content varies; may be repeated for credit.

525 Advanced Human Growth and Development (3:3:0) Covers human development throughout the life span, including emotional, physical, and cognitive development; and emphasizes personal adjustment and achievement.

597 Special Topics in Education (1–6:1–6:0) Prerequisite: admission to program in Graduate School of Education. Provides advanced study on selected topic or emerging issue in American or international education. May be repeated for credit with GSE permission.

598 Directed Reading, Research, and Individual Projects (1–6:1–6:0) Prerequisites: admission to degree program and permission of dean. Presents various subjects and projects, principally by directed study, discussion, research, and participation under supervision of graduate faculty member. May be repeated for up to 12 credits.

599 Thesis (6:6:0) Study of problem of significant interest to student using accepted research methods and under supervision of graduate faculty member.

600 Workshop in Education (1–6:1–6:0) Offers full-time workshops and weekend seminars on selected topics in education and education tour seminars. May be repeated for credit.

601 Introduction to Research in Counseling (3:3:0) Enhances knowledge of and involvement in counseling research by introducing techniques and principles to design, implement, and evaluate research projects and program development in community and school settings.

602 Foundations in Counseling (3:3:0) Emphasizes history of counseling; multifaceted role of counselors, professional organizations, and memberships; and APA style. Provides a thorough understanding of the CNDV Mission Statement, Mason’s Honor Code and Professional Dispositions. Basic skills are briefly introduced and an orientation to multiculturalism and social justice is provided.

603 Counseling Theories and Practice (3:3:0) Prerequisites: admission to CNDV program; EDCD 602 (course may be taken concurrently). Covers major theoretical approaches to counseling from a multicultural perspective and provides supervised introduction to basic skills.

604 Assessment and Appraisal in Counseling (3:3:0) Prerequisites: Admission to CNDV program, EDCD 525, and EDCD 601. Prepares students to become informed about psychological and educational tests and assessment procedures that are used and applied in a counseling context.

606 Counseling Children and Adolescents (4:4:0) Prerequisites: Admission to CNDV program, EDCD 525, EDCD 603, EDCD 608, and EDCD 660. Presents theories, techniques, and counseling issues relevant to children and adolescents. Counseling lab provides practice with an emphasis on process and culturally competent counseling strategies.

608 Group Processes and Analyses (4:3:1) Prerequisites: admission to CNDV program, EDCD 603. Presents theories appropriate to various types of groups and descriptions of group practices, methods, dynamics, and facilitative skills. Focuses on applying theory to practice. Includes lab.

609 Advanced Counseling Skills and Strategies (4:3:1) Prerequisites: Admission to CNDV program, EDCD 525, EDCD 603, EDCD 608, and EDCD 660. Covers counseling skills and process, counselor self-awareness, and strategies associated with major counseling theories. A counseling lab provides skills practice with an emphasis on process and culturally competent counseling strategies.
610 Career and Educational Counseling (3:3:0) Prerequisite: Admission to CNDV program; EDCD 525; and EDCD 604 (course may be taken concurrently). Presents theories and counseling issues relevant to career counseling in schools and community agencies.

611 Introduction to Ethical and Legal Issues in School Counseling (2:2:0) Prerequisites: admission to counseling and development program and EDCD 602. Prerequisite or corequisite: EDCD 626. Introduces principles, practices, and application of ethical and legal issues in school counseling.

616 Counseling Skills in International Schools (3:3:0) Introduces skills applicable to international school settings. Students study, discuss, and develop skills with emphasis on multicultural counseling and multiethnic student populations.

617 Group Counseling in International Schools (3:3:0) Discusses group counseling in context of international schools and multicultural counseling, describing types of groups, group counseling practices, methods, group dynamics, and facilitation skills. Attention to applying theory to practice.

618 Principles and Practices of Counseling in International Schools (3:3:0) Discusses philosophy, principles, and practices for effective international school counseling programs including leadership, advocacy, and program evaluation.

619 Multicultural Counseling in International Schools (3:3:0) Covers issues, characteristics, skills, and needs relevant to internationally diverse populations in the international school context.

620 Counseling Children and Adolescents in International Schools (3:3:0) Discusses counseling international school students K–12 from developmental and multicultural perspectives.

626 Principles and Practices of School Counseling (3:3:0) Prerequisites: admission to CNDV program, EDCD 602 (course may be taken concurrently). Introduces school counseling program development at K–12 levels. Presents philosophy, principles, and practices of effective school counseling.

628 Counseling and Social Justice (3:3:0) Prerequisites: admission to CNDV program, EDCD 603, and EDCD 626 or EDCD 654. Studies relationship between counseling and social justice, and theories, models, and strategies of social justice, social change, leadership, and advocacy in community and school settings. Emphasizes application of theories and models.

631 Ethical and Legal Issues in Counseling (3:3:0) Prerequisites: admission to counseling and development program and EDCD 605, or postgraduate counseling students by permission of program coordinator or instructor. Covers principles, practices, and application of ethics and law in counseling.

652 Introduction to Substance Abuse Counseling (3:3:0) Prerequisites or corequisites: admission to counseling and development program, EDCD 603. Introduces substance abuse counseling. Covers addiction issues, diagnosis and treatment planning, and individual and group counseling strategies with diverse populations.

654 Counseling, Ethics, and Consultation in Community Agencies (3:3:0) Prerequisites or corequisites: admission to counseling and development program, EDCD 603. Emphasizes types of services and facilities provided, needs and problems of client population served, role and function of counselor in agency setting, and personnel needs of the individual agency.

656 Diagnosis and Treatment Planning for Mental Health Professionals (3:3:0) Prerequisites: admission to CNDV program, EDCD 603 (course may be taken concurrently). Reviews diagnostic criteria associated with mental illness, emphasizes the cultural component of mental illness, and helps students develop written plans and simulate implementation for overall diagnosis and treatment of clients and their families.

658 Couples and Family Counseling (3:3:0) Prerequisites: Admission to CNDV program; EDCD 603 (course may be taken concurrently). Introduces major approaches to counseling couples and families. Uses case studies and simulations to facilitate transition from theory to practice.

660 Multicultural Counseling (3:3:0) Prerequisites: admission to CNDV program, EDCD 603. Covers counseling from a multicultural perspective. Explores counseling issues for diverse populations with a focus on ethnicity and race.

754 Practicum in Counseling and Development (3–6:3:3) Prerequisites: completion of counseling and development program except for practicum and internship; permission of advisor; overall GPA of 3.00; no grade of C in skills courses EDCD 605, 607, 608, and 610; and no more than two grades of C in any other graduate course work required by counseling and development program. Provides supervised practice in counseling setting similar to setting in which student may work. Weekly graduate class emphasizes site processing.

755 Practicum in Counseling (3:0:3) Prerequisites: completion of CNDV program course work except for EDCD 610 or 611 or electives (total credits cannot exceed 3 credits); permission of advisor; overall GPA of 3.00; no grade lower than B in skills courses EDCD 603, 606, 608, and 609; no more than two grades of C in any other graduate course work required by CNDV program. Provides supervised practice for a minimum of 200 hours (for school counseling students) and 300 hours (for community agency students) in counseling setting similar to setting in which student may work. Weekly graduate class emphasizes site processing.

790 Internship in Counseling and Development (3–6:3:3) Prerequisites: completion of counseling and development program except for internship; permission of advisor; overall GPA of 3.00; no grade of C in any skills courses EDCD 605, 607, 608, 610, and 754; no more than two grades of C in any other graduate course work required by counseling and development program. Provides supervised practice in counseling setting similar to setting in which student may work. Skills and practice build on previous practicum experiences. Weekly graduate class emphasizes site processing.

791 Internship in Counseling (3:0:3) Prerequisites: completion of counseling and development program except for electives (total credits cannot exceed 3 credits) and internship; permission of advisor; overall GPA of 3.00; no grade lower than B in skills courses EDCD 603, 606, 608, 609; no more than two grades of C in any other graduate course work required by CNDV program. Provides supervised practice for minimum of 200 hours (for school counseling students)
and 300 hours (for community agency students) in counseling setting similar to setting in which student may work. Skills and practice build on previous practicum experiences. Weekly graduate class emphasizes site processing.

797 Advanced Topics in Education (1–6:1–6:0) Prerequisite: admission to CNDV program or permission of instructor. See EDUC 797.

895 Emerging Issues in Counseling and Development (3:3:0) Prerequisite: admission to PhD program, or permission of instructor. Examines issues in counseling profession, including counseling theory and methodology, development of client groups, new roles and settings for counselors, emerging assessment procedures, new understanding of diagnosis, and impact of societal changes on counseling profession.

896 Advanced Multicultural Counseling (3:3:0) Prerequisites: master’s degree in counseling or related counseling field from accredited institution of higher education, EDCD 660 or equivalent, EDCD 895, and admission to counseling and development PhD specialization; or permission of instructor. Focuses on advanced issues in multicultural counseling, including multicultural counseling theories, skills, assessment, supervision, research, and ethics.

897 Advanced Group Counseling (3:3:0) Prerequisites: master’s degree in counseling or related counseling field from accredited institution of higher education, EDCD 608 or equivalent, EDCD 895, and admission to counseling and development PhD specialization; or permission of instructor. For doctoral students who have had experience and training in group work. Provides greater understanding and advanced skill application in group dynamics, group process, and group leadership.

898 Grant Writing and Publishing (3:3:0) Prerequisites: master’s degree in counseling or related counseling field from accredited institution of higher education, EDCD 895, and admission to counseling and development PhD specialization; or permission of instructor. Focuses on grant writing and publishing in counseling and psychology.

900 Advanced Internship in Counseling Leadership (3:3:0) Prerequisites: admission to counseling and development PhD specialization, EDCD 895, and EDCD 628 or equivalent. Provides supervised practice in counseling leadership setting or position. Emphasizes counseling leadership in practice. Biweekly class emphasizes site processing, leadership skills, and topical seminars.

990 Advanced Internship in Multicultural Counseling (3:3:0) Prerequisites: admission to counseling and development PhD specialization; and EDCD 895, 896, and 628 or equivalent. Provides supervised practice in multicultural training setting. Emphasizes intensive use of multicultural competencies in practice, supervision, and program development and evaluation in school and community agency settings. Biweekly class emphasizes site processing, leadership skills, and topical seminars.

992 Advanced Internship in Social Justice (3:3:0) Prerequisites: admission to counseling and development PhD specialization, EDCD 628 or equivalent, and EDCD 895. Provides opportunities to implement programs and strategies to affect social justice for clients in school or community settings. Biweekly class emphasizes topical seminars and supervision.

Cultural Studies (CULT)

Cultural Studies

320 Globalization and Culture (3:3:0) Examines relationship between cultures and globalization through texts and points of view. Starting from development of capitalism, looks at age of imperialism and colonialism, finishing in present. Considers how globalization affects dynamics of cultural change. Emphasizes extraordinary role of new media and technologies in defining and shaping cultural spaces in which people live.

802 Histories of Cultural Studies (3:3:0) Prerequisite: admission to program, MA feeder track, or permission of instructor. Required of all students. Historical survey of principal works and theories of cultural studies. Provides overview of contemporary situation of cultural studies, and assesses possibilities for future development.

806 Research Seminar in Cultural Studies (3:3:0) Prerequisites: admission to program and CULT 802. Introduces research methods in cultural studies. Specific topics vary.

808 Student/Faculty Colloquium in Cultural Studies (1:1:0) Prerequisite: admission to program, or permission of instructor. Forum for presentation of original and current research in cultural studies. Students register for 1 credit per semester over a three-semester period.

810 Culture and Political Economy (3:3:0) Prerequisite: admission to program, or permission of instructor. Surveys social science and humanities classics that relate cultural production and consumption to underlying political economic conditions. Includes Marx, Lukacs, Frankfurt School, semiotic neo-Marxism, productivist theories of power indebted to Foucault, Baudrillard, Bourdieu, Harvey, Jameson, Mauss, Mill, Polanyi, Sahlins, A. Smith, and Weber.

812 Visual and Performance Culture (3:3:0) Prerequisite: admission to program, or permission of instructor. Examines theories, production, consumption, and reception of visual culture. Covers film, video, visual arts, music, display, ritual, performance, performativity, and theories of the aesthetic. Includes key readings from theorists such as Adorno, Artaud, Benjamin, Brecht, Bryson, Doane, Fiske, Heath, Marcuse, Merleau-Ponty, and Sartre.

814 Gender and Sexuality (3:3:0) Prerequisite: admission to program, or permission of instructor. Examines investigation of gender functions in maintaining and analyzing issues of social and cultural power. Examines conflicting notions of sexuality, and their role in cultural signification. Seeks to explicate relationship of sexuality, gender.

816 Science/Technology (3:3:0) Prerequisite: admission to program, or permission of instructor. Considers relationship of science, social construction of nature, and effects of technology on modern cultural forms. Includes readings from materials such as Nietzsche, Heidegger, Horkheimer, Feyerabend, Bahro, Haraway, and Latour.

818 Social Institutions (3:3:0) Prerequisite: admission to program, or permission of instructor. Considers theories of institutional practice and social structures, from Max Weber to Michel Foucault. Covers prisons, bureaucracies, museums, schools, political parties, and social movements.

820 After Colonialism: Race, Ethnicity, Nationalism (3:3:0) Prerequisite: admission to program, or permission
of instructor. Surveys racial, ethnic, caste, and national identities in colonial contexts; scientific racism in periphery and core sites; subsequent history of race, ethnic, national identities and conflicts; classical and contemporary texts by authors such as DuBois, Fanon, Gilroy, and Spivak; and particular place of issues of national, racial, and ethnic identities in contemporary cultural studies.

860 Special Topics in Cultural Studies (1–3:1–3:0) Prerequisite: admission to program, or permission of instructor. Specialized interdisciplinary topics in cultural theory and analysis. Content varies. May be repeated.

870 Directed Readings (3:0:0) Intensive reading course to develop comprehensive coverage for specific fields as agreed on in with advisors. May be repeated.

880 Independent Study (1–3:0:0) Reading and research on specific topic, resulting in a written project. May be repeated.

998 Doctoral Dissertation Proposal (1–6:0:0) Work on research proposal that forms basis for doctoral dissertation. Students must have completed all students courses work, fulfilled foreign language requirement, and passed comprehensive exam. Course may be repeated once for credit. Graded S/NC.

Dance (DANC)
College of Visual and Performing Arts

114 Rhythmic Analysis and Music Resources for Dance (3:3:0) Prerequisite: admission to dance major, or permission of instructor. Introduces rhythmic structure, notation, and basic forms of music. Experience with audio equipment in creating simple sound scores. Lecture, lab.

118 World Dance (3:3:0) Develops knowledge, skills, and appreciation of world dance forms through presentation of fundamental techniques, music, and culture. Area of concentration varies to include as many cultures as possible. May be repeated for total 6 credits. Fulfills non-Western requirement for CHSS and COS students, and global understanding of university general education.

119 Dance in Popular Culture: Afro-Latino Dance (3:3:0) Develops knowledge, skills, and appreciation of popular dance forms through presentation of fundamental techniques, music, and culture. Area of concentration varies to include as many idioms as possible. Meets general education fine arts requirement. May be repeated for total 6 credits.

120 Special Topics in Dance (1–3:1–3:0) Rotating topic. Introduction and exploration of topical studies in dance or related study areas; topic depends on instructor. May be repeated for total 9 credits if course content differs.

125 Beginning Modern Dance (3:3:0) Develops knowledge, skills, and appreciation of modern dance through presentation of fundamental techniques and creative movement experiences. Meets general education fine arts requirement. May be repeated for total 6 credits.

131 Beginning Jazz Technique (3:3:0) Introduces fundamentals of jazz dance technique and historical context. Emphasizes improving anatomical awareness and alignment, increasing strength and flexibility, and developing rhythmic sensitivity. Also introduces jazz improvisation and choreography. Meets general education fine arts requirement. May be repeated for 6 credits.

145 Beginning Ballet (3:3:0) Introduces elements of ballet technique and vocabulary. Stresses learning elementary positions and movements characteristic of this highly stylized art form. Meets general education fine arts requirement. May be repeated for total 6 credits.

150 Dance Improvisation (3:3:0) Prerequisite: admission to dance major, or permission of instructor. Explores movement invention and discovery. Movement explored in relation to other forms such as literature, painting, sculpture, and architecture; enhancing kinesthetic awareness; sensitivity to others; and the environment. Prerequisite for dance composition and choreography series.

161 Beginning Tap Dance (3:3:0) Elementary exploration into rhythms and steps basic to art form of tap dancing. Meets general education fine arts requirement. May be repeated for total 6 credits.

170 Orientation to Dance Production (1:1:1) Prerequisite: admission to dance major, or permission of instructor. Introduces sound, lighting, and stage management elements and terminology as related to dance performance. Intensive workshop setting emphasizes laboratory experience.

210 Dynamic Alignment (3:3:0) Prerequisite: admission to dance major or permission of instructor. Covers aspects of anatomy and kinesiology that directly apply to correct development of dance technique. Emphasizes exercise corrective and imagery to correct insufficient muscle pattern and reduce stress on the body.

225 Beginning Intermediate Modern Dance (3:3:0) Prerequisite: DANC 125 or permission of instructor. Further develops knowledge, skills, and appreciation of modern dance through continued exploration of techniques, aesthetics, and creativity. Meets general education fine arts requirement. May be repeated for total 9 credits.

231 Intermediate Jazz Technique (3:3:0) Prerequisite: DANC 131 or permission of instructor. Continued study of the concepts of jazz dance technique, and in-depth study of 20th century jazz dance forms. Emphasizes furthering anatomical awareness and alignment, developing technical clarity, and mastering rhythm and syncopation. Continues exploration of jazz improvisation and choreography. Meets general education fine arts requirement. May be repeated for 12 credits.

245 Beginning Intermediate Ballet (3:3:0) Prerequisite: DANC 145 or permission of instructor. Further development of knowledge, skills, and appreciation through technique, vocabulary, and history of ballet. Meets general education fine arts requirement. May be repeated for total 9 credits.

251 Dance Composition I (3:3:0) Prerequisite: DANC 150 or permission of instructor. Introduces basic principles for composing dance movement. Focuses on simple compositional
forms as they apply to solo performer, discussion, analysis, and evaluation of artistic choices. Students maintain video and written journals to document their artistic process.

252 Dance Composition II (3:3:0) Prerequisite: DANC 251 or permission of instructor. Explores compositional elements in dance as they apply to group forms. Offers continued experience in developing and manipulating movement phrases using a variety of compositional forms. Introduces conducting rehearsals and selecting music. Students discuss, analyze, and evaluate artistic choices in composition using appropriate dance arts vocabulary and terminology, and maintain video and written journals to document artistic process.

270 Dance Production Lab (1:1:1) Prerequisite: DANC 170 or permission of instructor. Practical experience in stage crew, sound, or lighting of dance productions through rehearsal to public performance for university dance concerts or guest artist programs. May be repeated for total 6 credits.

301 What is Dance? (3:3:0) Explores connections among literature, music, theater, and visual art within aesthetic frameworks and cultures. Examines development and ideals of Western theatrical dance, and historical and social context in which they were created. Method of instruction includes lecture, discussion, and studio experiences.

314 Music Accompaniment for Dance (3:3:0) Prerequisite: DANC 114 or permission of instructor. Lecture practicum course that gives both dance and music students practical experience in dance accompaniment, primarily through using percussion instruments. Students use knowledge of music and rhythm to accompany and enhance a dance technique class.

318 Global Perspectives: World Dance Forms (3:3:0) Prerequisite: completion of DANC 118, 119, or 120; or junior standing; or permission of instructor. Continued in-depth study of world dance form including technique, music, and culture. Texts, video, performances, music, participatory events, and guest artist presentations. Lecture, studio. Area of concentration varies to include as many cultures as possible. May be repeated for total 6 credits. Meets general education global understanding requirement.

325 Intermediate Modern Dance (1–3:1–3:0) Prerequisite: admission to dance major or permission of instructor. Explores intermediate level of modern dance technique. Emphasizes improving anatomical awareness, increasing strength and flexibility, expanding modern dance vocabulary, and developing flow and dynamic range. Meets general education fine arts requirement. May be repeated for total 24 credits.

326 Dance Performance Practicum (1:0:3) Prerequisite: audition. Practical experience in dance performance through rehearsal process of university dance concerts. May be repeated for total 8 credits.

330 Dance/Movement Therapy I (3:3:0) Prerequisites: DANC 325, 150; and PSYC 100, 211; or permission of instructor. Overview of dance/movement therapy exploring meaning of movement as communication and expression. Explores theoretical approaches, treatment goals, and interventions with wide variety of patient groups. Readings, movement explorations, and volunteer field observations.

331 Advanced Jazz Dance (3:3:0) In-depth studio study of 20th century jazz dance forms. Continues concepts and vocabulary introduced in DANC 231, and further emphasizes alignment, technical clarity, and virtuosity. Emphasizes mastery of rhythm and syncopation. Meets general education fine arts requirement.

345 Intermediate Ballet (1–3:1–3:0) Prerequisite: admission to dance major, or permission of instructor. Provides continued ballet training for intermediate-level dancer. Emphasizes increasing technical proficiency, improving anatomical awareness, and developing deeper understanding of skills and principles of ballet technique and how they provide foundation to teach and perform. Meets general education fine arts requirement. May be repeated for 24 credits.

350 Advanced Dance Improvisation (1–3:1–3:0) Prerequisite: DANC 325 and 150, or permission of instructor. Lecture and performance course for continued study of dance improvisation, including contact improvisation. Students create and direct advanced problems in dance improvisation. May be repeated for total 6 credits.

360 Choreography (3:3:0) Prerequisite: DANC 252, or permission of instructor. Continued choreographic exploration and research, culminating in bringing completed works to production.

362 Directed Choreography (1:0:3) Prerequisite: DANC 252 or permission of instructor. Faculty-guided, individual learning experience where students learn to choreograph a dance work by auditioning dancers, costuming, staging, lighting, selecting musical accompaniment, and composing original movement material. May be repeated for total 6 credits.

370 Dance Performance (1:0:3) Prerequisite: admission to dance major and audition; or permission of instructor. Practical experience in performance, repertory, and choreography through rehearsal and public performance of university dance concerts or guest artist programs. May be repeated for total 12 credits.

371 Residency Workshop (1:0:3) Prerequisite: admission to dance major and audition. Rehearsal and performance of new or restaged dance by guest choreographer in intensive rehearsal setting. May be repeated for total 6 credits.

372 Advanced Dance Production (1:1:1) Prerequisite: DANC 170 and 270, or permission of instructor. Methodology and practice of stage make-up, costume design, and lighting as dictated by specific needs of dance performance. Taught in series of workshop settings.

390 Dance History: Pre-Twentieth Century (3:3:0) Examines dance as it developed as Western theatrical form from its beginnings in social and folk dance through evolution into ballet. Emphasizes romantic and classical ballet. Also studies American dance forms as they evolved in spectaculars, burlesques, minstrelsy, and social dance. All forms of dance placed in social, political, cultural, aesthetic, and historical contexts. Meets general education fine arts requirement.

391 Dance History: Twentieth Century (3:3:0) Examines revolutions in transformation of 20th century Western dance into forms and institutions that radically departed from predecessors. Development of contemporary dance carried.
Dance (DANC) 455

with it reflections of the influence of technology and media as well as concept of global culture. Renewed interest in traditional dance forms acknowledges power of dance to serve as carrier of cultural and societal values. Dance forms placed in social, political, cultural, aesthetic, and historical contexts. Meets general education fine arts requirement.

399 Independent Study (1–3:0:0) Prerequisite: permission of instructor. Individual research or creative project supervised by faculty member. May be repeated for total 6 credits.

418 Global Dance Intensive (1–3:1–3:0) Intensive investigation of selected dance idioms within cultural and artistic contexts. Course work supplemented by participation in and observation of ambient culture. Analyzes similarities, differences, and common antecedents between selected culture and North American dance idioms. May be repeated for total 6 credits.

420 Special Topics in Dance (1–3:1–3:0) Prerequisite: 9 credits of dance courses, or permission of instructor. In-depth presentation and exploration of topical studies in dance or related study areas. Topic depends on instructor. May be repeated for total 9 credits.

425 Advanced Modern Dance (1–3:1–3:0) Prerequisite: admission to dance major, or permission of instructor. Advanced-level exploration of modern dance technique. Emphasizes refining alignment, developing ability to self-correct, and replicating sophisticated movement sequences. Preparation to enter professional field of dance. Meets general education fine arts requirement. May be repeated for 24 credits.

430 Dance/Movement Therapy II (3:3:0) Prerequisites: DANC 210, 350; and PSYC 324, 325; or permission of instructor. Applies dance/movement therapy as psychotherapeutic process to further emotional, cognitive, social, and physical integration.

445 Advanced Ballet (1–3:1–3:0) Prerequisite: admission to dance major, or permission of instructor. Provides pre-professional ballet training for advanced-level dancer. Emphasizes attainment of high-quality technical and performance skills, application of anatomical principles, and mastery of sophisticated classical movement sequences. Meets general education fine arts requirement. May be repeated for 24 credits.

453 Teaching Creative Movement (3:3:0) Prerequisites: DANC 325 and 150, or permission of instructor. Provides theory, methodology, and practicum experience in preparation for teaching creative movement to children K–12, with some application to special populations.

454 Methods of Teaching Dance (3:3:0) Prerequisite: 6 credits of intermediate or advanced dance technique, and DANC 210. Examines dance pedagogy, focusing on principles needed for teaching sound technique. Students learn skills, methods, and instructional procedures for classroom. Emphasizes curriculum development, proper course sequencing, implementation of teaching strategies, and classroom management techniques. Students study teaching methods appropriate for K–12, gifted and talented, and special-needs students. Intensive practice in implementing these skills includes lab, field-teaching experiences.

455 Teaching Practicum (1–6:3:0) Prerequisites: DANC 454, and permission of instructor. Full semester of supervised teaching experience in approved school or studio dance program. Credits based on number of teaching contact hours per week. May be repeated for total 12 credits.

480 Introduction to Laban Movement Analysis (3:3:0) Prerequisite: DANC 210, or permission of instructor. Introduces components of laban movement analysis: body, shape, effort, and space. Includes motif writing for recording and analyzing movement.

490 Senior Dance Seminar (3:3:0) Prerequisite: senior status in dance major program. Culminating seminar devoted to analyzing and synthesizing knowledge and skills gained through undergraduate course work as it applies to dance, arts education, and professional development. Students develop senior project including written and oral presentation in public forum.

501 Graduate Dance Seminar (3:3:0) Prerequisite: admission to MFA in dance program. Presentation and discussion of current issues in dance specific to education, research, and professional development.

520 Special Topics in Dance (1–3:1–3:0) Prerequisite: 9 credits of dance courses, or permission of instructor. In-depth presentation and exploration of topical studies in dance or related study areas. Topic depends on instructor. May be repeated for total 9 credits.

525 Advanced Modern Dance (1–3:1–3:0) Prerequisite: admission to MFA in dance program, or permission of instructor. Advanced training in modern technique emphasizing attainment of high technical ability and performing skills. May be repeated for total 18 credits.

545 Advanced Ballet (1–3:1–3:0) Prerequisite: admission to MFA in dance program, or permission of instructor. Advanced training in ballet technique with emphasis on high technical quality, performance skills, ballet vocabulary, and styles. May be repeated for total 18 credits.

553 Teaching Creative Movement (3:3:0) Prerequisite: graduate status, or permission of instructor. Provides theory, methodology, and practicum experience in preparation for teaching creative movement to children K–12, with some application to special populations.

560 Advanced Choreography (3:3:0) Prerequisite: admission to MFA in dance program, or permission of instructor. Intensive study and exploration of advanced choreographic forms culminating in public performance of complete dance work. May be repeated for total 12 credits.

562 Directed Choreography (1–3:3:0) Prerequisite: admission to MFA in dance program, and permission of instructor. Individual choreographic project supervised by faculty member. May be repeated for total 6 credits.

570 Advanced Dance Performance (1–3:0:3–9) Prerequisite: admission to MFA in dance program, and audition. Advanced performance through participation in university productions and professional dance companies. May be repeated for total 12 credits.

571 Residency Workshop (1:0:3) Prerequisite: admission to MFA in dance program, and audition. Rehearsal and performance of new or restaged dance by guest choreographer in intensive rehearsal setting. May be repeated for total 6 credits.
580 Laban Movement Analysis (3:3:0) Prerequisite: admission to MFA in dance program, or permission of instructor. Introduces components of laban movement analysis: body, shape, effort, and space. Includes motif writing for recording and analyzing movement.

598 Philosophy and Aesthetics of Dance (3:3:0) Prerequisites: DANC 390 and 391, or permission of instructor. Study of philosophical theories and aesthetic principles of dance as a performing art.

599 Independent Study (1–6:0:0) Prerequisite: Admission to MFA in dance program, and permission of instructor. Individual research or creative project in close consultation with instructor. May be repeated for total 6 credits.

615 Contemporary Trends (3:3:0) Prerequisite: graduate standing. Study of contemporary art and artists and their ideas and practices as they relate to the making of new work.

627 Advanced Teaching Seminar (3:3:0) Prerequisite: DANC 454, admission to MFA in dance program, or permission of instructor. Discussion of advanced problems in teaching from scientific and creative points of view.

680 Dance Management (3:3:0) Prerequisite: admission to MFA in dance program. Exploration of technical, financial, and economic aspects of dance management, including marketing, fundraising, publicity, incorporation, booking, nonprofit vs. profit-making groups, and issues relating to current practices in performing arts industry.

700 Internship (1–3:0:0) Prerequisites: admission to MFA in dance program, and permission of advisor. Study involving intensive professional experience through sponsorship by a dance company, agency, or other arts organization in management, administration, performance, choreography, or teaching. May be repeated for total 6 credits.

790 Thesis (1–6:0:0) Prerequisites: admission to MFA in dance program, permission of advisor, and approval of proposal. Original research, including written work and public performance, under direction of thesis committee. May be repeated for total 6 credits.

Early Childhood Education (Unified Transformative Early Education Model—UTEEM) (EDUT)

Graduate School of Education

411 Universality and Diversity in Child and Family Development, Ages 3–5 (3:3:0) Provides knowledge of child and family development from diverse and cultural perspectives, offering appreciation for critical role of families. Explores role of culture, various disabilities, and theories for understanding and interpreting child and family growth and development.

413 Language Development and Emergent Literacy for Diverse Learners, Ages 3–5 (3:3:0) Provides understanding of first and second languages. Explores impact of disability and second language acquisition; and covers interrelationship of speaking, listening, reading, and writing. Offers understanding of diversity of oral and written communication styles in families, communities, and cultures.

414 Creating Environments and Adapting Curriculum for Diverse Learners, Ages 3–5 (3:3:0) Provides understanding of developmentally appropriate programs and practices for culturally, linguistically, and ability diverse young children. Students explore, plan, and implement curricula and environments using individually, age-related, and culturally appropriate methods and materials. Provides understanding of the important role of play, active exploration, construction and representation of knowledge, and social interaction with peers and family.

423 Language Acquisition and Communication for Diverse Infants and Toddlers (3:3:0) Provides understanding of early language development in terms of the five major components of language. Speech, language, and communication are discussed, particularly in terms of interrelatedness with cognitive and sociocultural development. Explores importance of adult-child interaction; and impact of bilingualism, cultural diversity, cognitive ability, and language disorder.

424 Culturally, Linguistically, and Developmentally Appropriate Practices with Infants, Toddlers, and their Families (3:3:0) Provides understanding of culturally, linguistically, and developmentally appropriate programs and practices in community settings that provide services to infants and toddlers with varied abilities and their families. Students explore, plan, and implement developmentally supportive activities, and are expected to become familiar with cultural context of infants and toddlers with whom they are working. Special emphasis on providing home-based services.

511 Universality and Diversity in Child and Family Development, Ages 3–5 (3:3:0) Prerequisite: admission to UTEEM program, or permission of instructor. Provides knowledge of child and family development from diverse and cultural perspectives. Students explore role of culture and theories for understanding and interpreting child and family growth and development; learn about various disabilities; and acquire appreciation for critical role of families.

512 Assessment of Diverse Young Learners, Ages 3–5 (3:3:0) Prerequisite: admission to UTEEM program, or permission of instructor. Provides understanding of forms, functions, methods, and roles of assessment for planning and implementing effective early childhood programs for children ages 3–5 from diverse cultures and with varied learning needs. Teaches quantitative and qualitative approaches to evaluation and assessment. Students learn about technological adaptations, and gain understanding of appropriate strategies for conducting, reporting, and decision-making related to specific functions of assessment. They also learn about assessment strategies for second language learners, and adaptations for children with disabilities.

513 Language Development and Emergent Literacy for Diverse Learners, Ages 3–5 (3:3:0) Prerequisites: admission to UTEEM program, or permission of instructor. Provides understanding of first and second languages. Explores impact of disability and second language acquisition, and covers interrelationship of speaking, listening, reading, and writing. Students also gain understanding of the diversity of oral and written communication styles in families, communities, and cultures.

514 Creating Environments and Adapting Curriculum for Diverse Learners, Ages 3–5 (3:3:0) Prerequisite: admission to UTEEM program, or permission of instructor. Provides understanding of developmentally appropriate
programs and practices for culturally, linguistically, and ability diverse young children. Students explore, plan, and implement curricula and environments using individually, age-related, and culturally appropriate methods and materials. Covers important role of play, active exploration, construction and representation of knowledge, and social interaction with peers and family members.

521 Infant/Toddler Development in Family and Cultural Contexts (3:3:0) Prerequisite: admission to UTEEM program, or permission of instructor. Teaches about development of infants and toddlers in family and cultural contexts. Students explore role of family, culture, and developmental theories in providing frameworks for understanding and interpreting behavior of children from birth to age 3. Students learn about factors that place infants and toddlers at developmental risk, and other disabilities.

522 Family-Centered Assessment of Diverse Infants and Toddlers (3:3:0) Prerequisite: family-centered practice in assessing infants and toddlers with diverse cultures and abilities. Teaches assessment practices that lead to plans for supporting infant development in individually and culturally relevant ways. Offers understanding of appropriate strategies for conducting, reporting, and decision making related to specific functions of assessment, and adapting assessment practices for culturally, linguistically, and ability diverse infants and toddlers and their families.

523 Language Acquisition and Communication for Diverse Infants and Toddlers (3:3:0) Prerequisite: admission to UTEEM program, or permission of instructor. Provides understanding of early language development in terms of five major components of language. Discusses speech, language, and communication, particularly in terms of interrelatedness with cognitive and sociocultural development. Also explores importance of adult-child interaction; and impact of bilingualism, cultural diversity, cognitive ability, and language disorder.

524 Culturally, Linguistically, and Developmentally Appropriate Practices with Infants, Toddlers, and Their Families (3:3:0) Prerequisite: admission to UTEEM program, or permission of instructor. Explores culturally, linguistically, and developmentally appropriate programs and practices in community settings that provide services to infants and toddlers with varied abilities and their families. Students explore, plan, and implement developmentally supportive activities with infants and toddlers and their families, and are expected to become familiar with cultural context of infants and toddlers with whom they are working. Special emphasis on providing home-based services.

614 Integrating and Adapting Curriculum across the Content Areas for Diverse Learners, K–3 (3:3:0) Prerequisite: admission to UTEEM program, or permission of instructor. Explores developmentally appropriate programs and practices for teaching children in grades K–3. Covers strategies for planning and implementing community of learners inclusive of children with diverse abilities and needs. Integrative class links knowledge in specific content areas to broader picture of managing the classroom day, implementing integrated curriculum across content areas, and applying philosophical principles related to effective instruction of diverse young learners.

615 Developing Concepts in Early Childhood Mathematics and Science for Diverse Learners, K–3 (3:3:0) Prerequisite: admission to UTEEM program, or permission of instructor. Examines preoperational and concrete operational thought processes of conservation, seriation, observation, comparison, classification, and early number concepts. Uses concrete science and math materials, experiences to foster development of quantitative thinking in geometry, measurement, graphing, and whole number arithmetic. Covers construction of math and science lessons and hands-on experiences that address needs of variety of student populations, such as children with disabilities, gifted and talented children, and minority and culturally diverse groups.

621 Development and Assessment of Diverse Learners, K–3 (3:3:0) Prerequisite: admission to UTEEM program, or permission of instructor. Examines forms, functions, methods, and roles of assessment for planning and implementing effective early childhood programs across content areas for culturally, linguistically, and ability diverse children in kindergarten through third grade.

613 Language and Literacy Development for Diverse Learners, K–3 (3:3:0) Prerequisite: admission to UTEEM program, or permission of instructor. Develops and applies knowledge of literacy stages in conjunction with appropriate instructional materials and techniques for grades K–3. Analyzes, synthesizes, and applies knowledge of recent research to teaching practices in literacy development. Applies instructional approaches in response to the needs of diverse students in culturally and developmentally sensitive manner.

781 Frameworks for Unified, Transformative Early Care and Education (3:3:0) Prerequisite: admission to UTEEM program, or permission of instructor. Provides opportunity to analyze foundational frameworks for developing unified perspective for working with culturally, linguistically, and ability diverse young learners, birth to age 8, and their families. Students examine foundational work from separate fields of early childhood education, early childhood special education, multicultural education, and second language acquisition and bilingual education.

782 Policy Perspectives Affecting Diverse Young Learners and Their Families (3:3:0) Prerequisites: admission to UTEEM program, or permission of instructor. Advanced seminar explores historical and current trends and issues involving legislation and policy in early childhood education, bilingual education, early childhood special education, and multicultural education. Focuses on historical role of social advocacy, development of advocacy skills, and collaboration and consultation with other professionals and staff in early childhood education. Provides understanding of continuum of services and context of service delivery.

790 Internship with Diverse Learners, Ages 3–5 (3:3:0) Prerequisite: admission to UTEEM program, or permission of instructor. Enables students to participate full time in inclusive early childhood setting serving families of infants and toddlers with diverse learning needs. Links university course work to real world of working with diverse families and their infants and toddlers. Students engage in carefully planned learning sequence, including observing infants and toddlers, environments, and intervention strategies that identify family concerns, priorities, and resources.

791 Internship with Diverse Infants and Toddlers and Their Families (3:3:0) Prerequisite: admission to UTEEM program, or permission of instructor. Provides experience in working with infants and toddlers born to age 3, and their families in inclusive early childhood settings serving families of culturally, linguistically, and ability diverse children and their families. Provides experience in working with infants and toddlers born to age 3, and their families in inclusive early childhood settings serving families of culturally, linguistically, and ability diverse children and their families.
program, or permission of instructor. Enables students to participate full time in inclusive early childhood setting serving families of infants and toddlers with diverse learning needs. Links university course work to real world of working with diverse families and their infants and toddlers. Students engage in carefully planned learning sequence, including observing infants and toddlers, environments, and intervention strategies that identify family concerns, priorities, and resources.

792 Internship with Diverse Learners, K–3 (3:3:0) Prerequisite: admission to UTEEM program, or permission of instructor. Enables students to participate full time in early childhood setting serving children with diverse learning needs. Links university course work to real world of teaching. Students engage in carefully planned learning sequence, beginning with targeted observations and culminating with responsibility for entire planning process for three- to four-week period.

793 Specialization Internship with Diverse Learners and Their Families (6:6:0) Prerequisite: passing scores on Praxis I and II, and admission to UTEEM program; or permission of instructor. Enables students to participate full time in education setting serving diverse children and their families, becoming involved in range of activities to ensure experience and understanding of the complexity, uniqueness, and significance of the work done.

804 Families of Diverse Young Learners – Interdisciplinary and Cross-cultural Research, Policy, and Practice (3:3:0) Prerequisites: admission to doctoral program or post-master’s status and permission of instructor. Explores the relationship between families and professionals in providing appropriate early care and education for diverse young children. Course includes in-depth study, analysis, and discussion of original research as well as syntheses of findings.

805 Personnel Preparation and Professional Development in Early Education of Diverse Learners (3:3:0) Prerequisites: admission to doctoral program or post-master’s status and permission of instructor. Explores research and current recommended practices related to professional development and teacher education in early care and education of diverse learners. Provides opportunity for practical application with pre-service or in-service early educators.

806 Early Childhood Cognition, Language, and Literacy for Diverse Young Learners (3:3:0) Prerequisites: admission to doctoral program or post-master’s status and permission of instructor. Develops an understanding of research and practice related to cognition, language, and literacy in a sociocultural context in the early childhood education of diverse learners, including special education and multicultural/multilingual education.

Earth Observing Systems (EOS) Geography and Geoinformation Sciences

121 Dynamic Atmosphere and Hydrosphere (4:3:3) Prerequisites: none. This natural science lab course is a systematic study of weather, climate, energy, and hydrologic systems viewed from a geospatial and global perspective. We will study the spatial distribution and relationships of the Earth’s climate and hydrologic systems to other Earth systems, as well as the processes driving and changing them, including energy, climate, weather, and water resources.

122 Dynamic Geosphere and Ecosphere (4:3:3) Prerequisites: none. Systematic study of biogeography and soils, viewed from a geographic, or spatial, perspective. We will study the spatial distribution and relationships of Earth’s biomes and soils systems to other Earth systems, and the processes driving them, including energy, climate, nutrients, chemistry, and moisture.

303 GIS Applications for Earth Systems (3:3:0) Prerequisites: 30 hours; and EOS 121, EOS 122 and IT 103, or permission of instructor. An overview of fundamentals in GIS, with emphases on aspects related to Earth systems and global studies. Review the use of GIS in different aspects of the Earth systems at the global and regional scales.

304 Population Dimensions of Global Change (3:3:0) Prerequisite: 30 credits of prior course work. Interdisciplinary course combining knowledge from social sciences and environmental science to develop global understanding of world population condition, issues, and related problems. Applies demographic concepts using GIS and quantitative methods. Satisfies general education syntheses requirement.

305 Global Environmental Hazards (3:3:0) Prerequisites: 30 hours and undergraduate status. Introduces applications of observational and modeling techniques to natural hazards and the threat they pose to the world, as well as a general introduction to global climate change and its effect on regional and local scales. Examples include topics of interest to different countries and regions of the world, such as earthquakes, sand and dust storms, slope failures, volcanoes, land slides, droughts and desertification, floods, hurricanes and typhoons, severe weather, wild fires (U.S., Indonesia, Africa, S. America), sea-level rise, and tsunamis. Covers Earth system science topics related to the above hazards and their coupling with anthropogenic hazards as well as how societies respond to natural disasters and mitigation.

306 Sustainable Development (3:3:0) Prerequisites: 60 hours; EOS 122 and EOS 305, or permission of instructor. Explores the concepts, applications, and tools for analysis and decision making in support of environmentally sustainable development. Case studies and problem-solving exercises will be used to stimulate learning and provide practical experience in addressing sustainable development issues.

310 Severe and Unusual Weather (3:3:0) Prerequisites: 30 hours. Introduce the student to a general survey of the atmosphere and the fundamentals of severe and unusual weather. Designed for students who generally have little physical science background and want to satisfy their intellectual curiosity about severe weather and complete basic science requirements. Mathematics is not emphasized. Appropriate equations are provided in an optional format during the course material for mathematically oriented students.

312 Physical Climatology (3:3:0) Prerequisites: 30 hours; EOS 121 or equivalent, EOS 310 or GEOG 309, PHYS 243–244, or permission of instructor. Quantitative description of nature and theory of the climate system, dynamics of atmosphere-ocean-land surface, internal interactions and response to external forcing, description of the climate record and simple climate models.
320 Air Pollution (3:3:0) Prerequisites: 30 hours. Devoted to air pollution fundamentals and aimed at undergraduates who are beginning to study air pollution problems. The use of Gaussian plume dispersion models is also covered in detail, because it serves as the basis for most computer models used for regularity analysis by the EPA. The course also deals with pollution and atmospheric interactions, and the nature of our climate.

322 Issues in the Global Change (3:3:0) Prerequisites: 30 hours and courses in chemistry, physics, ecology, and advanced mathematics. Provides the basis for evaluating existing and emerging issues in the environmental sciences at the regional and global scale, using interdisciplinary scientific principles. This objective is met by a combination of activities designed to provide an understanding of the following: first principles underlying regional/global issues in the environmental sciences, with attention to links among the disciplines of atmospheric sciences, biology, ecology, hydrology, oceanography, geology, human health, toxicology, and mathematical modeling; concepts of systems control, feedbacks, modeling, and hierarchical scales (spatial and temporal); role of developing a scientifically sound basis for evaluation and analysis; and studies of specific issues of interest on a regional to global scale.

353 Observations of the Earth and Its Climate (3:3:0) Prerequisites: 30 hours. Provides a general introduction to observations of the Earth and its climate, focusing on regional and global aspects. Introduces remote sensing and other Earth-observing techniques, as well as provides a survey of some of the physical and mathematical aspects of remote sensing at a very high level. Concepts and foundations of remote sensing in addition to different approaches and techniques are discussed. The course covers several key Earth system science topics such as El Niño, carbon dioxide increase, climate change including sea rise, ozone depletion, and the energy budget of the Earth.

354 Data Analysis and Global Change Detection Techniques (3:3:0) Prerequisites: Competency in basic programming or tools used in data analysis. Introduces basic time series methods, especially those used in detecting trends and randomness in time series data. Various data related to global changes on different temporal and spatial scales will be identified, and the relevant analysis methods will be used to those data so that students can detect or confirm changing trends or lack of them in data. Other topics such as data formats, data visualization, and data mining may also be included based on the background of the student body.

399 Selected Topics in Global Change (3:3:0) Prerequisites: 30 credits or permission of instructor. Covers selected topics in global change not covered in fixed-content global change courses. Content varies and is determined by instructor. May be repeated.

410 Introduction to Hyperspectral Imaging (3:3:0) Prerequisites: 30 hours PHYS 243–244, 245–246, MATH 113 and 114, EOS 533, or permission of instructor. Provides an introduction to quantitative measurements by remote-sensing methods covering an introduction to quantitative spectroscopy, spectral and thermal signatures, atmospheric physics, and the electromagnetic spectrum. Emphasis will be on the scientific principles involved and the transition of the technology to real-world applications. The requisite materials to begin to understand hyperspectral imaging (HSI) technology and its many civil and military applications are presented. The course covers the needed mathematics used in the analysis of n-dimensional data. Topics such as hyperspectral concepts, data collection systems, data processing techniques, case studies, and U.S. national policy issues will be covered. The data processing techniques will include N-dimensional space, scatterplots, spectral angle mapping, spectral mixture analysis, spectral matching, and other techniques. Applications and case studies will include environmental, medical, agricultural, military, and others. Ground, airborne, and spaceborne hyperspectral systems will be covered.

455 Environmental Impact Assessment (3:3:0) Prerequisites: 60 hours; EOS 120, EOS 305, EVPP 377 and 6 hours of courses in ecology or environmental science, or permission of instructor. Evaluates current methods and practices for conducting and planning environmental assessments to include techniques and requirements for assessing impacts on air, water, natural resources, transportation, water facilities, and industrial and community development.

495 Senior Research (3:0:0) Prerequisites: open only to authorized majors with 90 credits. Applications of research tools and techniques on specific global change topics, in conjunction with faculty instruction and research. Individualized sections taught by arrangement with full-time faculty.

600 Communication Skills for Scientists (1:2:0) Prerequisite: graduate standing. Develops basic set of essential skills for scientific communication of written and oral materials. Oral skills focus on delivery of successful and informative presentations to both peers and the general public. Written communication skills focus on writing of scientific abstracts, manuscripts, and grant proposals. Meets objectives through combination of activities, including practical writing assignments, planned and extemporaneous oral presentations, discussion of grant preparation for extramural competition, and personal advice on developing and delivering oral presentations.

650 Introduction to GIS Algorithms and Programming (3:3:0) Prerequisites: introductory GIS course (GEOG 553). Prepares students to program using object-oriented languages for GIS or in a GIS environment. A comprehensive programming training process, including computer programming, syntax, data types, data structure, control structures, and integrated programming environment (such as Python & JBuilder), will be introduced. Several technical aspects of GIS related to algorithms, such as file reading/writing and topology will be discussed.

656/EVPP 652/GEOG 570 The Hydrosphere (3:3:0) Prerequisite: two semesters of calculus, preferably partial differential equations; or permission of instructor. Components and transfer processes within hydrosphere, which consists of aqueous envelope of Earth, including oceans, lakes, rivers, snow, ice, glaciers, soil moisture, groundwater, and atmospheric water vapor. Offers understanding of various components of hydrosphere, spatial and temporal distributions, physics of transfer processes for redistribution, and appreciation of water’s role in sustaining life and influencing global and regional energy and mass balance.

657/GEOL 601/GEOG 671 The Lithosphere (3:3:0) Prerequisite: graduate standing. Global-scale overview of lithosphere, the solid nonliving Earth, its materials, cycles, plate tectonic and geomorphic processes; and history, includ-
ing interactions with hydrosphere, atmosphere, and biosphere, and methods of analysis. Offers understanding of materials, features, and landforms of solid Earth, and processes by which they formed.

670 Fundamentals of Atmosphere (3:3:0) Prerequisite: permission of instructor. Introduces students to a general survey of the atmosphere and the fundamentals of weather.

680 Environmental Applications of Integrated Geographic Information Technologies (3:3:0) Prerequisites: EOS 753, and GEOG 550 or 585; or permission of instructor. Focuses on how geoinformation technologies, including GIS, RS, and GPS, and spatial analytical techniques can be integrated to address various situations in environmental risk assessment, monitoring, and planning.

684 Select Studies in Geospatial Intelligence (3:3:0) Prerequisites: admission in the geospatial intelligence certificate program or permission of program coordinator. A course for students in the geospatial intelligence certificate (GI) program. It is intended to cover specialized topics relevant to geospatial intelligence. Accordingly, it comprises lectures, reading assignments, and exercises.

685 Capstone Course in Geoinformatics (3:3:0) Prerequisites: 12 credits in the geospatial intelligence certificate program or permission of program coordinator. A course for students completing their geospatial intelligence certificate (GI) program. It is intended to provide a capstone experience by synthesizing the knowledge and experience they acquired in their previous courses to address a complex geospatial intelligence problem. The course requires analytical, collaborative, and communication skills.

721 Biogeography (3:3:0) Prerequisites: courses in ecology, chemistry, and geology. Provides broad understanding of how physical geography and environment influence spatial and temporal distribution of plants and animals on Earth’s surface.

722 Regional and Global Issues in the Earth Sciences (3:3:0) Prerequisites: courses in ecology, chemistry, and physics. Provides basis for evaluating existing and emerging issues in Earth sciences at regional and global scales, utilizing interdisciplinary scientific principles.

725 Advanced Hydrosphere (3:3:0) Prerequisite: two semesters of calculus, preferably partial differential equations; or permission of instructor. Uses mathematical and modeling approaches for in-depth study of different components and transfer processes within hydrosphere. Topics include transfer processes relevant for oceans, lakes, rivers, snow, ice, glaciers, soil moisture, ground water, and atmospheric water vapor.

740 Hyperspectral Imaging Systems (3:3:0) Prerequisite: CSI 660 or equivalent, or permission of instructor. Provides requisite materials to understand hyperspectral imaging technology and its many civilian and military applications. Emphasizes scientific principles involved and technology application to real-world imaging systems. Topics include hyperspectral concepts and system tradeoffs; data collection systems; calibration techniques; data processing techniques and software; classification methods; and case studies. Data processing techniques include N-dimensional space, scatterplots, spectral angle mapping, spectral mixture analysis, spectral matching, and mixture tuned matched filtering. Discusses ground, airborne, and spaceborne hyperspectral remote sensing systems.

747 Satellite Data Reception and Product Generation (3:3:0) Prerequisites: EOS 753, or introductory remote-sensing course; computer programming; or permission of instructor. Provides a practical experience on how to receive, process, and distribute remote-sensing data using an antenna-receiving station. Covers basic orbital mechanics, characteristics of satellite sensors and their limitations, and algorithms used to generate products from the raw measurements. Data mining techniques are presented for the analysis of large volume of data.

753 Observations of the Earth and Its Climate (3:3:0) Prerequisite: CSI 660 or introductory remote sensing course; environmental science, space science, physics, or chemistry undergraduate background; or permission of instructor. Provides requisite material to understand techniques of remote sensing and other observational methods as applicable to Earth science and global change. Surveys methodologies and their applications, including systematic study of how each part of electromagnetic spectrum is used to gather data about Earth. Describes limitations imposed by satellite engineering, sensor limitations on data gathering, and a survey of data reduction specific to remote sensing applications. Also covers current research issues, including examples pertaining to atmosphere, land masses, and oceans. Includes discussions of current efforts by NASA and NOAA to provide integrated data gathering and dissemination systems.

754 Earth Science Data and Advanced Data Analysis (3:3:0) Prerequisite: EOS 753 or permission of instructor. Covers accessing and applying Earth observations and remote-sensing data for Earth system science research and applications. Major topics are data formats, analysis and visualization tools, advanced data analysis methods, and data applications. Also covers combining innovative information technology techniques and Earth science data to set up online data centers for accessing data through the web.

756 Physical Principles of Remote Sensing (3:3:0) Prerequisite: EOS 753 or permission of instructor. Emphasizes fundamental physical and mathematical principles of remote sensing. Also provides overview of the current Earth Observation System as well as the National Polar-Orbiting Operational Environmental Satellite Systems (NPOESS), and NPOESS Preparatory Project missions.

757 Techniques and Algorithms in Earth Observing and Remote Sensing (3:3:0) Prerequisite: EOS 753 or permission of instructor. Covers retrieval, analysis, and application of geophysical parameters derived from remotely sensed data for Earth system research and applications. Includes theory of visible and infrared and microwave remote sensing, heritage sensors, sensor calibration, retrieval algorithms, validation, and error estimates.

758 Earth Image Processing (3:3:0) Prerequisites: EOS 753 and GEOG 380, plus knowledge of a computer language;
or permission of instructor. Intermediate-advanced level course focusing on digital processing of Earth images, with significant coverage of hyperspectral images, mathematical and algorithmic foundations, analysis procedures, and computational implementations. Emphasizes programming projects.

759 Topics in Earth Systems Science (3:3:0) Prerequisite: permission of instructor. Covers selected topics in Earth systems and global changes not covered in fixed-content Earth systems and global changes courses. May be repeated.

760 Advanced Remote Sensing Applications (3:3:0) Prerequisites: EOS 753 or GEOG 580. Focuses on applications of remote sensing in various important areas of Earth systems science, including analysis of surface radiation budget, land cover, inland and coastal waterways, and soil moisture. Details algorithms, techniques, and examples.

771 Algorithms and Modeling in GIS (3:3:0) Prerequisites: prior course or experience in GIS, and knowledge of computer programming language. Examines several fundamental GIS algorithms based upon computational geometry and computer graphics. Also discusses issues in modeling features of different dimensions and surfaces in GIS. Significant programming expected.

772 Distributed Geographic Information Systems (3:3:0) Prerequisites: introductory course in GIS and some programming experience, or permission of instructor. Examines different aspects of science and technology in the context of distributed GIS. Includes general concepts, architecture, component design and development, and system integration as well as other advanced topics, including interoperability and agent-based GIS.

773 Interoperability of Geographic Information Systems (3:3:0) Prerequisites: EOS 754 and GEOG 553, or a course in GIS. Advanced course addressing theories, standards, and implementations of web-based interoperable geographic information systems for online data and information services. Reviews international standards, including OGC, and associated tools for interoperability.

777 Remote Sensing of Natural Hazards (3:3:0) Prerequisite: EOS 753 or GEOG 579 or GEOG 580; or permission of instructor. Provides an overview of major natural hazards, their governing dynamics and remote-sensing applications. Topics include advanced hyperspectral concepts, multisystem tradeoffs, data collection and processing systems, imaging radar systems, laser systems, calibration techniques, data fusion, quantitative remote sensing techniques, data compression techniques, case studies, and U.S. national policy. Applications and case studies include environmental, homeland security, medical, military, disaster mitigation, agricultural, and transportation.

840 Hyperspectral Imaging Applications (3:3:0) Prerequisite: CSI 660 or equivalent, or permission of instructor. Introduces advanced hyperspectral imaging and multisensor concepts with emphasis on real-world civilian and military applications. Topics include advanced hyperspectral concepts, multisystem tradeoffs, data collection and processing systems, imaging radar systems, laser systems, calibration techniques, data fusion, quantitative remote sensing techniques, data compression techniques, case studies, and U.S. national policy. Applications and case studies include environmental, homeland security, medical, military, disaster mitigation, agricultural, and transportation.

854 Air Pollution Meteorology and Dispersion (3:3:0) Prerequisite: CLIM 710 or 711, or permission of instructor. Covers the basic concepts, theories, and models of pollutant dispersal in the atmosphere and the related atmospheric systems affecting dispersal of hazardous atmospheric releases.

855 Introduction to Mesoscale Atmospheric Modeling (3:3:0) Prerequisite: permission of instructor. Introduces physical and numerical modeling issues involved in mesoscale atmospheric flows. These flows involve time and space scales associated with diurnal cycle, atmospheric inertial mode, thermal and mechanical forcing due to mesoscale terrain inhomogeneities, mesoscale precipitation systems, and downslope energy transfer from synoptic scale to mesoscale due to nonlinear flow interactions.

900 Research Colloquium in Earth Systems and Geoinformation Sciences (1:1:0) Prerequisite: graduate standing. Presentations in specific research areas of Earth systems and geoinformation sciences by faculty and staff, Mason faculty in related programs, and professional visitors. May be repeated for credit, but maximum 3 credits may be applied to Earth systems and geoinformation sciences PhD.

998 Dissertation Proposal (1–12:0:0) Prerequisite: permission of instructor. Covers development of research proposal that forms basis for doctoral dissertation, under guidance of dissertation director and doctoral committee. May be repeated, but no more than 12 credits of EOS 998 may satisfy doctoral degree requirements.
999 Doctoral Dissertation (1–12:0:0) Prerequisite: permission of instructor. Doctoral dissertation research under direction of dissertation advisor. May be repeated, but no more than total 24 credits in EOS 998 and 999 may be applied to doctoral degree.

E-Commerce (EC)

The Volgenau School of Information Technology and Engineering

511 E-commerce Basic IT Infrastructure (3:3:0) Discusses basic networking infrastructure used in e-commerce environments and typical multitiered e-commerce architectures of e-commerce sites. Includes ISO OSI reference architecture; functions, main features of IP protocol; functions, main features of TCP protocol including connection establishment, error control, and congestion control; HTTP protocol; and load balancers, web servers, application servers, and database servers in e-commerce site architecture. Discusses software architecture elements such as servlets, transaction processing services, remote method invocation, CGI scripts, and active server pages.

512 E-commerce Software Services (3:3:0) Prerequisite: EC 511. Flow analysis of e-commerce transactions, and role of various software servers, such as web, application, and database servers, in executing e-commerce transactions. Uses various technologies to illustrate typical designs. Covers protocols for authentication and payment in e-commerce; introduction to symmetric and public-key encryption; digital signatures and certificates; and Secure Sockets Layer (SSL) Transport Layer Service (TLS), and secure electronic payment protocols.

521/MBA 603 Managerial Economics and Decisions of the Firm (3:3:0) Prerequisite: admission to MS in e-commerce program. Provides fundamental understanding of how microeconomics concepts are usefully applied to managerial decision making. Explores principles of microeconomic theory, including market supply and demand, production and cost functions, industry structure, and product and resource pricing.

522/MBA 613 Financial Reporting and Decision Making (3:3:0) Prerequisite: admission to MS in e-commerce program. Foundation course focusing on economics and analysis of business transactions and related financial reporting issues. Topics include introduction to accounting framework used in financial reporting, analysis of economic events and impact on financial reports, analysis of impact of accounting method choices on financial reports, and financial statement analysis.

600 Group Project in Electronic Commerce (3–6:3–6:0) Prerequisite: completion of all core courses and at least 9 credits in MS in e-commerce program. Group projects in electronic commerce selected to illustrate special problems and solutions in development, design, and implementation of e-commerce systems.

Economics (ECON)

Economics

Individual courses taken for credit under their former numbers may not be repeated for credit under their present numbers. A grade of C or better in ECON 103 and 104 is prerequisite to upper-division economics courses.

100 Economics for the Citizen (3:3:0) Not available to economics majors. Broad introduction to economic concepts and how they can contribute to a better understanding of the world around us. Applies and develops concepts to current economic and social problems and issues. Less formal modeling than in the 103–104 sequence.

103 Contemporary Microeconomic Principles (3:3:0) Introduces microeconomics in the context of current problems. Explores how market mechanism allocates scarce resources among competing uses; uses supply, demand, production, and distribution theory to analyze problems.

110 Introduction to Economic Science (2:2:0) Registration is controlled; contact instructor for guidelines. Introduces economics as an observational science, covering personal vs. impersonal exchange, strategic interdependence and game theory, group decision making, and market design.

111 Laboratory Methods in Economics (1:0:3) Registration is controlled; contact instructor for guidelines. Enables participation in experimental economics research by recruiting subjects, writing experiment instructions, and monitoring sessions.

306 Intermediate Microeconomics (3:3:0) Prerequisites: ECON 103 and 104, and MATH 108 or 113. Basic factors of price and distribution theory: analysis of demand, costs of production and supply relationships, and price and output determination under various market structures.

309 Economic Problems and Public Policies (3:3:0) Prerequisites: completion or concurrent enrollment in all other general education courses, and ECON 103 and 104, or permission of instructor. Economic problems in light of current and proposed public policies. Topics include environmental issues, international trade policies, and regulatory issues and their historical roots.

310 Money and Banking (3:3:0) Prerequisites: ECON 103 and 104, or permission of instructor. Monetary, commercial, and central banking systems, with particular emphasis on their relationship with American government programs, fiscal policies, and controls.

311 Intermediate Macroeconomics (3:3:0) Prerequisites: ECON 103 and 104, or permission of instructor. Aggregate economic accounts, including measuring national income;
determinants of levels of income and output; and causes and solutions for problems of unemployment, inflation, and economic growth.

316 Economic Growth and Business Cycle (3:3:0)  Prerequisite: ECON 310 or 311, or permission of instructor. Covers factors contributing to sustained economic growth, emphasizing business fluctuations and their measurement.

320 Labor Problems (3:3:0)  Prerequisites: ECON 103 and 104, or permission of instructor. Explores American labor unions and their effect on society, including causes of and proposed solutions to selected problems.

321 Economics of Labor (3:3:0)  Prerequisite: ECON 306. Defines factors that determine levels of wages and employment, and economic consequences. Emphasizes recent developments in unionism, collective bargaining, and industrial technology.

330 Public Finance (3:3:0)  Prerequisite: ECON 306 or permission of instructor. Covers intergovernmental financial relationships; types, incidences, and consequences of taxation; other sources of governmental income; governmental expenditures and their effect; public economic enterprises; public borrowing; and debt management and its economic effect.

335 Environmental Economics (3:3:0)  Prerequisites: ECON 103 and 104. Microeconomic analysis of environmental problems. Topics include externalities and market failure, alternative solutions and policies, problems in monitoring and enforcement, economic analysis of development of legislation and regulation, and applications to current policy issues.

340 Introduction to Mathematical Economics (3:3:0)  Prerequisites: ECON 306 and 311, and MATH 113; or permission of instructor. Mathematical treatment of theory of firm and household behavior, stabilization policy, growth theory, input-output analysis, and linear programming.

345 Introduction to Econometrics (3:3:0)  Prerequisites: ECON 306 and 311, and OM 210 or STAT 250. Modern statistical techniques in estimating economic relations.

350 Regional and Urban Economics (3:3:0)  Prerequisite: ECON 306 or permission of instructor. Regional development and metropolitan growth, including locational decisions of households and firms, and problems associated with high-density urban economic activity.

360 Economics of Developing Areas (3:3:0)  Prerequisites: ECON 103 and 104, or permission of instructor. Economic growth characteristic of developing countries. Economic development, obstacles to development, policies, and planning.

361 Economic Development of Latin America (3:3:0)  Prerequisites: ECON 103 and 104, or permission of instructor. For non-Western credit. Economic development, institutions, and problems of Latin America.

362 African Economic Development (3:3:0)  Prerequisites: ECON 103 and 104. Issues of economic development as applied to Africa. Includes overview of early economic history in Africa and post-independence development, and contemporary development problems.

365 Topics in Economic History (3:3:0)  Prerequisites: ECON 103 and 104. Subject matter varies. Possible topics include ancient, medieval, modern European, and American economic history, using econometric analysis as necessary. May be repeated once for credit with permission of instructor.

370 Economics of Industrial Organization (3:3:0)  Prerequisite: ECON 306, or permission of instructor. Factors influencing industrial structure, and industrial conduct and performance.

372 Economics of E-Commerce (3:3:0)  Prerequisites: ECON 103 or permission of instructor. Examines how institutional rules, transaction costs, and behavior of agents affect performance of electronic marketplaces.

375 Introduction to the Economics of Religion (3:3:0)  Prerequisite: ECON 103. Examines the theory of religious markets as they relate to effects, mainstream religion, new religious movements, religious extremism, and religious trends.

380 Economics in Transition (3:3:0)  Prerequisites: ECON 103 and 104, or permission of instructor. Examines problems and achievements of formerly communist and socialist countries including China, Eastern European countries, and Russia and other countries of the former Soviet Union as they transition to more market-oriented economies. Includes market economics and central planning.

385 International Economic Policy (3:3:0)  May not be taken for credit by students who have completed ECON 390. Introduces economic way of thinking on trade and international finance. Presents historical and current information on consequences of trade and protectionism.

390 International Economics (3:3:0)  Prerequisites: ECON 306 and 311, or permission of instructor. Foreign exchange market, balance of payment, foreign trade policies, and theories of international trade.

403 Austrian Economics (3:3:0)  Prerequisites: ECON 306 and 311. Microeconomic and macroeconomic models and misallocation of resources. Alternative economic tools from noted Austrian economists.

410 Public Choice (3:3:0)  Prerequisite: ECON 306. Applies economic theory, methodology to study nonmarket decision making.

412 Game Theory and Economics of Institutions (3:3:0)  Prerequisite: ECON 306 or permission of instructor. Introduces game theory and its relevance for analyzing framework of rules and institutions within which economic processes occur. Applies game theoretical concepts to comparative analysis of causes and effects of alternative institutional arrangements.

415 Law and Economics (3:3:0)  Prerequisite: ECON 306 or permission of instructor. Economic analysis of the law. Topics include introduction to legal institutions and legal analysis; application of economic concepts to the law of property, contracts and torts, criminal and constitutional law; economic efficiency of common law; and public choice perspective on the evolution of the law.

420 International Money and Finance (3:3:0)  Prerequisite: ECON 306 and 311, or permission of instructor. Examines models of balance of payments, exchange rate behavior, and open economy macroeconomics. Includes international financial system and issues such as globalization and international financial instability.
440 Economic Systems Design: Principles and Experiments (3:3:0) Prerequisite: MATH 213. Introduces design principles to develop systems to allocate resources. Students must participate in experiment demonstrations of different allocation mechanisms. They also are exposed to experimental methods in economics and market design.

441 Economic Systems Design: Case Studies and Analysis (3:3:0) Prerequisite: ECON 440. Requires students to design and develop mechanism to specific allocation problem. Students develop analytical and working engineering models of their mechanism.

442 Economic Systems Design: Implementation (3:3:0) Prerequisite: ECON 441. Involves students in developing experimental design to test proposed allocation solution. Design process includes construction of experimental parameters, treatments, and initial test in laboratory setting.

445 Design and Analysis of Experiments (3:3:0) Prerequisites: STAT 250, 344; and MATH 351 or IT 250; or permission of the instructor. Topics include comparing two or more treatments, and computing and interpreting analysis of variance. Discusses randomized block, Latin square, and factorial designs; and applications to economics experiments.

481 The Development of Economic Thought (3:3:0) Prerequisites: ECON 306 and 311, or permission of instructor. Discusses developments in economic thought from 1500 to the present. Emphasizes historical origins, impact on contemporary economics, and theoretical validity.

490 Senior Seminar on Problems in Economics (3:3:0) Prerequisites: ECON 306 and 311, OM 210, and 90 credits; economics majors only. Applies economic tools to investigate problems in economics.

496 Special Topics in Economics (3:3:0) Prerequisite: varies with topic. Subject matter varies. May be repeated for credit with permission of department.

498 Internship (1-3:0:0) Prerequisite: 6 upper-level credits of economics, junior standing, and permission of instructor. Students find economics-related internship with assistance from Career Services. Pre-internship proposal and final reflections paper required.

499 Independent Study (1-3:0:0) Prerequisites: economics majors with 90 credits, and permission of both department and instructor. Individual study of selected area of economics. Directed research paper required. May be taken for a maximum of 6 credits.

ECON 306 and 311, or equivalent, are prerequisites to all graduate courses except ECON 600 and 602. Undergraduates require special permission to enroll in 600-level courses.

535 Survey of Applied Econometrics (3:3:0) Prerequisites: OM 210, and ECON 306 and 311, or permission of instructor. Introduces multiple regression and problems associated with single equation model-autocorrelation, multicollinearity, and heteroscedasticity.

611 Microeconomic Theory (3:3:0) Prerequisites: admission to doctoral or master’s program, or ECON 306 and 311, and MATH 113; or permission of graduate coordinator. Covers theory of behavior of consumers, firms, and resource suppliers; theories of choice under risk and uncertainty; partial equilibrium analysis of competitive and noncompetitive markets; general equilibrium analysis; and welfare economics. Introduces capital theory.

612 Microeconomic Theory II (3:3:0) Prerequisite: ECON 611. Nature of the firm; theory of supply; and production functions, factor pricing, and supplies. Introduces microeconomic foundations of theories of public finance and public choice.

615 Macroeconomic Theory (3:3:0) Prerequisite: admission to master’s program in economics, or ECON 306 and 311, and MATH 108; or permission of graduate coordinator. Explores survey course covering monetary theory, theories of consumption and saving, budget deficits, economic growth, international finance, and monetary and fiscal policies.

623 American Economic History (3:3:0) Prerequisites: ECON 611 and 613, taken concurrently, or permission of instructor. ECON 637 recommended. Explores development of American economy, and evolution of economic institutions.

630 Mathematical Economics I (3:3:0) Prerequisite: admission to doctoral or master’s program, or ECON 306 and 311, and MATH 113; or permission of instructor. Includes set theory, function, differential calculus, integration, series, and matrix algebra, with special emphasis on economic applications.

632 Economic Systems Design Principles and Experiments (3:3:0) Prerequisites: courses in linear and nonlinear optimization, and linear algebra. Introduces analytical and engineering principles to develop exchange systems. Students must become familiar with literature on applied mechanism design; and understand behavioral aspects of auction systems, matching, assignment and transportation problems, and information markets. Also introduces methods for testbedding systems using experimental economics and statistical design.

633 Economic Systems Design Case Studies and Analysis (3:3:0) Prerequisite: ECON 632. Students begin process of doing research in design economic exchange system. Design process includes electronic instructions, and design of information structures. Students responsible for research into economic issues, and practical design issues.

634 Economic Systems Design Implementation (3:3:0) Prerequisite: ECON 633. Students do original research in economic systems design by constructing engineering model of solution to allocation problem. Research includes experimental and statistical design, and complete description of hypothesis related to construction of experimental parameters and treatments to test mechanism. Requires initial test of mechanism in laboratory setting.

637 Econometrics I (3:3:0) Prerequisite: acceptance to PhD program, OM 210, or permission of instructor. Techniques of estimating relationships between economic variables. Introduces multiple regression and problems associated with single equation model-autocorrelation, multicollinearity, and heteroscedasticity.

675 Economics of Religion I (3:3:0) Prerequisite: ECON 611, 612, 615, 630, 637. Explores the application of economics methods and insights to the exploration of the relationship between religious and socioeconomic behavior, beliefs, and institutions.
676 Comparative Economic Systems (3:3:0) Capitalism, socialism, and corporatism historical perspective. Includes examination of economies of representative contemporary countries.

715 Macroeconomic Theory I (3:3:0) Prerequisite: admission to doctoral program, or permission of graduate coordinator. Covers classical, neoclassical, Keynesian, and post-Keynesian theories of income and employment determination; theories of inflation and growth; and demand for money and implications for effectiveness of monetary vs. fiscal policy.

811 Microeconomic Theory I (3:3:0) Prerequisite: admission to doctoral program, or permission of graduate coordinator. Theory and applications of behavior of consumers, firms, and resource suppliers. Partial equilibrium analysis of various market structures and introduction to intertemporal choice and capital theory. Review and analysis of classic works in microeconomic theory.

812 Microeconomic Theory II (3:3:0) Prerequisite: ECON 811. Examines nature of firm; theory of supply; and production functions, factor pricing, and supplies. Introduces microeconomic foundations of theories of public finance and public choice.

816 Macroeconomic Theory II (3:3:0) Prerequisites: ECON 611 and 715, or permission of instructor. Aggregate economic activity and price levels with emphasis on dynamic models. Topics vary.

817 Monetary Theory and Policy (3:3:0) Prerequisites: ECON 615 and 637, or permission of instructor. Theory of mechanisms through which central banking affects economic activity and prices. Analyzes demand for money and its relationship to economic activity. Develops monetary theory with emphasis on current theories and controversies in the field.

820 History of Economic Thought (3:3:0) Explores major figures in history of economic thought and tools of analysis they created. Emphasizes classical, neoclassical, and Keynesian theories.

821 History of Economic Thought II (3:3:0) Covers development of economic analysis from marginal revolution of 1877 to present. Emphasizes development of neoclassical economic theory.

823 Topics in Economic History (3:3:0) Prerequisites: ECON 611 and 615. Offers economic analysis of various historical epochs including Industrial Revolution, evolution of political reform, rise of unions, and growth of government.

825 Political Economy and Public Policy I (3:3:0) Prerequisite: ECON 611, or permission of instructor. Covers economic process of public policy formulation and implementation; and economic behavior of principals in policy making and execution.

826 Political Economy and Public Policy II (3:3:0) Prerequisites: ECON 611, 615, and 825; or permission of instructor. Specific issues related to political economy of public policy, including privatization, political economy of deficit spending, regulation and deregulation, and economics of rent seeking.

827 Economic Philosophy (3:3:0) Prerequisite: ECON 611, or permission of instructor. Analyzes philosophical organization, including interrelations between economics and legal and political institutions; philosophical presuppositions of capitalist economy under constitutional democracy; alternative presuppositions for noncapitalist economies; and critical evaluation of history of ideas in social and moral philosophy.

828 Constitutional Economics (3:3:0) Prerequisite: ECON 611, or permission of instructor. Analyzes existing and proposed elements of economic constitution. Emphasizes fiscal, monetary, transfer, and regulatory powers of government and constitutional limits on such powers, especially in the United States. Includes analysis of proposed changes in limits.

829 Economics of Institutions (3:3:0) Prerequisite: ECON 611, or permission of instructor. Analyzes framework of rules and institutions for economic activities and transactions. Includes emergence and working properties of different institutions, and classical and contemporary approaches to economic theory of institutions.

831 Mathematical Economics II (3:3:0) Prerequisite: ECON 630 or permission of instructor. Covers mathematical treatment of economic theories. Includes static and dynamic analysis of macromodels; input-output analysis; and optimization techniques such as Lagrangian multipliers, linear programming, nonlinear programming, and game theory.

838 Econometrics II (3:3:0) Prerequisite: ECON 637 or permission of instructor. Explores econometric models and simultaneous equation systems. Includes identifying parameters and least squares bias, alternative estimation methods, and block recursive systems.

840 Law and Economics I (3:3:0) Prerequisites ECON 611, 630, 637. Uses economics to analyze U.S. common-law system, evaluating efficiency and logic of evolution. No prior knowledge of law required.

841 Law and Economics II (3:3:0) Prerequisite: ECON 640. Explores empirical analyses of law of property, torts, crime, and family. Also looks at law’s effects on freedom and economic growth.

842 Labor Economics (3:3:0) Prerequisites: ECON 611 and 615, or permission of instructor. ECON 637 recommended. Formal models of labor demand, supply, utilization, and wage determination; determination of factor shares in open economy; theory of collective bargaining, and impact of trade unions on wage rates and resource allocation; measurement, types, and causes of unemployment; and benefit-cost analysis of labor training and development projects.

844 Industrial Organization and Public Policy I (3:3:0) Prerequisite: ECON 611 or permission of instructor. Structure of American industry and underlying determinants. Includes structure and conduct on industrial performance in light of theory and empirical evidence; and rational antitrust policy and analysis of impact on structure and performance.

849 Public Finance (3:3:0) Prerequisite: ECON 611 or permission of instructor. Theoretical and institutional analysis of government expenditure, taxation, debt management, and intergovernmental fiscal relations. Includes allocative and distributional effects of alternative tax and subsidy techniques, principles of benefit cost, and cost-effectiveness analysis for government decisions.

852 Public Choice I (3:3:0) Prerequisite: ECON 611 or permission of instructor. Applies economic theory and methodology to study of nonmarket decision-making.

854 Public Choice II (3:3:0) Prerequisite: ECON 611 or permission of instructor. Applies public choice approach to study such topics as causes and consequences of governmental growth, behavior of public bureaucracies, and economic reasoning behind constitutional limitations on size and growth of government.

856 Urban and Regional Economics (3:3:0) Prerequisite: ECON 611 or permission of instructor. Regional development and metropolitan growth economics including locational decisions of households and firms, and problems associated with high-density urban economic activity.

861 Economics of the Environment (3:3:0) Analyzes economic models of ecosystems and pollutant discharges into environment. Includes methods of improving economic efficiency, and review of public policies.

866 Economic Development (3:3:0) Prerequisites: ECON 611 and 615, or permission of instructor. Explores forces contributing to or retarding economic progress in developing countries. Includes role of foreign trade, economic integration, foreign investment, multinational corporations, and technological transfers.

869 International Trade and Policy (3:3:0) Prerequisite: ECON 611 or permission of instructor. Studies classical, neoclassical, and modern theories of international trade; theory and practice of world trade models such as project LINK; foreign investment and economic growth, tariffs and non tariff barriers, and economic integration; and recent developments, with emphasis on natural resources.

871 International Monetary Economics (3:3:0) Prerequisite: ECON 615 or permission of instructor. Examines international adjustment mechanism, price and income effects, controls, and monetarist approach; development of international monetary system; demand for international reserves; capital movements; and role of International Monetary Fund.

875 Economics of Religion (3:3:0) Prerequisites: ECON 611, 630, 637, 812. Studies the relationship between religion and economies as it addresses a wide range of empirical questions concerning the causes and consequences of religious commitment. Issues addressed include the relationship between religious and political conservatism, correlates of socioeconomic factors and religious outcomes, and the contributions of religion to development, political liberty, and civil rights.

880 Austrian Theory of the Market Process I (3:3:0) Prerequisite: ECON 611. Examines theory developed by Menger, Mises, Hayek, and others of the Austrian School; and compares with other popular theories.

881 Austrian Theory of Market Process II (3:3:0) Prerequisites: ECON 611 and 615; ECON 880 recommended. Continuation of ECON 880. Topics vary and include market-process approach to analyzing capital accumulation and growth; money and credit institutions; inflation and unemployment; and industrial fluctuations.

885 Experimental Economics (3:3:0) Prerequisites: ECON 611 or permission of instructor. Designed for graduate students to learn how experimental methods can be used to inform economic research and practice. Students expected to have working understanding of basic economic concepts and multivariate calculus.

886 Experimental Economics II (3:3:0) Prerequisites: ECON 885 or permission of instructor. Research in experimental design. Topics represent basic tools to build, test, and implement exchange mechanisms in an applied setting.

918 Seminar in Monetary Theory and Policy (3:3:0) Prerequisite: ECON 817. Selected topics of current interest.

950 Seminar in Public Finance (3:3:0) Prerequisites: ECON 611 and 849. Important public finance issues treated in seminar format.

975 Workshop in Religion and Economics (3:3:0) Prerequisites: ECON 675, 875. Topics vary according to interests of instructor. Emphasizes new areas of discipline. May be repeated for credit as topics vary.

985 Workshop in Experimental Economics (3:3:0) Prerequisites: ECON 885, 886. Designed for graduate students who have taken Experimental Economics and Economic Systems Design and are applying experimental methods to their own or collaborative research projects.

998 Doctoral Dissertation Proposal Research. Research on prospective dissertation topic. For students who have completed course work but have not yet advanced to candidacy. Graded S/NC.

999 Doctoral Dissertation Research (variable credit) Prerequisites: admission to PhD economics program, and permission of dissertation advisor. Research on approved dissertation topic under direction of dissertation committee. May be repeated; 24 credits may be applied to doctoral degree requirement. Graded S/NC.

Education (EDUC)

Graduate School of Education

203 Human Disabilities in American Culture (3:3:0) Provides a perspective in human disabilities in American culture through awareness, historical and political implications, and technological applications. Demonstrations, discussions, and explorations of this culture by age groups, professions, and life domains will be included.

300 Introduction to Teaching (3:3:0) Introduction to educational issues; not applicable in graduate-level teacher education programs. Examines roles of teacher, nature of American schools, and potential contributions of students. Requires school-based field experience during course.
301 Educationally Diverse Populations: Handicapped, Gifted, Multicultural (3:3:0) Introduction to educational issues; not applicable in graduate-level teacher education programs. Introduces psychological, sociological, educational, and physical aspects of diverse populations in today’s schools for early and middle education. Emphasizes litigation and legislation pertaining to education of diverse populations. Requires school-based field experience during course.

302 Human Growth and Development (3:3:0) Introduction to educational issues; not applicable in graduate-level teacher education programs. Examines human development through life span with special emphasis on cognitive, language, physical, social, and emotional development of children. Emphasizes contemporary theories of human development and their relevance to educational practice. Requires school-based field experience during course.

303 Politics of American Education (3:3:0) Focus on the study of the American political system. Designed for students studying the American political system and students interested in careers in education. Explores how interactions between various levels and branches of government affect education.

372 Human Development, Learning, and Teaching (3:3:0) Explores processes that influence intellectual, social, emotional, moral, ethical, and physical development of middle and high school students. Examines research and theories for understanding learning process. School-based field experience required.

400 In-Service Educational Development (1–6:1-6:0) Prerequisite: employment in professional capacity by sponsoring division or agency. Offered at request of school division or other educational agency. Content varies; may be repeated for credit.

415 Student Teaching in Physical Education (12:0:12) See PHED 415.

418 Student Teaching in Music Education (6:0:6:0) Prerequisite: completion of requirements for admission to music education concentration. Provides intensive, supervised clinical experience in approved Virginia schools, and supplemental course work appropriate to student’s area of concentration (vocal and choral or instrumental). Experiences are in elementary or secondary school settings.

500 In-Service Educational Development (1–6:1-6:0) Prerequisite: employment in professional capacity by sponsoring division or agency. Offered at request of school division or other educational agency. Content varies; may be repeated for credit.

511 Introduction to Education in International Schools (3:3:0) Explores structure and variations of international schools. Includes analysis of human growth and development, overview of educational psychology, and introduction to using technology across curriculum.

512 Teaching Elementary Social Studies in International Schools (3:3:0) Focuses on translation of knowledge and data-gathering processes from social sciences into appropriate and meaningful K–8 social studies experiences. Develops understanding of aims and methodologies of history, geography, government and political science, sociology, anthropology, and psychology.

513 Teaching Elementary Math in International Schools (3:3:0) Presents topics in school mathematics with particular emphasis on developing common K–8 strands for application in international schools. Focuses on exploring, verifying, and explaining concepts using concrete materials.

514 Teaching Elementary Science in International Schools (3:3:0) Covers theory and practices of effective teaching of K–8 science in international schools. Uses laboratory and discovery techniques to design essential science components and integrate them with other disciplines. Introduces design and implementation of activities for developing concepts, solving problems, and strengthening thinking skills in K–8 science.

516 Language Across the Elementary International School Curriculum (3:3:0) Introduces current methods of teaching integrated language arts in elementary and middle school settings (K–8). Includes language and literacy development, second language acquisition, reading and writing in content areas, and children’s literature. International focus considers needs of second-language learners in regular classroom settings.

520 Elementary Curriculum, Instruction, and Assessment in International Schools (3:3:0) Addresses interrelationship of instruction, curriculum, and assessment in international schools. Includes review of research and effective practice.

539 Human Development and Learning PK–12 (3:3:0) Provides practicing teachers with foundations of psychological, theoretical, research, and professional practice relating to development and learning in inclusive PK–12 classroom settings. School-based field experience required.

542 Foundations of Education (3:3:0) Prerequisites: admission into elementary education graduate program; must be taken in programmatic sequence. Examines the historical, philosophical, and sociological foundations of education as they relate to elementary schools, with a particular emphasis on teaching a culturally diverse population.
Students will develop an understanding of the relationship between society and education.

543 Children, Family, Culture, and Schools, 4–12 Year Olds (3:3:0) Prerequisite: admission to elementary education licensure program. Examines child and family development and ways children, families, schools, and communities interrelate. Links children’s developing physical, social, emotional, and cognitive abilities to planning curriculum and developing instructional strategies. Requires school-based field experience.

546 Integrating Technology in Elementary Classrooms: Literacy (1:1:0) Prerequisite: admission into elementary education graduate program; corequisite: EDCI 556. Studies the development and integration of technology in the Elementary Education Literacy curriculum.

547 Integrating Technology in Elementary Classrooms: Mathematics (1:1:0) Prerequisite: admission into elementary education graduate program; corequisite: EDCI 552. Studies the development and integration of technology in the Elementary Education Mathematics curriculum.

548 Integrating Technology in Elementary Classrooms: Social Studies and Fine Arts (1:1:0) Prerequisite: admission into elementary education graduate program; corequisite: EDCI 554. Studies the development and integration of technology in the Elementary Education Social Studies and Fine Arts curriculum.

559 Research and Assessment in Elementary Education (3:3:0) Prerequisites: admission into elementary education graduate program; capstone course for degree must be taken last in programmatic sequence. Provides teacher candidates understanding of research paradigms using systematic evidence to improve practice and further skills at assessment of learning outcomes. Emphasizes linking research and practice, making instructional decisions based on systematically collected data.

597 Special Topics in Education (1–6:1–6:0) Prerequisite: admission to program in Graduate School of Education. Provides advanced study on selected topic or emerging issue in American or international education. May be repeated for credit with GSED permission.

598 Directed Reading, Research, and Individual Projects (1–6:1–6:0) Prerequisites: admission to degree program, and permission of dean. Presents various subjects and projects, principally by directed study, discussion, research, and participation under supervision of graduate faculty member. May be repeated for up to 12 credits.

599 Thesis (6:6:0) Prerequisite: EDRS 590. Study of problem of significant interest to student using accepted research methods and under supervision of graduate faculty member.

600 Workshop in Education (1–6:1–6:0) Offers full-time workshops and weekend seminars on selected topics in education and education tour seminars. May be repeated for credit.

606 Education and Culture (3:3:0) Uses cultural inquiry process (CIP) and web site to acquire cultural, social, and language-related perspectives on educational processes; and teaches skills to analyze educational settings and expand strategies to address puzzles in students’ own practice.

611 Cultural Issues in Second Language Acquisition (3:3:0) Prerequisite: admission to TESL or bilingual or multicultural education program, doctoral status, or permission of instructor. Explores impact of linguistic and cultural diversity among students in teaching of second language across curriculum. Draws on theoretical foundations in second language acquisition, cross-cultural communication, socio- and psycholinguistics, and educational anthropology.

612 Inquiry into Practice (2:2:0) Provides experience using research skills to foster systematic and thoughtful inquiry into classroom practice. Explores relevant classroom practice issues through critical writing, action, and research. Emphasizes cultural diversity and gender issues in research.

613 How Students Learn (3:3:0) Advanced course in study of learning based on research and theory from different disciplines. Focuses on increasing students’ learning through study of different learning systems, and understanding each learner in context of learning process itself.

614 Designing and Assessing Teaching and Learning (2:2:0) Explores design and development of curricular, pedagogical, and assessment strategies responsive to needs and interests of students. Investigates factors that affect teaching and learning, and examines multiple ways of knowing that teachers bring to classrooms.

615 Educational Change (2:2:0) Explores influences on educational change at classroom, school, community, state, and national levels. Investigates implications of factors and influences that affect educational change. Analyzes influences and factors, and involves students in reflecting on their own experiences.

621 Teaching and Learning in the International Baccalaureate Primary Years Program (3:3:0) Prerequisites: admission to GSE, enrollment in FAST TRAIN initial licensure program or permission of instructor. Focuses on principles and practices of Primary Years Program (PYP) of the International Baccalaureate (IBO), organized around four areas of inquiry: curriculum processes, teaching and learning, assessment, and professional learning. Final course in preparation for IBO Practitioner Award.

622 Curriculum Development across IB Programs (3:3:0) Prerequisites: admission to GSE, enrollment in FASTTRAIN IB certificate program, and completion of EDUC 621, or permission of the instructor. Explores the development of practical knowledge about the design and structure of the IB programs’ curricula. Provides a foundation for understanding how the programs are implemented and how student learning developed within them is assessed.

623 Models and Strategies for Teaching and Learning in IB Schools (3:3:0) Prerequisites: admission to GSE, enrollment in FAST TRAIN IB certificate program, and completion of EDUC 621, or permission of the instructor. Focuses on the development of the capacity of teachers in IB schools to adopt appropriate teaching strategies and techniques instrumental in ensuring program learning outcomes are achieved. Furthermore, participants develop a deep understanding of the critical relationship between teaching and learning.

624 Assessment and Learning in IB Schools (3:3:0) Prerequisites: admission to GSE, enrollment in FAST TRAIN IB certificate program, and completion of EDUC 621, or permission of instructor. Explores the essential role of assessment in teaching IB learners. Addresses formative and summative assessment practices as an integral part of the IB
626 Inquiry into Action: IB Teachers, Learners, and Schools (3:3:0) Prerequisites: admission to GSE, enrollment in FAST TRAIN IB certificate program, and completion of EDUC 621, or permission of the instructor. Uses the action research and qualitative process to help educational practitioners plan and complete an action research study related to IB learners, teachers, or schools. Furthermore, the course examines the social, cultural, and ethical issues of conducting research with students.

627 Contemporary Issues and Trends in IB (3:3:0) Prerequisites: admission to GSE, enrollment in FAST TRAIN IB certificate program, and completion of EDUC 621, or permission of the instructor. Focuses on current IB research, trends, and issues as well as international, national, and state/provincial legislation concerning schools and the potential impact on IB schools. Participants are prepared as leaders and advocates for IB programs and their students.

634 The Role of the School Library Media Specialist (3:3:0) Introduces basic concepts of library science, and professional responsibilities and ethical standards of library media specialist. Addresses this role as instructional partner and resource for students and staff.

640 Selection and Utilization of Library Media Materials and Equipment, Including Technology (3:3:0) Introduces prospective library-media specialists to various uses of technology in library setting, and elements involved in media collection development.

641 Reference and Bibliography (3:3:0) Covers library reference process, and bibliographic tools to meet needs of library patrons seeking information.

642 Organization and Technical Processing of Materials (3:3:0) Emphasizes application of basic cataloging principles in bibliographic description of print and nonprint materials. Students develop procedures for organizing, cataloguing, and maintaining media collection using technological support.

643 Organization Administration and Evaluation of the School Library Media Center (3:3:0) Develops skills to implement effective school library media program. Focuses on management principles, interpersonal skills, and lifelong learning skills in relation to evaluating services, collection development, and public relations for school libraries.

644 Production of Media and Instructional Materials (3:3:0) Provides guidance and practice with available audio-visual and computer-based technology to plan, produce, and present instructional materials.

645 Literature for Young Adults (3:3:0) Provides in-depth knowledge of young adult literature, and ability to relate that knowledge to library programs. Requires extensive reading of young adult literature.

646 Literature for Children (3:3:0) Develop critical abilities to select and use literature for children. Focuses on selecting materials to support curriculum and promote reading.

670 The Culture of Teaching (3:3:0) Prerequisite: admission to secondary education program; corequisite: initial methods course. Explores roles, responsibilities, and realities of teaching in secondary schools. Examines teaching in context of contemporary educational issues, legal matters, diverse and exceptional learners, classroom management, and professional practices.

671 Schools and Culture (3:3:0) Prerequisites: initial methods course and EDUC 670. Focuses on relationship between schools and communities they serve. Examines historical roots of contemporary educational practice, and examines important directions defined by contemporary school-reform efforts.

672 Human Development and Learning: Secondary Education (3:3:0) Explores developmental issues associated with middle and high school students, and theories that provide basis for understanding learning process. Addresses implications for designing instruction and curriculum.

674 Assessing Learning and Teaching in the Secondary School Classroom (3:3:0) Supports beginning teachers' development and design of assessment practices for promoting student learning. Focuses on individual differences and classroom, teacher, school, and cultural factors that impact assessment; different types and purposes of assessment; and relationship of assessment to national and state standards.

675 Research in Secondary Education (3:3:0) This capstone class of the MEd program should be taken last. The portfolio is submitted during the semester the candidate is enrolled in EDUC 675. Helps beginning teachers become more effective by critiquing various research paradigms, reviewing the research literature, and systematically collecting and interpreting evidence to improve practice. Emphasizes linking evidence of student learning to make informed instructional decisions.

695/ENGL 695 Northern Virginia Writing Project-Service Program (1–3:1–3:0) Prerequisite: admission to graduate program, or permission of dean. Offered at request of school division or other educational agency. Content varies. May be repeated with permission of department, but no more than 6 credits in EDUC 695, 695, or 699 may be applied toward master’s degree.

697/ENGL 697 Theory of Composition (3:3:0) Prerequisites: ENGL 615 and 685, or equivalent. Acquaints classroom teachers with current theory relating to writing and teaching composition. Focuses on making explicit participants' theories, reading works of leading theorists, and developing statement describing implications of theoretical consistency in teaching writing.

751 Mentoring/Supervising Intern Teachers and Mentor Teacher Career Development (3:3:0) Examines multiple roles of teachers as they mentor and supervise intern teachers in schools. Covers career development, leadership, and instructional roles and strategies. Designed to assist intern teachers in their first year, and provide quality career and staff development to their mentors.

797 Advanced Topics in Education (1–6:1–6:0) Advanced study of selected topics in education for students preparing for doctoral studies or who have been admitted to the PhD program in education. May be repeated for credit with GSED approval.

800 Ways of Knowing (3:3:0) Prerequisite: admission to PhD program. Provides understanding of characteristic ways of knowing in various liberal arts disciplines while examining subject matter, scope, key concepts, principles, methods, and theories. Analyzes philosophical traditions underlying
802 Leadership Seminar (3:3:0) Prerequisite: admission to PhD program. Intensive study of leadership, emphasizing decision and change processes, and assessment and development of leadership skills. Required course during first semester of study in the program.

805 Doctoral Seminar in Education (1:1:0) Prerequisite: admission to PhD program. Covers selected topics in education. Students, faculty members, and scholars discuss current research interests and ideas.

850 The Study of Teaching (3:3:0) Prerequisite: EDRS 810. Explores the history and development of the search for teaching effectiveness. The course will trace the various definitions of effectiveness and the methods created to assess effectiveness.

851 Research on Teacher Education (3:3:0) Prerequisite: EDRS 810. Explores the history and development of the search for effectiveness in the preparation of preservice teachers and the continuing professional development of practicing teachers. The students will examine the substance and gaps in the study of the education of educators.

853 World Perspectives of Teacher Education (3:3:0) Prerequisite: admission to the doctoral program. Focuses on the cross-cultural analysis of current U.S. and internationally based teacher preparation and continuing professional development pedagogical models, policy reforms, and their historical contexts.

870 Education Policy: Process, Context, and Politics (3:3:0) Prerequisite: admission to PhD in education program, or permission of instructor. Examines public policy decision-making in education at local, state, and national levels, and its impact on education institutions, students, and public. Focuses on government entities’ authority over education decision-making, and resolution of competing policy arguments in political arena.

871 Advanced Policy Issues in Education (3:3:0) Prerequisite: EDUC 870 or equivalent. In-depth analysis of selected education policy issues. Focuses on issue interactions and education-related policy actions by different levels of government.

872 Social Science Research and Education Policy (3:3:0) Prerequisites: admission to PhD program, and EDUC 870 and 871; or equivalent doctoral-level policy course work. Focuses on research base used to support education policy actions. Focuses on analyzing strength of this research.

873 Education Policy: Comparative and International Perspectives (3:3:0) Prerequisites or corequisites: EDUC 870 and admission to PhD program. Using interdisciplinary approach, addresses education policy issues that transcend national boundaries and have implications for educators in fostering social justice and global awareness.

874 The Achievement Gap (3:3:0) Prerequisite or corequisite: admission to PhD program or permission of instructor. Focuses on achievement gap in schools. Students research and analyze gaps in student achievement related to race and ethnicity, limited English proficiency, family background, gender, poverty, and ableism, and practices designed to close the gap.

875 Contemporary and Emerging Issues in Education Policy (3:3:0) Prerequisites or corequisites: EDUC 870 and admission to PhD program. Focuses on identifying and analyzing factors that promote new initiatives in education policy agenda. Attention given to nontraditional sources of education policy initiatives.

876 Teacher Development and Education Policy (3:3:0) Prerequisite: EDUC 870 or permission of instructor. Focuses on the impact of policy actions at the local, state, and national levels on teacher preparation and continuing professional development.

880 Introduction to International Education (3:3:0) Prerequisite or corequisite: admission to PhD in education program or permission of instructor. Examines educational systems throughout the world and relationship to social justice; equity; conflict; culture; economic, political, and social development; leadership and governance; language policy; and institutional development.

881 Seminar in Bilingual Education: Policy (3:3:0) Prerequisite: admission to PhD program. Examines historical development of education for language minority students in United States, including federal and state legislation and court decisions. Explores policy issues regarding administrative program models, instructional approaches, curricular reform, and assessment policies for language minority students developed in response to legal mandates, legislative decisions, and school reform movement.

882 Seminar in Bilingualism and Second Language Acquisition: Theory and Research (3:3:0) Prerequisite: admission to PhD program, or permission of instructor. Examines theoretical foundations of bilingual and ESL education through focus on linguistics, anthropology, sociology, psychology, and education research addressing language minority students.

890 Doctoral Internship in Education (1–6: 1–6:0) Prerequisites: admission to PhD program, and prior approval of advisor and PhD director. Requires 100 hours of on-site internship completed over at least a five-week period. Interns work with appropriate staff member in cooperating school, school system, or other educational institution, agency, or setting. Up to 6 credits of EDUC 890 may be applied toward PhD degree requirements.

892 Social Justice and Equity in International Education (3:3:0) Prerequisite or corequisite: EDUC 895. Examines ideological, cultural, and systemic structural inequities in various educational settings at national and international levels. Focuses on educational practices that promote equity and social change throughout the world.

893 Seminar in Educational Anthropology (3:3:0) Prerequisite: admission to PhD program, or permission of instructor. Examines theories and research from educational anthropology and educational sociology to clarify and address contemporary educational issues and concerns. Focuses on U.S. public schools, with comparative materials from other educational settings and societies.

894 Seminar in Multicultural Education (3:3:0) Examines knowledge base, policy issues, and curricular and instructional features of multicultural education in United States and other countries.

895 Seminar in Emerging Issues of Education (3:3:0) Prerequisite: successful completion of EDUC 800. Study of...
selected emerging issues or problems in education. Students engage in research, study, discussion, and writing. May be repeated for credit. Up to 6 hours of 895 course work may be applied to PhD requirements.

897 Independent Study for the Doctor of Philosophy in Education (1–6:1–6:0) Prerequisites: admission to PhD program and prior approval of advisor and PhD director. Structured learning experience to extend and develop skills and knowledge relative to field of professional expertise.

994 Advanced Internship in Education (3:3:0) Prerequisites: admission to PhD program, and prior approval of advisor and PhD director. Internship in setting related to student’s major area of study. Requires minimum of 100 hours completed over at least a five-week period. Each intern works with appropriate staff member in cooperating school, school system, or other educational institution or agency. Internship must be in setting that differs from regular employment.

998 Doctoral Dissertation Proposal (1–3:1–3:0) Prerequisites: admission to candidacy in PhD program, successful completion of doctoral qualifying exam; and EDRS 810, 811, and 812 or their equivalents.

999 Doctoral Dissertation Research (1–9:1–9:0) Prerequisites: admission to candidacy in PhD program and faculty approval of dissertation proposal. Provides continued faculty assistance on individual basis to complete dissertation planned in EDUC 998 and initiate new projects. May be repeated for credit. No more than 11 credits of EDUC 998 and 999 may be applied toward minimum PhD degree requirements.

Education Leadership (EDLE)

Graduate School of Education

412 Schools and the Law (3:3:0) Prerequisite: EDUC 300. Provides an extensive overview of legal and ethical issues in schools. In the course, students will review and analyze key legal and ethical principles, read court decisions, and examine federal and state statutes.

420 Organization and Management of Schools (3:3:0) Prerequisite: EDUC 300. Studies basic issues in leadership, organization, and governance of schools. Explores theories and models of leadership how leaders conceptualize school organization, with an emphasis on distributed leadership in professional environments, systems thinking, and organizational change.

500 In-Service Educational Development (1–6:1–6:0) Prerequisite: employment in professional capacity by sponsoring division or agency. Offered at request of school division or other educational agency. Content varies; may be repeated for credit.

597 Special Topics in Education (1–6:1–6:0) Prerequisite: admission to program in GSE. Provides advanced study on selected topic or emerging issue in American or international education. May be repeated for credit with GSE permission.

598 Directed Reading, Research, and Individual Projects (1–6:1–6:0) Prerequisites: admission to degree program and permission of dean. Presents various subjects and projects, principally by directed study, discussion, research, and participation under supervision of graduate faculty member. May be repeated for up to 12 credits.

600 Workshop in Education (1–6:1–6:0) Offers full-time workshops and weekend seminars on selected topics in education and education tour seminars. May be repeated for credit.

610 Leading Schools and Communities (3:3:0) Prerequisites: admission to the EDLE program, EDLE 620, 690, 612, 614, 616, and 618; corequisite: EDLE 791. Examines critical functions of leadership and management, complex decision making of school ejecutives, and constructive relationships between schools and communities. Studies historical, philosophical, and sociological foundations of American education, and impact of organizational structure on reform and student achievement. Emphasizes leadership skill development.

612 Education Law (3:3:0) Prerequisites: admission to the EDLE program, EDLE 620 and 690; corequisite: EDLE 791. Provides legal foundations of U.S. public schools. Examines general principles of statutory and case law, and applies judicial decisions to educational environments. Examines legal responsibilities, constraints, and opportunities of public school officials. Includes component of special education law.

614 Managing Financial and Human Resources (3:3:0) Prerequisites: admission to the EDLE program, EDLE 620, 690, and 612; Corequisite: EDLE 791. Explores basic functions in financial and human resource management. Examines legalities, ethics, and politics of resource procurement and allocation. Provides experiences to help students better understand tasks typically performed by school leaders.

616 Curriculum Development and Evaluation (3:3:0) Prerequisites: admission to the EDLE program, EDLE 620, 690, 612, and 614; corequisite: EDLE 791. Examines relationship of written, taught, and tested curriculum, and identifies critical leadership decisions that can positively impact student achievement. Identifies components of effective curriculum guides, and constructs guide for personal use.

618 Supervision and Evaluation of Instruction (3:3:0) Prerequisites: admission to the EDLE program, EDLE 620, 690, 612, 614, and 616; corequisite: EDLE 791. Provides theoretical and practical overviews of supervision and evaluation of instruction. Introduces supervision and inquiry into current issues, and best practices in supervision. Uses practical, interactive exercises to develop skills in clinical process and developmental approach to supervision.

620 Organizational Theory and Leadership (3:3:0) Studies basic organizational theories and models of leadership and management. Emphasizes shared leadership in professional environments, communication skills, systems thinking, and personal and organizational change. Bridges theory to practical applications in educational settings.

634 Contemporary Issues in Education Leadership (3:3:0) Prerequisite: admission to program. Examines current and emerging issues and trends impacting education. Includes demographic shifts; globalization; technology; data-based decision making; inclusion of diverse learners in American schools; and recent research on student achievement when influenced by race, gender, and poverty.

636 Adult Motivation and Conflict Management in Education Settings: A Case Study Approach (3:3:0) Prerequisite: admission to program. Uses case studies and
simulations to examine conflict mediation and resolution skills, and safety and security issues. Focuses on character and ethics education in schools, coaching and mentoring, and adult motivation to support positive behaviors in work settings.

690 Using Research to Lead School Improvement (3:3:0)  
Prerequisite: admission to education leadership program. Develops skills, insights, and understanding of how leaders use research to improve schools, with emphasis on the use of assessment and research data to identify school improvement needs and design school improvement projects.

791 Internship in Educational Leadership (3:3:0)  
Prerequisites: admission to the EDLE program and EDLE 620; corequisite: EDLE 690. Course must be taken in second term of program. Offers wide range of practical experiences and professional challenges in authentic educational settings. Activities emphasize strategic, instructional, organizational, political, and community leadership.

797 Advanced Topics in Education (1–9:1–9:0) Advanced study of selected topics in education for students preparing for doctoral studies or who have been admitted to the PhD program in education. May be repeated for credit with CEHD approval.

801 Foundations of Education Leadership: History and Leadership (3:3:0) Prerequisites: admission to PhD in education program. May be taken as corequisite with EDLE 802. First in three-course sequence. Emphasizes historical foundations of U.S. education and evolution of school, district, and state leadership. Students begin work on analytical literature review.

802 Foundations of Education Leadership: Ethics, Philosophy, and Law (3:3:0) Prerequisites: EDLE 801. May be taken as corequisite with EDLE 801. Second in three-course sequence. Emphasizes ethical, philosophical, and legal foundations of U.S. education; and the evolution of school, district, and state leadership. Students continue work on analytical literature review.

815 Conceptual Frameworks in Education Leadership (3:3:0) Prerequisite or corequisite: admission to PhD in education program, or permission of instructor. Introduces three different disciplinary perspectives on education leadership, and helps identify and articulate different conceptual frameworks. Major focus is designing a conceptual framework that informs research questions.

895 Emerging Issues in Administration and Supervision (3:3:0) Prerequisite: admission to PhD program, or permission of instructor. Covers selected emerging issues in educational leadership. Students engage in research, study, discussion, and writing about various topics selected for study.
qualitative data collection and analysis procedures in educational research, including ethnographic and other field-based methods, and unobtrusive measures. Emphases vary depending on student interests and needs.

820 Evaluation Methods for Educational Programs and Curricula (3:3:0) Prerequisite: successful completion of EDRS 810, or permission of instructor. Prior completion of EDRS 811 and 812 helpful but not required. Explores development and types of current systems and models for evaluating educational programs and curricula. Emphasizes evaluation needs and problems of public and private elementary and secondary schools, and colleges and universities. Also considers needs of government agencies, industry, and health-related organizations.

821 Advanced Applications of Quantitative Methods (3:3:0) Prerequisites: EDRS 810 and 811. Advanced study of applications of quantitative methods in educational research, reinforcing and building on concepts and skills acquired in EDRS 811. Uses modular approach, and provides advanced study of techniques appropriate to survey research, group-experimental and quasiexperimental research, selected multivariate procedures and factor analysis, and quantitative synthesis (meta-analysis) of research. Combines text reading assignments, critiques, and discussion of relevant journal articles; and application activities.

822 Advanced Applications of Qualitative Methods (3:3:0) Prerequisites: EDRS 810 and 812. Advanced seminar devoted to study of current topics in qualitative research. Deals with cutting-edge information on selected advanced topics in qualitative research, and provides opportunities to apply new skills and knowledge to projects related to students’ interests.

823 Advanced Research Methods in Single Subject/Case Design (3:3:0) Prerequisites: EDRS 810, 811, and 812. Prepares students to conduct research using single subject design and single case study design. Provides understanding of salient features as well as advantages, disadvantages of these research methodologies. Students critique and analyze published research using these methodologies. Provides opportunities to apply these methodologies to research questions related to student interests.

Educational Psychology (EDEP)

Graduate School of Education

401 Introduction to Multimedia/Hypermedia (3:3:0) Provides an overview of the principles and tools used within the fields of e-Learning, instructional design and multimedia/hypermedia technologies. Students apply knowledge and skills learned by creating an e-Learning module.

402 Brain, Behavior, and Neuroimaging in Children (3:3:0) Prerequisite: at least junior standing or sophomore honors/university scholar candidate. Focus on research regarding the development of cognitive processes in children, their neurobiological substrates, and the imaging technology used to explore the functioning brain.

550 Theories of Learning and Cognition (3:3:0) Explores theoretical perspectives on learning and cognition, and relation of these theories to construction of learning environments, student motivation, classroom management, assessment, and technology to support teaching and learning.

551 Principles of Learner Motivation (3:3:0) Focuses on theories and concepts of human motivation; and examines strategies, techniques, and interventions that promote and sustain learner motivation.

601 Creativity and Cognition in the Arts and Media (3:3:0) Focuses on research on cognition, development, learning, and creativity in the visual arts and media in formal and informal educational settings.

650 High-Stakes Assessment and Accountability Systems (3:3:0) Focuses on school effectiveness, assessment tools, and accountability models on state and national levels. Explores issues and methods relevant to educational policy, standardized testing, and classroom assessment.

651 Test Design and Interpretation (3:3:0) Focuses on test design and interpretation including issues regarding test development, administration, interpretation, and communication of results. Addresses issues in educational policy, philosophy, and ethics pertaining to assessment and testing.

652 Process of Learning and Development (3:3:0) Prerequisite: EDEP 550. Explores different theoretical perspectives on learning and development. Focuses on historical and contemporary theories of learning and cognitive development, and examines current research and its application in educational settings.

653 Culture and Intelligence (3:3:0) Explores different theoretical perspectives on intelligence as they relate to individual and cultural differences. Examines issues related to heritability and measures of intelligence, and intelligence in the cultural context.

654 Learning, Motivation, and Self-Regulation (3:3:0) Prerequisite: EDUC 800, 805; EDLE 802, and EDRS 810. Focuses on foundational educational psychology theories including cognitive, social, and constructivist themes and their implications for improving instructional practices and learning at all developmental levels and content areas.

820 Teaching, Learning, and Cognition (3:3:0). Prerequisites: EDUC 800, 805; EDLE 802, and EDRS 810. Examines processes by which social, cultural, and linguistic variables influence human behavior. Focuses on differences within and between cultural groups related to student’s learning and achievement in educational settings.

823 Research Project in Educational Psychology: Sequence I (3:3:0). Prerequisites: EDEP 820, 821, 822. Focuses on development and implementation of research studies in educational psychology. Students acquire skills regarding developing research questions and a sound methodological approach for their study. First in two-course sequence.
824 Research Project in Educational Psychology: Sequence II (3:3:0). Prerequisites: EDEP 823. Focuses on development and implementation of research studies in educational psychology. Students acquire skills regarding collecting, analyzing, and interpreting data. Second in two-course sequence.

Electrical and Computer Engineering (ECE)

101 Information Technology for Electrical Engineers (3:3:1) Introduces fundamental concepts in information technology that provide technical underpinning for state-of-the-art applications. Presents fundamental engineering skills and perspective on range of information technology through lectures and hands-on experiments. Discusses ethics, professionalism, historical development, and social implications of IT.

201 Introduction to Signal Analysis (3:3:1) Prerequisite: grade of C or better in MATH 113. Provides technically more rigorous introduction to problems and tools commonly encountered by electrical engineers. Introduces mathematical modeling of engineering problems and their solutions. Introduces standard software packages for electrical engineering as tools to simulate engineering problems on computer. Mathematical and computer models are related to physical reality provided by hands-on experiments. f,s

220 Signals and Systems I (3:3:1) Prerequisite: C or better in ECE 201 or equivalent; corequisites: MATH 203, 214. First of two-semester sequence of courses providing mathematical background for many ECE courses taken in junior, senior years. Introduces methods of representing continuous-time signals and systems, and interaction between signals and systems. Covers analysis of signals and systems via differential equations and transform methods; Laplace and Fourier transforms as convenient analysis tools; frequency response of systems; and stability of systems in time and frequency domains. Presents application examples from communications, circuits, control, and signal processing. f,s,sum

280 Electric Circuit Analysis (5:4:2) Prerequisite: grade of C or better in PHYS 260 and 261; corequisite: ECE 220 must be taken concurrently or before ECE 280. Builds on simple circuit concepts introduced in PHYS 260. Includes circuit analysis using superposition, equivalent circuits, and transient and steady state analysis of RL, RC, and RLC circuits; applications of Laplace transform in circuit analysis; sinusoidal excitations and phasors; resonance; filters; AC steady-state analysis; coupled coils; and three-phase circuits. Includes lab demonstrating and investigating circuit analysis concepts. f,s,sum

301 Digital Electronics (3:2:2) Not intended for those majoring in electrical or computer engineering. Introduces digital systems, circuits, and computers. Topics include binary systems and codes; digital logic gates and circuits; encoding and multiplexing; shift registers, counters, and elementary computer architecture/MIPS computer organization; and assembly language, including instruction format, data definition, load/store/arithemtic instructions, and addressing. Includes laboratory. f,s

305 Electromagnetic Theory (3:3:0) Prerequisites: grade of C or better in PHYS 260 and MATH 214. Static and time varying electric and magnetic fields, dielectrics, magnetization, Maxwell’s Equations, and introduction to transmission lines. Course uses vector calculus and algebra of complex numbers. f,s

320 Signals and Systems II (3:3:1) Prerequisite: grade of C or better in ECE 220 and MATH 203. Second of two-semester sequence providing mathematical background for many ECE courses taken in junior, senior years. Provides methods of representing and analyzing discrete-time signals and systems. Studies effects of converting from continuous-time to discrete time, and presents Z-transform as convenient analysis tool. Emphasizes powerful concept of frequency response of systems developed in first semester. Studies random signals in continuous and discrete time. Presents application examples from communications, circuits, control, and signal processing. f,s,sum

331 Digital System Design (3:3:0) Corequisites: ECE 280 and 332. ECE 332 should be taken concurrently with ECE 331. Credit may not be received for ECE 301 and 331. Covers principles of digital logic and digital system design and implementation in VHDL. Topics include number systems; Boolean algebra; analysis, design, and minimization of combinational logic circuits; analysis and design of synchronous and asynchronous finite state machines; and introduction to VHDL and behavioral modeling of combinational and sequential circuits. f,s

332 Digital Electronics and Logic Design Lab (1:0:3) Prerequisite: PHYS 261 or 265, or permission of instructor; corequisite: ECE 331. Lab associated with ECE 331. f,s,sum

333 Linear Electronics I (3:3:0) Prerequisite: grade of C or better in ECE 280. ECE 334 is usually taken concurrently with ECE 333. Principles of operation and application of electron devices and linear circuits. Topics include semiconductor properties, diodes, bipolar and field effect transistors, biasing, amplifiers, frequency response, operational amplifiers, and analog design. f,s,sum

334 Linear Electronics Lab I (1:0:3) Prerequisite: PHYS 261 or 265, or permission of instructor; corequisite: ECE 333. Lab associated with ECE 333. f,s,sum

410 Principles of Discrete-Time Signal Processing (3:3:0) Prerequisite: ECE 320 with grade of C or better. Introduces fundamental concepts of digital signal processing. Emphasis on the theoretical and numerical tools used for frequency domain analysis of sampled signals. Topics covered include sampling, the discrete Fourier transform, fast transform algorithms, spectral analysis, and digital filtering.

421/SYST 421 Classical Systems and Control Theory (3:3:0) Prerequisite: grade of C or better in ECE 220, or permission of instructor. Introduces analysis and synthesis of feedback systems, including functional description of linear and nonlinear systems, block diagrams and signal flow graphs; state-space representation of dynamical systems,
frequency response methods, Root Locus, Nyquist, and other stability criteria; performance indices and error criteria; and applications to mechanical and electromechanical control systems.

422 Digital Control Systems (3:3:0) Prerequisite: grade of C or better in ECE 320 and 421. Introduces analysis, design of digital control systems, Z-transform, discrete linear systems, frequency domain, and state variable techniques. Discusses use of microcomputers in control systems.

429 Control Systems Lab (1:0:3) Prerequisite: grade of C or better in ECE 421. Laboratory experiments for topics in control systems analysis, design, and implementation with emphasis on using microcomputers.

430 Principles of Semiconductor Devices (3:3:0) Prerequisites: MATH 214, ECE 305, and a grade of C or better in ECE 333; or permission of instructor. Introduces solid state physics and its application to semiconductors and semiconductor devices. Topics include band theory, doping, p-n junctions, diffusion theory, low-frequency circuits, devices including bipolar transistor, MOSFET, CMOS, and photo transistors.

431 Digital Circuit Design (3:3:0) Prerequisites: grade of C or better in ECE 331 and 333. Analysis and design of discrete and integrated switching circuits. Topics include transient characteristics of diodes, bipolar, and field-effect transistors; MOS and bipolar inverters; nonregenerative and regenerative circuits; TTL, ECL, IIL, NMOS, and CMOS technologies; semiconductor memories; VLSI design principles; and SPICE circuit analysis.

433 Linear Electronics II (3:3:0) Prerequisite: grade of C or better in ECE 333. Second course in linear electronics. Covers differential amplifiers, feedback circuits, power amplifiers, feedback amplifier frequency response, analog integrated circuits, operational amplifier systems, oscillators, wide band and microwave amplifiers, and computer-aided design.

434 Linear Electronics II Laboratory (1:0:3) Prerequisite: ECE 334; corequisite: ECE 433. Second lab course in linear electronics involving analysis and design of topics listed in ECE 433.

435 Digital Circuit Design Laboratory (1:0:3) Prerequisite: ECE 334; corequisite: ECE 431. Lab experiments for topics covered in ECE 431.

437 Principles of Microelectronic Device Fabrication (3:2:3) Prerequisites: ECE 333 or 430, or permission of instructor. Introduces fundamentals of microelectronic semiconductor device fabrication technology. Processing steps include photolithography, oxidation, diffusion, ion-implantation, chemical vapor deposition, ohmic contact metallization, interconnects, packaging, MOS process integration, and bipolar process integration. Laboratory project integral to course.

442 Digital Computer Design and Interfacing (3:3:0) Prerequisite: grade of C or better in ECE 445. Overview of digital computer development. Examines computer design principles, design of processors, instruction sets, memory systems, cache, interface, RISC principles, principles of pipelining and pipeline hazards, instruction-level parallelism, and superscalar and superpipelined systems. Presents overview of modern RISC-type systems.

445 Computer Organization (3:3:0) Prerequisite: grade of C or better in ECE 331. General overview of operating a digital computer. Topics include computer arithmetic, arithmetic unit, hardwired and microprogrammed control, memory, register-to-register, input-output operations, and behavioral modeling of computer organization using VHDL.

447 Single-Chip Microcomputers (4:3:3) Prerequisites: grade of C or better in CS 211 and ECE 332 and 445; and 90 credits toward electrical or computer engineering degree. Explores designing with single-chip microcomputers and microcomputer interfacing. Topics include role of microcomputers compared to microprocessors and other computers, microcomputer architecture and organization, real-time control issues, assembly language programming for control, design of control software, input/output methods, design tools, and available single-chip microcomputers. Students select project and design, and construct system including single-chip microcomputer and ancillary hardware to implement control system. Completing course with C or better satisfies university’s general education synthesis requirement.

448 FPGA and ASIC Design with VHDL (4:3:3) Prerequisite: grade of C or better in ECE 445. Practical introduction to modeling of digital systems with VHDL for logic synthesis. Overview and comprehensive analysis of design flow and tools for FPGAs and standard-cell ASICs. Discusses verification of digital systems using testbenches, prototyping boards and modern testing equipment; and illustrates VHDL-based design methodology with multiple examples from communications, control, DSP, and cryptography. Laboratory experiments create link between simulation and actual hardware implementation based on FPGA boards.

449 Computer Design Lab (1:0:3) Prerequisites: ECE 332 and 445. Laboratory course providing experience in design and fabrication of digital computer using field programmable arrays (FPGA) or other VLSI-integrated circuits. Includes specification of simple computer using VHDL; and simulation and fabrication of computer in programmable logic devices such as FPGA, PLA, and PAL. Compares simulation and hardware implementation.

450 Introduction to Robotics (3:3:0) Prerequisites: CS 112, ECE 280 and ECE 331 and either ECE 332 or ECE 303, all with grade of C or better. Introduces mobile robotic systems. Topics include overview of power systems, motors, behavior-based programming, sensors, and sensor integration. Design projects conceived, developed, implemented, and presented.

460 Communication and Information Theory (3:3:0) Prerequisites: grade of C or better in ECE 220 and STAT 346. Introduction to analog and digital communications. Topics include review of important concepts from signals and systems theory and probability theory; Gaussian processes and power spectral density; digital transmission through additive white Gaussian channels; sampling and pulse code modulation; analog signal transmission and reception using amplitude, frequency and phase modulation; and affects of noise on analog communication systems.

461 Communication Engineering Laboratory (1:0:3) Prerequisites: ECE 460 and 334. Lab experiments in analog and digital communication areas covered in ECE 460.
462 Data and Computer Communications (3:3:0) Prerequisites: STAT 344 or 346, and ECE 220, and ECE 331 or 303, all with a grade of C or better. Introduces modern data communications and computer networks. Topics include point-to-point communication links and transmission of digital information, modems, and codecs; packet switching, multiplexing, and concentrator design; multiaccess and broadcasting; local area and wide area networks; architectures and protocols for computer networks; OSI reference model and seven layers; physical interfaces and protocols; and data link control layer and network layer. Provides examples of data networks. f

463 Digital Communications Systems (3:3:0) Prerequisite: ECE 460. Introduces digital transmission systems. Topics include quantization, digital coding of analog waveforms, PCM, DPCM, DM, baseband transmission, digital modulation schemes, ASK, FSK, PSK, MSK, QAM, pulse shaping, intersymbol interference, partial response, voice-band and wideband modems, digital cable systems, regenerative repeaters, clock recovery and jitter, multipath fading, digital radio design, optimal receiver design, MAP receiver, and probability of error. f

464 Modern Filter Design (3:3:0) Prerequisite: ECE 320. Offers solution to filtering approximation problem via Butterworth, Chebyshev, Elliptic, and Bessel approaches. Covers transfer function scaling and type transformations, review of Z-transform, time and frequency domain effects of A/D and D/A conversion, and digital filter design and implementation. s

465 Computer Networking Protocols (3:3:0) Prerequisites: STAT 344 or 346, and CS 112, both with a grade of C or better. Introduces computer networking protocols and concepts, emphasizing Internet and Internet Protocol Suite. Covers computer networking protocols at application, transport, and network layers, including multimedia networking protocols, and network security and management. s

467 Network Implementation Laboratory (1:0:3) Prerequisite: ECE 462. Corequisite: ECE 463. Hands-on experience in implementing, configuring, and operating local and wide area networks in live laboratory environment equipped with modern local and wide area network devices and technologies. Students exposed to real-world computer networking scenarios including local area network implementation, asynchronous communication setup, and wide area network implementation using various protocols and technologies covering all layers of computer network protocol stack.

469 Microwave Circuit Laboratory (1:1:2) Prerequisites: ECE 205 and 334, or permission of instructor. Introduces microwave engineering laboratory techniques and measurements; and the design, fabrication, and test of microwave microstrip circuits.

491 Engineering Seminar (1:1:0) Prerequisites: 90 credits applicable to electrical engineering or computer engineering program, and COMM 100. Engineering ethics, professionalism, role of engineer in society, current topics, and employment opportunities. f,s

492 Senior Advanced Design Project I (1:1:0) Prerequisites: senior status in electrical engineering or computer engineering program, and COMM 100 and ENGL 302. Conception of senior design project and determination of feasibility of proposed project. Work includes developing preliminary design and implementation plan. f,s

493 Senior Advanced Design Project II (2:2:0) Prerequisite: ECE 492, preferably in preceding semester. Implementation of project for which preliminary work was done in ECE 492. Project includes designing and constructing hardware, writing required software, conducting experiments or studies, and testing complete system. Requires oral and written reports during project and at completion. Completing this course with a C or better satisfies university’s general education synthesis requirement. f,s

498 Independent Study in Electrical and Computer Engineering (1–3:0:0) Directed self-study of special topics of current interest in ECE. Topic must be arranged with an instructor and approved by department chair before registering. Maximum 3 credits. f,s

499 Special Topics in Electrical Engineering (1–3:0:0) Prerequisites: permission of instructor; specific prerequisite varies with nature of topic. Topics of special interest to undergraduates. May be repeated for maximum 6 credits if topics substantially differ. f,s

511 Microprocessors (3:3:0) Prerequisite: ECE 445 or equivalent. Introduces microprocessor software and hardware architecture. Includes fundamentals of microprocessor system integration, instruction set design, programming memory interfacing, input/output, direct memory access, interrupt interfacing, and microprocessor architecture evolution. Studies Intel family of microprocessors, and reviews other microprocessor families and design trends. f

513 Applied Electromagnetic Theory (3:3:0) Prerequisite: ECE 365 or equivalent. Maxwell’s Equations, electromagnetic wave propagation, wave guides, transmission lines, radiation, and antennas. f

520 Applications of Analog and Digital Integrated Circuits (3:3:0) Prerequisites: ECE 433 and 431, or permission of instructor. Studies analog and digital integrated circuits mainly from communications applications point of view. Covers analog, digital, and mixed (analog/digital) building block circuits used in system design including operational amplifiers, comparators, voltage regulators, video amplifiers, oscillators, modulators, phase-locked loops, multiplexers, active filters, A/D and D/A converters, and optoelectronic circuits.

521 Modern Systems Theory (3:3:0) Prerequisite: ECE 320 or equivalent. Introduces linear systems theory and design of linear feedback control systems. Reviews linear algebra, state variables, state space description of dynamic systems, analysis of continuous-time and discrete-time linear systems, controllability and observability of linear systems, and stability theory. f,s

528 Introduction to Random Processes in Electrical and Computer Engineering (3:3:0) Prerequisites: ECE 220 and STAT 346, or permission of instructor. Probability and random processes are fundamental to communications, control, signal processing, and computer networks. Provides basic theory and important applications. Topics include probability concepts and axioms; stationarity and ergodicity; random variables and their functions; vectors; expectation and variance; conditional expectation; moment generating and characteristic functions; random processes such as white noise and Gaussian; autocorrelation and power spectral
535 Digital Signal Processing (3:3:0) Prerequisites: ECE 320 and 328, or permission of instructor. Representation analysis and design of digital signals and systems. Covers sampling and quantization, Z-transform and Discrete Fourier Transform, digital filter realizations, design techniques for recursive and nonrecursive filters, Fast Fourier Transform algorithms, and spectrum analysis. Additional topics may include adaptive filtering, homomorphic digital signal processing, digital interpolation and decimation, and VLSI signal processors.

537 Introduction to Digital Image Processing (DIP) (3:3:0) Prerequisite: graduate standing. First course in digital-image processing; introduces scanning systems, focal plane array detectors, data acquisition methods, display hardware, image preprocessing algorithms, feature extraction, and basic image processing methods. Semester-long image processing project includes utilizing modern image processing system prototyping software.

540/TCOM 500 Modern Telecommunications (3:3:0) Prerequisite: graduate standing. For students outside of the program. Cannot be applied toward degrees in electrical or computer engineering. Comprehensive overview of telecommunications including current status and future directions. Topics include review of evolution of telecommunications; voice and data services; basics of signals and noise, digital transmission, network architecture, and protocols; local area, metropolitan, and wide area networks and narrowband ISDN; asynchronous transfer mode and broadband ISDN; and satellite systems, optical communications, cellular radio, personal communication systems, and multimedia services. Uses examples of real-life networks to illustrate concepts and gain insight.

541 Computer Architectures - A Survey (3:3:0) Prerequisite: IT 212 or permission of Instructor. Survey of computer architectures. Covers basic concepts, definitions, single and multiple processor machines, data flow, computation, high-level language architecture, and current trends in computer architectures. Course designed for MS AIT students. Cannot be used for credit in MSCpE or MSEE.

542 Computer Network Architectures and Protocols (3:3:0) Prerequisites: STAT 344 or equivalent, and graduate standing in IT&E. Introduction to architectures and protocols of computer networks and concept of packet switching. Topics include ISO standard layer model, physical interfaces and protocols, data link control, multi-access techniques, packet switching, routing and flow control, network topology, data communication subsystems, error control coding, local area network, satellite packet broadcasting, packet radio, interconnection of packet-switching networks, network security and privacy, and various examples of computer networks.

545 Digital System Design with VHDL (3:3:0) Prerequisite: graduate standing. Introduction to the design of complex digital systems using hardware description languages. Emphasizes the design methodology based on the partitioning of a digital system into a datapath and control unit. Introduces a clear sequence of steps leading from specification to synthesizable, register transfer level (RTL), and fully verified HDL code. Covers VHDL for digital circuit design, including dataflow, structural, and behavioral coding styles. Introduces and illustrates the concepts of VHDL simulation, verification, synthesis, mapping, placing, routing, timing analysis and performance optimization. Requires semester-long project devoted to the design of a complex digital system using VHDL as a hardware description language and FPGA as an implementation platform.

548 Sequential Machine Theory (3:3:0) Prerequisite: ECE 331, or permission of instructor. Theoretical study of sequential machines. Topics include sets, relations and lattices, switching algebra, functional decomposition, iterative networks, representation, minimization and transformation of sequential machines, state identification, state recognizers, and linear and stochastic sequential machines.

563 Introduction to Microwave Engineering (3:3:0) Prerequisite: ECE 305, or permission of instructor. Studies propagation, storage of microwave signals. Examines transmission lines, waveguides, resonators, scattering parameters, Smith charts, measurement techniques, instrumentation, and microwave striplines and microstrips.

565 Introduction to Optical Electronics (3:3:0) Prerequisites: ECE 305 and 333. Introduces optoelectronic devices for generation, detection, and modulation of light. Topics include electro-optic modulators, gas, solid state and semiconductor lasers, photodetectors, and detector arrays.

567 Optical Fiber Communications (3:3:0) Prerequisite: ECE 565 or permission of instructor. Studies components and integration of fiber-optic transmission systems. Topics include optical fibers, signal degradation, optical sources, power launching and coupling, photodetectors, receiver circuits, link analysis, and optical measurements.

584 Semiconductor Device Fundamentals (3:3:0) Prerequisite: ECE 430 or permission of instructor. Studies principles of operation of semiconductor devices based on solid state physics. Topics include band theory of solids, intrinsic and extrinsic semiconductor properties, pn junction diode, bipolar junction transistor, Schottky diode, metal insulator semiconductor junctions, field-effect transistors, and heterostructures.

586 Digital Integrated Circuits (3:3:0) Prerequisites: ECE 331 and 430, or permission of instructor. Studies design and analysis of digital integrated circuits, emphasizing CMOS technology. Reviews MOSFET operation and SPICE modeling. Covers analysis and design of basic inverter circuits, structure and operation of combinatorial and sequential logic gates, dynamic logic circuits, chip I/O circuits, and brief introduction to VLSI methodologies.

587 Design of Analog Integrated Circuits (3:3:0) Prerequisites: ECE 333 and 430, or permission of instructor. Studies design methodologies of CMOS-based analog integrated circuits. Topics include differential amplifiers, current sources, output stages, operational amplifiers, comparators, frequency response, noise, and computer-aided design.
590 Selected Topics in Engineering (3:3:0) Prerequisite: graduate standing or permission of department. Selected topics from recent developments, and applications in various engineering disciplines. Designed to help professional engineering community keep abreast of current developments.

611 Advanced Microprocessors (3:3:0) Prerequisite: ECE 511 or permission of instructor. Covers principles of advanced 32-bit and 64-bit microprocessors. Includes microprocessor structure and architecture, pipeline hazards, instruction-level parallelism, superscalar and superpipelined execution, thread-level parallelism; and RISC principles and advantages. Offers examples of RISC-type microprocessors. Studies in detail Intel IA-32, Intel and HP IA-64, and Motorola M68000 families.

612 Real-Time Embedded Systems (3:3:0) Prerequisite: ECE 511 or permission of instructor. Study of real-time operating systems and device drivers for embedded computers. Emphasizes microprocessor systems and associated input device sampling strategies, including interrupt driven and polled I/O. Covers basic input/output operations, analog to digital conversion methods, I/O programming techniques and process, and communication control methodologies. Involves design project.

620 Optimal Control Theory (3:3:0) Prerequisite: ECE 521 or permission of instructor. Detailed treatment of optimal control theory and its applications. Topics include system dynamics and performance criteria, calculus of variations and Pontryagin’s minimum principle, computational methods in optimal control, and applications of optimal control.

624 Control Systems (3:3:0) Prerequisites: ECE 421 and 521, or permission of instructor. Analysis, design, and implementation of digital feedback control systems. Topics include discrete-time models, pole-placement, controller design methods, MIMO system decoupling, and observer design. Course may include simulation and design project.

630 Statistical Communication Theory (3:3:0) Prerequisite: ECE 528. Introduces optimum receiver design in the additive white Gaussian noise environment. Topics include efficient signal set design, modulation techniques, matched filter, correlation detector, coherent and noncoherent detections, fading and diversity channels, random amplitude and phase, diversity techniques, performance bounds of communications, and waveform communications.

633 Coding Theory (3:3:0) Prerequisite: ECE 528 or permission of instructor. Mathematics of coding groups, rings, and fields; polynomial algebra. Topics include linear block codes, generator and parity check matrices; error syndromes, binary cyclic and convolutional codes; and implementation of encoders and decoders.

635 Adaptive Signal Processing (3:3:0) Prerequisite: ECE 528. Introduces adaptive systems and adaptive signal processing. Topics include correlation functions and matrices; performance functions; search of minimum; steepest descent and Newton algorithms; least mean squares algorithm; noise perturbed search and misadjustment; sequential regression algorithm and convergence issues; recursive least squares algorithm and forgetting factor; frequency domain algorithms; adaptive equalization; pseudorandom binary sequences and system identification; adaptive interference cancellation; and adaptive beam forming and arrays. Simulates adaptive algorithms.

638/IT 838 Fast Algorithms and Architectures for Digital Signal Processing (3:3:0) Prerequisite: ECE 535 or permission of instructor. Studies recent advances in development of signal processing algorithms and relevant computational architectures. Topics include fast polynomial transforms, Winograd’s algorithms, multirate processing of digital signals, spectral estimation, adaptive filtering, and wavelet transforms.

641 Computer System Architecture (3:3:0) Prerequisite: ECE 511 or permission of instructor. Advanced course in computer architecture. Covers definitions, multiple processors, VLSI architecture, data flow, computation, semantic gap, high-level language architecture, object-oriented design, RISC architecture, and current trends in computer architecture.

642 Design and Analysis of Computer Communication Networks (3:3:0) Prerequisites: ECE 542 and 528, or equivalent. Introduces queuing theory. Other topics include concentrator design, multiplexing, capacity assignments, random access schemes, polling and probing techniques, topology design, flow control and routing, packet radio, protocol specification, and validation.

643 Communication Switching Systems (3:3:0) Prerequisites: ECE 528 and 542. Basic concepts of switching with application to digital telecommunication networks. Topics include circuit switched networks, space-division and time-division switching, digital switching system architecture, stored-program control, traffic theory, numbering concepts, signaling networks, intelligent networks, and fast-packet switching.

644 Architectures and Algorithms for Image Processing (3:3:0) Prerequisite: ECE 511 and 537, or equivalent. Architectures and algorithms to analyze and process pictorial information. Topics include systems and techniques for digital representation of images; image scanning methods and their applications; picture processing languages; image data structures; feature detection, extraction, and reconstruction; detection of symmetries; systems and methods for regular decomposition; image desegmentation; object thinning; real-time orthogonal transformations; and applications. Includes design project.

645 Computer Arithmetic (3:3:0) Prerequisite: ECE 545 or permission of instructor. Covers computer arithmetic as applied to the design of general-purpose microprocessors and application-specific integrated circuits for cryptography, coding, and digital signal processing. Focuses on efficient implementations of all basic arithmetic operations in three major domains: integers, real numbers, and elements of Galois Fields GF(2n). Illustrates tradeoffs among various hardware algorithms and architectures depending on primary optimization criteria, such as speed, area, and power consumption. Demonstrates the use of software implementations as a source of test vectors for verification of hardware.
646 Cryptography and Computer Network Security (3:3:0) Prerequisites: ECE 542 or permission of instructor. Topics include need for security services in computer networks, basic concepts of cryptology, historical ciphers, modern symmetrical ciphers, public key cryptography (RSA, elliptic curve cryptosystems), efficient hardware and software implementations of cryptographic primitives, requirements for implementation of cryptographic modules, data integrity and authentication, digital signature schemes, key exchange and key management, standard protocols for secure mail, www and electronic payments, security aspects of mobile communications, key escrow schemes, zero-knowledge identification schemes, Smart cards, quantum cryptography, and quantum computing.

650 Robotics (3:3:0) Prerequisite: ECE 521 or permission of instructor. Introduces robotics and advanced automation from electrical engineering standpoint. Topics include hardware overview; coordinate systems and manipulator kinematics; differential motion and inverse Jacobian; manipulator path control and motion planning; design and control of articulated hands; sensory feedback; machine vision; and applications to industrial automation.

662 Microwave Devices (3:3:0) Prerequisites: ECE 563 or permission of instructor. Studies generation of microwave signals. Topics include solid-state microwave devices and high-power microwave devices and microwave applications.

665 Fourier Optics and Holography (3:3:0) Prerequisite: ECE 565. Studies optical systems for processing temporal signals as well as images. Topics include use of coherent optical systems for image processing and pattern recognition, principles of holography, and acousto-optic systems for radar-signal-processing optical computers.

670 Principles of C4I (3:3:0) Provides broad introduction to fundamental principles of command, control, communication, computing, and intelligence (C4I). Applies principles, techniques to wide range of civilian and military situations. Discusses modeling, simulation of combat operations; studies sensing, fusion, and situation assessment processes. Derives optimal decision-making rules. Discusses concepts of C4I architectures and tools to evaluate and design systems such as queuing theory.

672/SYST 619 Introduction to Architecture-Based Systems Engineering (3:3:0) Prerequisite: SYST 510 or 520, or ECE 521; or permission of instructor. Explores lifecycles in systems engineering; and human, organizational, process, and technological basis for systems integration and architecting. Includes societal and cultural basis; conceptual frameworks; structure, function, and purpose; risk management; user requirements and functional specifications; bid and proposal process; System of Systems issues; systems management; increasing returns to scale, network effects, and path dependency issues; and evolutionary systems. Considered “out of department” course for MSEE and MS CpE programs.

673/SYST 620 Discrete Event Systems (3:3:0) Prerequisites: ECE 521 or SYST 611, or equivalent. Introduces modeling and analysis of discrete event dynamical systems. Covers elements of discrete mathematics, and focuses on Petri Net Models and their basic properties: locality and concurrency, condition and event systems, place and transition nets, Colored Petri Nets, reachability graphs (occurrence nets), and invariant analysis. Includes issues in Petri Nets and temporal logic; stochastic Petri Nets; relation to other discrete event models of dynamical systems; and applications of the theory to modeling and simulation and systems engineering problems, especially in systems architecting.

674/SYST 621 Systems Architecture Design (3:3:0) Prerequisites: SYST 619/ECE 672 and SYST 620/ECE 673. Intensive study of relationships of different types of architecture representations and methodologies to obtain them. Uses approaches based on systems engineering constructs, such as structured analysis and software engineering constructs, including object orientation, to develop architecture representations and derive executable model of information architecture. Executable model is then used for behavior analysis and performance evaluation. Discusses roles of systems architect and engineer. Uses examples from current practice including C4ISR architectures. Considered “out of department” course for MSEE and MS CpE programs.

678/SYST 631 Systems Engineering of Information Architectures (3:3:0) Prerequisites: SYST 520 and SYST 619/ECE 672. An intensive study of the relationships between different types of architecture representations and the methodologies used to obtain them. Approaches based on systems and software engineering constructs, such as object orientation and structured analysis are used to develop architecture representations or views. The roles of the systems architect and the systems engineer are discussed. The function of an executable model of the information architecture in deriving requirements is presented. Examples from current practice including C4ISR architectures are included. This course does not meet the requirements for the MS SE or MS EE degrees.

679/SYST 632 System Integration and Architecture Evaluation (3:3:0) Prerequisites: SYST 631/ECE 678. The System Integration Problem – human, organizational, societal, cultural, and technological aspects. The role of architectures in systems integration. Integration in a System of Systems and a Federation of Systems. Measures of performance and effectiveness. Analysis of Alternatives. This course does not meet the requirements for the MS SE or MS EE degrees.

680 Physical VLSI Design (3:3:0) Prerequisite: ECE 586 or permission of instructor. Introduces NMOS, CMOS, and BiCMOS integrated circuit technology and fabrication. Reviews MOS and BiCMOS inverter structures and operation, MOS and BiCMOS circuit design processes, MOS layers, stick diagrams, design rules, and layout. Covers subsystem design and layout illustration of design process; includes design of 4bit arithmetic processor and its parts, adder, multiplier, register, and memory cells; and aspects of
system timing, test and testability. Reviews currently available VLSI CAD tools.

681 VLSI Design Automation (3:3:0) Prerequisites: ECE 543 and 586, or permission of instructor. Broad introduction to basic concepts, techniques and algorithms used by modern VLSI design automation software. Covers hardware description languages, logic synthesis, simulation, static timing analysis, formal verification, test generation/fault simulation, and physical design including floor planning, placement, routing, and design rule checking.

684 MOS Device Electronics (3:3:0) Prerequisite: ECE 584 or permission of instructor. Study of MetalOxide Semiconductor (MOS) based device theory, characteristics, models, and limitations. Topics include MOS capacitor, MOSFETs, CMOS, charge coupled devices, scaling, hot carrier effects, latchup, radiation effects, and isolation techniques.

689 VLSI Processing (3:3:0) Prerequisite: ECE 584 or permission of instructor. In-depth study of various steps in silicon VLSI circuit processing. Includes thermal oxidation, diffusion, ion implantation, epitaxial growth, polysilicon, metal and insulator layer deposition, photolithography, and MOS processing integration. Involves hands-on laboratory projects and using process simulator SUPREM.

698 Independent Reading and Research (3:3:0) Prerequisites: graduate standing, completion of at least two core courses, and permission of instructor. Studies selected area in electrical engineering under supervision of faculty member. Requires written report. May be taken no more than twice for graduate credit.

699 Advanced Topics in Electrical and Computer Engineering (3:3:0) Prerequisite: permission of instructor. Advanced topics of current interest in electrical and computer engineering. Topics chosen so they do not duplicate other courses in department. Active participation encouraged in form of writing and presenting papers in research areas.

720/IT 843 Multivariable and Robust Control (3:3:0) Prerequisite: ECE 620 or permission of instructor. Covers Eigenstructure assignment for multivariable systems, Smith-McMillan form, internal stability, modeling system uncertainty, performance specifications and principal gains, parametrization of controllers, loop shaping and loop transfer recovery, and H methodology.

721/IT 846 Nonlinear Systems (3:3:0) Prerequisite: ECE 521. Includes motivating examples; analysis techniques include basic fixed point theory, implicit function theorem, and dependence of trajectories on initial data and parameters. Also covers computational simulation techniques; stability theory including Lyapunov’s direct method; nonlinear control systems of input-output and absolute stability; strong positive real transfer functions; feedback linearization of nonlinear systems; nonlinear canonical forms; nonlinear decoupling; sliding control; and applications to adaptive control, neural networks, and robotics.

722/IT 841 Kalman Filtering with Applications (3:3:0) Prerequisites: ECE 521 and 528 or equivalent, or permission of instructor. Detailed treatment of Kalman Filtering Theory and its applications, including some aspects of stochastic control theory. Topics include state-space models with random inputs, optimum state estimation, filtering, prediction and smoothing of random signals with noisy measurements, all within the framework of Kalman filtering. Additional topics are nonlinear filtering problems, computational methods, and various applications such as Global Positioning System, tracking, system control, and others. Stochastic control problems include linear-quadratic-Gaussian problem and minimum-variance control.

728 Random Processes in Electrical and Computer Engineering (3:3:0) Prerequisite: ECE 528 or permission of instructor. Recommended for advanced master’s and doctoral students. Provides background in random processes needed for pursuing graduate studies and research in statistical signal processing, communications, control, and computer networks. Covers probability spaces, random variables, Lebesque integration, conditional mean on a sigma field, convergence of random variables, limit and ergotic theorems, Markov processes, and Martingales.

731 Digital Communications (3:3:0) Prerequisite: ECE 630 or equivalent. Digital transmission of voice, video, and data signals. Covers signal digitization, pulse code modulation, delta modulation, low bit-rate coding, multiplexing, synchronization, intersymbol interference, adaptive equalization, frequency spreading, encryption, transmission codes, digital transmission using band-width compression techniques, and satellite communications.

732 Mobile Communication Systems (3:3:0) Prerequisites: ECE 542 and 630. Topics include modeling of mobile communication channel, signal set and receiver design for mobile communication channel, access and mobility control, mobile network architectures, connection to fixed network, and signaling protocols for mobile communication systems. Examples of mobile communication systems are presented, including pan-European GSM, North American D-AMPS, and personal communication systems.

733 Advanced Coding Theory (3:3:0) Prerequisites: ECE 630 and 633. Theory and practice of advanced error-control coding techniques. Topics include trellis and multidimensional codes, Leech lattice, rotationally invariant codes, and spectral analysis and transform coding. Presents applications of contemporary coding theory in mobile communications, magnetic and optical recording, high-speed modem, and high-density data storage design.

734/IT 830 Detection and Estimation Theory (3:3:0) Prerequisite: ECE 528. Introduces detection and estimation theory with communication and radar and sonar applications. Topics include classical detection and estimation theory, detection of known signals in Gaussian noise, signal parameter and linear waveform estimation, and Wiener and Kalman filters.

735/IT 832 Data Compression (3:3:1) Prerequisite: ECE 528 or permission of instructor. In-depth study of lossy data compression techniques based on vector quantization with application to speech, image, and video signals. Covers vector quantization of signal’s waveform and commonly used parametric statistical models such as the autoregressive model. Topics include scalar and predictive quantization, transform and entropy coding, and variations on basic vector quantization such as constrained vector and variable rate vector quantization.

737/IT 932 Spread Spectrum Communications (3:3:0) Prerequisite: ECE 630. Introduces spread spectrum communications. Topics include pseudo noise spread spectrum systems, feedback shift registers, jamming strategy, code acquisition, synchronization, tracking, gold codes, burst-
communication systems, time-hopping, frequency hopping, and multiple access communications.

738 Advanced Digital Signal Processing (3:3:0) Prerequisite: ECE 638. Theory and practice of advanced digital signal processing techniques. Topics include computationally efficient high-speed algorithms for convolution, correlation, orthogonal transforms, multi-rate processing of digital signals, filter banks, multiresolution time frequency and time-scale analysis of one- and two-dimensional signals, and parallel signal processing.

739/IT 833 Satellite Communications (3:3:0) Prerequisite: ECE 630 or permission of instructor. Introduces theory and applications of modern satellite communications. Topics include satellite channel characterization, channel impairments and transmission degradation, link calculations, modulation, coding, multiple access, broadcasting, random access schemes, demand assignment, synchronization, satellite switching and onboard processing, integrated service digital satellite networks, and satellite transponder, ground stations, packet switching, and optical satellite communications.

741 Wireless Networks (3:3:0) Prerequisite: ECE 642 or equivalent. Theoretical foundation and practice in design of wireless networks. Emphasizes mobility and teletraffic modeling aspects, and networking issues and state-of-the-art performance evaluation methods of radio and system infrastructure applicable to wireless cellular and local networks. Topics include analysis of mobility, handoff, control traffic loading, resource allocation techniques, multiaccess protocols, admission policy and call control, network infrastructure and multilayer configuration, wireless LANs, and packet data systems.

742/IT 834 High-Speed Networks (3:3:0) Prerequisite: ECE 528 and 642, or permission of instructor. Theories for design, analysis and evaluation of high-speed networks including scalability, performance, and issues related to local area, metropolitan, and wide area networks. Includes architecture, protocols, and applications of high-speed networks; performance modeling of high-speed networks; flow control and routing; design issues for high-speed switches, interfaces, and controllers; all optical networks and their architectures; examples of high-speed computer networks and internetworking; video, imaging, and multimedia applications; software issues, robustness, and applications; and selected topics in current research areas in high-speed computer networks.

743/IT 848 Multimedia Networking and Communications Software (3:3:0) Prerequisite: ECE 642 or equivalent. Advanced modern networks and services increasingly rely on communication protocols and their implementation in software. Course provides principle methodologies, constraints, and technologies for advanced store-and-forward or packet-switched communications nodes, networks and protocols, and emerging software-based applications. Specific examples include next-generation integrated Internet and Intranet, underlying transport infrastructure over wired and wireless media, switching and routing, multipoint and real-time multimedia and web-based services, and quality of services aspects.

744 Computer Vision and Expert Systems (3:3:0) Prerequisite: ECE 644 or permission of instructor. Brief review of image analysis. Includes vision system architectures such as human and computer visual systems; vision system operations such as focus and zooming; picture recognition languages; knowledge-based systems; learning algorithmic schemes; and applications to text processing and analysis as expert systems. Students conceive, simulate, and test design projects.

745 ULSI Microelectronics (3:3:0) Prerequisite: ECE 684. Studies UltraLargeScaleIntegration (more than a million devices in a single chip) by considering limits of packing density, modeling of devices, and circuit topology. Semiconductor material and device physics imposed “second order effects” and limitations on deep submicron CMOS performance. Reliability studied through analytical (compact) modeling and numerical simulations. Presents and evaluates new ULSI technologies such as SOI CMOS.

746 Advanced Applied Cryptography (3:3:0) Prerequisites: ECE 646 or permission of instructor. Discusses complex cryptographic algorithms and their implementations in software and hardware. Provides mathematical background necessary to understand, implement, and break modern cryptographic systems. Covers implementations of cryptosystems using smart cards, network processors, and other platforms. Discusses side channel attacks against implementations of cryptography, including timing attacks, power analysis, fault analysis, cache attacks, etc. Introduces advanced topics, such as random and pseudorandom number generators, secret sharing, zero-knowledge, and quantum cryptography. Requires a semester long project devoted to implementation of selected algorithms or protocols in software or hardware, and/or comparative analysis of various algorithms, protocols, or implementations.

749/IT 844 Neural Networks for Control (3:3:0) Prerequisites: ECE 549 and 620. General neural network principles for control applications and supervised control, direct inverse control, neural adaptive control, backpropagation trout time (BTT), adaptive critic, sensory-motor principles. Topics include applications to adaptive control and system identification, neural networks for motion control and path planning in robotics, neural network process control, aerospace control problems and neural network autopilot, neural network control of aircraft flare and touchdown, and neural network control of autonomous vehicles.

750/CS 685/SYST 672/IT 840 Intelligent Systems for Robots (3:3:0) Prerequisite: SYST 611, ECE 650, or CS 580; or SYST 555 or equivalent. Reviews recent developments in intelligent autonomous systems. Studies applications of artificial intelligence, control theory, operations research, decision sciences, computer vision, and machine learning to robotics as well as correspondences between various fields. Topics include analysis and design of methods, algorithms and architecture for planning, navigation, sensory data understanding, visual inspection, spatial reasoning, motion control, learning, self-organization, and adaptation to environment.

751/IT 886 Information Theory (3:3:0) Prerequisite: ECE 528 or permission of instructor. Introduces information theory, which is mathematical theory of communication systems. Topics include measures of information such as entropy, relative entropy, and mutual information; Shannon-McMillian-Breiman theorem and applications to data compression; entropy rate and source coding theorem; Huffman, arithmetic and Lempel-Ziv codes; method of types, channel capacity, and channel-coding theorem; joint source-channel
482 Electrical and Computer Engineering (ECE) • Elementary/Secondary Education (EDCI)

coding theorem; differential entropy; Gaussian channel; rate distortion theory; and vector quantization.

752/IT 885 Spectral Estimation (3:3:0) Prerequisite: ECE 528 or STAT 652, or permission of instructor. In-depth study of spectral analysis and application to statistical signal processing. Topics include classical Fourier analysis of deterministic signals and Wiener theory of spectral analysis for random processes; spectral estimation using Periodogram and window approaches; maximum entropy spectral estimation and relation to autoregression modeling; signal subspace approaches for frequency estimation; and wavelet transform and elation to short-time Fourier transform.

753/IT 888 Distributed Estimation and Multisensor Tracking and Fusion (3:3:0) Prerequisite: ECE 734 or SYST 611. Centralized and distributed estimation theory, hierarchical estimation, tracking and data association, multisensor multitarget tracking and fusion, distributed tracking in distributed sensor networks, track-to-track association and fusion, and Bayesian networks for fusion.

755/IT 937 Optimum Array Processing II (3:3:0) Prerequisite: IT 837. Adaptive beamformers, SMI and RLS estimators, spatial smoothing and FB averaging, QR decomposition, LMS algorithm, optimum detection and parameter estimation, UML and CML estimation, Cramer-Rao bounds, IQML, weighted subspace fitting, subspace algorithms such as MUSIC and ESPRIT, root versions, beam-space algorithms, sensitivity, robustness, and calibration.

758/CS 758 Networked Virtual Environments (3:3:0) Theory and practice of advanced distributed simulation via networks using highly realistic graphic environments. Networked virtual environment principles, networking technology for distributed simulation, networked multimedia concepts, virtual simulation concepts, efficiency/ performance issues, and online conferencing/virtual classrooms. Term project required.

780/IT 845 High-Frequency Electronics (3:3:0) Prerequisite: ECE 563 and 684, or permission of instructor. Studies devices and circuits in high-speed communications systems. Topics include microwave bipolar transistors and high-speed integrated circuits, and designing linear and power amplifiers using Sparameter techniques and computer simulation.

798 Research Project (3:0:0) Prerequisite: 9 graduate credits. Research project to be chosen and completed under guidance of graduate faculty member that results in acceptable technical report.

799 Master’s Thesis (1–6:0:0) Prerequisite: 9 graduate credits, and permission of instructor. Research project chosen and completed under guidance of graduate faculty member that results in technical report and oral defense acceptable to thesis committee of three faculty members.

836/IT 836 Special Topics in Detection and Estimation Theory (3:3:0) Prerequisite: ECE 734. Advanced topics in detection, estimation, and signal processing in areas of current research interest. Topics may include spectral estimation, speech recognition, array processing, SAR, underwater acoustics, or higher order spectra.

847/IT 847 Topics in Photonics (3:3:0) Prerequisite: ECE 565 or permission of instructor. In-depth discussion of specific topics in photonics. Includes optical storage (disks, holographic, 3D), digital optical computing, integrated optics, photonic switching networks, and optoelectronic devices. May be repeated with different topics.

945/IT 945 Advanced Topics in Microelectronics (3:3:0) Prerequisite: IT 845. Current topics of advanced research in microelectronics. Includes very high speed integrated circuits, monolithic microwave integrated circuits, optoelectronic integrated circuits, novel device structures, and advances in semiconductor device technology. May be repeated with change in topic.

998 Doctoral Dissertation Proposal (1–12:0:0) Work on research proposal that forms basis for doctoral dissertation. May be repeated. No more than 24 credits of ECE 998 and 999 may be applied to doctoral degree requirements.

999 Doctoral Dissertation (1–12) Prerequisite: admission to candidacy. Formal record of commitment to doctoral dissertation research under direction of ECE faculty member. May be repeated as needed. Students must complete minimum 12 credits of doctoral proposal (ECE 998) and doctoral dissertation research (ECE 999) Maximum of 24 credits of ECE 998 and 999 may be applied to degree. Students who choose to take less than 24 credits of ECE 998 and 999 may earn remaining credits from approved course work. Students cannot enroll in ECE 999 before research proposal accepted and approved by dissertation committee.

Elementary/Secondary Education (EDCI)

Graduate School of Education

370 Young Adult Literature in Multicultural Settings (3:3:0) Examines literary works written for and about young adults, introduces critical issues surrounding teaching of young adult literature in multiculturally diverse schools, and requires reading and review of young adult literature. Significant online work is required.

473 Teaching Science in the Secondary School (3:3:0) Builds fundamental knowledge of science teaching and learning including standards-based curriculum design and research-based teaching strategies. School-based field experience required for those seeking initial teacher licensure.

479 Advanced Methods of Teaching English in the Secondary School (3:3:0) Guides students in working effectively with national and local standards for teaching secondary English. Continuation course in methods from EDCI 469.

483 Advanced Methods of Teaching Science in Secondary School (3:3:0) Prerequisite: EDCI 473. Provides advanced study of teaching and curriculum development based on research and current issues. Emphasizes integrating science and technology, adapting instruction to needs of diverse learners, and promoting safety.

490 Student Teaching in Education (6:6:0) Prerequisite or corequisite: completion of licensure and all endorsement
500 In-Service Educational Development (1–6:1–6:0)
Prerequisite: employment in professional capacity by sponsoring division or agency. Offered at request of school division or other educational agency. Content varies; may be repeated for credit.

510 Linguistics for PreK–12 ESOL Teachers (3:3:0)
Examines language as a system, with particular focus on teaching English as a second language (ESOL) to students in public schools, grades PreK–12. Considers teaching implications of phonology, morphology, syntax, semantics, and pragmatics.

511 Developing Curriculum and Designing Instruction in Early Childhood Education (3:3:0)
Covers procedures, materials, and organization of environments for young children. Field experiences required for students without previous teaching or administrative experience in early childhood settings.

516 Bilingualism and Language Acquisition Research (3:3:0)
Examines research in first and second language acquisition, including interaction of bilingual person’s two languages, with applications for classroom. School-based field experience required.

519 Methods of Teaching Multilingual Students (3:3:0)
Prerequisite: EDCI 516. Examines approaches, methods, and techniques for teaching English as second language (ESL) in bilingual and ESL classrooms, as well as resources available in field. Participants critically analyze and demonstrate teaching approaches based on second language acquisition research, including teaching language through content. Field experience in public schools required.

520 Assessment of Language Learners (3:3:0)
Prerequisites: EDCI 516 and 519. Examines innovative approaches to assessing language minority students and English language learners. Topics include identification, placement, monitoring of student progress, development of authentic performance-based measures, design of portfolios, application of measurement concepts, analysis of assessment instruments, and linking assessment to instruction.

521 Curriculum Development for Language Learners (3:3:0) Prerequisites: EDCI 516 and 519. Examines current approaches to curriculum development for second language learners and language minority students. Participants review, evaluate, and develop curricular materials, with emphasis on learner-centered activities, cooperative learning, interdisciplinary and thematic approaches, authentic and problem-based learning, integration of language and content, and linking assessment and instruction.

544 Curriculum and Methods of Teaching in Elementary Education (3:3:0) Prerequisites: admission into elementary education graduate program; must be taken in programmatic sequence. Introduction to general methods of teaching in elementary schools focusing on planning, teaching strategies, management, assessment, and differentiation.

545 Assessment and Differentiation (3:3:0) Prerequisites: admission into elementary education graduate program; must be taken in programmatic sequence. Provides a research-based introduction to differentiated instruction for children in grades PK–6. Emphasis on the assessment of learners and differentiation of instruction to meet the needs of all learners.

546 Integrating Technology in Elementary Classrooms: Literacy (1:1:0)
Prerequisite: admission into elementary education graduate program; corequisite: EDCI 556. Studies the development and integration of technology in the elementary education literacy curriculum.

547 Integrating Technology in Elementary Classrooms: Mathematics (1:1:0)
Prerequisite: admission into elementary education graduate program; corequisite: EDCI 552. Studies the development and integration of technology in the elementary education mathematics curriculum.

548 Integrating Technology in Elementary Classrooms: Social Studies and Fine Arts (1:1:0)
Prerequisite: admission into elementary education graduate program; corequisite: EDCI 554. Studies the development and integration in the elementary education social studies and fine arts curriculum.

549 Foreign Language Immersion in the Elementary School (3:3:0)
Covers theories and methods of teaching foreign language through elementary school curriculum; and curriculum development, assessment, and community relations in foreign language immersion classes.

552 Mathematics Methods for the Elementary Classroom (1–3:1–3:0)
Prerequisite: admission to elementary education licensure program. Introduces methods for teaching all children topics in arithmetic, geometry, algebra, probability, and statistics in elementary grades. Focuses on using manipulatives and technologies to explore mathematics and solve problems. Requires field experience in public schools.

553 Science Methods for the Elementary Classroom (1–3:1–3:0)
Prerequisite: admission to elementary education licensure program. Develops skills and abilities in science teaching methods, applications of technology, safety practices, and creation of integrated science curricula. Examines science teaching based on contemporary theory, practice, and standards. Requires field experience in public schools.

554 Methods of Teaching Social Studies and Integrating Fine Arts in the Elementary Classroom (3:3:0) Prerequisite: admission into elementary education graduate program; must be taken in programmatic sequence. Focuses on the design and delivery of standards-based integrated curriculum centered on the social sciences. Includes integration of fine arts and examines the central role of the arts in learning. Field experience is required.

555 Literacy Teaching and Learning in Diverse Elementary Classrooms I (3:3:0) Prerequisite: admission to elementary education licensure program. Provides research-based introduction to literacy teaching and learning for younger children. Emphasizes language development; reading and writing processes; emergent literacy; culture, families, and literacy; and literacy integration in the curriculum. School-based field experience required.

556 Literacy Teaching and Learning in Diverse Elementary Classrooms II (1–3:1–3:0) Prerequisite: admission to elementary education licensure program. Provides research-based introduction to literacy teaching and learning for older children. Emphasizes literacy and language processes and development; connections among cultures, families, and literacy; and literacy integration in curriculum. School-based field experience required.
557 Integrating Technology in the Elementary Curriculum (3:3:0) Prerequisite: admission to elementary education licensure program. Examines development and implementation of curriculum and instruction in elementary classroom. Emphasizes integrating technology in curriculum, and inclusion of special needs and culturally diverse students. School-based field experience required.

558 Integrating Fine Arts and Movement in Elementary Education (3:3:0) Prerequisite: admission to PDS or Partnership Elementary Licensure Program. Includes art, drama, music, and movement. Examines central role of arts in children’s learning. Focuses on integration and interdisciplinary learning experiences. Includes developmental theory, addressing diverse learners through multiple intelligences, and movement for physical health. School-based field experience required.

559 Research and Assessment in Elementary Education (3:3:0) Prerequisite: admission into elementary education graduate program; capstone course for degree must be taken last in programmatic sequence. Provides teacher candidates an understanding of research paradigms utilizing systematic evidence to improve practice, and further skills in assessment of learning outcomes. Emphasizes linking research and practice, making instructional decisions based on systematically collected data.

560 Methods of Teaching in Foreign/World Languages (3:3:0) Prerequisite: EDCI 516, or current teaching position. Covers approaches, theories, and methods of teaching foreign and second languages, with practical application to classroom. Students demonstrate teaching strategies, develop lesson and unit-planning skills, and evaluate curricula and materials. Requires field experience in schools.

570 Teaching Young Adult Literacy in a Multicultural Setting (3:3:0) Examines literary works written for and about young adults. Introduces critical issues surrounding teaching young adult literature in multicultural diverse public schools and requires reading and reviewing young adult literature from several genres.

577 Curriculum and Methods of Teaching, PK–12 (3:3:0) Blends theory and practice by providing instruction in curriculum and planning, theoretical concepts, application of research, models of learning and teaching, and practical experiences. Examines educational standards, assessment, and classroom management in PK–12 schools.

597 Special Topics in Education (1–6:1–6:0) Prerequisite: admission to program in GSE. Provides advanced study on selected topic or emerging issue in American or international education. May be repeated for credit with GSE permission.

600 Workshop in Education (1–6:1–6:0) Offers full-time workshops and weekend seminars on selected topics in education and education tour seminars. May be repeated for credit.

601 Applied Study of Communicative Competence and Classroom Discourse (3:3:0) Analyzes young children’s language development and design of individual and group language experiences.

602 Technology Applications in Early Childhood Education (3:3:0) Prerequisite: admission to GSED. Examines criteria and methods for integrating technology into all areas of early childhood curriculum. Emphasizes use of instructional technology to facilitate cognitive and social growth.

603 Trends, Issues, and Research in Early Childhood Education (3:3:0) Prerequisites: admission to GSED, and EDRS 590. Examines trends, issues, research findings, and resulting program development.

613 Curriculum and Assessment in Early Childhood Education I (3:3:0) First of two-course sequence addressing current thinking about curriculum and assessment in programs for preschool through third grade. Gives overview of effective ways to plan and implement integrated curriculum; special focus on content, subject matter.

614 Curriculum and Assessment in Early Childhood Education II (3:3:0) Second of two-course sequence focusing on planning and assessing children’s knowledge of content and subject matter. Emphasizes action research.

615 Advanced Human Development (3:3:0) Advanced course in development and learning across lifespan. Critically reviews contemporary research and theories of human development and learning, and relevance to educational practice and family contexts as they relate to children under 8.

616 The Creative Arts and Play in Early Childhood Education (3:3:0) Advanced course using creative arts and play as central approaches to teaching and learning. Focuses on an integrated approach to what arts-based curriculum looks like and how it functions.

621 Introduction to Gifted and Talented Learners (3:3:0) Examines nature and needs of gifted and talented learners. Participants become knowledgeable about characteristics of gifted and talented students, and examine role of culture in manifestation of gifts and talents as well as gifted behaviors in special populations.

622 Curriculum Differentiation for Diverse Learners (3:3:0) Develops personal and professional rationale for differentiating instruction in mixed-ability classrooms, as well as skills and knowledge of strategies to utilize presessment data and plan for and implement differentiated instruction.

623 Models and Strategies for Teaching Gifted Learners (3:3:0) Provides framework to examine and apply curriculum
models and instructional strategies advocated for use with gifted students according to national and state standards that reflect best practices in gifted education.

625 Contemporary Issues and Trends in Gifted Education (3:3:0) Prerequisites: EDCI 621, 622, 623, 624. Focuses on research, trends, issues, legislation, and litigation concerning gifted and talented children. Provides professionals in gifted education and related fields with knowledge and skills to serve as advocates for gifted child education.

626 Action Research in Gifted Education (3:3:0) Opportunity to identify and investigate school-based problem and apply inquiry, writing, and research skills to relevant issue or concern in gifted education.

627 Advanced Practicum in Gifted Education (3:3:0) Prerequisites: EDCI 621, 622, 623, 624. Intensive supervised clinical experiences for one semester in accredited elementary or secondary school. Students supervised in setting that includes scheduled observations and seminar experiences.

631 Research in Elementary Education (3:3:0) Prerequisite: completion of elementary education (PK–6) licensure. Helps beginning teachers understand various research paradigms to use research literature and systemic evidence to improve practice. Emphasizes linking research and practice, and making data-based instructional decisions.

632 Advanced Social Studies Methods for the Elementary Classroom (3:3:0) Prerequisites: completion of elementary education (PK–6) licensure, and EDCI 631. Provides advanced study of teaching social studies in elementary education. Uses inquiry, research, and reflection to improve teaching. Emphasizes design and delivery of integrated social studies curriculum centered on knowledge, skills, and dispositions from history, geography, civics and economics, arts and humanities, and multicultural education. Covers student assessment and using student data in instructional decision-making and improvement. Requires extensive field experience in public schools.

634 Advanced Science Methods for the Elementary Classroom (3:3:0) Prerequisites: completion of elementary education (PK–6) licensure, and EDCI 631. Emphasizes inquiry and extensions of theoretical understanding of how children learn. Develops expertise in teaching and assessment, and incorporates technology, safety, and issues of culture and gender into day-to-day teaching activities.

635 Applied Research in Elementary Education (3:3:0) Prerequisites: completion of elementary education (PK–6) licensure, and EDCI 631, 632, 633, and 634. Helps beginning teachers plan and complete action research project related to teaching assignment. Students apply research methods explored during prerequisite series of courses.

645 Curriculum Development in Mathematics Education (3:3:0) Prerequisite: admission to mathematics education leadership master's degree program, or permission of instructor. Yearlong seminar for master's level students in mathematics education leadership cohort program. Analysis, design, and evaluation of school mathematics curricula.

646 Mathematics Education Leadership for School Change (1–3:1–3:0) Prerequisite: admission to mathematics education leadership master's degree program, or permission of instructor. Yearlong seminar for master's level students in mathematics education leadership cohort program. Surveys current literature and large-scale studies in mathematics education. Engages students in research, study, and discussion of factors that affect teaching and learning of mathematics in school settings.

663 Research in Science Technology (3:3:0) Prerequisite: course in teaching science in elementary school, or permission of instructor. Provides advanced study of methodology and materials in teaching biological, physical, and earth sciences.

666 Research in Mathematics Teaching (3:3:0) Explores curricula, current issues, and research literature in elementary school mathematics. Emphasizes development of different styles of teaching.

667 Advanced Methods of Teaching Social Sciences in the Secondary School (3:3:0) Prerequisite: EDCI 567. Emphasizes interdisciplinary curriculum and instruction, implementing national state standards, authentic assessment, and adaptations for diverse populations. School-based field experience required.

669 Advanced Methods of Teaching English in the Secondary School (3:3:0) Prerequisites: EDUC 522 and EDCI 569. Continuation course in methods (See EDCI 569). Guides students in working effectively with national and local standards for teaching secondary English.

673 Advanced Methods of Teaching Science in the Secondary School (3:3:0) Prerequisites: EDCI 573. Provides advanced study of teaching and curriculum development based on research and current issues. Emphasizes integrating science and technology, and adapting instruction to the needs of diverse learners. School-based field experience required.
677 Advanced Curriculum and Methods of Teaching, Secondary (3:3:0) Prerequisite: EDCI 577. Extends principles of teaching and learning introduced in EDCI 577. Includes application of skills in discipline-specific methodology, communication, classroom management, and evaluation of student performance appropriate to elementary level.

678 Advanced Curriculum and Methods of Teaching, Elementary (3:3:0) Prerequisite or corequisite: EDCI 577. Extends principles of teaching and learning introduced in EDUC 577. Includes application of skills in discipline-specific methodology, communication, classroom management, and evaluation of student performance appropriate to elementary level.

683 Curriculum Development and Evaluation in Science Education (3:3:0) Prerequisites: EDCI 663, or permission of instructor. Advanced course in science curriculum design and development. Emphasizes instructional materials and assessment.

684 Advanced Methods of Teaching Foreign/Second Languages in PK–12 Schools (3:3:0) Prerequisite: EDCI 516, or current teaching position. Blends theoretical knowledge and practical application. Provides advanced study of second language pedagogy and teaching trends. Topics include multiple learning styles, alternative forms and assessment, and teaching diverse populations. Requires field experience.

693 Leadership and Organizational Issues in Science Education (3:3:0) Prerequisites: EDCI 663 and 683, or permission of instructor. Advanced course in current issues for leadership in science education. Emphasizes technology, safety, professional development, and related organizational change issues.

705/EDIT 705 Instructional Design (3:3:0) Prerequisite: teaching experience. Helps students analyze, apply, and evaluate principles of instructional design to develop education and training materials spanning a wide range of knowledge domains and instructional technologies. Focuses on variety of instructional design models, with emphasis on recent contributions from cognitive science and related fields.

710 Technology and the Culture of Schools (3:3:0) Corequisite: EDIT 711. Explores relationship of human inventions and social, political, cultural, and epistemological constructions. Examines history of technology, relationship of technology and human behavior, and theories of social change and technology. Focuses on how technological and social changes influence and shape goals and outcomes of K–12 educational process. Considers links between technology and educational reform, how technology is associated with educational reform movement, and ways educators can take leadership roles in facilitating intersection of educational reform and technology.

712 Technology and Learning (3:3:0) Corequisite: EDIT 713. Explores ways of knowing and theories of learning as reflected in and influenced by technology. Analyzes, applies, and evaluates current theories such as constructivism, multiple intelligences, role of symbolization in human cognition, development of problem-solving and critical thinking strategies, and learning conditions. Covers relationship of technological forms and nature and structure of human cognition, especially as it influences K–12 educational practice. Explores technology and nature of individual learner attributes, learners in context, special-needs learners, access, equity, and values.

714 Methods of Integration (3:3:0) Corequisite: EDIT 715. Considers curriculum design strategies that facilitate technology integration. Includes examples of curriculum design strategies, readings, discussions, and design of lessons or units appropriate to various contents. First course in sequence focuses on disciplinary standards, role of technology applications to support standards, and strategies for curriculum design such as learning cycle, thematic design, interdisciplinary and transdisciplinary approaches, and writing across the curriculum.

716 Principles of Integration (3:3:0) Corequisite: EDIT 717. Continued consideration of curriculum design strategies appropriate for technology integration. Includes examples of curriculum design strategies, readings, discussions, and design of lessons or units. Second course in sequence builds on previous student learning, and focuses on technology’s role in problem-based learning, problem-centered curriculum design, authentic instruction, and rationales and processes for implementing authentic assessment strategies.

725 National and International Leadership Issues in Mathematics Education (3:3:0) Prerequisite: admission to mathematics education leadership PhD program. Yearlong seminar for PhD students in the mathematics education leadership cohort program. Students study research on mathematics teaching and learning, including current issues and trends in mathematics education leadership at national and international levels.

726 State and Local Leadership Issues in Mathematics Education (3:3:0) Prerequisite: admission to mathematics education leadership PhD program. Yearlong seminar for PhD students in the mathematics education leadership cohort program. Students study research on mathematics teaching and learning, including current trends in mathematics school reform at state, district, and individual school levels.

777 Research to Practice (3:3:0) Prerequisites: all other program courses except EDRS 590 and elective, or permission of instructor. Provides culminating experience that synthesizes and applies essential elements of second language teaching and learning. Emphasizes teacher as change agent through critical inquiry into practice. Promotes collaboration between ESL and grade-level teachers to advance achievement of English language learners and language minority students.

784 Capstone Seminar in Early Childhood Education (3:3:0) Prerequisite: EDIT 715. Intensive, supervised clinical experience for full semester in accredited school. Students must register for appropriate section.

795 Science Education Research (3:3:0) Prerequisite: EDCI 891. Explores science education research, theory, and practice, including sources and methods of study. Students review and report on research literature and teaching practices on topics of interest.
796 Science Education Curriculum (3:3:0) Prerequisite: EDCI 891. Explores science education curriculum from preschool through high school, including identifying and evaluating curriculum materials and resources. Emphasizes research-based exemplary materials and use of technology.

797 Advanced Topics in Education (1–6:1–6:0) Advanced study of selected topics in education for students preparing for doctoral studies or who have been admitted to the PhD program in education. May be repeated for credit with CEHD approval.

855 Mathematics Education Research on Teaching and Learning (3:3:0) Prerequisite: admission to mathematics education leadership PhD program. Yearlong seminar for PhD students in the mathematics education leadership cohort program. Students survey most current research literature in mathematics education and engage in research, study, and discussion of mathematics education research on teaching and learning in school settings.

856 Mathematics Education Curriculum Design and Evaluation (3:3:0) Prerequisite: admission to mathematics education leadership PhD program. Yearlong seminar for PhD students in the mathematics education leadership cohort program. Students engage in research, analysis, design, and evaluate school mathematics curricula.

857 Preparation and Professional Development of Mathematics Teachers (3:3:0) Prerequisite: admission to mathematics education leadership PhD program. Yearlong seminar for PhD students in the mathematics education leadership cohort program. Students study attributes of effective professional development in mathematics education, develop expertise in designing and teaching mathematics methods courses, and learn to create and teach professional development experiences for practicing teachers.

858 Mathematics Education Research Design and Evaluation (3:3:0) Prerequisite: admission to mathematics education leadership PhD program. Yearlong seminar for PhD students in the mathematics education leadership cohort program. Students review methods of research appropriate for mathematics education settings and develop theoretical framework and action plan for conducting research project.

891 Science Teaching and Learning (3:3:0) Explores research, theory, and practice for effective science teaching and learning. Focuses on science education standards at local, state, national, and international levels. Students review common core of research literature and topics of individual interest.

892 Science Education History and Research (3:3:0) Prerequisite: EDCI 891. Explores history of science education research, theory, and practice, including research on general teaching strategies in science instruction. Reviews common historical core of research literature; students conduct exploratory research of individual interest.

893 Science Education Staff Development (3:3:0) Prerequisite: EDCI 891. Explores staff development in science education with emphasis on planning and conducting professional development on key topics in science teaching and learning. Reviews common core of research literature; students conduct research of individual interest.

894 Science Education Leadership and Policy (3:3:0) Prerequisite: EDCI 891. Focuses on leadership and policy issues at local, state, and national levels that affect science education. Emphasizes understanding decision-making structure and process; current issues; and trends. Students participate in leadership and policy events.

895 Emerging Issues in Curriculum and Instruction (3:3:0) Prerequisite: admission to PhD program, or permission of instructor. Covers issues in curriculum and instruction through individual and group research, discussion, writing, and presentations by experts. Students conduct critical analysis of specific field.

Engineering (ENGR)
The Volgenau School of Information Technology and Engineering

107 Introduction to Engineering (2:2:0) Corequisite: MATH 105, or Math Placement Test score qualifying student for MATH 113. Introduces engineering profession fundamentals and problem-solving. Topics include description of engineering disciplines, functions of the engineer, professionalism, ethics and registration, problem-solving, representation of technical information, estimation and approximations, and analysis and design. f,s

183 Engineering Computer Graphics (3:2:3) Fundamentals of engineering drawing, graphic communication, descriptive geometry, multiview projection, and graphical analysis. Introduces computer-aided drafting, visualization, pictorial views, and reading of engineering drawings. f,s

210 Statics and Dynamics (3:3:0) Prerequisites: PHYS 160 and MATH 114. Covers general principles and fundamental concepts, including units of measurement; force vectors and their use, including vector operations; equilibrium of a particle; resultants of a system of forces; equilibrium of a rigid body; dry friction; center of gravity and centroids; moments of inertia, including parallel axis theorem and radius of gyration; kinematics of a particle; and work and energy. f,s

307 Engineering Thermodynamics (3:3:0) Prerequisites: MATH 213 and PHYS 260. Classical concepts of energy and temperature, first and second laws and their application to closed and open thermodynamic systems. Covers properties of pure substances, equation of state, and analysis of thermodynamic processes and systems. Presents application to engineering systems. s

310 Mechanics of Materials (3:3:0) Prerequisite: ENGR 210. Concepts of stress, strain, elasticity, and plasticity. Stress and strain analysis, including the use of Mohr’s circle. Pure torsion. Theory of pure bending and members under transverse loading, including normal and shear stress analysis. Theory of elastic buckling. Distribution of internal forces in statically determinate systems, including beams, frames, and arches. f, s

400 Principles of Professional Practice in Engineering (3:3:0) Prerequisite: engineering majors within 30 hours of graduation. Does not satisfy requirements for CEIE technical elective. Overview of all engineering disciplines focusing on engineering ethics and professionalism, need for lifelong learning, and professional licensure. Topic areas also include engineering science and mechanics, material science, electric...
circuitry, chemistry and thermodynamics, engineering economics, and other fundamentals of engineering.

490 Human Practice of Engineering Design (3:3:0) Prerequisites: senior standing with at least 90 credits in IT&E degree program; one of SYST 301, ECE 331, or CS 421; and permission of instructor. Study of engineering design and innovation emphasizing human aspects. Students directly involved in project with client for whom they must produce measurable innovation supported by engineering system. Students prepare through extensive readings and exercises, from which they will learn how to identify and listen for human concerns, action, breakdowns, and coordination.

498 Independent Study in Engineering (1–3:3:0) Prerequisites: 60 credits; must be arranged with instructor and approved by department chair before registering. Directed self-study of special topics of current interest in ENGR. May be repeated for maximum 6 credits if topics substantially different.

499 Special Topics in Engineering (3:3:0) Prerequisites: 60 credits and permission of instructor; specific prerequisites vary with nature of topic. Topics of special interest to undergraduates. May be repeated for maximum 6 credits if topics substantially different.

English (ENGL)

Prerequisite to all 200-level and above: 3 credits of 100-level English. Prerequisite to all English courses numbered above 302 unless otherwise noted: 3 credits of 100-level English and 3 credits of general education literature. Nonnative speakers of English with limited language proficiency are encouraged to take ENGL 100 instead of ENGL 101. Students may not receive credit for both ENGL 100 and 101.

100 Composition for Non-native Speakers of English (4:4:0) For non-native English speakers with limited language proficiency. Students must attain minimum grade of C to fulfill degree requirements. Intensive practice in drafting, revising, and editing expository essays of some length and complexity. Studies logical, rhetorical, and linguistic structure of expository prose, with attention to particularly difficult aspects of the language for non-native speakers. Methods and conventions of preparing research papers.

101 Composition (3:3:0) Intensive practice in drafting, revising, and editing expository essays of some length and complexity. Studies logical, rhetorical, and linguistic structure of expository prose. Methods and conventions of preparing research papers. Students must attain minimum grade of C to fulfill degree requirements.

201 Reading and Writing about Texts (3:3:0) Close analysis of literary texts, including but not limited to poetry, fiction, and drama. Emphasizes reading and writing exercises to develop basic interpretive skills. Examines figurative language, central ideas, relationship between structure and meaning, narrative point of view.

202 Texts and Contexts (3:3:0) Studies literary texts within the framework of culture. Examines texts within such categories as history, gender, sexuality, religion, race, class, and nation. Builds on reading and writing skills taught in ENGL 201.

203, 204 Western Literary Traditions (3:3:0), (3:3:0) Major works of Western literature in historical progression. ENGL 203 focuses on writers such as Homer, Sophocles, Euripides, Dante, Cervantes, Machiavelli, and Montaigne. ENGL 204 covers writers such as Moliere, Mme. de Lafayette, Goethe, Ibsen, Flaubert, Dostoyevsky, Tolstoy, Mann, Kafka, Borges, and Soyinka. All readings are in modern English. Courses build on reading and writing skills taught in ENGL 201.

302 Advanced Composition (3:3:0) Prerequisites: completion of 45 credits including general education composition and general education literature, requires a grade of C or better. Intensive practice in writing and analyzing expository forms such as essay, article, proposal, and technical or scientific reports with emphasis on research related to student’s major field. Schedule of Classes designates particular sections of ENGL 302 in business, humanities, natural sciences and technology, and social sciences.

309 Introduction to Nonfiction Writing (3:3:0) Not to be taken concurrently with ENGL 399 or 489, and not to be taken by students who have taken ENGL 489. Not a remedial course. Advanced practice in analyzing and writing nonfiction forms such as essay, profile, article, and technical or scientific report, depending on student’s interests.

311 Writing Ethnography (3:3:0) Study and practice of ethnographic writing. Students conduct ethnographic investigations and practice journal keeping, field note recording, interviewing, transcription, and interpretation. Includes introduction to current issues in ethnographic writing.

325 Dimensions of Writing and Literature (6:6:0) Open to all students. Required of those majoring or minoring in English, who should take ENGL 325 before taking other 300- or 400-level literature courses, and who must obtain a minimum grade of C to satisfy degree requirements in English major or minor. Examines English as discipline, and develops interpretive skills for further study in the major. All sections cover issues such as form, genre, point of view, figurative language, conventions of close reading and literary interpretation, and how culture shapes texts. Regular class meetings; weekly lectures, performances, or readings.

326 General Linguistics (3:3:0) See LING 326.

327 Introduction to Cultural Studies (3:3:0) Introduces interpretive practices associated with cultural studies.

330 Introduction to Literary Theory (3:3:0) Introduces contemporary theories informing literary and cultural study such as deconstruction, poststructuralism, new historicism, feminism, psychoanalysis, and contemporary cultural studies.

331 Introduction to Documentary (3:3:0) This introduction to the study of documentary considers fundamental concepts of form, style, and subject matter, ethical considerations, and theories of documentary, and includes close analysis of a series of representative film and television texts.

332 Introduction to Film (3:3:0) Introduces film medium as an art form.
333 Folklore of the Americas (3:3:0) Topics include folktales, personal narratives, legends, proverbs, jokes, folk songs, folk art and craft, and folk architecture. Considers ethnicity, community, family, festival, folklore in literature, and oral history. Discusses traditions in students’ own lives.

334 Literary Approaches to Popular Culture (3:3:0) Emphasizes popular fiction and adaptation of popular prose genres to media that have strong verbal and visual elements. Relationship between verbal and nonverbal elements of media such as film, comics, and radio.

335, 336 Shakespeare (3:3:0) Twenty selected plays. ENGL 335 emphasizes histories and comedies; ENGL 336, tragedies and romances.

337 Special Topics in Myth and Literature (3:3:0) Studies how traditional mythologies are reflected in English and American literature and other texts as themes, motifs, and patterns. May be repeated once for credit when course content differs.

338 Cultural Constructions of Sexualities (3:3:0) Introductory survey of cultural, literary, and theoretical constructions of sexuality that seek to complicate traditionally fixed categories of identity. Examines various representations of human sexuality, with particular attention to intersections with gender, race, ethnicity, nationality, and class.

342 Web Authoring and Design (3:3:0) Provides a rhetorical foundation for web authoring and design in professional settings. Students will learn basic principles of writing for the web, information architecture, coding for accessibility, and usability testing. The production-oriented component of the course provides instruction in writing valid code and practice with web- and graphic-editing software tools.

343 Textual Media (3:3:0) Critical reading of new media texts and creation of technology-enriched texts in variety of rhetorical genres. Instructs students in rhetoric of new media, whether produced as hypertext, multimedia, or interactive digital productions. Technology-enriched activities present complex textuality of words, images, word-as-image, and kinetic text.

344 Introduction to Digital Writing in the Genres (3:3:0) Prerequisites: ENGL 396, or permission of instructor. Combined workshop and studio course in technological and aesthetic issues of reading and writing hypermedia texts with emphasis on poetry, fiction, creative nonfiction, mixed genre, drama, or performance. Explores how genre meets hypertext and hypermedia in original creative work. Includes techniques in authoring interactive hypermedia projects using digital media tools. May include reading assignments in hypertext and hypermedia theory.

345 Special Topics: Literary Surveys (3:3:0) Advanced introduction to major movements and representative figures of two or more centuries or periods of American, British, European, or world literature. May be repeated once for credit when course content is different.

349 Global Voices (3:3:0) Prerequisite: 45 credits. Studies two cultures other than contemporary British or American culture through exploration of several textual forms such as written literature, oral literature, film, folklore, or popular culture. Specific cultures vary, but at least one is non-Western.

350 The Idea of a World Literature (3:3:0) Prerequisite: 45 credits. Examines history and current status of conceptions of world literature, considering such topics as non-European influences on Western literature, shifting horizons of comparative literature, rise of postcolonial literature, place of translation, and role of international institutions such as UNESCO and the Nobel Prize. Focuses on degree to which these initiatives have been successful in promoting global understanding of literary production.

360, 363 Special Topics in Literature (3:3:0) Studies literature by topics, such as women in literature, science fiction, and literature of the avant garde. Topic changes each time course is offered. May be repeated when course content differs.

368 Beginnings of African American Literature Through 1865 (3:3:0) Concentrating on such poets as Phillis Wheatley, Jupiter Hammon, Lucy Terry, and George Moses Horton, examines significant African American literary, social, and political texts produced through 1865. Special attention to narrative accounts of enslavement and freedom by Frederick Douglass, Harriet Jacobs, and Olaudah Equiano; political writings and orations of David Walker and Sojourner Truth; fiction of Harriet Wilson and William Wells Brown; and nonwritten cultural artifacts such as slave songs and spirituals.

369 Women and Literature (3:3:0) Explores experiences of women as both authors and subjects of imaginative literature. May be repeated for credit when subtitle is different.

371 African American Literature Through 1946 (3:3:0) Focusing on fiction, poetry, drama, and autobiography, explores evolution of African American literature and aesthetics and major social, cultural, and historical movements such as the Harlem Renaissance of the 1920s and emergence of black naturalism, realism, and modernism in the 1930s–40s. Major authors include Zora Neale Hurston, Langston Hughes, Jessie Fauset, James Weldon Johnson, Jean Toomer, Nella Larsen, Margaret Walker, Chester Himes, Richard Wright, and Ann Petry.

372 Contemporary African American Literature (3:3:0) Encompassing array of genres and forms, examines black writing from mid-20th century to present. Engages textual, critical, political, and theoretical issues related to cardinal literary movements, such as Black Arts Movement of 1960s and Third Renaissance of 1980s–90s. Examines how musical forms such as blues, jazz, and rap shaped literary production. Major authors include Ralph Ellison, Gwendolyn Brooks, James Baldwin, Lorraine Hansberry, Amiri Baraka, Alice Walker, Ernest Gaines, Gloria Naylor, August Wilson, and Toni Morrison.

375 Ethnic American Literature (3:0:3) Prerequisite: 3 credits of general education literature. Studies particular
ethnic American literatures. Focuses on literatures such as Asian American, Native American, Latino/a, Arab American, or Jewish American. May be repeated once for credit when subtitle and course content are different.

380 Recent American Fiction (3:3:0) American short story writers and novelists from World War II to present, including Mailer, Barth, Cheever, Oates, Gass, Beattie, Updike, and Morrison.

392 Editing for Audience, Style, and Voice (3:3:0) Introduces editing as a textual and rhetorical practice. Addresses copyediting, stylistics, and design; revisions based on audience, purpose, and genre; multimedia editing; interactions between editors and authors. (Not a remedial course in fixing sentence errors.)

396 Introduction to Creative Writing (3:3:0) Assignments include writing exercises and original works of poetry and fiction. May also include drama or creative nonfiction. Includes reading assignments in covered genres, and may include oral presentations or in-class performance. Original student work read and discussed in class and conference with instructor.

397 Poetry Writing (3:3:0) Prerequisite: ENGL 396, or permission of instructor. Workshop in reading, writing poetry. Original student work read and discussed in class and conferences with instructor. Technical exercises in craft of poetry; may include reading assignments.

398 Fiction Writing (3:3:0) Prerequisite: ENGL 396, or permission of instructor. Workshop course in reading and writing fiction. Original student work read and discussed in class and conferences with instructor. Includes technical exercises in craft of fiction; may include reading assignments.

399 Creative Nonfiction Writing (3:3:0) Prerequisite: ENGL 309 or 396, or permission of instructor. Workshop in reading and writing of nonfiction that makes use of literary techniques normally thought of in context of fiction, such as evoking senses and use of dialogue. Original student work read and discussed in class and conferences with instructor. Includes technical exercises in artful creating of nonfiction; may include reading assignments.

400 Literature of the Middle Ages (3:3:0) Selected English narrative, dramatic, and homiletic literature written between 1300 and 1500, exclusive of Chaucer.

402 English Poetry and Prose of the 17th Century (3:3:0) English poetry and prose from 1603 to 1688, excluding Milton.

404 The Augustan Age (3:3:0) English literature from late 17th century to mid-18th century. Includes Dryden, Rochester, Behn, Defoe, Swift, Pope, and Montagu.

405 The Age of Sensibility (3:3:0) English literature of later 18th century, time of American and French Revolutions, including new developments in novel, drama, biography, and poetry. Includes Johnson, Boswell, Blake, Goldsmith, Sterne, Gray, Cowper, Burney, Godwin, and Wollstonecraft.

407 Prose and Poetry of the Victorian Period (3:3:0) Poetry and nonfiction prose by such authors as Carlyle, Arnold, Tennyson, Elizabeth Barrett Browning, Robert Browning, Ruskin, Mill, and Wilde.

408 Special Topics: British Literary Periods (3:3:0) In-depth study of selected period of British literature. In addition to literary examples, materials may be chosen from art, philosophy, or popular culture of the time. When subtitle is different, may be repeated once for credit with permission of department.

410 Professional and Technical Writing (3:3:0) Prerequisite: ENGL 302. Intensive study and practice in various forms of professional and technical writing, including proposals, reports, instructions, news releases, white papers, and correspondence. Emphasizes writing for variety of audiences, both lay and informed, and writing within various professional and organizational contexts.

414 Honors Seminar (3:3:0) Prerequisite: permission of department. Emphasizes growth in awareness of literary scholarship as a discipline, providing opportunity for advanced study in literary and cultural criticism. Covers variety of topics, including consideration of a literary period, genre, author, work, theme, discourse, or critical theory. May be repeated for credit.

415 Honors Thesis Writing Seminar (3:3:0) Prerequisites: permission of department and ENGL 414 or 416. Gives students who wish to write an English honors thesis guidance in research methods, while offering opportunity to share and critique works in progress in workshop format. Students may take thesis seminar concurrently and in coordination with another approved course offered by English Department. In this case, the thesis of about 30 pages explores area covered by second course, and instructor in that course serves as thesis reader and advisor. Students receive credit for thesis seminar and second course; however, thesis work may substitute for some assigned work in second course by arrangement of instructors of thesis seminar and second course.

416 Honors Independent Study (1–3:0:0) Prerequisites: admission to honors program in English, and permission of instructor. Intensive writing course. Honors students concentrating in nonfiction writing and editing may use English 416 to replace English 414 as first course in Honors program. Honors students concentrating in creative writing may use English 416 to replace 415 as second course in Honors program.

421 Topics in Film History (3:3:0) Advanced studies of development of film language, both as cultural practice and medium for formal innovation. Topics might include studies of national cinemas, historical periods, genres, or individual directors. May be repeated once for credit when topic is distinctly different.

422 Topics in Film Theory (3:3:0) Advanced studies of theories about various aspects of production, distribution, and reception of film-mediated experiences. Topics may include theories of spectator, semiotics, feminist film theory,
theories of narrativity, structuralist film theory, or deconstruction. May be repeated once for credit when topic distinctly different.

423 Colonial and Federalist American Literature (3:3:0) Works of first 200 years of American literature, including Edwards, Franklin, Irving, Cooper, and Bryant.

429 Special Topics: American Literary Periods (3:3:0) In-depth study of selected period of American literature. In addition to literary examples, materials may be chosen from art, philosophy, or popular culture of time. May be repeated once for credit when subtitle is different, with permission of department.

431/HIST 431/FRLN 431 Medieval Intellectual Topics (3:3:0) May be taken for credit by English or history majors. Examines selected topic in intellectual history of Middle Ages. Specific topic may vary. Primary emphasis is literary or historical, depending on discipline of instructor. May consider relevant material from philosophy, theology, and art.

437 Twentieth-Century Continental Novels in Translation (3:3:0) Offered in cooperation with the Department of Modern and Classical Languages. Focuses on continental novel from beginning of 20th century to present. Includes Proust, Mann, Gide, Kafka, Yor yecvar, Beauvoir, Calvino, and Garcia Marquez. Attention to influence of this literature on novel in English.

439 Literature in English Other Than British and American (3:3:0) Study of selected topics, periods, genres, or authors in literature written in English, originating in Canada, Australia, New Zealand, South Asia, or Africa, for example. May be repeated once for credit when subject is different, with permission of department.

440 English Renaissance Drama (3:3:0) Major dramas and dramatists of English Renaissance, such as Lyly, Marlowe, Jonson, Middleton, Webster, and Ford.

443 Restoration and Eighteenth-Century Drama (3:3:0) Restoration comedy of manners, sentimental comedy, and neoclassical and bourgeois tragedy. Theories of drama and conventions of staging. Includes writers such as Wycherley, Behn, Congreve, and Cowley.

445 English and Irish Drama of the Twentieth Century (3:3:0) English or Irish drama from Yeats to the present. Plays by authors such as Yeats, Synge, O’Casey, Osborne, Wesker, Pinter, Friel, Churchill, and Gems.

447 American Drama of the Twentieth Century (3:3:0) American drama of 20th century, with special attention to playwrights such as Glaspell, O’Neill, Miller, Williams, Fornes, and Albee.

448 Modern Drama (3:3:0) Representative plays of most influential European and American dramatists, with emphasis on dramatic styles such as realism, expressionism, epic, and existentialism. Studies Chekhov, Ibsen, Strindberg, Brecht, and Beckett.

449 Special Topics in Drama (3:3:0) Studies selected topics, periods, or playwrights. May be repeated once for credit when subtitle is different, with permission of department.

452 Development of the American Novel to 1914 (3:3:0) Major American novels of the pre-World War I period with emphasis on Brown, Cooper, Hawthorne, Melville, Twain, Howells, James, Crane, Dreiser, Norris, and others.

453 English Novel of the 19th Century (3:3:0) Works by Dickens, Thackeray, the Brontes, Eliot, Trollope, and Hardy.

456 English Novel of the Twentieth Century (3:3:0) Works by Conrad, Forster, Lawrence, Joyce, Woolf, Greene, Lessing, Spark, and Fowles.

458 Advanced Fiction Writing Workshop (3:3:0) Prerequisites: ENGL 398 and manuscript review. Submit 8–10 pages of fiction to instructor. Enrollment is controlled. Workshop; intensive practice in creative writing and study of creative process. Intended for students already writing original creative work. With permission of instructor may be taken a second time for credit.

459 Special Topics in Fiction (3:3:0) Study of selected topics, periods, or authors. May be repeated once for credit when subtitle is different, with permission of department.

460 Critical Study of Children’s Literature (3:3:0) Examines the history and criticism of children’s literature and the strategies used by authors of children’s literature to address their audience. Selected readings range from Puritan to contemporary writing for children, as well as influential works in educational philosophy, such as those by Locke and Rousseau.

462 English Poetry of the Twentieth Century (3:3:0) Emphasizes work of Hardy, Yeats, Lawrence, Graves, Auden, Thomas, and Hughes. Work of fiction employing poetic techniques, such as Joyce’s Ulysses, may also be studied.

463 American Poetry of the Twentieth Century (3:3:0) Emphasizes work of Robinson, Frost, Stevens, Williams, Pound, Crane, Eliot, and Lowell. May include work of fiction employing poetic techniques, such as Faulkner’s The Sound and the Fury.

464 Advanced Poetry Writing Workshop (3:3:0) Prerequisites: ENGL 397 and manuscript review. Submit 8–10 pages of poetry to instructor. Enrollment is controlled. Intensive practice in the craft of poetry and study of the imagination in creative process. Intended for students already writing original poetry. At discretion of instructor, technical exercises and assigned reading may be required. With permission of instructor, may be taken a second time for credit.
468 Special Topics in Poetry (3:3:0) Study of selected topics, periods, or poets. May be repeated once for credit when subtitle is different, with permission of department.

471 Chaucer (3:3:0) Major works of Chaucer, with emphasis on The Canterbury Tales.

472 Spenser (3:3:0) Poetry of Edmund Spenser, with central emphasis on The Faerie Queene.

473 Special Studies in Shakespeare (3:3:0) Study of one aspect of Shakespeare’s art or critical issues surrounding his work. May be repeated once for credit when subtitle is different, with permission of department.

474 Milton (3:3:0) Milton’s major poetic works, with emphasis on Paradise Lost.

477 Special Topics: British Authors (3:3:0) Study of one or two major figures in British literature. May be repeated once for credit when subtitle is different, with permission of department.

478 Special Topics: American Authors (3:3:0) Study of one or two major figures in American literature. May be repeated once for credit when subtitle is different, with permission of department.

479 Ethnicity and Immigration in Folklore (3:3:0) Explores U.S. immigration trends and the historical basis for the concepts of ethnicity, identity, and immigration in folklore scholarship, literature, film, and popular media. The course explores at least three of the following ethnic groups: Latino, Asian, Jewish, European, Arab, or African.

480 Advanced Nonfiction Writing (3:3:0) Prerequisite: ENGL 309 or 399, or permission of instructor. Workshop course. Intensive practice in advanced nonfiction writing; emphasizes writing for publication. Occasional special topics sections in such forms as autobiography and scientific writing.

492 Science Fiction (3:3:0) Major works of science fiction in terms of mode, themes, and narrative techniques, especially role of hypothesis in science fiction. Focuses on novels, short stories from early 19th century to present.

493 Special Topics in Popular Literature (3:3:0) Studies specific topic or theme in popular literature. May be repeated once for credit when subtitle is different, with permission of department.

494 Special Topics in Criticism (3:3:0) Studies selected approach to literary criticism, as announced, with exercises in critical analysis. Includes new criticism, structuralism, psychoanalysis, and Marxism. May be repeated with permission of department.

495 Literary Modes (3:3:0) Theory and practice of such modes as tragedy, comedy, tragicallyomedy, romance, and satire, considered in separate semesters and drawn from variety of periods ranging from biblical times to present, with examples from drama, poetry, and fiction. May be repeated with permission of department.

496 Topics in Rhetoric and Writing (3:3:0) Advanced studies in rhetoric and writing. Introduces key rhetorical terminology and examines how texts construct meaning and how those meanings are determined within social contexts. Topics may include the relationship between rhetorics and poetries, rhetoric and new media, histories of rhetoric, global rhetorics, argument theory, discourse analysis, theories of technical communication, or advanced theories of composition and pedagogy. May be repeated once for credit when subtitle is different, with permission of department.

497 Special Topics in Creative Writing (3:3:0) Prerequisite: ENGL 396 or equivalent, and permission of instructor. Students must submit typed manuscript at least one week before registration. Workshop course. Intensive practice in creative writing and study of creative process. Concentrates on specialized literary type other than short story or poetry, such as playwriting, screenwriting, children’s literature, travel literature, autobiography, gothic novel, and translation. Concentration announced in department’s Course Description Booklet before preregistration. Intended for students already writing original creative work. May be taken second time for credit.

498 Internship: Special Topics (1–3:0:0) Prerequisites: 60 credits including 3 credits of 100-level English course; 6 credits of 200-level English courses; and 3 credits of English 302. English majors need 6 additional credits of upper-level English courses. Non-English majors need 3 additional credits of upper-level English courses, and 3 credits of upper-level courses in the major. Unpaid, approved work-study positions at specific sites. Under supervision of faculty advisor, students work as intern with site supervisor in agency of student’s choosing, with advisor’s permission. For 3 credits, students work 120 hours on site and write 3,500 words, or the equivalent, given contract with advisor. Contact the English Department one semester prior to enrollment. No more than 3 credits can be counted in concentration or English minor. May be repeated for credit once with permission of department.

499 Independent Study (1–3:0:0) Prerequisites: permission of department and instructor. Individualized section form required. Intensive study of particular author, genre, period, or critical or theoretical problem in literature or linguistics, to be conducted by student in close consultation with instructor. Student produces at least one substantial piece of written work during semester on research findings. With permission of department, course may be taken twice for maximum 6 credits.

With permission of department, qualified undergraduates may enroll in 500-level courses for either undergraduate or reserved graduate credit.

501 Introduction to Professional Writing and Rhetoric (3:3:0) Provides historical and theoretical background in professional writing and editing, including editing in literary tradition and organizational settings. Explores professional writing’s emergence as field of scholarship and practice in seminar and practicum format.

502 Research Methods in Rhetoric and Professional Writing (3:3:0) Introduces theory, methods, and ethics of
conducting research in rhetoric and professional writing. Students learn to conduct and evaluate research that may include rhetorical analysis, discourse analysis, historical methods, ethnography, user-centered design, document and usability testing, and others.

503 Theory and Practice of Editing (3:3:0) Prerequisite: 6 credits of English courses numbered above 300, including one of 309, 311, 396, 397, 398, 410, 458, 464, 489, or 497; or permission of department. Instruction in revising, editing, and preparing specialized writing for printing. Emphasizes methods of achieving clarity, accuracy, and completeness. Lecture and discussion on editing and printing techniques; practical exercise in revision, layout, and production.

504 Internship in Writing and Editing (3:0:0) Open to senior English majors, and graduate students pursuing MA in English or MFA. Contact English Department one semester before enrolling. Variable credit and prerequisites. Approved work-study positions in writing or editing established by department with specific employers.

505 Computer-Assisted Publications Writing and Design (3:3:0) Theory and practice of using computer programs to design and produce publications including brochures, fliers, newsletters, and small magazines. Includes readings, writing papers, and producing and editing copy and original publications.

506 Research for Narrative Writing (3:3:0) Prerequisite: ENGL 565 or 566, or permission of instructor. Combines study of basic research tools with field work and writing workshop experience. Helps students develop techniques and skills necessary for writing a research-dependent project of sufficient complexity to be of book or long essay length. Emphasis on finding story behind facts, using material from numerous sources.

507 Field Work in Applied Linguistics (3:0:0) See LING 507.

508 Digital Rhetoric and Design (3:3:0) Provides an examination of major works on digital rhetoric and digital media framed by contemporary rhetorical theories that inform the emergent field of digital rhetoric. Course work includes projects that engage in the design, analysis, and assessment of digital media.

511 Styles and Modes in Literary History (3:3:0) Prerequisites: 15 credits of advanced undergraduate English courses and permission of department; or baccalaureate degree. Historical consideration of principal styles, modes, and intellectual paradigms in literary and cultural texts.

512/PHIL 512 Issues in Literature and Philosophy (3:3:1) Prerequisites: graduate or senior standing, 6 credits of upper-level English, 6 credits of philosophy, and permission of instructor. Interdisciplinary seminar offering opportunity to arrive at a personal synthesis of work previously done in philosophy and literature. Topic changes yearly, but focuses on themes or methodologies common to both disciplines.

513 Advanced Special Topics in English (3:3:0) Prerequisites: 15 credits of advanced undergraduate English courses and permission of department; or baccalaureate degree. Intensive study of topics involving literary or other texts such as film, television, opera, and folklore. May be repeated for credit with permission of department.

514/CL 514 Theories of Comparative Literature (3:3:0) Prerequisite: CL 300 and senior standing, or baccalaureate degree; or permission of instructor. Intensive study of major theories of comparative literature with special emphasis on development and redefinition of comparative outlook, from Great Books and Western Canon to transnationalism, multiculturalism, and intercultural studies.

520 Descriptive Linguistics (3:3:0) See LING 520.

522 Modern English Grammar (3:3:0) See LING 522.

526 Special Topics in the History and Criticism of Children's Literature (3:3:0) Focuses on the history and criticism of children’s literature, by concentrating on selected historical periods and literary modes such as “Golden Age” children’s literature, contemporary fantastic and children’s literature, or Romantic and Victorian children’s literature. May be repeated once for credit with permission of instructor.

551 Literary Criticism (3:3:0) Studies in selected critical theories pertinent to textual and cultural analysis.

555 Introduction to Cinema Studies (3:3:0) Students who have taken ENGL 332 may not take this course for credit. Advanced introduction to film study, including overview of approaches to study of cinema, methods of close analysis, basic concepts of film form and style, and contemporary theories of film.

564 Form of Poetry (3:3:0) Prerequisites: ENGL 464 or equivalent, and permission of instructor, except for MFA students in the concentration. Students seeking permission must submit typed manuscript of original poetry. Intensive study of and practice in formal elements of poetry through analyzing models and weekly or biweekly writing assignments. Intended for students already writing original poetry. Covers rhyme, meter, rhythm, lineation, stanza pattern, traditional and experimental forms, free verse and open-form composition, lyric, narrative, and dramatic modes.

565 Forms of Nonfiction (3:3:0) Prerequisites: ENGL 489 or equivalent, and permission of instructor, except for MA and MFA candidates in English. Intensive study of and practice in various forms of nonfiction writing through analyzing models and weekly writing assignments. Includes biographies, documentaries, editorials, interviews, reports, reviews, and essays.

566 Forms of Fiction (3:3:0) Prerequisites: ENGL 458 or equivalent, and permission of instructor, except for MFA students in concentration. Students seeking permission must submit typed manuscript of original fiction. Intensive practice in formal elements of fiction through analyzing models and weekly or biweekly writing assignments. Intended for students already writing original fiction. Covers description, narration, plot, dialogue, voice, point of view, style, epiphany, and antifiction techniques.

581 Psycholinguistics (3:3:0) See LING 581.

582 Second Language Acquisition (3:3:0) See LING 582.

591 Special Topics in Folklore (3:3:0) Explores various aspects of folklore and folklife such as narrative and story-
Courses

Non-MFA students seeking permission must submit manu-
or 489, and permission of instructor for non-MFA students.

608 Craft Seminars (3:3:0) semester prior to enrollment.

610 Proseminar in Teaching the Reading of Literature
(3:3:0) Methods of teaching literature. Includes study of
sections offer work in fiction, poetry, and nonfiction, each
focusing in different ways on the practices and the craft
development of writers. Numerous writing assignments
mixed with reading followed by careful analytical and craft
discussions. Assignments vary with genre and specific topic.
May be taken concurrently with ENGL 564, 565, 566.

619 Special Topics in Writing (3:3:0) Prerequisite: Two
graduate writing courses or permission of instructor, except
for MFA students in concentration. Intensive practice in
craft of writing and study of creative process. Intended for students already familiar with tradi-
tional and contemporary poetic modes and already writing
original poetry. At discretion of instructor, reading may be
required. May be repeated for credit with permission of
department.

625 British Medieval (3:3:0) Selected literary authors,
works, or movements from 1300 to 1500, studied in Middle
English. Content varies. May be repeated twice for credit
with permission of department.

630 Early Modern (3:3:0) Selected literary authors, works,
or movements of English Renaissance. Content varies.
May be repeated three times for credit with permission of
department.

635 Eighteenth-Century British (3:3:0) Selected English
literary authors, works, or movements of 18th century.
Content varies. May be repeated twice for credit with permis-
sion of department.

640 Nineteenth-Century British (3:3:0) Selected English
literary authors, works, or movements of 19th century.
Content varies. May be repeated twice for credit with permis-
sion of department.

645 Twentieth-Century British (3:3:0) Selected English
literary authors, works, or movements of 20th century.
Content varies. May be repeated twice for credit with permis-
sion of department.

652 British Medieval (3:3:0) Selected literary authors,
works, or movements from 1300 to 1500, studied in Middle
English. Content varies. May be repeated twice for credit
with permission of department.

661 Early Modern (3:3:0) Selected literary authors, works,
or movements of English Renaissance. Content varies.
May be repeated three times for credit with permission of
department.
650 Seventeenth-Century American (3:3:0) Selected literary authors, works, or movements of the “new world” before 1800. Content varies. May be repeated once for credit with permission of department.

655 Nineteenth-Century American (3:3:0) Selected American literary authors, works, or movements of 19th century. Content varies. May be repeated twice for credit with permission of department.

660 Twentieth-Century American (3:3:0) Selected American literary authors, works, or movements of the 20th century. Content varies. May be repeated for credit with permission of department.

661 Advanced Survey in African American Literature (3:3:0) Intensive study of period in African-American literature between 1800 and present, with focus to be determined by instructor. Several genres will be considered, including autobiography; fiction; drama; poetry; essays; and oral artifacts such as slave songs, spirituals, and hip-hop. May be repeated for credit with departmental permission.

665 Texts in Global Contexts (3:3:0) Examines various cultural texts such as literature, drama, film, and folklore in terms of transnational circulation or production and reception in locations around the world other than Britain and United States. Engages with issues arising from globalization of English and interplay of global cultures. Texts studied in English or English translation. May be repeated once for credit with permission of department.

670 Visual Culture: Theories and Histories (3:3:0) Prerequisite: Introductory film course, or permission of instructor. Advanced study in histories of visual representation including film, television, and video, and in theories of production and circulation of meanings in visual culture. May be repeated once for credit with permission of department.

676 Introduction to Cultural Studies (3:3:0) Advanced introduction to theoretical practice known as cultural studies, with attention to role in textual studies. Part of interdisciplinary cultural studies PhD and MA in English programs.

684 Proseminar in Poetry (3:3:0) For students working on independent reading and research in poetry. Designed for students preparing to take the MFA reading exam in poetry but open to others with comparable reading projects in poetry.

685 Selected Topics, Movements, or Genres of Literature in English (3:3:0) Content varies. May be repeated for credit with permission of department.

686 Special Topics in Linguistics (3:3:0) See LING 686.

690 Generative Phonology (3:3:0) See LING 690.

691 Theories of Language (3:3:0) See LING 691.

692 Phonology II (3:3:0) See LING 692.

695/EDUC 695 Northern Virginia Writing Project Inservice Program (1,2,3:0:0) Prerequisite: admission to graduate program, or permission of department. Offered at request of school division or other education agency to assist teachers in improving student writing and use of writing to learn. Content varies. May be repeated once for credit with permission of department.

696/EDUC 696 Northern Virginia Writing Project Teacher/Research Seminar (3:0:0) Prerequisite: ENGL 695/EDUC 695 or NWWP Summer Institute. Acquaints classroom teachers with findings related to composing process and methods of studying writing in school setting. Focuses on developing proposal investigating some aspect of composing process. Teachers who developed proposal before enrolling conduct research during course.

697/EDUC 697 Composition Theory (3:3:0) Acquaints classroom teachers with theory relating to writing and teaching composition. Focuses on explaining theories of participants, reading works of leading theorists, and developing statement describing implications of theoretical consistency in teaching writing.

699 Workshop in English (1–3:0:0) Prerequisite: admission to graduate program, or permission of department. Concentrated workshops, educational tours, independent studies, and special seminars dealing with selected topics in writing, linguistics, film, electronic media, and literature written in English. All tours are optional, and may be replaced by specified work conducted on campus. May be repeated for credit with permission of department, but no more than 6 credits of ENGL 699 may be applied to master’s degree in English. No more than 3 credits of 699 may be applied to literature requirement for MFA degree.

701 Research in English Studies (3:3:0) Introduces research in English studies, including practice in library methods, writing critical bibliography, evaluating issues and problems, and surveying scholarly activities in department.

705 Literary Theory and Criticism (3:3:0) Major theories of literature and methods of analyzing and evaluating literary works. Content varies. May be repeated once for credit with permission of department.

740 Seminar in English/Cultural Studies (3:3:0) Prerequisites: 9 credits of graduate English courses including 701, or permission of department. Analyzes historical shifts in literary and cultural discourse or of relationships between literary and nonliterary elements of culture within specific historical moment. Major research paper required. Specific topics vary. May be repeated once for credit with permission of department.

750 Advanced Workshop in Poetry Writing (3:3:0) Open to MFA students only. Intensive practice in craft of poetry for experienced writers. May be repeated for credit with permission of department.

751 Advanced Workshop in Fiction Writing (1–6:1–6:0) Open to MFA students only. Intensive practice in craft of fiction for experienced writers. May be repeated for credit with permission.

752 Advanced Workshop in Nonfiction Writing (1–6:1–6:0) Open to MFA students only. Intensive practice in craft of nonfiction for experienced writers. May be repeated for credit with permission.

785 Semantics and Pragmatics (3:3:0) See LING 785.

786 Syntax I (3:3:0) See LING 786.

787 Syntax II (3:3:0) See LING 787.
780 Directed Reading and Research (1–3:0:0) Prerequisite: open only to degree students who have preregistered and have completed 15 credits, including ENGL 701. Reading, research, and writing on specific project under direction of department member. Oral or written report required. MA students may repeat once for credit with permission of department. MFA students may present up to 12 credits of ENGL 780 for graduation, but no more than 3 may count toward completing literature requirement.

797 Projects in Professional Writing and Rhetoric (3:3:0) Prerequisites: ENGL 501, ENGL 502, and 6 credits of professional writing and rhetoric courses. Students complete a capstone project guided by instructor and a faculty consultant. Reflecting on theories and methods learned in previous course work and applying them to a concrete rhetorical situation, students produce a professional-quality project for a primary audience located in the professional workplace or the discipline of rhetoric and professional writing. Graded S/NC.

799 Thesis (1–6:0:0) Students who take ENGL 798 to develop thesis topic and then elect thesis option receive 3 credits for ENGL 799 on completion of thesis. Students who do not take ENGL 798, or who take it to work on project unrelated to thesis, receive up to 6 credits for ENGL 799 on completion of thesis. Graded S/NC.

800 Studies for the Doctor of Philosophy in Education (variable credit) Prerequisite: admission to PhD in education program to study in English. Program of studies designed by discipline director and approved by doctoral committee that prepares student for research and writing in area of interest of discipline director. Enrollment may be repeated.

801 New Developments in English (3:3:0) Designed for students in doctor of arts in community college education program. Focuses on major original texts that have influenced discipline of English in late 20th century. Readings are from literary studies, composition and writing theory, and linguistics.

Enterprise Engineering and Policy (EEP)

School of Public Policy

601 Introduction to Enterprise Engineering: Engineering and Policy (3:3:0) Provides overview of extended enterprise integration using modern standard software solutions and tools. Focuses on integration and management aspects of extended enterprise solutions. Topics include enterprise resource planning and e-business extensions. Students must demonstrate complete proficiency in modern implementation methodology and supporting tools.

602 Decision Support for Enterprise Integration (3:3:0) Prerequisite: EEP 601. Lectures focus on using “business intelligence” to enhance competitive advantage, developing information-driven set of controls to improve profitability, and creating balanced business with aligned corporate direction and strategic intent. Examines solutions within enterprise resource planning systems.

603 Supply Chain Integration and Management (Business-to-Business Electronic Commerce) (3:3:0) Prerequisite: EEP 601. Focuses on two issues: supply chain integration from information technology perspective, and supply chain management from decision support perspective. Course motivation is merging of enterprise computing with operations research, primarily through customer and supply chain management systems. Topics include enterprise resource planning and web integration, advanced planning and scheduling, and CPFR.

604 E-Commerce Architectures (Business-to-Consumer Electronic Commerce) (3:3:0) Prerequisite: EEP 601. Introduces network and system architectures that support high-volume, business-to-consumer web sites and portals. Provides insight into structure of modern web-enabled storefront. Critical business and technology issues include storage area networks, server clustering, load balancing techniques at server and network levels, fault tolerance, and recovery of database and application servers.

605 Economics of Electronic Commerce (3:3:0) Prerequisite: EEP 601. Focuses on gaining competitive advantage through electronic commerce implementation; identification and growing of new market opportunities and electronic enabling of existing business relationships; business-to-consumer relationships and economics of strategic procurement; enterprise resource planning hosting; customer relationship management; catalog hosting; portal operations; and supplier management.

606 Customer Relationship Management (3:3:0) Prerequisite: EEP 601. Modern world of e-commerce extends intraenterprise integration, as implemented in enterprise resource planning systems, to include external constituents such as customers, partners, and suppliers. Course focuses on modern system support for demand chain, and value-creation process that results from integrating “front office” and “back office” systems.

607 Critical Information Technology Infrastructures (3:3:0) Prerequisite: EEP 604. Focuses on design and implementation of high-speed network and application services in support of modern enterprise resource planning (ERP) systems. Critical technologies include high-speed data communication, switched vs. routed data flow, workflow engines, business rule and web application servers, and load-balancing technologies. Large-scale, web-enabled ERP system architecture examined in detail.

608 Optimization of Supply Chains (3:3:0) Prerequisites: MATH 203 and 213, and graduate standing. Focuses on supply chain optimization from enterprise-wide perspective, and supply chain optimization from business-to-business e-commerce perspective. Explores optimizing value of goods and services and assuring reasonable return on such sales. Describes heuristic and exact algorithms for scheduling, production, inventory management, logistics, and distribution. Presents new software that enables such optimization, and new techniques to handle risk, quality of data, and robustness of solutions. Outlines manufacturing and service examples from public and private sectors. Students perform case studies using state-of-art software.

609 Special Topics in Enterprise Engineering and Policy (1–3:1–3:0) Topics not covered in regular EEP course offerings; content varies each semester.

610 Project in Enterprise Engineering and Policy (3:3:0) Focuses on completing capstone project in enterprise engineering and policy. Designed as two-semester project, with student closely guided by faculty advisor. Topic selected by mutual agreement with faculty advisor.
Environmental Science and Public Policy (EVPP)

Environmental Science and Policy

110 The Ecosphere: An Introduction to Environmental Science I (4:3:3) Studies components and interactions that make up natural systems of our home planet. Teaches basic concepts in biological, chemical, physical, and Earth sciences in integrated format with lecture, laboratory, and field exercises. First semester of two-semester lab science sequence that can fulfill science requirements for BA students in CAS. (3:3:0)

111 The Ecosphere: An Introduction to Environmental Science II (4:3:3) Prerequisite: EVPP 110. Studies components and interactions that make up natural systems of our home planet. Teaches basic concepts in biological, chemical, physical, and Earth sciences in integrated format with lecture, laboratory, and field exercises. Second of two-semester lab science sequence that can fulfill science requirements for BA students in CAS. (3:3:0)

201 Environment and You: Issues for the Twenty-First Century (3:3:0) Introduces broad aspects of anthropocentric environmental considerations in contemporary world. Topics include global populations and wastewater treatment, environmental law, and genetic engineering. (3:3:0)

318 Conservation Biology (3:3:0) Prerequisites: BIOL 307 and 311. Introduces science used to identify species in need of conservation, and techniques to manage and protect organisms. (3:3:0)

335 People, Plants, and Culture (3:3:0) Prerequisites: completion or concurrent enrollment in all other required general education courses. Introduces students to the complex interactions of people and plants in historical and contemporary times. The course is team taught by professors of both natural and social science. The instructors will lend their expertise to fully address the fundamental links between botany, human ecology, and environmental health and sustainability. (3:3:0)

336 Human Dimensions of the Environment (3:3:0) Prerequisite: one of EVPP 110, GEOL 101, SOCI 101, or ANTH 114. Overview of current knowledge regarding human and environment interactions and human ecology. Topics include basic theoretical and conceptual issues, relationship between social and biological sciences, human causes and consequences of environmental change, and contemporary perspectives on environmental issues. (3:3:0)

337 Environmental Policy Making in Developing Countries (3:3:0) Prerequisite: 60 credits. Overview of environmental policy process in developing countries around the world. Major focus on understanding distinctive problems and dynamics of environmental policy making in poor countries to generate better policy decisions and management. (3:3:0)

339 Vertebrate Natural History (4:3:3). Prerequisite: BIOL 307 or equivalent. Introduces vertebrates with emphasis on systematics, life history, behavior, and ecology. Laboratory emphasis on identification and natural history of local fauna. (3:3:3)

350 Freshwater Ecosystems (4:3:3) Prerequisites: CHEM 211/212, and either EVPP 110/111 or BIOL 103/104. Studies physical, chemical, and biological processes in lakes, streams, and wetlands. Teaches physical and chemical aspects of aquatic systems and life cycles, and adaptations of aquatic organisms. Lectures, field trips, lab exercises. (3:3:3)

361 Introduction to Environmental Policy (3:3:0) Prerequisites: 30 credit hours. Environmental politics and policymaking since the 1970s. Primary focus on United States, with some discussion of global issues. Examines policy strategies and outcomes, ethical and economic debates, political controversies, lawmaking and enforcement, and role of key players. (3:3:0)

363 Coastal Morphology and Processes (4:3:3) Prerequisite: GEOL 309, BIOL 309, or GEOL 317; or 9 credits in geography, including GEOG 309. Studies global coastal geomorphology and processes with emphasis on U.S. Atlantic and gulf coasts. Topics include plate tectonics; sea-level changes; sediment supply; impact of waves, tides, and storms; and human activities. Lectures and extended weekend field trips to mid-Atlantic coast. (3:3:0)

377 Applied Ecology (3:3:0) Prerequisite: 60 credits, including 8 credits of biology, geology, or chemistry; or permission of instructor. Introduces ecosystem concepts and applications to natural and managed ecosystems. (3:3:0)

395 Undergraduate Research in Environmental Science and Policy (1–3:0:0) Prerequisites: 45 credits including at least two upper-level science lab courses. Original research project. May involve field and lab study, computer modeling and analysis, or other original research as appropriate. Research formulated and completed under instructor's guidance. Culminates in final report. May be repeated for total 10 credits. (1–3:0:0)

396 Directed Topic in Environmental Science and Policy (1–4:0:0) Prerequisites: 45 credits. Study of topic not otherwise available. May involve readings, lectures, lab assignments, and tutorials as jointly agreed on by student and instructor. Culminates in term paper, final exam, or both. May be repeated for maximum 8 credits. (1–4:0:0)

419 Marine Mammal Biology and Conservation (3:3:0) Prerequisites: BIOL/GEOL 309-001 or BIOL 449; 60 credit hours. Covers the evolution, biology, ecology, and behavior of marine mammals from polar bears and sea otters to whales and dolphins. Marine mammal conservation and policy is also a major component of the course; several lecture sessions are devoted to the issue of whaling, threats to marine mammal populations, and recent conservation issues such as marine mammals and noise pollution. The course also includes a number of guest lectures from a variety of international marine mammal experts. (3:3:0)

421 Marine Conservation (3:3:0) Prerequisites: BIOL/GEOL 309 and completed or concurrent enrollment in all other required general education courses. Provides an overview of threats to the marine environment, and discusses the scientific, socioeconomic, and political issues behind marine conservation. Covers categories of marine pollutants (chemical, biological, and physical contaminants) and their impacts on the marine ecosystem, as well as impacts on humans (health, social, and economic), threats to key marine species (e.g., coral, sharks, turtles, and marine mammals) and initiatives and laws developed to reduce these threats. Scientific and socioeconomic problems that hinder sustainable fisheries management and the science and policy behind the global warming debate are also discussed. The course also provides an overview of marine environmental law and policy issues related to marine conservation policy. (3:3:0)
Courses

451 Fungi and Ecosystems (3:3:0) Prerequisite: BIOL 304 or course in microbiology; or permission of instructor. Considers impact of fungi on ecosystems in terms of effects on biogeochemical cycling, primary and secondary production, and regulating community structure and populations of individual species through activities as symbionts and parasites. Discusses role of fungi in ameliorating pollutants produced by anthropogenic activities.

490 Special Topics in Environmental Science and Policy (1–4:1–4:1–4) Prerequisites: 60 credits, and permission of instructor. Studies selected topics in environmental science and policy using lectures, guest lectures, student presentations, or laboratory exercises. Topics vary, but each offering has coherent syllabus. May be repeated for credit if topics significantly different.

503 Field Mapping Techniques (3:0:6) Prerequisites: MATH 105 or equivalent; and EVSC 110, GEOG 102, or GEOL 101 or equivalent. Basic techniques for collecting, recording, and plotting spatial field data, including topographic maps, compass, transit, alidade, and global positioning systems. Field work and field-based research project.

505 Selected Topics in Environmental Science (1–4:1–3:0–6) Prerequisite: course in ecology or geology, or permission of instructor. Topic depends on instructor’s specialty.

515 Molecular Environmental Biology I (3:3:0) Prerequisite: introductory biology and genetics course, or permission of instructor. Introduces molecular environmental biology covering basic concepts of molecular biology, molecular evolution, and bioinformatics, and application to problems in molecular and environmental biology.

519 Marine Mammal Biology and Conservation (3:3:0) Covers the evolution, biology, ecology, and behavior of marine mammals from polar bears and sea otters to whales and dolphins. Marine mammal conservation and policy is also a major component of the course; several lecture sessions are devoted to the issue of whaling, threats to marine mammal populations, and recent conservation issues such as marine mammals and noise pollution. The course also includes a number of guest lectures from a variety of international marine mammal experts.

521 Marine Conservation (3:3:0) Provides an overview of threats to the marine environment, and discusses the scientific, socioeconomic, and political issues behind marine conservation. Covers categories of marine pollutants (chemical, biological, and physical contaminants) and their impacts on the marine ecosystem, as well as impacts on humans (health, social, and economic), threats to key marine species (e.g., coral, sharks, turtles, and marine mammals) and initiatives and laws developed to reduce these threats. Scientific and socioeconomic problems that hinder sustainable fisheries management and the science and policy behind the global warming debate are also discussed. The course also provides an overview of marine environmental law and policy issues related to marine conservation policy.

524 Introduction to Environmental and Resource Economics (3:3:0) Prerequisite: basic algebra skills. Introduces theory of external costs and benefits, public goods, natural resource management, and benefit and cost analysis for noneconomicists. Lecture-discussion format with student presentations and participation. Analytical problems set, short writing assignments, and exams.

525 Economics of Human/Environment Interactions (3:3:0) Prerequisite: EVPP 524/GEOG 524 or equivalent. Advanced topics in environmental, natural resource, and ecological economics for noneconomists. Emphasizes sustainability, intergenerational equity, and economic-ecological feedbacks. Lecture, discussion with substantial student participation. Problem sets, class presentations, term paper.

531 Land-use Modeling Techniques and Applications (3:3:0) Prerequisite: GEOG 550, or permission of instructor. Surveys literature on spatially explicit empirical models of land-use change. Offers hands-on experience developing and running simple models. Includes statistical models, mathematical programming models, cellular automata, agent-based models, and integrated models.

536 Ichthyology (4:3:3) Prerequisites: ecology course, or permission of instructor. Studies systematics, evolution, physiology, ecology, and behavior of fishes. Lab time used for field trips, practice in identifying species, and hands-on experience with lecture subjects.

538 Mammalogy (4:3:3) Prerequisites: Courses in zoology and ecology (BIOL 303 and 307, or equivalent). Biology of mammals with emphasis on behavior, ecology, and conservation.

543 Tropical Ecosystems (4:3:3) Prerequisites: ecology course, and permission of instructor. Terrestrial, aquatic, and marine ecosystems in the tropics, emphasizing plant communities, plant-animal interactions, and role of humans in tropics. Requires field trip to tropics as part of lab.

546 Estuarine and Coastal Ecology (4:3:3) Prerequisites: course in ecology, and permission of instructor. Emphasizes marine biology of estuarine and coastal habitats of Chesapeake Bay region, and factors affecting distribution and abundance of organisms. Lab provides training in field measurement of physical and chemical parameters, and collection and identification of local organisms. Extended field trips to mid-Atlantic sites.

550 Waterscape Ecology and Management (3:3:0) Prerequisites: course in chemistry, and course in ecology. Studies physical, chemical, and biological components of freshwater ecosystems with emphasis on streams, rivers, and lakes; links between watersheds and freshwater ecosystems; and impact of human management.

551 Fungi and Ecosystems (3:3:0) Prerequisite: BIOL 304 or course in microbiology, or permission of instructor. Considers impact of fungi on ecosystems in terms of effects on biogeochemical cycling, primary and secondary production, and regulating community structure and populations of individual species through activities as symbionts and parasites. Discusses role of fungi in ameliorating pollutants produced by anthropogenic activities.

555 Lab in Waterscape Ecology (1:0:3) Prerequisite: EVPP 550 or permission of instructor. Field and laboratory approaches to freshwater ecology with emphasis on study design, sampling methods, laboratory and data analysis, and report writing.

563 Coastal Morphology and Processes (4:3:3) Prerequisite: previous courses in geology, oceanography, marine science or physical geography; or permission of instructor. Studies global coastal geomorphology and processes, emphasizing U.S. Atlantic and gulf coasts. Topics include plate
tectonics; sea-level changes; sediment supply; impact of waves, tides, storms; and human activities. Lecture, extended weekend field trips to mid-Atlantic coast.

576 Microbial Ecology of Soils (3:3:0) Prerequisite: course in microbiology or permission of instructor. Surveys microbial ecology in surface and subsurface soils. Describes organisms and their function and interaction.

577 Biogeochemistry: A Global Perspective (3:3:0) Prerequisites: course in ecology and course in chemistry; or permission of instructor. Structure and function of ecosystems, their interactions as components of landscapes, and contributions to the global environment. Emphasizes biogeochemical cycles of natural, disturbed, and managed ecosystems, and integration at landscape and global level as related to current ecological problems such as transfer of nonpoint source pollutants, atmospheric deposition, stratospheric ozone depletion, and global change.

607/BIOL 607 Fundamentals of Ecology (3:3:0) Overview of concepts in physiological, population, community, and ecosystem ecology restricted to graduate students with little or no background in ecology.

610 Bioremediation: Theory and Applications (3:3:0) Prerequisites: courses in microbiology and either organic chemistry or biochemistry; or permission of instructor. Provides basis for understanding proper application of bioremediation technologies to treatment of hazardous wastes. Includes evaluation of data to determine successful treatment.

613 Environmental Geochemistry and Mineralogy (3:3:0). Prerequisite: graduate standing. Explores hot topics and aids students in developing intellectual skills to identify key research problems. Students will also improve their writing and presentation skills.

615 Molecular Environmental Biology II (4:3:3) Prerequisite: EVPP 515 or permission of instructor. Applied course covering theory and methodology of molecular environmental biology, including analysis of selected case studies in conservation biology of macro-organisms, molecular systematics, and microbial ecology.

620 Development of U.S. Environmental Policies (3:3:0) Prerequisites: course in policy process and course in ecology; or permission of instructor. Through lectures, guest speakers, class discussions and assigned reading, examines nature and historical development of environmental policy in the United States, including consideration of social, political, economic and environmental factors, and ways it is expressed and implemented. Also consider sustainability and emerging issues.

621 Overview of Biodiversity Conservation (3:3:0) Prerequisites: 8 graduate credits in ecology and environmental science or environmental policy, or permission of instructor. Lectures, reading assignments, class discussions, and orally presented and written case studies to explore what biodiversity is, why it is important, how conservation has evolved, and status today.

622 Management of Wild Living Resources (3:3:0) Prerequisites: 6 credits of ecology or permission of instructor. Through lectures, case studies, and discussions, examines management and different types of wild living resources: animal and plant, aquatic and terrestrial. Reviews status of resources, analyzes factors that have led to present situation, and considers what may be required to achieve effective and sustainable management.

623 Translating Environmental Policy into Action (3:3:0) Prerequisites: 8 graduate credits in environmental science or environmental policy, or permission of instructor. Guest lecturers, class discussions, written and orally presented case studies, and assigned reading to identify and analyze factors involved in moving from science and policy to concrete action. Provides understanding of basic principles, skills, and strategies.

626 Environment and Development in South and East Asia (3:3:0) Prerequisites: course work in policy process, international development, and ecology; or permission of instructor. Guest lecturers, assigned reading, class discussions, and oral and written case studies to examine environment and development in selected countries of South and East Asia. Reviews relationship between environment and development, considers background and history leading up to the present, and considers requirements to achieve more effective and sustainable results.

627 Environmental Policy in Latin America (3:3:0) Prerequisites: course work in policy process, international development, and ecology; or permission of instructor. Guest lecturers, assigned reading, class discussions, and oral and written case studies to examine environmental policy in Latin America. Reviews evolution of environmental policy and relationship between environment and development, considers background and history leading up to the present, and considers requirements to achieve more effective and sustainable results.

628 Environment and Development in Africa (3:3:0) Prerequisite: course work in policy process, international development, and ecology; or permission of instructor. Guest lecturers, assigned reading, class discussions, oral and written case studies to examine environment and development in sub-Saharan Africa. Reviews relationship between environment and development, considers background and history leading up to the present, and considers requirements to achieve more effective and sustainable results.

630 Methods and Logic of Social Inquiry (3:3:0) Prerequisite: undergraduate statistics and research methods, or permission of instructor. Emphasizes gathering, interpretation, and evaluation of scientific evidence. Develops critical-thinking skills and covers logic of scientific inquiry, including various data collection methods such as experiments, observational research, and Q methodology.

631 Spatial Agent-based Models of Human-Environment Interactions (3:3:0) Prerequisite: EVPP 531 or CSS 600, or permission of instructor. Discusses key challenges in spatial modeling of human–environment interactions. Reviews agent-based modeling applications in urban and rural interactions, agriculture, forestry, and other areas. Hands-on development of simple ABM models, and investigation of links between GIS and ABM.

635 Environment and Society (3:3:0) Human–environment interactions in human ecology perspective, historical basis of human environmental impact, indigenous and nonindigenous worldviews in context of modernization, environmental degradation and globalization, and contemporary policy and research initiatives geared toward resilience and sustainability. Discussion format.
636 Gender, Race and the Natural World (3:3:0)
Advanced study of links among gender, race, and nature using social-psychological framework, original sources, and seminar and discussion. Analyzes ideologies that underpin the interlocking narratives of gender, race, and nature, and examines role of science in producing these ideologies.

637 Human Dimensions of Global Change (3:3:0) Prerequisite: graduate standing, or permission of instructor. Examines human dimensions of climate change, biodiversity loss, ozone depletion, and related anthropogenic alterations of biosphere.

638 Corporate Environmental Management and Policy (3:3:0) Provides understanding of how environmental issues interact with business strategy decisions. Emphasizes learning about proactive win-win environmental management strategies being implemented by world’s leading firms, and shows how government policies and regulations can be designed to simultaneously promote higher environmental protection and competitiveness. Combines mini lectures, participatory discussions.

641 Environmental Science and Public Policy (3:3:0) Prerequisite: course in ecology, or permission of instructor. Effects of human activities on environment. Considers airborne, waterborne, and solid waste material with respect to sources, control, and effect on ecosystems.

642 Environmental Policy (3:3:0) In-depth examination of U.S. efforts since 1970 to mitigate pollution of air, land, and water. Addresses issues of global concern, including biodiversity loss, ozone depletion, and climate change.

643 Microbial Ecology (4:3:3) Prerequisite: course in microbiology, or permission of instructor. Studies relationships between microorganisms and their natural environment, and methodology for observing their natural environment and its biochemical activities.

645 Freshwater Ecology (3:3:0) Prerequisite: EVPP 550, or permission of instructor. Studies biotic and abiotic interactions that affect structure and composition of freshwater ecosystems. Emphasizes research literature.

646 Wetland Ecology and Management (3:3:0) Prerequisites: BIOI 306 or EVPP 377, or permission of instructor. Emphasizes structure, functions, and ecological processes of created and natural wetlands from an ecosystem perspective. Students will be expected to develop an understanding of hydrologic, physiochemical, and ecological aspects of wetlands and the management of these systems through in-class and field/lab works. Each student is required to carry out an individual research project that involves field and lab works, and write a research paper.

647 Wetland Ecology Lab and Field (1:0:3) Prerequisites: EVPP 646 (or previously EVPP 644), or permission of instructor. Use laboratory and field work to study the structure and function of wetland ecosystems.

648 Population Ecology (3:3:0) Prerequisite: course in ecology or permission of instructor. Surveys ecological models and theory. Topics include population growth and regulation, competition, predator-prey, herbivore-plant, and parasite-host interactions, mutualism, and metapopulation ecology.

650 Environmental Analysis and Modeling (4:3:3) Prerequisite: course in ecology, or permission of instructor. Introduces principles, history, and methodologies of systems ecology, emphasizing development and simulation of ecological models for natural resource/ecosystem management, conceptual and symbolic models, and simulation techniques on microcomputers.

652 The Hydrosphere (3:3:0) Prerequisites: two semesters of calculus and partial differential equation. Components and transfer processes within hydrosphere, which consists of aqueous envelope of Earth including oceans, lakes, and rivers; and snow, ice, glaciers, soil, moisture, ground water and atmospheric water vapor.

670 Environmental Law (3:3:0) Prerequisites: courses in ecology and environmental biology, or permission of instructor. Studies environmental laws such as the National Environmental Policy Act, and regulatory issues such as the Clean Water and Clean Air Acts. Emphasizes critical evaluation of alternatives to unresolved issues in environmental policies.

675 Environmental Planning and Administration (3:3:0) Prerequisite: permission of instructor. Interaction of man and ecological systems; causes of damage or deterioration in environment; content, oversights, and externalities in management decision processes that affect environment and effectiveness of plan implementation; means of assessing environmental impact; and administrative approaches for minimizing environmental impact.

677 Applied Ecology and Ecosystem Management (3:3:0) Prerequisite: EVPP 607 or equivalent. Uses ecological principles to manage natural resources. Emphasizes hierarchical levels of organization within ecological systems, and management of ecosystems to conserve biodiversity, natural resources, and environment.

681 Introduction to Bioinformatics (3:3:0) Prerequisite: course in molecular biology, or permission of instructor. Overview of methods and tools in bioinformatics including Internet interfaces to sequence databases, methods for performing searches of biological databases, sequence alignment, phylogenetic analysis, other types of DNA sequence analysis, web-based tools, and databases in structural biology.

692 Master’s Seminar in Environmental Science and Public Policy (1:1:0) Explores selected topics in environmental science and public policy using lectures, guest lectures, student presentations, and discussions of current literature. Topics vary. May be repeated for credit.

693 Directed Studies in Environmental Science and Public Policy (1–4:0:0) Prerequisite: permission of instructor and chair. Studies topic not otherwise available in graduate program. May involve reading assignments, tutorials, lectures, papers, presentations, and lab or field study determined in consultation with instructor. Short study plan required. May not be used to fulfill explicit undergraduate prerequisites for graduate work.

741 Advanced Topics in Environmental Science and Public Policy (1–4:0:4–0) Prerequisite: 8 credits of graduate course work in environmental science and public policy, or permission of instructor. Studies selected advanced topics in environmental science and public policy. Lectures, guest lectures, student presentations, laboratory exercises. Topics vary; each offering has coherent theme. May be repeated for credit if topics significantly differ.

745 Environmental Toxicology (3:3:0) Prerequisites: courses in ecology and physiology, or permission of instruc-
tor: Studies nature, distribution, and interaction of toxic chemicals released into environment. Emphasizes effects on nonhuman biota, detection and fate of chemicals, and implications for government regulation.

791 Colloquium in Earth Systems Science (1:1:0) Covers various parts of Earth systems. Invited talks by Mason faculty and primarily Earth science experts in region. Students graded on written reports demonstrating understanding of wide topics covered.

792 Seminar in Earth Systems Science (2:2:0) Prerequisites: 15 graduate credits; and courses on atmosphere, hydrosphere and lithosphere. Seminar for Earth systems science graduate students with background in major systems. Capstone experience. Seminars presented by faculty and students. Topics vary from semester to semester.

793 Research in Environmental Science and Public Policy (1–3:0:0) Prerequisites: 8 graduate credits in EVPP, and permission of instructor and chair. Library, laboratory, or field investigation under supervision of instructor. Short proposal required. May be repeated for total 6 credits.

798 Master's Research Project in Environmental Science and Public Policy (1–3:0:0) Prerequisites: approved project proposal, and permission of instructor and chair. Experimental, observational, literature-based, or theoretical research project chosen and completed under guidance of faculty member. Proposal required before enrollment. Comprehensive report acceptable to student’s committee required for completion. Students taking EVPP 798 may receive no more than 6 credits for both EVPP 793 and EVPP 798. Graded S/NC.

799 Master's Thesis in Environmental Science and Public Policy (1–6:0:0) Prerequisites: approved thesis proposal, and permission of instructor and chair. Experimental, observational, or theoretical research under instructor’s supervision that culminates in production of thesis. Thesis work should be potentially publishable. No more than 6 credits of EVPP 793 and EVPP 799 may be applied to master's degree. Graded S/NC.

894 Supervised Internship (3–12:0:0) Prerequisite: permission of program director and student’s doctoral committee. Training in application of ecological skills to environmental management and policy under supervision of a qualified environmental scientist at governmental agency, consulting firm, industry, or other acceptable organization.

911 Advanced Seminar in Environmental Science (2:2:0) Prerequisite: 8 hours of ecology, or permission of instructor. Topics generally address interface between environmental science and public policy. May be repeated for credit.

998 Doctoral Dissertation Proposal (1–6:0:0) Prerequisite: admission to doctoral candidacy. Work on research proposal that forms basis for a doctoral dissertation. Graded S/NC.

999 Doctoral Dissertation Research (1–12:0:0) Prerequisite: approval of dissertation proposal. Research on basic or applied problem in environmental science and public policy. Graded S/NC.

See additional course work under Biology (BIOL), Chemistry (CHEM), Public and International Affairs (PUAD), School of Public Policy (PUBP), Geography (GEOG), and Geology (GEOG).

Executive Master of Business Administration (EMBA)

School of Management

603 Managerial Economics and the Decisions of the Firm (3:3:0) Develops and applies economic analysis tools in managerial decision situations. Focuses on economic analysis to understand firm’s competitive environment.

612 Managing Costs and Evaluating Performance (1–3; 1–3:0) Focuses on developing accounting information for use by managers in planning and control activities. Examines traditional and emerging cost-management systems. Special emphasis on information for decision-making, operational control, and performance evaluation.

613 Financial Reporting and Decision Making (3:3:0) Develops framework of concepts and procedures essential for interpreting general-purpose financial statements and internal managerial accounting reports. Emphasizes understanding basic concepts and applying selected procedures to problem-solving situations.

623 Marketing Management (3:3:0) Prerequisite: admission to EMBA program. Develops market-based knowledge and skills for effective marketing strategy design, implementation, and evaluation. Develops ability to make marketing decisions in wide variety of institutional and competitive situations. Emphasis on case studies, team work, and projects.

633 Statistics for Managers (3:3:0) Applies statistical methods in analyzing problems in business decision-making. Topics include descriptive statistics, probability distributions, estimation and hypothesis testing, and linear regression.

638 Strategies for Operations Management: Process and Supply Chain Leadership (3:3:0) Integrates theory and practice of operations management with mathematical modeling and quantitative techniques of management science. Addresses range of operations management issues, including technology and strategy decisions, systems design issues, project operations, quality control, and inventory planning.

641 Building the High-Performing Team (1–3:1–3:0) Develops the knowledge and skills needed for creating powerful, high-performance teams within and among organizational units. Strategies are offered for alignment of goals, building conditions for coordinated action, generating innovation, and resolving breakdowns.

643 Managerial Finance (3:3:0) Introduces theories of finance and their application to the formulation of business policy. Topics include internal financial analysis, financial forecasting, valuation, risk and return analysis, capital allocation, and capital structure.

653 Organizational Behavior (3:3:0) Examines development, theories, and practice of management within organizations. Emphasizes human behavior and how it influences organizational effectiveness.

660 Management of Information Technology (3:3:0) Examines computer-based information technologies and their interrelation with management processes, especially problem-solving and decision-making at individual, work group, and organization levels. Topics include management information system life cycle, with emphasis on manager’s perspective, and modeling and analysis to support decision-making.
673 Legal Environment for Management (1:1–3:0)
Examines interrelationships among organizations, external environment, and regulatory process. Emphasizes legal and ethical issues and managerial implications.

678 Strategic Management (3:3:0)
Integrates business strategy and policy with functional knowledge developed in other courses and business practice. Issues include formulation of strategy, industry analysis, building core competencies, and strategy implementation.

703 Financial Markets (3:3:0)
Explores the relationships between financial markets and their impact on corporate financial decision making. Considers cross-market interrelationships, including how financial markets respond by creating financial instruments to meet the varying financial requirements of business firms. The course includes a domestic financial residency in New York that focuses on contemporary developments in these markets.

708 Taxation and Business Strategy (1–3:1–3:0)
Examines influences of taxation on decisions of firms, and effects of taxes on performance in competitive setting. Emphasizes specific coverage of international issues, and role of non-tax costs in tax planning.

709 Global Capital Markets (1–3:1–3:0)
Considers emerging topics in finance, with focus on links between global markets and strategic firm decisions. Emphasizes understanding valuation of strategic investment opportunities, and identification of financing alternatives.

710 Business, Government, and the Global Economy (1–3:0)
Focuses on modern system of international trade, and opportunities that global trading environment creates for firms. Attention to roles of national policies, international agreements, and business activities in system development.

Focuses on the basic concepts of international macroeconomics—national income accounts, monetary and fiscal policies, balance of payments, and exchange rates. These concepts will be introduced and discussed in situations where national economic strategies affect the decisions and performance of business operations.

715 Special Topics in Accounting (1–3:1–3:0)
In-depth examination of advanced topics in accounting.

716 Managing Change (1–3:1–3:0)
Focuses on how organizations can successfully adapt and change. Topics include understanding forces that make change necessary, developing vision of appropriate course, aligning organization behind that vision, and motivating people to achieve it.

717 Corporate Governance (1–3:1–3:0)
Investigates past, present, and future of corporate governance. Focuses on relationships among shareholders, boards of directors, and top-level managers in examining governance process, with emphasis on rights and responsibilities of participants.

722 Consumer Behavior (3:3:0)
Prerequisite: completion of EMBA core requirements or permission of instructor.
Examines behavioral science concepts to understand and predict marketplace behavior. Emphasizes applications of product and service strategies, as well as on market segmentation and targeting.

724 Marketing Communications (3:3:0)
Prerequisite: completion of EMBA core requirements or permission of instructor.
Examines all forms of communication and sources of brand or company contacts as potential message channels in building and managing relationships with various publics. Focuses on an integrated planning process for these communication elements, including consumer and trade advertising, public relations, direct and database marketing, promotions, and sales presentations to achieve synergy in the overall marketing communications program. Emphasis is placed on appreciating the scope, strengths, and weaknesses of these tools.

725 Leadership (3:3:0)
Prerequisite: completion of EMBA core requirements or permission of instructor.
Explores key leadership roles in organizations and their own leadership competencies. Provides understanding of leadership development, power and influence, motivation, strategic decision making, leading change, the influence of globalization and diversity on leadership, and ethical issues.

727 Applied Macroeconomics (1–3:1–3:0)
Examines how firm environment is shaped by economy and macroeconomic policy. Topics include business cycle, determinants of economic growth, influence of fiscal and monetary policies, and use of economic forecasts.

734 Electronic Commerce (1–3:1–3:0)
Explores ongoing transformation of business activities and markets by computer and telecommunications technologies. Examines technology and its application in variety of functional areas and industry settings.

735 Systems Thinking for Business Performance (1–3:1–3:0)
Enables students to develop, express, improve, and validate holistic mental models of problems. In doing so, they will build a foundation for better decision making leading to improved business performance. The main strength of the systems-thinking approach is its emphasis on long-term strategic outcomes as opposed to short-term tactical ones.

745 Special Topics in Finance (1–3:1–3:0)
In-depth examination of advanced topics in finance.

750 Capstone Project: Action Learning Project (1–6:1–6:0)
Prerequisite: completion of EMBA core requirements or permission of instructor.
The Integrated Project Application is a lab-based course designed to provide an action learning experience that integrates course content from throughout the EMBA program. Students will work in teams to develop solutions to organizational challenges and opportunities.

751 Corporate Strategy and Policy (1–1:1–3:0)
Examines issues in strategy for firms operating in multiple markets or businesses, including diversification, portfolio approaches to corporate strategy, mergers and acquisitions, corporate alliances and joint ventures, restructuring, and coordinating multibusiness corporations.

752 A Strategic View of the Firm (1–3:1–3:0)
Examines the interplay between the industry environment and a firm’s resources and capabilities to drive superior performance. The course seeks to integrate multiple functional perspectives to arrive at a complete understanding of the firm within its environment.

765 Special Topics in Management Information Systems (1–3:1–3:0)
In-depth examination of advanced topics in management information systems.

775 Special Topics in Marketing (1–3:1–3:0)
In-depth examination of advanced topics in marketing.

798 International Business Environment (1–3:1–3:0) Develops global perspective through seminars led by professors and high-level managers; briefings by officials of government and other policy-making organizations; and site visits to production and distribution facilities, research centers, IT units, and other corporate offices.

Exercise, Fitness, and Health Promotion (EFHP)

School of Recreation, Health, and Tourism

Prerequisite to all courses: graduate standing or permission of instructor.

500 Workshop in Exercise, Fitness, and Health Promotion (1–3:1–3:0) Provides concentrated full-time workshops, weekend seminars, and workshops on selected topics in exercise, fitness, and health promotion. May be repeated. No more than 6 credits may be applied for degree credit.

522 Anatomy for the Athletic Trainer: Structure and Function of the Neuromuscular and Musculoskeletal Systems (3:2:1) Prerequisites: BIOL 124 and 125 or equivalent, and permission of instructor. Promotes familiarity and proficiency with anatomy of neuromuscular and musculoskeletal systems, which relate directly to sports-related injuries.

524 Physiology for the Athletic Trainer Including the Pharmacology of Sports Injuries (3:2:1) Prerequisites: BIOL 124 and 125 or equivalent, and permission of instructor. Promotes familiarity and proficiency in physiology, pharmacology, and rehabilitation of sports injuries.

526 Athletic Training Perspectives: Evaluation and Prevention of Sports Injuries (3:2:1) Prerequisites: BIOL 124 and 125 or equivalent, and permission of instructor. Recommended that this course be taken concurrently with EFHP 522. Promotes familiarity and proficiency with assessment and physical examination of sports-related injuries.

528 Advanced Athletic Training (3:2:1) Prerequisites: BIOL 124 and 125 or equivalent, EFHP 526, and permission of instructor. Promotes familiarity and proficiency with assessment and intervention of neuromusculoskeletal system and other systems of body that relate directly to sports-related injuries.

598 Special Topics (1–6:1–6:0) Focuses on projects related to exercise, fitness, or health promotion. May be repeated with no more than 6 credits earned.

599 Independent Study in Exercise, Fitness, and Health Promotion (1–3:1–3:0) Study of problem area in exercise, fitness, and health promotion research, theory, or practice under direction of faculty member. May be repeated. No more than 3 credits may be earned.

600 Foundations of Exercise, Fitness, and Health Promotion (3:3:0) Insights into historical and philosophical foundations that guide exercise, fitness, and health promotion professions. Through assigned readings, group exercises, individual research, and class discussion, students explore disciplines, professions, and associated philosophical trends and issues.

610 Advanced Exercise Physiology (3:3:0) Lecture, demonstration, and seminar experiences in applying research findings to understanding physiological function and effects of exercise on people.

611 Fitness Assessment: Theory and Practice (3:2:2) Promotes familiarity and proficiency with methods and instrumentation in assessing individual fitness and establishing base for exercise and other lifestyle alternatives to improve fitness.

615 Epidemiology and Environmental Health (3:3:0) Principles, methods, and application of epidemiology. Reviews behavioral, psychological, social, and environmental risks to disease distribution. Focuses on lifestyle, exercise patterns, and environmental factors to health and disease conditions.

618 Exercise and Sport Psychology (3:3:0) Covers psychological and social-psychological antecedents and consequences of exercise, physical activity, and sports participation. Emphasizes theory and research on personality, motivation, arousal, cognition, attributions, attitudes, self-efficacy, leadership effectiveness, and group dynamics.

623 Research Design and Statistical Reasoning (3:3:0) Introduces techniques of research and methods of data analysis.

630 Exercise, Health, and Fitness Program Development (3:3:0) Covers exercise and health program development related to fitness and health of adult populations. Provides 3 to 6 hours of field experience.

660 Management of Exercise, Fitness, and Health Promotion Organizations (3:3:0) Advanced study in management and administration of organizations dedicated to human development and improvement of quality of life. Covers application of theories and practices of management and behavioral sciences, fiscal management, marketing, and evaluation research.

670 Analysis of Teaching in Physical Education (3:3:0) Presents qualitative and quantitative research methods for studying teacher and student behaviors in physical education setting, and engaging teacher as researcher. Revisits teaching strategies, develops action research projects, and examines current education reform movements.

680 Ethical Issues in Exercise, Fitness, and Health Promotion (3:3:0) Covers formulation of coherent framework for ascertaining good, right, and just; and for assessing evidence and reason underlying positions and arguments. Examines ethical issues in exercise, fitness, and health promotion.

798 Project (1–3:1–3:0) Addresses an applied exercise, fitness, and health promotion issue under supervision of graduate faculty member.

799 Thesis (1–6:1–6:0) Explores exercise, fitness, and health promotion problem using appropriate research methodology and under supervision of graduate faculty member.
802 Readings for the Doctor of Arts in Community College Education (3–9:3–9:0) Prerequisite: admission to doctor of arts program in National Center for Community College Education with physical education specialty. Intensive reading in recent scholarship in physical education and related fields. Students must propose reading list, which must be approved by faculty advisor, and use list to prepare potentially publishable literature review.

Film and Video Studies (FAVS) College of Visual and Performing Arts

100 Film and Video Studies Colloquium (1:1:2) Prerequisite: for majors only. Students are exposed to the film and video industry through film professionals. Students are required to attend all sessions, review the speaker’s materials prior to the class, prepare questions, and complete written critiques. Students completing their senior project will present their work as part of their last FAVS 100. FAVS majors must take three times.

352 Ethics of Film and Video (3:3:0) An examination of ethical issues associated with image production and consumption. Topics include the technological development of the film apparatus, privacy, the pursuit of objectivity, excess, consent, and representing others. All issues highlight the increasingly sophisticated (and powerful) role of film and media authorship. Students will develop a more complex view of the ethics of screen representation (both fiction and nonfiction) and be encouraged to take stock of the ethics of their own media literacy.

355 Film Business Practices (3:3:0) Prerequisite: COMM 434 or equivalent ethics course. An overview of the film industry from a business perspective. Students learn basic business practices, film financing, business plans, film distribution, and management and marketing techniques appropriate for the film industry.

365 Documentary Filmmaking I (3:3:0) Prerequisite: satisfactory completion of COMM 355. An introduction to documentary filmmaking in which each student makes a short digital documentary, from concept development to finished piece. The class covers essential technical skills, emerging styles of nonfiction film, and documentary storytelling techniques.

399 Special Topics in Film and Video Studies (1–3:1–3:0) In-depth presentation and exploration of topical studies. Subject matter varies. May be repeated for a maximum 12 credits when taken under different topics.

450 Internship in Film and Video Studies (3:1:0) Prerequisite: 75 credits, 15 credits in core FAVS courses, and permission of FAVS director. Required for all FAVS majors. On-the-job training in film and video studies through approved fieldwork study programs. Internships are arranged and supervised by the FAVS director.

499 Senior Project (3:3:0) Prerequisite: senior status in the film and video studies program. Culminating seminar devoted to analyzing and synthesizing knowledge and skills gained through undergraduate course work as it applies to film, video studies, and professional development. Students will be required to develop and present written materials and documentation related to the development and presentation of their works as well as present their work in FAVS 100 Film and Video Studies Colloquium as part of their formal oral presentation.

Finance (FNAN) School of Management

If a student takes noncore, upper-level business courses before acceptance to the School of Management (SOM), those courses will not count on an undergraduate degree application for any major in SOM except as general elective credit. A grade of C or higher must be presented on the graduation application for each upper-level course in the major. Prerequisites are strictly enforced. Degree status is defined as formal admission to SOM.

301 Financial Management (3:3:0) Prerequisites: credit for MIS 102 AND C or better in ECON 103, ACCT 203 and OM 210; and sophomore standing. Introduction to managing a firm’s financial resources given wealth maximization decision criterion. Includes working capital management, fixed-asset investment, cost of capital, capital structure, and dividend decision analysis. Lecture, problems, and discussion. Lecture, recitation format; requires attendance in weekly lecture and weekly recitation.

302 Financial Analysis, Forecasting, and Valuation (3:3:0) Prerequisites: C or higher in FNAN 301, degree status. Examines techniques for analyzing, understanding, and applying financial information in decision situations. Topics include financial statement analysis, development of financial models, and financial planning and forecasting. Lecture, discussion, computer-assisted research.

311 Principles of Investment (3:3:0) Prerequisites: C or higher in FNAN 301, degree status. Introduces analysis of the valuation of equity and debt securities given modern capital market theory. Includes discussion of portfolio analysis as related to valuation of securities. Lecture, discussion, and computer-assisted research.

321 Financial Institutions (3:3:0) Prerequisites: C or higher in FNAN 301, degree status. Discusses basic objectives of financial institutions in light of industry structure and regulatory environment, and decision variables that management should concentrate on to achieve objectives. Includes role of financial institutions in allocation of funds in financial markets. Lecture, discussion, and computer-assisted research.

351 Principles of Real Estate (3:3:0) Prerequisites: C or higher in FNAN 301, degree status. Studies dimensions and specialties involved in public control and private development, sale, finance, and management of real estate. Includes land planning, land-use control, appraisal, finance, brokerage, property management, and investment. Lecture, discussion, and computer-assisted research.

401 Advanced Financial Management (3:3:0) Prerequisites: C or higher in FNAN 301, degree status. Analyzes decision-making in firm, emphasizing conceptual structure of problems and using advanced analytic techniques. Topics include current asset management, capital budgeting and structure, dividend policy, long-term financing, mergers, and corporate planning models. Lecture, discussion, and case analysis.

411 Investment Analysis and Portfolio Management (3:3:0) Prerequisites: C or higher in FNAN 301 and FNAN
311, degree status. Analyzes modern techniques of portfolio management including evaluating standards for selecting individual securities to include or delete from portfolios. Presents risk-return analysis for portfolios and portfolio performance measures. Lecture, discussion, computer-assisted research.

412 Futures and Options Markets (3:3:0) Prerequisites: C or higher in FNAN 301 and FNAN 311, degree status. Introduces options, commodity, and financial futures markets as they function to provide pricing mechanisms and alternative investment vehicles. Lecture, discussion, and computer-assisted research.

421 Money and Capital Markets (3:3:0) Prerequisites: C or higher in FNAN 301 and FNAN 321, degree status. Discussion of how financial markets are organized, their role in the allocation of funds to various market segments, and interaction between markets. Topics include aggregate flow of funds analysis; and money, government, corporate, and mortgage markets. Lecture, discussion, and computer-assisted research.

440 International Financial Management (3:3:0) Prerequisites: C or higher in FNAN 301 and 311, degree status. Introduces management of contemporary firm’s international financial operations. Topics include foreign exchange risk, political risk, returns and risks of international projects, international money and capital markets, financial accounting, capital structure, and cost of capital. Lecture, discussion, readings, and problems.

451 Real Estate Finance (3:3:0) Prerequisites: C or higher in FNAN 301 and FNAN 351, and degree status. Studies mechanisms of real estate finance, sources of funds, loan contracts, principles of mortgage risk analysis, and secondary mortgage markets. Develops analytical skills including using microcomputer and appropriate software.

454 Real Estate Development (3:3:0) Prerequisite: C or higher in FNAN 351 Examines commercial real estate development process and principles plus actual residential, office, retail, and industrial projects. Includes financial analytical techniques to investigate project feasibility, density, financing viability, cash flows, and valuation. Emphasis placed on real-world, entrepreneurial, decision-making skills for developing commercial real estate. Lecture, discussion, project analysis.

462 Honor Seminar in Finance (3:3:0) Prerequisites: finance major, senior standing, and permission of the instructor. Provides an in-depth study and analysis of contemporary developments and topics of interest in finance. The topics and format will vary. Enrollment In this course if limited and competitive.

491 Special Topics in Finance (3:3:0) Prerequisites: finance majors with at least 9 upper-level finance credits, and degree status. Advanced study of special topics in finance.

499 Independent Study (1-3:0:0) Prerequisites: Finance majors with at least 9 upper-level credits. May be repeated to a maximum of 6 credits if topics vary. Degree status. Research and analysis of selected problems or topics in finance. Must be arranged with instructor and approved in writing by associate dean for undergraduate programs before registration. Written report required. May be repeated for maximum 6 credits if topics vary.

Foreign Languages (FRLN)

Modern and Classical Languages

310 Outside of Hitler’s Shadow: Germany in its Global Context (3:3:0) Prerequisites: completion of concurrent enrollment in all other general education courses. Critical examination of images of Nazis, Hitler, and Holocaust in media, popular culture. Course seeks to demystify and de glamorize such images while highlighting philosophical, cultural, and scientific contributions of Germany, Austria, and Switzerland.

330 Topics in World Literature (3:3:0) Prerequisites: ENGL 101 and 45 credits, or permission of instructor. Major works of world literature with varying perspectives and topics, such as specific cultures, histories, myths, or music and the arts, as represented in literature. All course work in English. May be taken toward fulfilling literature requirement of baccalaureate degrees. May be repeated twice when course content substantially differs, with permission of department.

380 Topics in the Sociopolitics of Language (3:3:0) Prerequisites: ENGL 101 and 45 credits, or permission of instructor. Topics will address relationship between language and other social and cultural systems (macro sociolinguistics), and critical study of people’s ideas about language (language ideology). Utilizes comparative approach to explore ways people use language to perform and communicate various social identities and categories; how and why people attach social meanings and values to particular ways of using language; development of official and unofficial language policies; and impact of language policies.

385 Multilingualism, Identity, and Power (3:3:0) Prerequisites: completion or concurrent enrollment in all other required general education courses. Study of individual and societal aspects of multilingualism including language choice, linguistic maintenance and shift, code-switching, language planning, educational policy, and representations of multilingualism. Interdisciplinary approach emphasizes the social and political aspects of multilingualism, as well as the relationship of language to cultural, ethnорacial, and national identities and categories.

431/ENGL 431/ HIST 431 Medieval Intellectual Topics (3:3:0) May be taken for credit by English or history majors. Focuses on topic in intellectual history of Middle Ages. Emphasizes literary or historical, depending on discipline of instructor. Relevant material may be drawn from philosophy, theology, and art.

510 Bibliography and Research in Foreign Languages and Literature (3:3:0) Prerequisite: graduate standing, or permission of department. Use of basic bibliographical tools and methodologies for scholarly research in French, German, and Spanish. Taught in cooperation with university library staff. Conducted in English.

525 Literary Translation (3:3:0) Prerequisite: graduate standing, or permission of instructor. Advanced work in literary translation. Critical approach and analysis of diverse texts such as poetry, drama, essay, and novel excerpts.

550, 551 Special Topics (3:3:0) Themes, periods, or genres vary from semester to semester. Focuses on topics that incorporate one or more languages taught in department, but instruction is in English. May be repeated for credit with permission of department.
565 Theory of Translation (3:3:0) Lectures on nature, function of translating process. Evaluates theories of translation with respect to text typology. Critiques selected translations from target languages to English and vice versa.

572 Integrating Technology into Language Learning (3:3:0) Prerequisites: graduate standing or permission of department, language teaching methods course, and language teaching experience; or permission of instructor. Explores pedagogical and theoretical basis for integrating interactive technologies into language learning programs, and examines potential for learning, teaching, testing, and research. Includes hands-on analysis and evaluation of materials. Prior experience with technology not required.

573 Basic Issues in Language Pedagogy (3:3:0) Prerequisites: graduate standing or permission of department, language teaching methods course, and language teaching experience; or permission of instructor. Explores major issues controversial in language pedagogy. Topics include communicative competence as pedagogical goal, role of explicit grammar teaching, proficiency movement, cultural authenticity, student-centered learning, and technology.

590 Internship and Seminar in Translation (3:3:0) Prerequisite: admission to translation certificate program. Internships are nonpaying, work-study positions that focus on the practice of translation. Qualified students placed with area institutions, interest groups, agencies, or corporations. Placement depends on availability of positions.

600 Workshop in Foreign Languages (1–6:0:0) In-service workshops, tours, and seminars on selected topics in literature, language, bilingualism, culture, methodology. May not usually be applied toward MA in modern and classical languages.

620 Literary Theory and Criticism (3:3:0) Studies nature of literary work, and analyzes contemporary critical approaches to literature. May not be taken for credit by students who previously received credit for FRLN 615.

650 The Teaching of Culture in Foreign Language Programs (3:3:0) Purpose and methods of study of culture, with emphasis on strategies and techniques for teaching culture in foreign language programs.

660 Approaches to the Study of Language (3:3:0) Linguistics and its relationship to other disciplines, including study of generative grammar with syntactic problems drawn from commonly taught foreign languages.

670 Foreign Language Learning and Teaching (3:3:0) Theories, methods, and strategies of second and foreign language learning and teaching. May not be taken by students who have completed FRLN 570.

French (FREN)

Modern and Classical Languages

101 Elementary French I (3:3:1) For students with no knowledge of French. Introduces elements of grammar, vocabulary, oral skills, listening comprehension, and reading. Lab work required.

102 Elementary French II (3:3:1) Prerequisite: FREN 101, appropriate placement score, or permission of instructor. Continuation of FREN 101. Lab work required.

105 Review of Elementary French (3:3:1) Prerequisite: appropriate placement score, or permission of department. Review for students who have studied French previously. May not be taken for credit in combination with FREN 101.

109 Intensive Elementary French (6:6:2) Equivalent to FREN 101 and 102 taught in single semester. Recommended for students who desire intensive introduction. May not be taken for credit in combination with FREN 101, 102, or 105. Lab work required.

110 Elementary French (6:6:1) Introduces elements of grammar, vocabulary, oral skills, listening comprehension, and reading. Students may not receive credit for FREN 110 if they have received credit for FREN 101, 102 or 109. Lab work required.

201 Intermediate French I (3:3:1) Prerequisites: FREN 102, 105, and 109; appropriate placement score; or permission of department. Further development of skills in listening, speaking, reading, and writing. FREN 201 and 202 must be taken in sequence. Lab work required.

202 Intermediate French II (3:3:1) Prerequisite: FREN 201, appropriate placement score, or permission of department. Applies language skills to reading, composition, and class discussion. Lab work required.

209 Intensive Intermediate French (6:6:2) Prerequisite: FREN 102, 105, and 109; appropriate placement score; or permission of department. Equivalent to FREN 201 and 202 taught in single semester. May not be taken for credit in combination with FREN 201 or 202. Lab work required.

210 Intermediate French (3:3:1) Prerequisite: FREN 110 or appropriate placement score. Continuation of the development of basic components of the language, with focus on listening, speaking, reading, and writing skills. Introduces students to the cultures and histories of French-speaking regions. Lab work required.

250 Gateway to Advanced French (3:3:0) Prerequisites: FREN 210, appropriate placement score, or permission of department. Integration of advanced intermediate-level French reading, writing, listening, and speaking skills, and the development of critical thinking about authentic texts from around the globe. Taught in French.

300 Study Tour in France (1–6:0:0) Prerequisite: FREN 202 or equivalent, or permission of instructor. Directed study tour of cultural and literary points of interest in France. Briefing sessions and reading selection given before the trip. All papers and exams required for credit are due by end of summer session.

309 Reading and Writing Skills Development (6:6:0) Prerequisites: FREN 202 or 209, appropriate placement score, or permission of instructor. Development of ability to write on topics of current interest. Readings provide examples of each topic and necessary vocabulary for compositions. Introduces reading strategies, and provides practice in reading of different kinds of texts.

310 Oral Proficiency in French (3:3:0) Prerequisite: FREN 202 or equivalent, appropriate placement score, or permission of instructor. Develops conversational proficiency in
French with attention to various specific communicative strategies and functions. Practice in pronunciation and dictation based on systematic study of sound system of French.

325 Major French Writers (3:3:0) Prerequisite: ENGL 101 or equivalent, or permission of instructor. Studies works of major French writers. Writers to be studied vary. Course work in English. May be taken toward fulfilling general requirement in literature for baccalaureate degrees. May be repeated for credit with permission of department.

329 Problems of Western Civilization in French Literature (3:3:0) Prerequisite: ENGL 101 or equivalent, or permission of instructor. Basic philosophical, moral, social, and political dilemmas reflected in literature of major French writers. Course work in English. May be taken toward fulfilling general requirement in literature for baccalaureate degrees. May be repeated for credit with permission of department.

340 Francophone Identities (3:3:0) Prerequisite: FREN 309, appropriate placement score, or permission of instructor. Provides opportunity to learn about richness, variety, and complexity of francophone world through study of literature, culture, social life, and identities of various francophone regions including Caribbean, Africa, Quebec, and Indochina.

350 French Conversation (3:3:0) Prerequisite: FREN 202 or equivalent. Development of conversational proficiency in French. Specifically designed for French majors who need practice in spoken language beyond the intermediate level.

351 Advanced French Grammar (3:3:0) Prerequisite: FREN 202 or equivalent. Systematic review of French grammar with emphasis on syntax, idiomatic construction, vocabulary building, and literary style. Written and oral exercises.

352 French Composition (3:3:0) Prerequisite: FREN 202 or equivalent. Develops writing skills through written reports on current events and literary topics. Specifically designed for students concentrating in French who need practice in written language beyond intermediate level.

355 Phonetics and Oral Expression (3:3:2) Prerequisite: FREN 202, or permission of instructor. Intensive study of French pronunciation and diction. Practice in discriminating French phonemes and allophones, and transcribing in phonetic symbols. Recitation of poems and rhythmic prose. Enrollment limited to 15.

357 Introduction to Translation (3:3:0) Prerequisite: FREN 202, or permission of instructor. French to English, English to French translations, of texts from current periodicals and newspapers in various fields. Recommended for students who wish to improve language skills.

370 French Civilization, Culture, and Literature: Ancient Gaul to 1789 (3:3:0) Prerequisite: FREN 309, or permission of instructor. Examines history, civilization (daily life, politics, science, philosophy, religion), culture (architecture, art, music, dance), and literature of France from Ancient Gaul to eve of French Revolution. Studies development of French nation and its people through written texts, visual arts, and music.

371 French Civilization, Culture, and Literature: 1789 to the Present (3:3:0) Prerequisite: FREN 309, or permission of instructor. Examines history, civilization (daily life, politics, science, philosophy, religion), culture (architecture, art, music, dance), and literature of France from French Revolution of 1789 to present. Studies development of French nation and its people through written texts, visual arts, and music.

375 French Civilization: From Ancient Gaul to the French Revolution (3:3:0) Prerequisite: 15 credits of French, or permission of instructor. Studies contributions of France to world civilization. Emphasizes ideas, arts, sciences, and institutions. Offered in alternate years.

376 French Civilization: From the Revolution to Contemporary France (3:3:0) Prerequisite: 15 credits of French, or permission of instructor. See FREN 375.

377 Survey of French Literature: Middle Ages to 1800 (3:3:0) Prerequisite: 15 credits of French, or permission of instructor. French literature through the centuries, with reading and analysis of representative texts of major authors. Offered in alternate years.

381 Introduction to Literary Analysis (3:3:0) Prerequisite: 15 credits of French. Structured approach to reading and analysis of French literary texts.

391 French for the Business World I (3:3:0) Prerequisite: 15 credits of French, or permission of instructor. Studies styles in commercial, private, and official formats for correspondence and various common business documents. Emphasizes written exercises. Satisfies needs of students equipping themselves for multinational business and foreign service.

392 French for the Business World II (3:3:0) Prerequisite: FREN 391, or permission of instructor. Continuing study of terminology used in business affairs, with attention to form and style of business documents. Oral and written practice of French used in everyday work situations. Students may use course to prepare for Paris Chamber of Commerce certificate in business French.

405 French Literature of the Renaissance (3:3:0) Prerequisite: 18 credits of French, or permission of instructor. Studies works of major French writers of Renaissance period, with emphasis on their contributions to humanistic tradition in France during 16th century, especially as reflected in works of Rabelais and Montaigne.

413 French Literature of the Seventeenth Century: Classical Drama (3:3:0) Prerequisite: 18 credits of French, or permission of instructor. Studies dramatic literature of 17th century.

414 French Literature of the Seventeenth Century: Prose and Poetry (3:3:0) Prerequisite: 18 credits of French, or permission of instructor. Reading and analysis of representative texts of major authors. May be taken toward fulfilling general requirement in literature for baccalaureate degrees.

421 French Literature of the Eighteenth Century: Montesquieu and Voltaire (3:3:0) Prerequisite: 18 credits of French, or permission of instructor. Studies Montesquieu, Voltaire, and other writers of first half of century.

422 French Literature of the Eighteenth Century: Diderot and Rousseau (3:3:0) Prerequisite: 18 credits of French,
or permission of instructor. Studies Diderot, Rousseau, and other writers of second half of century.

431 French Literature: 1800–1850 (3:3:0) Prerequisite: 18 credits of French, or permission of instructor. Poetry, theater, and novels of Romantic and Parnassian movements.

432 French Literature: 1850–1900 (3:3:0) Prerequisite: 18 credits of French, or permission of instructor. Poetry, theater, and novels of Realist, Naturalist, and Symbolist movements.

441 Twentieth-Century Prose Fiction (3:3:0) Prerequisite: 18 credits of French, or permission of instructor. Principal literary trends in contemporary French literature. Emphasizes evolution of novel from Proust and Gide to Beckett and “Nouveau Roman.”

442 Twentieth-Century Drama and Poetry (3:3:0) Prerequisite: 18 credits of French, or permission of instructor. French drama from Surrealism to “Nouveau Theater.” French poetry from Symbolism to contemporary poets.

451 Sub-Saharan African Literature (3:3:0) Prerequisite: 18 credits of French, or permission of instructor. For non-Western credit. Studies selected writers expressing culture and civilizations of French-speaking countries south of the Sahara.

452 French-Canadian Literature (3:3:0) Prerequisite: 18 credits of French, or permission of instructor. Studies Francophone literature of Canada with emphasis on contemporary works.

453 Francophone Literature from North Africa (3:3:0) Prerequisite: 18 credits of French, or permission of instructor. Studies Francophone literature of North Africa (the Maghreb) with emphasis on contemporary works. May be repeated once for credit with permission of instructor.

454 Caribbean Literature in French (3:3:0) Prerequisites: 18 credits of French, or permission of instructor. Studies selected writers expressing culture and civilization of French-speaking countries of Caribbean.

460 Advanced Oral and Written Expression (3:3:0) Prerequisite: 18 credits of French, or permission of instructor. Intensive course to help students obtain fluency in oral and written French. Develops conversational skills and mastery of vocabulary. Class discussions and oral and written reports on current topics.

461 Linguistic Structure of Modern French (3:3:0) Prerequisite: 18 credits of French, or permission of instructor. Analyzes phonology, morphology, and syntax of modern standard French. Optional lab work.

462 Stylistics (3:3:0) Prerequisite: 18 credits of French, or permission of instructor. Analyzes more complex aspects of French language and various stylistic processes. Develops writing skills through readings, discussion, and composition.

470 Topics in French Cinema (3:3:0) Prerequisite for film and media studies students: English 332, or permission of instructor; for French students, 18 credits in French, or permission of instructor. Topics such as early days of French cinema, La Nouvelle Vague, women film directors, Quebecois, and African and Caribbean films selected by type, period, or director. Emphasis varies from year to year. Required viewing, student discussion, and written critiques. May be repeated once with permission of department or film studies advisor.

480 Special Topics (3:3:0) Prerequisite: 18 credits of French, or permission of instructor. Studies selected literary theme, topic, period, or genre. May be repeated once with permission of instructor.

490, 491 Independent Study (1–3:0:0), (1–3:0:0) Prerequisites: French majors with 90 credits, and permission of chair. Research and analysis of selected problem in literature or linguistics in consultation with department member. Only 6 credits of independent study may be applied to fulfilling requirements in concentration.

497, 498 Senior Honors Tutorial (3:0:0), (3:0:0) Prerequisites: French majors with 90 credits, cumulative GPA of 3.00, and 3.00 in major field. Students who meet these requirements admitted to candidacy after submitting letter of application to departmental Honors Committee in second half of junior year. Also requires faculty recommendation and interview by Honors Committee. First semester involves weekly meetings with faculty member to discuss readings from comprehensive list prepared by French faculty. Second semester requires independent research and completion of honors essay under supervision of French faculty member.

515 Medieval French Literature (3:3:0) Intensive study of outstanding literary works of Middle Ages. Course work in French.

517 Studies in Seventeenth-Century Literature (3:3:0) Selected writers, works, themes, or trends of French literature in classical era. Content varies. May be repeated once for credit. Course work in French.

518 Studies in Eighteenth-Century Literature (3:3:0) Selected writers, works, themes, or trends of French literature in 18th century. Content varies. Course work in French. May be repeated for credit with permission of department.

519 Studies in Nineteenth-Century Literature (3:3:0) Selected works, themes, genres, and authors of 19th-century French literature. Content varies. Course work in French. May be repeated for credit with permission of department.

525 Studies in Modern French Literature (3:3:0) Selected writers, works, themes, or trends of French literature in modern era. Content varies. May be repeated for credit with permission of department. Maximum 6 credits may be earned. Course work in French.

550 Special Topics (3:3:0) Specialized topics relating to French culture and literature. Content varies. May be repeated once for credit. Course work in French.

560 History of the French Language (3:3:0) Evolution of French language from Latin to present-day French.

575 Grammatical Analysis (3:3:0) Studies characteristic features of contemporary French. Examines spoken and written French, including syntactic analysis, distributional analysis, and generative-transformational grammar. Emphasizes problem areas for American learners.

576 Advanced Translation (3:3:0) Advanced work in translation of topics from social and political sciences and humanities. Comparative terminology, sight translation, and precise writing. Stresses importance, function, and techniques of documentation in translation. Translations from French to English and English to French.
580 Contemporary French Society and Culture (3:3:0) Studies structure and evolution of society and culture of contemporary France.

798 Directed Reading and Research (3:0:0) Open only to degree students who have completed at least 18 credits. Reading and research on specific project under direction of department member. Oral or written report required.

799 Thesis (1–6:0:0) Students who take FREN 798 and then elect the thesis option receive 3 credits for FREN 799 after completing thesis. Students who do not take FREN 798 receive 6 credits for FREN 799 after completing thesis. Graded S/NC.

See also FRLN course listings.

Forensics (FRSC)  College of Science

500 Introduction to Forensic Science (3:3:0) Prerequisite: graduate standing. Overview of forensic science and related investigative techniques. Includes coverage of crime scene investigation, crime scene procedures, the role of the forensic pathologist, the modern forensic laboratory, DNA analysis techniques, microanalysis, examination of trace evidence, hair and fibers, examination of questioned documents, forensic anthropology, forensic odontology, homicide investigation, and analysis of a mock crime scene.

510 Crime Scene Analysis (3:3:0) Prerequisite: graduate standing. Examines the role of the first officer at the scene, search, seizure and related legal issues, traditional crime scene measurements, photogrammetry, processing latents, crime scene reconstruction methods, 2-D and 3-D impressions, blood spatter analysis, collection of trace evidence, packaging and preserving evidence, outdoor crime scenes, and explosion and fire scenes.

520 Toxicology (3:3:0) Prerequisite: a 400-level course in molecular or cellular biology, or permission of instructor. Examines toxic substances and their effects on human cellular and organ systems. The course focuses on human physiological concepts, the chemistry of toxins, the human enzymatic detoxification processes, and the analytical techniques required for detecting the presence of toxins and their metabolites in human tissue or serum.

530 Criminal Law (3:3:0) Prerequisite: graduate standing. Introduction to the criminal justice process, constitutional overview, the Fourth, Fifth, and Sixth amendments, continuation of criminal justice process, exclusionary rule and the Bill of Rights. Search warrants requirements, including probable cause, particularity, and proper execution. Covers warrantless searches and seizures, the plain view doctrine, exigent circumstances, searches incident to an arrest and consent, and challenges to searches, including the exclusionary rule and the concept of standing. Also explores warrant requirements for arrest and interrogation, including the Miranda rule and its limitations; the grand jury process and pretrial discovery issues; trial and the right to counsel; burden of proof, guilty pleas, and plea bargaining; and sentencing issues, including an overview of sentencing guidelines.

540 Chemical Analysis (3:3:0) Prerequisite: undergraduate degree in chemistry or biology, or permission of instructor. Theories and models of separation with applications to analyses of a wide range of chemical, biological, and environmental samples. Topics include high-resolution gas and high-performance liquid chromatography. Emphasizes theory of reverse phase, normal phase, ion exchange, size exclusion, and affinity based separations. Also presents instrumentation such as detectors, pumps, columns, and data acquisition.

550 Issues in Forensic Anthropology (3:3:0) Prerequisite: graduate standing. Examines issues related to skeletal analyses and interpretation of forensic case reports in determining personal identification and cause of death. Discussions include skeletal variation, age criteria, sexing criteria, pathology, trauma, and postmortem damage.

560/BINF 637 Forensic DNA Sciences (3:3:0) Prerequisites: graduate standing or permission of instructor. Intensive introduction to parameters affecting data QC and analysis, including factors arising from biochemistry, chemistry, genetics, statistics, instrumentation, and software.

570 Introduction to Biochemical Forensics (3:3:0) Prerequisites: a course in biochemistry or permission of instructor. Introduces students to the application of standard biochemical techniques and assays to the collection and interpretation of evidence in criminal investigations. Emphasizes sample processing and methodology used in sample analysis. Covers mass spectrometry, DNA chip technology, and bioterrorism as it relates to forensic science and law enforcement. Includes a survey of laboratory methods and instrumentation for testing of drugs and biological samples, as well as a discussion of drug abuse and toxicology from the perspective of forensic analysis. Assignments cover sample preparation, handling, analysis, and data interpretation for samples from simulated crime scenes. Techniques covered include chromatographic and spectroscopic analysis and mass spectrometry. Use and conformity to standard protocols, quality assurance, and quality control methods will be stressed, along with statistical methods for calibration and analysis of data.

590 Forensics Capstone Course (3:3:0) Prerequisite: permission of instructor. Integrates all the various techniques used in the study of forensic science and medicine, and applies them to the interpretation of events and the reconstruction of the sequence of events at a variety of typical death scenes. Integrates medical, scientific, sociological, and legal methodology as they apply to medicolegal death investigations, using a variety of forensic literature and text resources. Presents an integrative approach to crime scene analysis based on actual case studies, in which students apply theoretical concepts discussed in class to real-world situations. Includes weekly group projects, with students organized in rotating groups and assigned a research topic in forensic medicine. Students discuss, examine, and analyze forensic, medical, and physical elements present at the death scenes, and develop their own hypotheses, which are then evaluated and discussed as the case is reconstructed.

Geography (GEOG)

Geography and Geoinformation Sciences

101 Major World Regions (3:3:0) Patterns, problems, and prospects of the world’s principal human-geographic regions. Emphasizes areal differentiation and role of geographic differences in interpreting current world scene.
102 Physical Geography (3:3:0) Interrelated processes affecting global distribution and character of climate, soils, vegetation, hydrology, and landforms. Includes elements of mapping (natural science credit).

103 Human Geography (3:3:0) Overview of major ideas and approaches to studying spatial aspects of human social and behavioral systems. Surveys distribution and movement of human populations, characteristics and distribution of cultural mosaics, patterns of economic interdependence, and study of forces of cooperation and conflict among people from global perspective.

110 Maps and Mapping (3:3:0) Introduces maps and spatial analytic tools and methods, including geographic information systems. Familiarizes students with key geographic concepts and skills through integrating information technology with map-making technology. Includes introduction to computer and web-based geographic applications, databases, and graphics.

300 Quantitative Methods for Geographical Analysis (3:3:0) Prerequisites: 30 credits, including GEOG 102 and 103, or permission of instructor; and permission of department. Comprehensive introduction to quantitative methods in spatial analysis, with emphasis on solving geographical research problems. Topics include nature of spatial data; collection of spatial data; preparation of spatial data for mapping, geographic information systems, and statistical analysis; descriptive spatial statistics; areal sampling theory and methods; probability theory and distributions; hypothesis testing; correlation and regression; and areal and point pattern spatial statistics.

301 Political Geography (3:3:0) Prerequisite: 30 credits. Distribution and effects of power on landscape, particularly on national and global scales.

303 Conservation of Resources and Environment (3:3:0) Prerequisites: 30 credits, and completion or concurrent enrollment in all other required general education courses. Provides analysis of world resources distribution, conservation, and preservation; and problems resulting from their natural occurrence and utilization. Uses knowledge from physical and social sciences to develop complex and sophisticated understanding of issues surrounding natural resource exploitation and management, conservation, and preservation.

304 Geography of Population (3:3:0) Prerequisite: 30 credits. Spatial distribution of population, its causes and effects, and changing patterns resulting from population mobility. Emphasizes spatial characteristics of variables such as age, sex, race, education, and income.

305 Economic Geography (3:3:0) Prerequisite: 30 credits. Analyzes pattern of distribution of world economic activity, spatial economics behind this pattern, and influence of distribution on other spatial systems.

306 Urban Geography (3:3:0) Prerequisite: 30 credits. Structure and internal differentiation of cities. Variety of perspectives on nature of cities, and opportunities for intensive use of space. Urban problems and alternatives in their spatial context.

308 Field Mapping Techniques (3:0:6) Prerequisites: MATH 105, GEOG 102 or 101, and 30 credits. Basic techniques for collecting and recording spatial field data, including topographic maps, compass, transit, alidade, and geographic positioning systems. Includes field work.

309 Introduction to Meteorology and Climate (3:3:0) Prerequisite: GEOG 102 or equivalent, or permission of instructor. Elements of meteorology; analysis of world distribution of meteorological controls as bases of regional climatic variations (natural science credit).

310 Introduction to Digital Cartography (4:3:2) Origins, principles, and methods of thematic map design and production. Principles of graphic design, data compilation, analysis, and display.

311 Introduction to Geographic Information Systems (3:3:0) Fundamental concepts and theories for appropriate use of geographic information systems (GIS). Discusses basic GIS functionality, and applications in various fields.

315 Geography of the United States (3:3:0) Prerequisite: 6 credits of geography or American studies, or permission of instructor. Diversity of U.S. physical and cultural landscapes.

316 Geography of Latin America (3:3:0) Prerequisite: 6 credits of geography or Latin American studies, or permission of instructor. Regional survey of physical resources, populations, cultural characteristics, and economic activities in Latin America.

320 Geography of Europe (3:3:0) Prerequisite: 6 credits of geography or European studies, or permission of instructor. Environmental, economic, social, and political factors influencing regional structure of Europe.

325 Geography of North Africa and the Middle East (3:3:0) Prerequisite: 6 credits of geography or courses related to Middle East; or permission of instructor. Environmental, economic, and social factors of differentiation of regional structure and distribution of resources in North African and Middle Eastern countries.

330 Geography of the Soviet Succession States (3:3:0) Prerequisite: 6 credits of geography or Russian studies, or permission of instructor. Analyzes geographic factors involved in history, economic development, and geopolitical situation of the former Soviet Union.

333 Issues in Regional Geography (1–6:0:0) Prerequisite: 30 credits. Geographical study of particular region or relevant regional issue. Content varies. May be repeated to a maximum of 12 credits.

357 Structures in Urban Governance and Planning (3:3:0) Prerequisite: 30 credits. Reviews spatial, policy, and administration principles that guide planning activity in United States. Outlines differences between theory and practice; and provides tools, methods, and perspectives commonly incorporated into practice of urban and regional policy analysis. Provides orientation to public-sector economy in general; and urban administration, planning, and policy in particular.

380 Geography of Virginia (3:3:0) Prerequisite: 30 credits. Natural and cultural forces of Virginia. Studies regional makeup and analysis of human and environmental characteristics.

399 Selected Topics in Geography (3:0:0) Prerequisite: 30 credits. Content varies; determined by instructor. May be repeated to a maximum of 12 credits.

406 Suburban Geography (3:3:0) Prerequisite: 60 credits. Analyzes spatial aspect of social, economic, and political
activities in suburbia. Suburbanization viewed as independent force and component of larger urbanization process. Uses Northern Virginia as lab for suburban geographical study and student-initiated field work projects.

411 Advanced Digital Cartography (3:3:0) Prerequisite: grade of C or better in GEOG 310. Design and production of full-color digital maps and information graphics, map cognition and use, and principles of desktop mapping.

412 Aerial Photography Interpretation (3:3:0) Prerequisites: 60 credits and GEOG 102 or 103, or permission of instructor. Methods and techniques of interpreting and using information contained in aerial photography, including applications to various aspects of physical and cultural landscape.

415 Seminar in Geography (3:3:0) Prerequisites: GEOG 300 and 310. Capstone seminar for geography majors integrating previous course work into disciplinary framework. Students produce, present original research papers.

416 Satellite Image Analysis (3:3:0) Prerequisites: 60 credits and GEOG 412, or permission of instructor. Examines methods and techniques of interpreting and using information obtained by nonphotographic remote sensing systems, with particular emphasis on space-borne platforms. Includes analysis of imagery for both physical and cultural environments.

420 Physiography of North America (1–3:0:0) Prerequisite: 60 credits, GEOG 102, 3 additional credits of geography or geology, or permission of instructor. Physiographic features of North American continent; spatial distribution; and influence on cultural, demographic, and economic development of United States and Canada.

463 Applied Geographic Information Systems (3:3:0) Prerequisites: 2.00 or better in GEOG 300 and 311. Selected applications in geographic information systems (GIS). Topics include automated data capturing and processing, spatial data models and structure including object-oriented approach, advanced spatial analytical techniques including raster modeling and network analysis, programming, and algorithm development in GIS. Major purpose of course is to extend fundamental theories and concepts in GIS so students are able to conduct research with and on GIS.

480 Internship in Geography (1–3:0:0) Prerequisite: open only to majors with 90 credits and GPA of 2.50 in geography course work. Approved study programs with specific employers. Credit determined by department, may be repeated to a maximum of 6 credits. Contact department one semester before enrollment.

490 Practicum in Geographical Applications (1–6:0:0) Prerequisite: open only to authorized majors with 90 credits. Application of geographical research tools and techniques in conjunction with faculty instruction and research. Individualized sections taught by arrangement with full-time faculty. May be repeated to a total of 6 credits.

499 Independent Study in Geography (1–3:0:0) Prerequisite: open only to geography majors with 90 credits, and permission of department and instructor. Individual study of selected area of geography. Requires directed research paper. May be repeated to a maximum of 6 credits with permission of the department.

503 Problems in Environmental Management (3:3:0) Prerequisite: 6 credits of geography, including GEOG 102. Case studies of effects of human activities on atmospheric, hydrologic, geomorphic, and biotic processes.

505 Transportation Geography (3:3:0) Prerequisite: 6 credits of geography. Structure, principles, location, and development of world transportation. Critical role of transportation in moving people, goods, and ideas at international, national, regional, and urban levels.

520 Geography for Teachers (3:3:0) Prerequisite: graduate standing, or permission of department. Emphasizes problems and techniques in teaching geography; and current developments in research, methodology, and philosophy in the discipline.

525 Economics of Human/Environment Interactions (3:3:0) Prerequisite: GEOG 550, or permission of instructor. Survey of literature on spatially explicit empirical models of land-use change. Hands-on experience developing and running simple models. Techniques covered include statistical models, mathematical programming models, cellular automata, agent-based models, and integrated models.

533 Issues in Regional Geography (1–6:0:0) Geographical study of particular region or relevant regional issue. Content varies. May be repeated to a total of 12 credits with permission of the department.

540 Medical Geography (3:3:0) Prerequisite: course in statistics. Spatial approaches to study of health and disease. Topics include disease ecology and diffusion, and geographic perspectives on improving health care delivery.

550 Geospatial Science Fundamentals (3:3:0) Introduces geospatial sciences, emphasizing concepts and theories of cartography, remote sensing, air photo interpretation, Global Positioning Systems, spatial data structures, and geographic information systems. Lectures accompanied by hands-on exercises. Only available for students without previous course work in cartography.

551 Thematic Cartography (3:3:0) Prerequisite: GEOG 310 or 550. Analyzes nature of perceptual organization and visual systems in thematic map communication portrayal, graphic handling, and data analysis.

553 Geographic Information Systems (3:3:0) Prerequisite: GEOG 550, or course in cartography. Sources of digital geospatial data; and methods of input, storage, display, and processing of spatial data for geographic analysis using GIS. Lectures, hands-on exercises familiarize students with current technology.

554 History of Cartography (3:3:0) Prerequisite: graduate standing. History of cartographic portrayal of Earth from ancient times through 19th century, emphasizing interrelation of human culture, technological development, and geographical knowledge as reflected in maps.
556 Automated Cartographic Generalization (3:3:0). Prerequisite: GEOG 550, or permission of instructor. Survey of algorithms and techniques to generalize information on maps and in geographic information systems. Covers simplified representation of geographic objects, surfaces, and thematic information. Includes GIS programming component.

562 Photogrammetry (3:3:0) Prerequisite: GEOG 412, or permission of instructor. Treatment of photogrammetric problems, including least squares adjustments, image co-odination refinements, colinearity equation, resection, relative orientation, and analytic aerotriangulation.

563 Advanced Geographic Information Systems (3:3:0) Prerequisites: GEOG 553 or equivalent. Discusses advanced GIS concepts including spatial data structure, spatial analysis, programming data fusion, Internet components, and spatial database management. Hands-on activities demonstrate concepts and specific applications in both cultural and physical geography.

570 The Hydrosphere (3:3:0) Prerequisite: two semesters of calculus, partial differential equation recommended; or permission of instructor. Covers fundamental aspects of hydrosphere, which consists of aqueous envelope of Earth including oceans, lakes, rivers, snow, ice, glaciers, soil moisture, ground water, and atmospheric water vapor.

575 Reconstructing Past Environments: Seminar in Geoarchaeology (3:3:0) Prerequisites: permission of instructor and course work in geography, biology, geology, or archaeology. Research seminar examining intersection of geoarchaeology and paleoecology with cultural ecology. Addresses methods common to these research areas, and ranges of scales and reliability of evidences to reconstruct past environments, both natural and cultural. Applied examples cover selected geoarchaeological and paleoecological projects from variety of geographical regions.

579 Remote Sensing (3:3:0) Prerequisite: GEOG 412, or permission of instructor. Examines use of various types and combinations of electromagnetic energy to obtain spatial information. Concentrates on nonphotographic and spaceborne remote sensing platforms and sensors. Examines essential operational parameters for existing and future systems and strategies for visual extraction of features.

580 Digital Remote Sensing (3:3:0) Prerequisite: GEOG 416 or 579. Examines theory and techniques of using digital remotely sensed data for obtaining geographic information of Earth’s surface, including image-enhancement methods and classification strategies for variety of physical and cultural features.

581 World Food and Population (3:3:0) Prerequisite: graduate standing. Topics include maldistribution of population, regional disparities in growth rates and income distribution, food production, and world hunger. Discusses population policies, with emphasis on Third World countries.

585 Quantitative Methods (3:3:0) Prerequisite: previous course work in statistics, or GEOG 310 or 550. Survey of quantitative methods commonly used in geographic research. Emphasizes spatial analysis techniques.

590 Selected Topics in Geography and Cartography (3:3:0) Prerequisite: permission of department. Analyzes topics of immediate interest. Content varies. May be repeated to a maximum of 12 credits.

Graduate standing is prerequisite to all 600-level courses.

603 Geographic Perspectives of Complex Natural Resource Management Topics (3:0:0) Develops better understanding of strengths, limitations of restoring large and complex natural resource systems by examining critical aspects of one such effort.

605 Socioeconomic Applications of GIS (3:0:0) Prerequisite: GEOG 553. Provides those working with spatially-referenced data the technical skills to use GIS to conduct spatial analyses on socioeconomic phenomena related to labor, retail and real estate markets. Introduces and emphasizes the development of technical and methodological skills to understand the potential and the pitfalls of using GIS for spatial analyses of socioeconomic phenomena.

631 Spatial Agent-based Models of Human-Environment Interactions (3:3:0) Prerequisite: GEOG 531 or CSS 600, or permission of instructor. Discusses key challenges in spatial modeling of human-environment interactions. Reviews agent-based modeling applications in urban and rural interactions, agriculture, forestry, and other areas. Hands-on development of simple ABM models and investigation of linkages between GIS and ABM.

644 Fundamentals and Interpretation of Imaging Radar (3:0:0) Prerequisites: GEOG 579 or EOS 753, or other basic course in remote sensing. Provides understanding of components, functionality, and use of radar remote sensing for acquiring spatial information. Concentrates on operational systems. Includes hands-on assignments.

653 Geographic Information Analysis (3:3:0) Prerequisites: GEOG 553 and 583. Explores existing and potential capabilities of geographic information systems in conducting spatial analysis and modeling.

655 Map Design (3:3:0) Prerequisite: GEOG 310 or 550. Advanced examination of principles of map design, including discussions of map design research.

656 Terrain Mapping (3:3:0) Prerequisite: GEOG 553 or equivalent, or permission of instructor. Covers fundamental methods of digitally representing terrain data, major technologies, and programs for generating terrain data; methods for quantifying terrain error and assessing terrain data quality; and a variety of applications.

661 Map Projections and Coordinate Systems (3:3:0) Prerequisite: GEOG 310 or 550. Covers development of various map projections and coordinate systems, property analysis, distortions, and applications.

664 Spatial Data Structures (3:3:0) Prerequisite: GEOG 310 or 550. Studies spatial data structures and their application in digital cartography, geographic information systems, and image-processing systems. Examines raster and vector data structures, and attribution schemes and topological models. Includes data transformation, information loss, data quality, and the role of metadata.

670 Applied Climatology (3:3:0) Prerequisite: course in weather and climate, or permission of instructor. Applies climatic concepts to natural and human-modified environments, and analyzes climatic change.

671 The Lithosphere (3:3:0) Prerequisite: graduate standing. Global-scale overview of lithosphere, the solid non-living Earth, its materials, cycles, plate tectonic and geomorphic processes; and history, including interactions
with and history of hydrosphere, atmosphere and biosphere, and methods of analysis.

674 Environmental Impact Analysis (3:3:0) Scientific and administrative processes involved in environmental impact analysis and environmental impact statements.

680 Seminar in Thought and Methodology (3:3:0) Prerequisite: GEOG 585. Includes historical development of geographic thought and current philosophy of geography; rationale for various subfields; and geographic research techniques and methods of analysis.

690 Advanced Practicum in Geographical Applications (1–6:0:0) Prerequisite: permission of department. Applies spatial technologies in conjunction with faculty instruction and research. Individualized sections taught by arrangement with full-time faculty.

695 Internship (1–6:0:0) Prerequisite: permission of department. Approved study programs with specific employers. Students and employer supervisors must demonstrate relevance of study program to degree requirements.

698 Directed Readings and Research (1–3:0:0) Prerequisite: permission of instructor and department. Reading and research on specific topic under direction of faculty member. Written report required; oral exam and report may be required. May be repeated to a maximum of 12 credits.

750 Advanced Geographical Research Applications (1–6:0:0) Prerequisite: permission of instructor. Advanced research employing geographical tools and research techniques. Content varies. May be repeated to a maximum of 12 credits with permission of the department.

785 Geographic Field Work (3:3:0) Introduces nature, scope, and objectives of geographic field methods and techniques, including use of base maps, acquisition of data, and field research design. Taught as much as possible in field situations with students required to develop and carry out relevant field research projects pertaining to both physical and cultural geography.

791 Colloquium in Earth Systems Science (1:1:0) Introduces in colloquium format various parts of Earth systems. Invited talks by Mason faculty and primarily Earth science experts in Washington, D.C. area. Students graded on written reports demonstrating understanding of wide topics covered.

792 Seminar in Earth Systems Science (2:2:0) Prerequisites: 15 graduate credits and courses on atmosphere, hydrosphere and lithosphere. For graduate students with background in Earth’s major systems. Capstone experience. Seminars presented by faculty and students. Topics vary from semester to semester.

795 Seminar in Regional Analysis (3:3:0) Analyzes and synthesizes physical and cultural elements of geography in selected region. Should be taken near end of master’s degree program. Provides opportunity to apply selective knowledge gained in previous systematic courses to specific region.

799 Thesis (1–6:0:0) Prerequisites: degree candidacy and departmental approval of thesis proposal. Graded S/NC. May be repeated to a maximum of 5 credits.

Geology (GEOL)

Environmental Science and Policy

101 Introductory Geology I (4:3:3) Covers Earth, processes that operate within Earth and on surface, and human interaction with Earth. Topics include minerals, earthquakes and seismology, isotasy, igneous processes and rocks, paleomagnetism and plate tectonics, weathering, mass movements, rivers and streams, groundwater, glaciers, and marine processes. May include field trips.

102 Introductory Geology II (4:3:3) Prerequisite: GEOL 101. Earth processes in historical context. Topics include sedimentary rocks and principles, deformation and metamorphism, mountain building and plate tectonics, geologic time, fossils, and historical development of continents. May include field trips.

206 Topics in Geology I (1–3:1–3:0) Discusses particular topic in geology. May include field trips.

302 Mineralogy (4:3:3) Prerequisites: GEOL 101 and 102 with grade of C or better, and CHEM 211. Crystallographic, optical, chemical, and physical properties of minerals. May include field trips.

303 Field Mapping Techniques (3:0:6) Prerequisites: 30 credits including MATH 105 or equivalent, and GEOL 102 or GEOL 101. Basic techniques for collecting, recording, and plotting spatial field data including use of topographic maps, compasses, transit, alidade, and global positioning systems (GPS). Includes field work.

304 Sedimentary Geology (4:3:3) Prerequisites: GEOL 101 and 102, and grade of C or better in GEOL 302. Introduces sedimentation, sedimentary petrology, facies analysis, and stratigraphy. May include field trips.

305 Environmental Geology (3:3:0) Prerequisites: GEOL 101, and either GEOL 102, GEOL 309/BIOI 309, or GEOL 309. Investigates geological principles directly relating to environmental problems, geological causes and effects of natural disasters, geology of natural resources, geology of land-use planning, and geology as related to health problems. May include field trips.

306 Soil Science (3:3:0) Prerequisites: GEOL 101, and CHEM 103 or 211. Composition, classification, physical properties, and origin of soils. May include field trips.

308 Igneous and Metamorphic Petrology (4:3:3) Prerequisites: GEOL 101 and 102, grade of C or better in GEOL 302, and MATH 105 or equivalent. Genesis, classification, and recognition of igneous and metamorphic rocks. May include field trips.

309 Introduction to Oceanography (3:3:0) Prerequisites: GEOL 101 and BIOL 103 or 213. Introduces physical, chemical, biological, and geological aspects of oceanic environment. May include field trip.

312 Invertebrate Paleontology (4:3:3) Prerequisites: GEOL 101, or BIOL 103, 104; or BIOL 213, 303, 304. Classification, evolutionary trends, and distribution of common invertebrate fossils. May include field trips.

313 Hydrogeology (3:3:0) Prerequisites: GEOL 101 or GEOG 102, MATH 113, and CHEM 211. Geological and hydrologic factors controlling occurrence, distribution, movement, quality, and development of groundwater.
315 Topics in Geology II (1–3:1–3:0) Prerequisites: CHEM 211, 212; MATH 113 or permission of instructor. Discusses particular topic in geology. May include field trips.

316 Computers in Geology (3:3:0) Prerequisites: GEOL 101, 102, and 302, and one semester of mathematics; or permission of instructor. Uses of mainframe and microcomputers, with emphasis on geologic applications.

317 Geomorphology (4:3:3) Prerequisites: GEOL 101 and 102, with grade of C or better; or 6 credits in GEOG, including GEOG 412 strongly recommended. Analyzes processes that occur at Earth’s surface and resulting landforms. Labs stress recognition and evaluation of landforms using maps and aerial photographs, and methods of data collection used in study of surficial geology. May include field trips.

363 Coastal Morphology and Processes (4:3:3) Prerequisite: GEOL 309, BIOL 309, or GEOL 317; or 9 credits in geography, including GEOG 309. Studies global coastal geomorphology and processes with emphasis on U.S. Atlantic and Gulf coasts. Topics include plate tectonics, sea level changes, sediment supply, waves, tides, storm impacts, and human activities. Lecture and extended weekend field trips to mid-Atlantic coast.

401 Structural Geology (4:3:3) Prerequisite: grade of C or better in GEOL 302; and MATH 110, 111, or 113. Igneous, sedimentary, and metamorphic rocks in folded, faulted, and metamorphosed terrains. May include field trips.

403 Geochemistry (3:3:0) Includes stable isotope, crystal, water, and organic geochemistry; geochronology; and geochemistry of rocks.

404 Geological Field Techniques (3–8:0:6–12) Prerequisites: GEOL 101, 102, 302, 304, 308, and 401. Mapping techniques involved in collecting geological field data. Includes field work.

405 Geology of Mineral and Energy Resources (3:3:0) Prerequisites: GEOL 101, 102, 302, 304, 308, and 401. Topics include metallic and nonmetallic ore deposits, fossil fuels, alternate energy resources, and methods by which each is used. May include field trips.

406 Seminar in Earth and Environmental Science (3:3:0) Prerequisite: 90 credits. Capstone seminar for Earth and environmental science majors. Students read, discuss research literature; produce, present original papers.

408, 409 Practicum for Geology Laboratories (1:1:3) Prerequisites: geology major with 80 credits, and permission of department chair. Studies techniques to make geology lab effective component in geological education. Discusses developing testing materials, supplemented by experience operating geology course lab section.

410 Research Proposal Preparation (1:1:0) Prerequisites: geology or Earth science major with 80 credits, and permission of department chair. Prepares for research in GEOL 411. Includes literature research, initial data collection, and preparing research proposal.

411 Geological Research (3:0:3) Prerequisite: GEOL 410. Geological research: data collection and reduction, interpretation, preparation of written report, and oral presentation of results.

417 Geophysics (3:3:0) Prerequisites: GEOL 101, MATH 113, and one year of physics; or permission of instructor. Basic principles of geophysics including gravity, magnetism, and seismic reflection and refraction.

420 Earth Science and Policy (3:3:0) Prerequisites: completion of or concurrent enrollment in all other required general education courses; completion of at least 18 credit hours in major or minor (geology, Earth science, ocean and estuarine science, or global and environmental change), and one of the following social science-based courses: EVPP 361, ECON 103, ANTH 114, GEOG 103, GLOA 101, GOVT 132 or 133, HISTORY 125 or 130, SOCI 101, 102, or 120. Discusses Earth science issues that have policy implications. Course uses a broad definition of Earth science, from atmosphere to geosphere. Course taught seminar-style, with emphasis on discussion, reading, writing, critical analysis, and student oral presentations. Course may include field trips.

480 Internship (1–3:0:0) Prerequisite: open only to majors with 90 credits. Approved study programs with specific employers. Contact department one semester before enrollment.

500, 501 Selected Topics in Modern Geology (1–3:1–3:0) (1–3:1–3:0) Prerequisite: baccalaureate degree in geology, or permission of instructor. Lecture, lab, field trip. Topic designated in class schedule.

503 Special Topics in Earth Science (1–6:1–6:0) Prerequisite: employment or anticipated employment as Earth science teacher. In-service course to strengthen and update knowledge of Earth science. May include field trips.

601 The Lithosphere (3:3:0) Prerequisite: graduate standing. Global-scale overview of lithosphere, solid non-living Earth, materials, cycles, plate tectonic and geomorphic processes; and history, including interactions with and history of hydrosphere, atmosphere and biosphere, and methods of analysis.

613 Environmental Geochemistry and Mineralogy (3:3:0) Prerequisite: graduate standing. Explores hot topics and aids students in developing intellectual skills to identify key research problems. Students will also improve their writing and presentation skills.

800 Studies for the Doctor of Philosophy in Education (variable credit) Prerequisite: admission to PhD in education program to study geology. Program of studies designed by discipline director and approved by doctoral committee that allows student to participate in current research of discipline director and results in paper reporting student’s original contributions. Enrollment may be repeated.

German (GERM)

Modern and Classical Languages

Placement: See the Academic Testing section in the Admission chapter.

101 Elementary German I (3:3:1) Designed for students with no knowledge of German. Introduces elements of grammar, vocabulary, oral skills, listening comprehension, and reading. Lab work required.
102 Elementary German II (3:3:1) **Prerequisite:** GERM 101, or permission of department. Continuation of GERM 101. Lab work required.

105 Review of Elementary German (3:3:1) **Prerequisite:** appropriate placement score, or permission of department. Reviews elements for students who have studied German previously. May not be taken for credit in combination with GERM 102. Lab work required.

110 Elementary German (6:6:1) Introduces elements of grammar, vocabulary, oral skills, listening comprehension, and reading. Students may not receive credit for GERM 110 if they have received credit for GERM 101 and 102. Lab work required.

201 Intermediate German I (3:3:1) **Prerequisite:** GERM 102 and 105, appropriate placement score, or permission of department. Further development of skills in listening, speaking, reading, and writing. GERM 201 and 202 must be taken in sequence. Lab work required.

202 Intermediate German II (3:3:1) **Prerequisite:** GERM 201, appropriate placement score, or permission of department. Applies skills to reading, composition, and discussion. Lab work required.

210 Intermediate German (3:3:1) **Prerequisite:** GERM 110 or appropriate placement score. Continuation of the development of basic components of the language, with focus on listening, speaking, reading, and writing skills. Introduces students to the cultures and histories of German-speaking regions. Lab work required.

250 Gateway to Advanced German (3:3:0) **Prerequisites:** GERM 210, appropriate placement score, or permission of department. Integration of advanced intermediate-level German reading, writing, listening, and speaking skills, and the development of critical thinking about authentic texts from around the globe. Taught in German.

301 Culture and Civilization (3:3:0) **Prerequisite:** 60 credits, or permission of instructor. Covers development of German civilization from 18th century to present. Includes German cultural contributions to world civilization. Taught in English.

310 Conversation and Composition (3:3:0) **Prerequisite:** GERM 202 or equivalent, or permission of instructor. Develops fluency in speaking, and proficiency in writing German through discussion, reports, and compositions based on texts dealing with contemporary events and issues. Not for native speakers.

316 German for the Business World (3:3:0) **Prerequisite:** GERM 202 or equivalent, or permission of instructor. Introduces terminology and structural features of business German. Emphasizes acquiring vocabulary and developing facility in reading German business articles and correspondence.

318 Translation of Texts (3:3:0) **Prerequisite:** 12 credits of German, or permission of instructor. Introduces principles and techniques of translation. Translation of texts from the natural and social sciences, current events, and contemporary culture. Translations mainly from German into English.

325 Major Writers (3:3:0) **Prerequisite:** ENGL 101 or equivalent, or permission of instructor. Works of major German, Austrian, and Swiss writers in translation. Writers to be studied vary. Course work in English. May be repeated for credit with permission of department.

340 Survey of German Literature (3:3:0) **Prerequisite:** GERM 202 or equivalent, or permission of instructor. Overview of history of German literature to 1880.

355 Readings in Poetry (3:3:0) **Prerequisite:** GERM 202 or equivalent, or permission of instructor. Intensive reading of German poetry in its historical context. Studies genre characteristics and development. Types of poetry studied vary. May be repeated for credit when subtitle is different, with permission of department.

365 Readings in Narrative Prose (3:3:0) **Prerequisite:** GERM 202 or equivalent, or permission of instructor. Intensive reading of German narrative prose, such as autobiographical fiction, fairy tales, and film. Studies genre characteristics and development. Topics vary. May be repeated for credit when subtitle is different, with permission of department.

375 Readings in Drama (3:3:0) **Prerequisite:** GERM 202 or equivalent, or permission of instructor. Intensive reading of German dramas in their historical context. Study of genre characteristics and development, including performance aspects. Genre varies; may be historical drama, radio play, or epic theater. May be repeated for credit with permission of department when subtitle differs.

415 Advanced Grammar and Style (3:3:0) **Prerequisite:** 15 credits of German or permission of instructor. Studies syntax, idiomatic features, and levels of style. Extensive practice in different types of written expression.

418 Advanced Composition (3:3:0) **Prerequisite:** 15 credits of German, or permission of instructor. Develops proficiency in writing German through intensive practice in preparing guided and original compositions.

442 The Age of Goethe (3:3:0) **Prerequisite:** 15 credits of German, or permission of instructor. Major works of Enlightenment, Sturm und Drang, Classicism, and early Romanticism. Emphasizes drama and poetry by Goethe and Schiller, with additional works by Lessing, Kleist, and other important writers of the era.

444 The Literature of Romanticism (3:3:0) **Prerequisite:** 15 credits of German, or permission of instructor. German Romantic poetry and prose. Background and some theory included.

450 Modern Literature: 1880–1925 (3:3:0) **Prerequisite:** 15 credits of German, or permission of instructor. Literature of Naturalism, Impressionism, and Expressionism, in Germany, Austria, and Switzerland.

451 Modern Literature: 1925 to the Present (3:3:0) **Prerequisite:** 15 credits of German, or permission of instructor. Literary trends since 1925 in Germany, Austria, and Switzerland.

480 Special Topics (3:3:0) **Prerequisite:** 15 credits of German, or permission of instructor. Special topics on language, literature, or culture by theme, approach, or era. May be repeated for credit with permission of department. See also FRLN course listing.
Global Affairs (GLOA)  •  Global and Community Health (GCH)

Global Affairs (GLOA)
College of Humanities and Social Sciences

101 Introduction to Global Affairs (3:3:0) Surveys wide range of global topics: previous periods of globalization, international organizations and law, transnational corporations and global economy, immigration and refugees, world environmental concerns, world culture, war and peace, paradoxical presence of nationalism and fundamentalism in global world, and antiglobalization movement.

490 Independent Study in Global Affairs (1–3:1–3:1–3) Prerequisite: global affairs majors with 90 credits, GLOA 101, and permission of instructor. Reading or research on specific topic related to globalization, under direction of faculty member. At least one written paper required. Course may involve combination of reading assignments, tutorials, presentations, or off-campus activities. May be repeated for credit up to total 6 credits.

495 Global Experiential Learning (1–18:0:0) On-the-job training in transnational or international fields through approved internship programs. Enrollment and credits controlled by Global Affairs Program. Contact Global Affairs Program one semester before planned enrollment.

Global and Community Health (GCH)
College of Health and Human Services

205 International Health (3:3:0) Examines cross-cultural values in health and nutrition, exploring health- and nutrition-related problems that afflict populations throughout the world and efforts to achieve optimal health for all. Introduces nutrition and health concerns from variety of cultures and considers population dynamics, vital statistics, global disease patterns, and cultural variations. Includes lectures, discussion, video presentations, oral presentations, and web research.

295 Nutrition for Health Professionals (3:3:0) Prerequisite: one semester of science or permission of instructor. Introduces nutrition science, emphasizing macro- and micro-nutrients in body, digestion, energy metabolism, weight loss, fitness and nutrition, prevention of chronic diseases, nutrition therapy, and nutritional assessment. Problem-solving and critical-thinking methodologies used in group presentations that address nutrition-related case studies. In-class activities, outside readings, and class discussion reinforce concepts. Students use computer-based diet analysis to evaluate personal dietary intakes.

332 Concepts of Health Care Promotion and Disease Prevention throughout the Life Span (3:3:0) Introduces epidemiology, health promotion, and disease prevention, and effect on health status of culturally diverse and vulnerable individuals, families, small groups, and communities. Focuses on health problems and potential interventions throughout life span, and incorporates principles of teaching and learning as they apply to health professionals.

350 Health Education, Promotion, and Holistic Health Perspectives (3:3:0) Enables students to survey health and wellness issues related to their personal profile and explore options in reducing personal risk factors. Students define health in context of family, environment, culture, society, and life span. By examining, comparing, and using various methods of health-risk appraisal and assessment tools, students plan health education and promotion projects for targeted populations. Stresses motivational strategies for improving and maintaining health.

402 Case Management (3:3:0) Open to seniors. Survey course on the state of case management programs and practice for health and human service professionals. Special emphasis on comparing nature, process, and outcomes guided by the objectives.

420 Strategies for Nutrition Education (3:3:0) Prerequisite: GCH 295 or permission of instructor. Examines methods and techniques for educating individuals about nutrition. Addresses nutrition education issues from variety of populations with respect to culture, age, religion, and specific disease states.

421 Community Nutrition (3:2:1) Prerequisite: GCH 295 or permission of instructor. Focuses on nutrition and health problems of specific community settings, and examines practices of nutrition services in various communities.

422 Nutrition throughout the Life Cycle (3:3:0) Prerequisite: GCH 295 or permission of instructor. Focuses on nutrient needs and food habits throughout life cycle. Emphasizes nutrient needs prior, during, and after pregnancy, and nutritional requirements of infants, children, adolescents, adults, and elderly.

423 Nutrition and Chronic Illnesses (3:3:0) Prerequisite: GCH 295 or permission of instructor. Examines nutrient needs related to specific chronic illnesses, including cardiovascular disease, cancer, obesity, and diabetes. Focuses on principles of nutritional therapy and prevention.

440 Community Health and Epidemiology (3:3:0) Prerequisite: completion of 300-level requirements. Addresses population-focused health care. Emphasizes primary, secondary, and tertiary prevention of health problems. Examines concepts of community, public health, and health policy affecting culturally diverse and vulnerable populations.

460 Public Health Research and Methods (3:3:0) Prerequisite: statistics course. This introductory research course is designed to present basic concepts and methods of public health research. Emphasis is placed on critique and use of current community and public health research methods.

466 Nutrition and Weight Management: Obesity, Anorexia, and Bulimia (3:3:0) Prerequisite: GCH 295, GCH 332, GCH 440, or approval of instructor. Focuses on the physiological, emotional, genetic, and societal and cultural factors that influence the relationship between eating and weight regulation.

480 Health Maintenance and Health Aspects of Aging (3:3:0) Studies physiological and psychological factors that influence health and have implications for preventive measures in disease and health disorders. Examines nutrition, nature of health problems, and methods of assessing physical and psychological needs.

494 Special Topics in Global and Community Health (3:3:0) Selected topics analyzing specialized areas in global and community health. Content varies. Lecture, seminar, laboratory, workshops.

496/NURS 496 Violence in Today’s Society (3:3:0) Examines magnitude of problem of violence globally and more specifically within the United States. Discussion and reflective activities engage students in the learning process.
498 Global and Community Health Internship (6:2:8) Involves a seminar and an internship in a community health organization. Open to community health majors only. Students are required to work a minimum of 224 hours during the semester they take the internship. This course provides for experiential learning in a community health organization under the direction of a faculty advisor and a preceptor. Students are expected to understand the roles and functions of the community health organization and complete a project approved by the faculty advisor and the preceptor.

499 Independent Study in Global and Community Health (1–3:0:0) Prerequisite: permission of college. Provides individual study of a particular problem area in global and community health research, theory development, or education under the direction of faculty. May be repeated for maximum 6 credits.

502 U.S. Role in Global Health, Nutrition, and Population (3:3:0) The course will cover U.S. history in responding to health, nutrition, and population challenges worldwide; examine current programs in each area, including those of the U.S. government and nongovernmental organizations, foundations, and the private sector; and examine future directions for responding to health, nutrition, and population trends.

506 Clinical Exercise Physiology (3:3:0) Prerequisites: bachelor’s degree, and 8 credits in anatomy and physiology; or permission of instructor. Examines acute and chronic alterations, adaptations associated with exercise and training. Covers role of exercise therapy in preventing and rehabilitati- ing from disease across lifespan. Particular emphasis on role of exercise therapy in cardiorespiratory, musculoskeletal, and metabolic diseases.

510 Scientific Basis for Pain, Fatigue, and Suffering in Chronic Illness and Disability (3:3:0) Reviews the scientific literature describing the theories of the initiation and perpetuation of pain, fatigue, and suffering. Describes the methodologies used to evaluate these symptoms. Students will apply the theories of pain, fatigue, and suffering and will further their understanding of specific clinical problems.

530 Nutrition: A Global Perspective (3:3:0) For students from a variety of disciplines. Examines malnutrition and how it occurs by looking at several situations from around the world. Covers how nutrition can affect society and community, and examines benefits of well-nourished population.

543 Global Health: Trends and Policies (3:3:0) Covers today’s health challenges and their various social, economic, and epidemiological causes; role and likely success of information and technology transfer; primary preventive health care; social awareness; and intervention in alleviating problems. Lecture, discussion.

555 Human Biology (3:3:0) Provides an overview of the biological aspects of disease processes, with emphasis on the pathophysiology of common diseases and public health measures for the prevention and control of disease in populations.

560 Environmental Health (3:3:0) Prerequisite: an undergraduate community health course. Examines principles and methods, risk factors, prevention and control, and policies related to the aspects of human health determined by biological, physical, and chemical factors in the environment at the local, regional, and global levels.

566 Nutrition and Weight Management (3:3:0) Prerequisite: GCH 295 or other introductory nutrition course. Focuses on the physiological, emotional, genetic, and societal/cultural factors that influence the relationship between eating and weight regulation.

571/NURS 571 HIV/AIDS Concepts, Principles, and Interventions (3:3:0) Overview of HIV disease, including retrospective and current concepts and analyses, global and societal effect, and cutting-edge research. Examines development of therapeutic tools and skills to educate, reduce risks, control infection, and affect care and healing of client, family, and community, and issues of increasing dilemma for health care professionals.

583 Food and Culture: Biocultural Perspectives on Food and Nutrition (3:3:0) Prerequisite: GCH 295 or permission of instructor. Examines food and eating behaviors, diet, and nutrition from cross-cultural perspective. Focuses on how and why people choose what to eat, range and significance of cross-cultural variability in diet, how diets have changed, and health and social implications of those changes. Lecture, discussion, video presentations, audiovisual aids, student presentations, and case study analyses.

590 International Health Organizations (3:3:0) Directed at students in the global health concentration. Examines inner workings of international health organizations such as WHO, PAHO, Red Cross, Red Crescent, USAID, UNICEF, Doctors without Borders, and the World Bank. Primary concern is on organizations focused on health prevention and promotion, disease remediation, and epidemiology. Explores goals and mechanisms of these international health organizations and the mission, roles, procedures, funding sources, and evaluation of effectiveness in global community.

594/HAP 594/NURS 594 Special Topics in Health Care (3:0:0) Selected topics analyzing specialized areas in health care. Content varies. Lecture, seminar, laboratory, and workshops.

601 Introduction to Biostatistics (3:3:0) Applies selected biostatistics techniques to public health and health system management issues. Includes univariate and bivariate statistics, and regression analysis.
602 Global Health Issues Related to Violence (3:3:0) Prerequisite: admission to a graduate program or permission of instructor. Explores worldwide view of violence and its impact on health. Examines biological, psychological, and social determinants of violence. The epidemiology of violence is examined with special attention to collective violence, youth violence, abuse and neglect of children and the elderly, intimate partners, sexual violence, self-directed violence, and transgenerational violence. Preventive approaches attempted to help reduce the prevalence of violence will be addressed.

605 Social Epidemiology (3:3:0) Students will learn the basic foundations of social epidemiology and learn how they can apply these principles to the global community and their own professions. Throughout the course, students will explore the health-enhancing and health-deteriorating effects of social factors, with special emphasis on the personal social environment. They will also examine the effect of macro-social variables, such as socioeconomic status, cultural traditions, life cycle stages, and circumstantial changes, such as migration and relocation on health and well-being.

610 Foundations of Health Education and Behavior (3:3:0) Introduces students to the fundamentals of social and behavioral sciences, emphasizing current health behavior theories and models. Students develop an understanding of the theoretical and scientific basis of health promotion/health education interventions and develop community need and asset assessment skills.

611 Planning, Implementing, and Evaluating Health Promotion Programs (3:3:0) Addresses the process of program planning, development, and fundamental evaluation principles, emphasizing health promotion programs. The focus is on development of clear and concise objectives leading to the design of effective primary, secondary, and tertiary prevention strategies.

620 Psychosocial Aspects of Rehabilitation (3:3:0) Explores social and psychological impacts of disability. Processes by which people with disabilities adapt to limitations will be examined, as will the influence society has in promoting independence/dependence among people with disabilities.

637 Normal Aging and Health Deviations (3:3:0) Examines biopsychosocial aspects of aging. Examines effects of age changes and health deviations on functional capacity of older persons and interventions and promotion of the elderly’s capacity for self care.

659 Health Care of Aging Persons with Chronic Illnesses (3:3:0) Prerequisite: GCH 637. Focuses on biological, psychological, and sociocultural aspects of aging and chronic illness. Examines functional capacity and capacity for self care.

680 International Research Ethics and Methods (3:3:0) Prerequisite: GCH 543. Prepares students to conduct global and community health research. Discusses ethical issues in international health research. Develops plans for identifying a research project, collecting and analyzing data, and reporting results of international health research.

690 Independent Study (1–3:1–3:0) In-depth studies of selected area of health science theory, research, or practice under direction of faculty. May be repeated for a maximum of 3 credits.

691 Project Management in Public Health (3:3:0) Course examines project management roles and environments, the project lifecycle and various techniques of work planning, and control and evaluation to achieve project objectives. Emphasizes leadership, communication, grant writing and ethics.

712 Introduction to Epidemiology (3:3:0) Prerequisite: HAP 730 or comparable other as approved by instructor. Introduction to epidemiology and health service research as body of knowledge and a method for analyzing health problems. Students learn the role of health services research and epidemiology in policy and evidence-based management and clinical practice. Students design experiments, analyze secondary data, and evaluate impact of programs on health outcomes.

714 Epidemiology for Nursing Practice (3:3:0) Targeted at students in the doctor of nursing practice program, this course provides an introduction to epidemiology as a body of knowledge and a method for analyzing health problems. Students use analytic methods to critically appraise existing literature, design and implement evaluation processes, collect and analyze data, and apply relevant findings to the practice environment. Note: Only one of GCH 714 or GCH 712 can be taken for credit.

722 Infectious Disease Epidemiology (3:3:0) Infectious disease epidemiology is the study of the distribution and determinants of infectious diseases in populations. Covers agent, host, and environmental characteristics; the infections transmission process; epidemiological study, design, and analysis; surveillance, outbreak investigation, and disease control; and advanced techniques such as mathematical modeling and spatial analysis.

726 Advanced Seminar in Epidemiology (3:3:0) Prerequisites: GCH 597 or an approved graduate-level statistics course, GCH 712, a topics-based epidemiology course (GCH 605, GCH 722, or GCH 732), and permission of instructor. Develops epidemiological skills through completion of an original research project. Focuses on epidemiological methodology and analysis, critical review of the literature, and scientific writing.

732 Chronic Disease Epidemiology (3:3:0) Prerequisite: GCH 712 or approved epidemiology course. Focuses on the epidemiology of chronic diseases, including cancers, cardiovascular and lung diseases, and mental health disorders. Emphasizes study design, critical reading, and public health approaches to disease control, such as surveillance and screening.

740 Applied Physiology: Cardiorespiratory System (3:3:0) Prerequisites: GCH 506 or EFHP 610 or other graduate physiology course, plus one of the following: two semester course sequence in anatomy and physiology (100 level or above) or one course in animal or comparative physiology (500 level or above) or one course in human physiology (300 level or above). Rigorous, evidence-based study of biological factors and medial conditions that limit oxidative metabolic function. Emphasis on examining current hypotheses of physical activity limitations in chronic illness and disability.

751 Nutritional Assessment, Monitoring, and Surveillance (3:3:0) Prerequisite: GCH 530 or approved graduate nutrition course. Introduces students to methods and tools used in assessing nutritional status and the practice and application
of these to monitoring among individuals and population groups. Methods of interpretation of nutrition-related information will be examined.

**752 Nutritional Epidemiology (3:3:0)** Prerequisite: GCH 712. Introduces students to the principles of epidemiology and their application to nutrition. Examines the methodologies and interpretation of dietary assessment and the design, conduct, analysis, and interpretation of epidemiologic studies related to nutrition, particularly the relationship between nutritional status, diet, and disease.

**770 Gerontology Practicum I (3:2:3)** Prerequisite: all core course work; corequisite for gerontology tract majors: health services research for MS in health science. Field practicum in gerontology, emphasizing applying gerontological knowledge in designated facility and developing skills to function in service organization for aging. Includes problem identification and analysis, project development, and practical experience under supervision of qualified professional. Students collaborate with preceptor to develop useful project based on organizational and client needs. Uses case study analyses to explore problem-solving approaches in variety of situations and health care or service organizations.

**771 Gerontology Practicum II (3:2:3)** Prerequisite: GCH 770. Continuation of field practicum in gerontology. Students receive practical experience under supervision of qualified professional. Emphasizes implementation of approved project. Gerontological theoretical concepts applied in implementation and evaluation. Uses case study analyses to explore problem-solving approaches.

**788 Public Health Research I (3:3:0)** Prerequisites: GCH 530, 543, 590, 597, 680, and 712. Only students enrolled in graduate degree programs within the Department of Global and Community Health may enroll. Provides students with skills to develop their research proposal, conduct their research goals, and complete their master’s thesis, which will be completed in Public Health Research II. Repeatable to maximum of 6 credits.

**789 Public Health Research II (3:3:0)** Prerequisite: GCH 788. Provides students with skills to complete their research projects and write the master’s thesis. Repeatable to maximum of 6 credits.

**798 Practicum in Public Health I (3:1:8)** Prerequisite: completion of the global health core curriculum. Provides students with supervised experience in an identified public health organization. Students will explore the structure, functions, and activities of the public health organization and understand its relationships to improving health from a global perspective.

**799 Practicum in Public Health II (3:1:8)** Prerequisite: GCH 798. Provides students with an in-depth supervised experience in an identified public health organization. Provides students the opportunity to complete a project related to an actual public health issue that is a focus within the organization.

**804/NURS 804 Advanced Quantitative Data Analysis for Health Care Research I (3:3:0)** Prerequisite: a graduate level statistics course. Examines factorial ANOVA, factorial ANCOVA, repeated measures ANOVA, ANOVA and ANCOVA via regression approach, and multiway frequency analysis. Students apply mathematical calculations and interpret SPSS outputs using health care research data.

**805/NURS 805 Advanced Quantitative Data Analysis for Health Care Research II (3:3:0)** Prerequisite: GCH/NURS 804 or an equivalent statistics course. Examines multivariate analysis of variance (MANOVA), multivariate analysis of covariance (MANCOVA), multiple regression (ordinary least squares), and logistic regression. Students apply mathematical calculations and use linear combinations of multivariate tests in health care research data.

**806/NURS 806 Advanced Multivariate Statistics and Data Analysis for Health Care Research (3:3:0)** Prerequisite: GCH/NURS 805 or an equivalent multivariate statistics course. Examines canonical correlation, discriminant analysis, factor analysis and causal analysis (path models and structural equation modeling). Students analyze and interpret data using these statistical techniques.

**807/NURS 807 Measurement Theories and Applications in Health Care Research (3:3:0)** Prerequisite: doctoral-level course in research design and statistics. Completion of GCH/NURS 803 or GCH/NURS 806 is highly recommended. Theories, principles, and techniques presented as foundation for the development and evaluation of instruments for use in health care research. Includes review of statistical techniques required for understanding measurement theory, reliability, validity, item analysis, and instrument construction. Students required to design, construct, administer, analyze, and evaluate an original instrument or evaluate an existing instrument in health care research.

### Government and International Politics (GOVT)

#### Public and International Affairs

**101 Democratic Theory and Practice (3:3:0)** Comparative exploration; topics include contemporary analysis of the meanings of liberty, equality, representation, property rights, voting rights, and civil responsibilities.

**103 Introduction to American Government (3:3:0)** American government examined in light of basic concepts and institutions of democracy. Includes citizenship project, a first-hand observation or participation in and analysis of some public activity.

**132 Introduction to International Politics (3:3:0)** Nature of international politics, approaches to study of international politics, state and nonstate actors in international system, patterns of action and interaction between nation-states, international institutions, and major global issues.

**133 Introduction to Comparative Politics (3:3:0)** Discusses methods and subject matter of comparative political analysis. Includes political systems, politics, participation in politics, government structures, policy-making process, and evaluation of political performance.

**300 Research Methods and Analysis (4:3:1)** Required for all majors in government and international politics, and public administration. Strongly recommended before or during first semester of enrolling in 300-level courses. Emphasizes asking clear, researchable questions and using appropriate evidence to answer them. Introduces broad range of evidence including quantitative and qualitative information. Studies design and analysis of surveys, government archives, case studies, and interpretations of events in journals. Examines ethical implications of information technologies.
301 Public Law and the Judicial Process (3:3:0) Prerequisite: GOVT 103. American judicial organization and operation, role of the Supreme Court in policy formation, and selected constitutional principles.

305 Contemporary American Federalism (3:3:0) Prerequisite: GOVT 103. Legal, administrative, fiscal, and political dimensions of evolving American federalism.

307 Legislative Behavior (3:3:0) Prerequisite: GOVT 103. Organization, processes, functions, and roles of legislature and U.S. Congress members. Topics include state legislatures and cross-national comparisons as time and resources permit.

308 The American Presidency (3:3:0) Prerequisite: GOVT 103. Survey of modern presidency, including constitutional origins of office, growth and influence of White House staff, Cabinet, presidential appointees and control of executive branch, relations with Congress, and domestic and national security policy-making.

309 Government and Politics of Metropolitan Areas (3:3:0) Prerequisite: GOVT 103. Government, politics, and problems of metropolitan centers and surrounding areas.

311 Public Opinion and Electoral Behavior (3:3:0) Prerequisites: GOVT 103 and 300. Studies actions of voters, candidates, and political parties in relation to the expression of relevant public opinion in a democratic system.

312 Political Parties and Campaigns (3:3:0) Prerequisite: GOVT 103. Characteristics and functions of political parties, influence of parties and other political forces on electoral decisions, and emphasis on parties’ inability or ability to hold government accountable to citizens.

318 Interest Groups, Lobbying, and the Political Process (3:3:0) Prerequisite: GOVT 103. Role, internal operations, strategies, and activities of interest groups. Evaluates ability of these groups to enable citizens to influence or control government and enhance democratic process. Considers conditions under which social movements become, or fail to become, effective interest groups.

319 Issues in Government and Politics (1–3:3:0) Prerequisite: GOVT 103. Special issues relevant to government and politics. Topics announced in advance. Examples include politics and the arts, ethnic conflict and the political system, gender politics, and changing dynamics in political institutions. May be repeated for credit when topic is different, with permission of department.

322 International Relations Theory (3:3:0) Prerequisite: GOVT 132 or 133. Advanced inquiry into international relations. Studies theories, concepts of international relations, and major forces and issues in international politics.

323 Classical Western Political Theory (3:3:0) Prerequisite: GOVT 101, or 3 credits of philosophy. Lectures, discussions of developments in Western tradition of political thought from Renaissance to mid-19th century. Topics include nature and purpose of politics, relationship between individual and state, political significance of religion and tradition, and concept of natural law.

324 Modern Western Political Theory (3:3:0) Prerequisite: GOVT 101, or 3 credits of philosophy. Lectures, discussions of developments in Western tradition of political thought from Renaissance to mid-19th century. Topics include rise of individualism in political theory, early developments in social contact theory, theories of radical popular sovereignty, and early criticisms of liberal theory.

327 Contemporary Western Political Theory (3:3:0) Prerequisite: GOVT 101, or 3 credits of philosophy. Lectures, discussions of developments in Western tradition of political thought from mid-19th century to today. Different sections focus on various political theories that have been influential during this period, such as liberal, libertarian, conservative, communitarian, Marxist, feminist, and postmodern thought. May be repeated for credit when subject matter is different.

328 Non-Western Political Theory (3:3:0) Prerequisite: GOVT 101 or 133. Theory and history of political community, governance, and development as understood by various non-Western societies, including China, Japan, India, Africa, and Islamic World; relations to Western tradition; methodology of studying other cultures; postcolonial theories; and cultural politics on contemporary globalization.

329 Issues in Political Theories and Values (1–3:3:0) Studies special issues relevant to theoretical and value aspects of government and politics. Topics announced in advance. Examples include ethics and politics, ethics and environmental policy, changing perspectives on civil rights and liberties, religion and politics, and changing views of public space. May be repeated for credit when topic is different, with permission of department, but no more than 9 credits of GOVT 329 are permitted.

331 Government and Politics of Latin America (3:3:0) Prerequisite: GOVT 132, 133, or 149. Contemporary political systems of Latin America, with emphasis on institutions, political processes, and political behavior. Presents case studies of several key Latin American politics; discusses problems of political development.

332 Government and Politics of the Middle East and North Africa (3:3:0) Prerequisite: GOVT 132, 133, or 149. Societies of Middle East and North Africa and their response to impact of internal sociocultural-political determinants and external forces. Focuses on contemporary politics, ideologies, popular manifestations, institutions, and operations.

333 Government and Politics of Asia (3:3:0) Prerequisite: GOVT 132, 133, or 149. Government structures and political processes of Asian countries. Examines patterns of conflict and cooperation, and issues of economic development and political reform in rapidly changing world.

334 Government and Politics of Europe (3:3:0) Prerequisite: GOVT 132, 133, or 149. Contemporary democratic political systems of Europe, with emphasis on political processes, institutions, and behavior. Presents case studies of key European policies. Discusses problems of multiparty systems, coalition governments, Eurocommunism, and stability and change in postindustrial societies.

336 Political Development and Change (3:3:0) Prerequisite: GOVT 132, 133, or 149. Process of political development and change in context of modernization and industrialization. Examines patterns of political development, with emphasis on developing world.
337 Ethnic Politics in Western Europe and North America (3:3:0) Prerequisite: GOVT 132, 133, or 149. Studies resurgence of ethnic nationalism in industrial democracies of Western Europe and North America, and the comparative analysis of policy issues related to ethnonationalism. Case studies drawn from the industrial democracies.

338 Government and Politics of Russia (3:3:0) Prerequisite: GOVT 132, 133, or 149. Examines continuity and change in Russia’s Soviet era and post-Soviet era politics and international relations.

339 Issues in the Politics of Advanced Industrial Societies (1–3:3:0) Prerequisite: GOVT 103 or 133, or permission of instructor. Studies selected current political issues in industrial democracies of Western Europe and North America. Specific topics chosen each semester to reflect contemporary political concerns in these countries, but political process in advanced industrial countries is organizing principle throughout the course.

340 Central Asian Politics (3:3:0) Comparative examination of political change in Central Asia with attention to national identity formation, political economy, political conflict, political Islam, and democratization.

341 Chinese Foreign Policy (3:3:0) Prerequisites: GOVT 132, 133. Discusses theories and practices of Chinese foreign policy decision-making, which are then used to understand China’s relations with United States, Japan, Russia, Europe, and its Asian neighbors, and China’s policy in issues such as human rights, environmental protection, and nuclear nonproliferation.

343 International Political Economy (3:3:0) Prerequisite: GOVT 132, 133, or 149; or permission of instructor. Introduces international political economy. Examines interplay of economics and politics, and applies these to different issues. Focuses on issues of contemporary significance, with attention to historical issues and basic political and economic concepts.

344 American Foreign Policy (3:3:0) Prerequisite: GOVT 132, 133, or 149. Central issues surrounding the conduct of America’s foreign relations, with special emphasis on structural and constitutional questions, national policy objectives abroad, and conduct of foreign policy in a democracy.

345 Political Islam (3:3:0) Covers politics of religion in Muslim societies; history, ideology, and practices of key individuals, movements, and institutions; case studies of political Islam in the Middle East, Asia, Africa, and the West; plurality and diversity of political expression in Muslim world; nature of democracy in Islam; and Islamic state.

346 American Security Policy (3:3:0) Prerequisites or corequisites: GOVT 132, 133. Approaches U.S. national security policy from perspective of organization and implementation of specific policies. Applies theoretical concerns to historic cases to illuminate problems that continue to challenge country.

347 International Security (3:3:0) Prerequisite: GOVT 132. Explores enduring security problems and new developments. Examines effects of international system on defense policies of states, particularly tensions of world caught between emerging interdependence and national demands. Encourages development of critical-thinking and group and oral presentation skills.

349 Issues in the Analysis of Global Systems (1–3:3:0) Prerequisite: GOVT 149 or permission of instructor. Overview of global systems with emphasis on political subsystem and interactions with other global systems.

351 Administration in the Political System (3:3:0) Prerequisite: GOVT 103. Administrative structures and processes in political setting of public management. Presents organization and administrative theory, critiques, and current practices; and examines impact of changes in social, political, and economic environment on concepts, models.

355 Public Personnel Administration (3:3:0) Prerequisite: GOVT 351. Analyzes techniques and tools in human resource management including merit system, classification, compensation, evaluation, recruitment, and labor relations. Emphasizes current local and policy issues in personnel administration, such as diversity and privatization.

356 Public Budgeting and Finance (3:3:0) Prerequisite: GOVT 351. Covers tools and techniques in budgeting and financial management in U.S. governments, including management of public financial institutions, budgetary process and reform, and relationship of public budgeting to national economic policy.

357 Urban Governance and Planning (3:3:0) Prerequisite: GOVT 351. Framework, subject matter, uses, methods, administration, and future of public planning. Emphasizes setting goals, defining objectives, and choosing between program alternatives. Discusses political and bureaucratic constraints, and problems of implementation. Planning illustrations may be drawn from various levels of government.

358 Nonprofit Financial Planning (4:3:1) Prerequisite: 60 credits or permission of instructor. Provides understanding of social mission and entrepreneurial cross pressures underlying financial planning and accounting in nonprofit sector. Topic include revenue sources and projections, entrepreneurial techniques, and cost analysis for nonprofit and nongovernmental entities. Lectures, student case studies.

359 Computers in Public Management (3:3:0) Prerequisite: GOVT 300. Applies computers and computer-based analytical techniques to management information needs in public sector. Focuses on mainframe and microcomputer applications.

361 Introduction to Environmental Policy (3:3:0) Prerequisite: 30 credits. Environmental politics and policymaking since the 1970s. Primarily U.S. focus, with some discussion of global issues. Examines policy strategies and outcomes, ethical and economic debates, political controversies, lawmaking and enforcement, and role of key players.

364 Public Policy Making (3:3:0) Prerequisite: GOVT 103. Processes, agencies, and politics involved in the proposal making, implementation, evaluation, and revision of U.S. public policy.

365 State and Regional Public Policy (3:3:0) Examines public policy decisions that affect local and state jurisdictions in context of federal system of government. Examines context, substance, and impact of such policies as housing,
transportation, land use, crime prevention, service delivery, and health care.

366 Public Policy Analysis (3:3:0) Prerequisite: GOVT 300. Methods of public policy analysis, evaluation, and research. Studies design and development of alternative courses of government action and evaluation of results, and problems in applying systematic analysis to political issues.

399 Research Practicum in Public and International Affairs (1–3:1–3:0) Prerequisites: GOVT 300, and permission of instructor. Applies research methods in context of assisting with faculty research. Individualized sections taught by arrangement with full-time faculty. Methods adopted vary but generally include library research, data collection, data analysis, and report construction.

400 Political Research and Data Analysis (3:3:0) Prerequisite: GOVT 300. Methods of research and data analysis used in research about politics. Examines ways to design research to answer questions, select appropriate techniques for data collections, and use statistics to organize and interpret data. Students also learn to carry out data analysis using microcomputers and programs such as SPSS to process data and compute statistics.

407 Law and Society (3:3:0) Prerequisite: ADJ 100 or GOVT 301. Explores relationship between law and society, including concept of law; origin, development, and role of law in society; and relationship between law and social change. Assesses different approaches and methodologies.

409 Virginia Government and Politics (3:3:0) Prerequisite: GOVT 103. Examines history of politics in Virginia and current political issues. Particular attention to changing dynamics of political parties, key legislative issues, and policies of recent administrations.

414 Politics of Race and Gender (3:3:0) Prerequisite: GOVT 103. Examines political, economic, and social impact of public policies and implications for race, gender, and age.

420 American Political Thought (3:3:0) Prerequisite: GOVT 103. Major political values and theories in America from formation of American republic to present. Covers changes in American political values in crisis periods, and contemporary American political theory including pluralism, elite theories of democracy, and empirical political theory.

421 Contemporary Political Ideologies (3:3:0) Studies political ideologies that shape values, beliefs, and actions of contemporary regimes and political movements. Topics include liberalism, conservatism, socialism, communism, and fascism in theory and contemporary practice; and totalitarianism and nationalism in postindustrial and developing societies.

422 Constitutional Interpretation (3:3:0) Prerequisite: GOVT 103. Examines Supreme Court’s interpretation of constitutional powers of Congress, presidency, and judiciary. Includes examination of major decisions concerning state regulation, taxation, and interstate relations.

423 Constitutional Law: Civil Rights and Liberties (3:3:0) Prerequisite: GOVT 103. Studies First Amendment freedoms of speech, press, assembly, association, and religion; right to privacy; and Fourteenth Amendment equal protection.

424 Constitutional Law: Criminal Process and Rights (3:3:0) Prerequisite: GOVT 103. Studies constitutional law pertaining to rights of criminally accused from stages of investigations and evidence through attorney, trial, and punishment stages at federal and state levels.

427 Feminist Political Thought (3:3:0) Prerequisites: GOVT 101, WMST 200, 3 credits of philosophy, or permission of instructor. Explores feminist political thought in historical context. Topics include feminist political movements, feminist critiques of political philosophy, and feminist contributions to political theory.

428/PHIL 428 Advanced Democratic Theory (3:3:0) Prerequisites: GOVT 101 or one course in philosophy. Explores various theoretical approaches to nature and justification of democracy. Topics may include liberal, communitarian, pluralist, and deliberative theories and their critiques; constitutionalism; role of markets; and transnational democracy.

430 Comparative Political Leadership (3:3:0) Prerequisite: GOVT 132, 133, or 149. Comparative political leadership, relationships between political cultures and types of leadership, patterns of leadership recruitment, and linkages between political elites and citizenry.

432 Political Change and Social Development in Sub-Saharan Africa (3:3:0) Prerequisite: GOVT 132, 133, or 149. Examines relationship of culture, history, ethnicity, and religion, and contemporary political and socioeconomic developments in Africa. Special attention to implications of ethnic conflict for nation-building in the post-Cold War period, and strategies for resolving conflicts.

433 Political Economy of East Asia (3:3:0) Prerequisites: GOVT 133 and 60 credits, or permission of instructor. Discusses different theoretical perspectives of East Asian political economy; transformation of East Asia; and issues such as money, finance, trade, investment, environment, and energy. Focuses on issues of contemporary significance, but attention also given to history.

434 Democracy in Global Perspective (3:3:0) Prerequisite: GOVT 133. Comparative study of structures and performance of democracies around the world since 1975. Examines growing influence of global forces such as economy, media, and culture in process of democratization. Examines select current elections.

435 Law and Ethics of War (3:3:0) Prerequisite: GOVT 132. Explores sources of morality in armed conflict, and implications of such ideas for international relations. Examines content and philosophy of modern law of war.

444 Issues in International Studies (1–3:3:0) Prerequisite: GOVT 132, 133, or 149. Major issues in international system, including international political economy and security. May be repeated for credit when topic is different, with permission of department, but no more than 9 credits of GOVT 444 permitted.

445 Human Rights (3:3:0) Prerequisite: GOVT 132. Explores philosophical, legal, and political issues at heart of modern international human rights movement. Examines
historical background legal architecture of modern human rights movement.

446 International Law and Organization (3:3:0) Prerequisite: GOVT 132, 133, or 149. Nature, sources, and subject of law of nations; law and individual; territorial questions; nature, sources, and functions of international organizations; international transactions and organizations; war and present; and future status of international law.

447 Revolution and International Politics (3:3:0) Prerequisite: GOVT 133. Historical overview of modern revolutions as well as different theories about causes and consequences of revolutions. Special attention to Marxist-Leninist, Arab nationalist, and Islamic revolutions.

448 Ethics and International Politics (3:3:0) Prerequisites: 60 credits, and GOVT 132 or PHIL 151. Ethics and international politics ask students to wrestle with dilemmas raised by a desire to behave morally in an international system in which consensus about ethical matters is absent. Distributive justice and use of force are two overarching themes. Students also develop, apply, and justify their own perspectives on ethical problem using philosophical theory, history, and social science research.

452 Administrative Law and Procedures (3:3:0) Prerequisite: GOVT 351. Law of public office. Studies procedures followed by and the legal limits on administrative agencies and their officers and employees.

460 Surveillance and Privacy in Contemporary Society (3:3:0) Prerequisite: ADJ 100. Philosophical perspectives, historical context, technological developments, and institutional changes that surround controversies about privacy and surveillance in contemporary society. Explores public and private institutions doing surveillance, how they calculate and manage risk, and legal constraints on surveillance activities.

464 Issues in Public Policy and Administration (1–3:3:0) Prerequisites: GOVT 103 plus 60 credits. Analyzes selected policy issues in administering public policies. Topics announced in advance. Examples include environmental policy, government regulation, federal mandates, state policy, and regional policy. May be repeated for credit when topic is different, with permission of department.

470 Faith and Reason in the Making of the Modern Mind (3:3:0) Investigates the interlocking claims of religious faith and human reason in Western culture, from Biblical times to the present. First covers tightly focused reading assignments in theology and philosophy, and second covers particular case studies, from Galileo to the Intelligent Design debate.

471 Millennialism and Philosophies of History in Western Culture (3:3:0) Is there purpose in human history? Are we really going anywhere as humanity moves through time? This seminar studies major patterns by which thinkers in the West have discerned meaning in humanity’s temporal existence. Extends from the Jewish roots of historical understanding, through Christian millennialism, to contemporary naturalism.

472 Christianity, Secularism, and Democracy (3:3:0) Examines the evolving relationship between religion and the American political order, from the Reformation to George W. Bush.

480 Internship (3–6:0:0) Contact department one semester before enrolling. Approved work-study programs with specific employers. Students develop individual contracts defining learning and competencies they plan to gain from the experience.

490 Synthesis Seminar (3:3:0) Prerequisite: completion or concurrent enrollment in all other required general education courses, GOVT 300, and 18 credits in major. Readings, individual or group projects, and discussion of papers reflecting on connections between liberal arts and sciences and political world.

491 Honors Seminar (3:3:0) Prerequisite: completion or concurrent enrollment in all other required general education courses, GOVT 300, and 18 credits in major. Subject varies. Readings, individual or group projects, and discussions of seminar papers.

496 Directed Readings and Research (1–3:3:0) Open to majors in public and international affairs with 90 credits, and permission of instructor and department. Reading and research on specific topic under direction of faculty member. Written report required; oral report of research may be required.

500 Research Methods in Political Science (3:3:0) Introduces research methods and data sources to study political science and practice of government. Topics include measurement of political concepts, research design, archival research techniques, survey research and case study development, and data analysis with elementary statistics.

510 American Government and Politics (3:3:0) Examines institutions and processes of American government, including separate institutions of power in national government, theory and practice of federal system, role of interest groups and political parties, and effects of media and public opinion on electoral behavior and policy making. Seminar examining normative and empirical research.

520 Political Theory (3:3:0) Analyzes selected major works of ancient, modern, or contemporary political theory that illuminate basic problems and questions for people engaged in political or civic life. Examines justice, liberty, equality, autonomy, rights, obligation, participation, and nature of politics.

530 Comparative Politics (3:3:0) Examines fundamental issues in comparative politics and provides broad coverage of the central themes under study. Designed to help students think theoretically and critically about the study of comparative politics, its scientific objectives, and its epistemological assumptions. Within this context, students will look at concepts and approaches, as well as important theories and debates that characterize the subfield. Helps prepare students for qualifying exams in comparative politics.

540 International Relations (3:3:0) Focuses on changing structure of international politics, post-Cold War security issues, effect of globalized economy and information technology revolution, enhanced role of global corporations and nongovernmental organizations, and rise of nonsecurity issues in emerging international agenda.

541 Introduction to Critical Analysis and Strategic Response to Terrorism (3:3:0) Introduces terrorism as a complex threat to human security. Focuses on tools for analyzing terrorism and the underlying sources and conditions that contribute to it. Considers similarities and differ-
ences between terrorism and other threats to human security. Explores the lessons learned in the history of responding to terrorism. Focuses not only on different tactics of response, but also includes how different types of societies (dictatorship, democracies, etc.) have responded to terrorism and what the results of those responses have been. Includes case studies of responses to terrorism.

603 Seminar in the Courts and Constitutional Law (3:3:0) Analyzes role, influence, and effects of U.S. courts in creating constitutional legal norms and interpreting them. Special attention to First and Fourteenth Amendments and Commerce Clause. Lecture and discussion; students expected to read and analyze leading court cases.

604 Seminar on Congress and Legislative Behavior (3:3:0) Prerequisite: GOVT 510. Examines theories and empirical research on the U.S. Congress and legislative behavior, including elections, representation, structures, and processes. Also examines Congress’s impact on the design and implementation of public policy, interactions with other branches of government, and comparisons with parliamentary systems.

605 Seminar on the Presidency (3:3:0) Prerequisite: GOVT 510. Examines the American presidency from a number of substantive and methodological perspectives. Readings and discussions in the course appraise the presidency within the system and focus on the role the presidency plays in formulating and implementing public policy.

631 Seminar in Comparative Politics and Institutions (3:3:0) Examines theories and practices of governance, development, and conflict resolution in comparative national settings. Covers elections in presidential and parliamentary democracies, institutional forms, political cultures, and ideologies. Comparative analysis theories and research reflecting alternative analytic perspectives applied to institutions and political processes of nations, regions.

640 Strategic Responses to Terrorism: Coordinated Decision Making (3:3:0) Revisits, expands, and examines the critical themes developed in the terrorism certificate program. The central feature of this course is to provide the students with the opportunity to apply the theoretical concepts developed in practice. Finally, this course integrates the ideas, theories, and practices considered in this track within the larger field of terrorism analysis and strategic responses to this threat. This is the capstone course for the terrorism certificate program and must be completed in the final semester of the certificate program.

641 Seminar in Global Systems (3:3:0) Prerequisites: completion of all core courses. Applies systems approach to understanding global politics. Emphasizes properties and functions of global systems such as population, food, disease, energy, and trade, and how world’s political systems interact with them. Discusses how governance at municipal, national, and international levels affected by global systems. Examines role of nongovernmental organizations in global affairs.

650 Seminar in Theories of Public Administration (3:3:0) Prerequisite: GOVT 510. Reviews the theoretical traditions in American public administration, from the earliest days of the founding to the present. Concludes with consideration of contemporary theoretical debates over the proper role of public administrators and controversies about conflicting demands made on the public service and the public sector.

706 Federalism and Intergovernmental Relations (3:3:0) Prerequisite: GOVT 510. Examines broad trends in governance, including theory and practice of federal, state, and local governments. May include privatization, devolution, mandating, regulatory reform, and comprehensive federalism reform.

711 Problem Solving and Data Analysis I (3:3:0) Techniques and research skills to solve policy-related problems or analyze politics-related data. Focuses on problem definition, research design, and problem solving under conditions of uncertainty in politics and public sector.

712 Problem Solving and Data Analysis II (3:3:0) Prerequisite: GOVT 711. Advanced techniques and skills for solving policy-related problems or analyzing political data. Focuses on data gathering and analysis, use of statistical software, and multivariate analysis.

713 The Constitution, Criminal Procedure, and Security (3:3:0) Prerequisite: JLCP 720/GOVT 728, or permission of instructor. Examines legal doctrines that form basis of U.S. constitutional procedural rights, how these doctrines develop, and why courts rule as they do. Evaluates strengths, weaknesses of these rights.

715 Advanced Seminar in Political Methodology (3:3:0) Prerequisites: GOVT 500. Common statistical techniques employed in political science research including OLS regression, logistic regression, probit, factor analysis, multidimensional scaling, discriminant analysis, cluster analysis, and analysis of variance. Sampling and inferential statistics.

719 Issues in American Politics (3:3:0) Prerequisite: GOVT 510. Examines significant issue in American politics and political behavior. Analyzes topic of contemporary and emerging concern. Course may be repeated when topics are different.

725 Democratic Theory and Democratization (3:3:0) Prerequisites: GOVT 520. Examines democracy in terms of versions of liberalism, theories of social capital and civic participation, and discourses about civil, political, and human rights. How is democracy conceptualized normatively and empirically? What underlying economic, social, and cultural conditions promote democracy? What role do institutions play in creating and sustaining a stable democratic society? Takes a broadly comparative perspective, focusing on variety of established and emerging democracies around the world. Elective for students specializing in American government or international politics and comparative governments.

726 Theories of Justice (3:3:0) Overview of ancient and modern theories of justice with application to contemporary issues involving justice system and other social and political institutions.

727 Restorative Justice (3:3:0) Prerequisite: JLCP 700, or permission of instructor. Origins of restorative justice, its principles, implications for different justice organizations and processes, and application to problems such as family violence, human rights, and reconciliation following mass victimizations.

728 Behavior of Law (3:3:0) Examines development of law, and law’s effect on human behavior. Reviews theories of law’s meaning and aims. Examines construction of law, and investigates consequences of law and legal decisions.
731 Advanced Seminar in Comparative Politics (3:3:0)  
Prerequisite: GOVT 540. Assumes basic proficiency in comparative analysis. Addresses theoretical and methodological issues central to comparative politics by focusing on specific topic such as international development, race and ethnicity, and social movements; or region such as Latin America, Asia, Middle East, European Union, Africa, and Russia. Focuses on advanced modes of inquiry through in-depth analysis and discussion. May be repeated for credit when topic is different and with permission of department.

732 Comparative Justice (3:3:0)  
Prerequisite: JLCP 700/GOVT 726, or permission of instructor. Survey of justice systems and their environments in different lands and cultures. Identifies commonalities and differences among justice systems, evaluates them, and considers policy implications.

739 Issues in Comparative and International Politics (3:3:0)  
Prerequisite: GOVT 540. Explores issues of contemporary and emerging concern in comparative and international politics.

741 Advanced Seminar in International Politics (3:3:0)  
Prerequisite: GOVT 540. Examines theoretical and methodological issues central to study of international relations by focusing on specific topic: American foreign policy, diplomacy, international law and organization, international relations theory, international ethics, human rights and humanitarian intervention, the environment, and others. May be repeated for credit when topic is different and with permission of department.

743 International Political Economy (3:3:0)  
Prerequisite: GOVT 343 or equivalent. Examines interplay of international politics and economics. Discusses theoretical perspectives and analytical tools in academic field of international political economy, and applies theories and tools to trade, investment, exchange rates, development, regionalization, and globalization. Explores how international economic and political forces increasingly shape domestic interests, and how domestic politics affect international political economy. Lecture, discussion.

745 International Security (3:3:0)  
Prerequisites: GOVT 540. Examines interplay of international politics and international security. Discusses theoretical perspectives and analytical tools in academic field of international security, and applies theories and tools to nuclear, biological, and chemical weapons, strategy and defense, and arms control. How domestic issues affect defense policies, terrorism, changing nature of international conflict, and human security will be examined.

753 Third-Party Governance (3:3:0)  
Examines design and management of government programs that rely on other levels of government and the private sector for delivery, with focus on such governmental tools as contracts, grants, loans, regulation, and tax credits.

755 Seminar in Politics and Bureaucracy (3:3:0)  
Prerequisite: GOVT 510. Explores research and theory on political causes and effects of actions of government bureaucratic agencies. Readings examine origins of agencies, influences on decisions and programs, sources of internal and external accountability, pathologies of bureaucracies, and contributions bureaucracies make on effective and just governance.

758 Homeland/Transportation Security Administration (3:3:0)  
Examines the terrorist attacks of 9/11, vulnerabilities of the aviation security at that time, failure of elected officials and administrators to act more decisively to improve security before 9/11, and the policy and administrative responses to the 9/11 attacks, including the creation of the Transportation Security Administration and the Department of Homeland Security. Includes the development of radical Islam and the rise of Osama bin Laden and Al Qaeda.

794 Internship (1–6:0:0)  
Prerequisite: 12 credits in MAIS-political science concentration. Open only to students admitted to MAIS-political science concentration. Contact internship coordinator one semester before enrollment. Work-study program with specific employers. Credit determined by department.

795 Leadership in Justice and Security Organizations (3:3:0)  
Prerequisite: JLCP 740/PUAD 790, or permission of instructor. Examines leadership theories and explores fundamental questions about leadership in justice and security organizations today.

796 Directed Research and Study (1–3:0:0)  
Prerequisites: 15 credits of GOVT courses at 500 level and above, and permission of instructor. Reading and research on specific topic under direction of faculty member. Written paper required.

798 Political Science Research Project (3:0:0)  
Prerequisites: 24 credits. Research project related to student’s concentration under supervision of a faculty advisor. Student produces substantial and original contribution to political science knowledge on model of article in scholarly journal. Graded S/NC.

799 Political Science Thesis (1–6:0:0)  
Prerequisite: 24 credits, and approval of thesis proposal. Substantial and original research paper with guidance of faculty advisor. Thesis proposal must be approved in advance by advisor and two faculty, who comprise thesis committee. Completed research must be approved by committee and defended publicly in oral presentation. Graded S/NC.

810 American Political Development (3:3:0)  
Prerequisite: GOVT 510. Advanced graduate-level seminar on historical roots of American politics. Examines political culture and historical development of U.S. institutions, and how laws and programs have been affected by historical and cultural development.

811 Advanced Seminar in American Institutions (3:3:0)  
Prerequisite: GOVT 510. Advanced graduate-level seminar on specific topics of contemporary research and theory in American governmental institutions. Topics vary to include presidential politics, Congress, and politics of the judiciary. Readings include classic and contemporary literature. Seminar format with discussion, student presentations. May be repeated for up to 9 credits on different topics.

815 Advanced Seminar in Political Behavior (3:3:0)  
Prerequisite: GOVT 510. Advanced graduate-level seminar on specific topics of contemporary research and theory in American political behavior. Topic varies to include political parties, electoral politics, public opinion and voting behavior, interest groups, and lobbying. Readings include classic and contemporary literature. Seminar format with discussion, student presentations. May be repeated for up to 9 credits on different topics.

820 Advanced Topics in Political Thought (3:3:0)  
Prerequisite: GOVT 520. Advanced graduate-level seminar on
topics of contemporary research and theory in political thought. Topics vary to include political ideologies, feminist theory, and political theory. Seminar format with discussion, student presentations. May be repeated for up to 9 credits on different topics.

831 Research Seminar in Regional Political Culture and Development (3:3:0) Prerequisite: GOVT 540. Advanced graduate-level seminar on theories of political culture and economic development applied to Middle East, Latin America, Asia, and Africa. Debates economic growth and development from broad and rigorous analytical base.

833 European Union and Political Integration (3:3:0) Prerequisites: GOVT 540 and 631. Advanced graduate-level seminar on European integration and theories of international organizations. Examines evolution of European Union and other international organizations, such as NATO, which have brought most European states together since end of World War II.

841 Ethics and Human Rights in International Affairs (3:3:0) Prerequisite: GOVT 540. Seminar on ethical behavior in an international system in which consensus about ethical matters is absent. Overarching themes are distributive justice, human rights, and use of force. Students develop, apply, and justify their own perspective on an ethical problem using ethical theory and social science research.

843 Diplomacy (3:3:0) Prerequisite: GOVT 540. Advanced graduate seminar on theory and practice of diplomacy; alliance construction and destruction; coercive and cooperative diplomacy; diplomacy of certain great powers such as America, Russia, China, France, and Japan, and small and revolutionary powers. Also examines diplomacy and the media, and day-to-day diplomacy.

850 Advanced Seminar in Public Administration Research and Theory (3:3:0) Prerequisite: GOVT 510. Focuses on a topic of central concern in contemporary public administration research and theory. Content of the seminar varies but includes such topics as organizing for homeland security, managerial and political effects of e-government, and the application of principal-agency models in public management.

851 Doctoral Seminar in Theories of Organization and Administrative Systems (3:3:0) Prerequisites: GOVT 540 and 631. Advanced seminar on theories and practices of political and governmental leadership in American and comparative settings. Presents health planning and regulatory environment, current or proposed regulatory environments, and differences between assisted living and other

854 Advanced Seminar in Comparative Public Administrative Systems (3:3:0) Specific topics of contemporary research and theory in comparative public administration, including the international diffusion of governmental reform and innovation, public administration in developing countries, and international trends in public administration theory. Includes readings in classic and contemporary literature.

998 Doctoral Dissertation Proposal (1–6:0:0) Prerequisite: advancement to candidacy. Work on research proposal that forms basis for doctoral dissertation. Graded S/NC.

999 Doctoral Dissertation Research (1–12:0:0) Prerequisite: approval of dissertation proposal. Research on approved dissertation topic under direction of dissertation committee. May be repeated for up to 9 credits in a semester, but no more than 15 total. Graded S/NC.

Greek (GREE)

Modern and Classical Languages

150 Classical Greek I (3:3:0) Addresses linguistic, semantic, and cultural aspects. Covers basic structure and vocabulary, its place among other world languages and its unique role in development of modern thought. Lectures, discussions supplemented by web-posted material.

160 Classical Greek II (3:3:0) Prerequisites: GREE 150 or permission of instructor. Expands proficiency, refines grasp of morphology and syntax, and fosters greater command of vocabulary. Introduces selected original passages from Greek classical authors. Lectures, discussions supplemented by web-posted material.

Health Administration and Policy (HAP)

College of Health and Human Services

290 Lifestyle Management through Systems Analysis (3:3:0) Students make resolutions (e.g., maintain a healthy diet, exercise more, etc.) and analyze their lifestyle to see what is causing and preventing success. Each student maintains a diary and analyzes it using Bayesian causal modeling techniques to understand the constraints and causes leading to successes and failures. Students analyze their pattern of success using statistical process control tools and engage in cycles of self improvement.

302 Health Care Finance (3:3:0) Introduces finance in health care organizations. Reviews issues in reimbursement structures, regulatory mechanisms, cost control, and related factors affecting financial management of health service organizations including financial decision support skills.

303 Strategic Health Management and Planning (3:3:0) Introduces past and present interventions that affect supply and demand for health care at community, state, regional, and national levels. Presents health planning and regulatory entities, and discusses strategic and program planning in context of current economic and market conditions.

307 Assisted-Living Management and Philosophy (3:3:0) Overview of growth of assisted living industry, its role in health care continuum, current or proposed regulatory environments, and differences between assisted living and other
forms of senior health care and senior living services. Specific instruction provided in philosophy and day-to-day management of assisted-living communities, including resident care, operations, finance and budgeting, human resources and staffing, and successful marketing and community relations. Also examines industry future, including cutting-edge programs and technologies, and approaches to creating next generation of assisted-living services.

320 Management of Project Resources (3:3:0) Prerequisites: HAP 360 or related course, HAP 378 or related course. An introductory course in the management of project resources, including, but not limited to, assessing return on investment for projects and cost-related tasks. Includes hands-on application of project management tools as they are applied in the health-related organization and the health service industry. Also includes a variety of variables that may affect cost control and cost variation, including the impact of finishing projects in shorter time frames than originally planned and activity-based costing.

334 Role Development for Health Administration Majors (3:3:0) Explores career opportunities that build on basic education in health science field. Includes historical perspectives on ethical, legal, political, social, and cultural issues related to health care policy and research. Explores multidisciplinary collaboration among health care providers.

360 Introduction to Health Information Systems (3:3:0) An introduction to basic information management in health care service organizations. Provides an overview of health information systems for selected administrative functions and clinical care services, including electronic data interchange for billing and claims management, institutional approaches to ensuring data security and privacy, and information management and decision support for managers and clinicians.

378 Health Care Delivery in the United States (3:3:0) Introduces history and current structure and function of U.S. health care delivery. Explores components and subsystems of health care, and sociopolitical (public and private) context that shapes system and affects access to health care and delivery of health services.

410 Introduction to Health/Medical Practice Management (3:3:0) An introductory course in the leadership and management of ambulatory health service practices and small provider organizations. Content covers a variety of health/military practice management functions, including administrative systems, operations and strategies for effective management of quality, efficiency and business performance (contracts and marketing), and human resources. Trends in practice integration and affiliations with multiprovider groups and larger enterprises will be covered.

416 Leadership and Management of Health Systems I (3:3:0) Prerequisite: completion of HAP 300-level course requirements. Introduces theoretical concepts and their application to the leadership and management of effective health administration organizations. Explores the structure and function of health-related organizations and selected administrative and operational issues in program development and service design, emphasizing strategies for effective performance management, decision making, and communication.

417 Leadership and Management of Health Systems II (3:3:0) Prerequisite: completion of HAP 416. Explores challenges to providing effective leadership and management of health care organizations and systems of care related to operational issues such as personnel management and labor relations, information management, conflict and goal alignment, financial management, accountability, and quality and safety improvement. Focuses on identification of management skills, technology, and strategy that influence optimal performance and communication between clinicians, administrative staff, and managers.

447/HAP 547 Regulatory Requirements for Health Care Systems (3:3:0) Helps health care professionals understand link between infrastructures of organization and regulatory and accreditation processes for health care organizations. Covers major accrediting agencies and their roles, accreditation principles, and survey process. Focuses on hospitals with reference to ambulatory care, managed care organizations, rehabilitation centers, laboratories, and home health and long-term care facilities. Emphasizes requirements of Joint Commission on Accreditation of Health Care Organization and regulations mandated by Health Care Finance Administration.

460 Information Technology Project Management (3:3:0) Focuses on project management as applied to management of health care information technology projects. Students learn critical path analysis, project resource management, crashing projects, vendor selection, assessment of project quality, and analysis of project risks. Students learn to use media for effective project communication.

494 Special Topics in Health Administration and Policy (3:3:0) Selected topics analyzing specialized areas in health administration and policy. Content varies. Lecture, seminar, laboratory, and workshops.

498 Health Administration Internship (6:2:12) Prerequisite: open to HAP majors only. Taken in last semester of studies. Capstone course involves a two-hour weekly seminar and a 12-hour internship in a health-related organization. Provides variety of applied management experiences in a health systems or related organization (field agency), under the direction of a HAP faculty member and a preceptor in the field. Students integrate and apply critical-thinking, project-planning, and management and communication skills in the internship experience and toward completion of an approved internship project. Not repeatable for credit.

499 Independent Study in Health Administration and Policy (1–3:0:0) Prerequisite: permission of college. Provides individual study of a particular problem area in health administration and policy research, theory development, or education under the direction of faculty. May be repeated for maximum 6 credits.

501 Business Statistics in Health Service Management (3:3:0) An introductory course in basic statistics applied to applications in health systems management. Students use spreadsheet applications to perform a variety of statistical analyses (parametric and nonparametric statistics, including regression) to support program evaluation and managerial decision making in health systems.

512 Introduction to Health Services Research (3:3:0) Prerequisites: HAP 678 (if required in program of study) and HAP 501 or equivalent statistics course. An introductory course in the basic methods of interdisciplinary health services research and program evaluation in health systems and policy. The course covers topics related to policy, management, and program effect and evaluation within health
delivery systems, including research design, existing data systems, measurement of quality and basic cost benefit, and effectiveness analysis.

540 Introduction to Emergency Preparedness/Disaster Recovery for Health Care Professionals (3:2:1) Introductory course in emergency preparedness and disaster recovery issues for health and human service professionals, using blended learning methods. Introduces policy guiding public and private sector emergency preparedness activities, and provides overview of issues in emergency preparedness infrastructure, needs assessment, and interdisciplinary roles in emergency response operations. Uses knowledge acquired from recent state and federal responses to disasters.

542 Health Policy (3:2:1) Explores development of public health policy, influence of health care delivery, nursing, and other health professions. Classroom and field experience required.

546/NURS 546 Leadership Strategies in Health Policy (3:3:0) Examines the leadership process from a policy and organizational perspective to expand students’ ability to impact the health policymaking process.

547/HAP 447 Regulatory Requirements for Health Care Systems (3:3:0) Helps health care professionals understand link between infrastructures of organization and regulatory and accreditation processes for health care organizations. Covers major accrediting agencies and their roles, accreditation principles, and survey process. Focuses on hospitals with reference to ambulatory care, managed care organizations, rehabilitation centers, laboratories, and home health and long-term care facilities. Emphasizes requirements of Joint Commission on Accreditation of Health Care Organization and regulations mandated by Health Care Finance Administration.

586 Process Improvement in Health Services (3:3:0) Examines how improved work processes lead to quality improvement. Explores contribution of operations research and quality management to improve delivery and production of health services and business processes from the perspective of health care managers.

594/GCH 594/NURS 594 Special Topics in Health Care (3:3:0) Selected topics analyzing specialized areas in health care. Content varies. Lecture, seminar, laboratory, and workshops.

601 E-Commerce and On-line Marketing for Health Services (3:3:0) Explores development of online health services; organization of online businesses; online marketing, financial, and clinical transactions; and venture capital and the IPO process. Explores creating and maintaining web pages and databases. Reviews literature on effect of computer environments. Includes writing of special routings for Electronic Health Record (HER), preferably VISTA.

610 Health/Medical Practice Management (3:3:0) Prerequisite: health care financial management or equivalent or instructor’s permission. Regulatory pressures, technology, managed care contracting, revenue cycle management, and legal issues are making medical practice management more complex. Physicians groups struggling with these demands are finding a need for sophisticated management. This course prepares the student to manage the modern practice by providing a foundation in the leadership and management of ambulatory health services and small provider organizations.

611 Computer Programming within Health Care Environment (3:3:0) Focuses on use of M computing program and its incorporation into electronic health records. Includes scientific principles for easy-to-maintain software programs. Includes writing of special routings for Electronic Health Record (HER), preferably VISTA.

612 Maintaining Business Continuity in Health Care (3:3:0) Considers potential types of catastrophes, their likely impact, and how organizations could continue their mission in the aftermath. Explores interdependences among various components of the health care delivery system, regional health services, disaster planning, business record protection, patient information and information systems protection, manpower planning, professional credentialing, access to supplies and drugs, and financial implications and resources.

613 Project Management in Health Information Technology (3:3:0) Covers the body of knowledge in project management as applied to information technology and prepares students to take project management professional certification exam. Includes needs assessment, project planning, project cost analysis, project control, project risks, and management of personnel within projects.

621 Management of Health Service Organizations (3:3:0) Prerequisite: admission to CHHS graduate program or permission of instructor. Introductory course in application of organizational and management theory relating to management of health service organizations. Emphasizes leadership and trends in organizational structure that affect performance effectiveness, quality, and interorganizational relations, and values and principles of health management as a profession. Explores challenges of managing health professionals’ decision making, power gradients, change, and other issues that affect function and performance of health service organizations. Introduces strategies used by learning organizations.

650 Assisted Living Management and Operations (3:3:0) Issues, trends, and practices related to administration of assisted-living and senior housing communities. Emphasizes budgeting, staffing, hospitality services, resident care, risk management indicators; and evaluation of demographic, cultural, and regulatory environments affecting industry.

660 Health Policy Formation and Implementation (3:3:0) Applies selected methods for studying theory and practice of health policy formulation and converting a policy into administrative decisions and a plan of action. Emphasis on acquiring a basic working knowledge of health system and problem complexity and evaluation of policy impact using contemporary health policy examples and case studies.
Identifies the institutional determinants of health policy formation and implementation, including special interest and stakeholder groups and their interaction.

661 Policy Development and Analysis for Community Health Programs (3:3:0) Prepares students to critically analyze issues and develop skills pertinent to effective policy development for community and family public health programs. Explores what constitutes a vulnerable population and examines current government programs and policies supporting these programs for such populations. Recent case examples ground students in current issues faced by community groups and other health interests.

662 Aging and Health Care Policy (3:3:0) Prerequisite or corequisite: GCH 637, SOC 599, or NURS 659; or permission of instructor. Focuses on policy perspective in relation to older adults in community and long-term care facilities. Students analyze policy issues and health care delivery systems as they affect older adults through lecture, discussion, field trips, projects, and policy analysis papers.

678 Introduction to the U.S. Health System (3:3:0) Prerequisite to all other certificate courses for students who do not have familiarity with all aspects of U.S. health care system and recent working experience. Explores structure, function, and financing of U.S. health care delivery systems. Explores development of various subsystems of care and ways public, private, and social forces influence politics of health care, shape the system, and affect public health. Includes analysis of systems infrastructure and sociopolitical context of U.S. health care system.

680 Applied Public Health Leadership and Management (3:3:0) Survey course in leadership, management, and planning applied to public health systems. Students apply theoretical knowledge from a variety of disciplines relevant to development and implementation of public health policy, regulatory directives, public health program planning and management (including human resources and financial management), and the design and evaluation of public health services/functions. Content includes strategies for ensuring access to essential public health services and use of evaluation and monitoring systems to ensure the safety, efficiency, and effectiveness of local public health systems. Course emphasizes leadership, communication, systems thinking, data-driven decision making, and ethical practice in public health systems.

690 Independent Study (1-3:1-3:0) In-depth studies of selected area of health science theory, research, or practice under direction of faculty. May be repeated for a maximum of 3 credits.

702 Managerial Accounting in Health Care (3:3:0) Practical examination of controllership function in health care organizations and systems (profit and nonprofit), with emphasis on policy formulation and evaluation of performance, including cost methods and systems; measurement criteria; and managerial planning, methods, and techniques.

703 Financial Management in Health Systems (3:3:0) Prerequisites: admittance to graduate program and working knowledge of health care industry. Examines tools and methods of financial management in health care organizations and systems, with emphasis on allocation and use of funds. Analyzes costs and constraints of alternative source of funds, and applies financial decision instruments and effect on operational management and market value of entity.

704 Contemporary Issues in Health Systems Management (3:3:0) Analyzes management theory and practice from recently evolving works that identify, analyze, and resolve recent strategic organizational problems and issues in health care systems. Applies leadership strategy to effectively manage variety of critical issues, including organizational development, change management, human relations and diversity, quality management for organizational and clinical effectiveness, technology, competing priorities, conflicting constituencies, delivery system redesign, and health services research.

705 Strategic Management and Marketing in Health Care (3:3:0) Develops executive skills for strategic decision making through use of marketing-based tools and techniques. Covers strategic planning, market research and opportunity and risk analysis, customer assessment, market segmentation, and life cycle assessment for health care services in managed-care and nonmanaged-care environments.

706 Integrated Health Systems Management (3:3:0) Explores emerging structures for financing and delivery of comprehensive health services in integrated health systems. Covers successful development and management of alliances, provider hospital organizations, and managed care systems with emphasis on strategies for vertical integration, community partnering, contract negotiation, governance, and management of antitrust situations.

709 Health Care Databases (3:3:0) Introduces design and use of health and medical databases, providing hands-on experience. Explores uses of medical record systems. Includes review and analysis of databases and database management systems. Examines application of databases to clinical and managerial transaction.

710 Inferential Statistics in Health Services Research and Management (3:2:1) Prerequisite: HAP 501 or equivalent introductory graduate statistics course and lab. Introduction and practical application of advanced statistical analyses and their use/application in health services (research, management, policy analysis) using various software applications (STATA, Microsoft Excel and Access, SAS, SPSS, Minitab). Topics include analysis of variance (one and two way) and design of experiments, multiple regression, model building, chi-square and the analysis of contingency tables, and nonparametric statistics.

711 Hardware and Networking in Health Care Environment (3:3:0) Focuses on the operating system, network of computers, and noncomputing hardware. Students learn to connect imaging and other equipment to electronic health records and provide electronic services online. Includes configuration of laboratory and imaging systems to VISTA electronic health record.

712 Topics in Public Policy (3:3:0) Presents selected topics current in public policy related to health care and health care administration.

715 Health Economics (3:3:0) Emphasizes understanding of economic efficiency in the U.S. health system. Microeconomic methods examine markets and resources in health care. Health care examined as commodity. Explores demand for health and medical care services, provider behavior, and function of insurance markets. Topics include government role, financing arrangements, insurance reform, rationing, price regulation, and provider competition.
720 Health Data Integration (3:3:0) Students learn to manipulate large databases, create link table queries, write SQL application programs, understand sources of data conflicts, and identify methods of integrating ODBC databases with legacy data. Covers data warehousing, methods of analyzing large databases, including Bayesian belief networks and machine learning in health care context. Features semesterlong data integration group project.

727 Program Evaluations in Health Care (3:3:0) Methods of evaluating health and social programs, including anthropological case studies, decision analytic and quasi-experimental approaches. Emphasis is placed on using methods of continuous quality improvement and benchmarking exchanges in evaluating multisite programs. Assess cost effectiveness of programs (including assessment of patient census, employee activities and program outcomes). Evaluation of health care interventions, rate setting, and managed care are discussed.

730 Health Care Decision Analysis (3:3:0) Prerequisite: HSCI 501 or any statistics course. Students analyze practice patterns and find optimal methods of improving them. Uses decision analysis and failure mode analysis in health care settings. Students integrate scientific evidence, patients' preferences, and experts' opinions to identify optimal alternatives.

735 Risk Analysis in Health and Bioscience (3:3:0) Students build and interpret causal model of risks and test the accuracy of them against extant incidence reports using risk analysis models, risk analysis life cycle, as well as methods of evaluating the validity and reliability of risk analysis. Bayesian probability models, probabilistic risk analysis, root-cause analysis, and failure mode analysis are covered. Includes applications to terrorism, unauthorized disclosures, and patient safety.

740 Management of Health Information Systems (3:3:0) Introduces health and medical information systems with emphasis on systems analysis and design to support managerial and clinical communications and decision making. Explores trends and innovations in information technology and systems, focusing on managerial oversight of health and medical information systems. Explores contemporary management strategies for information systems personnel.

745 Health Care Security Policy (3:3:0) The focus of this course is on health security and privacy policy and compliance issues. Students will develop policies for the type of threats faced by the facilities. The legal and business policies for facility, personnel, travel, information, and patient security will be discussed.

746 Advanced Seminar on Security (3:3:0) Describes new methods to manage and verify identity of patients and providers. Includes issues related to identity management in electronic and physical domains. Includes discussion of continuity of care, referral process, patient recruitment, and follow-up of community clinic visits. Includes emerging topics in health care security and the new role of compliance officers.

750 Analysis of Causality in Health Services Research (3:3:0) Prerequisites: A prior graduate-level course in statistics covering analysis of variance: HAP 501, GCH 601, GCH 804, or an equivalent course (approved by the instructor). Covers philosophical and statistical problems with analysis of causes as separate and distinct from associations. Topics discussed include structural modeling, self selection, risk adjustment, propensity scoring, and Bayesian modeling. Students examine real health care databases and the pitfalls of causal inferences. Special attention is made to investigation of causes of outbreaks and illness.

760 Philosophy of Science in Health Services Research (3:3:0) Prerequisite: admission to a doctoral program or permission of instructor. An introductory course on the theory and philosophy of science and humanism that relate to the design and conduct of health services research. The course examines selected theories on the nature of reality (ontology), the justification of knowledge claims (epistemology), and how knowledge is constructed (methodology) in design and analysis of health services research.

762 Cost-Effectiveness for Health Care Management and Policy Decisions (3:3:0) A survey course in health services research methods for the application of economic evaluation techniques used in health care policy analysis and clinical or administrative applications for health care service planning and evaluation. Content introduces methods applied to health care technology assessment, medical decision making, health resource allocation, and policymaking.

764 Health Policy and Government Payment Systems for Health Care Services (3:3:0) Examines the rationale for government intervention in provider payment and explores the current policy issues and politics of major government provider payment systems, including Medicare and Medicaid, and examines options for managing these programs more effectively. The course will “follow the money” as it flows through government and provider payment systems, model potential changes in such systems, and identify policies for improving the operation of these programs and payment systems.

765 Methods for Health Policy Analysis (3:3:0) Explores conceptual, analytic, and technical methods/approaches used in health policy analysis and planning. Students will learn to select from among alternative methods for applied concept modeling, graphical data presentation, needs assessment, goal clarification, group decision methods, and a variety of quantitative applications and frameworks for evaluating policy impact.

766 Policy Implementation and Health System Management Dilemmas (3:3:0) Prerequisite: HAP 703 or equivalent, or permission of instructor. Analyzes selected public policies and regulations and the impact of implementation and compliance/noncompliance on health care systems and organizations. Examines management responsibilities, challenges, and dilemmas (fiduciary and ethical) of implementing selected policies and regulations (promulgated or proposed).

780 Data Mining in Health Care (3:3:0) Prerequisite: HAP 501 or equivalent introductory graduate statistics course and lab, or permission of instructor. An introductory course to data mining and knowledge discovery in health care. Methods for mining health care databases and synthesizing task-oriented knowledge from computer data and prior knowledge are emphasized. Topics include fundamental concepts of datamining, data preprocessing, classification and prediction (decision trees, attributional rules, Bayesian networks), constructive induction, cluster and association analysis, knowledge representation and visualization, and an overview of practical tools for discovering knowledge.
from medical data. These topics are illustrated by examples of practical applications in health care.

790 Health Management Practicum and Capstone Seminar (3:2:6) Prerequisite: all course work. Team-based field practicum in health management, problem analysis, and project management in health care or service organization. Learning teams define complex problem in assigned facility and analyze problem with recommendations for management decision action. Analysis provides context in which theoretical concepts and management skills are applied. Uses case study analyses to explore problem-solving approaches in variety of situations and health care or service organizations.

820 Analytic Models in Health Services Management, Policy, and Research (3:3:0) Prerequisite: HAP 710 or equivalent graduate statistics course. An advanced statistics course in applied linear and multiple regression analysis, including polynomial regression, indicator variables and covariance analysis, model selection and validation, methods for measurement errors, diagnostic methods for outliers, influence and multicollinearity, nonlinear regression, logistic regression with non-normal distributions, correlations, and time-series analysis and forecasting as used in health services administration research and policy analysis.

821 Analysis of Categorical Data in Health Policy and Administration (3:3:0) Prerequisite: HAP 710 or equivalent graduate statistics course. An advanced statistics course in analysis of categorical data. Topics include tests and measures of association for contingency table analysis, including chi-square, odds ratio, relative risk, comparative trials, analysis of categorical data with matched samples, log-linear models, and logistic regression. Econometric models involving categorical variables could also be covered.

822 Research Designs and Analysis in Pharmaceutical and Health-Related Clinical Trials (3:3:0) Prerequisite: HAP 710 or equivalent graduate statistics course. A survey course that introduces students to the design and management of clinical trials research and pharmaceutical research and development, including drug development and FDA drug approval. This course also covers a variety of biostatistical methods as they apply to biomedical and biotechnology industry research with human subjects.

866 Health Care Public Policy (3:2:1) Focuses on process of formulating health care policy and analyzing implications for nursing, administration in nursing, and education and nursing service. Examines current and impending health issues, legislative process, and program implementation evaluation.

868 Advanced Research Seminar in Health Policy Analysis (3:3:0) Limited to doctoral students having completed core courses in statistics and research design, or permission of instructor. Seminar on advanced research methods that analyzes theoretical and analytic foundations to critique health services research and health policy analysis. Students synthesize, integrate, and apply theoretical knowledge and advanced skills relevant to health services research, policy analysis, and program evolution.

Health Education (HEAL)

School of Recreation, Health, and Tourism

110 Personal Health (3:3:0) Focuses on individual and family well-being through integrating fitness, nutrition, human sexuality, consumer health, drug education, and mental health.

205 Principles of Accident Causation and Prevention (4:3:1) Investigates safety-related problems. Emphasizes fire, home, occupational, and vehicle safety; identification, care, and treatment of various medical emergencies; and violence and property crime prevention.

220 Dimensions of Mental Health (3:3:0) Focuses on integrating behavioral and sociocultural factors in studying mental health.

230 Introduction to Health Behavior (3:3:0) Introduces health behavior in context of health psychology. Various theoretical models applied to understanding health and illness behavior. Studies nature of health from cognitive, behavioral, and biological perspectives. Examines means of preventing and treating health problems.

310 Drugs and Health (3:3:0) Analyzes drug use, with emphasis on positive aspects, and presents alternatives to drug misuse and abuse.

312 Health and Wellness Choices (3:3:0) May be taken by nonmajors. Actively involves students in becoming managers of their personal health and well-being throughout life span. Consistent with Healthy People 2000 goals for nation. Emphasizes lifestyle activity and fitness, behavioral change, and maintenance.

314 Community Health Issues and Strategies: Drugs and Alcohol (3:3:0) Emphasizes applications of theories underlying health promotion and risk reduction, with primary attention to drug and alcohol abuse. Focuses on applied strategies in range of community settings, including schools and colleges, workplace, social services, health care providers, citizen groups, and related services.

323 Program Leadership and Evaluation (3:3:0) Prerequisite: PRLS 310 or permission of instructor. Covers leadership and evaluation of health, fitness, and recreation programs. Uses computer technology to study evaluative aspects of program planning and administration.

327 Women’s Health (3:3:0) Examines health issues unique to women, including health care, food and exercise, reproductive and gynecological issues, chronic diseases, and issues of violence.

330 Nutrition (3:3:0) Assesses dietary habits and patterns in relation to nutrient requirements. Emphasizes weight control, diet and fitness, and current nutritional controversies.

350 Interventions for Populations and Communities at Risk (3:3:0) Identifies culturally, physically, emotionally, mentally, and demographically diverse populations and communities at risk. Covers implications for developing innovative programs, and role of HFRR interventions.

370 Health Determinants and Status (3:3:0) Focuses on determining person’s health status and health behavior-
change strategies. Covers skills acquisition in health-risk appraisal, screening, and related instruction.

372 Health Communication (3:3:0) Applies research-based models and theories of health assessment and promotion at individual, organizational, agency, and community levels. Uses communication approaches and skills in context of behavior change strategies, including policy and program development.

402 Introduction to Driver Education Instruction (3:3:0) Introduces vehicle operator’s tasks in highway transportation system. Provides essential knowledge and skills to instruct driver education.

403 Driver Education Practice and Administration (3:3:0) Applies driver education to simulated and actual driving environments. Provides essential knowledge and skills to administrate driver education.

405 Teaching Methods in Health Education (K–12) (3:3:0) Prerequisite: BSED status or permission of instructor. Covers content, methodology, and resource materials in teaching health education for physical education teaching majors. Field experience required.

430 Seminar in Exercise Science and Health Promotion (3:3:0) Prerequisite: 90 hours. Provides overview of contemporary and often controversial health issues with analysis of selected problems of current concern to society.

451 Epidemiology and Environmental Health (3:2:1) Covers incidence, distribution, and causes of diseases and injuries in human populations. Emphasizes essential diagnostics and planning for community health problem-solving with environmental consideration.

470 Community Health Systems (3:3:0) Examines complexities of community health and community health system infrastructure. Focuses on planning and navigating multi-system agency environment, including population and subpopulation health.

480 Special Topics (1–3:1–3:0) Presents selected health issues or problems. Focuses on applying information to education programs.

490 Internship (12:0:12) Prerequisite: 90 credits or permission of instructor. See internship manual for specific concentration requirements. Provides directed experience in observing and participating in health promotion and exercise science programs at community agencies, health care centers, and private sector organizations. Minimum period of 10 to 12 consecutive weeks. Graded Pass/Fail.

499 Independent Study in Health Education (1–3:1–3:0) Prerequisites: 90 credits or permission of instructor. Studies problem area in health education research, theory, or practice under faculty direction. May be repeated, but no more than 3 credits may be earned.

516 Program Development and Resources in Health Education (3:3:0) Open to licensed and provisionally licensed health and physical education teachers in the commonwealth of Virginia and students in ASTL physical education program. Focuses on program development, health content, methodology, and resources for teaching preK–12 health education. Distance learning course.
750 Legal Issues Relevant to Health Care Administration (3:3:0) Prepares health professionals to understand legal principles, statutes, regulations, and case law related to managing health care organizations and health professionals’ practice. May compare legal health care issues from domestic and international perspectives.

855/NURS 855 Ethics in Health Care Administration (3:3:0) Prerequisite: admission to PhD program; for non-PhD students, permission of instructor. Philosophical foundations of health care ethics. Students analyze specific ethical dilemmas faced by administrators in health care settings.

Hebrew (HEBR)

Modern and Classical Languages

101 Elementary Hebrew I (3:3:1) Designed for students with no knowledge of Hebrew. Introduction including grammar, vocabulary, oral skills, listening comprehension, and reading. Lab work required.

102 Elementary Hebrew II (3:3:1) Prerequisite: HEBR 101 or equivalent. Continuation of HEBR 101. Lab work required.

150 Introduction to Biblical Hebrew (3:0:0) Introduces basic vocabulary, grammar, and development of reading skills with introduction to religion and culture of ancient Israel that produced the Hebrew Bible/Old Testament.

160 Readings in Biblical Hebrew (3:3:0) Prerequisite: HEBR 150 or equivalent. Continuation of HEBR 150 to increase students’ proficiency in vocabulary and understanding of morphology and syntax. Selected passages from Hebrew Bible read; students introduced to text formation and analysis.

201 Intermediate Hebrew I (3:3:1) Prerequisite: HEBR 102 or equivalent. Further development of skills acquired in HEBR 101 and 102, including grammar, oral expression, listening comprehension, reading, and writing. Lab work required.

202 Intermediate Hebrew II (3:3:1) Prerequisite: HEBR 201 or equivalent. Continuation of HEBR 201. Lab work required.

History (HIST)

History and Art History

100 History of Western Civilization (3:3:0) Students who take HIST 100 may not receive credit for HIST 101 or HIST 102. History of Western civilization from ancient Mediterranean origins through medieval and modern development of Europe to contemporary world.

101 Foundations of Western Civilization (3:3:0) Students may not receive credit for HIST 101 if they have taken HIST 100. Evolution of Western culture from ancient Mediterranean world to formation of modern Europe in 17th century.

102 Development of Western Civilization (3:3:0) Students may not receive credit for HIST 102 if they have taken HIST 100. History of Western institutions and ideas from 17th century to the present.

120 U.S. History (3:3:0) Students cannot receive credit for HIST 120 if they have taken either HIST 121 or HIST 122. Examines American society from its founding documents, values, institutions, and peoples to present. Requires experience in historical analysis.

121 Formation of the American Republic (3:3:0) Students may not receive credit for HIST 121 if they have taken HIST 120. Social, political, economic, and intellectual growth of American institutions from colonization through Reconstruction.

122 Development of Modern America (3:3:0) Students may not receive credit for HIST 122 if they have taken HIST 120. History of the United States since 1877.

125 Introduction to World History (3:3:0) Analytical approach to world history overview that surveys major features of principal existing civilizations of world, as originally formed and as altered by key global processes including forces of modernity.

130 History of the Modern Global System (3:3:0) Provides understanding of processes that have shaped modern world. Beginning in 1500, traces developments that reorganized peoples, reshaped cultures, and generated new economies in interaction between Western and non-Western societies. Focuses on Western and non-Western regions of world, and their participation in global networks resulting from mercantile expansion, industrial revolution, imperialism, nationalism, and legacies in postcolonial period.

200 Freshman/Sophomore Seminar in U.S. History (3:3:0) Prerequisite: freshman or sophomore standing. Focuses on skills, methods of learning, and subject matter to introduce discipline of history. Topics vary.

201 Freshman/Sophomore Seminar in European History (3:3:0) Prerequisite: freshman or sophomore standing. Focuses on skills, methods of learning, and subject matter to introduce discipline of history. Topics vary.

202 Freshman/Sophomore Seminar in Global History (3:3:0) Prerequisite: freshman or sophomore standing. Focuses on skills, methods of learning, and subject matter to introduce discipline of history. Topics vary.

251, 252 Survey of East Asian History (3:3:0) HIST 251 surveys history of China and Japan from prehistoric times to ca. 1600. HIST 252 surveys history of China and Japan from early modern times (ca. 1600) to present.

261, 262 Survey of African Civilization (3:3:0) HIST 261 surveys African history from earliest times to the decline of western Sudanic states in 16th century. HIST 262 surveys African history from beginnings of interaction with Europe in 15th century to recent emergence of new states.

271, 272 Survey of Latin-American History (3:3:0) HIST 271 surveys colonial era to 1825. HIST 272 surveys development of independent Latin America since 1825. Emphasizes interactions of United States, Latin America.

281, 282 Survey of Middle Eastern Civilization (3:3:0) Survey of Middle Eastern history from rise of Islam to present, emphasizing processes that led to emergence of economic, cultural, social, and political institutions that characterize region today. HIST 281 surveys period from rise of Islam in 570 to medieval period (ca. 1258); HIST 282 surveys medieval period to present.

298 History and the Web (1:1:0) Introduces techniques and methods of creating historical web sites. Overview of historical resources on web, including Internet archives,
hypertext scholarly articles, and online exhibits. Examines new narrative and interpretive possibilities for doing history. Combines lecture, lab.

299 Databases for Historians (1:1:0) Introduces techniques and methods to create historical databases. Overview of web, CD-ROM, and personal databases helpful for historical research. Examines database as electronic archive and interpretive and analytical tool. Combines lecture and lab.

300 Introduction to Historical Method (3:3:0) Prerequisite: ENGL 302; COMM 100, 101 or 104; or permission of instructor. Introduces research skills and methods, as well as historical interpretation, culminating in written and oral presentations. Topics vary according to instructor. History majors strongly urged to take HIST 300 early in their program of upper-level courses. Grade of C or better is required to graduate with BA in history. Not offered in the summer.

301 Classical Greece (3:3:0) Political, social, economic, and cultural history of classical Greece from development of the city-state through 5th century.

302 Classical Rome (3:3:0) Political, social, economic, and cultural history of classical Rome from founding of the city through fall of Roman republic.

304 Western Europe in the Middle Ages (3:3:0) Survey of development of European society from collapse of Roman rule in 5th century to advent of Black Death in 14th century. Emphasizes political, social, cultural, and intellectual growth of society that developed from Roman, Catholic, and Germanic roots.

305 The Renaissance (3:3:0) Survey considering Renaissance as phenomenon rather than chronological period. Emphasizes growth of humanism in Italy in 14th and 15th centuries, development of new political concepts, and laicization of society. Includes transmission of these developments to transalpine Europe in late 15th and 16th centuries.

306 The Reformation (3:3:0) Late medieval ecclesiastical conditions and reform movements, late scholasticism, Protestant Reformation, Catholic Reformation, dynastic rivalries, and religious wars. Concludes with Peace of Westphalia.

307 Old Regime and Revolutionary Europe (3:3:0) Political, social, economic, and cultural history of Europe from 1648 to 1815. Crisis of authority, consolidation of the state, absolutism, colonial expansion, the Scientific Revolution and the Enlightenment, and the French Revolution and Napoleon.

308 Nineteenth-Century Europe (3:3:0) History of Europe from Congress of Vienna to outbreak of World War I.

309 Europe in Crisis: 1914–1948 (3:3:0) Prerequisite: 45 credits or permission of instructor. Two world wars, the Great Depression, and political and cultural revolutions transformed Europe as never before. Explores causes and consequences of these tumultuous events, and concludes with consideration of reconstruction that caps period.

312 Nationalism in Eastern Europe (3:3:0) Examines history of modern Eastern Europe from mid-19th century through collapse of communist regimes in 1989, and includes focus on Yugoslav wars of 1990s. Nationalism provides organizing theme; topic approached through literature, political, social, cultural, and new media sources. Class sessions emphasize discussion of central issues and sources.

314 History of Germany (3:3:0) Political, diplomatic, economic, social, and cultural development of Germany from dissolution of Holy Roman Empire to present.

321 Early Modern England (3:3:0) History of England from late 15th to mid-18th century, focusing on social, political, economic, and cultural changes of period with particular attention to English Reformation and causes and consequences of English Civil War.

322 Modern Britain (3:3:0) History of Britain from mid-18th century to present. Focuses on social, political, and economic transformations of industrialization; culture of 19th-century industrial society; problems of late 19th-century economic competition and imperialism; creation of welfare state; and experience of post-World War II political, social, and economic realignments.

328 Rise of Russia (3:3:0) Political, social, and cultural experience of Russia from appearance of Kievan state to mid-19th century.

330 The United States Since World War II (3:3:0) Examines major domestic and foreign policy factors that shaped American experience from World War II to present. Includes political, social, and economic forces as they affected nation’s history.

336 The African American Experience in the United States: Reconstruction to the Present (3:3:0) Prerequisite: 45 credits of history or permission of instructor. History of African American life in post-slavery America, and rise and consequences of racial segregation in 19th and 20th centuries. Examines African American response to continued racial inequality and repression. Covers great migration, urbanization, black nationalism, and civil rights era, as well as contemporary debates about race.

337 The Vietnam War (3:3:0) Covers the causes, major events, and legacies of America’s Vietnam War, including an introduction to Vietnamese history and culture, American decisions for war, strategy and major military engagements, diplomacy and peace talks, and the aftermath of the conflict in Vietnam and the United States.

345 History of American Foreign Relations (3:3:0) Survey of American diplomacy from Revolutionary War to present, with emphasis on 20th-century issues.

350 U.S. Women’s History (3:3:0) Prerequisite: 45 credits or permission of instructor. History of women and their changing status and gender roles in American society from colonial period through “second wave” of feminism in 1970s. Explores images and lives of women of different class, ethnic, and regional origins. Also focuses on women’s political, economic, and legal conditions, and changes in them.
351 History of the Old South (3:3:0) History of South to outbreak of Civil War, with particular emphasis on rise of sectionalism. Focuses on development of distinct Southern culture through emergence of economic, political, social, agricultural, and intellectual institutions.

352 The South since 1865 (3:3:0) History of South during Reconstruction, Redeemer era, and New South, with particular emphasis on race relations. Covers political, economic, cultural, and intellectual development from aftermath of war.

353 History of Traditional China (3:3:0) Prerequisite: 6 credits of history or permission of instructor. China from earliest times to period of modern Western intrusion. Development of traditional Chinese culture, society, and government.

354 Modern China (3:3:0) Prerequisite: 6 credits of history or permission of instructor. China from 1644 to the People’s Republic of China. Emphasizes coming of West, and various stages of Chinese reaction.

355 Women and Family in Chinese History (3:3:0) Prerequisite: 45 credits or permission of instructor. Explores women’s experiences and changing meanings of womanhood over course of imperial and modern Chinese history. Focuses on issues of marriage, education, motherhood, women’s work, property rights, legal status, sexuality, notions of love, foot binding and fashion, political participation, and women’s liberation.

356 Modern Japan (3:3:0) Japan from Meiji Restoration to World War II. Emphasizes Japan’s modernization in face of challenge.

357 Postwar Japan (3:3:0) Prerequisite: 45 credits or permission of instructor. History of Japan from World War II to present. Examines Japanese experience of several key moments: Japan’s defeat in Pacific War, reconstruction during U.S. occupation, rise to economic prominence during 1960s and 1970s, and cultural and international identity crisis during 1980s and 1990s.

358 The Rise of the South (1–3:0:0) Study of historical topics of special interest. Topics announced in advance. May be repeated for credit when topic is different.

359 Topics in World History (3:3:0) Study of historical topics or periods of special interest in global, Latin American, African, Asian, or Middle Eastern history. Topics announced in advance. May be repeated for credit when topic is different.

360 Topics in Global History (3:3:0) Study of historical topics or periods of special interest. Topics announced in advance. May be repeated for credit when topic is different.

361 Topics in History (3:3:0) Study of historical topics or periods of special interest. Topics announced in advance. May be repeated for credit when topic is different.

362 Topics in European History (3:3:0) Study of historical topics or periods of special interest. Topics announced in advance. May be repeated for credit when topic is different.

363 Topics in Latin American History (3:3:0) Study of historical topics or periods of special interest. Topics announced in advance. May be repeated for credit when topic is different.

364 Revolution and Radical Politics in Latin America (3:3:0) Prerequisite: 6 credits of history or permission of instructor. During 20th century, Latin America has witnessed both peaceful political movements and violent revolutions aimed at achieving social justice. Considers several of these movements in comparative perspective: Mexican Revolution, Arbenz government in Guatemala, Allende regime in Chile, Cuban and Nicaraguan revolutions, and Brazilian Worker’s Party.

365 Conquest and Colonization in Latin America (3:3:0) Prerequisites: 45 credits or permission of instructor. Examines forms of conquest and colonization practiced by Aztec, Inca, Spanish, and Portuguese in what is now Latin America. Includes role of ideology and religion in imperial rule, use of warfare to create empires and colonies, and implementation of political and economic systems to rule subject people.

366 Comparative Slavery (3:3:0) Prerequisites: 45 credits or permission of instructor. Examines systems of slavery from ancient world to modern world, with special emphasis on Atlantic slave trade and slave societies in Latin America and Anglo America. Considers impact of slaves and slavery on cultural, economic, and political systems in Africa and Americas from 16th to 19th centuries.

367 History, Fiction, and Film in Latin America (3:3:0) Explores modern Latin American history through different types of texts: scholarly histories, historical novels, fictional films, documentary films, and oral history. Explores ways these texts produce knowledge about the past. What motivates different approaches? What counts as evidence? How do we know what really happened? How do we decide what mattered and what did not? Also introduces several important episodes in 20th century Latin American history.

370 War and American Society (3:3:0) Examines war and American society from the colonial period to the post-Cold War era, including how military institutions, war, and the preparation for war have affected American society, and how Americans have thought about military service, experience war, and made peace through their history. Special emphasis on civil–military relations and the role of war and militarism in American culture.

373 The Civil War and Reconstruction (3:3:0) Examines the history of the American Civil War from its origins in the late 18th century to the withdrawal of federal troops from the south in 1877. Examines the political, social, and economic issues that led to war; the home fronts, war leadership, diplomacy, combat motivation, and grand strategy; problems associated with reconstituting the nation’s political institutions; and the integration of millions of newly freed slaves.

386 Topics in History (3:3:0) Study of historical topics of special interest. Topics announced in advance. May be repeated for credit when topic is different.

387 Topics in Global History (3:3:0) Study of historical topics or periods of special interest in global, Latin American, African, Asian, or Middle Eastern history. Topics announced in advance. May be repeated for credit when topic is different.

388 Topics in European History (3:3:0) Study of historical topics or periods of special interest. Topics announced in advance. May be repeated for credit when topic is different.

389 Topics in U.S. History (3:3:0) Study of historical topics or periods of special interest. Topics announced in advance. May be repeated for credit when topic is different.

390 History of Virginia to 1800 (3:3:0) Discovery and settlement of Virginia. Colonial period with emphasis on development of representative government and race relations, Golden Age of Virginia dynasty, and coming of Civil War.

392 History of Virginia Since 1800 (3:3:0) Decision to secede, Civil War and Reconstruction, Readjustors and Populism, disfranchisement and Constitution of 1902, and rise of Senator Harry F. Byrd. Recent developments.

393 Topics in Film and History (3:3:0) Study of historical periods or topics from perspective of feature films and documentaries. Topics available in advance in History Department. May be repeated when topic is different. Maximum 6 credits may be applied to history major.

398 Historical Study Abroad (1–3:0:0) Intended for participation in formally organized course offered by Center for Global Education during intersession or spring break. May be repeated for credit.

399 Internship (1–9:0:0) Prerequisite: history majors with permission of undergraduate coordinator. Approved work-
study programs in cooperation with specific organizations including area museums; archives; historic sites; and local, state, and federal agencies. Credit determined by department.

401 Colonial America (3:3:0) Intensive study of colonial American history from European origins through Revolutionary War.

403 Revolutionary Era in American History, 1763–1812 (3:3:0) Study of formative years of new republic from Treaty of Paris of 1783 to election of 1820.

404 Jacksonian America, 1812–1854 (3:3:0) Study of age of Andrew Jackson. Emphasizes democratic institutions that emerged as dominant influences in American society.

409 Between the Wars: The United States, 1919–1941 (3:3:0) Intensive study of political, social, economic, and diplomatic developments in 1920s and 1930s.

417 History of Metropolitan Washington (3:3:0) Examines urban and suburban growth in Washington, D.C., and its suburbs in Maryland and Virginia since 1790, in context of U.S. urban history.

418 Ethnic Groups in America (3:3:0) Explores ethnicity and race in American urban society by comparing experiences of different ethnic groups as migrants to American cities.

426 The Russian Revolution (3:3:0) Prerequisite: 45 credits or permission of instructor. Era of revolutionary activity from 19th century to end of 1920s, with emphasis on Russian Revolutions of 1917. Explores why revolutionary situation developed; political, social, and cultural issues at stake; why it took various forms; and revolution’s contribution to nature of Soviet state and post-Soviet problems.

431/ENGL 431/FREN 431 Medieval Intellectual Topics (3:3:0) Selected topics in intellectual history of Middle Ages. Topics vary, depending on discipline of instructor. May be taken for credit by English or history majors.

435 Society and Culture in Early Modern Europe (3:3:0) Examines social and cultural lives of Europeans from end of Middle Ages to Industrial Revolution. Emphasizes popular and elite culture, and bridges and interrelationships between them. Focuses on religious, artistic, literary, and recreational behavior. Covers political activity and riots, strikes, royal receptions, and rituals.

436 European Society and Culture: 19th and 20th Centuries (3:3:0) Examines major cultural trends in Europe since French Revolution. Major themes include romanticism; socialism; Marxism; and social effect of modernization, science, and societies.

455/COMM 455 History of Print Journalism (3:3:0) Prerequisite: 3 credits in COMM or HIST courses. Development of print journalism from inception to present, with emphasis on interaction of technology, audience, and government intervention. Topics include birth of press; development of modern newspaper and American development, including Revolutionary and Civil wars; rise of independent press; and yellow journalism.

460 Modern Iran (3:3:0) Prerequisite: 45 credits or permission of instructor. Modern Iran, from 1800 to present, in context of several broad themes: institutional structure of state; role of great powers in Iran and Iranian response to economic, military, technological, and ideological challenge posed by West; interaction of religion and other ideologies and politics; economic development and impact on politics and society; and ways historians have sought to understand and interpret modern Iranian history.

461 Arab-Israeli Conflict (3:3:0) Prerequisite: 45 credits or permission of instructor. Some knowledge of history of Middle East since World War I strongly advised. Overview of history of Arab-Israeli conflict. Examines conflict from various perspectives: conflict over land and between competing nationalisms and identities; in terms of national interests of various states, including Israelis and Palestinians as well as other Arab governments and great powers; and in terms of peace making and conflict resolution.

462 Women in Islamic Society (3:3:0) Prerequisite: 6 credits of history or permission of instructor. Surveys history of women in Islamic society from rise of Islam to present day. Examines historical processes that affected role and status of women in society, and specific topics around which issues of gender status and identity coalesced, especially in modern period.

465 The Middle East in the 20th Century (3:3:0) Prerequisite: 6 credits of history or permission of instructor. Political, social, and cultural history of Middle East since World War I. Emergence of Israel, Arab nationalism, and political and economic influence of Middle East in world affairs.

466 Origins of Conflict in Southern Africa (3:3:0) Explores historical origins of conflict in South Africa, focusing on themes of economic change, cultural interaction, and political consolidation during past five centuries.

480 Alexander the Great (3:3:0) Rise of Persia, Persian wars with Greece, subjugation of Greece by Philip II of Macedonia, and Alexander the Great and his conquest of Persian empire.

490, 491 Honors Directed Readings, Honors Directed Research (3:0:0), (3:0:0) Prerequisite: admission to history honors program and permission of instructor. Students must have completed at least one course in the field, or with the professor, chosen for these honors courses. The 3 reading credits should be taken before 3 research credits, though they may be taken concurrently. Either may be taken concurrently with HIST 499.Linked, individualized courses, usually given by same instructor. HIST 490 involves directed readings; HIST 491 culminates in research paper related to subject of readings.

498 Directed Readings/Research in History (1–3:0:0) Prerequisites: history majors with 90 credits and permission of instructor. Readings, research conducted on individual basis in consultation with instructor. Student may not present more than 3 credits for graduation credit.

499 Senior Seminar in History (3:3:0) Prerequisite: history majors with 90 credits, HIST 300, and completion or concurrent enrollment in all university general education courses. Research on specialized historical topic culminating in seminar paper and oral presentation. Synthesis course; students expected to integrate knowledge and skills acquired in general education courses. Subject determined by instructor. Student may present no more than 3 credits for graduation credit. Must receive passing grade to graduate with BA in history. Not offered in summer.
510 Approaches to Modern World History (3:3:0) Introduces historical study of world beyond Europe and United States. Students read major theoretical works and case studies of particular regions. Examines imperialism, national identity, and various forms of popular resistance; familiarizes students with range of scholarly approaches, including world systems theory and subaltern studies.

523 Issues in American History (3:3:0) Open to advanced undergraduates and graduates. Reading, analysis of selected problems. Topic determined by instructor. Course may be repeated when content differs.

524 Issues in European History (3:3:0) Open to advanced undergraduates and graduates. Reading, analysis of selected problems. Topic determined by instructor. Course may be repeated when content differs.

525 Problems in Latin American History (3:3:0) Analysis of selected problems. Emphasizes reading and discussion of historical interpretations, and development of bibliography. Course may be repeated when content differs.

535 Problems in Comparative World History (3:3:0) Investigates selected problems in global and comparative history, covering multiple countries or world regions. Course may be repeated when content differs.

537 Problems in Middle Eastern History (3:3:0) Prerequisite to 600-level courses: graduate standing. Analyzes selected problem. Emphasizes reading and discussion of historical interpretations, and development of bibliography. Course may be repeated when content differs.

585 Problems in Middle Eastern History (3:3:0) Survey of U.S. history prior to 1877. Designed for individuals entering the graduate program who need to strengthen preparation in area, or who seek to enhance knowledge of latest interpretations in field. Stresses factual knowledge and its interpretation.

601 Themes in U.S. History I (3:3:0) Survey of European history from 1500 to 1815. Designed for individuals entering graduate program who need to strengthen preparation in this area, or who seek to enhance knowledge of latest interpretations in field. Stresses factual knowledge and its interpretation.

602 Themes in U.S. History II (3:3:0) Continuation of HIST 601.

605 Themes in European History I (3:3:0) Survey of European history from 1500 to 1815. Designed for individuals entering graduate program who need to strengthen preparation in this area, or who seek to enhance knowledge of latest interpretations in field. Stresses factual knowledge and its interpretation.

606 Themes in European History II (3:3:0) Survey of European history from 1815 to present. Designed for individuals entering graduate program who need to strengthen preparation in this area, or who seek to enhance knowledge of latest interpretations in field. Stresses factual knowledge and its interpretation.

610 The Study and Writing of History (3:3:0) Methodology of the historian including techniques of research, use of documentation and other sources, development of bibliography, and synthesis of material.

615 Problems in American History (1–6:1–6:0) Readings and discussion of bibliographies, interpretations, and research trends in topics selected by instructor. Course may be repeated when content differs.

616 U.S. Westward Movement (3:3:0) Investigates continuity and change in American West. Topics include economic development, ethnicity, rural and urban life, and role of federal government.

617 Topics in the American Civil War Era (3:3:0) Joint project of instructor and students into various aspects of common topic in Civil War era, with emphasis on historiography and historical method.

618 The Age of Jackson, 1815–1854 (3:3:0) Survey of social, cultural, intellectual, economic, and political changes in United States during period of rapid growth and expansion. Topics include second-party system; growth of sectionalism, nationalism, and expansionism; industrialization and spread of market economy; rise of romantic reform and evangelical religion; and growth of abolitionist and proslavery movements.

619 The Constitution, Civil Liberties, and the Supreme Court (3:3:0) Investigates evolution of civil liberties in American history, and interaction of three branches of government in applying various constitutional guarantees. Students read extensively in Supreme Court decisions and secondary literature, and undertake independent research.

620 Development of the Early Republic, 1783–1815 (3:3:0) Investigates breakdown of Confederation, Constitutional Convention, and role of revolutionary ideology of republicanism. Discusses leadership and policies of republic in hostile international context. Students read extensively in monographic literature, and prepare research paper.

621 Virginia and the American Revolution (3:3:0) Detailed examination of Virginia society on eve of American Revolution, and role in events from 1750 to 1789. Combines lectures, discussion of major themes, ideas, and personalities.

623 Recent U.S. History, 1945 to Present (3:3:0) Selected political, social, economic, diplomatic, and cultural forces that shaped the post-World War II American experience.

624 U.S. Diplomatic History (3:3:0) Study of selected issues in American foreign relations, and changing historical interpretations of American diplomacy.
626 Approaches to American Culture (3:3:0) Focuses on various approaches historians have taken to history of American culture: questions they asked, assumptions they made, disciplinary tools they used, and types of materials they analyzed. Concentrates on patterns of culture, and what they say about American past and present.

628 Immigration and Ethnicity in the United States (3:3:0) Examines immigration and ethnicity in America since 1840. Considers why immigrants came, from where, under what circumstances, and how they adapted. Examines immigration policy and American attitudes toward immigration and ethnicity. Conducted as readings colloquium.

629 The Gilded Age and Progressive Era (3:3:0) Examines history of United States from 1877 to 1918, with attention to history of reform movements and politics, and social history of the period. Familiarizes with major issues and historical literature of the period.

630 U.S. Women’s History (3:3:0) Wide-ranging survey of burgeoning field of women’s history, emphasizing critical evaluation of sources and interpretation. Readings represent variety of approaches, which may include material culture studies, medical history, history of sexuality, political history, and social and cultural history.

631 Era of the American Revolution (3:3:0) Examines history and historiography of revolutionary era, with special emphasis on social and ideological interpretations of period. Includes events leading to War for Independence, war itself, and social and political effects of war on American society.

632 Reconstruction (3:3:0) Examines panoply of political, social, economic, and constitutional concerns from 1863 to 1880, as North and South struggled over outcome of Civil War. Addresses political institutions and power in postwar North and South, and place of former slaves in society, politics, and economy.

634 Interwar America: 1918–1939 (3:3:0) Considers issues of United States between the two world wars. Explores various ways issues complemented and contradicted each other in rich and complex historical era.

635 Problems in European History (1–6:1–6:0) Investigates selected problems. Readings, discussions, development of bibliographies. Primary sources used where possible. Course may be repeated when content differs.

636 Political Culture in Twentieth-Century Germany and Austria: Continuities and Discontinuities (3:3:0) Recent interpretations of key political events of 20th century. Asks if there were fundamental continuities in structure of German and Austrian society that can be observed throughout the period under review.

638 Western Europe in the Post-War Period (3:3:0) Examines process of reconstruction, reconciliation, and integration in Western Europe in 20 years after World War II. Conducted as readings colloquium.

639 Society and Politics in Western Europe, 1750–1914 (3:3:0) Focuses on changes in social conditions and ramifications in political life. Attention to urbanization of workers, changes in peasantry, growth of middle classes, decline of nobility, and major political developments and expansion of liberal reforms.

640 Metropolitan Cities of Europe in the Nineteenth and Twentieth Centuries (3:3:0) Studies individual cities, and investigates particular cities in depth. Considers economic, social, cultural, and political features of urban life.

642 Humanism and the Renaissance (3:3:0) The Renaissance as a unique period in European cultural history from ca. 1350 to 1520. Concentrates on Italian situation as standard, with consideration given to manifestations of Renaissance in northern Europe, especially Germany, until Reformation. Focuses on recent studies of political, social, intellectual, and religious changes. Students write class reports and a larger bibliographic paper.

643 Religion and Society in the Reformation Era (3:3:0) The Reformation, ca. 1500 to 1650, was a time of major religious, intellectual, social, and political upheaval in European history. Investigates reasons for changes, and effects on European society. First half focuses on Germany, but major events throughout Europe are studied.

644 Society and Culture in Early Modern Europe (3:3:0) Overview of most recent historical work on social and cultural history of premodern West, ca. 1400 to 1800. Uses theoretical approaches and empirical methodologies of other disciplines, especially social anthropology, sociology, and literary theory, to shed new light on popular culture, class, manners, taste, rituals, religion, language, gender, and the state. Formulates new topics of research and poses new questions, and suggests new approach to more traditional topics such as politics, religion, and ideas.

645 The Russian Revolution and the Origins of the Soviet State (3:3:0) Period between 1890 and 1924 with concentration on sources of Bolshevism, problems of old regime as they led to revolutions of 1905 and 1917, and establishment of new regime and its survival in environment of foreign and civil war.

689 Teaching and Learning History in the Digital Age (3:3:0) Prerequisite: graduate standing. Examines what happens when instructors integrate new media technology into history classroom. Includes consideration of learning theory, new media theory, and an in-depth examination of state-of-the-art in practice. In the final third of semester, students produce practicum that is either working history teaching web site or concept paper for site, depending on student’s degree of technical sophistication. No prior facility with information technology required. Course appropriate for graduate students working as teachers or planning career in teaching.

690 The Administration of Archives and Manuscripts (3:3:0) Prerequisite: 6 credits of U.S. history, or permission of department. Introduces principles and practices of managing records and administering archival and manuscript collections, public and private. Designed for graduate students with special interest in historical sources as well as for those specializing in applied history.
691 Museum Studies (3:3:0) Prerequisite: 6 credits of U.S. history or permission of department. General introduction to museums of history and museum studies in the United States, intended for interested citizen as well as for assistance to students in course and career choices. Explores development, present state, and future possibilities of U.S. museums, with some reference to international developments.

692 Historical Editing (3:3:0) Introduces fundamentals of historical editing of documents, including microform, word processing, and computer techniques. Designed for those seeking introduction to various areas of applied history, and those intending to edit historical documents for publication.

693 Historic Preservation (3:3:0) Prerequisite: 6 credits of U.S. history or permission of department. General introduction to historic preservation in the United States, intended for interested citizen and to assist students in course and career choices. Explores development, present state, and future possibilities of historic preservation in the United States, with some reference to international aspects of preservation.

695 History Symposium (3:3:0) Subject of academic and community interest pursued through discussions and lectures by distinguished guest instructors.

696 Clio Wired: An Introduction to History and New Media (3:3:0) Students with limited computer competency should consult department before enrolling. Introduces changes that new media and technologies are bringing to how we research, write, present, and teach about the past. Students explore theoretical and historical issues as well as learn hands-on skills in digital history.

697 Creating History in New Media (3:3:0) Prerequisites: HIST 696 or permission of instructor. Seminar; students create original historical projects in digital media.

711 Research Seminar in U.S. History (3:3:0) Prerequisite: HIST 610 or permission of department. Research in specialized topics using primary sources. Maximum 6 credits may be earned.

731 Research Seminar in European History (3:3:0) Prerequisite: HIST 610 or permission of department. Research in specialized topics using primary sources. Maximum 6 credits may be earned.

751 Research Seminar in Comparative World History (3:3:0) Prerequisite: HIST 610 or permission of department. Research seminar requiring comparative research and analysis. Organized around significant topic or theme in field of world history. Topics vary from year to year. Maximum 6 credits may be earned.

790 Comprehensive Readings in U.S. History (3:0:0) To be taken in final semester of program. Integrates past work in major field and fills gaps before comprehensive exam. After a review of graduate experience, student and instructor design reading list to round out preparation for exam.

791 Comprehensive Readings in Comparative World History (3:0:0) To be taken in final semester of program. Integrates past work in major field and fills gaps before comprehensive exam. After a review of graduate course work, student and instructor design reading list to round out preparation for exam.

792 Comprehensive Readings in European History Since 1500 (3:0:0) To be taken in final semester of program. Integrates past work in major field and fills gaps before comprehensive exam. After review of graduate experience, student and instructor design reading list to round out preparation for exam.

794 Internship in Applied History (3–6:0:0) Prerequisites: 3 credits of applied history in appropriate area and 12 credits in major field, or permission of internship director. All internship placements must be approved by the department to ensure suitability to student’s program. Introduces applied history through work and study at historical museum, site, library archive, editing project, or other approved agency.

796 Directed Readings (1–6:0:0) Independent reading on topic agreed to by student and faculty member. Maximum 6 credits may be earned.

798 Directed Research and Writing in History (3:0:0) Intended for students in department’s predoctoral track who are not writing master’s thesis. Goal is to produce substantial and original contribution to historical knowledge on model of article in scholarly journal.

799 Thesis (1–6:0:0) Master’s thesis research and writing under direction of faculty committee. May not be taken prior to successful completion of comprehensive exam. Graded S/NC.

800 Studies for the Doctor of Philosophy in Education (variable credit) Prerequisite: admission to PhD in education program to study history. Program of studies designed by discipline director and approved by doctoral committee, which brings student to participate in research of discipline director and results in paper reporting original contributions of student. Enrollment may be repeated.

801 New Developments in History (3:3:0) Prerequisite: doctoral standing; or permission of instructor and HIST 610 or equivalent. Survey of current developments in historical analysis and methodology.

802 Readings for Doctor of Arts in Community College Education (variable credit) Prerequisite: admission to doctor of arts in community college education program to study history. Intensive reading of recent scholarship in broad areas of historical study. With advisor, students develop readings list and define at least three areas in which to prepare readings courses. May be repeated.

803 Doctoral Readings for Major Field (3:0:0) Independent readings for PhD students on topic agreed on by student and instructor, taken in preparation for completing major field exam. Should be broadly comprehensive of field, and cover major historical themes and historiographical debates.

804 Doctoral Readings for Minor Field (3:0:0) Prerequisite: doctoral standing. Independent readings for PhD students on topic agreed on by student and instructor, taken in preparation for completing minor field statement. Designed to help student master literature of subfield that is subject of field statement.

810 History Doctoral Colloquium (1:1:0) Prerequisite: doctoral standing. Introduces array of scholars and scholarship through discussions of innovative historical events, important theories, and significant methodological breakthroughs in history. May be taken for credit 6 times. Graded S/NC.
811 Doctoral Research Seminar (3:0:0) Prerequisite: doctoral standing. Students pursue research projects in their areas of specialization.

998 Doctoral Dissertation Proposal (1–6:0:0) Prerequisite: advancement to candidacy. Work on research proposal that forms basis for doctoral dissertation. May be taken for maximum 6 credits. Graded S/NC.

999 Doctoral Dissertation Research (1–12:0:0) Prerequisite: completion of HIST 998. Doctoral dissertation research and writing under direction of student’s dissertation committee. Graded S/NC.

Honors Program in General Education (HNRS)

College of Humanities and Social Sciences

Only students enrolled in the Honors Program are eligible to take HNRS courses. HNRS 110 must be taken in the first semester.

110 Introduction to Research (4:3:1) Prepares students in humanities and social sciences research practices. Offers students the opportunity to learn about research practices in the natural sciences, mathematics, economics, management, and law. Students learn how to choose and focus a research question, find and analyze sources, organize evidence in an essay shape by an original these, write clearly, and address an audience of scholars.

122 Reading the Arts (3:3:0) Prerequisite: HNRS 110. Explores relationship of parts to whole in work of art, connections among different art forms, and links between art and its historical context.

125 A Liberal Arts Approach to Calculus (3:3:0) Assumes understanding of basic algebra and functions. Studies exponential models and develops mathematical concepts of limit and infinity including the topic of derivatives.

130 Conceptions of Self (3:3:0) Drawing from appropriate works in social sciences, arts, and humanities, examines different conceptions and definitions of the self from diverse cultures and historical contexts.

131 Contemporary Society in Multiple Perspectives (3:3:0) Prerequisite: HNRS 110, 130. Explores methods and perspectives in social sciences and humanities to evaluate contribution of different disciplines to understanding significant social issues and their global ramifications and our responsibilities as citizens of the world.

226 Topics in Quantitative Analysis (3:3:0) Prerequisite: HNRS 125 or permission of Honors program. Studies selected topics of special interest to honors students with suitable preparation. For students who have taken calculus in high school. HNRS 226 is an alternative to HNRS 125.

227, 228 Scientific Thought and Processes I, II (4:3:3) Prerequisite: HNRS 227 is prerequisite for HNRS 228. Explores and integrates principles of classical and modern science through study of such topics as cosmology, evolution, ecology, mechanics, relativity, and quantum physics. Includes a weekly lab session.

230 Cross-Cultural Perspectives (3:3:0) Prerequisite: HNRS 110. Enables students to broaden cultural horizons and understand human behavior by studying societies in depth and in comparison.

240 Reading the Past (3:3:0) Prerequisite: HNRS 110. Considers constructions of historical narratives by examining significant current topics such as revolution, race, empire, and religion over time. Considers how public narratives about history are constructed. Provides context for HNRS 353.

353 Technology in the Contemporary World (3:3:0) Prerequisite: HNRS 110, 240. Analyzes emergence and impact of specific technologies on contemporary cultures. Explores television, automobile, newspapers, Internet, and computer games from historical, scientific, political, economic, and global perspectives.

Information Security and Assurance (ISA)

Computer Science

522 Information Security Essentials (3:3:0) Prerequisites: an introductory information systems class or permission of instructor. This course covers basic concepts and techniques in applied information security. The course begins introducing the student to basic concepts of security including confidentiality, integrity, availability, and current concerns of anonymity, privacy and safety of web-based transactions, forensics investigations etc. It also covers the main safeguards available in security such as authentication, authorizations, network security. The course shows how these techniques are applied to the concerns of business, health care, nursing, sociology and law. This course does not count for MS programs in the Computer Science Department.

562 Information Security Theory and Practice (3:3:0) Prerequisites: INFS 501, 515, 519, and SWE 510, or permission of instructor. This course is a technical introduction to the theory and practice of information security. It serves as the first security course for the MS-ISA degree, is required as a prerequisite for all subsequent ISA courses (at the 600 and 700 levels) and subsumes most topics covered by the CISSP examination. It also serves as an entry-level course available to non-ISA students, including MS-CS, MS-ISE, and MS-SWE students.

563 Fundamentals of Systems Programming (3:3:0) Prerequisites: An intermediate programming language course or permission of instructor. Introduces systems and network programming for UNIX and Windows using lectures and hands-on Labs. Covers ANSI C programming, system libraries and APIs, forking and threads, inter-process communications, synchronization, Windows API, and code debugging.

564 Security Laboratory (3:3:0) Prerequisites: ISA 562 and ISA 563 or permission of instructor. This course provides hands-on experience in configuring and experimenting with commodity-networked systems and security software in a live laboratory environment, with the purpose of understanding real-world security threats. This course will take both offensive and defensive approaches and expose students to a variety of real-world attacks, including viruses, worms, rootkits, and botnets. Possible mitigation and defending mechanisms, such as firewalls and intrusion detection software, will also be covered.

640 Programming Language Security (3:3:0) Prerequisites: CS 540 and ISA 562 or permission of instructor. This course describes language-based techniques to provide security for executing code. Topics include a discussion on the need for and the advantages of language-based security, security...
principles and properties, memory and type safety, encapsulation and access control, certifying compilers and their verification methods, security types and information flow, and applying programming language-inspired techniques to enforce security in the semantic-web based languages.

650 Security Policy (3:3:0) Prerequisites: ISA 562 or permission of instructor. The course focuses on security policy and its management for information systems having national and international connectivity. Issues include legal, international, cultural, and local factors. Students are expected to participate regularly in presenting material, in discussion of recent security issues, and by writing short papers on major current issues.

652 Security Audit and Compliance Testing (3:3:0) Prerequisites: ISA 562 or ISA 532 or permission of instructor. This course presents the fundamental concepts of the IT-security audit and control process that is being conducted in a plethora of environments, including government, financial industry, and healthcare industry. The goal of this course is to enable the students to structure and perform audits based on the specifications of Sarbanes-Oxley, HIPAA, and FISMA audit programs. The course covers all the CISA certification requirements in depth and the students completing the course are encouraged to attempt the certification exam on their own.

656 Network Security (3:3:0) Prerequisites: ISA 562 and CS 555 or permission of instructor. This course is an in-depth introduction to the theory and practice of network security. It assumes basic knowledge of cryptography and its applications in modern network protocols. The course studies firewalls architectures and virtual private networks and provides deep coverage of widely used network security protocols such as SSL, TLS, SSH, Kerberos, IPSec, IKE, and LDAP. It covers countermeasures to distributed denial of service attacks, security of routing protocols and the Domain Name System, e-mail security and spam countermeasures, wireless security, multicast security, and trust negotiation.

673 Operating Systems Security (3:3:0) Prerequisites: CS 571 and ISA 562 or permission of instructor. This course covers fundamentals and advanced topics in operating system (OS) security. It includes OS-level security mechanisms and policies in investigating and defending against real-world attacks on computer systems, such as self-propagating worms and large-scale botnets. Basic OS security techniques, such as logging, system call auditing, and memory protection, will be discussed. Recent advanced techniques, such as honeypots and honeyfarms, system randomization, vulnerability fingerprinting, and virtualization, will also be introduced.

674 Intrusion Detection (3:3:0) Prerequisites: ISA 562 and 650 or permission of instructor. Studies methodologies, techniques, and tools for monitoring events in computer system or network, with the objective of preventing and detecting unwanted process activity and recovering from malicious behavior. Topics include types of threats, host-based and network-based information sources, vulnerability analysis, denial of service, deploying and managing intrusion detection systems, passive vs. active responses, and designing recovery solutions.

681 Secure Software Design (3:3:0) Prerequisite: SWE 619 or permission of instructor. Theory and practice of software security, focusing in particular on some common software security risks, including buffer overflows, race conditions and random number generation, and the identification of potential threats and vulnerabilities early in the design cycle. The emphasis is on methodologies and tools for identifying and eliminating security vulnerabilities, techniques to prove the absence of vulnerabilities, and ways to avoid security holes in new software and on essential guidelines for building secure software. Explores how to design software with security in mind from the ground up and integrate analysis and risk management throughout the software life cycle. This course is also cross-listed as SWE 781.

697 Topics in Information Security (3:3:0) Prerequisite: permission of instructor. Special topics in information security and assurance not occurring in regular ISA sequence. May be repeated for credit when distinct offerings of course differ in subject.

763 Security Protocol Analysis (3:3:0) Prerequisites: ISA 650 or permission of instructor. This course teaches how to design, understand, verify, and test communication protocols so that they meet their objectives of recognizing the basic components of a communication protocol; specifying security properties accurately; modeling actors and mal-actors against which a protocol ought to be secure; discussing verification and testing methods and their limitations by ensuring that the specified protocol satisfies stated security objectives in the presence of intended mal-actions; designing a medium-sized protocol that satisfies a specification of requirement; using existing tools to specify and verify security protocols; and testing protocols for satisfying their security objectives.

764 Security Experimentation (3:3:0) Prerequisite: ISA 562, ISA 564, ISA 674, or permission of instructor. This course teaches how to conduct security experiments and how to empirically demonstrate, validate, and evaluate security vulnerabilities, exploits, and defense mechanisms. By the end of the course, students will gain a deeper understanding and first-hand experience on capturing packets of interests from both wired and wireless networks, and replaying interested network flows and how shellcode various buffer overflows attacks, worms, spyware, rootkits, botnets, anonymous communication and traceback mechanisms work.

765 Database and Distributed Systems Security (3:3:0) Prerequisites: INF 614 and ISA 562, or permission of instructor. Science and study of methods of data protection: discretionary and mandatory access controls, secure database design, data integrity, secure architectures, secure transaction processing, information flow controls, inference controls, and auditing. Covers security models for relational and object-oriented databases; security of databases in distributed environments; statistical database security; and survey of commercial systems and research prototypes.

767 Secure Electronic Commerce (3:3:0) Prerequisites: ISA 562 and 656, or permission of instructor. Cryptography review, cryptographic protocols, secure electronic transactions, public key certificates and infrastructures, authentication and authorization certificates, secure credential services and role-based authorization, mobile code security, security of agent-based systems, electronic payment systems, intellectual property protection, secure time stamping and notarization.

785 Digital Forensics (3:3:0) Prerequisites: ISA 562, CS 571 and CS 555 or permission of instructor. This course provides an in-depth introduction to the principles, techniques and tools in digital forensics. While it covers current established techniques, tools and practice of digital forensics, it...
focuses on the following fundamental aspects of digital forensics: (1) fundamental and practical limitations of current forensics techniques; (2) countermeasures against digital forensics; and (3) open problems in current digital forensics.

796 Directed Readings in Information Security (3:3:0)
Prerequisite: graduate standing in information security and assurance, with at least 12 prior credits in MS. To register, students must complete independent study form, available in department office. It must be initiated by faculty sponsor and approved by department chair. Research and analysis of contemporary problem in information security. Prior approval required by faculty sponsor who supervises student’s work. Written report also required. Maximum 6 credits may be earned.

797 Advanced Topics in Information Security (3:3:0)
Prerequisite: permission of instructor. Special advanced topics not occurring in regular ISA sequence. May be repeated for credit when distinct offerings of course differ in subject.

798 Research Project (3:3:0)
Prerequisite: 18 credits applicable toward MS. To register, students must complete independent study form, available in department office. It must be initiated by faculty sponsor and approved by department chair. Research project chosen under guidance of full-time graduate faculty member, resulting in written technical report. Prior approval required by faculty sponsor who supervises student’s work.

799 Thesis (6:3:0)
Prerequisite: 18 credits applicable toward MS or permission of instructor. To register, students must complete independent study form, available in department office. It must be initiated by faculty sponsor and approved by department chair. Original or expository work chosen and completed under supervision of graduate faculty member, which results in technical report accepted by three-member faculty committee. Report must be defended in oral presentation.

Information Systems (INFS)

Computer Science

310/IT 308 Program Structure and Design for Business Applications (3:3:0)
Prerequisite: computer programming course in high school or college. Teaches structured programming and design using high-level language. Focuses on program design, coding, debugging, and documentation.

311/IT 314 Database Management (3:3:0)
Prerequisite: computer programming course in high school or college. Studies logical and physical characteristics of data and their organization in computer processing. Emphasizes data as resource in computer applications; examines database management system (DBMS) software and its design, implementation, and use.

312 Computer Architecture and Operating Systems (3:3:0)
Prerequisite: INFS 310 or CS 112. Introduces computing system hardware components, architecture, organization, and operating system software concepts. Provides basic experience in assembly language programming for modern microprocessors, and examines techniques for system evaluation and selection.

315 High-Level Programming Languages (3:3:0)
Prerequisite: INFS 310 or CS 112. Studies structure and application of high-level languages by stressing design and implementation of data types, data structures, and algorithms. Includes computing lab. Credit does not count toward requirements for major in computer science.

316 Software Systems Engineering (3:3:0)
Prerequisite: INFS 310 or CS 211. Studies programming environments, including software tools and control of software development for large information systems engineering projects.

462/IT 462: Information Security Principles (3:3:0)
Prerequisite: IT 212 or equivalent. Studies security policies, models, and mechanisms for secrecy, integrity, availability and usage controls. Topics include models and mechanisms for mandatory, discretionary and role-based access controls; authentication technologies; control and prevention of viruses and other rogue programs; common system vulnerabilities and countermeasures; privacy and security policies and risk analysis; intellectual property protection; and legal and social issues.

498 Independent Study in Information Systems Engineering (1–3:0:0)
Prerequisite: 60 credits; must be arranged with instructor and approved by department chair before registering. Directed self-study of special topics of current interest in INFS. May be repeated for maximum 6 credits if topics substantially different.

499 Special Topics in Information Systems Engineering (3:3:0)
Prerequisites: 60 credits, and permission of instructor. Topics of special interest to undergraduates. May be repeated for maximum 6 credits if topics are substantially different.

501 Discrete and Logical Structures for Information Systems (3:3:0)
Prerequisites: one programming course, and 6 credits of college math. Relational database management systems. Covers logical and physical database design, query languages, and databases programming, and examines commercial systems. Computing lab.

514 Database Design and Management (3:3:0)
Prerequisites: one programming course, and 6 credits of college math. Relational database management systems. Covers logical and physical database design, query languages, and databases programming, and examines commercial systems. Computing lab.

515 Computer Organization (3:3:0)
Prerequisite: undergraduate courses or equivalent knowledge in structured programming in a high-level language. Computer hardware organization: arithmetic and logical operations; combinational and sequential logic; machine representation of numbers, characters, and instructions; addressing techniques; microprogramming; reduced instruction set computers. Also covers symbolic assembly language and interrupts and input/output organization. Credit cannot be applied to any graduate degree in IT&E or the BS degree in computer science.

519 Program Design and Data Structures (3:3:0)
Prerequisite: SWE 510 or equivalent knowledge of object-oriented programming in Java. Studies fundamentals of data structures and algorithms applied in programming solutions to application problems. Stresses programming in modern high-level language. Laboratory required. Credit cannot be applied to any graduate degree the Volgenau School.
524 Database Management Essentials (3:3:0) Prerequisites: one programming course and six credits of college math. Relational database management systems. Covers logical and physical database design; query languages and database programming; and examines commercial systems. Computing lab. This course does not count towards MS programs offered in the Computer Science Department.

565 Database and Distributed System Security Principles (3:3:0) Prerequisite: permission of instructor. Introduces information and distributed system security fundamentals. Topics include notions of security, threats and attacks; legal-ethical issues; security evaluation; data models, concepts, and mechanisms for database and distributed system security; inference in statistical databases; basic issues in operating system, application and network security.

612: Principles and Practices of Communication Networks (3:3:0) Prerequisites: INFS 501, 515, 519, and SWE 510, or equivalent. Introduces principles of computer networks and applications to Internet. Discusses details of layering, protocols, performance, resource allocation, management, security and other contemporary issues related to networks. Examples of course material are protocols such as HTTP(S), DNS, TCP/IP, RSVP, SNMP, algorithms such as Dijkstra’s link state routing, security measures such as firewalls and encryption, principles behind them and analysis of performance. No substitutions can be made for this class.

614 Database Management (3:3:0) Prerequisites: INFS 501, 515, 519, and SWE 510, or equivalent. Introduces database systems, emphasizing study of database models and languages and practice of database design and programming. Topics include Entity-Relationship model, relational model and its formal query languages, SQL, theory of relational database design, and object-oriented and logic-based databases. Requires computing lab. No substitutions can be made for this class.

622 Information Systems Analysis and Design (3:3:0) Prerequisites: INFS 501, 515, and 519, or equivalent. Integration of computing technologies, systems analysis, system design practices, and management criteria in the design of large-scale information management and decision support systems. Includes cases, computing lab.

623 Classical and Web Information Retrieval (3:3:0) Prerequisites: INFS 501, 515, and 519, or equivalent. Study of models and methods for storage and retrieval of unstructured information, such as documents. Topics include information retrieval models, automatic indexing, document clustering, statistical thesauri, search techniques, performance measurement, answer visualization, and search engines for retrieval from the web.

640 Introduction to Electronic Commerce (3:3:0) Prerequisites: INFS 501, 515, and 519; and SWE 510 or equivalent. Studies electronic commerce from both managerial, technical perspectives. Topics include e-commerce models and concepts; Internet and web protocols and infrastructure; e-commerce marketing and branding; security protocols and standards; e-commerce payment systems; and case studies of business-to-consumer, business-to-business, consumer-to-consumer, and e-government.

650 Development Frameworks for Information Systems Applications (3:3:0) Prerequisites: INFS 501, 515, and 519; and SWE 510 or equivalent. Principles and methods of building commercial applications within high-level framework. Tools for system construction are considered, along with variety of programming languages, component integration, and design methods. Applications investigated through program construction in varied settings, such as database systems, graphical user interfaces, and prototyping. Requires programming projects.

697 Topics in Information Systems (1–6:1–6:0) Prerequisite: permission of instructor. Presents special topics in information systems not occurring in regular INFS sequence. May be repeated for credit when distinct offerings of course differ in subject.

740 Database Programming for the World Wide Web (3:3:0) Prerequisite: INFS 614. Information systems accessible through web and Internet are becoming prevalent. Course focuses on technologies and industry standards for accessing and manipulating persistent data that are suitable for web applications.

750 Application Frameworks for Windowed Information Systems (3:3:0) Prerequisites: INFS 650. Studies use of object-oriented visual application frameworks in building event-driven windowed systems. Topics include windowed systems as event-driven systems; central architecture of windowed systems and encapsulation of windowed architectures by object-oriented frameworks; and analysis and design of windowed applications. Illustrates various features of visual application frameworks using variety of information systems applications. Programming projects.

755 Data Warehousing and Mining (3:3:0) Prerequisite: INFS 614 or equivalent. Covers techniques for designing and maintaining large data warehouses. Topics include OLAP, star schemas, data integration, data cleaning, maintenance of views in presence of updates to sources, and query processing of warehouses. Second part of course focuses on mining data from warehouses. Topics include data mining techniques such as classification, clustering, association rules, mining of time-series and complex data. Emphasizes scalability over large data sets.

760 Advanced Database Management (3:3:0) Prerequisite: INFS 614. Study of advanced database models and languages, database design theory, transaction processing, recovery, concurrency, distributed database, and security and integrity. Discusses recent developments and research directions.

764 Object-Oriented Database Systems (3:3:0) Prerequisite: INFS 614 or CS 650, or permission of instructor. Knowledge of object-oriented programming language such as C++ highly desirable. Studies concepts and systems of object-oriented (OO) databases. Topics include OO design, data models, query languages, new data types, and implementation. Also includes detailed case study and project performed on OO-DBMS. Surveys various prototypes, commercially available systems, and emerging standards.

770 Knowledge Management for E-Business (3:3:0) Prerequisite: INFS 622 or permission of instructor. Addresses knowledge management (KM) from managerial, technical viewpoints in context of large organizations doing business over web and Internet. Topics include KM life cycle for knowledge creation, aggregation, dissemination, and sharing; ontology modeling, design, and engineering; role of standards such as XML, RDF, web services, and semantic web for e-business; business rules and reasoning engines; and digital rights management for e-business.
772 Intelligent Agents and the Semantic Web (3:3:0)  
Prerequisite: INFS 614. Course covers the role of intelligent agents in cooperating to access, harvest, sift and winnow information and knowledge from the Semantic Web. Topics include agent architectures, practical reasoning and deductive agents, Beliefs-Desires-Intentions (BDI) framework for agent reasoning, commitments and actions; Semantic Web ontology languages, description logics, reasoning and rule languages; agent communication languages, protocols and standards.

774/IT 874 Enterprise Architecture (3:3:0)  
Prerequisite: INFS 622 or permission of instructor. This course presents the basic concepts and methodologies for the discipline known as Enterprise IT Architecting within a framework, structure, and methodology. Enterprise IT Architecting is a necessary step for designing and developing a system of information systems. It includes the definition of the business, work, functional, information and technical perspectives. As such, it is the enabling approach for the system development process that builds complex information systems.

785 Data Mining for Homeland Security (3:3:0)  
Prerequisite: INFS 755. Covers analytic techniques for investigative analysis. Topics include small world graphs as way to model groups and organizations, relational data mining with emphasis in predictive models, alias discovery techniques, and profiling.

790 Information Systems Policy and Administration (3:3:0)  
Prerequisite: completion of all core courses. Should be taken in final semester before graduation. Capstone course integrating technical and executive policy issues of information systems. Examines critical executive issues through case studies and comprehensive individual project. No substitutions can be made for this class.

795 Special Topics in Data Mining Applications (3:3:0)  
Prerequisite: INFS 755. Focuses on interdisciplinary applications of data mining. Topics selected from following: web and text data mining, e-commerce, bioinformatics, security and intelligence analysis, data mining of economical data. Each topic analyzed in depth; state-of-the-art techniques in application of data mining to field extensively covered.

796 Directed Readings in Information Technology (3:3:0)  
Prerequisite: graduate standing in information systems, with at least 12 prior credits in MS. To register, students must complete independent study form available in department office. It must be initialed by faculty sponsor and approved by department chairman. Research and analysis of contemporary problem in information system development. Prior approval required by faculty sponsor who supervises student’s work. Written report required. Maximum 6 credits may be earned.

797 Advanced Topics in Information Systems (3:3:0)  
Prerequisite: permission of instructor. Special advanced topics not occurring in regular INFS sequence. May be repeated for credit when distinct offerings of course differ in subject.

798 Research Project (3:3:0)  
Prerequisite: 18 credits applicable toward MS. To register, students must complete independent study form available in department office. It must be initialed by faculty sponsor and approved by department chairman. Research project chosen under guidance of full-time graduate faculty member, resulting in written technical report. Prior approval required by faculty sponsor who supervises student’s work.

799 Thesis (1–6:0:0)  
Prerequisite: 18 credits applicable toward MS. To register, students must complete independent study form available in department office. It must be initialed by faculty sponsor and approved by department chairman. Original or compilatory work evaluated by a committee of three faculty members.

Information Technology (IT)  
The Volgenau School of Information Technology and Engineering

101 Introduction to Information Technology (3:3:0)  
Introduces fundamental concepts that provide technical underpinning for state-of-the-art applications. Presents perspective on range of information technology. Historical development and social implications of efforts in information technology integral to course.

103 Introduction to Computing (3:1:2)  
Prerequisite: knowledge of high school algebra. Through lecture and laboratory practice, introduces nature and uses of computers. Studies widely used applications including word processing, spreadsheets, databases, and presentation software; laboratory projects required in these areas. Additional lectures address computer systems organization, computer communications and networking, legal and ethical considerations (including privacy, intellectual property, and appropriate uses of technology), effective presentation of information, computer security, artificial intelligence, and future of computing and the Internet.

108 Programming Fundamentals (3:2:1)  
Prerequisite: IT 103. Introduces programming fundamentals and presents software development process. Students learn to write programs in high-level, object-oriented language.

207 Applied IT Programming (3:3:0)  
Prerequisite: IT 108 or CS 112, or permission of instructor. Building on fundamentals of structured and object-oriented programming, this course covers client and server side scripting languages and an SQL database management system. Students will use open source software tools to develop database-enabled web applications.

208 Program Design and Data Structures (3:3:0)  
Prerequisite: IT 108, or permission of instructor. Fundamentals of data structures and analysis of algorithms. Large programs written in a modern, high-level programming language. Stresses abstraction, modular design, code reuse, and correctness.

212 Computer Hardware Fundamentals (3:3:0)  
This course explains the basic principles of how computers work. It provides a comprehensive understanding of the essential components associated with computers with a focus on PCs. Topics include history of computers, the microprocessor, motherboard, memory, graphics and sound adapters, input and output devices, and storage media. An overview of operating systems and other software, as well as the various methods used to connect computers to each other and the Internet, are presented. The course also addresses recent advances in computer architectures and computer hardware and how they affect computer performance. Presentations of actual hardware are included so that students can gain experience in identifying the various internal and external components of a PC.
213 Multimedia and Computer Graphics (3:2:1) Prerequisites: IT 103 and 108. Through lecture, class demonstration, class discussion, and hands-on lab experience, introduces multimedia and web computer graphics. Focuses on development of web-enabled multimedia applications from practical business perspective. Introduces and discusses technological, aesthetic, and human factors.

214 Database Fundamentals (3:3:0) Prerequisite: IT 103. Introduces relational database management systems and their applications. Students learn about types of databases, data modeling, designing relational databases, normalization and relationships, and recent trends in database management, including web applications. Students apply learned concepts using modern database application to create tables, queries, forms, and reports.

223 Information Security Fundamentals (3:3:0) Prerequisite: IT 103 or equivalent. Students cannot receive credit for both IT 221 and 223. Introduces concept of information security. Discusses need for organizational policy to define required services such as confidentiality, authentication, integrity, nonrepudiation, access control, and availability; and mechanisms to implement those services. Covers different types of security including physical security, computer security, and network security; common threats to and attacks against information systems, including accidental damage, identity theft, malicious software, and “spam”; and defensive measures.

300 Modern Telecommunications (3:3:0) Prerequisites: IT 101 or permission of instructor. Comprehensive overview, including current status and future directions. Topics include review of evolution of telecommunications; voice and data services; basics of signaling, digital transmission, network architecture, and protocols; local area, metropolitan, and wide area networks and narrow band ISDN; asynchronous transfer mode and broadband ISDN; and satellite systems, optical communications, cellular radio, personal communications systems, and multimedia services. Provides examples of real-life networks to illustrate basic concepts and gain further insight.

304 IT in the Global Economy (3:3:0) Prerequisite: IT 103 or equivalent. Students cannot receive credit for both IT 304 and CS 306. Explores how IT changed nature of society and contributed to evolution of global economy. Examines changing nature of work, education, and communication, and ethical issues such as intellectual property rights, computer-related crime, privacy concerns, and public policy issues.

308/INF5310 Event-Driven Programming (3:3:0) Prerequisite: IT 108 or CS 112 or permission of instructor. Building on the programming concepts covered in IT 108, this course focuses on graphical user interfaces. Students will design, develop, and document event-driven programs using an object-oriented language.

314/INF5 311 Database Management (3:3:0) Prerequisite: computer programming course in high school or college. Studies logical and physical characteristics of data and their organization in computer processing. Emphasizes data as resource in computer applications, and examines database management system (DBMS) software and design, implementation, and use.

331 Web I: Web Development (3:3:0) Prerequisites: IT 103, 207, and 213; or permission of instructor. Introduces the principles and techniques necessary for successful client-side web development. Topics such as XHTML, Cascading Style Sheets, JavaScript, DOM, XML, RSS, AJAX are presented. Students will learn to develop attractive and interactive web pages and applications and use client-side web-scripting languages to solve problems both with a text editor and more powerful WYSIWYG HTML editor.

332 Web Site Administration (3:3:0) Prerequisites: IT 331 and 341, or permission of instructor. Covers web server administration and web security, property sheets related to these sites and security features, hosting multiple web sites on same web server, associated performance issues, and application-level password security.

341 Data Communications and Network Principles (3:3:0) Prerequisites: IT 101, 108, and 212, and MATH 108; or permission of instructor. This course focuses on the primary aspects of data communications networking, including a study of the Open Systems Interconnection (OSI) and Internet models. Students will start at Layer 1 with the study of various Layer 1 interface and cabling configurations. They will construct and test various cables with connectors. Moving up the OSI layers, students will focus on IP network addressing, network design, and enhanced hands-on router and port configurations. They will also learn security protocols and do static routing, EIGRP, RIPv2, and OSPF configurations. Students will also develop Access Control Lists (ACLs) used in modern day networks as a prime method of controlling network security and implement the ACLs on laboratory networks. Concentration on layers 4 through 7 include studying TCP, UDP, data reliability, and error correction methods, on the ladder to the FTP, HTTP, SMTP, DNS, and TFTP protocols of Layer 7. This course is 50 percent lab work of configuration of routers and network design, implementation, and testing.

342 Operating Systems Fundamentals (3:3:0) Prerequisites: IT 101, 108, 212, and 341, or permission of instructor. Practices and procedures for installing and configuring modern operating systems, including user accounts, file, print, and terminal servers, mobile computing, and disaster recovery. Through practical lab sessions, students receive real-world experiences with multiple operating systems.

343 IT Resources Planning (3:3:0) Prerequisite: junior standing in BS in information technology program, or permission of instructor. Provides essential strategies and procedures for planning, organizing, staffing, monitoring, and controlling design, development, and production of system to meet stated IT-related need in effective and efficient manner. Fulfills writing-intensive requirement for BS in Information Technology.

353 Information Defense Technologies (3:3:0) Prerequisites: IT 101 (or equivalent), IT 103 (or equivalent), and IT 223. This course will examine and assess the role of information technology as a tool of warfare and civil defense. Topics will be discussed from both defensive and offensive perspectives and will include asset tracking, asymmetric warfare, network centric warfare, physical attacks, cyberterrorism, espionage, psycop, reconnaissance and surveillance, space assets, and applications of GPS and cryptographic technology. Students will research and write about the social, ethical, and political effects of such technology.

357 Computer Crime, Forensics, and Auditing (3:3:0) Prerequisites: IT 103 and 223. Students cannot receive credit
for both IT 222 and 357. Covers computer crime, relevant laws, agencies, and standards. Presents auditing, logging, forensics, and related software. Explores legal principles such as chain of evidence, electronic document discovery, eavesdropping, and entrapment. Students get hands-on experience with forensics tools.

362/STAT 362 Introduction to Computer Statistical Packages (3:3:0) Prerequisite: IT 250/STAT 250 or equivalent. Covers use of computer packages in statistical analysis of data. Topics include data entry, checking, and manipulation; and use of computer statistical packages for regression and analysis of variance.

366 Network Security I (3:3:0) Prerequisites: IT 108 or equivalent, and IT 223. Examines information security services and mechanisms in network context. Topics include symmetric and asymmetric cryptography; message authentication codes, hash functions and digital signatures; digital certificates and public key infrastructure; access control including hardware and biometrics; intrusion detection; and securing network enabled applications including e-mail and Web browsing.

413 Digital Media Editing (3:3:0) Prerequisite: IT 213. Examines three areas of digital media editing—tools for editing, content and logic decision process, and information technology used by major corporations for development and distribution—through video examples from entertainment industry and corporate productions as well as hands-on editing experience.

414/INF 414 Advanced Database (3:3:0) Prerequisite: IT 214 or equivalent. Explores advanced concepts of database modeling using enterprise-level database management system. Topics include object-oriented database processing, data integrity, transactions, locks, concurrency control, backup, recovery, optimization, data mining, Internet databases, server programming, and security.

415 Information Visualization (3:3:0) Prerequisite: IT 213. Provides an overview of information visualization applications in intelligence analysis, decision support systems, and network monitoring. Covers human factors, human interface with information, and current and future trends in information visualization. Students also learn to develop a rudimentary visualization application.

431 Web II: Advanced Web Development (3:3:0) Prerequisites: IT 108 and 331, or permission of instructor. Continuation of Web I. Rapid Application Development (RAD), client- and server-side scripting for user and database interaction. Students build skills in web application development using different technologies and frameworks. Topics such as session tracking/cookie management, privacy and integrity issues, and web services are also covered.

435 Applied Knowledge Technologies for the Semantic Web (3:3:0) Prerequisites: IT 331 or permission of instructor. Methods, languages, and tools related to the knowledge technologies for semantic web from an applied perspective. Combines survey lectures with indepth presentation of relevant issues and hands-on experience with existing technologies.

441 Network Servers and Infrastructures (3:3:0) Prerequisites: IT 341, MATH 108 and either 112 or 125, and junior-level standing; or permission of instructor. Covers IP networking concepts and practices for using DHCP, DNS, secure communication, routing, remote address services, web servers, and network connectivity between operating systems. Students learn TCP/IP, routing architecture, and understand application level services used in Internet.

Through networking lab sessions, students focus on using switches and routers connected in LANs and WANs. Term project.

445 Advanced Networking Principles (3:3:0) Prerequisite: IT341. This course focuses on Layer 2 and 3 of the OSI model and WAN technologies, Frame Relay and ISDN, complex router configurations of Variable Length Subnet Masking (VLSM), Classless Inter-Domain Routing (CIDR), Address Translation (NAT), Dynamic Host Configuration Protocol (DHCP), and study of Network Management Systems available for Data Communications Networks. Layer 2 involves Ethernet-switching components, including detailed hands-on configuration covering all aspects of switches using the command-line interface method.

455 Wireless Communications and Networking (3:3:0) Prerequisites: IT 300 and IT 341. This course covers the fundamental principles underlying wireless communications and networking. Topics include wireless transmission principles, protocols, satellite communications, cellular wireless networks, cordless systems, the wireless local loop, mobile IP, and wireless networking technologies, including IEEE 802.11 and Bluetooth standards.

462/INF 462 Information Security Principles (3:3:0) Prerequisite: IT212 or equivalent. Studies security policies, models, and mechanisms for secrecy, integrity, availability, and usage controls. Topics include models and mechanisms for mandatory, discretionary, and role-based access controls; authentication technologies; control and prevention of viruses and other rogue programs; common system vulnerabilities and countermeasures; privacy and security policies and risk analysis; intellectual property protection; and legal and social issues.

466 Network Security II (3:3:0) Prerequisites: IT 108 or equivalent, IT 223, 341, and MATH 112 or 125; or permission of instructor. Detailed study of certain symmetric and asymmetric cryptographic schemes; analysis of network data (including “packet sniffing”); security at different network layers (including IPSec, SSL/TLS, Kerberos); and secure e-commerce. Teaches principles of designing and testing secure networks, including use of network partitioning, firewalls, intrusion detection systems, and vulnerability assessment tools.

468 Cyber Security Capstone (4:4:0) Prerequisites: IT 108 or equivalent, IT 223, 341, and MATH 112 or 125; or permission of instructor. In-lab course on defending computer networks against accidental or deliberate damage. Examines hardening tools including firewalls, intrusion detection systems and network scanning devices; and protection against denial of service attacks, e-mail bombs, buffer overflow attacks and root kit attacks. Students harden a network and protect it against attack. Discusses ethical, legal implications of network attacks.

471 Applications of Digital Technologies (3:3:0) Prerequisites: IT 208 and 212, and high school algebra. Technologies and applications of digital components used in modern IT systems. Topics include microelectronics, including chip manufacturing and chip design, microprocessors on a chip, other digital components such as light emitting diodes (LED) and light sensor infrared technology, and
481 Concepts of Multimedia Processing and Transmission (3:3:0) Prerequisites: IT 108 and 213, or permission of instructor. Fundamentals of signal and image processing, including algorithms for signal processing that have applications to multimedia (voice and streaming video applications). Presents topics in voice coding and recognition, CD and DVD technology, streaming video, WANs and LANs, and videoconferencing technology.

484 Voice Communications Technologies (3:3:0) Prerequisites: IT 300 and IT 341. Examines current and emerging technologies for transmission of voice signals over telecommunications systems. Highlights significant differences between the requirements for voice and other forms of data. Topics provide a balance between traditional voice technologies and those that use data networks. Real-world implementations are analyzed to determine reliability, quality, and cost effectiveness. Includes lab experiments with analog and digital technologies.

488 Fundamentals of Satellite Communications (3:3:0) Prerequisites: MATH 108, and IT 300 and 341; or permission of instructor. Offers appreciation for space environment and implications for space-based operations. Discusses engineering, scientific, political, and legal aspects of space for exploration and exploitation. Presents different uses of space communications and future trends.

492 Senior Design Project I (3:3:0) Prerequisites: senior standing in BS information technology program, IT 343, and completion or concurrent enrollment in all other required general education courses. First of two capstone courses. Students work in teams on project proposals that demonstrate preparedness as practicing IT professional. Students must prepare business plan, software and hardware requirements, schedule and organizational plan, documentation plan, quality control, and testing strategy. Environmental impact and social implications of project must be evaluated. Students must show they have researched relevant laws, treaties, and ethical implications. Oral and written reports evaluated during and at completion of proposal. Final presentation made before business panel.

493 Senior Design Project II (4:4:0) Prerequisite: senior standing in BS in information technology program, and IT 492 taken previous semester. Second of two capstone courses. Students work in teams to complete projects that demonstrate preparedness as practicing IT professional. Includes ethical challenges. Status reports and engineering notebooks evaluated during project. Required readings include case studies. Teams, with contributions by each individual, present final written reports and final presentations before review panel comprising at least two business leaders.

495 Turning Ideas into Successful Companies (3:3:0) Prerequisite: senior standing or permission of instructor. This is a practical course in entrepreneurship. Each class session will focus on specific topics associated with building a business: team creation, business planning, market research, product development, financial planning, funding, people and organizations, competitive strategies, operations, growth and exit strategies, and more. Students will have reading assignments and will participate in competitive team assignments.

498 Independent Study in Information Technology (1–3:0:0) Directed self-study of special topics of current interest in IT. Topics must be arranged with instructor and approved by department chair before registering. Maximum 3 credits.

499 Special Topics in Information Technology (1–3:0:0) Prerequisites: permission of instructor; specific prerequisites vary with nature of topic. Topics of special interest to undergraduates. May be repeated for maximum 6 credits if topics are substantially different.

500 Quantitative Foundations for Information Systems Analysis (3:3:0) Prerequisite: MATH 108 or equivalent. Provides common background in basic quantitative areas focused on decision making, information processing, and telecommunications. Topics include review of precalculus, introduction to matrix algebra, problems in optimization, and introduction to probability and statistics. Does not fulfill any VSITE graduate degree requirement.

557 Introduction to Network Science (3:3:0) Prerequisites: bachelor’s degree in math, science, or engineering; Math 114 and 351. First of a sequence providing broad treatment of principles and technologies of modern telecommunications, combined with computing, that create computer networks. Provides sufficient breadth and depth to allow technical professional to function as effective entry-level network engineer. Includes modules in telecommunication principles, telecommunications carrier systems, data communications, local area networks, and wide area network protocols.

665 Managing Information Technology Programs in the Federal Sector (3:3:0) This case study-grounded seminar introduces student team members to the unique complexities of the federal sector, including congressional and executive branch oversight and the reporting, justifying, and sustaining annually very large IT programs.

685 Capstone Seminar (3:3:0) Faculty-facilitated, student teams analyze business cases from perspectives of IT, management and analysis, as well as leadership and ethics.

688 Pattern Recognition (3:3:0) Prerequisites: CS 580 or equivalent. Explores statistical pattern recognition and neural networks. Pattern recognition topics include broad treatment of classification and decision theory, density (parametric and non-parametric) estimation, linear and nonlinear discriminant analysis, dimensionality reduction, feature extraction and selection, mixture models and EM, and vector quantization and clustering. Neural networks topics include feed-forward networks and back-propagation, self-organization feature maps, and radial basis functions. Course emphasizes experimental design, applications, and performance evaluation.

735/OR 735 Advanced Stochastic Simulation (3:3:0) Prerequisite: OR 635 or permission of instructor. Special topics and recent developments in Monte Carlo simulation methodology for discrete-event stochastic systems. Contents vary; possible topics include statistical analysis of simulation output data, random number and random ariate generation, variance reduction techniques, sensitivity analysis and optimization of simulation models, distributed and parallel simulation, object-oriented simulation, and specialized applications. May be repeated for credit when topics are distinctly different.

746/CSI 776 Calculus of Random Signals (3:3:0) Prerequisites: STAT 652 or CE 630 or 632. For graduate students...
in information technology, electrical engineering, mathematics, operations research, and statistics. Introduction to modern theory of stochastic calculus such as stochastic integrals, martingales, counting processes, diffusion processes, and Ito-type processes in general. Presents applications of methods to engineering and biology. Focuses on developing necessary concepts rather than mathematical proofs.

750/CS 750 Theory and Applications of Data Mining (3:3:0) Prerequisite: CS 681, 687, or 688; or permission of instructor. Concepts and techniques in data mining and their multidisciplinary applications. Topics include databases; data cleaning and transformation; concept description; association and correlation rules; data classification and data mining in advanced database systems including text, audio and images; and emerging themes and future challenges. Term project and topical review.

758/CS 758 Networked Virtual Environments (3:3:0) Theory and practice of advanced distributed simulation via networks using highly realistic graphic environments. Includes networked virtual environment principles, networking technology for distributed simulation, networked multimedia concepts, virtual simulation concepts, efficiency and performance issues, and online conferencing and virtual classrooms. Requires term project.

776/CSI 778 Real Analysis and Statistics (3:3:0) Prerequisite: STAT 652; or ECE 620, 621, and 630. Advanced calculus and linear algebra needed for doctoral work in statistics and related fields. Topology, vector spaces, atrices, continuity, differentiation, sequences and series of real numbers and real-valued functions, Riemann and Riemann-Stieltjes integrals, and multidimensional calculus. Presents applications in probability and statistics including response surface methodology.

778/CS 778 Biometrics (3:3:0) Prerequisite: CS 688 or permission of instructor. Basic principles and methods for automatic authentication of individuals. Technologies include face, fingerprint and iris recognition, and speaker verification. Additional topics cover multimodal biometrics, system design, performance evaluation, and privacy issues. Term project required.

796, 797 Directed Reading and Research (1–3:0:0) Reading and research on specific topic in information technology under direction of faculty member. May be repeated as needed.

803, 804/CS 803, 804 Doctoral Tutorial in Information Technology (3:3:0) Individualized intensive study of particular aspects of information technology. May be repeated as needed.

809/CS 809 Scaling Technologies for E-business (3:3:0) Prerequisites: at least one operating systems and one networking course, and admission to VSITE doctoral program. From quantitative point of view, discusses characteristics of most important technologies used to support implementation of e-business sites. Includes topics such as hardware and software architectures of e-business sites, authentication, and payment services, understanding customer behavior, workload characterization, scalability analysis, and performance prediction. Term paper and project required.

811/CS 811 Research Topics in Machine Learning and Influence (3:3:0) Prerequisites: CS 680 and 681, or permission of instructor. Presentation of unifying principles that underlie diverse methods, paradigms, and approaches to machine learning and inference. Reviews most known learning and inference systems, discusses strengths and limitations, and suggests most appropriate areas of application. Students get hands-on experience by experimenting with state-of-the-art learning and inference systems, and working on projects tailored to research interests.

814/CSI 801 Foundations of Computational Science (3:3:0) Prerequisite: CS 735 or equivalent. Investigation methods for scientific questions in presence of teraops computation, gigabyte memory, and gigabit transmission. Mapping of mathematical models to parallel algorithm and architectures, associated data structures, languages, operating systems, networks, and global change demonstrate important scientific accomplishments enabled by computation. Working in teams with scientists and information technologists, students learn mathematical models, abstract algorithms, and concrete algorithms; and conduct experiments and simulations.

815/CS 815 Parallel Computation (3:3:0) Prerequisite: CS 635 or CSI 801. Topics illustrating contemporary thinking on architectures, application, development environments, algorithms, operating system related issues, language requirements, and performance for parallel computation.

817/CS 817 Neural Networks (3:3:0) Prerequisite: CS 688; or permission of instructor. Study of adaptive and competitive principles used in distributed and parallel computation. Topics include background from statistics, control, adaptive signal processing, and neurosciences. Basic models, such as those suggested by Grossberg, Hopfield, and Kohonen, are discussed in terms of analytical characteristics and applications. Neural networks assessed as universal approximators. Presents connections to fuzzy approach established through radial basis function approach. Presents applications to perception, knowledge-based systems, and robotics.

818/CS 818 Topics in High Performance Computer Systems Discussion of current research topics in computer systems. Topics vary according to faculty interest. Possible topics include peer-to-peer computing, high-performance distributed computing, sensor and ad hoc networks, autonomic computing, virtualization, and web services and middleware.

819 Computational Models for Probabilistic Inference (3:3:0) Prerequisite: SYST 664 or 652. Graphical models for encoding conditional independence assumptions in a multivariate discrete probability distribution. Includes computational methods for updating probabilities when evidence is observed on some variables in model. Algorithms for finding most probable instantiation of network. Applications in expert systems and decision analysis.

821 Software Engineering Seminar (3:3:0) Prerequisite: SWE 621. Study of application of software engineering principles, design methods, and support tools through real-life problems extracted from faculty and industry projects. May be repeated with change in topic.

822/CS 732 Software Maintenance and Reuse (3:3:0) Prerequisites: CS/SWE 621 or equivalent, data structures, principles of modern programming, and discrete mathematics; or permission of instructor. Perfective maintenance,
reuse of software components and patterns, evolving software systems, principles of object-oriented analysis and development. Presents issues regarding technologies supporting pervasive software maintenance and reuse.

823 Software for Critical Systems (3:3:0) Prerequisites: SWE 620 and STAT 534. Study of software for systems in which failure can be catastrophic. Presents techniques to construct and analyze software for critical applications and examination of inherent limitations of such techniques, and interaction between techniques used during development and behavior of software during operation. Topics include tolerance of software faults, design redundancy, data redundancy, software safety, formal methods, statistical testing, design for analyzability, and design for testability.

824 Program Analysis for Software Testing (3:3:0) Prerequisite: CS 540 or CS/SWE 637, or permission of instructor. Different methods for analyzing software, primarily for purpose of testing. Analysis techniques, specific algorithms, tools, and applications. Goals are to explore current research issues, learn how to build software analysis tools, and understand how these techniques can be applied to software development activities. Focuses on applications for testing software, including automatic test data generation, object-oriented testing, and testing client-server applications. Also considers analysis techniques for other software-related activities such as maintenance, reuse, object-oriented development, metrics, and optimization.

825/SWE 825 Special Topics in Web-based Software (3:3:0) Prerequisite: SWE 642 Software Engineering for the World Wide Web. Advanced topics in specifying, designing, modeling, developing, deploying, testing, and maintaining software written as web applications and web services. May be repeated with change in topic.

830/ECE 734 Detection and Estimation Theory (3:3:0) Prerequisites: ECE 528, or permission of instructor. Introduction to detection and estimation theory with communication applications. Topics include M-hypotheses, Bayes, minimax, Neyman-Pearson criterion, detection of signals in AWGN and ACGN, Bayes estimation, ML estimation of signal parameters in AWGN and ACGN, estimation of Gaussian waveforms in Gaussian noise, linear MSE estimation, and Kalman and Wiener filters.

832/ECE 735 Data Compression (3:3:0) Prerequisite: ECE 528, or permission of instructor. In-depth study of lossy data compression techniques based on vector quantization with application to speech, image, and video signals. Covers vector quantization of both signal’s waveform and commonly used parametric statistical models such as the autoregressive model. Topics include scalar quantization, predictive quantization, transform coding, entropy coding, and variations on basic vector quantization such as constrained vector quantization and variable rate vector quantization.

833/ECE 739 Satellite Communication (3:3:0) Prerequisite: ECE 631. Introduces theory and applications of modern satellite communications. Topics include satellite channel characterization, channel impairment and transmission degradation, link calculations, modulation, coding, multiple access, broadcasting, random access schemes, demand assignment, synchronization, satellite switching and onboard processing, integrated service digital satellite networks, and satellite transponder, ground stations, packet switching, and optical satellite communications.

834/ECE 742 Telecommunications Networks (3:3:0) Prerequisites: ECE 528 and 642, or permission of instructor. Open systems interconnection reference model, analysis and modeling of layered network architectures including transport and higher layers, performance evaluation of system network architecture, DEC network architecture, and other telecommunication architectures. Protocols and standards for local, metropolitan, and wide area networks are also discussed. Topics include high-speed packet switching, broadband multimedia protocols, and congestion control in broadband integrated networks.

835/CS 835 Computational Vision (3:3:0) Prerequisites: CS 682 and 686, or permission of instructor. Study of recent advances in development of machine vision algorithms and knowledge-based vision systems. Topics include scalespace; Gabor and wavelet processing; distributed and hierarchical processing using neural networks; motion analysis; active, functional, and selective perception; object and target recognition; expert systems; data fusion; and machine learning. Emphasizes system integration in terms of perception, control, action, and adaptation. Presents applications to robotics, intelligent highways, inspection, forensic, and data compression.

836/ECE 836 Special Topics in Detection and Estimation Theory (3:3:0) Prerequisite: ECE 734. Advanced topics in detection, estimation, and signal processing in areas of current research interest. Topics may include spectral estimation, speech recognition, array processing, SAR, underwater acoustics, or higher order spectra.

838/ECE 638 Signal Processing Algorithms and Architectures (3:3:0) Prerequisite: ECE 635 or permission of instructor. Study of recent advances in development of fast signal processing algorithms and parallel architectures. Topics include fast transforms, multirate processing of digital signals, adaptive filtering, high-resolution spectral analysis, parallel computational arrays, and mapping of signal processing algorithms into array processors.

840/CS 685/ECE 750/SYST 672/CS 840 Intelligent Systems for Robots (3:3:0) Prerequisites: SYST 611, ECE 650, CS 580, and SYST 555, or equivalent. Reviews recent developments in intelligent autonomous systems. Studies applications of artificial intelligence, control theory, operations research, decision sciences, computer vision, and machine learning to robotics as well as correspondences between various fields. Topics include analysis and design of methods, algorithms and architecture for planning, navigation, sensory data understanding, visual inspection, spatial reasoning, motion control, learning, self-organization, and adaptation to environment.

841/ECE 722 Kalman Filtering with Applications (3:3:0) Prerequisites: ECE 521 and 528 or equivalent, or permission of instructor. Detailed treatment of Kalman Filtering Theory and applications, including some aspects of stochastic control theory. Topics include state-space models with random
inputs, optimum state estimation, filtering, prediction and smoothing of random signals with noisy measurements, all within framework of Kalman filtering. Additional topics are nonlinear filtering problems, computational methods, and various applications such as Global Positioning system, tracking, and system control. Stochastic control problems include linear-quadratic-Gaussian problem and minimum-variance control.

842 Models of Probabilistic Reasoning (3:3:0) Prerequisites: STAT 544 and OR 681. Survey of alternative views about how incomplete, inconclusive, and possibly unreliable evidence might be evaluated and combined. Discusses Bayesian, Baconian, Shafer-Dempster, and Fuzzy systems for probabilistic reasoning.

843/ECE 720 Multivariable and Robust Control (3:3:0) Prerequisite: ECE 620, or permission of instructor. Eigenstructure assignment for multivariable systems, the Smith-McMillan form, internal stability, modeling system uncertainty, performance specifications and principal gains, parametrization of controllers, loop shaping and loop transfer recovery, and the H methodology.

844 Advanced Pattern Recognition (3:3:0) Prerequisite: CS 688 or permission of the instructor. Course covers model selection, statistical learning theory, structural risk minimization, support vector machine and regression, semisupervised learning and transduction, change detection, and mixtures of experts such as AdaBoost. Applications related to link analysis for social networks and forensics, collaborative filtering and recommendation systems, and document analysis.

845/ECE 780 High-Frequency Electronics (3:3:0) Prerequisite: ECE 520. Study of devices and circuits used in high-speed communication systems. Topics include microwave bipolar transistors, GaAs MOSFETs, and high-speed integrated circuits; and design of linear and power amplifiers using S-parameter techniques and computer simulation.

846/ECE 721 Nonlinear Systems (3:3:0) Prerequisite: ECE 521. Nonlinear dynamical systems. Motivating examples. Analysis techniques include basic fixed point theory, implicit function theorem, dependence of trajectories on initial data and parameters. Also covers computational simulation techniques; stability theory, including Lyapunov’s direct method; and nonlinear control systems input-output stability, absolute stability, and strong positive real transfer functions. Includes feedback linearization of nonlinear systems; nonlinear canonical forms; nonlinear decoupling; sliding control; and applications to adaptive control, neural networks, and robotics.

847/ECE 847 Topics in Photonics (3:3:0) Prerequisite: ECE 565 or permission of instructor. In-depth discussion of specific topics in photonics. Topics include optical storage (disks, holographic, 3D), digital optical computing, integrated optics, photonic switching networks, and optoelectronic devices. May be repeated when covering different topics.

848/ECE 743 Digital Video Communications (3:3:0) Prerequisites: ECE 535 and 642. Coding, transport, and modeling of digital video signals; digital coding of waveforms with emphasis on compression techniques for video signals; transform coding including DCT and rate distortion theory for images; subband/wavelet coding of images; treatment of video signals for different television formats; colorimetry and motion estimation/compensation; general characterization of video traffic; modeling of variable bit rate video codecs; transport protocols for video and multimedia; network-delay compensation for video over ATM; VBR video flow control; and discussion of applications such as HDTV/TV over ATM, digital HDTV for terrestrial broadcast, and videoconferencing/desktop multimedia over LAN/WAN.

850 Systems Integration Engineering (3:3:0) Prerequisite SYST 510 or 520. Covers lifecycles; large systems comprised of heterogeneous components; human, organizational, and technological basis for integration; societal and cultural basis; conceptual frameworks; structure, function, and purpose of industry; risk management; user requirements and functional specifications; bid and proposal process; systems integration and federal government; standards; integration of systems and federations of systems; integrated process and product development; architectures; systems management and cost estimation; reengineering; quality management; increasing returns to scale, network effects, and path dependency issues; and systems integration ecology and evolutionary systems integration.

851 Seminar: Topics in Software Requirements (3:3:0) Prerequisite: SWE 620 or 624, or CS 624. Emphasizes latest research ideas in requirements engineering domain. Discusses state-of-the-art and state-of-the-practice. Focuses on most critical problems and discusses how resolutions might further the requirements research knowledge base and enhance quality and productivity of real software and system developments in industry. May be repeated when topic is different.

852/CS 852 Graphical Real-Time Simulation (3:3:0) Prerequisite: CS 652 or IT 875. Current research in advanced computer graphics and its applications in realistic real-time simulations. Topics include physically based modeling, computer graphics and its applications in realistic real-time systems, rendering technologies. Includes term project in design and analysis of complex, real-time software system.

860 Software Analysis and Design of Real-Time Systems (3:3:0) Prerequisite: SWE 623. Background for students who want to conduct research in software engineering of real-time systems. Provides understanding of key real-time software system analysis, design concepts and methods, and how they are used in developing large-scale, real-time software systems. Also explores potential impact of emerging technologies. Includes term project in design and analysis of complex, real-time software system.

861 Distributed Database Management Systems (3:3:0) Prerequisite: INFS 614 or equivalent. Topics in include transaction management, concurrency control, deadlocks, replicated database management, query processing reliability, and surveys of commercial systems and research prototypes.

862 Computer Security Models and Architectures (3:3:0) Prerequisite: INFS 767 and 780. Covers large-scale distributed systems, including cross-enterprise systems; models for role-based and lattice-based access control; and delegated administration with respect to formal and pragmatic criteria. Studies architectures to implement these models based on public-key infrastructure, trusted servers, and other components.

863 Empirical Methods in Information Technology (3:3:0) Prerequisite: STAT 654. Examines alternative paradigms of scientific research and their applicability to research
in information technology. Topics include fundamental elements of scientific investigation, basic principles of experimental design and statistical induction, philosophy of science and its relation to the information technology sciences, and case studies of information technology research.

864 Scientific Databases (3:3:0) Prerequisite: INF6 614. Studies database support for scientific data management. Covers requirements and properties of scientific databases; data models for statistical and scientific databases; semantic and object-oriented modeling of application domains; statistical database query languages and query optimization; advanced logic query languages; and case studies such as the human genome project and Earth orbiting satellite.

865 Networks and Distributed Systems Security (3:3:0) Prerequisite: INF6 612 or equivalent. Detailed study of network and distributed systems security. Reviews basic cryptography and threats and vulnerabilities in distributed systems. Covers security services and confidentiality, authentication, integrity, access control, nonrepudiation, and their integration in network protocols. Topics also include key management, cryptographic protocols and their analysis; access control, delegation, and revocation in distributed systems; and security architectures, multilevel systems, and security management and monitoring.

867 Intelligent Databases (3:3:0) Prerequisite: INF6 760, or permission of instructor. Studies models and techniques that empower database systems with intelligent and cooperative behavior, with emphasis on subjects such as knowledge-rich databases, logic databases, epistemological queries, intentional answering, and knowledge discovery. Topics include user interfaces, cooperative query interfaces, interactive query constructors, graphical interfaces, and browsers; uncertainty representing, manipulating, and retrieving uncertain, imprecise, or incomplete information; and formulating and interpreting vague or incomplete queries.

870 Organizational Informatics (3:0:0) Prerequisite: doctoral status, or permission of instructor. Examines effects of informatics on national and international policy; setting of international policy on informatics; ethical and social change in governments and organization; shaping of national policy in informatics; industry growth; and research methods from various scientific discipline.

871/STAT 871 Statistical Data Mining (3:3:0) Prerequisite: STAT 554 or 663, or permission of instructor. Covers basic concepts, computational complexity, data preparation and compression, databases and SQL, rule-based machine learning and probability, density estimation, exploratory data analysis, cluster analysis and pattern recognition, artificial neural networks, classification and regression trees, correlation and nonparametric regression, time series, and visual data mining. as

874 Analysis of Complex Surveys (3:3:0) Prerequisites: STAT 656, 665, and 674; or permission of instructor. Presents current theory and methods of statistical analysis of data from complex surveys of finite populations. Includes contingency table analysis and regression analysis; modeling structured populations by multilevel models; and loglinear, logistic, and regression models for stratified and multistage cluster samples. Case studies illustrate methodology. ir

875/CSI 803/STAT 875 Scientific and Statistical Visualization (3:3:0) Prerequisite: CS 652, STAT 554, STAT 663, or STAT 751; or permission of instructor. Presents visualization methods to provide new insights and intuition concerning measurements of natural phenomena and scientific and mathematical models. Presents case study examples from variety of disciplines. Topics include human perception and cognition, introduction to graphics laboratory, elements of graphing data, representation of space-time and vector variables, representation of 3D and higher dimensional data, dynamic graphical methods, and virtual reality. Students required to work on visualization project. Emphasizes software tools on Silicon Graphics workstation, but other workstations and software may be used.

876/CSI 876 Measure and Linear Spaces (3:3:0) Prerequisite: IT 776/CSI 778. Measure theory and integration; convergence theorems; and theory of linear spaces and functional analysis, including normed linear spaces, inner product spaces, Banach and Hilbert spaces, Sobolev spaces, and reproducing kernels. Topics include wavelets, applications to stochastic processes, and nonparametric functional inference. af

877/CSI 877/STAT 877 Geometric Methods in Statistics (3:3:0) Prerequisite: STAT 751, or permission of instructor. Develops foundations of geometric methods for statistics. Topics include n-dimension Euclidian geometry; projective geometry; differential geometry including curves, surfaces, and n-dimensional differentiable manifolds; and computational geometry including computation of convex hulls, and tesselations of 2-, 3-, and n-dimensional spaces. Examples include applications to statistics and scientific visualization. af

880 Queuing Modeling of Computer-Communication Networks (3:3:0) Prerequisite: OR 645 or 647, or ECE 542; or equivalents. Studies analytical modeling of computer and communication networks and performance evaluations. Topics include Markovian systems, open networks, closed networks, approximations, decomposition, simulation, sensitivity analysis, and optimal operation of systems. Presents local area networks, manufacturing systems, and other applications.

882 Advanced Topics in Combinatorial Optimizations (3:3:0) Prerequisites: OR 641 and 642. Studies problems using most recent developments. Topics include cutting plane procedures based on polyhedral combinatorics; column-generation procedures for large, complex problems; heuristic approaches such as genetic algorithms, simulated annealing, and tabu search; study of special structures; reformulation techniques; and bounding approaches. Topics stress most recent developments in field. May be repeated for credit when topics are distinctly different.

884 Advanced Topics in Nonlinear Programming (3:3:0) Prerequisite: OR 644. Studies theory and algorithms for solving nonlinear optimization problems. Contents vary; possible topics include large-scale and parallel-unconstrained optimization, theoretical issues in constrained optimization, duality theory, Lagrangian and sequential quadratic programming methods. May be repeated for credit when topics are distinctly different.

885/ECE 752 Spectral Estimation (3:3:0) Prerequisite: ECE 528 or STAT 652, or permission of instructor. In-depth study of spectral analysis and its application to statistical signal processing. Topics include classical Fourier analysis
of deterministic signals, and Wiener theory of spectral analysis for random processes; spectral estimation using Periodogram and window approaches; maximum entropy spectral estimation and its relation to autoregression modeling; signal subspace approaches for frequency estimation; and wavelet transform and its relation to short-time Fourier transform.

886/ECE 751 Information Theory (3:3:0) Prerequisite: ECE 630 or STAT 644 or equivalent, or permission of instructor. Introduces the mathematical theory of communication systems. Topics include entropy; relative entropy and mutual information; Shannon-McMillan-Breiman theorem and applications to data compression; entropy rate and source coding theorem; Huffman, arithmetic and Lempel-Ziv codes; method of types; channel capacity and channel-coding theorem; joint source-channel coding theorem; differential entropy; Gaussian channel; rate distortion theory; and vector quantization.

888/ECE 753 Distributed Estimation and Multisensor Tracking and Fusion (3:3:0) Prerequisite: ECE 734 or SYST 611. Centralized and distributed estimation theory, hierarchical estimation, tracking and data association, multisensor multitarget tracking and fusion, distributed tracking in distributed sensor networks, track-to-track association and fusion, and Bayesian networks for fusion.

890 Special Topics in Urban Transportation (3:3:0) Prerequisites: CEIE 560 and 660 or equivalent; or permission of instructor. Includes traffic safety analysis, simulation in transportation, intelligent transportation systems, advanced public transportation systems, congestion and travel demand management, geographic information systems and information technology, and innovative refinancing and public-private partnerships. May be repeated for credit when topics distinctly different.

891 Special Topics in Applications of Information Technology to Urban Systems Engineering (3:3:0) Prerequisites: CEIE 670, or permission of instructor. Topics include inventive engineering, design engineering, network computing, building and using intelligent agents in engineering, and proactive design. May be repeated for credit when topics distinctly different.

892 Special Topics in Environmental and Water Resource Systems Engineering (3:3:0) Prerequisite: CEIE 601. Possible topics include studies in waste minimization; pollution prevention; hazardous waste management; wastewater management; air pollution control; solid waste management; environmental decision making; sustainability; water resource and environmental economics; wetlands management, design and construction; groundwater contamination modeling; stochastic hydrology; river basin planning and management; and water quality modeling. May be repeated for credit when topics distinctly different.

894 Design and Inventive Engineering (3:3:0) Prerequisite: SYST 573, CEIE 670, or OR 681; or permission of instructor. Topics include evolution of engineering, design engineering, inventive engineering, general design methodology, conceptual versus detailed design, axiomatic and inferential design theories, engineering method in design, design paradigms, case-based and proactive design, design evaluation, virtual design studio, Internet and browsers in design, creative problem solving, and computer tools to support design creativity.

901/CS 910 Research Topics in Artificial Intelligence (3:3:0) Prerequisite: graduate course in artificial intelligence. Special topics not occurring in regular computer science sequence. Requires substantial student participation. Subject matter may include continuation of existing 600- or 700-level courses in artificial intelligence. May be repeated for credit when subject matter differs.

915/CS 915 Research Topics in Parallel Computation (3:3:0) Prerequisite: IT 815. Discusses current research topics in parallel computation. Topics vary according to student and faculty interest. Possible topics include formal models of concurrency, specification and design of parallel programming languages, logic programming in parallel environment, and parallel distributed processing (neural networks).

922 Concurrent Object-Oriented Systems (3:3:0) Prerequisite: IT 822. Comparative study of existing concurrent object-oriented approaches to problem analysis and software construction. Introduces current research issues in concurrent object-oriented systems, concurrency models, and concurrent object-oriented programming languages and development tools.

932/ECE 737 Spread Spectrum Communications (3:3:0) Prerequisite: ECE 731. Fundamentals of spread spectrum communications. Major topics include pseudonoise spread spectrum systems, acquisition, synchronization, timehopping, frequency hopping, and multiple access communication.

933/ECE 755 Optimum Array Processing II (3:3:0) Prerequisite: IT 837. Includes adaptive beamformers; SMI and RLS estimators; spatial smoothing and FB averaging; QR decomposition; LMS algorithm; optimum detection; parameter, UML, and CML estimation; Cramer-Rao bounds; IQML; weighted subspace fitting; subspace algorithms such as MUSIC and ESPRIT; root-versions; beam-space algorithms; and sensitivity, robustness, and calibration.

940/CS 884 Advanced Topics in Computer Vision and Robotics (3:3:0) Prerequisite: CS 682 or 685, or permission of instructor depending on topics offered. Covers recent developments. Topics motivated by applications to autonomous robotic systems, mobile robot navigation, multirobot systems, human-computer-environment interaction, image/video search and analysis, content discovery, and visual surveillance. Topics include 3D structure and motion recovery, motion understanding, map building and localization, object detection and recognition, and target tracking. Projects and experimental evaluation emphasized. Course may be repeated with change of topic.

941 System Identification and Adaptive Control (3:3:0) Prerequisite: ECE 621, or permission of instructor. Advanced treatment. Topics include identification algorithms, their convergence and accuracy, and computational aspects; model reference and self-tuning adaptive control, transients, stability, and robustness; and intelligent schemes to improve robustness. Students required to study literature and complete computer project.

944 The Process of Discovery and Its Enhancement in Engineering Applications (3:3:0) Prerequisite: IT 842, or permission of instructor. Studies ingredients of imaginative reasoning as it concerns efficient discovery of new ideas and valid evidential test of them. Topics include different interpretations of Peirce’s theory of abductive reasoning and other forms of reasoning, Hintikka’s analysis of process of
inquiry, and current attempts to design systems that provide assistance in discovery-related or investigative activities.

945/ECE 945 Advanced Topics in Microelectronics (3:3:0)  
Prerequisite: IT 845. Current topics of advanced research in microelectronics. Topics include very high-speed integrated circuits, monolithic microwave integrated circuits, optoelectronic integrated circuits, novel device structures, and advances in semiconductor device technology. May be repeated with change in topic.

950 Design and Management Aspects of Information Systems (3:3:0)  
Prerequisite: INFS 790 or equivalent. Impact of organizations and management of information systems (IS) and vice versa. Topics include problems of introducing IS; effect on organizational, economic, and political framework; participative design and new techniques for specification, analysis, design, and implementation of IS; rapid prototyping and expert systems; possible conflicts; methods in life-cycle management; and economic analysis.

958 Basic and Applied Decision Support Systems Technology (3:3:0)  
Prerequisite: SYST 642. Analyzes tools, techniques, and methods that contribute to design, development, application, and evaluation of interactive computer-based decision support systems. Analyzes state-of-the-art and state-of-the-expectation of basic and applied decision support systems technologies.

962 Advanced Topics in Computer Security (3:3:0)  
Prerequisite: IT 862 or 865, or permission of instructor. Current topics of advanced research. Content varies depending on faculty interests, research developments, and student demand. Requires substantial student participation. May include formal models for computer security, multilevel data models, multilevel database management system architectures, secure concurrency control protocols, distributed secure system architectures, integrity models and mechanisms, security policy, and requirements analysis.

971 Probability Theory (3:3:0)  
Prerequisite: IT/CSI 876 or equivalent. Reviews measure theory concepts needed for probability. Includes expectation, distributions, laws of large numbers and central limit theorems for independent random variables, characteristic function methods, conditional expectations, martingales, strong and weak convergence, Markov chains, and stationary processes. as

972/CSI 972 Mathematical Statistics I (3:3:0)  
Prerequisite: STAT 652 or equivalent. Focuses on theory of estimation. Includes method of moments, least squares, maximum likelihood, and maximum entropy methods. Details methods of minimum variance unbiased estimation. Topics include sufficiency and completeness of statistics, Fisher information, Cramer-Rao bounds, Bhattacharyya bounds, asymptotic consistency and distributions, statistical decision theory, minimax and Bayesian decision rules, and applications to engineering and scientific problems. as

973/CSI 973 Mathematical Statistics II (3:3:0)  
Prerequisite: IT 972. Continuation of IT 972. Concentrates on theory of hypothesis testing. Topics include characterizing decision process, simple versus simple hypothesis tests, Neyman-Pearson Lemma, uniformly most powerful tests, unbiasedness and invariance of tests, and randomized and sequential tests. Applications of testing principles made to situations in normal distribution family and other families of distributions. as

976/CSI 976 Statistical Inference for Stochastic Processes (3:3:0)  
Prerequisite: IT 746/CSI 776. Modern theory of parameter estimation and hypothesis testing for stochastic processes, counting processes with random intensities, and solutions to stochastic differential equations driven by martingales. Considers applications to engineering, biology, and economics. as

978/CSI 978 Statistical Analysis of Signals (3:3:0)  
Prerequisites: STAT 544 and 638, or equivalent. Advanced course in analysis of discrete- and continuous-time signals using methods of stochastic differential equations and time series. Presumes familiarity with methods of harmonic analysis and times series modeling. Topics include state-space modeling and eigen-value processing, nonlinear modeling of signals, non-Gaussian stochastic process structure, detection and estimation of vector-valued signals, robust signal detection, with applications to array processing and target tracking.

979/CSI 979 Topics in Statistical Aspects of Information Technology (3:3:0)  
Prerequisite: STAT 652 or equivalent. Studies statistical science and body of methods and techniques that convert raw data into information. Contents vary. Topics include high-interaction statistical graphics, stochastic methods for parallel computing, cryptography and covert communications, order-restricted inference, treatments of imprecision, and foundations of inference. May be repeated when topics distinctly different.

980 Advanced Topics in Applied Probability (3:3:0)  
Prerequisites: OR 645 and 647, or permission of instructor depending on semester topics. Special topics and recent developments in field of applied probability. May include computational probability, stochastic point processes, advanced queuing theory, traffic and transportation models, percolation, processes of random aggregation and coagulation, and Markov decision processes. May be repeated for credit topics distinctly different.

981 Advanced Topics in Optimization (3:3:0)  
Prerequisite: IT 741, 750, 881, 882, or 884. Special topics and recent developments. Contents vary and may include topics in linear, nonlinear, combinatorial, network, global, or stochastic optimization. Requires active student participation. May be repeated for credit when topics distinctly different.

983 Advanced Topics in Network Optimization (3:3:0)  
Prerequisite: OR 645. Recent developments in solving optimization problems on networks. Prepares doctoral students to perform advanced research on network-related problems. Topics include linear, discrete, nonlinear, and stochastic problems. Several aspects of problems also studied, including computational complexity, exact algorithms, heuristics, solvable special cases, and computer implementation issues.

990 Dissertation Topic Presentation (1:0:0)  
Prerequisite: completion of all course requirements for PhD in IT, or permission of instructor. Opportunity for PhD students to present research proposal for critique. Covers presentation of research topic for PhD in information technology; required of all PhD students. Students complete dissertation research proposal. May be repeated with change in topic, but degree credit is given only once.
Courses

Teaching (IETT)

991 Engineer Project Presentation (1:0:0) Prerequisite: completion of all course requirements for engineer degree in information technology, or permission of instructor. Opportunity for engineer degree students to present project proposal for critique to interested faculty and students. Covers presentation of project topic for engineer degree in information technology, and is required of all engineer degree students. Students complete project proposal. May be repeated with change in topic, but degree credit is only given once.

996 Engineer Project Proposal (1–6:0:0) Work on project proposal that forms basis for dissertation for engineer degree. May be repeated. No more than 12 credits of IT 996 and 997 may be applied to engineer degree requirements.

997 Engineer Project Dissertation (1–6:0:0) Prerequisite: admission to candidacy. Formal record of commitment to engineer project dissertation under direction of advisory committee in information technology. May be repeated as needed.

998 Doctoral Dissertation Proposal (1–12:0:0) Work on research proposal that forms basis for doctoral dissertation. May be repeated. No more than 24 credits of IT 998 and 999 may be applied to doctoral degree requirements.

999 Doctoral Dissertation (1–12) Prerequisite: admission to candidacy. Formal record of commitment to doctoral dissertation research under direction of faculty member in information technology. May be repeated as needed.

Initiatives in Educational Transformation—Teaching (EDIT)

Graduate School of Education

750 Studies in Language and Culture I (3:3:0) Offers opportunity to view how language shapes realities, including perceptions of children as learners. Explores cultural constraints and transformative possibilities embedded in language.

751 Studies in Language and Culture II (3:3:0) Building on IETT 750, students investigate more closely academic discourses and ways they frame lived realities. Exploring theme of how language and culture shape and open interpretations of the world, students research language and culture in their practice.

752 Research in Practice: The Team Project (6:6:0) Concurrent with other courses, student teams refine research topics and develop projects to investigate those topics. Projects involve children as partners rather than subjects in research. Product is substantial piece of work submitted with plan for dissemination in school community.

753 Teaching and Learning (3:3:0) Capstone course to help teachers document and reflect on individual growth and transformation while participating in IETT school-based master’s program. Through developing portfolio, teachers provide evidence to demonstrate professional growth, and provide documentation about themselves as teachers and learners in the two years of the program. As part of documentation, teachers present team research projects in professional conference organized as third summer session.

Instructional Technology (EDIT)

Graduate School of Education

401 Introduction to Multimedia/Hypermedia (3:3:0) Provides an overview of the principles and tools used within the fields of e-learning, instructional design, and multimedia/hypermedia technologies. Students apply knowledge and skills learned by creating an e-learning module.

410 Introduction to Assistive Technology (3:3:0) Provides an understanding of assistive technology and application in instructional programs, career tasks, and life skills for persons with disabilities. Presentation and demonstration experiences enable students to better use assistive technology in education, work, community, and home environments. Knowledge and awareness components may be delivered via distance education.

412 Assistive Technology for Individuals with Sensory Impairments (2:2:0) Prerequisite: EDIT 410. Provides technology and resources available to enhance and improve the ability of individuals with visual and hearing impairments for success in school, daily living activities, and employment. Class components may be delivered via distance education.

413 Technology, Society, and the Culture of Learning (3:3:0) Prerequisite: EDUC 300. Explores the relationship between technological change and education reform initiatives. Emphasis will be placed on the ways in which technological and social changes influence and shape the goals and outcomes of the K–12 educational process.

423 Accessibility/Input Modifications (2:2:0) Prerequisite: EDIT 410. Explores accessibility/input devices and strategies used by individuals with disabilities for accessing computers, independent living aids, driving equipment, and communication devices. Class components may be delivered via distance education.

425 Software for Individuals with Special Needs (2:2:0) Prerequisite: EDSE 410. Provides software evaluation and design for individuals with disabilities. Students will create a software program using existing authoring tools for a person with a disability. Class components may be delivered via distance education.

426 Web Accessibility and Design (3:3:0) Provides instruction for accessible web design using HTML and existing authoring tools. Section 508 web accessibility standards and assistive technologies to access the computer will be explored. Class may be delivered via distance education.

428 Low-Technology Assistive Technology Solutions (1:1:0) Prerequisite EDIT 410. Provides functional application of low-technology solutions within the areas of self-care; mobility and transfer; communication; stability and support; sports, recreation, and leisure; and academic and work environments. Will include opportunities to create low-technology devices.

504 Introduction to Educational Technology (3:3:0) Examines uses of and issues in educational technology. Explores curriculum integration of technology, and focuses on learning and using commercially available applications software.

510/EDSE 510 Introduction to Assistive Technology (3:3:0) Provides an understanding of assistive technology and application in instructional programs, career tasks, and life skills for persons with disabilities. Presentation and
demonstration experiences enable students to better use assistive technology in education, work, community, and home environments. Knowledge and awareness components may be delivered via distance education.

522/EDSE 522 Assistive Technology for Individuals with Sensory Impairments (2–3:2–3:0) Focuses on professionals or students interested in serving visually impaired/blind or hearing impaired/deaf populations. Heightens awareness of participants to specific technology and resources available to enhance and improve ability of individuals with impairments to succeed in school, daily living activities, and employment. Knowledge and awareness components may be delivered via distance education.

523/EDSE 523 Accessibility/Input Modification (1–3: 1–3:0) Provides overview of accessibility/input modifications and strategies. Students explore various input devices and their application and use by individuals with disabilities. Opportunities for in-depth exploration of sophisticated access technologies available to those students who seek expertise in specific assistive technology devices. Knowledge and awareness components may be delivered via distance education.

524/EDSE 524 Assistive Technology for Individuals with Learning Disabilities (2:2:0) Focuses on strategies and techniques for implementing software and other technologies in lives of individuals, age 3 to adult, with learning disabilities. Students develop and implement plans for assistive technology. Requires practicum. Knowledge and awareness components may be delivered via distance education.

525/EDSE 525 Software for Individuals with Special Needs (1–2:–1–2:0) Focuses on software evaluation and design for individuals with disabilities. Explores existing software resources, and identifies design features to meet individual’s special needs. Students create software program for person with disabilities (credit 2). Knowledge and awareness components may be delivered via distance education.

526 Web Accessibility and Design (3:3:0) Develops understanding of principles of universal web design. Students apply this understanding by designing and developing accessible web site using web authoring tools.

529 Internet as an Assistive Technology Tool (2:2:0) Prerequisite: HTML experience. Overview of web and Internet as an educational tool for students with disabilities. Focuses on presentation of strategies, accommodations, assistive technology, and Internet resources for educators. Students review and evaluate web sites, and develop accessible Internet lesson plan or web site.

530 Scripting and Programming (2:2:0) Enables development of computer-based educational materials using widely known educational scripting language. Students explore basic authoring capabilities, and learn to apply those capabilities by designing and producing materials using commands, procedures, and functions of scripting language.

561 Teaching with Telecommunications (1:1:0) Develops expertise with various aspects of telecommunications tools, and models ways these tools can be used for personal learning and integration into teaching/learning process. Addresses e-mail, Internet, web, and online databases.

562 Teaching with Databases (1:1:0) Develops expertise with various aspects of databases, and models ways databases can be integrated into teaching and learning process. Focuses on strategies for searching, sorting, creating, and communicating with information, much of which is structured by variety of online and offline databases.

563 Teaching with Graphics (1:1:0) Explores various graphic programs available for constructing visual images. Addresses draw and paint programs, scanning and editing images, and using visual communication to support K–12 learning.

564 Teaching with TV/Video (1:1:0) Develops expertise with social, cognitive, and learning implications of film, video, and television. Engages students in process of planning, storyboarding, and filming with video.

565 Teaching with Educational Software (2:2:0) Explores variety of educational software, including simulations, problem-solving software, computational tools (calculators, probeware, LOGO, and spreadsheets), and drill-and-practice/ integrated learning systems. Emphasizes ways these programs support K–12 teaching and learning process.

566 Teaching with Multimedia/Hypermedia (2:2:0) Prerequisite: EDIT 563. Covers variety of hypertext/hypermedia and multimedia tools. Emphasizes students’ ability to use tools and then teach others. Covers the ways integration of tools in K–12 curriculum support learning, and difference between hypermedia and multimedia.

567 Teaching with Desktop Publishing (2:2:0) Prerequisite: EDIT 563. Explores variety of publishing tools, including word processors, desktop publishers, and idea processors. Emphasizes using tools to communicate. Covers design and layout principles, appropriate use of images to facilitate communication, and ways K–12 teachers can design opportunities for students to learn concepts.

571 Tools for Visual/Graphic Design (1–3:1–3:0) Teaches basic knowledge of tools available for integrating graphics and visual design into computer-based instruction. Exposes students to latest tools available for developing, integrating, and managing visual and graphic display.

572 Tools for Digital Video and Audio (1–3:1–3:0) Overview and exploration of using these tools in instructional design process. Offers rationale for using select tools and developing skills to use them.

573 Project Management Tools (1–3:1–3:0) Teaches students the principles of project management as it is applied to instructional design. Explores project management tools used to manage, plan, and track large-scale multimedia and hypermedia projects.

574 Networking Tools (1–3:1–3:0) Teaches basic knowledge of current networking and telecommunications devices used to enhance instructional design process. Covers local area networks, telecommunications, and teleconferencing and distance education technologies.

575 Authoring Tools (1–3:1–3:0) Introduces specific authoring tools through hands-on lab instruction, interaction with software interface, construction of instructional sequences, importing video and audio clips, resource management, and animation. Content customized to particular software tool presented.

575-A Authoring Tools: Authorware (1–3:1–3:0) Teaches fundamentals of Authorware program, which can be very complex. Only the essential functions are used for this course. Students develop basic, self-directed design module that
includes major components of software covered. Provides core foundations for developing computer-based instructions. Students can apply concepts to other authoring tools.

575-B Authoring Tools: Toolbook (1–3:1–3:0) Introduces object-oriented construction and authoring with Asymetrix’s Multimedia Toolbook. Through hands-on lab instruction, students learn Toolbook’s interface. Teaches advanced concepts of importing video and audio clips, resource management, object-linked and embedding, and path-based animation. Introduces basic scripting theories to prepare students for next level of Toolbook authoring. Students may apply concepts taught to other authoring tools.

590 Educational Research in Technology (3:3:0) Focuses on developing skills, insights, and understanding basics to performing research with emphasis on interpretation, application, critique, and use of findings in educational settings. Students develop expertise in action research methodology, design, and implementation.

593 Instructional Hardware Systems (3:3:0) Teaches basic technical features of computer-based hardware systems used in educational settings, including stand-alone computers, peripheral devices, and networking systems.

597 Special Topics in Education (1–6:1–6:0) Prerequisite: admission to program in GSE. Provides advanced study on selected topic or emerging issue in American or international education. May be repeated for credit with GSE permission.

601 Instructional Design and Development (IDD) Portfolio (1:1:0) To be taken at mid-degree program point with minimum 12 and maximum 15 credits. Enables students to create and publish electronic portfolio that demonstrates effective and meaningful integration and syntheses of instructional design and development concepts, principles, and competencies learned across program courses at mid-degree program point.

611 Innovations in Distance Learning (3:3:0) Explores educational opportunities through electronic networks and telecommunications. Hands-on activities focus on planning, implementation, and evaluation. Students discuss emerging applications, and how new approaches to learning can be integrated into today’s classrooms.

641 Understanding Virtual Schools (1:1:0) Develops knowledge about online learning for K–12 students. Examines history and trends of online learning, and characteristics of K–12 virtual learners.

642 The Online Academy (1:1:0) Prerequisite or corequisite: EDIT 641. Develops knowledge about Mason’s virtual high school. Focuses on design model with attention to representative problems, performances of understanding, communities of practice, and mentors.

643 Online Mentoring 1: Building Virtual Relationships (1:1:0) Prerequisite or corequisite: EDIT 642. Assists in developing online mentoring skills related to integral role that building relationships plays in success of online learning.

644 Online Mentoring 2: Promoting Self-Regulation (1:1:0) Prerequisite or corequisite: EDIT 643. Assists in developing online mentoring skills related to integral role that self-regulation plays in success of online learning.

645 Online Mentoring 3: Conceptual Learning (1:1:0) Prerequisite or corequisite: EDIT 644. Assists in developing online mentoring skills related to role of support of conceptual and content understanding in success of online learning.

646 Online Mentoring 4: Moderating (2:2:0) Prerequisite or corequisite: EDIT 645 or permission of instructor. Assists in developing expertise with moderating student learning—asynchronous and synchronous—in online environments including discussion boards, chat rooms, and general communication patterns.

701 Advanced Instructional Design and Development (IDD) Portfolio (1:1:0) Prerequisite: EDIT 601. To be taken in the last semester of course work. Enables students to create and publish electronic portfolio that demonstrates effective and meaningful integration and syntheses of instructional design and development concepts, principles, and competencies learned across program courses at end degree program point.

704 Instructional Technology Foundations and Theories of Learning (3:3:0) Reviews practical and pedagogical issues related to design and development of technological instruction. Emphasizes investigating instructional design as a field and community of practice, and reviewing core learning theory constructs applicable to design of instructional technology.

705/EDCI 705 Instructional Design (3:3:0) Prerequisite: teaching experience. Helps students analyze, apply, and evaluate principles of instructional design to develop education and training materials spanning a wide range of knowledge domains and instructional technologies. Focuses on variety of instructional design models, with emphasis on recent contributions from cognitive science and related fields.

711 Teaching with Technology I: Telecommunications and Databases (3:3:0) Corequisite: EDCI 710. Explores and develops expertise with various aspects of telecommunications and databases, and models how tools can be used for personal learning and integration into teaching and learning process. Addresses e-mail, Internet, and web, and online and multimedia databases. Also focuses on strategies for searching, sorting, creating, and communicating with information, many of which are structured by online and offline databases.

713 Teaching with Technology II: Graphics, TV and Video, and Simulations (3:3:0) Corequisite: EDCI 712. Explores and develops expertise with various graphic programs for constructing visual images, interpreting and creating video, and structuring and using simulations for learning. Addresses draw and paint programs, scanning and editing images, and using visual communication to support K–12 learning. Explores social, cognitive, and learning implications of film, video, and television, and engages students in planning, storyboarding, and filming with video. Also focuses on various categories of simulation, relationship between simulations and ways of knowing, and strategies for using simulations to promote K–12 learning.

715 Teaching with Technology III: Publishing and Computational Tools (3:3:0) Corequisite: EDCI 714. Explores and develops expertise with variety of publishing tools, including word processors, desktop publishers, and idea processors. Emphasizes use of tools to publish. Covers design and layout principles, appropriate use of images to facilitate communication, and ways K–12 teachers can design opportunities for students to learn these concepts. Also helps
students explore and develop expertise with tools commonly used as part of “computational science” and mathematical modeling. Tools include programming languages such as LOGO, calculators, spreadsheets, probeware, and graphing calculators.

717 Teaching with Technology IV: Hypermedia and Emerging Technologies (3:3:0) Prerequisite: EDIT 716. Develops expertise with hypertext/hypermedia and multimedia tools. Emphasizes ability to use tools and then teach others. Focuses on understanding difference between hypermedia and multimedia. Also examines educational technologies expected to become important applications soon, including virtual reality and distributed learning.

719 Tools 5: Web 2.0 and Digital Video Editing (3:3:0) Prerequisite: EDIT 717. Co-prerequisite: EDIT 716. Explores emerging Web2 tools (blogs, wikis, and podcasts) and digital video with attention to conceptual understanding and potential applications in K-12 settings. Culminates in the design and development of products and lesson plans for K-12 settings.

720 Leadership Issues in Educational Technology (3:3:0) Examines how educational technology can provide infrastructure for creating, managing, and evaluating innovative types of teaching and learning environments. Explores new assumptions about learning, instructional technology, and organizational development as foundation for planning how schools can use technology to evolve beyond conventional approaches.

725 Technology and Diversity (3:3:0) Focuses on technology to support learning needs of all students, including English-as-a-second-language, bilingual, and special-needs students. Emphasizes helping teachers use technology to support learning when faced with such diverse learners in one classroom.

730 Analysis and Design of Multimedia/Hypermedia Environments (3:3:0) Prerequisites: EDIT 732, and knowledge of authoring tool. Enables design, implementation, and evaluation of technology-based education and training materials using advanced computer-based authoring tools.

732 Advanced Instructional Design: Constructive Methods (3:3:0) Prerequisite: EDCI/EDIT 705. Capstone course of three-course sequence on theory and practice of instructional design. Helps students apply ideas developed in prior courses to complete major instructional design project. Covers leading-edge ideas in evolution of instructional design.

741 TIP 1 Technology Innovations Project (3:3:0) Students design and create technology enriched learning module that can be used in specific educational setting or learning environment. Students paired with instructional designers, providing real world context for project development within cognitive apprenticeship model.

742 Interactive Technologies: Gaming and Robotics (3:3:0) Project-based, hands-on course focusing on technology, science, and engineering. LOGOs, controlled by small microcomputers, used to show principles behind many technological innovations. Other technological advances explored.

743 Technology and Community Partnerships (3:3:0) Explores nontraditional community partnerships in role in learning. Emphasizes partnerships between these non-traditional learning environments.
Courses

792 Project Development Practicum (6:0:0) Designed for students in immersion concentration of Instructional Technology program. Allows students to join design team focusing on development and evaluation phase of instructional design process and development process.

797 Advanced Topics in Education (1–6:1–6:0) Advanced study of selected topics in education for students preparing for doctoral studies or who have been admitted to the PhD program in education. May be repeated for credit with CEHD approval.

895 Emerging Issues in Instructional Technology (3:3:0) Prerequisite: admission to PhD program, or permission of instructor. Covers selected emerging issues. Examines ways instructional technology provides infrastructure for creating, managing, and evaluating innovative types of teaching/learning environments.

Interdisciplinary Studies (MAIS)

Interdisciplinary Studies

797 Interdisciplinary Studies Proposal (1:0:0) Prerequisite: degree candidacy in MAIS, and completion of 21 credits of graduate course work, including any required research methodology course. Focused work on formulating and writing MAIS project or thesis proposal.

798 Individualized Studies Project (1–5:0:0) Prerequisites: MAIS 797 and prior approval of a project proposal by the faculty advisors, two committee members, and MAIS director. Individualized section form required. Research project related to student’s concentration taken under supervision of faculty advisor and project evaluation committee.

799 Individualized Studies Thesis (1–5:0:0) Prerequisites: MAIS 797 and prior approval of a thesis proposal by the faculty advisors, three committee members, and MAIS director. Individualized section form required. Original research endeavor related to student’s MAIS program concentration. Research must result in document meeting MAIS and university standards.

International Commerce and Policy (ITRN)

School of Public Policy

500 Approaches to International Commerce and Policy (4:3:0) First foundation course in ICP program. Introduces national economic policy and international trade, investment, and finance. Uses case-study method to teach basic economic concepts such as national income accounting, balance of payments, and factors affecting foreign exchange rates. Also provides practice in comparing national strategies for growth and development, and using political and economic analysis to assess choice of national economic strategy and relative effectiveness.

501 Methods of Analysis for International Commerce and Policy (4:3:0) Provides the skills necessary to conduct qualitative and quantitative research and analysis of issues related to international commerce and policy. Students obtain practical information on sources of data, their origins, strengths, and weaknesses. Helps develop tools for statistical analysis of data, and includes use of computers for analyzing and displaying information. It covers major data sources as well and literature and indices related to international policy, including trade data, economics and financial indicators, and development indicators.

503 Investment and Macroeconomics (4:3:0) Provides overview of basic concepts in macroeconomic theory, as well as mathematical skills, with emphasis on application to problems of contemporary global economy. Covers monetary systems, balance of payments, foreign exchange market, foreign investment and international institutions, and issues in world monetary arrangements.

504 Trade and Microeconomics for International Commerce (4:3:0) Provides foundation in international economics, and presents fundamentals of international trade, finance, and transactions. Focuses on alternative approaches to understanding international economic system. Topics include classical and neoclassical theories of trade, alternative theories of trade and their extensions, tariffs, customs unions, institutions, and economic development. Students learn to employ appropriate analytical approaches, including graphical analyses, and communicate the results concisely. Throughout, emphasizes relating theory to practical applications.

602 International Financial Institutions and Globalization (3:3:0) Examines nature and dynamics of financial interactions between public and private sectors worldwide. Covers aims and actions of international financial institutions in fostering trade and development, with emphasis on emerging economies. Policy issues include devolving political and economic structures, differing resource and cultural endowments, privatization, financial crises, sector imbalances, and equity. Reviews international and domestic financial markets and instruments.

603 International Trade Relations (3:3:0) Examines U.S. role in world economy and evolving global trading system. Analyzes regulatory framework for trade, and political dynamics of international trade relations. Particular attention to domestic trading institutions, and global and regional institutions such as the GATT/WTO, NAFTA, EU, and APEC. Examines debate between free and fair trade advocates, and prospects for U.S. trade policy.

604 International Trade and Technology (3:3:0) Examines science and technology policies and international trade, with emphasis on relationships and interactions. Assesses roles of science and technology as economic drivers, and explores strategies employed by companies and governments to link research and development to economic growth and competitiveness. Examines research and development systems and technology-related trade policies of United States, Japan, Europe, major developing countries, and selected newly industrialized economies, emphasizing policies affecting trade and technology. Explores specific cases involving interactions among science, technology, and international trade.

612 International Business Operations and the Multinational Corporation (3:3:0) Examines international business environment and challenges facing companies in conducting operations in increasingly interconnected global marketplace. Focuses on issues of management and organization, and resolution of conflicts that may arise between business organizations and home and host governments. Also focuses on role of multinational corporations in international environment, and impact on global trade, economic development,
and political system. Also studies trade and international investment theories and world financial environment. Explores broad issues such as sovereignty of decision making and global impact of business activities.

701 Special Topics in International Commerce and Policy (1–3:1–3:0) Offers specialized courses on various aspects of international commerce and policy.

702 Special Topics in International Commerce and Policy: Study Abroad (3:3:0) Provides opportunity for study abroad under supervision of Mason faculty. Course topics, content, and locations vary.

710 International Business Transactions: Finance and Investment (3:3:0) Focuses on techniques for financing trade and payment methods, including letters of credit, countertrade, and other approaches. Covers issues of direct concern in financing international business operations, such as preparing financing proposals, risk insurance, international taxation, pricing policies, and currency conversion and foreign exchange risk management. Introduces foreign direct investment, alliances and acquisitions, joint ventures, and other methods for investing overseas.

711 United States Law and Global Trade (3:3:0) Prerequisite: ITRN 603 or permission of instructor. Surveys types of regulations imposed by United States, foreign governments, and international institutions on transnational business activities. Reviews principal regulatory bodies in United States and overseas, and powers and authorities. Covers tariffs and customs regulations; product safety and environmental restrictions; intellectual property, copyright, trademark, and patent regulations; and licensing rules. Also covers special restrictions that may be imposed because of political considerations such as embargoes, munitions controls, and antibribery and antiboycott regulations.

712 World Trade Organization and Global Trade (3:3:0) Focuses on legal aspects of international trade regulation by studying international legal and political regime established under WTO, and assessing impact of domestic economic legislation on U.S. trade regulations.

713 U.S. Foreign and Economic Decision Making (3:3:0) Identifies and assesses approaches to foreign policy decision making within the United States and offices involved with political and trade issues. Examines congressional and executive processes and their interrelationship. Exercises involve historical and simulated cases; gives attention to conflicting interests of private and institutional entities. Assesses tension between political and economic issues within context of national security concerns.

715 Global Environment and the World Economy (3:3:0) Examines growing relationship between environmental interdependence and developing world economy. Assesses increased globalization of environmental and health issues with a focus on the impact on those issues on international transactions involving trade and development. Attempts to develop an understanding of relationship of scientific knowledge to global environment in context of existing political and economic institutions. Emphasizes formulating and assessing policies and structures for corporations, nations, regions, and international organizations. Tensions among free trade, international competitiveness, and regulatory responses are central. Gives attention to practices of nations and international organizations, emerging forms of regional and international cooperation and growing use of multilateral agreements.

716 European Union in the International System (3:3:0) Examines current developments in European market integration from global perspective. Emphasizes impact of single market, and proposed economic and monetary union of United States and other major trading partners. Examines European economic relations with Eastern Europe, former Soviet Union, and Lome Pact countries.

717 International Science and Technology (3:3:0) Examines U.S. science and technology policies (S&T) and structures, as well as those in other leading countries. Assesses functional links between S&T and international transactions focusing on trade, national security, finance, and development assistance. Considers emergence of multilateralism and international institutional arrangements as alternatives to traditional bilateral patterns of cooperation.

718 Global Economic and Human Development (3:3:0) Interdisciplinary examination of economic and human development in world economy. Introduces alternative concepts and theories of economic and human development, and analytical frameworks for assessing important issues that arise in development process. Topics include colonialism, economic growth, population, health, education, industrialization, and rural development.

720 Regional and Supranational Organizations (3:3:0) Assesses role of international organizations in international system today, and focuses on wide range of international and regional economic and political institutions. Emphasizes changing nature of these organizations in relation to nation states, and relationship of international organizations to U.S. national security and economic interests.

730 Information Technology Fundamentals for International Business and Trade (3:3:0) Deals with technology and issues relating to emergence of computing, information, and telecommunications technologies in mainstream of society. Aim is to provide general understanding and facility with technologies of contemporary interest.

731 Business-to-Business Marketing in International Commerce (3:3:0) Provides understanding of concepts of international marketing process, and international environment within which companies operate.

734 Pricing in International Commerce (3:3:0) Deals with theory and techniques of pricing that enable organizations to effectively pursue marketing and business strategies.

736 Sources of Growth in East Asia (3:3:0) Examines extraordinary economic success of East Asian NIEs and some of their problems. Focuses on understanding proximate sources of growth, role of technological development, and salient political issues.

737 World Trade in Semiconductors and Information Technologies (3:3:0) Examines bilateral and multilateral approaches to world trade in technology products. Compares U.S.-Japan Agreement on Semiconductors and its successor agreements with those of WTO. Also looks at effects of agreements on U.S. industry, their relevance to trade development, and commercial transactions.

738 Fundamentals of International Marketing (3:3:0) Offers working knowledge of principles and practices that enable managers to effectively market organizations, prod-
ucts, services, and brands. Emphasizes international dimensions of marketing where appropriate.

740 ABCs of Exporting and Importing (3:3:0) Acquaints students with legal, regulatory, and practical issues in importation and exportation of merchandise. Topics include theoretical framework for government oversight of international movement of goods; legal issues between parties and governments; and practical guidance concerning structuring of import and export transactions to avoid legal and tariff liability.

742 Technology Policy and International Strategies (3:3:0) Introduces opportunities and problems created for organizations and society by Internet, and policies affecting trajectory of Internet developments. Also covers technological factors in planning horizon; domestic policy and international treaty factors affecting Internet trajectory; and new horizons for Internet applications.

744 The Politics of International Competitiveness (3:3:0) Provides inquiry into governance problems of public managers and political leaders as they cope with global competitiveness in post-industrial era. Focuses on integrating public and private sectors worldwide, with special emphasis on U.S. role and how it influences such areas as technology transfer, national security, electronic commerce, trade policies, money flows, and human resources.

750 Trade and Politics in Eastern Europe and the Former Soviet Union (3:3:0) Examines background and recent developments in political, business, and cultural environment confronting American firms seeking to do business in Eastern Europe and former Soviet Union. Emphasizes international trade patterns and relations between these states and United States. Examines modes of doing business in these countries, and unique problems American firms confront. Focuses on privatization, joint ventures, and countertrade.

751 Trade, Investment, and Politics in the Western Hemisphere (3:3:0) Examines cultural, political, economic, and legal aspects of conducting business and trade with countries of Western hemisphere. Focuses on evolving pattern of inter- and intra-hemisphere trade, as well as on region’s global trade integration. Special attention given to NAFTA and other bilateral and regional agreements, and to potential for and implications of free trade area in hemisphere. Emphasizes manipulation and analysis of regional trade data to describe and project trade patterns.

752 International Business Lobbying in the United States, Europe, and Japan (3:3:0) Presents comparative overview of lobbying process and practices, and explores representation of foreign firms in United States, European Community and member states, and Japan. Examines contemporary problems relating to lobbying by multinational corporations in foreign political and cultural setting.

753 Role of States and Virginia in the Global Economy (3:3:0) Examines roles of states, especially Virginia, in the international marketplace. Focuses on formulating specific export marketing plans for particular Virginia firms and industries. Examines state economic development policies, structure of state agencies, services, and resources available to domestic exporter and foreign investors contemplating direct investment.

754 International Commercialization of Space (3:3:0) Identifies and analyzes problems and transactions concerning privatization and commercialization of transnational space activities, including launch and satellite operations. Emphasizes interplay of new technologies with existing legal, political, and business structures in formulating viable commercial satellite and launch operations. Focuses on planning and implementing private space actions in conjunction with various public and private international organizations. Sessions focus on interdisciplinary aspects of space commercialization involving technology, finance, tax, insurance, joint venture and business matters, and international legal and national regulatory issues. Guest lecturers include leading business executives engaged in space and satellite operations.

756 National Security and the Global Economy (3:3:0) Examines impact of globalization and changes in international economic and political systems on concepts of national security. Emphasizes nexus of economic and security concerns in post-Cold War era, with particular attention to emerging issues including trade and economic security, proliferation of advanced military technology and control of weapons of mass destruction, international drug trafficking, and defense conversion. Focuses on implications of changing security requirements on U.S. defense and economic policy and activities.

757 Global Corporate Business Planning and the Competitive Edge (3:3:0) Provides introduction to planning international business activities, including licensing agreements, joint ventures, acquisitions, and divestitures. Using step-by-step planning methodology, students learn to integrate marketing, financial, regulatory, legal, and cultural factors into management strategy and business plan.

759 Trade Licensing, Controls, and Documentation (3:3:0) Examines legislation and practices concerning regulation of trade. Reviews current customs and import-export control regulations and documentation requirements for international transactions. Designed for students who need practical and detailed understanding of rules and documentation for international business transactions.

760 International Environmental Politics (3:3:0) Examines growing concerns related to global environmental issues and problems they pose to domestic, foreign, and international political institutions. Covers major environmental issues including global warming, ozone depletion, cross-border flow of pollution, and threats to biodiversity. Assesses strengths and weaknesses of traditional political institutions in dealing with these issues and providing for sustainable economic development while limiting environmental damage.

761 European Political and Economic Union (3:3:0) Examines movement for European integration since World War II, focusing on political and institutional development of European Community/Union. Topics include theories of European integration, Treaties of Rome, Single European Act, Maastricht Treaty, European Union (EU) policies and programs, and EU’s external relations. Analyzes changing nature of U.S.-EU relations and prospects for EU enlargement into Central and Eastern Europe.
763 International Real Estate Transactions (3:3:0) Provides overview of real estate market in the United States with emphasis on commercial real estate and issues of importance to national and international investors. Reviews recent developments in valuation approaches, marketing strategies, and performance trends. Discusses increasing use of securitization along with implications for traditional originators of mortgage financing. Emphasizes government experience and practices in real estate management and disposition.

764 Trade, Investment, and Politics in East Asia (3:3:0) Examines issues related to international transactions involving Korea, China, Taiwan, and Hong Kong, with some attention to Japan. Focuses on trade and financial relations between these East Asian nations and United States. Assesses impact of culture and domestic political and economic institutions within these states, and roles in regional institutions and in international system.

765 Trade, Investment, and Politics in Sub-Saharan Africa (3:3:0) Examines role and potential of sub-Saharan Africa in international trading system. Emphasizes political, historical, cultural, and development factors. Focuses on perspectives of U.S. firms and on international institutions trading or investing in region.

766 Trade, Investment, and Politics in the Middle East and North Africa (3:3:0) Examines major economic, political, and cultural issues that influence trade and investment relations with Middle East and North Africa. Focuses on roles of international and regional institutions in economic development, and develops understanding of challenges facing region and their implications for formulating trade and investment strategies by U.S. firms.

767 Political Economy and Integration in Latin America (3:3:0) Examines contemporary political, economic, and cultural dynamics of Latin American and Caribbean regions. Emphasizes issues and trends that affect U.S.-Latin American political, business, and trade relations, particularly recent political and economic reforms. Examines roles of domestic interest groups and decision-making systems in individual countries, and evolution of regional integration arrangements and integration with international system.

768 Global Intellectual Property Rights and International Trade (3:3:0) Examines national and regional systems, international contractual relations (licensing), and the evolving global system for protecting intellectual property. Addresses current international treaty system and the ongoing multilateral efforts to strengthen worldwide intellectual property protection. Examines intellectual property regimes worldwide, including regional and bilateral challenges and opportunities, and relevant U.S. law and policy responses.

769 International Entrepreneurship (3:3:0) Introduces practical planning approach for small and medium-size entrepreneurial firms seeking to enter international marketplace. Focuses on key business and financial documents related to doing business overseas; and assesses role of language, technology, and information systems in formulating successful business strategy. Role playing and simulated negotiations provide opportunities for students to sharpen business skills.

770 International Contract Negotiation (3:3:0) Reviews growing role of arbitration in international transactions. Examines international, national, and government arbitration bodies, with particular emphasis on how differing cultural characteristics affect negotiating behavior and effectiveness of arbitration.

771 Trade, Investment, and Politics in South and Southeast Asia (3:3:0) Focuses on trade and finance issues in the most dynamic countries of South and Southeast Asia. Assesses cultural and political factors, regional trade patterns, and institutions, focusing on implications for regional development and business opportunities for U.S. firms.

772 International Telecommunications (3:3:0) Focuses on developments in international telecommunications and satellite regulation. Examines regulatory environment, and business and financial aspects of global telecommunications industry.

773 International Strategic Management (3:3:0) Presents comprehensive approach to international strategy formulation, implementation, and evaluation processes affecting policy and program development within multinational firms and government agencies. Integrates marketing, finance, accounting, and management. Covers techniques for forecasting international business, political, economic, technological, legal, and sociocultural forces.

780 Internship (1–3:3:0) Open to authorized graduate majors only; departmental and advisor approval required before enrolling. Provides practical work experience in state, federal, or international agencies or private sector. Requires written project integrating work experience and academic program.

790 Independent Study (1–3:3:0) Open to authorized graduate majors only; departmental and advisor approval required before enrolling. Provides opportunity to pursue intensive research in area of interest not covered by other courses. Note: Not all courses earn 3 graduate credits. Some courses may vary in length and thus, in credits earned. Some course requirements subject to change.

791 Advanced Trade Policy (3:3:0) Covers international trade theory, trade policy analysis, regional economic integration, and institutional arrangements governing world trade. Examines dispute settlement regimes, and relationship between trade and environment. Includes WTO and constituent agreements in the areas of goods, services, intellectual property, and trade-related investment measures.

795 Final Project (1–3:3:0) Includes writing 40-page capstone paper that draws together key themes of program.

Italian (ITAL)

Modern and Classical Languages

101 Elementary Italian I (3:3:1) Designed for students with no prior knowledge of Italian. Includes elements of grammar, vocabulary, oral skills, listening comprehension, and reading. Lab work required.

102 Elementary Italian II (3:3:1) Prerequisite: ITAL 101 or permission of instructor. Continuation of ITAL 101. Lab work required.

110 Elementary Italian (6:6:1) Introduces elements of grammar, vocabulary, oral skills, listening comprehension, and reading. Students may not receive credit for ITAL 110 if they have received credit for ITAL 101 and 102. Lab work required.
201 Intermediate Italian I (3:3:1) Prerequisite: ITAL 102 or permission of department. Further development of skills in listening, speaking, and writing. ITAL 201 and 202 must be taken in sequence. Lab work required.

202 Intermediate Italian II (3:3:1) Prerequisite ITAL 201 or permission of department. Application of language skills to reading, composition, and discussion.

210 Intermediate Italian (3:3:1) Prerequisite: ITAL 110 or appropriate placement score. Continuation of the development of basic components of the language, with focus on listening, speaking, reading, and writing skills. Introduces students to the cultures and histories of Italian-speaking regions. Taught in Italian.

250 Gateway to Advanced Italian (3:3:0) Prerequisites: ITAL 210; appropriate placement score; or permission of department. Development of advanced intermediate-level language skills in the interpersonal, interpretive, and presentational modes of communication. Incorporates strong component of critical and comparative analysis of Italian cultural products, practices, and perspectives of the past and the present. Taught in Italian.

330 Advanced Reading and Speaking I (3:3:0) Prerequisite: JAPA 202, appropriate placement score, or permission of instructor. Courses must be taken in sequence. Designed for students to develop conversational proficiency and reading skills. Students work toward a mastery of linguistic and sociolinguistic rules by incorporating reading and speaking abilities through class discussions, reports, and presentations.

331 Advanced Reading and Speaking II (3:3:0) Prerequisites: JAPA 202, 330, and appropriate placement score; or permission of instructor. Courses must be taken in sequence. Designed for students to develop conversational proficiency and reading skills. Students continue to develop mastery of linguistic and sociolinguistic rules by incorporating reading and speaking abilities through class discussions, reports and presentations.

440 Integrated Study of Japanese Language and Society I (3:3:0) Prerequisites: JAPA 331, appropriate placement score, or permission of instructor. Integrated approach to study of Japanese language and society through grammar review, vocabulary and kanji development, intensive practice in spoken and written Japanese, and sociological and cultural readings and analysis. Includes class discussion, oral and written reports, and out-of-class direct interactions with native speakers.

441 Integrated Study of Japanese Language and Society II (3:3:0) Prerequisites: JAPA 440, appropriate placement score, or permission of instructor. Sequel to JAPA 440. Integrated approach to study of Japanese language and society through grammar review, vocabulary and kanji development, intensive practice in spoken and written Japanese, and sociological and cultural readings and analysis. Includes class discussion, oral and written reports, and out-of-class direct interactions with native speakers. More emphasis on actual use of Japanese language.

Japanese (JAPA)

Modern and Classical Languages

101, 102 Introduction to the Japanese Language (3:3:0), (3:3:0) Must be taken in sequence. Includes basic grammar, oral expression, listening comprehension, and reading and writing.

110 Elementary Japanese (6:6:1) Introduces elements of grammar, vocabulary, oral skills, listening comprehension, and reading. Students may not receive credit for JAPA 110 if they have received credit for JAPA 101, 102, or 109. Lab work required.

201 Intermediate Japanese I (3:3:0) Prerequisite: JAPA 102 or equivalent. Further development of skills acquired in JAPA 101 and 102, including grammar, oral expression, listening comprehension, reading and writing. Use of written language (katakana, hiragana, and kanji) emphasized. Lab work required. JAPA 201 and 202 must be taken in sequence.

202 Intermediate Japanese II (3:3:0) Prerequisite: JAPA 201 or equivalent. Continuation of JAPA 201.

209 Intensive Japanese II (6:6:0) Prerequisite: JAPA 102 or 109, or equivalent. Equivalent to JAPA 201, 202 taught in a single semester. May not be taken for credit in combination with JAPA 201 or 202.

210 Intermediate Japanese (3:3:1) Prerequisite: JAPA 110 or appropriate placement score. Continuation of the development of basic components of the language, with focus on listening, speaking, reading, and writing skills. Introduces students to the cultures and histories of Japanese-speaking regions. Lab work required.

250 Gateway to Advanced Japanese (3:3:0) Prerequisites: JAPA 210, appropriate placement score, or permission of department. Development of advanced intermediate-level Japanese language skills in the interpersonal, interpretive, and presentational modes of communication. Incorporates strong component of critical and comparative analysis of Japanese cultural products, practices, and perspectives of the past and the present. Taught in Japanese.

Justice, Law, and Crime Policy (JLCP)

Public and International Affairs

510 Policing in a Democratic Society (3:3:0) Fundamental issues in policing a democratic society: police mission, subculture, performance measurement, moral hazards, discretion, impact on crime and disorder, legitimacy, community policing, and other reforms.
691 Justice Program Planning and Implementation (3:3:0) Prerequisite: JLCP 700 or PUAD 502, or permission of instructor. Examines challenges of adapting to, planning, and implementing change in justice organizations. Provides hands-on experience in conducting, planning, and implementing project.

700 Theories of Justice (3:3:0) Overview of ancient and modern theories of justice with application to contemporary issues involving justice system, and other social and political institutions.

702 Comparative Justice (3:3:0) Prerequisite: JLCP 700/GOVT 726, or permission of instructor. Survey of justice systems and their environments in different lands and cultures. Identifies commonalities and differences among justice systems, evaluates them, and considers policy implications.

703 Restorative Justice (3:3:0) Prerequisite: JLCP 700 or permission of instructor. Covers origins of restorative justice, its principles, implications for different justice organizations and processes, and application to a variety of problems, such as family violence, human rights, and reconciliation following mass victimizations.

720 Behavior of Law (3:3:0) Examines development of law and law’s effect on human behavior. Reviews theories of law’s meaning and aims. Examines construction of law and investigates consequences of law and legal decisions.

721 The Constitution, Criminal Procedure, and Security (3:3:0) Prerequisites: JLCP 720/GOVT 728 or permission of instructor. Focuses on understanding legal doctrines that form basis of U.S. constitutional procedural rights and how doctrines develop, why courts rule as they do, and evaluating strengths, weaknesses of rights.

722 Civil Justice (3:3:0) Prerequisite: JLCP 720/GOVT 728 or permission of instructor. Covers understanding civil justice system, rules that govern civil justice, origins and effects, strengths and weaknesses of civil law doctrines, and processes to understand power of law to order social behavior.

723 Law and Social Control (3:3:0) Prerequisite: JLCP 720/GOVT 728 or permission of instructor. Competing conceptions of law, political systems, and social control. Intellectual traditions behind social control, its definitions, and mechanisms for regulating public and private behavior, by both individuals and organizations in society.

730 Seminar in the Courts and Constitutional Law (3:3:0) Role, influence, and effects of U.S. courts in creating constitutional norms and interpreting them. Special attention to First and Fourteenth Amendments, Commerce Clause. Analyzes leading court cases.

740 Justice Organization and Administration (3:3:0) Examines organization and administration of justice and security organizations. Covers organization theory and behavior as applied to justice and security organizations.

741 Conduct of Justice Organizations at the Street Level (3:3:0) Prerequisite: JLCP 740/GOVT 790 or permission of instructor. How justice organizations behave at lowest levels, where service is delivered and discretion is greatest (suspects, victims, witnesses, parole officers, prison guards, parole officers, attorneys, and others who interact with the justice system).

742 Leadership in Justice and Security Organizations (3:3:0) Prerequisite: JLCP 740/PUAD 790 or permission of instructor. Examines leadership theories, and explores fundamental questions about leadership in justice and security organizations today.

743 Changing Justice and Security Organizations (3:3:0) Prerequisite: JLCP 740/PUAD 790 or permission of instructor. Examines challenges of changing justice organizations, how changes have been successfully and unsuccessfully implemented in the past, and what change strategies appear to be the most effective.

749 Issues in Justice Administration (1–3:1–3:0) Prerequisite: JLCP 509/PUAD 509 or JLCP 700/GOVT 726, or permission of instructor. Explores issues in justice administration, taking into diverse perspectives. Emphasizes using theory and evidence to evaluate different viewpoints. Course topics vary, focusing on controversial matters.

760 Crime and Crime Policy (3:3:0) Explores relationship between crime policy and empirical evidence about etiology of crime. Includes crime measurement and trends in crime over time, effectiveness of various policy interventions.

761 Politics of Crime Policy (3:3:0) Prerequisite: JLCP 760/GOVT 792 or permission of instructor. Explores political context of crime policy. Examines influence of public opinion, interest groups, scientific community, and other political forces. In-depth, case-study comparison of several crime policies.

780 Research Methods (3:3:0) Prerequisite: undergraduate course in social science research methods or statistics, or permission of instructor. Introduces logic and methods of scientific inquiry in justice, law, and crime policy. Includes conceptualization of research questions, observation, measurement, research design, and principles of causality. Evaluation of extant research according to scientific principles.

781 Justice Program Evaluation (3:3:0) Prerequisite: PUAD 611/612, JLCP 780, or two graduate-level statistics courses; or permission of instructor. Practical exploration of assessment techniques used in evaluating need for and consequences of justice programs and policies. Design and measurement, interpreting and presenting results.

782 Statistics I (3:3:0) Prerequisite: An undergraduate social science research methods course or an undergraduate statistics course. Focuses on descriptive and inferential statistical methods and theory with application to problems within the justice field. Explores the logic of inferential statistical methods in general and null hypothesis significance testing in particular. Covers widely used statistical procedures within the applied social sciences.

783 Statistics II (3:3:0) Prerequisite: JLCP 782 or a comparable course. Focuses on the theory and application of multivariate regression methods as applied within the justice field. Topics include tests for and consequences of violating assumptions of the generalized linear model, dummy coding of categorical variables, testing of interaction effects, logistic regression, ordered and multinominal logit, and missing data analysis.

790 Practicum in Justice, Law, Crime, and Security (1–6:9:0) Prerequisites: JLCP 780, and either STAT 510 and 535 or STAT 554 and 656; or permission of instructor. Student-initiated research project supervised by faculty.
member. Students must work with justice organization to conduct useful research.

795 Special Topics (3:3:0) Prerequisite to be determined by instructor. Recent developments in field, or topics not covered by regularly listed courses. Course content varies; may be repeated for credit.

796 Directed Reading (1–3:0:0) Prerequisite: successful completion of 12 JLCP credits. Independent reading at doctoral level on specific topic related to justice, law, or crime policy as agreed to by student and faculty member and approved by coordinator of JLCP program.

799 Master’s Thesis (1–6:0:0) Prerequisite: submission and approval of thesis proposal. Research on approved master’s thesis topic under direction of thesis committee with approval of chair. Graded S/NC.

Korean (KORE)

Modern and Classical Languages

110 Elementary Korean (6:6:1) Introduces elements of grammar, vocabulary, oral skills, listening comprehension, and reading. Lab work required.

210 Intermediate Korean (3:3:1) Prerequisite: KORE 110 or appropriate placement score. Continuation of the development of basic components of the language, with focus on listening, speaking, reading, and writing skills. Introduces students to the cultures and histories of Korean-speaking regions. Lab work required.

Latin (LATN)

Modern and Classical Languages

Placement: See Academic Testing section of Admission chapter.

101, 102 Elementary Latin (3:3:0) Must be taken in sequence. Introduction including basic grammar, vocabulary, and development of reading skills, and introduction to Roman civilization.

109 Intensive Elementary Latin (6:6:0) Equivalent to LATN 101 and 102 and taught in a single semester. Recommended for students in minors of classical studies or Latin, and for students who want intensive introduction. May not be taken for credit in combination with LATN 101 or 102.

201 Intermediate Latin I (3:3:0) Prerequisite: LATN 102 or equivalent. Intensive review of elementary grammar. Introduces more advanced grammatical constructions and patterns of usage, continued development of reading proficiency, and vocabulary and readings in Latin literature.

202 Intermediate Latin II (3:3:0) Prerequisite: LATN 201 or equivalent. Study of advanced grammatical constructions, vocabulary, and patterns of usage. Reading of selections from Roman authors of late Republic and early Empire, and study of cultural and political backgrounds.

209 Intensive Intermediate Latin (6:6:2) Equivalent to LATN 201 and 202, and taught in single semester. May not be taken for credit in combination with LATN 201 or 202.

321 Latin Tutorial (1–3:0:0) Prerequisites: LATN 202 or equivalent, and permission of program chair. Latin readings drawn from classical or postclassical literature. Authors or genres selected by instructor in consultation with student. Meetings on tutorial basis. May be repeated once.

351 Roman Prose Literature (3:3:0) Prerequisite: LATN 202 or equivalent. Introduces major work of prose, themes, and literary qualities. Emphasizes interpretation and stylistic analysis. Concentrates on one complete work; topics, authors vary. May be repeated for credit.

352 Roman Poetry (3:3:0) Prerequisite: LATN 202 or equivalent. Introduces major work of poetry and themes, meters, and poetic techniques. Emphasizes interpretation, metrical and stylistic analysis, and poet’s role in society. Topics and authors vary. May be repeated for credit.

451, 452 Studies in Roman Literature (3:3:0, 3:3:0) Prerequisites: LATN 351/352 or equivalent, or permission of instructor. Focuses on single Latin author or literary genre. Approaches subject from variety of interpretive perspectives, and uses secondary literature as well as primary texts. Topics and authors vary. Sequence may be repeated for credit.

Latin American Studies (LAS)

Latin American Studies

100 Introduction to Latin American Studies (1:1:0) Weekly series of presentations by various Latin American Studies faculty. Short reading assignments and journal entries required. Graded pass/fail. Required for all Latin American studies majors.

490 Internship (1:1:0) Prerequisite: Latin American studies majors with permission of director. Approved work-study programs in cooperation with specific organizations including area museums; NGOs; and local, state and federal agencies. Credit determined by LAS program.

499 Research Seminar in Latin American Studies (3:3:0) Prerequisites: 90 credits and complete or concurrent enrollment in all other required general education courses. Research on specialized topic in Latin American Studies culminating in substantial paper and oral presentation. Students expected to integrate knowledge and skills acquired in general education courses. Must receive passing grade to graduate with a BA in Latin American studies.

Learning, Social and Organizational (LRNG)

School of Public Policy

596 Independent Study (1–12:0:0) Covers research, analysis, and implementation within realm of social and organizational learning. Students work with member of program faculty. May be repeated for credit.
601 Organizational Learning (3:3:0) Re-examination of organizations and role of management from interpretive standpoint. Develops process view of organizations that identifies differences in interests, perspectives, and cultures among groups and explains role of management in facilitating understanding to achieve effective cooperation in a dynamic work environment. Themes include organizational culture, decision-making, collaborative communities, and teamwork, and “reading” of organizational change. Case studies and experiential exercises reinforce learning process. Complements LRNG 672.

602 Group Dynamics and Team Learning (3:3:0) Using unstructured learning environments, participants learn how to facilitate team learning for organizational effectiveness by engaging in meaningful group interaction. Explores various aspects of group dynamics such as power, perception, motivation, leadership, and decision making.

672 Organizational Learning Laboratory (3:3:0) Focuses on creating learning and experimental environment to explore questions and concerns typically faced by managers in effort to build learning organizations. Analyzes questions using experiential learning and action research. Classroom group interactions and group projects simulate real-world organizations. Object is to acquire competence to diagnose and analyze organizations and develop skills to become better facilitators of organizational learning. Complements LRNG 601.

692, 792 Special Topics in LRNG (1–3:1–3:0) Covers topics in social or organizational change seen from economic, historical, philosophical, literary, organizational, and information technology perspectives. New courses that first appear under this heading include Teaching Practicum: Instructional Technologies, Building Learning Organizations for Global Business, Computational Modeling of Social Learning, and Strategic Knowledge Management. May be repeated for credit.

714 Ethnography of Corporate Culture (3:3:0) Corporate culture is not a simple byproduct of organizational charts and advertising images, but rather the web of meaning that endows organizational action with its deepest significance. Corporate cultures must be studied by ethnographic methods of “thick description.” After exploring conceptions of corporate culture, course examines exemplary ethnographies of various organizations, including those of different societies, to prepare students for their own ethnographic field work and writing.

762 Strategic Knowledge Management (3:3:0) Deals with theory and practices of leveraging and sharing knowledge to develop more effective organizations. Focuses on knowledge and communities of practice, and includes use of collaborative technology in managing interactions.

763 Technology and Learning in Organizations (3:3:0) Examines enormous potential of information technology to enhance the way organizations work and learn. Focus includes user interface design, and organizational processes that support effective use of this technology.

764 Learning Across Cultures (3:3:0) Focuses on ideas and practices involved in fostering learning, innovation, and new knowledge creation in the highly multicultural environments of knowledge intensive, global economies, and political systems.

781 Interpretive Social Theory (3:3:0) Advanced, philosophical study of interpretive school of economics sometimes known as the “Austrians.” Weaves together Austrian ideas, epistemology, and hermeneutics; organizing theme is reinterpretation of Austrian school as radically interpretive approach to social theory. Course material is in the form of Folio Views hyper-text, which lends itself to close analysis of text and provides practical way of demonstrating and appreciating value of interpretive social theory.

796 Independent Study (1–12:1–12:0) Requires research, analysis, and implementation within realm of social and organizational learning. Students work with member of program faculty. May be repeated for credit.

Linguistics (LING) English Department

326 General Linguistics (3:3:0) Introduces phonetics, phonology, morphology, and syntax.

450 Introduction to Sociolinguistics (3:3:0) Prerequisite: LING 326. Overview of the study of language variation and change. Topics to be covered include the interaction between language and social factors (age, sex, social class), dialects of English, speech communities, language contact, and language and gender.

485 Semantics and Pragmatics (3:3:0) Prerequisite: LING 326. Developments in theoretical linguistics that explore how language form is related to meaning and context. Topics include reference, lexical semantics, logic, quantification, truth conditions and sentential meaning, presuppositions, and speech acts.

486 Syntax I (3:3:0) Prerequisite: LING 326. Nature and form of syntactic theory, and examination and analysis of the properties of several major natural language syntactic structures.

490 Generative Phonology (3:3:0) Prerequisite: LING 326. Sound systems of English and other languages from perspectives of phonological theory. Topics include articulatory phonetics, distinctive features, nature of phonological representations, rhythm and stress, and phonological universals and constraints.

499 Independent Study (1–3:3:0) Prerequisites: LING 326 and 3 other LING credits, and permission of instructor. Intensive study of particular theoretical problem in linguistics conducted by student in close consultation with instructor. Student produces substantial piece of written work on research findings. With instructor permission, may be taken twice for total 6 credits.

507 Field Work in Applied Linguistics (3:0:0) Prerequisite: LING 326, 520, 521, or 582. Contact English Department one semester prior to enrollment. Field work providing working experience in language-teaching program or educational research organization.

520 Descriptive Linguistics (3:3:0) Introduces terminology and methodology of modern linguistic science, and detailed
structural analysis of English phonology, morphology, and syntax.

521 Applied Linguistics: Teaching English as a Second Language (3:3:0) Prerequisite: LING 520, 690, or 786. Theories and basic principles of teaching a second language, especially as they relate to English language. Introduces students to methods of teaching English to speakers of other languages.

522 Modern English Grammar (3:3:0) Prerequisite: one course in linguistics, or permission of instructor. Overview of structure of modern English beginning with word classes and ending with analyses of complex sentences. Most topics introduced as problems of language description; in solving them, principles of syntactic argumentation are demonstrated. Students learn to tap intuitions about English to analyze grammatical structure.

523 Descriptive Aspects of English Phonetics and Phonology (3:3:0) In-depth description and analysis of sound system processes of modern English. Topics include segmental phonetics, syllable structure, connected speech, and prosodic phenomena. Also addresses implications for language instruction.

525 Practicum in ESL (3:3:0) Prerequisite: LING 521. Involves preparation and presentation of lessons to adult English as second language (ESL) learners under guidance of mentor teacher and practicum professor. Field experience consists of observation and teaching in assigned ESL classroom.

581 Psycholinguistics (3:3:0) Prerequisite: LING 520, 690, or 786; or permission of instructor. Study of mental and psychological aspects of human language, including aphasia, association, autism, language acquisition, verbal concept formation, and perception.

582 Second Language Acquisition (3:3:0) Prerequisite: LING 520, 690, or 786; or permission of instructor. Examines second language (L2) acquisition from linguistic perspective. Compares first and second language acquisition. Examines factors contributing to L2 variation, including linguistic universals, transfer, age, input, and affective considerations.

Pending 650 Introduction to Sociolinguistics (3:3:0) Prerequisite: one of the following: LING 520, 523, 690. An overview of the study of language variation and change. Topics to be covered include the interaction between language and social factors (age, sex, social class), dialects of English, speech communities, language contact, and language and gender.

686 Special Topics in Linguistics (3:3:0) Prerequisite: varies with topic. Detailed advanced study of selected area of linguistics. Content varies. May be repeated once for credit with permission of department.

690 Generative Phonology (3:3:0) Sound systems of English and other languages from the perspective of phonological theory. Topics include articulatory phonetics, distinctive features, nature of phonological representations and processes, rule ordering, abstractness, role of external evidence, and nonlinear phonology.

691 Theories of Language (3:3:0) Prerequisite: LING 520, 690, or 786; or permission of instructor. Seminar in linguistic metatheory. Examines wide range of theories about language and linguistic theory, including those of Saussure, Bloomfield, Chomsky, and others. Readings from original sources.

692 Phonology II (3:3:0) Prerequisite: LING 690. Recent trends in phonological theory. Topics include stress assignment, tone spreading, and vowel harmony, from within nonlinear framework. Discusses segmental structure and underspecification.

770 Research Methods (3:0:0) Prerequisites: LING 582 and one of LING 690, 785, or 786; or permission of instructor. Conceptualizing and conducting second language research, including process of developing research questions, gathering data, obtaining permission from institutional review board, choosing data collection measures, and coding linguistic and nonlinguistic data.

782 Second Language Acquisition (3:3:0) Prerequisites: LING 582, or permission of instructor. Advanced course in second-language acquisition theory. Detailed analysis of internal and external constraints. Variation addressed from linguistic, psychological, and environmental perspectives.

785 Semantics and Pragmatics (3:3:0) Prerequisite: LING 520, 690, or 786; or permission of instructor. Developments in theoretical linguistics that explore how language form relates to meaning and context. Topics include reference, lexical semantics, logic, quantification, truth conditions and sentential meaning, presuppositions, and speech acts.

786 Syntax I (3:3:0) Nature and form of syntactic theory. Examines and analyzes properties of several major natural language syntactic structures.

787 Syntax II (3:3:0) Prerequisite: LING 786. Theoretical treatment of syntactic phenomena that have emerged as standard problems for syntactic analysis. Problems include binding, extraction, and quantification. Extensive reading in primary theoretical literature.

788 Semantics and Pragmatics II (3:3:0) Prerequisite: LING 785, or permission of instructor. Advanced course in semantic and pragmatic theory. Study of meaning under truth-conditional, model-theoretic framework explored and related to syntax and pragmatics.

798 Directed Reading and Research (1–3:0:0) Open only to students who have completed at least 18 credits of LING courses. Reading, research, and writing on specific project under direction of departmental member. Prior approval by faculty member required. Written report required. May be repeated once for credit with permission.

799 Thesis (1–6:0:0) Open only to students who have completed at least 18 credits of LING courses. Students who take LING 798 to develop thesis topic and then elect thesis option receive 3 credits after completing thesis. Students who do not take LING 798, or who take it to work on project unrelated to thesis, receive up to 6 credits after completing thesis. Graded S/NC.

882 Seminar in Language Acquisition (3:3:0) Prerequisite: LING 782 or permission of instructor. Advanced topics seminar in current language acquisition theory. Topics vary. May be repeated twice.

886 Advanced Syntax Seminar (3:3:0) Prerequisites: LING 786 or 787, or permission of instructor. Advanced course in current syntactic theory. Topics vary. May be repeated twice.
structures affect individual behavior. Topics include individual and societal phenomena relevant to issues of diversity. Prerequisites are strictly enforced. Degree status is defined as formal admission to SOM.

MGMT 301 Managing People and Organizations (3:3:0) Prerequisites: Sophomore standing. Explores how individuals behave in workplace, and how group and organizational structures affect individual behavior. Topics include individual differences, groups and teams, managing conflict, negotiation, stress, diversity, influence, leadership, and motivational theories and techniques. Half lecture, half lab; format provides opportunities to discuss and apply concepts throughout semester. Lecture, recitation format; requires attendance in weekly lecture and weekly recitation.

MGMT 312 Principles and Practices of Management (3:3:0) Prerequisites: C or higher in MGMT 301 and degree status. Builds on fundamental theories and concepts learned in MGMT 301 by examining nature of managerial work under range of business models and under rapidly changing business conditions. Managerial functions and activities such as planning, strategizing, organizing, controlling, and directing examined in depth and in context of current organizational examples and scenarios.

MGMT 321 Introduction to Human Resource Management (3:3:0) Prerequisites: C or higher in MGMT 301 and degree status. Human capital is the most important asset to most firms. Human resources field examines what can or should be done to make workers more productive and satisfied. Course builds on MGMT 301 by introducing key concepts and techniques that managers need to attract, retain, develop, compensate, and motivate quality talent. Also emphasizes legal and ethical considerations in human resource management.

MGMT 412 Diversity in Organizations (3:3:0) Prerequisites: C or higher in MGMT 301 and degree status. Builds on MGMT 301 by emphasizing intrapersonal, interpersonal, organizational and societal phenomena relevant to issues of diversity. Examines phenomena and processes in general and with regard to specific dimensions such as gender, race and ability. Designed to increase students’ knowledge of diversity in organizations, understanding others’ perspectives, and ability to work well with people who differ from themselves.

MGMT 413 Organizational Development and Management Consulting (3:3:0) Prerequisites: C or higher in MGMT 301; degree status. Introduces theory and practice of organizational development. Assumes some basic knowledge of organizational behavior, and addresses how to use knowledge about organizations to change them. Focuses on ways of understanding organizations with attention to theoretical underpinnings of field and diagnostic models, and processes for entering organizations. Later sessions focus on contracting, data collection, organizational diagnosis, data feedback, and change technologies.

MGMT 421 Advanced Human Resource Management (3:3:0) Prerequisites: C or higher in MGMT 301 and 321, and degree status. Builds on MGMT 321 by using case-based approach to deepen understanding of HRM best practices. Students conduct projects requiring application of important strategic human resource processes. In addition, advanced topics not thoroughly covered in MGMT 321 are discussed, such as international HRM. Relevant for management majors, particularly those seeking human resource management career. Helps prepare for Professional in Human Resources certification exam, which is affiliated with Society for Human Resource Management.

MGMT 431 Employee Relations (3:3:0) Prerequisites: C or higher in MGMT 301 and BULE 302; degree status. Focuses on employee relations issues from historical and current perspectives; for management majors interested in pursuing HRM career.

MGMT 451 New Venture Creation (3:3:0) Prerequisites: C or higher in MGMT 301 and degree status. Explains process of conceptualizing and creating new venture. Using central concepts of innovation, strategic opportunities, and globalization, students learn to evaluate new venture opportunities and consider external environment’s impact. Students gain greater understanding of entrepreneurial concepts by developing business plans that address critical issues, including management composition and structure, effective business and functional strategies, operational logistics, legal issues, financial projections, and financing options.

MGMT 461 Cross Cultural and Global Management (3:3:0) Prerequisite: C or higher in MGMT 301, and degree status. Explores theory and practice of managing culturally diverse organizations in domestic and international contexts. Topics include management customs and practices in different world regions, cross-cultural communication and learning, and the developing culturally and internationally sophisticated employees and managers.

MGMT 462 Honors Seminar in Management (3:0:0) Prerequisite: invitation by professor. Topic and format vary. In-depth study of topic of interest to managers and organizations. Enrollment limited and competitive.

MGMT 463 Negotiations in Organizations (3:3:0) Prerequisite: C or higher in MGMT 301 and degree status. Focuses on theory, processes, and practice of negotiation within and across organizations, including attention to ethical issues. Explores systematic ways to increase quality of negotiated agreements, including methods of preparation and use of rational assumption, bidding and decision criteria. Format includes negotiation exercises, lecture, and discussion.
464 Teamwork and Interpersonal Skills (3:3:0) Prerequisites: C or higher in MGMT 301 and degree status. Focuses on intensive development of high professional-level skill set for collaboration and leadership in contemporary environments. Builds on content introduced in MGMT 301, 312. Attention to developing personal leadership capabilities, collaborating in traditional and virtual environments, improving group processes, project management, tolerating ambiguity, improving communication, creative problem solving, time management, coaching, and empowering employees.

471 Competitive Strategy (3:3:0) Prerequisites: C or higher in MGMT 301 and degree status. Explores industry structures and competitive behavior of firms. Attention to how firms use tangible, intangible, and human resources to develop sustainable competitive advantage, and how competitors interact in marketplace. Introduces tools and concepts to analyze industry dynamics and competitive interactions of firms in these industries.

491 Current Topics in Management (3:3:0) Prerequisites: C or higher in MGMT 312 and degree status. Advanced study of management concepts and selected topics. Incorporates intensive analysis of management problems of long-term strategic significance or current urgency for organizational planning and operations. Includes significant contemporary research findings.

499 Independent Study (1–3:0:0) Prerequisite: Management majors with at least 9 credits of management major courses. Research and analysis of selected problems or topics in management must be arranged with instructor and approved in writing by associate dean for undergraduate programs. Written report required.

Management Information Systems (MIS)

School of Management

If a student takes noncore, upper-level business courses prior to acceptance to the School of Management, those courses will not count toward an undergraduate degree application for any major in SOM, except general elective credit. A grade of C or higher must be presented on the graduation application for each upper-level course in the major. Course prerequisites are strictly enforced. Degree status is defined as formal admission to SOM.

102 Spreadsheet Applications for Business (1:0:1) Hands-on course using popular spreadsheet package. Business examples used to teach fundamentals of spreadsheets and their use in business applications. Graded as S/NC.

301 Introduction to Business Information Systems (3:3:0) Prerequisite: sophomore standing. Introduces fundamentals of hardware, software, networking, Internet, and technology components. Includes role of technology in contemporary business, basic relational concepts, hands-on experience in building business database applications and web sites. Projects required.

302 Introduction to Programming for Business Applications (3:3:0) IT 108 highly recommended but not required. Teaches design and implementation of program data structures and algorithms to solve business problems using structured programming techniques. Students become familiar with program development life cycle and programming tools through using standard programming language such as Visual BASIC.NET supported by a modern Integrated Development Environment (IDE) Teaches basic data types, strings, arrays, selection and looping statements, subroutines, and functions. One of the most important courses in MIS because it provides understanding of basic software development techniques and problem-solving skills via programming. Programming foundation prepares students for successfully completing advanced classes in MIS, including MIS 310, 330, and 412. Lectures and lab sessions; students complete several individual lab assignments to enhance understanding of programming concepts discussed in lectures, and provide opportunities to utilize acquired skills in context of developing real-life business application.

310 Database Management Systems (3:3:0) Prerequisites: C or higher in MIS 301 and degree status. SOM majors may not receive credit for both MIS 310 and IT 214. Introduces principles of designing, maintaining, and manipulating databases. Emphasizes relational databases. Applications are business oriented, such as accounts receivables, order entry, customer history. Requires hands-on implementation using software package.

320 Networks and Security (3:3:0) Prerequisite: C or higher in MIS 301, degree status. Teaches students how information is transmitted within and between organizational networks. It prepares students to address the improvement of processes and protection of resources used for the distribution of information, including data, voice, and video. The course also includes lab work and exercises.

330 Systems Analysis and Design (3:3:0) Prerequisites: C or higher in MIS 301, MIS 310, degree status, programming course recommended. Introduces life cycle of computer information system with emphasis on information requirements analysis, feasibility studies, economics, systems design, equipment selection, and implementation process. Requires team project and computer lab.

411 Management and Control of Information Systems (3:3:0) Prerequisite: C or higher in MIS 301, degree status. Economics perspective to study issues arising in managing and controlling information systems. Topics include cost and performance trends in information technology, software development cost estimation, systems project management, pricing computer services, and strategic use of information technology.

412 E-Business Systems Development (3:3:0) Prerequisites: C or higher in MIS 301 and degree status. Introduces development of web-based information systems for E-business. Emphasizes technologies, methods, and application development tools. Requires team project and computer lab.

430 Data Warehousing and Data Mining (3:3:0) Prerequisites: C or higher in MIS 301 and MIS 310, degree status. Technologies and methods to develop decision support systems. Data warehousing and data mining techniques. Includes lab session and exercises. Term project required.

435 Knowledge Management (3:3:0) Prerequisites: C or higher in MIS 301 and MIS 310, degree status. Focuses on new trends on how knowledge management works for organizations, best strategy for such transition, and what are knowledge management elements.

440 E-Commerce Business Models and Applications (3:3:0) Prerequisites: C or higher in MIS 301 and MIS 310, degree status. Discusses business models on Internet, and applications in B2B and B2C Commerce. Term project.
450 Internet Architecture and Industry (3:3:0) Prerequisites: C or higher in MIS 301 and MIS 310, degree status. Overview of elements of Internet architecture. Analyzes economic and regulatory issues. Internet technology and industry trends. Includes lab sessions and exercises.

491 Seminar in Management Information Systems (3:3:0) C or higher MIS 301, degree status. Analyzes selected topics that highlight latest developments in information resource management field, including contemporary research findings and case studies of information systems in business and other organizations.

499 Independent Study in Management Information Systems (1–3:3:0) C or higher MIS 301, degree status. Must be arranged with instructor and approved in writing by associate dean for undergraduate programs before registration. Research and analysis of selected problems or topics in information resource management.

Marketing (MKTG)

School of Management

If a student takes noncore, upper-level business courses prior to acceptance to the School of Management, those courses will not count on an undergraduate degree application for any major in the school, except as general elective credit. A grade of C or higher must be presented on the graduation application for each upper-level course in the major. Prerequisites are strictly enforced. Degree status is defined as formal admission to SOM.

301 Principles of Marketing (3:3:0) Prerequisites: Sophomore standing and C or better in ACCT 203 and ECON 103. Examines marketing principles, concepts, strategies, tactics, and analytical tools used by profit and nonprofit organizations to market ideas, products, or services to selected target groups. Emphasizes how to promote, distribute, and price firm’s offering in dynamic economic, social, political, and international environment.

311 Sales Management (3:3:0) Prerequisites: C or higher in MKTG 301, degree status. Familiarizes students with marketing-sales interfaces including sales force role and capabilities, personal selling strategies, organizational relationships, and responsibilities of sales managers including training, motivating, and evaluating sales force.

312 Consumer Behavior (3:3:0) Prerequisites: C or higher in MKTG 301, degree status. Marketing strategy implications of concepts and propositions that compose consumer decision processes. Emphasizes lifestyle, situation, and information processing. Lecture and case analysis.

313 Integrated Marketing Communications (3:3:0) Prerequisites: C or higher in MKTG 301, degree status. In-depth study and application of advertising and other forms of marketing communication with emphasis on role in marketing planning. Study includes identification of relevant data to analyze marketing situation, development of product position, marketing and marketing communications objectives, creative strategy, media planning, and evaluation.

315 Internet Marketing (3:3:0) Prerequisites: C or higher in MKTG 301 and MIS 301, degree status. Explores impact of Internet technology on marketing strategy and practice. Topics include opportunities and challenges created by Internet in areas such as advertising and promotion, customer service, pricing, retailing (including electronic commerce), distribution channels, and customer relationship management.

322 Retailing and E-Commerce Management (3:3:0) Prerequisites: C or higher in MKTG 301, degree status. Comprehensive view of retailing as it relates to total marketing process. Emphasizes retail decision alternatives used when formulating retail strategies, particularly Internet.

333 Business to Business Marketing (3:3:0) Prerequisites: C or higher in MKTG 301, degree status. Examines unique challenges and opportunities of marketing systems among suppliers, manufacturers, resellers and government.

351 Marketing Research Techniques and Applications (3:3:0) Prerequisites: C or higher in OM 210 and MKTG 301, degree status. Study of concepts, theories, and principles underlying marketing research process. Focuses on development and evaluation of research designs for gathering marketing information.

407 International Marketing (3:3:0) Prerequisites: C or higher in MKTG 301, degree status. Multidisciplinary approach to international marketing from viewpoint of business management. Examines major marketing issues affecting companies operating in a global environment. Students achieve understanding of economic, political, and cultural differences among nations as they affect marketing opportunities and operations, and develop skills to identify and evaluate international marketing opportunities.

451 Competitive Intelligence and Information Security (3:3:0) Prerequisites: C or higher in MKTG 301, degree status. Develops understanding of benefits to commerce and society because of Internet-based commerce, escalating threats against Internet-based marketing initiatives, and protection of knowledge-based assets of firms.

471 Marketing Management (3:3:0) Prerequisites: Senior standing; C or higher in MKTG 301, 312 and 351; degree status. Emphasizes managerial aspects of marketing, including developing marketing strategies and plans, and integrating specific elements of marketing process. Emphasizes case analysis.

481 Marketing in the Nonprofit Sector (3:3:0) Prerequisites: C or higher in MKTG 301, degree status. Discusses unique problems of marketing in nonprofit organizations, including government, and their solution through applying traditional and innovative techniques. Explains how to market commercial ventures owned by nonprofits.

491 Special Topics in Marketing (3:3:0) Prerequisites: C or higher in MKTG 301, 9 credits of marketing, degree status. In-depth treatment in seminar format of contemporary topics in marketing. Culminates in preparation of substantial paper and oral presentation.

499 Independent Study (1–3:3:0) Prerequisite: 90 credits (senior class standing) and a minimum of 24 credits of business courses, including principles of marketing, finance, and management. Primary research proposal in marketing area. Requires prior approval from instructor and associate dean for undergraduate programs.
Courses

Master of Business Administration (MBA)

School of Management

603 Managerial Economics and Decisions of the Firm (3:3:0) Prerequisite: admission to MBA or MSA program. Provides fundamental understanding of applying microeconomics concepts to managerial decision making. Explores principles of microeconomic theory, including market supply and demand, production and cost functions, industry structure, and product and resource pricing.

612 Managing Costs and Evaluating Performance (1.5:1.5:0) Prerequisite: admission to MBA program and MBA 613. Examines impact of cost and cost allocation on performance and evaluation.

613 Financial Reporting and Decision Making (3:3:0) Prerequisite: admission to MBA program. Foundation course focusing on economics and analysis of business transactions and related financial reporting issues. Topics include introduction to accounting framework used in financial reporting; and analysis of financial statements, economic events and their impact on financial reports, and impact of accounting methods on financial reports.

623 Marketing Management (3:3:0) Prerequisite: admission to MBA program. Develops market-based knowledge and skills for effective marketing decision making, strategy design, implementation, and evaluation in wide variety of institutional and competitive situations. Emphasis on case studies, team work, and projects.

633 Statistics for Business Decision Making (3:3:0) Prerequisite: admission to MBA or MSA program. Uses statistical methods as analytical tools for understanding and solving business problems and supporting business decision making. Extensive use of applied business scenarios to illustrate concepts and computer software for data analysis.

638 Managing Operations and Technology for the Digital Enterprise (3:3:0) Prerequisite: admission to MBA or MSA program. Focuses on design, planning, and control activities to produce and deliver goods and services in modern organizations. Introduces wide range of operations management decisions, such as operations strategy, process analysis and design, capacity planning, supply chain management, total quality management, and project management. Uses quantitative modeling, case studies, and computer software to analyze and solve operations management problems.

643 Managerial Finance (3:3:0) Prerequisite: admission to MBA or MSA program. Introduces theory and practice of finance within corporations. Topics include intertemporal choice, valuation, capital budgeting and structure, working capital management, and risk and return analysis.

653 Organizational Behavior and Human Resource Management (3:3:0) Prerequisite: admission to MBA or MSA program. Emphasizes development of conceptual tools for understanding and analyzing individual and group behavior in organizations and organizational processes. Considerable focus on developing relevant skills for working in groups and teams. Lectures, discussions, case analyses, and class exercises.

673 Legal Environment for Management (1.5:1.5:0) Prerequisite: admission to MBA program. Examines fundamental legal concepts and doctrines from a variety of subject areas of the legal environment of business and examines how they can be applied to guide and enhance the decision-making processes of managers in the global economy. The importance of ethical behavior in business is also addressed. Lectures, class discussions, cases, and projects.

678 Strategy and Organizational Leadership (3:3:0) Prerequisite: admission to MBA program. Capstone course focusing on strategy development at business unit and corporate level. Cases, readings, and project format familiarize students with strategic management function and develop analytical, organizational, and formatting skills to analyze complex business situations. Provides opportunities to integrate knowledge gained in prior course work.

701 Business Analysis and Valuation (3:3:0) Prerequisite: completion of MBA or MSA core requirements, or permission of instructor. Applies theories and methods of corporate financial management to series of complex cases. Topics include capital projects as real options, cost of capital and capital structure, firm valuation, project finance, and merger and acquisition analysis.

703 Financial Markets (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Explores relationship among financial markets including global equity markets, U.S. Treasury securities, and exchange-traded and over-the-counter financial derivative instruments such as futures, options, swaps, and asset-backed securities.

704 Risk Management and Financial Innovation (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Considers how to identify, measure, and manage financial risk using innovative financial instruments and diversification strategies. Focuses on derivatives as tools in risk-management plans.

705 Venture Capital and Private Finance (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Considers market microstructure of venture capital and private finance: costs and benefits from employing private financing, interaction between the financiers and entrepreneurs, financial analysis of potential ventures, and investor exit strategies.

706 Investment Analysis (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Focuses on analyzing equity securities and debt instruments given implications of efficient market hypothesis and modern capital market theory.

708 Taxes and Business (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Provides framework for making managerial decisions in global tax environment. Examines business decisions such as location of facilities, employee compensation, mergers and acquisitions, capital and asset structure, and business form.

711 Entrepreneurship (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Considers fundamental aspects of entrepreneurship and process of
new venture creation. Draws on broad range of business disciplines including management, marketing, finance, and accounting to develop evaluation and execution skills.

712 Project Management (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Focuses on designing, planning, monitoring, and controlling projects. Involves practical examination of how projects should be managed from start to finish, including specific emphasis on how to avoid common pitfalls.

713 Human Resource Management (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. This course will approach strategic human resource functions from both a general manager and HR perspective. Students in this course will be acquainted with current talent management matters facing organizations in today’s business environment and will be challenged to generate and debate creative solutions to prevalent issues. Topics include hiring (recruiting/interviewing), firing, rewarding, compensating, managing performance, global HR issues, and security and health.

714 Managing Growth of Small Businesses (3:3:0) Prerequisite: completion of MBA core; MBA 711 recommended. Focuses on unique challenges faced by small and entrepreneurial firms that seek long-term growth. Builds on concepts and knowledge of creating start-up company, and introduces processes and strategies required to become significant player in industry segment. Designed for students interested in understanding opportunities and problems in their own businesses, employment in small or entrepreneurial businesses, or exploring corporate entrepreneurship within large firms.

715 Advanced Project and Program Management (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Examines advanced topics in project and program management with specific attention to issues and skills that managers need to effectively manage multiple projects and programs. Topics include project selection, multiple project resource allocation, and organization of project office.

716 International Business Strategy (3:3:0) Prerequisites or corequisites: completion of MBA core requirements. Focuses on the globalization of business activities, the strategic challenges faced by companies in global competition, and how companies strategically respond to these new competitive challenges.

717 International Finance (3:3:0) Prerequisite: completion of MBA core requirements or permission of instructor. Advanced analysis of managing firm’s international financial operations. Topics include currency risk, political risk, returns and funding of international projects, international markets and accounting, and cost of capital. Lecture, discussion, readings, and cases.

718 International Marketing (3:3:0) Prerequisite: completion of MBA core requirements or permission of instructor. Addresses marketing process for products and services within major international markets. Topics include marketing mix strategies using standardization, localization, or globalization approaches. Emphasizes the introduction of service innovations and new products in the global market.

719 Entrepreneurship Laboratory (1:0:1) Prerequisites: completion of MBA core requirements and permission of instructor. Permits MBA students to work with entrepreneurial community to gain first-hand knowledge of process of soliciting second-stage funding for new businesses, evaluating applications for second-stage funding, consulting for entities seeking funding, and negotiations for obtaining second-stage funding. May be repeated three times in different semesters.

721 Marketing Decision Systems (3:3:0) Prerequisite: completion of MBA core requirements or permission of instructor. Develops skills to plan and implement effective marketing research studies. Topics include research design, data collection, statistical analysis, and use of database systems. Offers perspective on how managers can use market data to develop successful product or service strategies.

722 Consumer Behavior (3:3:0) Prerequisite: completion of MBA core requirements or permission of instructor. Examines behavioral science concepts to understand and predict customer decision making, including demographics, psychographics, attitude formation and change, perception, and learning. Emphasizes applications of product and service strategies, focusing on customer segmentation, satisfaction, and loyalty.

723 Supply Chain Management (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Examines logistics of supply chain systems, including inventory management, distribution channels, and information systems. Emphasizes strategic alliances and international issues.

724 Marketing Communications (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Examines all forms of communication and sources of brand or company contacts as potential message channels in building relationship with customers. Focuses on integrated planning process for all communication elements, including consumer and trade advertising, public relations, direct and database marketing, promotions, and sales presentations to achieve synergy in communicating with various constituencies.

725 Leadership (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Overview of major conceptualizations of leadership and motivation in organizations. Integrates theory, research, and applications. Students apply principles of leadership and motivation to their own work situations and case evaluation.

726 Negotiations (3:3:0) Prerequisite: Completion of MBA core. Focuses on theory, processes, and practice of negotiation within and across organizations, including attention to ethical issues. Explores systematic ways to increase quality of negotiated agreements, including methods of preparation, effective communication, and various strategies to increase power. Format includes negotiation exercises, lecture, and discussion.

731 Business Systems Development (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Studies methods and tools for analyzing and designing business information systems with emphasis on business processes. Topics include data modeling, process modeling, interaction analysis, and user interface.

732 Knowledge Management (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Examines firms that use knowledge management principles
and approaches: intellectual capital, human capital, customer capital, tacit and explicit knowledge, new role of chief knowledge officer, leveraging of knowledge management.

733 Business Data Communications (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Introduces data communications and telecommunications technologies and application in business, including LANs, WANs, PBXs, voice services, network operating systems, corporate internetworking, and Internet. Analyzes data communications industry, and business applications in manufacturing and service sectors, along with regulatory issues and impact of globalization.

734 Electronic Commerce and E-Business (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Focuses on financial fraud such as bribery, contract rigging and kickbacks, embezzlement, fraudulent financial reporting, payroll fraud, and misappropriation of inventory and other assets.

735 Systems Thinking and Business Simulation (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Systems approach to design, analysis, and improvement of cross-functional business processes. Uses business-simulation software for modeling and analysis. Application areas include E-commerce, online services, and technology management.

737 Information Technology Governance and Policy (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Considers specific objectives of IT governance and policy, frameworks that help chart roadmap for this function, and tools and techniques used in specific areas of IT governance.

738 Business Intelligence and Data Management (3:3:0) Prerequisite: completion of MBA core requirements, or permission of instructor. Examines how data warehouses and data mining are used to help businesses successfully gather, structure, analyze, understand and act on relevant data, both operational and contextual.

741 Information Technology Auditing (3:3:0) Prerequisite: admission to MSA or MBA program, or permission of program director. Introduces methodologies to assess security and control issues concerning computerized accounting and other information systems. Key feature of course is applying computer-assisted audit tools and techniques to test effectiveness of application.

742 Corporate Governance and Ethics (3:3:0) Prerequisite: admission to MSA or MBA program, or permission of program director. Focuses on developing understanding of corporate governance issues and ethical decision-making. Topics include examination of internal and external and international governance issues, and ethical analysis in current business environment.

743 Corporate Financial Reporting (3:3:0) Prerequisite: admission to MSA or MBA program, or permission of program director. Addresses contemporary issues in corporate financial reporting. Focuses on role of financial reporting in providing decision-useful information to participants of capital market, and theoretical and empirical assessments of performance.

744 Fraud Deterrence and Detection (3:3:0) Prerequisite: admission to MSA or MBA program, or permission of program director. Introduces strategies and techniques for fraud prevention and detection. Focuses on financial fraud such as bribery, contract rigging and kickbacks, embezzlement, fraudulent financial reporting, payroll fraud, and misappropriation of inventory and other assets.
meaning affect nature of organizational reality and professional’s practice. Special attention to developing skills for “double-loop learning,” and reflection in professional lives through journals, narrative, autobiography, and imaginative literature. Customized for each track; for detailed course content, contact appropriate program directors.

703 Technology and Learning in the New Professions (3:3:0) Examines enormous potential for enhancing the way organizations can learn, notably through developing Internet literacy, and skills in using differing Internet navigation tools. Focuses on applying technology to real-world problems in different professional work-sites, and offers in-depth training in use and development of groupware applications. Customized for each track; for detailed course content, contact appropriate program directors.

704 Research Methodologies in the New Professionalism (3:3:0) Corequisite: EDUC 597. Concentrates on understanding and using research methodologies from such varied sources as Friere, McKeon, and Janowitz, with a practical team activity in which students study organization or aspects of it, using ethnography, field study, or any appropriately defensible research methodology. Customized for each track; for detailed course content, contact appropriate program directors.

720 Learning Community (3:3:0) Only for MNPS in organizational learning degree candidates. Workshops, seminars, and reading groups involving at least 60 hours of contact time and culminating in two-day retreat during which candidates for MS in New Professional Studies (organizational learning) make presentations to class and faculty on research practica. Theme of module is communication, collaboration, and interaction in organizations. After initial one-and-a-half day workshop, MNPS candidates meet with all faculty once a month to give talks and presentations on application of ideas in their organizations, discuss issues in organizational learning, and provide feedback about using collaborative computing technology in learning process.

Master of New Professional Studies—Teaching (MNPE)

Graduate School of Education

700 The New Professionalism: Theory and Practice (3:3:0) Experientially explores personal philosophical and pedagogical assumptions, including ethical relationship between educators and children, ethical accountability and responsibility, ethos of institutions, professional’s role in sustaining ethical standards, and how these challenges guide our lives as citizens in a democracy.

702 The New Professional as a Reflective Practitioner (3:3:0) Examines central problems of epistemology, what is meant by “ways of knowing” and “reflective practitioner,” and what they imply for professional learning. Special attention to developing skills for reflective practice through journals, narrative autobiography, and imaginative literature; and to considering how personal and professional identity is influenced by personal intentions and commitments to learning and schooling.

703 Technology and Learning in the New Professions (3:3:0) Uses various technological modes to sustain and enhance learning community. By learning and using technology such as e-mail, electronic conferences, and Internet, teachers further develop computer literacy and develop sharpened critiques regarding possibilities and concerns brought about by using technology in learning environments.

704 Research Methodologies in the New Professionalism (3:3:0) Corequisite: EDUC 597. Introduces qualitative approach to research as individual school-based projects are undertaken. Draws on “action research,” which starts with participants describing reality as they see it, reflecting on it, and deriving theories and action strategies immediately applicable to concrete situations. Emphasizes understanding and using various research methodologies as innovative approaches to teaching and learning are developed.

Mathematical Sciences (MATH)

Mathematical Sciences

Knowledge of high school algebra is a prerequisite for all mathematics courses. In exceptional cases, the prerequisite for a course above the calculus sequence may be waived at the discretion of instructor.

105 Precalculus Mathematics (3:3:0) Prerequisites: high school algebra I, algebra II, and geometry, and specified score on Math Placement Test; or successful completion of self-paced algebra tutorial program offered by Math Literacy Center. Call Mathematical Sciences Department at 703-993-1460 for details. Reviews mathematics skills essential to studying calculus. Topics include equations, inequalities, absolute values, graphs, functions, exponential and logarithmic functions, and trigonometry. May not be used as credit toward BA or BS in mathematical sciences. This course does not satisfy the university’s quantitative reasoning requirement for the BA degree. May not be taken for credit after receiving grade of C or better in any MATH course numbered 113 or higher.

106 Quantitative Reasoning (3:3:0) Prerequisite: specified score on Math Placement Test, or successful completion of self-paced Basic Math Program offered by Math Literacy Center. Quantitative skills for real world. Topics include critical thinking, modeling by functions, graphs, growth, scaling, probability, and statistics.

108 Introductory Calculus with Business Applications (3:3:0) Prerequisite: specified score on Math Placement Test, or successful completion of self-paced algebra program offered by Math Literacy Center. Call Mathematical Sciences Department at 703-993-1460 for details. Functions, limits, derivative, and integral. Applications of differentiation and integration. Students who have received credit for MATH 113 or 114 may not receive credit for this course.

110 Introductory Probability and Statistics (3:3:0) Prerequisite: specified score on Math Placement Test, or successful completion of self-paced Basic Math Program offered by Math Literacy Center. Elementary set theory, probability, and statistics.

111 Linear Mathematical Modeling (3:3:0) Prerequisite: specified score on Math Placement Test, or successful completion of self-paced basic math program offered by Math Literacy Center. Matrix algebra, systems of linear equations, Markov chains, difference equations, and data fitting.
112 Discrete Mathematics for BSIT (3:3:0). Prerequisite: specified score on Math Placement Test, or successful completion of self-paced Algebra Tutorial Program offered through Math Learning Center. Introduces ideas of discrete mathematics including mathematical induction, sets, logic, graphs, trees, basic counting arguments, and discrete probability. Students who have received credit for MATH 125 may not receive credit for this course. Intended for BSIT students; does not count toward a major or minor in mathematics.

113 Analytic Geometry and Calculus I (4:4:1) Prerequisites: thorough understanding of high school algebra and trigonometry, and specified score on Math Placement Test; or grade of C or better in MATH 105. Functions, limits, the derivative, maximum and minimum problems, the integral, and transcendental functions.

114 Analytic Geometry and Calculus II (4:4:1) Prerequisite: grade of C or better in MATH 113. Methods of integration, conic sections, parametric equations, infinite series, and power series.

115 Analytic Geometry and Calculus I (Honors) (4:4:1) Prerequisite: placement or permission of department. More challenging version of MATH 113. Functions, limits, the derivative, maximum and minimum problems, the integral, and transcendental functions.

116 Analytic Geometry and Calculus II (Honors) (4:4:1) Prerequisite: successful completion of MATH 115, or grade of A in MATH 113 and recommendation of MATH 113 instructor. More challenging version of MATH 114. Methods of integration, conic sections, parametric equations, infinite series, and power series.

125 Discrete Mathematics I (3:3:0) Prerequisite: specified score on Math Placement Test, or successful completion of self-paced algebra program offered by Math Literacy Center. Introduces ideas of discrete mathematics and combinatorial proof techniques including mathematical induction, sets, graphs, trees, recursion, and enumeration.

203 Matrix Algebra (3:3:0) Prerequisite: MATH 114 or permission of instructor. Systems of linear equations, linear independence, linear transformations, inverse of a matrix, determinants, vector spaces, eigenvalues, eigenvectors, and orthogonalization.

213 Analytic Geometry and Calculus III (3:3:0) Prerequisite: grade of C or better in MATH 114. Partial differentiation, multiple integrals, line and surface integrals, and three-dimensional analytic geometry.

214 Elementary Differential Equations (3:3:0) Prerequisite: MATH 213 or 215. First-order ODEs, higher-order ODEs, Laplace transforms, linear systems, nonlinear systems, numerical approximations, and modeling.

215 Vector Calculus (3:3:0) Prerequisites: permission of instructor, and MATH 113 and 114. Vectors and vector-valued functions, partial differentiation, multiple integrals, line integrals, surface integrals, and transformation of coordinates.

271 Mathematics for the Elementary School I (3:3:0) Concepts and theories underlying elementary school mathematics, including problem solving, whole numbers and numeration, whole numbers operations and properties, number theory, fractions, decimals, ratio and proportion, and integers. Intended for school educators; does not count toward major in mathematics.

272 Mathematics for the Elementary School II (3:3:0) MATH 271 recommended before enrolling. Continuation of MATH 271. Topics include rational and real numbers, introduction to algebra, geometry, statistics, and probability. Intended for school educators; does not count toward major in mathematics.

290 Introduction to Advanced Mathematics (3:3:0) Prerequisite: MATH 114. Set theory; graphs; functions; equivalence relations and partitions; partially ordered sets; induction; construction of the natural, rational, real, and complex number systems; well-ordering principle; and cardinality. Primarily intended for mathematics majors.

301 Number Theory (3:3:0) Prerequisite: 6 math credits. Prime numbers, factorization, congruences, and Diophantine equations.

302 Geometry (3:3:0) Prerequisite: 6 math credits. Fundamental concepts of incidence. Axioms of Euclidean geometry and the resulting theory, and axioms and development of non-Euclidean and projective geometry.

313 Introduction to Applied Mathematics (3:3:0) Prerequisite: MATH 213. Vector differential calculus, vector integral calculus, Fourier analysis, and complex analysis.

315 Advanced Calculus I (3:3:0) Prerequisites: MATH 213 and 290. Number system, functions, sequences, limits, continuity, differentiation, integration, transcendental functions, and infinite series.

316 Advanced Calculus II (3:3:0) Prerequisite: MATH 315. Sequences of functions, Taylor series, vectors, functions of several variables, implicit functions, multiple integrals, and surface integrals.

321 Abstract Algebra (3:3:0) Prerequisites: MATH 290 and 213 or 215. Theory of groups, rings, fields.

322 Linear Algebra (3:3:0) Prerequisites: MATH 290 and 203. Abstract vector spaces, linear independence, bases, linear transformations, matrix algebra, inner product, and special topics.

325 Discrete Mathematics II (3:3:0) Prerequisite: MATH 125. Advanced counting, binomial identities, generating functions, advanced recurrence, inclusion-exclusion, and network flows.

351 Probability (3:3:0) Prerequisite: MATH 213 or 215. Random variables, probability functions, special distributions, and limit theorems.

352 Statistics (3:3:0) Prerequisite: MATH 351. Estimation, decision theory, testing hypothesis, correlation, linear models, and design.
382 Introduction to Stochastic Processes (3:3:0) Prerequisite: MATH 351. General notion of stochastic processes, finite and infinite Markov chains, discrete and continuous Markov processes, stationary processes, random walk problems, birth and death processes, waiting line and serving problems, and Brownian motion.

400 History of Math (3:3:0) Prerequisites: completion or concurrent enrollment in all other required general education courses, and completion of MATH 290. Explores internal controversies and dynamics of mathematics in larger intellectual and social settings. Topics vary but might include differential equations devised for mechanics and astronomy by Euler, Lagrange, and Laplace; foundation of mathematical analysis from Cauchy to Weierstrass; algebras of Galois and Boole; or creation of non-Euclidean geometry and Cantor’s transfinite sets. Credits may not be used toward “upper division” math hours required of math majors.

411 Functions of a Complex Variable (3:3:0) Prerequisite: MATH 214 or 216. Analytic functions, contour integration, residues, and applications to such topics as integral transforms, generalized functions, and boundary value problems.

413 Modern Applied Mathematics I (3:3:0) Prerequisites: MATH 203, and 214 or 216. Synthesis of pure mathematics and computational mathematics. Emphasizes interplay between discrete and continuous mathematics. Mathematical structure revealed from equilibrium models in discrete and continuous systems.

414 Modern Applied Mathematics II (3:3:0) Prerequisite: MATH 413. Continuation of MATH 413, which involves synthesis of pure mathematics and computational mathematics. Fourier analysis and its role in applied mathematics developed (differential equations and approximations). Discrete aspects emphasized in computational models.

431 Topology (3:3:0) Prerequisite: MATH 315. Metric spaces, topological spaces, compactness, and connectedness.

441 Operations Research I (3:3:0) Prerequisite: MATH 203 or 216, or permission of instructor. Survey of deterministic methods for solving real-world decision problems. Programming model and simplex method of solution, duality and sensitivity analysis, transportation and assignment problems, shortest path and maximal flow problems, project networks including PERT and CPM, introduction to integer and nonlinear programming, dynamic programming and game theory. Emphasizes modeling and problem solving.

442 Operations Research II (3:3:0) Prerequisite: MATH 351, or permission of instructor. Survey of probabilistic methods for solving real-world decision problems. Probability review, queuing theory, inventory theory, Markov decision processes, reliability, decision theory, simulation. Emphasizes modeling and problem solving.

446 Numerical Analysis I (3:3:0) Prerequisites: MATH 203 and CS 112. Significant figures, round-off errors, iterative methods of solution of nonlinear equations of a single variable, solutions of linear systems, iterative techniques in matrix algebra, interpolation and polynomial approximation.

447 Numerical Analysis II (3:3:0) Prerequisites: MATH 214 or 216, and 446. Numerical differentiation and integration, initial-value and boundary-value problems for ordinary differential equations, methods of solution of partial differential equations, iterative methods of solution of nonlinear systems, approximation theory.

491, 492 Reading and Problems (1–3:0:0), (1–3:0:0) For mathematical sciences majors only. Independent study in math. Must be arranged with instructor before registering.

493 Topics in Applicable Mathematics (3:3:0) Prerequisite: 6 credits of math at or above 310 level. Topics that have been successfully used in applications of mathematics. Subject determined by instructor.

494 Topics in Pure Mathematics (3:3:0) Prerequisite: 6 credits of math at or above 310 level. Topics of pure math not covered in other courses. Topics might include Galois theory, cardinal and ordinal arithmetic, measure theory, mathematical logic, and differential geometry. Subject determined by instructor.

Prior knowledge of linear algebra and single and multivariable calculus assumed in all math graduate courses. A double number separated by a comma (MATH 355, 556) indicates both graduate courses normally constitute a sequence, and the first semester is prerequisite to the second. The prerequisite may be waived by permission of department chair. See also STAT and OR courses.

551 Regression and Time Series (3:3:0) Prerequisites: MATH 352, STAT 652, SOA Exam P, or permission of instructor. Mathematics of regression, exponential smoothing, time series, and forecasting. Material included in this course constitutes Society of Actuaries Validation by Educational Experience (VEE) for applied statistics and corresponds to part of Casualty Actuary Society Exam 3.

554 Financial Mathematics (3:3:0) Prerequisite: MATH 113, corequisite: MATH 114. Simple and compound interest, annuities, present and future value, yield rates, capital budgeting, amortization schedules, mortgages, bonds. Material corresponds to the Society of Actuaries Exam: Financial Mathematics (FM). Not appropriate for graduate science and engineering majors not considering actuarial or financial career. Cannot be counted toward MS or PhD degree in mathematics.

555, 556 Actuarial Modeling I, II (3:3:0) Prerequisites: MATH 554 and either MATH 351 or STAT 344. Two-semester sequence covering portions of the material corresponding to the Society of Actuaries Exam M, Casualty Actuary Society Exam 3, and Joint Board Exam EA1. The remaining material for these exams is covered in MATH 551 and 653. Topics include survival distribution and life tables, life insurance, life annuities, net premiums, net profits, net premium reserves, multiple life and multiple decrement models, pensions, insurance models including expense, and nonforfeiture benefits and cash values.

600 Special Topics in Mathematics (1–6:1–6:0) Mathematical workshops, special courses, or other projects.

601, 602 Analysis I, II for Teachers (3:2:1) Open to in-service teachers of mathematics at middle or secondary level. Others may enroll with permission of instructor. Background in mathematics desirable but not necessary. Some topics from college algebra will be reviewed in class, but thorough understanding of high school algebra and trigonometry expected. Develops continuous ideas of calculus with particular emphasis on concepts as opposed to computational aspects of calculus. Specific topics include derivative representation of real numbers, sequences, series, and limits; differentiation to find speed, slopes of curves, and tangents; integration to find volumes and distances and
area under curves. Optimization problems including maximization of area and volume, and modeling of these concepts. Graphing techniques supported by theory of calculus and graphing utilities such as TI-83 calculator or computer software such as Maple.

604 Geometry for Teachers (3:2:1) Open to in-service teachers of mathematics at middle or secondary level. Others may enroll with permission of instructor. Background in mathematics desirable but not necessary. Thorough understanding of high school algebra assumed. Discusses finite mathematics in juxtaposition to continuous ideas of calculus. Topics may consist of elementary counting and combinatorics including recursion and difference equations and their analogy to calculus; thorough discussion of probability and central measures of statistics; and graph theory and its connection to geometry.

605 Discrete/Finite Mathematics for Teachers (3:2:1) Open to in-service teachers of mathematics at middle or secondary level. Others may enroll with permission of instructor. Background in mathematics desirable but not necessary. Thorough understanding of high school algebra assumed. Expands on customary operations on integers and rationals to discuss systems that mimic these operations. Emphasizes multiplicative and additive inverses and their corresponding identities as they occur in other systems. Topics might include permutation groups, rigid transformations, groups of symmetry of the plane and connection to geometry, and matrices treated as linear transformations and connections to solutions of systems of equations.

608 Problem Solving in Mathematics (3:2:1) Open to in-service teachers of mathematics at middle school level. Others may enroll with permission of instructor. Background in mathematics or science desirable but not necessary. Assumes exposure to most of topics covered in MATH 601, 604, 605, and 607. Introduces variety of challenging mathematical problems appropriate for middle school student to analyze, and solving problems using mathematics learned in previous courses. Also asks students to search for such problems and orally present solutions. Specific topics might be any course listed as prerequisites.

619 Topics in Mathematical Logic (3:3:0) Special topics in foundations of mathematics not included in regular mathematics curriculum. May be repeated for credit.

621 Algebra I (3:3:0) Prerequisite: familiarity with basic properties of groups and rings, or permission of instructor. Groups, linear algebra, and matrix groups.

625/CSI 740 Numerical Linear Algebra (3:3:0) Prerequisite: computer literacy, including some programming experience. Theory and development of numerical algorithms for solving variety of matrix problems: linear equations, least squares problems, eigenvalue problems, and singular value decomposition. Direct and iterative method, analysis of sensitivity to rounding errors, and applications.

629 Topics in Algebra (3:3:0) Special topics in pure or applied algebra not covered in regular algebra sequence. May be repeated for credit.

631 Topology I: Topology of Metric Spaces (3:3:0) Prerequisite: MATH 315 or equivalent. Covers definition and basic examples of metric spaces, open and closed sets, subsets and finite products, sequences and convergence, compactness and separability, continuous functions, uniform continuity, metric space C(X) and uniform convergence, and homotopy.

641 Combinatorics and Graph Theory (3:3:0) Prerequisite: MATH 321 or equivalent. Covers enumerative combinatorics, including partially ordered sets; Moebius inversion and generating functions; and major topics in graph theory such as graph coloring, Ramsey theory, and matching.

644 Convex and Discrete Geometry (3:3:0) Prerequisites: MATH 203 and 290, or equivalent. Basic properties of Euclidean space, convex sets and convex cones, convex hulls, extremal structure of convex sets, support and separation properties, polyhedra and polytopes, special classes of convex sets, Helly-type theorems, selected problems of discrete geometry.

653 Actuarial Modeling III (3:3:0) Prerequisite: MATH 351 or STAT 644 required. MATH 555 recommended but not required. Economics of insurance, individual risk models for short term, collective risk models for single period, collective risk models over an extended period, and applications of risk theory. Material included in this course corresponds to portions of the Society of Actuaries Exam M and Casualty Actuary Society Exam 3. The remaining material for these exams is covered in MATH 551, 555, and 556.

654 Construction and Evaluation of Actuarial Models (3:3:0) Prerequisite: MATH 556 or permission of instructor. Nature and properties of survival and loss models, methods of estimates from complete and incomplete data, tabular and parametric models, and practical issues in survival model estimation. Material included in this course corresponds to most of the Society of Actuaries Exam C and Casualty Actuary Society Exam 4.

655 Pension Valuation (3:3:0) Prerequisite: MATH 556, SOA Exam EA-1, or permission of instructor. Basic mathematics used in pension actuarial work without regard to pension law. Material included in this course corresponds to all of the Joint Board Exam EA-2A and portions of the Society of Actuaries Exam 8. This course cannot be counted toward the MS or PhD degree in mathematics.

661 Complex Analysis I (3:3:0) Topology of complex numbers, holomorphic functions, series, complex integration. Meromorphic, multivalued, and elliptic functions.

671 Fourier Analysis (3:3:0) Study of fundamental ideas in Fourier analysis. Topics include orthonormal systems, Fourier series, continuous and discrete Fourier transform theory, generalized functions, and introduction to spectral analysis. Uses applications to physical sciences, linear systems theory, and signal processing to integrate topics.

673 Dynamical Systems (3:3:0) Prerequisites: elementary courses in linear algebra and differential equations. Contemporary topics in dynamical systems illustrated in mathematical models from physics, ecology, and population dynamics. Traditional qualitative analysis of difference and differential equations provides background for under-
standing chaotic behavior when it occurs in these models. Topics include stability theory, fractals, Lyapunov exponents, and chaotic attractors.

674 Stochastic Differential Equations (3:3:0) Prerequisites: MATH 214 and 351. Introduces stochastic calculus and differential equations. Includes Wiener process, Ito and Stratonovich integrals, Ito formula, martingales, diffusions, and applications. Simulations and numerical approximations of solutions.

675 Linear Analysis I (3:3:0) Prerequisite: MATH 315 or equivalent. Metric spaces, normed linear spaces, completeness, compactness, continuous (bounded) linear transformations, Banach spaces, Hilbert spaces, and orthogonal series.

678 Partial Differential Equations (3:3:0) Prerequisite: elementary differential equations course. Physical examples, characteristics, boundary value problems, integral transforms, and other topics, such as variational, perturbation and asymptotic methods.

679 Topics in Analysis (3:3:0) Special topics not covered in regular analysis sequence. May be repeated for credit.

680 Industrial Mathematics (3:3:0) Takes examples from industry and goes through complete solution process: formulation of mathematical model of problem; solution, possibly by numerical approximation; and interpretation and presentation of results. Emphasizes working in groups, relating mathematics to concrete situations, and communication and presentation skills.

682/OR 641 Linear Programming (3:3:0) Prerequisite: OR 541, or permission of instructor. Takes in-depth look at simplex method. Includes computational enhancements such as revised simplex method, sparse-matrix techniques, bounded variables and generalized upper bounds, and large-scale decomposition methods. Also includes computational complexity of simplex algorithm, and Khachian and Karmarkar algorithms.

683 Modern Optimization Theory (3:3:0) Introduces basic mathematical ideas and methods for solving linear and nonlinear programming problems, with emphasis on mathematical aspects of optimization theory. Reviews classical topics of linear programming, and covers recent developments in linear programming including interior point method. Considers basic results in nonlinear programming, including very recent developments in this field. Literature review, project report, or other written product is list is normally submitted as part of the request for approval.

685 Numerical Analysis (3:3:0) Prerequisite: computer literacy, including some programming experience. Computational techniques for solving problems arising in science and engineering. Includes theoretical development as well as implementation, efficiency, and accuracy issues in using algorithms and interpreting results. Specific topics include linear and nonlinear systems of equations, polynomial interpolation, numerical integration, and introduction to numerical solution of differential equations.

686 Numerical Solutions of Differential Equations (3:3:0) Prerequisites: MATH 446 or 685, and elementary differential equations course. Finite difference methods for initial value problems, two-point boundary value problems, Poisson equation, heat equation, and first-order partial differential equations.

687 Variational Methods (3:3:0) Prerequisites: MATH 446 or 685, and elementary differential equations course. Weak formulation of partial differential equations, energy principles, Galerkin approximations, and finite element methods. Includes review and development of necessary analysis.

689 Topics in Applied Mathematics (3:3:0) Special topics in applied math not covered in the regular applied math sequence. May be repeated for credit.

697 Independent Reading and Research (1–6:0:0) In areas of importance, but with insufficient demand to justify a regular course, students may undertake a course of study under the supervision of a consenting faculty member. Written statement of the content of the course and a tentative reading list is normally submitted as part of the request for approval. Literature review, project report, or other written product is normally required. May be repeated as necessary.

721 Algebra II (3:3:0) Prerequisite: MATH 621. Rings, fields, Galois theory.

722 Algebraic Topology (3:3:0) Prerequisites: MATH 621 and 631, or equivalent. Covers simplices and simplicial complexes, cycles and boundaries, simplicial homology, homological algebra, homotopy and the fundamental group, cohomology.

723 Combinatorial Structures (3:3:0) Prerequisite: MATH 321 or equivalent. Studies structural properties of objects encountered in pure and applied combinatorics. Topics include partially ordered sets, codes, designs, matroids, buildings, symmetrical structures, permutation groups, and face lattices of polytopes.

724 Commutative Algebra (3:3:0) Prerequisite: MATH 621. Study of commutative rings and their ideals, and of modules over commutative rings and their homological properties. More specific topics include Noetherian rings, primary decomposition, completions, graded rings and dimension theory with applications to algebraic geometry.

732 Topology II: Set-Theoretic Topology (3:3:0) Prerequisites: MATH 631 or equivalent. Topics include review of basic set theory (including cardinal numbers products of sets, the Axiom of Choice), definition of topological spaces, bases for topological spaces, forming new topological spaces by taking subspace, quotients, and products, separation properties (Hausdorff, regular, Tychonoff, and normal spaces) compactness, the Lindelof property, separability, connectedness, continuity and homeomorphism, manifolds.

739 Topics in Differential Geometry and Topology (3:3:0) Prerequisite: MATH 631 or equivalent. Topics include geometry of curves and surfaces, curvature, isometries, the Gauss-Bonet theorem, geodesics, differential forms, manifolds, smooth maps, vector fields, the Euler characteristic, integration on manifolds, de Rham cohomology.

762 Complex Analysis II (3:3:0) Prerequisite: MATH 661. Harmonic functions, generalizations of the maximum prin-
63 Functions of Several Complex Variables (3:3:0) 
Prerequisite: MATH 661 and 762, or equivalent preparation in one complex variable. Covers the important results for analytic functions in several variables, including analyticity in several variables and the differences between the theory of one and the theory of several complex variables.

772/CSI 746 Wavelet Theory (3:3:0) 
Prerequisite: MATH 315 or equivalent. Study of the theory and computational aspects of wavelets and the wavelet transform. Emphasizes computational aspects of wavelets, defining the Fast Wavelet Transform in one and two dimensions. Developing the appropriate numerical algorithms. Includes developing the theory of wavelet bases on the real line, discussing multi-resolution analysis, splines, time-frequency localization, and wavelet packets.

776 Linear Analysis II (3:3:0) 
Prerequisite: MATH 675. Lebesque measure and integration. Theory of $L^p$ spaces with $p$ between one and infinity on the real line. Theory of linear operators on Banach spaces, including the Hahn-Banach Theorem, Open Mapping Theorem, Closed Graph Theorem and the Uniform Boundedness Principle.

795 Graduate Seminar (1:1:0) 
Prerequisite: admission to PhD program in mathematical sciences. Mandatory for all PhD students. Weekly seminar graded on presentations and attendance. Faculty presentations on potential thesis topics and presentations by students.

799 Thesis (1–6:0:0) 
Original or compulsory work evaluated by committee of three faculty members. Graded S/NC.

800 Studies for the Doctor of Philosophy in Education (variable credit) 
Prerequisite: admission to PhD in education program to study in mathematical sciences. Program of studies designed by student’s discipline director and approved by student’s doctoral committee, which brings the student to participate in current research of discipline director and results in paper reporting the original contributions of student. Enrollment may be repeated.

998 PhD Thesis Proposal (1:1:0) 
Prerequisite: passing grade on qualifying exam. Work on research proposal that forms basis for doctoral dissertation. May be repeated for credit. No more than 24 credit hours of 998 and 999 may be applied to doctoral degree requirements. Graded S/NC.

999 PhD Thesis Credits (1:1:0) 
Prerequisite: advancement to candidacy. Formal record of commitment to doctoral dissertation research under the direction of a faculty member. May be repeated for credit. No more than 24 credit hours of 998 and 999 may be applied to doctoral degree requirements. Graded S/NC.

Medical Technology (MTCH)

Biology

200 Introduction to Medical Technology (1:1:0) 
Introduction to the profession of medical technology.

Prerequisite for the following courses: completion of requirements for BS with major in medical technology except for 30 credits of professional study, and admission to school of medical technology approved by National Accrediting Agency for Clinical Laboratories.

401 Orientation to the Problems and Practices of the Clinical Laboratory (1–2:0:0) 
Orientation to clinical lab; specimen collection and record keeping; management principles and problems; educational theories as they apply to the teaching of clinical laboratory procedures; and quality control principles. Not offered on campus.

402 Clinical Hematology and Coagulation (1–8:0:0) 
Morphology of blood cells in health and disease; theories of hematopoiesis and coagulation; techniques for measurement of hematologic parameters; and hematologic pathologies and their lab evaluation. Not offered on campus.

403 Clinical Microscopy (1–3:0:0) 
Methods for the routine examination of urine, feces, and certain other body fluids, especially the microscopic identification of normal and pathologic components. Includes a study of the kidney and theories of microscopy. Not offered on campus.

404 Serology and Immunohematology (1–7:0:0) 
Clinical lab procedures involving antigen-antibody reactions, and theoretical bases of such procedures. Includes both diagnostic and blood bank techniques. Not offered on campus.

405 Clinical Microbiology (1–8:0:0) 
Biology and pathology of bacteria, rickettsia, fungi, parasites, and viruses of clinical importance and their culture and identification. Not offered on campus.

406 Clinical Chemistry (1–10:0:0) 
Chemical reactions and procedures used in clinical determinations on blood, urine, and cerebral spinal fluid. Includes manual, automated methods of chemical analyses. Not offered on campus.

Military Science (MLSC)

ROTC

100 Leadership Skills I (0:2:2) 
Introduces leadership values and ethics; responsibilities of officership; the organization, customs, and traditions of the US Army; time management; and physical well-being. Includes a laboratory in applied leadership, common military tasks, and physical fitness.

101 Leadership Skills II (0:2:2) 
Introduces leadership principles, dimensions, styles, and assessment, among other varied topics. Includes a laboratory in applied leadership, common military tasks, and physical fitness.

200 Leadership Skills III (0:2:2) 
Prerequisite: MLSC 100 and 101, or approval of professor of military science. Covers leadership skills, such as values and ethics; how to influence, how to communicate, how and when to make decisions, how to engage in creative problem solving, and how to plan and organize. Includes a laboratory in applied leadership, common military tasks, and physical fitness.

201 Leadership Skills IV (0:2:2) 
Prerequisite: MLSC 200. Builds on the leadership skills developed in Leadership Skills III with additional emphasis on communication, team building, and team leadership. Includes a laboratory in applied leadership, common military tasks, and physical fitness.

300 Applied Leadership I (1:2:2) 
Prerequisites: MLSC 100, 101, 200, and 201; and credit or veteran status with approval from military science professor. Applied leadership with an introduction to the principles of physical fitness and healthy lifestyle; counseling as means of subordinate development; problem solving; operational analysis, development,
and execution; and methods for preparing and presenting instruction. Students are given an introduction to the Leader Development Program that is used to evaluate their leadership performance and provide students with developmental feedback. Some weekend training required. Includes a laboratory in applied leadership, common military tasks, and physical fitness.

301 Applied Leadership II (0:2:2) Prerequisite: MLSC 300. Applied leadership covering the models of communications (verbal and non-verbal), technology to communicate, how to prepare and conduct formal briefings, an introduction to the Army branches, diversity and equal opportunity training, ethical decision making, and group cohesion and dysfunction. Some weekend training required. Includes a laboratory in applied leadership, common military tasks, and physical fitness.

400 Leadership and Management (3:3:2) Prerequisites: MLSC 300 and 301. Considered the "transition to lieutenant" phase in which managerial theories are applied to personnel, training, and logistics management situations. Students have command and staff responsibilities for the George Mason cadet corps and receive hands-on experience operating as a management team. There are several briefing and writing requirements as well. Includes a laboratory in applied science, common military tasks, and physical fitness.

401 Leadership and Ethics (3:3:2) Prerequisite: MLSC 400, 300, or 301. Continuing the "transition to lieutenant" phase of ROTC, examines ethics of military environment to include customs, ethical codes and decision making, constraints, and appeals to moral principles. American military system is also examined, with emphasis on the Uniform Code of Military Justice. Command and staff responsibilities are assigned to students for hands-on experience operating as a management team for Mason cadet corps. Includes a laboratory in applied leadership, common military tasks, and physical fitness.

LAB 201 Leadership Laboratory (Lead Lab) (0:2:2) Students enrolling in any MLSC class for commissioning credit must enroll in this lab section. Meets as a combined course, common military tasks, and physical fitness.

Music (MUSI)
College of Visual and Performing Arts

Private Music Instruction

All private music instruction is by arrangement. Students must consult the director of applied music instruction in the Department of Music for teacher assignment and registration numbers. Private music instruction fee applies. Students who register for private music instruction must also register for an ensemble.

For music major, music minor, or jazz studies minor: half-hour lesson per week, 1 credit, $164.50; hour lesson per week, 2 or 3 credits, $329.

Private music instruction is offered in accompanying, bassoon, cello, clarinet, composition, conducting, euphonium, flute, classical guitar, jazz guitar, harp, harpsichord, horn, koto, oboe, organ, percussion, piano, saxophone, string bass, trombone, trumpet, tuba, viola, viola da gamba, violin, and voice.

324, 424, and 724 Junior, Senior, and Graduate Recitals (1:0:0) Corequisite: concurrent enrollment in appropriate 3-credit private music instruction course. Public recital by student during junior or senior year, or during graduate study. Junior recital must be at least 25 minutes long; senior recital must be at least 50 minutes long. Graduate recitals must be of the following lengths: composition, 30 minutes; conducting, 30 minutes; performance of single or multiple instruments, 50 minutes. All recitals by arrangement. Students must consult with director of applied music studies to register and schedule dates.

323 Music Education Recital (0:0:0) Prerequisite: minimum 8 credits in private music instruction in major instrument; corequisite: concurrent enrollment in appropriate 2-credit private music instruction course. Recital on major instrument given by student during junior or senior year. Recital must be at least 25 minutes long. All recitals by arrangement. Students must consult with director of applied music studies to register and schedule dates. Graded S/NC.

100 Fundamentals of Music (3:3:0) Cannot be applied toward degree in music. Study of musical notation, interval and triad construction, reading of treble and bass clefs, scale construction, rhythm, elementary sight singing and ear training, and application at keyboard. s

101 Introduction to Classical Music (3:3:0) Music majors may take only as free elective. Introduces art-music tradition of West. Techniques for expanding listening skills developed through study of musical elements, styles, and selected masterworks of musical literature. fs

102 Popular Music in America (3:3:0) Music majors may take only as free elective. Investigates popular music styles and development in the United States with particular emphasis on the past 50 years. Lectures, recordings, and video enhance critical listening skills and examine stylistic and social contexts of popular music. f

103 Musics of the World (3:3:0) For non-music majors only. Study and comparison of musical structure and expression in several world cultures, with special attention to social context and function. Studies selected Asian, Middle Eastern, African, and American (Latin, Native, African) cultures. fs

104 Introduction to Twentieth-Century Music (3:3:0) Music majors may take only as free elective. Survey of various styles found in 20th-century music. Tonal, atonal, serial, and experimental music.

105 Music in the United States (3:3:0) Music majors may take only as free elective. Study of music in the United States from colonial times to present. Through interaction with musical examples, traces significant African and European influences on emerging style and artistic activity in the United States.

107 The Development of Jazz (3:3:0) Music majors may take as free elective or part of jazz studies concentration. Historical, analytical, and aural survey of jazz from inception to present day. Looks at trends resulting from synthesis of jazz with other musical idioms.
113 Sight Singing and Ear Training I (2:3:0) Prerequisite: MUSI 115 and 171, or permission of instructor. Students taught to sing a line of music without accompaniment of instrument. Matching tones, major and minor scales, key signatures, intervals, rhythm, treble and bass clefs, rhythmic and melodic dictation. f,s

114 Sight Singing and Ear Training II (2:3:0) Prerequisite: MUSI 113, or permission of instructor. Continuation of MUSI 113. Alto and tenor clefs, modulation, various modes, melodic and harmonic dictation. f,s

115 Theory I (3:3:0) Prerequisites: Students must read music, pass fundamentals of music test administered during first week of classes, and have some proficiency on musical instrument or in voice. Music notation, scales, key signatures, intervals, chords, cadences, figured bass. f

116 Theory II (3:3:0) Prerequisite: MUSI 115, or permission of instructor. First- and second-inversion chords, modulation, nonharmonic tones, figured bass, seventh chords. Analysis of Bach chorales; composition of four-part chorales in 18th-century style. s

171 Keyboard Skills I (1:0:3) Prerequisite: nonmusic majors must have permission of instructor. Study of piano keyboard as it relates to various clefs in music. Emphasis on solution of basic stylistic and technical problems. f

172 Keyboard Skills II (1:0:3) Prerequisite: MUSI 171. Nonmusic majors must have permission of instructor. Study of piano keyboard as it relates to intermediate song and combined in various music forms. s

213 Sight Singing and Ear Training III (2:3:0) Prerequisite: Music 114, or permission of instructor. Continuation of Music 114. Emphasizes modulation, chromatic and non-tonal melodies, various modes, melodic and harmonic dictation, c clefs, and improvisation.

215 Theory III (3:3:0) Prerequisite: MUSI 116, or permission of instructor. Study of four-part chromatic harmony and analysis of 19th-century compositions. f

216 Form and Analysis (3:3:0) Prerequisite: MUSI 215, or permission of instructor. Analytical study of evolution of musical formal structures based primarily on harmonic and textural principles. s

221 Private Music Instruction I (1:0:0.5) Prerequisite: audition or portfolio. Private lessons in performance or composition. May be repeated for up to 8 credits.

222 PMI Keyboard (1:0:0.5) Prerequisite: audition. Private lessons in keyboard performance. May be repeated for up to 8 credits.

223 PMI Voice (1:0:0.5) Prerequisite: audition. Corequisite: MUSI 381, 384, or 385. Private lessons in vocal performance. May be repeated for up to 8 credits.

224 PMI Woodwind (1:0:0.5) Prerequisite: audition. Private lessons in woodwind performance. May be repeated for up to 8 credits.

225 PMI Brass (1:0:0.5) Prerequisite: audition. Private lessons in brass performance. May be repeated for up to 8 credits.

226 PMI String (1:0:0.5) Prerequisite: audition. Private lessons in string performance. May be repeated for up to 8 credits.
311 Jazz Studies (3:3:0) Prerequisite: MUSI 379. Musician-ship course integrating jazz improvisation, theory, composition, and arranging. Focuses on concepts unique to our time in style, form, and harmony.

319 Class Composition and Arranging (3:3:0) Prerequisite: MUSI 114 or 216, or permission of instructor. Students write original compositions for specified instruments, voices, or combinations. They then apply compositional principles to the creative arrangement of existing music of various styles.

323 Music Education Recital See beginning of Music course section.

324 Junior Recital See beginning of Music course section.

325, 326 Performance Seminar and Vocal Literature for Singers and Accompanists I, II (2:3:1) Prerequisite: audition. Students assigned vocal literature in Italian, English, German, and French from Baroque to 21st century, and perform in a weekly master class format. Designed for vocal performance and piano and accompanying majors; develops and improves artistic and performance skills, repertoire preparation and execution, diction, interpretation, style, and overall stage presence.

331 Music History in Society I (3:3:0) Prerequisite or corequisite: MUSI 215, or permission of instructor. Historical survey of Western music from Greek times through the late Baroque era, with emphasis on specific musical genres and composers who developed them. Musical developments are related to other aspects of society. Instruction conducted by lectures, recordings, and video. Learning process enhanced by reading, listening, writing, and analytical assignments.

332 Music History in Society II (3:3:0) Prerequisite: MUSI 216 and 331, or permission of instructor. Historical survey of Western music from the early Classical era through mid-19th century, with emphasis on specific musical genres and composers who developed them. Musical developments related to other aspects of society. Lectures, recordings, video. Learning process enhanced by reading, listening, writing, and analytical assignments.

341 Diction for Singers I: Italian Diction and English Diction (2:2:1) Increases proficiency in singing in Italian and English by teaching International Phonetic Alphabet (IPA), and strengthens performance of Italian and English art songs and operatic repertoire. Focuses on intensified, systematic study of phonetics as it applies to singing in Italian and English.

342 Diction for Singers II: German Diction and French Diction (2:2:1) Increases proficiency in singing in German and French by teaching International Phonetic Alphabet (IPA), and strengthens performance of German and French art songs and operatic repertoire. Focuses on intensified, systematic study of phonetics as it applies to singing in German and French.

351 Keyboard Pedagogy (3:3:0) Prerequisites: MUSI 114, 216 and 273, and 8 credits in piano, organ, or harpsichord; or permission of instructor. Investigates methods, theories, techniques, and materials to teach keyboard to children and adults in individual and group situations.

352 Vocal Pedagogy and Lab (3:3:1) Instruction in teaching of voice through systematic study of vocal physiology and its implications for pedagogical methods. Includes theoretical and systematic study of processes, procedures, and practices to develop art of singing. Offers technical, physiological, theoretical, and practical principals of the singing art, with emphasis on the importance of vocal health.

353 Instrumental Pedagogy and Literature (3:3:0) Prerequisite: junior standing in instrumental private music instruction, or permission of instructor. Instruction in teaching instrumental music techniques for all levels through study of pedagogical methods, standard literature, and musical instruments produced by present-day manufacturers.

361 Class Strings: Violin, Viola, Cello, and Bass (1:0:4) Prerequisite: admission to music major program, or permission of instructor. Study of playing and teaching string instruments with emphasis on violin and cello through beginning method book. Study of fingerings and bowing techniques to teach and play viola and bass at beginning levels. Survey of string playing techniques to conduct rehearsals at intermediate-, advanced-, and artist-level ensembles. Three clock hours per week studying violin, viola, cello, and bass; one clock hour per week in laboratory ensemble.

363 Class Woodwinds: Flute and Clarinet (1:0:4) Prerequisite: admission to music major program, or permission of instructor. Study of techniques of playing and teaching flute and clarinet. Survey of instructional materials, and mouthpiece and instrument selection. Three clock hours per week studying flute and clarinet; one clock hour per week in laboratory ensemble.

364 Class Woodwinds: Oboe and Bassoon (1:0:4) Prerequisite: admission to music major program, or permission of instructor. Study of techniques of playing and teaching oboe and bassoon. Survey of instructional materials, instrument selection, and reed adjustment. Three clock hours per week studying oboe and bassoon; one clock hour per week in laboratory ensemble.

365 Class Brass: Trumpet and French Horn (1:0:4) Prerequisite: admission to music major program, or permission of instructor. Study of techniques of playing and teaching trumpet and French horn. Survey of instructional materials, and mouthpiece and instrument selection. Three clock hours per week studying trumpet and French horn; one clock hour per week in laboratory ensemble.

366 Class Percussion (1:0:4) Prerequisite: admission to music major program, or permission of instructor. Study of techniques of playing and teaching percussion instruments. Survey of instructional materials and instrument selection. Three clock hours per week studying percussion instruments; one clock hour per week in laboratory ensemble.

367 Class Guitar (1:0:4) Prerequisite: admission to music major program, or permission of instructor. Study of techniques of playing and teaching guitar. Survey of instructional materials and instrument selection. Three clock hours per week studying guitar; one clock hour per week in laboratory ensemble.

368 Class Voice (1:0:4) Prerequisite: admission to music major program, or permission of instructor. Study of the human voice in artistic singing. Emphasizes practical application of basic principles. Three clock hours per week studying voice; one clock hour per week in laboratory ensemble.
369 Class Brass: Trombone, Euphonium, and Tuba
(1:0:4) Prerequisite: admission to music major program, or permission of instructor. Study of techniques of playing and teaching trombone, euphonium, and tuba. Survey of instructional materials and mouthpiece and instrument selection. Three clock hours per week studying trombone, euphonium, or tuba; one clock hour per week in laboratory ensemble.

371, 372 Techniques of Accompanying I, II (1:0:3) Prerequisite: successful audition on keyboard instrument for admission to music degree program; 4 credits in undergraduate private music instruction on a keyboard instrument; or permission of instructor. Development of accompanying skills through collaboration with solo singers, instrumentalists, and small ensembles. Students perform for each other, observe lectures, demonstrations, and performances by professionals, and participate in master classes. Each course may be taken two times for credit.

373 Advanced Accompanying and Musicianship Skills (3:3:0) Advanced study and techniques for accompanying choirs, vocal soloists, and instrumentalists. Additional instruction in keyboard reduction of orchestral scores for concerts, continuo/figured bass reading, lead-sheet reading, transposition, improvisation, transcription, and “playing by ear.”

379 Introduction to Jazz Improvisation (1:1:2) Prerequisite: MUSI 116, or permission of instructor. Study of improvisation techniques and styles, with emphasis on common practice period of jazz. Application on the student’s major instrument or voice to develop creativity and personal expression.

380 Wind Symphony (1:0:3) Prerequisite: audition. Highly selective group of instrumentalists perform works from wind symphony repertoire. Public concerts are given.

381 University Chorale (1:0:3) Prerequisite: audition. Performance of works from choral repertoire. Public concerts are given.

382 Piano Ensemble (1:0:3) Prerequisite: audition and 4 credits in private piano music instruction. Study and performance of original four-hand works for one and two pianos. Public performances.

383 Symphonic Band (1:0:3) Prerequisite: audition. Performance of works from band repertoire. Public concerts are given.

384 Symphonic Chorus (1:0:3) Prerequisite: audition. Performance of major works from the choral repertoire. Public concerts are given.

385 Chamber Singers (1:0:3) Prerequisite: audition. Discovery, interpretation, and performance of choral music for vocal chamber music ensemble from all historical periods. Emphasis on achieving a high level of artistic performance, and bringing to Mason and surrounding community musical compositions not readily accessible in regular concert repertoire.

387 Symphony Orchestra (1:0:3) Prerequisite: audition. Performance of works from symphony orchestra repertoire. Public concerts are given.

388 Fundamental Techniques of Stagecraft for Opera and Music Theater (2:2:1) Prerequisite: admission to music program, or permission of instructor. Study of basic to intermediate stage movement techniques necessary to the performance of opera and music theater roles. Emphasis on acting, improvisation, theater production, musical theater, and operatic role study.

389 Jazz Ensemble (1:0:3) Prerequisite: audition. Provides practical experience in various aspects of jazz performance: section work within a large aggregation, combo work, and improvisation. Public concerts are given.

391 Conducting I (2:0:3) Prerequisites: MUSI 114, 216, and 273; or permission of instructor. Study of basic techniques of conducting a musical ensemble.

393 Music Administration and Management (2:2:0) Prerequisite: MUSI 116, or permission of instructor. Prepares students to address aspects of administration and management of music programs in public and private schools. Investigates principles and concepts of management styles and planning. Covers curriculum, budget, student recruitment and retention, external relations of the music unit, and legal issues for music educators.

395 Teaching Internship (1–4:0:0) Prerequisite: MUSI 251. Internship with a professional individual or organization in teaching. Introduction to teaching or augmentation of teaching skills. Students develop individual contracts defining the learning and competencies to be gained from the experience. Maximum of 9 internship credits (MUSI 395, 495, 496) can be applied toward a degree.

396 Conducting II (2:0:3) Prerequisite: MUSI 391, or permission of instructor. Advanced conducting course emphasizing techniques for instrumental and choral conducting. Refining gestures, full score analysis and interpretation, rehearsal techniques, and changing meters.

401 Impact of the Arts on Civilization (3:3:0) Prerequisite: 30 credits, or permission of instructor. Analyzes how genres of art impact us intellectually, emotionally, and subliminally. Broadens aesthetic and historical perspective, exposes students to major strands of contemporary thought, and develops discursive abilities through role-playing in roundtable discussions.

415 Music in Computer Technology (3:3:0) Prerequisite: MUSI 319, or permission of instructor. Overview of ways computer is used in music. Topics include principles of musical instrument digital interface (MIDI); various kinds of synthesis; acoustics and sound processing; and musical composition using the computer. Explores music resources of Internet and surveys current multimedia applications in music history, theory, ear training, improvisation, and notation.

419 Orchestration (3:3:0) Prerequisites: MUSI 114, 216, and 319; or permission of instructor. Principles of combining and balancing instruments in orchestral and chamber contexts. Attention to orchestral terminology and general notation as well as timbre, range, clefs, transposition, special effects, and scoring procedures.

421 Private Music Instruction III (1:0:0.5) Prerequisite: audition or portfolio. Private lessons in performance or composition. May be repeated for up to 8 credits.

424 Senior Recital See beginning of Music course section.

431 Music History in Society III (3:3:0) Prerequisite: MUSI 216, 331, and 332; or permission of instructor. Studies contributions to the world of music in selected cultures such as India, Indonesia, China, Japan, Africa, Middle East, and Americas. Emphasizes comparative musical character-
istics as well as sociological function. Lectures, recordings, and video. Learning process enhanced by reading, listening, writing, and analytical assignments.

432 Music History in Society IV (3:3:0) Prerequisite: MUSI 216, 331, 332, and 431; or permission of instructor. Historical survey of Western music from late 19th century to present, with emphasis on specific musical genres and composers who developed them. Relates musical developments to other aspects of society, and considers interaction between world music. Lectures, recordings, and video. Learning process enhanced by reading, listening, writing, and analytical assignments.

441 Private Music Instruction IV (2–3:0:1) Prerequisite: audition or portfolio. Private lessons in performance or composition. May be repeated for up to 18 credits.

442 PMI Keyboard (2–3:0:1) Prerequisite: audition. Private lessons in keyboard performance. May be repeated for up to 18 credits.

443 PMI Voice (2–3:0:1) Prerequisite: audition. Corequisite: MUSI 381, 384, or 385. Private lessons in vocal performance. May be repeated for up to 18 credits.

444 PMI Woodwind (2–3:0:1) Prerequisite: audition. Private lessons in woodwind performance. May be repeated for up to 18 credits.

445 PMI Brass (2–3:0:1) Prerequisite: audition. Private lessons in brass performance. May be repeated for up to 18 credits.

446 PMI String (2–3:0:1) Prerequisite: audition. Private lessons in string performance. May be repeated for up to 18 credits.

447 PMI Percussion (2–3:0:1) Prerequisite: audition. Private lessons in percussion performance. May be repeated for up to 18 credits.

448 PMI Composition (2–3:0:1) Prerequisite: portfolio of recent compositions. Private lessons in music composition. May be repeated for up to 18 credits.

450 Jazz Improvisation I (2:2:1) Prerequisite: MUSI 379 or permission of instructor. Emphasizes improvisational materials and language developed in common practice period of jazz.

451 Keyboard Pedagogy II (3:3:0) Prerequisite: MUSI 351. Intensive study of methods, theories, techniques, and materials to teach keyboard to children and adults in individual and group situations.

452 Jazz Improvisation II (2:2:1) Prerequisite: MUSI 399 or permission of instructor. Emphasis on advanced improvisational techniques and contemporary tunes.

454 Jazz Arranging (3:3:0) Prerequisite: MUSI 311 or permission of instructor. Transcription, analysis, and scoring for small and large jazz ensembles.

461 The Teaching of General Music in the Elementary and Middle School (3:3:1) Prerequisites: MUSI 114, 216, 273; and acceptance into music education concentration. Corequisite: MUSI 391. For music majors only. Studies theory, methods, practice, and materials to teach general music in elementary and middle school. Students spend three hours per week in class, and one hour per week observing and teaching in laboratory ensemble. Students also participate in field observation of music classes in the public schools.

463 The Teaching of Vocal Music in the Secondary School (3:3:1) Prerequisites: MUSI 114, 216, 273, and 391; and acceptance into music education concentration. Corequisite: MUSI 396. For music majors only. Survey of repertoire and methods for teaching high school choral groups, small ensembles, and voice classes. Students spend three hours per week in class, and one hour per week observing and teaching in laboratory ensemble. Students also participate in field observation of music classes in public schools.

464 Instrumental Music Methods I (3:3:1) Prerequisites: MUSI 114, 216, and 273; and acceptance into music education concentration. Corequisite: MUSI 391. For music majors only. Prepares students to teach instrumental music in elementary, middle, and secondary schools. Students spend three hours per week in class, and one hour per week observing and teaching in laboratory ensemble. Students also participate in field observation of music classes in public schools.

465 Selected Topics in Music Education (1–3:1–3:0) Prerequisite: 90 credits in music degree program, or permission of instructor. Topics of practical interest to prospective and practicing music educators covering pedagogy, performance, and logistics of teaching music in schools, private studios, and communities. May be repeated for credit.

466 Instrumental Music Methods II (3:3:1) Prerequisites: MUSI 114, 216, 273, and 391; and acceptance into music education concentration. Corequisite: MUSI 396. For music majors only. Prepares students to teach instrumental music in elementary, middle, and secondary schools. Students spend three hours per week in class, and one hour per week observing and teaching in laboratory ensemble. Students also participate in field observation of music classes in public schools.

467 Instrumental Music Methods I: Orchestra (3:3:1) Prerequisites: MUSI 114, 216, 273, and 361; and acceptance into music education concentration. Corequisite: MUSI 391. For music majors only. Prepares students to successfully plan, organize, and administer marching band and jazz ensemble programs in secondary public school music curriculum. Students spend three hours per week in class, and one hour per week observing and teaching in laboratory ensemble. Students also participate in field observation of music classes in public schools.

485 Chamber Ensembles (1:0:3) Prerequisite: audition. Performance of works from chamber music repertoire. Public performances are given. f, s

490 Musical Communication in Context (3:3:0) Prerequisite: Students must be in senior year of BA program in music, and have completed all other general education requirements. Explains nature of musical communication in a variety of contexts, and combines knowledge gained in general education courses with knowledge and skills specific to the major to serve as a capstone course synthesizing both areas. How does music itself communicate, and how do musicians communicate about it with each other and with the world around them? Students address these through essays in the style of a
journal or portfolio, substantial paper, and oral presentation of paper before faculty and student panel.

491 Musical Communication in Performance (1:1:0)
Prerequisite: completion of all other required general education courses for BM performance concentration. Corequisite: concurrent enrollment in appropriate 3-credit private music instruction course and Music 424. Helps student conceive of musical performance as communication in a variety of contexts, and combines knowledge in general education courses with knowledge and skills specific to the major to serve as a capstone course synthesizing both areas. Students consider various aspects of musical communication to prepare senior recital. Students explore social, historical, analytical, and aesthetic aspects of the music they are to perform by composing essays in the style of a journal or portfolio. Students prepare a substantial paper on recital repertoire and present that paper before a faculty and student panel.

492/492H/492J/492N Selected Topics in Music (1–3; 1–3:0)
Prerequisite: 45 credits, or permission of instructor. Topics of practical interest to students in composition, music history and literature, world music, jazz studies, and performance practices. May be repeated for credit. 492H denotes a music history course, 492J denotes a jazz studies course, and 492N denotes a non-Western music course.

495 Internship in Music Education: Student Teaching (6:1:0) Prerequisite: completion of all other courses required for BM with concentration in music education. Full semester of intensive clinical experience in approved Virginia schools. Maximum of 9 internship credits (MUSI 395, 495, 496) can be applied to degree.

496 Internship: (1–6:0:0) Prerequisite: open to music majors with 90 credits. Contact the department one semester before enrollment. Internships are approved work-study programs with specific employers or agencies. Credit is determined by the department. Maximum 9 internship credits (MUSI 395, 495, 496) can be applied toward degree.

497, 498 Independent Study (1–3:0:0) Prerequisites: music majors with 90 credits, and permission of instructor and department chair. Individual research and study of selected subject in close consultation with instructor. Students may choose from the musicological, ethnomusicological, theoretical, compositional, or educational areas, and produce at least one major written work based on research.

501 Graduate Theory Review (3:3:0) Prerequisites: baccalaureate degree in music; graduate placement exam. Vocabulary and conceptual review of diatonic and chromatic harmony, part writing, form, harmonization, 20th-century techniques. Does not count toward required credits of a graduate music degree.

502 Graduate Aural Skills Review (3:3:0) Prerequisites: baccalaureate degree in music; graduate placement exam. Music reading and aural skills including intervals, dictation (melodic and harmonic), scales, chords, rhythms, and meter. Does not count toward required credits of a graduate music degree.

515 Music in Computer Technology (3:3:0) Prerequisite: baccalaureate degree in music, or permission of instructor. Overview computer use in music. Topics include principles of musical instrument digital interface (MIDI); synthesis; acoustics and sound processing; and musical composition using the computer. Explores music resources of Internet, and surveys multimedia applications in music history, theory, ear training, improvisation, and notation.

516 Keyboard Skills (3:0:4) Prerequisite: baccalaureate degree in music; graduate placement exam. Enhance keyboard skills for the non-keyboard major, including technique, harmonization, transposition, reading, and accompanying.

517 Score Reading Skills (3:0:4) Prerequisite: baccalaureate degree in music; graduate placement exam. Enhance score study and score reading skills for the conductor.

525, 526 Performance Seminar and Vocal Literature for Singers and Accompanists I, II (2:3:1) Prerequisite: audition. Advanced vocal literature and performance seminar. Students assigned art songs or operatic arias in Italian, German, French, and English, from Baroque to 21st century, and perform in weekly master class format. Develops and improves musical and artistic preparation and performance, increases repertoire, and establishes dependable methods for creating consistently high standards of artistic performance.

532 Music History Review I (3:3:0) Prerequisites: baccalaureate degree in music, graduate placement exam. Enhance understanding of music history and the context of musical style, chronologically through the mid-18th century. Does not fulfill courses requirements for graduate degrees in music.

533 Music History Review II (3:3:0) Prerequisites: baccalaureate degree in music, graduate placement exam. Enhance understanding of music history and the context of musical style—from the mid-18th century to today. Does not fulfill course requirements for graduate music degrees.

541 Diction for Singers I: Italian Diction and English Diction (2:2:1) Increases proficiency in singing in Italian and English by teaching International Phonetic Alphabet (IPA), and strengthens performance of Italian and English art song and operatic repertoire. Intensified, systematic study of phonetics as it applies to Italian and English.

542 Diction for Singers II: German Diction and French Diction (2:2:1) Increases proficiency in singing in German and French by teaching International Phonetic Alphabet (IPA), and strengthens performance of German and French art songs and operatic repertoire. Intensified, systematic study of phonetics as it applies to singing in German and French.

551 Keyboard Pedagogy I (3:3:0) Prerequisite: graduate status in applied piano, or permission of instructor. Intensive study of methods, theories, techniques, and materials to teach keyboard to children and adults in individual and group situations.

552 Vocal Pedagogy and Lab (3:3:1) Prerequisite: MUSI 352, or permission of instructor. Instruction in teaching voice through systematic study of vocal physiology and its implications for pedagogical methods. Includes theoretical and systematic study of processes, procedures, and practices to develop art of singing. Offers technical, physiological, theoretical, and practical principals of the singing art, with emphasis on vocal health.

553 Instrumental Pedagogy and Literature (3:3:0) Prerequisite: baccalaureate degree in music, or permission of instructor. Instruction in teaching of instrumental music techniques for all levels through the study of pedagogical
<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Prerequisites</th>
</tr>
</thead>
<tbody>
<tr>
<td>501, 502, and 516, or appropriate score on the graduate placement examination.</td>
<td>Uses music analytical theories to examine repertoire from a given time period or style. May be repeated for up to 9 credits as topics change.</td>
<td></td>
</tr>
<tr>
<td>611 Analytical Techniques (3:3:0)</td>
<td>Prerequisites: MUSI 501, 502, and 516, or appropriate score on the graduate placement examination. Detailed formal and stylistic examination of music selected from the major style periods. Development of graduate-level analytical skills.</td>
<td></td>
</tr>
<tr>
<td>613 Graduate Orchestration (3:3:0)</td>
<td>Prerequisites: MUSI 501, 502, and 516, or appropriate score on the graduate placement examination. Intensive study of instrumentation through analysis and arrangement. Includes contemporary techniques and scoring for large forces.</td>
<td></td>
</tr>
<tr>
<td>555 Music as a Healing Art (3:3:0)</td>
<td>Prerequisite: basic proficiency with instrument or voice, and bachelor’s degree in music. Study of the relationship between musical vibrations and the natural rhythms of the body. Topics include history of music and healing, theory of sound, cymatics, toning, and performance practice as well as a survey of vibrational healing modalities and related therapies. Considers listening examples as they apply to healing with music. Students sing and play instruments in directed improvisatory performance.</td>
<td></td>
</tr>
<tr>
<td>563 Orff Schulwerk I (3:3:0)</td>
<td>Intensive introduction to Orff teaching philosophy with practical and theoretical instruction and immersion in the method itself. Students learn concepts of rhythm, harmony, solfege, modes, improvisation, and pedagogy. Students learn basic performance technique on soprano recorder, and learn to apply movement and dance in their teaching.</td>
<td></td>
</tr>
<tr>
<td>564 Orff Schulwerk II (3:3:0)</td>
<td>Prerequisite: MUSI 563, or permission of instructor. Continues intensive study of Orff teaching philosophy with practical and theoretical instruction and immersion. Teaches further concepts of rhythm and meter including asymmetrical patterns. Reviews pentatonic modes and their transpositions, studies pentachordal and hexachordal scales, and begins intensive work with diatonic modes. Students work with a variety of percussion instruments including body percussion, unpitched instruments, and barred instruments. They sing and play soprano, alto, tenor, and bass recorders. Movement studies continue with intensive study of vocabulary of dance and mime.</td>
<td></td>
</tr>
<tr>
<td>565 Orff Schulwerk III (3:3:0)</td>
<td>Prerequisites: MUSI 563 and 564, or permission of instructor. Continues intensive study of Orff teaching philosophy to complete certification process in Orff Schulwerk. Students continue intensive work in rhythm, melody, harmony, timbre, form, and pedagogy. Tenor, bass, and soprano recorders introduced. Movement and rhythmic studies concentrate on mixed meters and non-Western source materials and styles.</td>
<td></td>
</tr>
<tr>
<td>571, 572 Techniques of Accompanying I, II (1:0:3)</td>
<td>Prerequisite: admission to graduate-level private music instruction in keyboard instrument, or permission of instructor. Development of accompanying skills through collaboration with solo singers, instrumentalists, and small ensembles. Students perform for each other, observe lectures, demonstrations and performances by professionals, and participate in master classes. Each course may be taken two times for credit. Ay</td>
<td></td>
</tr>
<tr>
<td>573 Accompanying and Musicianship III (3:3:0)</td>
<td>Prerequisite: MUSI 572. Study of complex accompanying skills including open score reading and orchestral reduction. This course is for piano majors or persons with significant keyboard skills.</td>
<td></td>
</tr>
<tr>
<td>592 Topics in Music (1–6:1–6:0)</td>
<td>Prerequisite: baccalaureate degree in music. Intensive study of selected topics in performance, composition, or conducting. Individual research, group discussions, and participation in related activities. May be repeated for up to 12 credits as topics change.</td>
<td></td>
</tr>
<tr>
<td>610 Topics in Music Theory (3:3:0)</td>
<td>Prerequisites: MUSI 501, 502, and 516, or appropriate score on the graduate placement examination.</td>
<td></td>
</tr>
</tbody>
</table>
654 Graduate Conducting (3:3:0) Prerequisites: baccalaureate degree in music, graduate placement exam. Classroom study of conducting, including refining gestures, rehearsal leadership, and the communication of musical style. May be repeated for up to 9 credits.

660 Topics in Music Education (1–6:1–6:0) Prerequisites: baccalaureate degree in music, graduate placement exam. Examination of specific areas of concern to music educators. Individual research, group discussions, and participation in related activities. Repeatable for up to 9 credits as topics change.

661 Psychology of Music Teaching and Learning (3:3:0) Prerequisites: baccalaureate degree in music, graduate placement exam. Study of the learner’s musical behaviors (affective, cognitive, and psychomotor) in an effort to devise an empirically based teaching method founded on learning principles.

662 Introduction to Research in Music (3:3:0) Prerequisite: baccalaureate degree in music, or permission of instructor. Development of skills, attitudes, and understanding to do and report research in music, including philosophical bases, scope and organization, stylistic practices in writing research reports, study of materials and resources in music and music education, and proper use of library and other research services.

663 Aesthetics of Music Education (3:3:0) Prerequisite: baccalaureate degree in music, or permission of instructor. Study of philosophical foundations of contemporary music education, and critical examination of music programs and activities in aesthetic education and efforts by music education establishment to enhance them.

681 Graduate Choral Ensembles (1:0:3) Prerequisite: audition. Performance of works from the choral repertoire. Public concerts are given. May be repeated for up to 6 credits total.

682 Wind Symphony (1:0:3) Prerequisite: audition. Highly selective group of instrumentalists performing works from the wind repertoire. Public concerts are given. May be repeated for up to 6 credits.

683 Symphonic Band (1:0:3) Prerequisite: audition. Performance of works from band repertoire. Public concerts are given. May be repeated for up to 6 credits.

685 Graduate Chamber Ensemble (1:0:3) Prerequisite: audition. Performance of works from chamber music repertoire. Public concerts are given. May be repeated for up to 6 credits.

687 Symphony Orchestra (1:0:3) Prerequisite: audition. Performance of works from orchestral repertoire. Public concerts are given. May be repeated for up to 6 credits.

688 Opera and Musical Theater Ensemble (3:2:4) Prerequisite: audition. Solo-vocal, performance-oriented ensemble class that presents operatic works or excerpts from them, from baroque to 21st century, as well as works or excerpts from American musical theater. May be repeated for up to 12 credits.

689 Jazz Ensemble (1:0:3) Prerequisite: audition. Provides practical experience in aspects of jazz performance. Participation in section rehearsals and small and large jazz groups. Jazz improvisation expected. Public concerts given. May be repeated for up to 6 credits total.

690 Graduate Lecture Recital (1–3:0:0) Prerequisites: baccalaureate degree in music, audition. Corequisite: MUSI 621 (3-credit level). Combination of musical performance and scholarly presentation on a well-defined topic. Public presentation required. May be repeated for a maximum of 6 credits.

695 Teaching Internship (2:0:0) Prerequisite: MUSI 660. Teaching beginner, intermediate, and early advanced students in private or group lessons under faculty supervision. May be repeated for up to 4 credits.

699 Independent Study (1–3:0:0) Prerequisite: baccalaureate degree in music, and permission of department chair. Individual research and study a concentration available in the master of music. May be taken for maximum 6 credits.

710 Advanced Topics in Music Theory (3:3:0) Prerequisites: MUSI 501, 502, and 516, or appropriate score on the graduate placement exam. Advanced study of specific styles and repertoire from the perspective of various analytical approaches. May be repeated for up to 9 credits total as topics change.

712 Composition for Conductors and Performers (3:3:0) Prerequisites: undergraduate degree in music, graduate placement exam. Advanced study of new music for various media. This course is not for students in the composition concentration.

720 Advanced Topics in Applied Music (3:3:0) Prerequisite: baccalaureate degree in music, graduate placement exam. Advanced study of concepts in applied music. May be repeated for up to 6 credits total as topics change.

721 Private Music Instruction (2–3:0:1) Prerequisite: audition or portfolio. Private lessons in performance or composition. May be repeated for up to 18 credits.

722 PMI Piano (2–3:0:1) Prerequisite: audition. Private lessons in piano performance. May be repeated for up to 18 credits.

723 PMI Voice (2–3:0:1) Prerequisite: audition. Private lessons in vocal performance. May be repeated for up to 18 credits.

724 PMI Woodwind (2–3:0:1) Prerequisite: audition. Private lessons in woodwind performance. May be repeated for up to 18 credits.

725 PMI Brass (2–3:0:1) Prerequisite: audition. Private lessons in brass performance. May be repeated for up to 18 credits.

726 PMI String (2–3:0:1) Prerequisite: audition. Private lessons in string performance. May be repeated for up to 18 credits.

727 PMI Percussion (2–3:0:1) Prerequisite: audition. Private lessons in percussion performance. May be repeated for up to 18 credits.

728 PMI Composition (2–3:0:1) Prerequisite: portfolio of recent compositions. Private lessons in music composition. May be repeated for up to 18 credits.

729 PMI Conducting (2–3:0:1) Prerequisite: audition. Private lessons in conducting. May be repeated for up to 18 credits.

730 Advanced Topics in Music History (3:3:0) Prerequisites: MUSI 532 and 533, or appropriate score on the
graduate placement exam. Advanced study of specific genres, composers, or repertoire from an historically analytical perspective. May be repeated for up to 9 credits total as topics change.

760 Advanced Topics in Music Education (3:3:0). Prerequisite: baccalaureate degree in music, graduate placement exam. Advanced study of selected issues in music education. May be repeated for up to 9 credits total as topics change.

770 Advanced Topics in Pedagogy (3:3:0). Prerequisite: baccalaureate degree in music, graduate placement exam. Advanced study of a specific topic in the pedagogy of music. May be repeated for up to 6 credits total as topics change.

790 Graduate Recital (1:0:0) Prerequisite: at least three credits graduate PMI in the appropriate instrument or voice. Corequisite: MUSI 72x (3-credit level). Public performance. Repertoire and performance standards as approved by faculty. May be repeated for up to 4 credits total.

796 Directed Reading/Research (1–3:0:0) Prerequisite: baccalaureate degree in music, graduate placement exam. Individualized study on a topic approved by faculty. May be repeated for up to 6 hours total credit.

799 Thesis (1–6:0:0) Prerequisite: at least 12 graduate credits including MUSI 511, and approval of thesis topic. Students in the music education concentration must also have taken MUSI 562, and have successfully passed comprehensive exit exam. Supervised research on approved thesis topic. Graded S/NC.

800 Studies for the Doctor of Philosophy in Education (variable credit) Prerequisite: admission to PhD in education program to study music. Program of studies designed by the student’s discipline director and approved by student’s doctoral committee that brings student to participate in research, performance, or creative activity of discipline director and results in a paper reporting original contributions. Enrollment may be repeated.

810 Doctoral Seminar in Analysis (3:3:0) Prerequisite: graduate placement examination. Seminar study of a specific genre or repertoire from various analytical perspectives. May be repeated for up to 9 credits as topics change.

821 Doctoral Private Music Instruction (2–3:0:1) Prerequisite: audition portfolio. Private instruction in performance, conducting, or composition. May be repeated for up to 18 credits.

822 Doctoral Private Music Instruction Piano (2–3:0:1) Prerequisite: audition. Private instruction in piano performance. May be repeated for up to 18 credits.

823 Doctoral Private Music Instruction Voice (2–3:0:1) Prerequisite: audition. Private instruction in vocal performance. May be repeated for up to 18 credits.

824 Doctoral Private Music Instruction Woodwind (2–3:0:1) Prerequisite: audition. Private lessons in woodwind performance. May be repeated for up to 18 credits.

825 Doctoral Private Music Instruction Brass (2–3:0:1) Prerequisite: audition. Private lessons in brass performance. May be repeated for up to 18 credits.

826 Doctoral Private Music Instruction String (2–3:0:1) Prerequisite: audition. Private lessons in string performance. May be repeated for up to 18 credits.

827 Doctoral Private Music Instruction Percussion (2–3:0:1) Prerequisite: audition. Private lessons in percussion performance. May be repeated for up to 18 credits.

828 Doctoral Private Music Instruction Composition (2–3:0:1) Prerequisite: portfolio of recent compositions. Private lessons in composition. May be repeated for up to 18 credits.

829 Doctoral Private Music Instruction Conducting (2–3:0:1) Prerequisite: audition. Private lessons in conducting. May be repeated for up to 18 credits.

830 Doctoral Seminar in Music History (3:3:0) Prerequisite: graduate placement exam. Seminar study of a specific genre, composer, or repertoire from a historically analytical perspective. May be repeated for up to 9 credits as topics change.

860 Doctoral Seminar in Music Education (3:3:0) Prerequisite: graduate placement exam. Seminar study of a specific issue in music education. May be repeated for up to 12 credits as topics change.

880 Doctoral Major Ensemble (1:0:3) Prerequisite: audition. Selective ensemble experience for doctoral students in music. Public concerts are given. May be repeated for up to 6 credits.

890 Doctoral Recital (1–2:0:0) Prerequisite: at least 3 credits in MUSI 821 in the appropriate instrument or voice. Corequisite: MUSI 821 (3-credit level). Public performance. Repertoire and performance standards as approved by faculty. May be repeated for up to 4 credits.

998 Dissertation Proposal (1–3:0:0) Prerequisite: admission to doctoral program in music, permission of faculty. Preparation of a proposal for a dissertation study in music under the supervision of music faculty members. May be repeated for up to 6 credits.

999 Dissertation (1–6:0:0) Prerequisite: candidacy in a doctoral program in music. Preparation of a dissertation in music under the supervision of music faculty members. May be repeated for credit.

Nanotechnology (NANO)

Computational and Data Sciences

500 Introduction to Nanomaterials and Interactions (3:3:0) Prerequisite: BS in any physical science, mathematics, or engineering; or permission of certificate director. Introduction to nanotechnology. Discussion of the Feynman challenge and its relation to modern science. Applications to nanostructures of charges, currents, diamagnetics, paramagnetics, and ferromagnetics.

510 Strategies for Nanocharacterization (3:3:0) Prerequisite: NANO 500 or permission of certificate director. Introduces various nanocharacterization techniques, with a discussion of which techniques are most useful in various applications. Includes gates and bridges, chemical thermodynamics, kinetics, and solid-state reactions.

520 Survey of Nanostructures (3:3:0) Prerequisite: NANO 500 or permission of certificate director. Discusses nanomechanical oscillators and nanoresonators, nanofibers, and conducting polymer nanowires. Nanomechanical beams for reacting ion etching. Electron-beam lithography and photolithography.
335 Molecular, Developmental, and Systems Neuroscience (3:2:3) Prerequisite: NSCI 210 or permission of instructor. In-depth survey of genetic and embryological development of the brain and introduction to systems neuroscience, including sections on patterning gene expression, generation and migration of neurons, axonal and dendritic outgrowth, and basic neuroanatomy.

461 Special Topics in Neuroscience (1-3:0; 1-3) Prerequisite: PSYC 372, 375, or equivalent or permission of instructor. Selected topics reflecting interest in specialized areas of neuroscience.

Neurosciences (NEUR)
College of Science

College of Humanities and Social Sciences
Krasnow Institute for Advanced Study

600/PSYC 556 Chemistry and the Brain (3:3:0) Prerequisite: admission to neuroscience PhD program or permission of instructor. Fundamentals of general chemistry, atoms, molecules, and reactions, with emphasis on water solutions. Organic compounds and functional groups, biosynthesis and properties, and examples from nervous system. Also includes biopolymers and their roles in cellular and neuronal organization, ionic channels, neurotransmitter receptors, and psychoactive substances.

601/PSYC 527 Developmental Neuroscience (2:2:0) Prerequisite: PSYC 372, or BIOL 213 and 303. Introduction to neurobiology with overview of embryological development of the nervous system in evolutionary context. Regional and systems neuroanatomy introduced by study of the mammalian visual system with a comparative perspective.

602/BIOS 721 Cellular Neuroscience (3:3:0) Prerequisite: admission to PhD program in biosciences or neuroscience, or permission of instructor. Detailed overview of the functioning and interactions of the cellular elements of the central nervous system. Topics include structure and function relationships, the chemical, physical, and electrical basis of neural signaling, local versus long-distance signaling, functional consequences of variations in the typical action potential, and essentials of synaptic conduction.

603/PSYC 531 System Neuroscience (3:2:3) Prerequisite: PSYC 527. Functional anatomy of the brains of mammals, with emphasis on regional and systems neuroanatomy of humans. Anatomy is correlated with material from clinical neurology where possible. Laboratory component includes brain dissections and clinical correlations.

604/CSI 639 Ethics in Scientific Research (1–3:1–3:0). Prerequisite: graduate standing. Reflects on purpose of scientific research, and reviews foundational principles for evaluating ethical issues. Offers skills for survival in scientific research through training in moral reasoning and teaching of responsible conduct. Discusses ethical issues in research, and teaches how to apply critical thinking skills to design, execution, and analysis of experiments. Issues include using animals and humans in research, ethical standards in computer community, and research fraud. Currently accepted guidelines for behavior in data ownership, manuscript preparation, and conduct of persons in authority may be presented and discussed in terms of relevant ethical issues.
634 Neural Modeling (3:3:0) Prerequisite: NEUR 602 or permission of instructor. Introduces the objectives, philosophy, and methodology of neuronal modeling. Instructs students in the use of some of the more popular neural modeling software packages. Students learn the syntax of several software packages, how to create neurons from subcellular components, and how to create networks by connecting neuron models.

689 Topics in Neuroscience (3:3:0). Prerequisite: permission of instructor. Selected topics in neuroscience reflecting specialized areas or new subfields not covered in fixed-content neuroscience courses. Course may be repeated for credit as needed.

701 Neurophysiology Laboratory (2:0:6) Prerequisite: NEUR 602 and admission to neuroscience PhD program or permission of instructor. Hands-on training in current techniques of modern neurophysiology. Acquaints students with the theoretical basis of each technique and trains the student in the laboratory skills necessary to perform each technique. Includes intracellular and extracellular recording techniques. Preparations include vertebrates and invertebrates. Meets once weekly for six hours.

702 Research Methods (3:3:0) Prerequisite: graduate standing. Trains students in research methodologies, techniques, and data analysis in neuroscience. The course is divided into three modules that introduce separate but equally significant components of any research project. The first module will focus on parameters required for outlining and synthesizing a problem. The second module will cover various techniques of measurement and analysis used by neuroscientists. The last module will cover various approaches used for data analysis and interpretations.

709 Neuroscience@GMU Seminars (1:1:0) Prerequisite: admission to neuroscience PhD program. Special seminar series for first year neuroscience PhD students. Detailed overview of neuroscience research at Mason. Each week, a different neuroscience laboratory and principal investigator gives two lectures to students. First is introductory lecture on the neuroscience basics necessary to appreciate laboratory research theme and mission. Second is a more practical description of the active research program, possibly including a visit to the laboratory.

710 Special Topics in Neuroscience (1:1:0) Prerequisite: admission to neuroscience PhD program. Examines topics in neurosciences, including neurogenetics, neural imaging, and the competing computational and biological approaches to understanding the mind.

734 Computational Neurobiology (3:3:0). Prerequisites: NEUR 602 and MATH 214, or permission of instructor. Intense review of neurobiology for graduate students interested in studying how nerve cells integrate and transmit signals, and how behavior emerges from integrated actions of populations or circuits of nerve cells. Covers electrical and biochemical properties of single neurons, and electrical and chemical communication between neurons. Emphasizes mathematical descriptions and computational techniques to study and understand neurons and networks of neurons.

735 Computational Neuroscience Systems (3:3:0). Prerequisite: NEUR 734, or permission of instructor. Intensive introduction to systems neuroscience from quantitative perspective. Covers computational techniques used to study function of networks of neurons. Uses spike train statistics, neural encoding, and information theory to investigate behaviors that emerge from integrated actions of networks of neurons.

741 Introduction to Neuroimaging (3:3:0) Prerequisite: NEUR 602 or 603, or permission of instructor. Introduction to physics and techniques of magnetic resonance imaging (MRI) and their applications to clinical and basic neuroscience. Students learn about the protocols used in the acquisition of images in both structural and functional contexts, and experimental paradigms applied to the exploration of cognition, learning, and development. Students gain experience with creating an experimental design for a study and understanding practical logistics involved in imaging, such as MRI safety and subject screening.

742 Cognitive Neuroscience (3:3:0). Prerequisite: NEUR 602 or 603, or permission of instructor. Introduces cognitive neuroscience topics, including aspects of cognitive science covering an array of perceptual, sensory, cognitive, and affective processes. Incorporates studies of brain lesions, brain imaging, and animal and computational models.

751 Applied Dynamics in Neuroscience (3:3:0) Prerequisites: NEUR 603 or CSI 734, or permission of instructor. Covers recent developments in the application of applied dynamics to neuroscience. Emphasizes dynamical system approach to the understanding of neural processes. Topics include neural synchrony and control; formation of waves; oscillations; patterns within neural ensembles; network topology and dynamics of neurons; and decoding and encoding of neural signals.

752 Modern Instrumentation in Neuroscience (3:3:0) Prerequisite: NEUR 602 or 734, or permission of instructor. Builds on knowledge of how and what things are measured and controlled in modern bioinstrumentation. Topics include fundamental instrumentation; principles of sensing; basic electronics; computer interfaces and data acquisition; signals in biological systems; biopotential and ionic concentration measurements; and optical techniques.

851 Advanced Computation and Brain Dynamics (3:3:0) Prerequisite: NEUR 603 or CSI 734, or permission of instructor. In-depth study of open issues and the state-of-the-art in advanced brain dynamics. Using mathematical and physical models, the course covers the neurodynamical aspects of neural nets, receptive fields, ion-channels, intercortical interactions, phase-locking, synchronicity, and the possible nontrivial role of quantum effects. It will emphasize the latest experimental approaches developed by Llinas and Crick.

996 Doctoral Reading and Research (1–6:0:0). Prerequisites: admission to NEUR PhD, and permission of instructor. Reading and research on specific topic in neuroscience under direction of faculty member. May be repeated as needed.

998 Dissertation Proposal (1–12:0:0) Prerequisite: permission of advisor. Covers development of a research proposal under guidance of dissertation director and doctoral committee. Proposal forms the basis for the doctoral dissertation. Course may be repeated as needed; however, no more than a total of 24 credits in NEUR 998 and 999 may be applied toward satisfying doctoral degree requirements. Out of the 24, no more than 12 credits of NEUR 998 may be applied.
Courses

999 Doctoral Dissertation (1–12:0:0) Prerequisite: admission to candidacy in neuroscience doctoral program. Doctoral research performed under the direction of the dissertation director. May be repeated as needed; however, no more than a total of 24 credits in NEUR 998 and 999 may be applied toward satisfying doctoral degree requirements.

New Century College (NCLC) New Century College

First-Year Experience

110 Community of Learners (8:8:0) Develops essential college skills, particularly communication (reading, writing, speaking) for critical thinking and problem solving, information literacy, statistics, and probability. Issues such as transition to college life, cultural diversity, and personal freedom and responsibility are explored. Credit distribution: composition (3), communication (2), math/analytical reasoning (1), and information technology (2).

111 Composition, Communication and Community (7:7:0) Students study key skills for our information economy. They research original ideas and analyze critically the ideas of others. They also learn to communicate their conclusions through writing, speech, and the creative use of electronic media. Topics covered include writing to learn, information literacy, individual and small-group communication, and collaborative problem solving. Credit distribution: written communication, 3; oral communication, 2; quantitative reasoning, 1; and information technology, 2.

120 The Natural World (8:6:2) Designed for students pursuing a BA or BS in integrative studies in New Century College. Introduces worlds of science and mathematics. Students explore contemporary issues of public health and the environment, with a historical perspective and understanding of how scientists communicate ideas. Students will engage in debate, poster presentation, and group problem solving. Credit distribution: math/analytical reasoning (2), natural science (4), and communication (2).

121 Science, Mathematics, and Technology in Society (7:7:0) Building on skills developed in NCLC 110/111, designed for students pursuing a BA or BS in integrative studies within New Century College. Introduces natural sciences and their relation to mathematics. After building a knowledge base, students explore the natural world through contemporary issues. Discusses man and nature from biological, historical and contemporary viewpoints, while developing an understanding of how science develops and communicates ideas. Students learn to work in groups to solve problems and work through issues, then publicly present ideas through debates, posters and various written formats. Credit distribution: math/analytical reasoning (3), natural science (4).

130 The Social World (8:8:0) Designed for students pursuing a BA or BS in integrative studies in New Century College. Focuses on the social world and its cultural origins. Students investigate how that world is both model and mirror of social behavior. Students are encouraged to model objective and subjective thinking, analysis and synthesis, explanation, and understanding. Credit distribution: arts (2), humanities (2), and social sciences (4).

140 Self as Citizen (8:8:0) Designed for students pursuing a BA or BS in integrative studies within New Century College. Explores definitions of self and society in historical non-Western and Western contexts. Issues relating to the concepts of moral identity and cultural differences are covered using text, film, plays, social science research methods, and writing. Credit distribution: art (1), literature (3), and social sciences (4).

Learning Communities

Learning Communities: Special Topics (3–15:3–15:0) Division II is composed of a variety of learning communities; each combining subjects usually taught in separate courses into a single course of study. Offering the equivalent of between 3 and 15 credits of undergraduate work, replaces the often fragmented classroom experience and integrates material from several perspectives. Credit is assigned for each learning community at the time it is offered.

200 Visual Thinking and the Creativity (4:3:1) Investigates modes of visual and textual creativity through art, literature, and variety of visual and textual forms. Through interdisciplinary approach to picturing text, provides opportunity to experiment with creative composition that includes visual elements; and with arts forms that include textual elements. Explores blocks to creativity, and provides understanding of how to evaluate and write about visual texts as well as how to produce documents that integrate words, images.

201 The World Since 1945 (3–15:3–15:0) Examines the history of the past 50 years to illuminate the contemporary world as well as build connections between the global and local. Using historical works, fiction, autobiographies, films, and daily newspapers, students explore such major events as the Cold War, the struggle against apartheid in South Africa, the Vietnam War, the Chinese Cultural Revolution, and the continuing conflict in the Middle East. As a learning community, requires active student participation in group projects and discussions.

202 Public Speaking and Critical Thinking Skills (4:3:1) Combines process of learning to speak in front of audiences with analysis of arguments and persuasive appeals. Students learn how to create and present effective speeches, adapt messages to specific audiences, and evaluate and critique messages produced for others. One credit of experiential learning enables students to examine public speeches, news stories, political campaigns, and advertising, among others, to make meaningful connections between public speaking theory, practice.

204 Leadership Theory and Practice (3:3:1) Examines historical and contemporary leadership theories, analyzes various methods and styles of leadership while providing students with opportunity to better understand their leadership strengths, challenges.

211 Introduction to Conservation Studies (6:4:2) Provides foundation for the integrative study of environmental conservation. Formal and informal writing assignments and oral presentations designed to strengthen critical thinking and communication skills important to students who pursue conservation-related professions. Instructors encourage students to use course assignments and off-campus work to identify suitable educational and career paths within the conservation world.

220 Energy and Environment (3–15:3–15:0) Investigates current sources of energy, various modes of their utilization, and environmental effects. Offers an overview of the
mechanical, physical, and chemical methodologies of energy use and delves into the biological, environmental, and ecological aspects of pollution-generating mechanisms.

225 Dean’s Honor Book Review (1:1:0) Open to New Century College students admitted with a GPA of 3.30 or better. Considers the ways in which specific works such as books, dramas, works of art, or ideas have influenced the intellectual climate of their times and beyond.

226 Dean’s Honors Seminar (1:1:0) Prerequisite: students must have entered New Century College with GPA of 3.50 or greater, or with 6 or more AP credits. Considers dynamic relationship of author or artist with cultural and intellectual climate of times and beyond. Broader question is how one helps create culture and is influenced by it.

230 Math and Culture (3–15:3–15:0) Focuses on mathematical problems and their emergence in different cultures and historical moments. Emphasizes interdisciplinary nature of the motivations for the development of mathematics and on the process of mathematical discovery. High degree of faculty/student interaction, which enables students to demonstrate, through the use of presentations and projects, their understanding and mastery of fundamental mathematical ideas and techniques and the role of mathematics in the development of human culture.

231 Introduction to Community Studies (4:3:1) Examines relationship between sustainable communities and democratic citizenship in a diverse society. The objectives are to improve one’s understanding of and thinking critically about communities and democratic principles, theories and practice. Students will identify and work through problems that communities address by working in a community service-learning setting.

244 Beats, Rhyme, and Culture (4:3:1) Examines the history of hip-hop and the effect it has had on our society. The primary focus is to consider hip-hop as a medium of communication that impacts, represents, and misrepresents the life experiences of youth in the United States. Students are exposed to historical, socio-economic, and musical/aesthetic contexts of this genre through in-class activities, and by attending related cultural events.

245 Visual Culture and Society (4:3:1) Explores the role of visual culture in contemporary society including an examination of photography, the visual and performing arts, film and video, and electronic media. Readings focus on the historical foundations of visuality as well as theories of visual culture and aesthetics. Students investigate the ways that forms of visual culture function in society and how these are linked to race, class, and gender as well as politics and economics. Students will gain hands-on experience working with contemporary visual media tools such as computer graphics and digital video editing.

249 The Internet: Literacy, HTML Tools, and Virtual Community (3–15:3–15:0) Introduction to cyberspace, the Internet, and web. Students learn basic HTML to create individual and collaborative web pages. In addition to using e-mail, students explore use of listserv, online discussion forums, and virtual communities. Assignments include collaborative and individual web pages, analytical and creative papers, and online research. One experiential credit is required in this class.

270 Page and Stage: Theory and Practice (3–15:3–15:0) In reading, writing, and performing plays and other literary texts, we discover our own ability to inhabit others’ minds, live in others’ bodies and see through others’ eyes. Students investigate the metamorphosis of reader into actor and text into three-dimensional theater. How do writers use images, voices and structure to shape their material and reach out to an audience? How does the actor as detective follow a writer’s clues to achieve a unique performance? Throughout the semester, students practice communicating those answers on stage and page.

275 Special Topics (3–15:3–15:0) Studies topics of special interest to undergraduates. May be repeated for credit if subtitle is different.

300 Utopia (3–15:3–15:0) Examines utopian and dystopian literature, theory, and practice including Plato, Piercy, LeGuin, Robinson, and others. Examines how utopian dreams (and dystopian nightmares) have changed over time and how texts are designed to jostle readers’ ideas about society and themselves. Students study several utopian experiments and visit a few local utopian communities.

301 Science in the News (3:3:0) Examination and discussion of the current trends in science as reported in the popular media. Students learn how to evaluate the science that is reported so they may become informed consumers; discuss how scientific advancement might shape society by looking at how science and society have changed together over time; and use examples from the past to discuss future trends.

304 Social Movements and Community Activism (4:3:1) Examines how citizens, individually and collectively, accomplish social change in society through case study analysis. Considers advantages, limits of social change strategies from communication and social movement theory perspectives. Surveys topics including how leaders maintain momentum in face of opposition; how movements, organizations use slogans, symbols, music to inspire followers; and how participants construct persuasive media campaigns and political arguments to facilitate policy change. One credit of experiential learning enables students to explore their role as social advocates and effective citizens in context of community.

305 Conflict Resolution and Transformation (6:6:0) Examines the nature and dynamics of conflict and ways to resolve and transform conflict. Experiential learning is used as the vehicle through which students explore their assumptions about communication and develop their skills for resolving interpersonal conflicts.

306 Our Common Futures (3–15:3–15:0) Students and faculty work together to model patterns of life that fit within the planet’s ecological means. Involves the study of “enviro-nomics,” introductions to urban systems and planning, and studio work to actually create models of alternative growth.

307 Narratives of Nature (6:3:3) Course begins with the individual’s connection to the infinite, the cosmos, and ends in a microscopic examination of the behavior of the human animal. Looks at the fundamental questions relating to scientific thinking and writing.

308 American Landscapes in Fiction, Film, and History (6:4:2) Satisfies requirements for ENGL 302. Waterways and roadways have always had practical, spiritual significance
for Americans. Course looks at American literary works and films in historical context to better understand the roles roads, rivers play in shaping physical, cultural landscape of United States. Students explore course themes outside classroom on weekend field trips, and conduct self-directed road trip as a main learning events.

310 Violence and Gender (3–15:3–15:0) Using nonfiction, research documentaries, oral histories, case studies, literature, feature films, music, dance, and visual arts, examines the dynamics of violence through different cultural lenses. Students work in university and community settings to integrate their academic experiences with practice.

311 The Mysteries of Migration: Consequences for Conservation (3–15:3–15:0) Investigates the biology of migration and its implications for science policy. Students consider the phenomenon of migration in the context of natural history, conservation, and cultural issues. The course includes several weekend trips for field study.

312 Images and Experiences of Childhood: Social Construct, Literature and Film (3–15:3–15:0) Immerses students in the images of childhood through the media of literature, video, and poetry, with a strong emphasis on historical perspectives of childhood. The class is interactive, requires some work in groups, and requires classroom participation.

313 Strangers in a Strange Land: Immigration in 20th Century America (3–15:3–15:0) Examines immigration experience as historical reality, culture. Through explorations of historical and contemporary discourse of immigration in United States, illuminates connections between current-day events, and ideas and policies that inform them.

315 Spirituality and Conflict Transformation (6:6:0) Examines dimensions of spirituality, including peace-making efforts in large-scale conflicts, conflicts within faith communities, and interpersonal disputes. Experiential learning explores spiritually informed resolution.

317 Issues in Family Relationships (4:3:1) Prerequisite: 35 credits. Dynamics of family systems and issues that shape relationships among family members. How families evolve as members grow, leave, and create related family systems; family roles and forms; and communication patterns, decision-making, conflict, stress, and power. Content draws from family communication, family relations, psychology, and counseling. Lecture, discussion, observation, analysis, research, and role-playing. One credit counts for experiential learning; students complete 45 credits of course-related work outside classroom.

318 Exploring Virginia’s Watersheds (4:4:0) Prerequisites: HIST 120, 121, 122, or equivalent; and EVPP 110 or GEOG 102 or GEOL 109 or NCLC 120. Comprehensive overview of history, geography, economics, and management of water resources in Virginia; and how rapidly growing population has measurably degraded resource. Includes one weekend field trip.

319 An Endangered Earth (3–6:3–6:0) Introduces issues and problems raised by science in the public policy process, especially the inherent tension between the tenets of a democratic society and scientific community. Using environmental policy problems, course is structured to prepare students to ask intelligent and useful questions about the science and politics of particular public policy issues, understand where they might go to find information for developing options, and develop criteria by which they can evaluate these ideas.

320 Construction of Differences; Race, Class, and Gender (3–15:3–15:0) Investigates race, sex, sexual orientation, and social class in contemporary American society. Examines commonalities in the construction of these categories and experiences of those who occupy them.

321 Vision Quest: Modeling the Natural World Using Art, Computer Programs, and Science (3–15:3–15:0) Imparts concepts of science in a visual, auditory, and kinetic fashion. Uses simulation programs, modeling the natural world to help students understand the principles and mysteries of science.

325 Dean’s Honor Book Review (1:1:0) Open to New Century College students who have had a previous semester GPA of 3.30 or better and at least 30 college credits. Focuses on classical philosophers and artists and the impact of their works for contemporary times. May be repeated for credit if the topic is different.

326 Dean’s Honors Seminar (1:1:0) Prerequisite: overall GPA of 3.50 or greater while in New Century College. Focuses on a variety of topics of interest ranging from book and film reviews to development of special events and symposiums. May be repeated for credit if the topic is different.

330 Enterprise Development (3–15:3–15:0) Prepares students for enterprise development in diverse environments by examining the spectrum of sociocultural, organizational, behavioral, strategic, and management factors that impact enterprise creation. Instructional method is interactive, using case studies, scenarios, role playing, guest speakers, and student-driven semester projects to link theory to practice.

331 The Nonprofit Sector (4:3:1) Readings, classroom discussions and activities, and practical experience reveal historical, legal, and socioeconomic forces that define and influence the American nonprofit sector. Explores structures, issues that affect nonprofit management, governing, and financial systems. Includes 1 experiential learning credit.

333 The Nature of Mathematics (3:3:0) Prerequisites: performance on Math Placement Exam equivalent to requirements for entrance to math, successful completion of algebra program in mathematics learning center, or any mathematics course that fulfills university’s general education requirement in quantitative reasoning; and permission of instructor. May be taken even after credit for MATH 106 or equivalent has been received. Sections include theoretical framework, historical context, connections with some other disciplines, and current issues. The sections are illustrated with selected mathematics topics (more advanced algebra and geometry plus introductions to set theory, probability, calculus, and number theory) Student presentations (in pairs) on what they have read and learned in mathematics, and result of optional experiential learning component of the course. Enrollment in NCLC 395 Experiential Learning is optional for at least 1 credit.

335 Ethics, Communication, and Freedom (3–15:3–15:0) Prerequisites: sophomore standing and 3 credits each of communication and philosophy; or permission of instructor. Students examine ethical principles, discuss some underlying bases for these principles, and work to understand how such principles are experienced and can be applied in a free
society. Focus is on examining potential conflicts between ethics and the freedoms believed essential to a healthy democratic society. Cases drawn from sports, medicine, media, politics, and business.

336 Wealth, Power, and Values (3–15:3–15:0) Investigates political, economic, social, industrial, and diplomatic sources of wealth, values, and power at the end of the 18th, 19th, and 20th centuries. Includes lecture, discussion, debate, and experiential learning, with emphasis on individual research projects.

337 Politics, the Arts, and History (9:9:0) Students taking this learning community receive opportunities to see how major musicians, composers, studio artists, dramatists, writers, architects, and dancers confront political issues and historical events. Students are required to attend several museum exhibitions or performances.

340 Progress: Can America Figure Out What It Means? (3–15:3–15:0) Explores our land, the built and the left natural, as valued and sacred. Challenges students as developers and environmentalists, as citizens and business persons, to strive for a win-win scenario.

341 Progress: Washington—the New Edge City? (3–15:3–15:0) NCLC 340 investigates how the city, both the good parts and the bad parts, came to be. This course investigates what we might do about the situation. Requires active engagement of the students in research and discussion. Collective field work and class field trips both semesters. Students may take either Part I or Part II of this course but are encouraged to take both.

343/ENGL 343 Interactive Digital Texts (3:3:0) Prerequisite: English 101 or equivalent. Writing-intensive course devoted to critical reading of new media texts, and to creation of technology-enhanced texts in a variety of rhetorical genres targeted to specific audiences. Includes analysis of text embedded within technology-enhanced writing and that which surrounds this emerging medium. Critical reading and interpretive skills, historical and theoretical contexts for development of contemporary textual media. Allows students to explore critically such genres and gain command of a new rhetorical field for academic, educational, informational, technical, and business communication.

345 Introduction to Multimedia (3–15:3–15:0) Technological, aesthetic, and educational issues of using interactive multimedia. Topics include theoretical underpinnings of some technological issues involved in multimedia computing as well as techniques for authoring interactive multimedia projects using a variety of digital media tools.

346 Art as Social Action (4:3:1) This learning community explores historical record to understand different ways art has been produced, distributed, and consumed. Examines ways artists have affected change in their worlds. Through interdisciplinary studies, teaches major social movements, and artists and theories used in socially engaged art. Students engage in experiential learning outside classroom as course requirement.

347 Gender Representation in Popular Culture (3-6:3-6:0) Explores the way in which masculinity and femininity have been represented across the decades in television, movies, music videos, pop art, and print media. Provides a review of the scholarship on the historical and contemporary roles of women and men in society; examines the contradictions and expectations associated with gender roles. Incorporates active group learning through creative, insightful opportunities; critical thinking and discussions; and group presentations and media research activities.

348 Information in the Digital Age (6:3:3) Prerequisite: NCLC 249. Examines how purpose and function relate to form, and how digital material can attract or hinder audience responsiveness. Unique concerns of copyright, security, and privacy in a digital environment are considered. By looking at significant social, cultural, ethical, business, and economic consequences of the digital age, students gain hands-on experience in working with and assessing digital information.

349 Writing for Multimedia (4:3:1) Looks at how literary traditions of 20th century meet the cybercultures of 21st century. Workshop course exploring writing tasks facing multimedia professional, whether as a concept and storywriter, a producer, or as a hands-on creator of multimedia presentations and narratives. Students practice creative and project-focused writing. Scripting interactivity is a key component of both kinds of multimedia writing; class time is spent working on the skills and concepts needed to creatively communicate interactively.

350 Cyberculture (6:6:0) Prerequisite: NCLC 249, or permission of instructor. Research and write reports about ethical, social, educational, and cultural dynamics of online communities. Students examine who forms and has access to these communities, various types of communities, how people represent themselves online, electronic mediums they use, how technology shapes human interactions, and vice versa. Extensive online discussion component, and students post their work on the web. Student groups create a cyberculture web site as the final project. Students expected to know basic web publishing.

360 The Built Environment (3–15:3–15:0) Examines, records, and interprets objects, structures, and landscapes that compose our built environment. Draws on the fields of historical archaeology, architectural history, and urban geography, and employs photography, cartography, and evocative writing to represent the material world we inhabit. Builds on study of one neighborhood in Arlington, Virginia, and expands to entire metropolitan area.

375 Special Topics (3–15:3–15:0) Studies topics of special interest to undergraduates. May be repeated for credit if subtitle is different.

378 Medicine, Justice, and Public Policy (3:3:0) Explores formation of public policy relating to several key issues in medicine. Students examine basic theories of justice and public policy formation and apply these to contemporary issues in the field of medicine. The goal is to examine how current policy on these issues was established and to example major stakeholders in the debate. This course involves some traditional lecture and discussion classes, but also features participative learning through group work and web-based discussions.
379 Cancer and Its Social Impact (4:3:1) Prerequisite: 60 credits, or permission of instructor. Introduces epidemiology and biological basis for treatment and prevention of cancer. Students consider the social impact of cancer by looking at how patients and families cope with the disease. A portion of the learning community focuses on working with and learning from people living with cancer. Designed for biology and premedical students as well as nonscience majors interested in connecting the physiology of health and disease to the human spirit.

381 When Cultural Worlds Collide (3–15:3–15:0) Explores what happens when “civilization” encounters “the jungle” by reading, writing, discussing, and viewing written and filmed works dealing with contacts between cultures with colliding world views. Literature (from Conrad’s The Heart of Darkness to Shakespeare’s The Tempest to Burrough’s Tarzan), news articles, radio broadcasts, web home pages, art exhibits, and many film and video presentations provide the basis for in- and out-of-class activities.

391 Introduction to Integrative Studies (3:3:0) Students may not enroll in this course after completing 12 or more learning community credits, or simultaneously with or after completing NCLC 491. Describes key components of the Integrative Studies Program in New Century College. Students prepare for active participation as a community of learners; to develop skills in reflective learning and self-assessment; and to identify areas of intellectual and professional interests, values and skills so that students may take greater advantage of opportunities in NCC. As a learning community, this course fosters group collaboration, intensive writing, and reflective learning.

401 Conservation Biology (3–15:3–15:0) Prerequisite: junior standing, or permission of instructor. Provides students with a working knowledge of conservation biology. Integrates the study of social, economic, and political factors with biodiversity, population modeling, habitat degradation, and management issues. Students confront the leading edge of this exciting field by developing real species conservation plans. The experiential learning component of the course will include trips to the Smithsonian Institution’s Conservation and Research Center in Front Royal, Virginia, to study with nationally known experts.

410 Contemporary Health Issues (3–15:3–15:0) Looks at a variety of health and health care issues. Examines several of the major health concerns of women and, to a lesser degree, men. Also explores the biology and medical implications of these diseases and how our society deals with potential life-altering information. Examines who is making the decisions on the allocation of research funds and prevention of diseases.

420 Work Effectiveness Skills (3–15:3–15:0) Develops a variety of work-readiness skills needed to become successful in both local and global marketplaces. Topics and skills covered include communication, problem solving in the business setting, workplace ethics, listening skills, how to influence others, building team project rapport, and meeting effectiveness skills.

422 An Experiential Approach to American Foreign Policy (3–15:3–15:0) Takes an experiential approach to the study of American foreign policy. Through case studies, discussions, group projects, and directed research, students learn how foreign policy is made and executed and how they as citizens, activists, or officials can influence national decisions.

423 Management in the Global Marketplace (6:6:0) Experiential approach to the study of global management and organizational behavior. Through exercises, case studies, discussions, group projects, and individual research and essays, students learn the principles of effective management as they apply to modern global organizations, whether public, private, or nonprofit.

424 Force and Justice in the International System (3–15:3–15:0) Examines ethical dimensions of war and peace, human rights, and international justice. During the first seven weeks of the semester, students explore these issues in a classroom setting, followed by a seven-week, off-campus internship, and an integrating project, monitored by instructor. The class meets again as a group in the last week of the semester to share and consolidate the learning experience.

426 Dean’s Honors Research/Thesis (3:3:0) Research related to an aspect of your specialization or BIS Project. Course will require analysis, quantitative interpretation, and a minimum 15-page thesis to be presented in written and oral form.

431 Principles of Fundraising (4:3:1) Prerequisite: NCLC 331. Examines history of philanthropy and public policy, economic and legal frameworks that shape it. Combining theory and practice, students study human behavior, communications, and management systems that are hallmarks of successful fundraising, and begin to develop skills to generate donations, foundation grants, and other unearned revenue for a nonprofit organization. Includes 1 experiential learning credit.

435 Leadership in a Changing Environment (4:3:1) Prerequisite: 60 credits. Explores the basic framework for change management. It examines leadership styles focusing on historical, philosophical, and industrial examples, as well as personal change stories. Students learn about the diverse nature of leadership, explore historical perspectives on leadership, and interview business and community leaders to understand strategies for change.

440 Death, Dying, and Decision Making (3:3:0) Prerequisites: 60 credits, or permission of instructor. Inter-disciplinary examination of clinical care of dying persons along with psychosocial issues related to processes of death and dying. Special emphasis on application of ethical principles in resolving complex problems for individuals with life-threatening illnesses and their families as care givers or decision makers. Students consider the changing norms and mores surrounding end-of-life decisions and explore the care available to terminally ill patients.

441 AIDS: Impact on Society (variable 3–15:3–15:0) In-depth understanding of the medical, legal, and psychosocial factors surrounding HIV disease. Provides conceptual framework of current issues to become better prepared to deal with the emerging challenges posed by AIDS. Students may take this course for 5 credits and work with the Center for Service-Learning to develop internship or experiential learning project involving impact of AIDS in our society.

445 Multimedia Design (5:4:1) Prerequisite: NCLC 345, or permission of instructor. Technological, aesthetic, and educational issues of using interactive multimedia. Topics include theory and practice, integration of digital media,
449 Multimedia Research and Project Development (4:3:1) Prerequisite: NCLC 345, or permission of instructor. Provides a solid background in multimedia research and concept development from a scientific yet practical point of view. Students gain a full understanding of the computer-based principles behind multimedia and appreciate the symbiotic relationship between the two. Students also learn about the life cycle of development for a multimedia application including what constitutes a good idea, usability testing, and copyright issues.

475 Special Topics (3–15:3–15:0) Studies topics of special interest to undergraduates. May be repeated for credit if subtitle is different.

491 The Senior Capstone Experience (3:3:0) Should be taken semester before graduation; 85 credits required. Graduation requirement for integrative studies students. Students complete final NCC portfolio and senior exposition. Provides information on issues of professional development (interviewing skills, resume development, career strategies, alumni opportunities).

510 Institutional Records Keeping (3:3:1) Explores theory and mechanics of animal records keeping at zoological and aquarium institutions and how AZA, ISIS, SSPs®, TAGs, PMPs, WCMC, studbooks, and animal records collected in the ISIS database combine forces to manage captive populations.

511 Career Development (3:3:1) Prerequisite: PUAD 505 or permission of instructor. Focuses on traditional and industry-specific nonprofit management topics ranging from marketing to education. It is one of a series of three management courses for MAIS ZAL students.

512 Organizational Development (3:3:1) Prerequisite: NCLC 511. Covers traditional zoo and aquarium organization topics, strategic planning, human resources, leadership styles, crisis management, and personal ethics. It is one of a series of three management courses for MAIS ZAL students.

513 Population Management I: Data Acquisition and Processing (3:3:1) Prerequisite: Admission to MAIS ZAL program or permission of instructor. Teaches students to use SPARKS software and collect, process, and enter data into the studbook computer software program to manage captive populations in zoos and aquariums. Introduces principles of captive population management and genetics.

514 Population Management II: Data Analysis and Breeding Recommendations (3:3:1) Prerequisite: NCLC 513. Educates students to be competent population managers with the ability to manage the genetic health of captive populations in zoos and aquariums.

520 Conservation Education (3:3:1) Prerequisite: Admission to MAIS ZAL program or permission of instructor. Provides students with a comprehensive view of best practice and an understanding of pedagogical reform necessary to provide excellence in modern zoo and aquarium education. Focuses on public education and K–12 program development.

522 Developing an Institutional In Situ Conservation Strategy (3:3:1) Prerequisite: Admission to MAIS ZAL program or permission of instructor. Educates students about the process and disciplines necessary to facilitate the professional development of an institutional in situ conservation strategy. Teaches the students key components of a successful institutional conservation strategy. Presents model for strategy development that can be used as a guide to develop institutionally specific strategies.

523 Managing Animal Enrichment and Training Programs (3:3:1) Prerequisite: Admission to MAIS ZAL program or permission of instructor. Focuses on the study of animal behavior, exhibit enrichment, training, and animal welfare in modern zoos and aquariums. Topics include history, philosophy, and theory of animal welfare and husbandry planning.

531 Principles of Elephant Management (3:3:1) Prerequisite: Admission to the MAIS ZAL program or permission of instructor. This course is designed to train students to be competent elephant managers through understanding and application of behavioral science, reproductive physiology, population genetics, and conflict resolution.

625 Online Library Research for the Zoo and Aquarium Professional (3:3:0) Examines technologies such as full-text databases, open access publishing, and websites. Develops an understanding of expectations of the scientific method and ethical conduct among zoo and aquarium professionals. Covers case studies of appropriate conduct including peer review, allocation of credit, animal welfare, and conservation education. Students review cases, conduct independent research, and draw on their own professional experiences to demonstrate an understanding of appropriate process and moral behavior.

Independent and Experiential Learning

165, 265, 365, 465 Independent Study (1–12:1–12:1–12) Prerequisite: permission of instructor and dean. Individualized section form required. Study of a topic not otherwise available to the student. May involve any combination of reading assignments, tutorials, lectures, papers, presentations, or field/labatory study (determined in consultation with instructor) Students are encouraged to work as a team on a particular topic. Maximum 12 credits can be used to fulfill graduation requirements.

190, 290, 390, 490 Internship (1–6:0:1–6) Prerequisite: sophomore standing and permission of instructor. Internship credit may be applied to 12 credits required in experiential learning. Students may take no more than 6 credits in any one semester, unless approved by director of experiential learning or associate dean. Structured and supervised professional experience, within an approved agency, for which the student earns academic credit. The primary purpose of an internship is to connect the student’s academic course work to experiences and challenges outside the university classroom. The faculty also expects that students will enhance their competencies and skills and explore career options.

194, 294, 394, 494 Service-Learning Experience (1–15:1–15:0) Service-learning courses offer students,
faculty, and community partners an opportunity to work together to integrate and apply knowledge to address community needs. Learning goals, action strategies, and assignments developed collaboratively. Students demonstrate progress through critical reflection that illustrates growth in acquiring and comprehending values, skills, and knowledge content. Critical reflection may take the form of papers, presentations, portfolios, journals, and exams.

195, 295, 395, 495 Field-Based Work (1–15:1–15:0) Directed field studies in topic not otherwise available to students. Topics vary, but entire course or significant component is located off campus. In addition to fieldwork, course may also include reading assignments, tutorials, lectures, papers, presentations, portfolios, journals, and exams. Students bear costs of required field trips and should consult Center for Field Studies for more information.

196, 296, 396, 496 Teaching Assistant Experience (1–6:1–6:0) Teaching assistantship and peer-mentoring duties carried out through existing university programs, such as Technology Assistants, Writing Tutors, and Residence Advisors. Also includes teaching assistantship arrangements for specific courses detailed in individualized course contract signed by instructor and student. In addition to peer mentoring/advising, course work may include logistical support, reading assignments, papers, presentations, and portfolios.

197, 297, 397, 497 Add-On Experiential Learning (1–3:1–3:0) Prerequisites: must be enrolled in a learning community or experiential learning class to add this additional credit. For students who wish to add one or more experiential learning credit to existing experiential learning course or learning community. May also be used by students who wish to add an experiential learning component to course that provides no experiential learning credit (with permission of instructor). Unless experiential learning add-on requirements are spelled out in course syllabus, requirements for add-on experiential learning credit must be detailed in individualized course contract signed by instructor and student.

198, 298, 398, 498 Field-Based Work (1–15:1–15:0) Experiential-based individualized studies, mentored by instructor. Topics decided by student and instructor, and approved by associate dean. Requirements must be detailed in individualized course contract signed by student, instructor, and associate dean. May include reading assignments, papers, journals, and portfolios.

Nursing (NURS)

College of Health and Human Services

305 Application of Basic Nursing Techniques (1:0:2) Prerequisite: acceptance into accelerated second degree program. To be taken fall semester of accelerated second degree program. Introduces basic nursing technologies, and provides opportunities to apply these skills in simulated technology lab.

309 Introduction to Basic Nursing Care (3:3:0) Corequisite: N310. Enrollment restricted to second-degree students only. Introduces basic fundamentals of nursing care across the life span. Emphasis on nursing process, critical thinking, and foundational technologies and skills required to practice in the health care setting.

310 Application of Basic Nursing Care (3:0:9) Prerequisite: acceptance into accelerated second degree program. Application of basic nursing care in acute care settings utilizing the nursing process.

317 Introduction to Nursing Research (2:2:0) Prerequisites: statistics, junior standing. Introduces current knowledge, theory, and research. Emphasizes acquiring skills to access and utilize nursing and other health care research.

319 Pathophysiological Basis for Nursing Care of Individuals and Small Groups (4:4:0) Prerequisite: acceptance into second degree program. Focuses on pathophysiological, psychological, sociocultural, and risk-reduction factors related to nursing care for clients with psychiatric conditions, as well as for child-bearing women, infants, children, and adolescents with acute health care needs.

325 Application of Nursing Care for Individuals and Small Groups II (5:0:15) Enrollment restricted to second-degree international students only. Prerequisites: NURS 309, 310, 318, 328, 329, and 428; corequisites: 426, 440, 430, and 455. Seven weeks of clinical with focus on obstetric and family nursing, and seven weeks of pediatric nursing. Students may also follow selected clients in clinics or home situations. Clinical consists of two full days at acute care clinical agencies.

330 Nursing Fundamentals and Health Assessment (3:3:0) Prerequisite: junior standing; corequisite: NURS 331. Introduces nursing process and communication skills as the foundation for beginning health assessment and fundamental nursing care for culturally diverse individuals throughout the life span.

331 Nursing as a Process for Health Practicum (2:0:6) Prerequisite: junior standing; corequisite: NURS 330. Opportunity to practice health assessment and fundamental nursing technologies while using communication skills with culturally diverse and vulnerable populations in a variety of settings. Includes agency and campus labs.

332 Concepts of Health Promotion and Disease Prevention throughout the Lifespan (3:3:0) Prerequisite: junior standing. Introduces epidemiology, health promotion, and disease prevention; and the impact on health status of culturally diverse individuals, families, small groups, and communities. Focuses on health problems and potential interventions throughout life span, and incorporates principles of teaching, learning as they apply to nursing.

334 Nursing as a Health Profession and Discipline (3:3:0) Prerequisite: open only to RNs, LPNs, and second-degree students; corequisite: NURS 309 and 310 for second-degree students only. Introduces nursing as a dynamic and caring health profession, the impact of epidemiology, health promotion, and disease prevention on health status of culturally diverse and vulnerable individuals, families, small groups, and communities throughout life span. Incorporates nursing and critical thinking processes as they apply to the art and science of nursing. Historical perspectives on ethical, legal, political, and social issues are included.

337 Applied Nursing Fundamentals and Health Assessment (1:0:2) Prerequisite: junior standing; corequisites: NURS 330 and 331. Opportunity to practice health assessment and fundamental nursing technologies while using communication skills with culturally diverse and vulnerable populations in a variety of settings.

339 The Nursing Process through Case Studies (1:1:0) Prerequisite: admission to traditional or LPN to BSN path-
way. Corequisites: NURS 330, 331, and 347; and 348 or 349. Meets every other week for two hours. Provides opportunities to use nursing process while examining health conditions of clients in geriatric, maternal and infant, pediatric, or medical and surgical settings. Particular attention to assessing health needs of clients and their families through using case studies.

342 Case Studies in Health Promotion and Disease Prevention (1:1:0) Prerequisites: successful completion of NURS 330, 331, 332, and 333; corequisite: NURS 341. Meets every other week for two hours. Opportunity to integrate nursing care with health care needs of culturally diverse and vulnerable populations throughout the life span.

343 Pharmacology (3:3:0) Covers principles of pharmacokinetics, pharmacodynamics of selected drug classifications, and nursing responsibilities related to drug administration to individuals throughout life span.

344 Intermediate Nursing Technologies (1:0:2) Prerequisites: successful completion of fall and spring junior nursing courses; corequisite: NURS 346. Laboratory course to assist students in acquiring therapeutic nursing interventions. Technologies presented are asepsis and wound care, administration of medications including dosage calculations, and management of intravenous therapy.

345 Nursing of Clients in an Acute Care Setting (5:0:15) Prerequisite: successful completion of fall and spring junior nursing courses; corequisite: NURS 346. Concentrated clinical course in an acute care setting. Opportunity to provide collaborative nursing care to culturally diverse adults experiencing acute or chronic health problems. Uses case presentations dealing with adult family members with health problems.

346 Case Studies in Medical Surgical Nursing (1:1:0) Corequisite: NURS 345. Meets every week for two hours. Explores in-depth nursing care related to culturally diverse adults experiencing acute and chronic health problems. Uses case presentations dealing with adult family members with health problems.

347 Adult Pathophysiology and Nursing Care (2:2:0) Introduces changing health needs of culturally diverse and vulnerable populations. Focuses on normal physiological, pathophysiological, psychological, sociocultural, risk reduction, and nursing care of these clients.

348 Maternal-Newborn Physiology, Pathophysiology, and Nursing Care (2:2:0) Introduces normal and abnormal processes with maternal-infant clients including cultural diversity and vulnerable populations. Focuses on normal physiological, pathophysiological, psychological, sociocultural, risk reduction, and nursing care of these clients.

349 Pediatric Pathophysiology and Nursing Care (2:2:0) Focuses on changing health needs of culturally diverse and vulnerable populations. Includes nursing care, pathophysiological, psychological, sociocultural, and risk-reduction implications of frequently experienced health problems in pediatric population.

350 Application of Nursing Care for Individuals and Small Groups (5:0:15) Prerequisite: all fall semester courses in second degree program, or permission of instructor. Introduces intermediate nursing technologies, and provides opportunities to apply these skills in simulated technology lab.

351 Application of Intermediate Nursing Technologies (1:0:2) Prerequisite: all fall semester courses in second degree program, or permission of instructor. Introduces intermediate nursing technologies, and provides opportunities to apply these skills in simulated technology lab.

352 Case Studies in Health Promotion and Disease Prevention (1:1:0) Prerequisites: successful completion of NURS 330, 331, 332, and 333; corequisite: NURS 341. Meets every other week for two hours. Opportunity to integrate nursing care with health care needs of culturally diverse and vulnerable populations throughout the life span.

353 Pharmacology (3:3:0) Covers principles of pharmacokinetics, pharmacodynamics of selected drug classifications, and nursing responsibilities related to drug administration to individuals throughout life span.

354 Intermediate Nursing Technologies (1:0:2) Prerequisites: successful completion of fall and spring junior nursing courses; corequisite: NURS 346. Laboratory course to assist students in acquiring therapeutic nursing interventions. Technologies presented are asepsis and wound care, administration of medications including dosage calculations, and management of intravenous therapy.

355 Nursing of Clients in an Acute Care Setting (5:0:15) Prerequisite: successful completion of fall and spring junior nursing courses; corequisite: NURS 346. Concentrated clinical course in an acute care setting. Opportunity to provide collaborative nursing care to culturally diverse adults experiencing acute or chronic health problems. Uses case presentations dealing with adult family members with health problems.

356 Case Studies in Medical Surgical Nursing (1:1:0) Corequisite: NURS 345. Meets every week for two hours. Explores in-depth nursing care related to culturally diverse adults experiencing acute and chronic health problems. Uses case presentations dealing with adult family members with health problems.

357 Adult Pathophysiology and Nursing Care (2:2:0) Introduces changing health needs of culturally diverse and vulnerable populations. Focuses on normal physiological, pathophysiological, psychological, sociocultural, risk reduction, and nursing care of these clients.

358 Maternal-Newborn Physiology, Pathophysiology, and Nursing Care (2:2:0) Introduces normal and abnormal processes with maternal-infant clients including cultural diversity and vulnerable populations. Focuses on normal physiological, pathophysiological, psychological, sociocultural, risk reduction, and nursing care of these clients.

359 Pediatric Pathophysiology and Nursing Care (2:2:0) Focuses on changing health needs of culturally diverse and vulnerable populations. Includes nursing care, pathophysiological, psychological, sociocultural, and risk-reduction implications of frequently experienced health problems in pediatric population.

360 Application of Nursing Care for Individuals and Small Groups (5:0:15) Prerequisite: all fall semester courses in second degree program, or permission of instructor; corequisite: NURS 333, 419, and 353. Includes five weeks of clinical experience in each specialty area, with focus on obstetric and family nursing, pediatric, and psychiatric mental health nursing. Students may also follow selected clients in clinics or home situations. Clinical consists of two full days per week in acute-care agencies.

361 Application of Intermediate Nursing Technologies (1:0:2) Prerequisite: all fall semester courses in second degree program, or permission of instructor. Introduces intermediate nursing technologies, and provides opportunities to apply these skills in simulated technology lab.

362 Case Studies in Health Promotion and Disease Prevention (1:1:0) Prerequisites: successful completion of NURS 330, 331, 332, and 333; corequisite: NURS 341. Meets every other week for two hours. Opportunity to integrate nursing care with health care needs of culturally diverse and vulnerable populations throughout the life span.
427 Advanced Technologies for the Accelerated pathway (1:1:2)
Prerequisites: NURS 310, 320, and 343. Advanced technology course developing knowledge base related to acquisition of advanced skills in nursing practice. Refinement of assessment skills associated with selected advanced technologies integrated into this laboratory course.

428 Community Health Clinical for the Accelerated Pathway (2:0:6)
Prerequisites: NURS 436 and 440. Clinical experience with a focus on collaborative nursing care with individuals, families, and large groups in the community. Emphasis on health promotion and disease prevention for well populations, and community-based care for individuals and families with acute and chronic illness.

429 Preceptorship for the Accelerated Pathway (3:0:9)
Prerequisites: NURS 309, 310, 320, 343, 419, and 436. Opportunity to deliver collaborative nursing care to culturally diverse and vulnerable populations. Concentrated clinical experiences available in selected institutional settings.

430 Leadership and Management of Health Care (3:3:0)
Introductory course in the leadership and management of health-related organizations. Reviews administrative issues in health-related services with particular emphasis on developing organizational strategies for effective interfacing of medical, nursing, allied health, and administrative staff. f,s

440 Community Health and Epidemiology (3:3:0)
Prerequisite: completion of junior year. Addresses population-focused health care. Emphasis is on primary, secondary, and tertiary prevention of health problems. Concepts of community, public health, and health policy affecting culturally diverse and vulnerable populations are examined. f,s

441 Nursing of Clients in Communities and Large Groups (5:0:15)
Prerequisites or corequisites: NURS 410, 436, and 440; corequisite: NURS 442. Provides clinical experience with a focus on collaborative nursing care with individuals, families, and large groups in the community. Emphasis on health promotion and disease prevention for well populations, and community-based care for individuals and families with acute and chronic illnesses. f,s

442 Case Studies in Community Health Nursing (1:1:0)
Corequisite: NURS 441. Examines the application of nursing care related to vulnerable and culturally diverse populations. Emphasis is on case studies, which include health promotion, disease prevention, cultural, political, ethical, and legal issues. Primary, secondary, and tertiary preventive concepts are applied. Seminar meets every other week for two hours.

451 Advanced Clinical Preceptorship (5:0:15)
Prerequisites or corequisites: NURS 410 and 436; corequisite: NURS 452, 455. Opportunity to provide complex, collaborative nursing care to culturally diverse and vulnerable populations. Concentrated clinicals available in selected institutional settings. f,s

452 Research in Nursing (3:3:0)
Prerequisite: statistics. Introductory research course designed to present basic concepts and methods of research. The research process is examined as a foundation for scholarship. Emphasis on critique and use of current nursing and research in clinical practice.

455 Advanced Technologies in Nursing (2:0:4)
Corequisite: NURS 451. Opportunity to acquire advanced skills in nursing practice. Refinement of assessment skills associated with selected advanced technologies integrated into this laboratory course.

466 Community Health Nursing (2:2:0)
Prerequisite: completion of junior year. This course addresses population-focused health care. Concepts of public health, epidemiology, environmental health, extended roles in nursing and health policy affecting culturally diverse and vulnerable populations are examined.

467 Clinical in Community Health Nursing (2:0:6)
Prerequisite: completion of junior year. Opportunity to provide complex collaborative nursing care with individuals, families, and large groups in the community. Emphasis is on health promotion and disease prevention for well populations and community-based care for individuals and families with acute chronic diseases.

468 Psychiatric and Mental Health Nursing (2:2:0)
Focuses on the nursing care, pathophysiological and psychological, social-cultural, and risk reduction implications of health problems in the area of mental health and psychiatric nursing.

469 Clinical in Psychiatric and Mental Health Nursing (2:0:6)
Prerequisite: NURS 468. Clinical experience with a focus on collaborative nursing care with individuals, families, and large groups in the community. Emphasis is on health promotion and disease prevention for well populations and community-based care for individuals and families with acute chronic diseases.

475 Grand Rounds Complex Case Presentations (3:3:0)
Enrollment restricted to second degree students only. Prerequisites: NURS 254, 262, 318, 319, 320, 419, 426, 430, 450, and 455. Examines nursing implications of selected major health problems that significantly affect individuals throughout the life span. Focus is on complex health problems. Class meets once a week in the format of group presentations in the clinical setting. sum

487 Principles, Concepts and Techniques of Operating Room Nursing (3:3:0)
Prerequisites: RN licensure, one year clinical experience, and letter of acceptance to six-month operating room clinical preceptorship. Prepares the registered nurse in basic principles and skills of operating room nursing. Learning environment is provided for registered nurse with no previous operating room experience to apply fundamental skills and knowledge of operating room nursing in clinical practice. Based on the Association of Operating Room Nurses Standards and Recommended Practices and Guidelines.

488 Inquiry-Based Clinical Seminar (2:2:0)
Students focus on a selected client they have provided care for during their NURS 451 clinical preceptorship. Students examine the data in the case, draw inferences, make deductions, identify assumptions, and generate interpretations regarding the client’s problems. The class will participate as a group in the inquiry process to identify strengths and weaknesses of the arguments presented.

491 Critical Thinking and Analysis of Test Taking Strategies (2:2:0)
Prerequisite: permission of instructor. Increases test-taking abilities and improves critical-thinking skills related to nursing situations. Also guides the student to
analyze and organize content to assist in decision making about nursing interventions. With faculty supervision, students work independently based on their learning needs.

492 Death, Dying, and Decision Making (3:3:0) Interdisciplinary examination and analysis of clinical care of dying and psychosocial issues related to death and dying. Special emphasis on applying ethical principles in resolution of complex problems for individuals with life-threatening illnesses and their families as caregivers or decision makers. Decision-maker models provide basis for clinical case discussions. Questions of futility examined with associated care issues. Current professional and lay literature discussed in context of socially changing norms and mores. Explores hospice and alternative palliative care models, and reviews policies, laws, and regulations that affect caregivers and health service providers. Includes advance directives, do-not-resuscitate orders, and assisted suicide. Presents bereavement as part of death, dying, and grieving process. Lecture-discussion.

494 Special Topics in Nursing (3:3:0) Selected topics analyzing specialized areas in nursing. Content varies. Lecture, seminar, laboratory, and workshops.

495 Directed Reading in Nursing (1–2:0:0) Prerequisite: permission of college. Examines literature on specialized topic in nursing practice, education, or scholarship. Readings conducted in consultation with faculty. May be repeated for a maximum of 4 credits.

496/GCH 496 Violence in Today’s Society (3:3:0) Examines magnitude of problem of violence globally and more specifically within the United States. Discussion and reflective activities engage students in the learning process.

499 Independent Study in Nursing (1–3:0:0) Prerequisite: permission of college. Provides individual study of a particular problem area in nursing research, theory development, or education under the direction of faculty. Clinical practice may be arranged. May be repeated for maximum 6 credits.

505 Case Management (3:3:0) Prerequisite: bachelor’s degree, or permission of instructor. Open to seniors. Survey course on state of case management programs and practice for health care and human service professionals. Special emphasis on comparing the nature, process, and outcomes for baccalaureate and graduate students guided by the objectives.

508 Psychopharmacology (3:3:0) Surveys therapeutic effects and side effect profiles of psychopharmacological drugs including psychotropic and recreational drugs. Emphasizes understanding mechanisms of actions, drug interactions, and subject variables influencing drug effects.

509 Introduction to Emergency Nursing (3:3:0) Introduces emergency care nursing, focusing on relevant pathophysiological disease processes, diagnostics, medical therapeutics and relevant technology as applied to emergency nursing. Focuses on care of multicultural clients across the life span, as well as the patient-family unit of care. Addresses collaboration and triage, as well as legal, ethical, and psychosocial issues. Course based on core curriculum of the Emergency Nursing Association (ENA)

513 Advanced Pharmacology in Nursing (3:3:0) Does not meet requirements for nurse practitioner majors, but may be taken as an elective. Provides knowledge of physiologic responses and pharmacokinetic principles of pharmacologic agents that will undergird the student’s learning of advanced pharmacologic concepts. Topics include advanced pharmacokinetic principles, pharmacotherapeutics of single and multiple drug regimens, client education needs, special population needs, and legal requirements for prescriptive authority.

514 Application of Advanced Health Assessment Methods (1:2:0) Prerequisite: undergraduate-level health assessment course for degree credit or approved CEU course. Expands on undergraduate skills in systematic health assessment across the life span. Teaches application of advanced health assessment skills in specialty advanced nursing practice setting. Integration of skills and techniques in collecting health assessment data towards appropriate decision making, clinical assessments, and therapeutic interventions in select population emphasized.

530 Nurses as Writers (3:3:0) Focuses on theories and practices related to writing in nursing. Researching, composing, revising, and editing practiced in a variety of writing styles.

546/GCH 546 Leadership Strategies in Health Policy (3:3:0) Examines the leadership process from a policy and organizational perspective to expand students’ ability to impact the health policymaking process.

550 Pathophysiology Bases for Major Health Deviations of Individuals (3:3:0) Examines health deviations occurring in people in the United States that require long-term or terminal health care interventions. Deviations are presented within a developmental framework as they influence physiologic integrity at the cellular level. Focus is on man as a whole, open system. Complex health programs from the perspective of maintaining homeodynamics are examined.

556 Principles of Assessment and Evaluation in Nursing Education (3:3:0) Presents techniques of assessment, measurement, and evaluation of nursing knowledge and skills in classroom and clinical settings. Provides opportunities for the informal assessment of learning; formal construction, analysis, and evaluation of tests; and evaluation of standardized tests. Examines the current research and the legal and ethical principles related to assessment and evaluation in nursing education.

557 Introduction to Clinical Genetics in Health Care (3:3:0) Focuses on human clinical genetics including basic Mendel genetics; cytogenetics; molecular genetics; genetic disease, diagnosis, testing, and screening. Discusses central principles and impact of Human Genome Project on health care practice in terms of ethical and legal issues, including genetic testing and counseling.

570 Cultural Dimension of Aging (3:3:0) Examines the impact of cultural definitions of aging, research methodologies, and findings of crosscultural studies. Implications for health care and nursing are explored.

571/GCH 571 HIV/AIDS: Concepts, Principles, and Interventions (3:3:0) Provides overview of all aspects of HIV disease to include retrospective and current concepts and analyses of the epidemic, global, and societal impact, and cutting-edge research. Examines development of therapeutic tools and skills to educate, reduce risks, control infection, and affect care and healing of client, family, and community; and issues of increasing dilemma for health care professionals.
580 Operating Room—RN First Assistant (3:3:0) Prepares the experienced operating room nurse to become a registered nurse first assistant. Modeled after the official AORN RNFA core curriculum. Student receives hands-on practice in knot tying and suturing, as well as experience with microscope and endoscopy labs.

581 Operating Room—RN First Assistant Clinical Practicum (3:1:2) Prerequisite: NURS 580, and operating room nursing experience. Practicum course that prepares the RNFA to practice in an expanded clinical nursing role in the operating room. Based on the core curriculum of AORN. Individually designed practicum is taken after completion of NURS 580 to give the experienced operating room nurse 120 hours of practicum experience as a surgical first assistant working under the supervision of a surgeon preceptor.

582 Nursing Care of Infants and Children (3:3:0) Prerequisite: junior nursing courses. Corequisites: NURS 451 and 455. Senior elective nursing course for students with specific interests in the field of pediatric nursing. Focuses on impact of illness and hospitalization on infants, children, and adolescents with emphasis on the family unit. Content builds on previous knowledge of pathophysiological, sociocultural, and risk reduction factors related to nursing care of infants, children, and adolescents.

585 Entrepreneurship in Health Care (3:3:0) Overview of models of entrepreneurship in health care. Provides opportunities for collaborative problem solving to support business development, entrepreneurial behavior, and leadership. Explores innovative approaches to and alternatives for nursing practice and health care delivery.

586 Parish Nursing I (3:3:0) Students must be registered nurses. Introduces parish nursing as a developing specialty practice for professional nurses. Identifies basic skills for ministry in a faith community. Emphasizes scope of practice, various theological concepts for health ministry, and application of assessment skills to the faith community. Examines processes of case consultation and spiritual formation.

587 Parish Nursing II (3:3:0) Students must be registered nurses. Focuses on skill development in spiritual assessment, ethical decision making, and effective use of prayer. Emphasizes health promotion, working with volunteers, and utilizing community resources. Self-care and professional identity for the parish nurse are addressed. Students continue the processes of case consultation and spiritual formation.

594/GCH 594/HAP 594 Special Topics in Nursing (3:3:0) Presents selected topics analyzing specialized areas in nursing. Content varies. Lecture, seminar, laboratory, workshop.

595 RN to MSN Transition: Evidence Based Community Health Nursing (3:2:1) Initial course in RN to MSN Pathway. Introduces concepts of community health nursing with evidence-based focus. Students apply concepts to selected communities; demonstrate an understanding of health promotion and disease prevention; explore role of master’s prepared nurses; and complete 45 hours of clinical practicum to achieve course objectives.

605 Clinical Nurse Educator Academy (3:3:0) Integrates knowledge and skills from clinical practice with new knowledge and skills needed as a clinical nurse educator. Narratives are used to teach essential skills for clinical nurse educators, such as assessment of learning needs, writing of objectives, teaching strategies, clinical simulation, and performance evaluation.

611 Anthropology of Health (3:3:0) Explores cross-cultural issues of health and illness from medical anthropology theory. Discusses cultural dimensions of developmental cycle and health care systems.

620 Advanced Psychiatric/Mental Health Nursing (3:3:0) Build on basic psychiatric and mental health nursing knowledge and skills in assessment, diagnosis, therapeutic intervention, and management. Focuses on enhancing fundamental roles of psychiatric or mental health advanced practice nurse, including practice, teaching, consultation, supervision, and research in relation to clients and their families.

623 Clinical Concepts in Community-Oriented Primary Care (3:2:3) Theoretical and clinical application of community oriented primary care concepts with focus on health promotion and disease prevention. Examines scope of practice of advanced practice nurse practitioner. Students work with interdisciplinary groups to improve health indicators for populations.

630 Acute Care Nursing for Advanced Practice (3:3:0) Focuses on acute-care nursing for advanced practice with individuals and their families diagnosed with potentially life-threatening alterations in health. Emphasizes risk factors, physical symptoms, evidence-based interventions, functional capacity, and patient and family dynamics; and psychosocial, economic, and cultural factors and their impact on care.

645 Gerontological Nursing 1 (3:3:0) Prerequisites: NURS 680 and 688. Provides content related to nursing care of older adults with emphasis on advanced practice and issues relevant to improved health care of the elderly. Focuses on biological, psychological, and sociocultural elements that influence the aging process, and onset of age-related illnesses.

646 Gerontological Nursing 2 (3:3:0) Prerequisite: NURS 645. Builds on content in NURS 645, and focuses on health care deviations and nursing interventions in advanced gerontological nursing practice. Age-related illnesses and common disorders are discussed in the context of health behaviors, healthy adaptation, cultural sensitivity, developing appropriate coping strategies, and family, community, and nursing supports.

654 Nursing Administration Financial Management (3:3:0) Investigates managerial technologies related to financial planning and control functions of midlevel nurse administrators. Content develops knowledge and skills necessary for effective participation in financial management as related to business plan development, program budget planning, and control.

660/PHIL 510 Seminar in the Ethics of Health Care (3:3:0) Examines moral dilemmas in the health care profession, with special emphasis on patients’ rights, professionals’ obligations to other professionals, and issues of social justice in health care. Methods of moral deliberation based on ethical knowledge and justification are applied to ethical dilemmas in health care.

680 Theoretical Foundations Related to Nursing (2:2:0) Examination and evaluation of assumptions, concepts, and propositions inherent in selected nursing and related discipline theories.

685 Advanced Nursing Research Methods (3:3:0) Prerequisite: admission to graduate nursing program; corequisite: NURS 755 and a graduate-level bivariate statistics course. Examines principles and methods of research in problem identification, theoretical framework, design, data collection, and analysis. Students develop a nursing research proposal.

686 Projects in Nursing Research (2:2:0) Prerequisite: NURS 685. Applies knowledge gained in NURS 790 to implement research proposal designed in NURS 790.

688 Organization of Nursing and Health Care Delivery Systems (3:3:0) Prerequisite: admission to graduate nursing program. Provides foundational overview of U.S. nursing and health care delivery systems. Surveys key concepts, frameworks, processes, and structures related to health care delivery organizations. Lecture, discussion.

690 Independent Study in Nursing (1–3:0:0) Prerequisites: admission to graduate nursing program, and permission of associate dean for academic programs. Studies in-depth a selected area of nursing theory, research, or practice under direction of faculty. May be repeated; maximum 6 total credits.

704 Nursing Administrative Leadership Academy (3:3:0) Uses a leadership competency framework to integrate knowledge, skills, values, and best practices of innovative nursing leadership. Lectures, interactive collaborative discussion, written projects, and leadership self-assessment identify and teach the proficiencies specific to the administrative executive role.

719 Advanced Health Assessment (2:0:4) Course is offered through George Washington University and is charged at GWU tuition rates. Prerequisite: admission to an NP concentration or permission of instructor. Application of advanced health assessment skills and clinical decision making with adults of all ages in primary care settings. Students formulate differential diagnosis related to body systems and presenting signs and symptoms. Students explore communication techniques related to motivating and changing health behaviors. The performance of skills and techniques needed to collect data for comprehensive health assessment is emphasized in this supervised practicum by nurse practitioner preceptors.

720 Practicum in Family Primary Care Nursing I (4:2:6) Prerequisites: NURS 710, 723, 745, 747, 756. Performance of beginning-level nurse practitioner clinical decision-making skills in assessment and management of families and individuals across the life span, with emphasis on health maintenance and health promotion. Seminar, lab, and clinical practicum.

721 Practicum in Assessment and Management of the Developing Family (8:3:15) Prerequisite: NURS 720. Theoretical and clinical application of health assessment, health maintenance and promotion, anticipatory guidance, diagnosis, and management of common primary health care concerns through clinical decision-making skills focused on childrearing and childbearing families. Seminar, lab, clinical practicum.

722 Practicum in Family Primary Care Nursing II (8:3:5) Prerequisite: NURS 721. Students perform advanced clinical decision making in the role of family nurse practitioner. Family primary care problems throughout the life span are assessed and managed, particularly families with elderly and medically underserved members. Seminar, lab, and clinical practicum.

723 Clinical Decision Making (2:2:0) Course is offered through George Washington University and is charged at GWU tuition rates. Corequisite: NURS 756, admission to an NP concentration, or permission of instructor. Analyzes clinical cases using student participation in decision-making formulation. Correlates pathophysiology with symptom manifestations. Evaluates family, medical, and social history; physical findings; laboratory data; and radiographic studies as they contribute to the decision-making process. The theoretical basis for selecting pharmacological and nonpharmacological therapies is explored. Therapies are justified by examining the evidence to support them.

725 Hermeneutic Research Methodologies in Health Care (3:3:0) Uses seminar/discussion for in-depth exploration of interpretive phenomenology, philosophical background for hermeneutics, and hermeneutics as method in context of conducting research in health care. Uses readings from philosophers such as Heidegger, Merleau-Ponty, and Gadamer to situate hermeneutical methodologies in philosophy of science.

726 Perspectives in Nursing Education (3:3:0) Uses seminar approach to provide an overview of nursing education. Provides the foundation for teaching and learning in nursing with emphasis on relevant research.

727 Application of Nursing Education Principles to Curriculum and Program Development (3:3:0) Prerequisite: NURS 726. Uses seminar and discussion forums to analyze and apply theoretical principles and teaching and learning strategies in planning, developing, and evaluating nursing programs. Examines the overall creative, planned, and collaborative process of program development and evaluation.

728 Practicum and Seminar in Nursing Education I (3:1:6) Prerequisites: admission to graduate nursing program or post-master’s status; NURS 726 and 727; NURS 536 or EDRS 531. Uses seminar/discussion approach and practicum experience to analyze the role and functions of the nurse educator in the academic classroom. Emphasis is on the application of teaching/learning strategies, legal and ethical issues in nursing education, and role development as a nurse educator.

729 Practicum and Seminar in Nursing Education II (3:1:6) Prerequisites: admission to graduate nursing program or post-master’s status; NURS 727 and 728; NURS 536 or EDRS 531. Uses seminar/discussion approach and practicum experience to analyze the role and functions of the nurse educator in the clinical setting. Application of research-based teaching and evaluation strategies in the clinical setting are emphasized.

730 Leadership Strategies for the Clinical Nurse Leader (2:2:0) Prerequisites or corequisites: NURS 597 and 685. Explores aspects of horizontal and vertical leadership central to clinical nurse leader (CNL) role. Emphasizes quality management and improvement, communication processes, evidenced-bases practice initiatives in microsystem, and
strategies for efficient use of resources while maintaining safe and effective patient care.

731 Clinical Nurse Leader Role Integration (2:0:6) Explores roles, functions of clinical nurse leader in microsystem in health care arena. Uses seminar and clinical approaches to develop competence in clinical decision-making, critical thinking, problem identification, and outcome measurement for select client population at point of care.

732 Clinical Nurse Leader Practicum (7:0:21) Guided implementation of clinical nurse leader role in selected health care microsystem. Uses clinical and seminar approaches to acquire in-depth skills related to design, implementation, and evaluation of patient care. Focuses on accountability for coordination, delegation, and supervision of care provided by unit-based health care team.

733 Introduction to Forensic Science (3:3:0) Prerequisite: admission to a graduate program or extended studies, or permission of the instructor. Examines the introductory concepts of forensic science including the various professional roles of forensic scientists and practitioners. This course provides a broad overview of the forensic science profession. Different types of violence, as well as prevention and reduction strategies, are discussed. The forensic professional’s role in policy and legal processes are explored. Forensic research is introduced. Professional certification options are explored.

734 Role of the Sexual Assault Nurse Examiner and Interpersonal Violence (3:3:0) Prerequisites: Must be a registered nurse with a valid nursing license; NURS 733 or permission of instructor. Focuses on the incidence and consequences of interpersonal violence across the lifespan. Identifies the role of sexual assault nurse examiner (SANE) as a member of the Sexual Assault Response Team (SART). Examines forensic techniques used to collect evidence. The role of the SANE in the judicial process is explored.

735 Crime Lab and Crime Scene Investigation (3:3:0) Prerequisite: NURS 733 or permission of instructor. Examines the components of the crime lab and the crime scene analysis process. Explores the role of the forensic scientist in crime scene investigation. This course covers the initial crime scene response and initial assessment measures needed to properly collect and handle evidence. Documentation and preservation efforts are reviewed for various types of evidence collected.

736 Psychological and Legal Aspects of Forensic Science (3:3:0) Prerequisite: NURS 733 or permission of instructor. Evaluates the psychological and legal aspects of forensic science. Reviews victimology and the role of the forensic professional when dealing with victimized individuals. This course reviews various types of violence and identifies the assessment criteria needed to pursue prosecution. Examines the legal process and the role of the forensic professional in providing testimony in a court of law.

737 Investigation of Injury and Death (3:3:0) Prerequisite: NURS 733 or permission of instructor. Explores the role of the forensic scientist in death investigation. Examines death, manners of death, and causes of death, along with the death certification process. The role of the medical office professional and autopsy procedures will be reviewed. DNA evidence and the CODIS system will be analyzed.

740 Clinical Nurse Specialist Internship (3:0:9) Prerequisite or corequisite: NURS 775. A continuation of clinical application of theory from NURS 775 to a selected clinical specialty with attention to the health illness continuum of individuals, families, and community. This course may be taken twice.

745 Pharmacology (3:3:0) Course is offered through George Washington University and charged at GWU tuition rates. Describes the pharmacologic principles and pharmacodynamic actions of major classes of drugs. Distinguishes between the major drug classes by the pharmacologic properties of the drugs on the cellular, organ, and whole organism level. Study of indications and contraindications of appropriate therapeutic entities for health deviations is based on a thorough knowledge of drugs including their mechanism of action, possible toxic effects, and their fate in the human body. Evaluation and recognition of drug interactions for the possible impact on each drug’s therapeutic behavior, as well as on the body as a whole is emphasized. Chooses and interprets appropriate monitoring mechanisms for drug efficacy and toxicity.

746 Practicum in Adult Primary Care Nursing (6:2:12) Prerequisite: NURS 719, 723, 743, 747, 756. Prerequisite or corequisite: NURS 623. Demonstration of the ability to function at a beginning level in the role of the nurse practitioner. Performance of advanced skills in assessment and the development of plans for health maintenance and promotion for adults.

747 Pharmacology in Disease and Pathophysiology (1:1:0) Course is offered through George Washington University and charged at GWU tuition rates. Corequisite: NURS 719. Prerequisite: permission of instructor. Analyze drugs and their interaction with physiologic processes on the cellular level. Discuss the therapeutic actions of drugs in relationship to pathophysiologic states. Recognize those physiologic and pathophysiologic states that have direct consequences on the actions of drugs.

748 Practicum in Adult Primary Care Nursing II (8:2:16) Prerequisite: NURS 746. Enables nurse practitioner student to assume increased responsibility in the delivery of primary care to adults. Special emphasis on primary care needs of elderly and medically underserved groups.

751 Primary Care of the Developing Family (5:5:0) Prerequisites: national certification as adult nurse practitioner; and graduate-level advanced health assessment, pathophysiology, and pharmacology. Taught through George Washington University Distance Learning. Post-master nurse practitioner course to introduce primary care nurse practitioner to knowledge and skills necessary to practice as a family nurse practitioner. Combines clinical experiences with instructional and informative family content, which focuses on primary care needs of the developing family. Provides theoretical and practical foundation for primary care nurse practitioners to expand their scope of practice to encompass family-based nursing. Participants collaborate with other students in group projects and web-based group discussions. Students broaden their knowledge through clinical experiences and clinical logs.

752 Advanced Family Primary Care (8:8:0) Taught through George Washington University Distance Learning. Seminar and clinical practicum that focuses on the integration of the family nurse practitioner role through the applica-
tion of family theory and concepts in primary care settings. Application of advanced critical thinking and decision making of family care needs and family systems is emphasized. For advanced students in the Post Master Advanced Practice Nurse Practitioner Program.

753 Diagnosis and Management of the Developing Family (4:2:6) Prerequisites: NURS 731. Taught through George Washington University Distance Learning. Didactic and laboratory course focused on primary care needs of families. Integration of advanced health assessment, health maintenance and promotion, anticipatory guidance, and diagnosis and management of common primary care health concerns to advance the knowledge and skills of primary care nurse practitioner needs of family care as provided by family nurse practitioners. For students in the Post Master Advanced Practice Nurse Practitioner Program.

754 Advanced Adult Primary Care (4:1:9) Prerequisites: NURS 719, 723, 745, 747, 756. Enables the post-master's nurse practitioner student to develop and assume increased responsibility in delivery of primary care to adults. Clinical preceptorship and instructional and informative didactic material in primary care enable students to demonstrate advanced skills in the assessment, clinical diagnostic, and clinical management of common acute and chronic primary care problems. Special emphasis to the development of community-based health promotion and disease prevention strategies with adults and medically underserved populations.

756 Advanced Pathology and Pathophysiology (4:4:0) Course is offered through George Washington University and charged at GWU tuition rates. Prerequisite: students must be enrolled in an NP concentration. Corequisite: NURS 723. Analyze health deviations in the physiologic and pathophysiologic aspects of systems functioning across the life span. Students assimilate the process of systematic assessment and management of health deviations foundational for making clinical decisions. Collaborate in interprofessional student groups to develop strategies for health promotion and disease prevention in vulnerable populations.

762 Managed Care Concepts for Primary Care Practice (1–4:1–4,3–12) Prerequisites: acceptance into nurse practitioner track, and permission of instructor. Presents managed care concepts specific to primary care practice through self-paced learning modules, seminars, and selected nondirect care internship experiences in managed care settings.

763 Administrative Theory in Nursing (3:3:0) Prerequisite: admission to graduate nursing program. Prerequisites or corequisites: NURS 680 and Management/Organizational Theory. Uses administrative theory and management principles and processes as related to roles and functions of the nurse in management in health-related agencies. f

765 Practicum in Nursing Administration I (3:1:8) Prerequisites: admission to graduate nursing program, and NURS 680. Prerequisite or corequisite: NURS 763. Applies administrative theory and management principles and processes in a selected health-related agency. Roles and functions of the nurse in management are explored. Lab arranged. f

766 Administrative Strategies in Nursing (3:3:0) Prerequisite: NURS 763. Explores roles and functions of the nurse in management as the nurse manager develops patterns of nursing care, articulating nursing education, and nursing service. s

768 Practicum in Nursing Administration II (3:1:8) Prerequisites: NURS 763 and 765. Prerequisite or corequisite: NURS 766. Implements and integrates roles and functions of the nurse in management. Emphasizes using appropriate management principles and processes in a selected health-related agency. Lab arranged. s

773 Advanced Clinical Nursing I (3:3:0) Prerequisite or corequisite: NURS 550 and 680. Foundational theory relevant to the emerging roles in advanced clinical nursing, focusing on therapeutic nursing interventions in a variety of clinical specialties, with attention to health-illness continuum of individuals, families, and communities.

775 Advanced Specialty Practice I (3:2:7) Prerequisites: admission to graduate program and NURS 680. Corequisite: NURS 772. Focuses on clinical application of theory from NURS 773 to a selected clinical specialty with attention to the health illness continuum of individuals, families, and communities.

776 Advanced Clinical Nursing II (3:3:0) Prerequisite: NURS 773. Expansion of selected content included in NURS 773 for the delivery of advanced nursing care in a variety of settings. Emphasizes development and evaluation of the advanced practice nursing role in complex health care systems.

778 Advanced Specialty Practice II (3:2:7) Prerequisites: NURS 773 and 775. Corequisite: NURS 776. Applies concepts of the advanced practice nursing role from NURS 776 to a selected clinical specialty.

780 Practicum in Gerontological Nursing I (3:0:3) Prerequisites: NURS 719, 723, 745, 747, 756. Corequisite: NURS 746. Demonstrates the ability to function at a beginning level in the role of the gerontological nurse practitioner. Performance of advanced skill in geriatric assessment with a special emphasis on the delivery of health promotion and disease prevention services (practicum of at least 100 clinical hours and case analysis conferences).

781 Practicum in Gerontological Nursing II (3:0:3) Prerequisite: NURS 780; corequisite: NURS 748. Demonstrates the ability to function at an advanced level in the role of the gerontological nurse practitioner in varied settings, including primary care, long-term care, and sub-acute care (practicum of at least 100 clinical hours and case analysis conferences).

804/GCH 804 Advanced Quantitative Data Analysis for Health Care Research I (3:3:0) Prerequisite: a graduate-level statistics course. Examines factorial ANOVA, factorial ANCOVA, repeated measures ANOVA, ANOVA and ANCOVA via regression approach, and multiway frequency analysis. Students apply mathematical calculations and interpret SPSS outputs using health care research data.

805/GCH 805 Advanced Quantitative Data Analysis for Health Care Research II (3:3:0) Prerequisite: GCH/NURS 804 or an equivalent statistics course. Examines multivariate analysis of variance (MANOVA), multivariate analysis of covariance (MANCOVA), multiple regression (ordinary least squares), and logistic regression. Students apply mathematical calculations and use linear combinations of multivariate tests in health care research data.

806/GCH 806 Advanced Multivariate Statistics and Data Analysis for Health Care Research (3:3:0) Prerequisite: GCH/NURS 805 or an equivalent multivariate statistics
807/GCH 807 Measurement Theories and Applications in Health Care Research (3:3:0) Prerequisite: doctoral-level course in research design and statistics; completion of GCH/NURS 805 or GCH/NURS 806 is highly recommended. Theories, principles, and techniques presented as foundation for the development and evaluation of instruments for use in health care research. Includes review of statistical techniques required for understanding measurement theory, reliability, validity, item analysis, and instrument construction. Students required to design, construct, administer, analyze, and evaluate an original instrument or evaluate an existing instrument in health care research.

810 Evaluation Research in Nursing Education (3:3:0) Prerequisites or corequisites: NURS 920 and 930. Uses seminar/discussion to analyze and apply theoretical models for implementing evaluation research in nursing education. Examines quantitative approaches for evaluating process and outcomes of domestic or international nursing education programs, including role of accreditation guidelines.

811 Nurse as Educator and Scholar (2:2:0) Prerequisites: NURS 920 and 930. Uses seminar/discussion to explore role of nurse educator in meeting research and scholarship expectations of college, university, or service setting. Addresses approaches to scholarship in relation to types of evidence appropriate for various scholarly expectations in academic setting.

820 Human Genetics Concepts for Health Care (4:4:0) The study of human genetics, principles of heredity and disease risks.

855/IHS 855 Ethics in Health Administration (3:3:0) Prerequisite: admission to PhD program; for non-PhD students, permission of instructor. Philosophical foundations of health care ethics. Students analyze specific ethical dilemmas faced by administrators in health care settings.

870 Nursing and Health Care Administration I (3:3:0) Prerequisites: organization behavior course such as MGMT 600, PUAD 620, LRNG 700, or equivalent; and NURS 955. Examines the theoretical basis of scholarship and practice in leadership and management of health systems and nursing organizations. Includes discovery of concepts and forces influencing the organization and performance of health care systems.

871 Nursing and Health Care Administration II (2:2:0) Prerequisite: NURS 870. Analyzes and applies selected concepts related to nursing and health system leaders and managers as well as factors influencing the performance of health systems and organizations.

874 Internship in Health Care Administration/Policy/Education (4:1:9) Prerequisite: completion of all other course work except NURS 998; written advanced application and permission of instructor by due dates (April/November 1) in advance of semester. Internship experience of at least 126 hours with leader in field of nursing, health care administration, policy, or education. Participatory activities require integration and application of principles, frameworks, and science related to executive preceptor role.

875 Research Internship (1:0:1) Provides guided research experience of 45 hours, during which students participate as a member of a research team engaged in scientific inquiry. Designed to enhance professional socialization in research scholarship at the doctoral level.

880 Informatics Inquiry for the Doctor of Nursing Practice (3:3:0) Prerequisite: admission to the DNP program or by permission of instructor. Introduces theoretical and practice components of nursing and health care informatics for the doctor of nursing practice (DNP). Health care data standards, classification schemes, and the electronic health record will be introduced. Students will evaluate informatics as it applies to quality improvement, outcomes measurement, complex decision making, consumer use, and legal and ethical issues. Students will analyze atomic and aggregate data to support practice, patient care, health education, and organizational management.

881 Issues and Methodologies in Translational Research (4:4:0) Prerequisite: admission to the DNP program or by permission of instructor. Build on knowledge of research methodologies to analyze the selection and evaluation of research underlying evidence-based practice. Apply research methodologies and strategies to examine and interpret population-based data sets. Explore models and the supporting research relating to the dissemination of knowledge and the translation of research practice. Determine the analytic approaches of relevance to translational research including interdisciplinary models. Address issues of measurement of quality health outcomes at the individual, family, system, and population level.

882 Theoretical Foundations Related to Human Health Behaviors (2:2:0) Prerequisite: admission to the DNP program or by permission of instructor. Explores and evaluates elements of selective behavioral and social science theories and models related to health risk behaviors and chronic disease management. Examines the impact of selected theories on advanced nursing practice. Applies behavioral change theory to the development of interventions for improvement in individual, organizational, and community health outcomes.

920 Qualitative Research in Nursing and Health Care (3:3:0) Corequisites or prerequisites: NURS 955. Philosophical foundations and approaches to qualitative research in nursing and health care administration, health care policy, and health care ethics analyzed within scholarship of discovery, integration, application, and teaching. Computer analysis required. Lecture, discussion.

925 Methodological Issues in Nursing and Health Care Qualitative Research (3:3:0) Prerequisites: NURS 920/HSCI 920 or equivalent course, and permission of instructor. Explores, analyzes, and synthesizes conceptual, methodological, and ethical issues in qualitative research within the scholarship of discovery, integration, application, and teaching. Seminar.

930 Quantitative Methods in Nursing and Health Care (3:3:0) Prerequisites: NURS 955 and a multivariate statistics course such as NURS 799 or equivalent. Examines advanced principles and special problems in quantitative research methodology. Emphasizes measurement as it relates to nursing and health care administration, health care ethics, and health policy research. Computer analysis required.

940 Independent Study for the Doctoral Student (1-6:0:0) Prerequisite: admission to a doctoral nursing program. Stud-
ies in depth a selected area of nursing theory, research, or practice under direction of faculty. May be repeated; maximum 6 credits.

950 Special Topics in Nursing (3:3:0) Presents selected topics analyzing specialized areas in nursing. Content varies. Lecture, seminar, laboratory, workshop.

955 Philosophical Bases of Inquiry (3:3:0) Prerequisite: admission to nursing doctoral program, or permission of instructor. Philosophical bases of discipline and practice of health-related disciplines are examined within scholarship of discovery, integration, application, and teaching. Compares nursing and health science philosophy with relevant related discipline philosophies.

980 Practice Inquiry I (4:3:0:1) Prerequisite: completion of DNP core courses. A seminar for doctor of nursing practice (DNP) students to identify an area of practice inquiry. Synthesize the literature related to the problem. Analyze the environmental factors impacting the problem. Identify the standard of care related to the clinical problem. Assess the quality of evidence that supports the standard of care. Develop a proposal that will impact the delivery of care in the identified area of practice inquiry. Develop the appropriate outcome measures to address the specific practice inquiry area.

981 Practice Inquiry II (4:2:0:2) Prerequisite: NURS 980. Implement the proposal developed in Practice Inquiry I. Maintain an ongoing process analysis of the project. Collect data. Analyze the findings from the practice inquiry. Disseminate the findings from the practice inquiry in a scholarly manner.

998 Doctoral Dissertation Proposal (3:0:0) Prerequisite: Completion of all other course work except NURS 999; and completion of doctoral comprehensive examination. A seminar for doctoral students to accompany the development of a doctoral dissertation proposal. Development of the research problem with analysis and critique of methodology discussed. May be repeated up to 12 credits.

999 Doctoral Dissertation (1–9:0:0) Prerequisite: NURS 998. Provides continued faculty assistance on an individual basis toward completion of approved dissertation.

Operations Management (OM)

School of Management

If a student takes noncore, upper-level business courses before acceptance to the School of Management (SOM), those courses will not count on an undergraduate degree application for any major in SOM, except as general elective credit. A grade of C or higher must be presented on the graduation application for each upper-level course in the major. Prerequisites are strictly enforced. Degree status is defined as formal admission to SOM.

210 Statistical Analysis for Management (4:4:0) Prerequisites: C or higher in MATH 108 or MATH 113, corequisite MIS 102. Introduces application of statistical methods to support quantitative decision analysis for resolving business problems. Lecture, recitation format; requires attendance in weekly lecture and weekly recitation.

301 Operations Management (3:3:0) Prerequisite: C or higher in OM 210, sophomore standing. Examines the principal aspects of an organization’s operations in various settings. Emphasizes planning and decision-making activities associated with managing operations, with focus on service operations. Uses analytical models to describe key planning and control activities.

320 Supply Chain Management and E-Business (3:3:0) Prerequisites: C or higher in OM 301, degree status. Design, development, and management of supply chain systems, including production and inventory management, distribution channels, and information systems that support them. Emphasizes impact of e-business on companies and industries, including Internet’s impact on the way goods and services flow through value chain from providers to customers.

352 Methods and Models of Management Science (3:3:0) Prerequisites: C or higher in OM 301, degree status. Introduces operation research and management sciences (OR/MS) techniques for supporting business management decisions. Specific mathematical programming and probabilistic topics include linear programming, integer programming, goal programming, network flow models, decision analysis, game theory, queuing models, and Monte Carlo simulation.

435 Business Process Analysis and Simulation (3:3:0) Prerequisites: C or higher in OM 301, degree status. Introduces concepts and tools used in designing, modeling, analyzing, and improving business processes. Various business process analysis and simulation methods, such as process mapping/flowcharting, process flow and capacity analysis, service process design, theory of constraints, process modeling and simulation, and business process reengineering are discussed. Introduces methods and analytical tools such as queue theory and computer simulation used to design, model, analyze, and improve business processes. Discusses methods such as process mapping/diagramming, service process design, process modeling, and business process reengineering.

452 Business Forecasting (3:3:0) Prerequisites: C or higher in OM 301, degree status. Introduces techniques for producing predictions of future business operations as aids to making planning decisions. Specific topics include judgmental forecasting, forecast accuracy, correlation analysis, smoothing methods, regression models, decomposition, and autoregressive and ARIMA models. Methods demonstrated and used through computer software.

456 Quality Management (3:3:0) Prerequisites: C or higher in OM 301, degree status. Provides an understanding of the multifaceted nature of quality management by emphasizing topics such as quality philosophies, total quality management, design quality, process quality, and managing quality in information systems development. Discusses ISO 9000 and Capability Maturity Model. Uses software, case studies.

493 Management of Technology Projects (3:3:0) Prerequisites: C or higher in OM 301, degree status. Focuses on managerial problems associated with meeting technical, cost, and time constraints of technology projects. Discusses project management areas including organization, teams, scheduling, cost control, earned value analysis, risk management, and quality. Discusses software cost estimation models. Software and case studies.

499 Independent Study in Operations Management (1–3: 0:0) Prerequisites: C or higher in OM 301, degree status. By special arrangement with instructor, and approval from associate dean for undergraduate programs. Investigates business problem according to student interest, using state-of-the-art decision science methodology.
Operations Research (OR)

Systems Engineering and Operations Research

335/SYST 335 Discrete Systems Simulation Modeling (3:3:0) Corequisite: CS 112, STAT 344, SYST 202, or CS 310; or permission of instructor. Introduction to basic concepts of modeling complex discrete systems by computer simulation. Topics include Monte-Carlo methods, discrete-event modeling, specialized simulation software, statistics of input and output analysis. f,s

441/MATH 441 Deterministic Operations Research (3:3:0) Prerequisite: MATH 203, or permission of instructor. Survey of deterministic methods for solving “real-world” decision problems. Covers linear programming model and simplex method of solution, duality, and sensitivity analysis; transportation and assignment problems; shortest path and maximal flow problems; and introduction to integer and nonlinear programming. Emphasizes modeling and problem solving. f,s

442/MATH 442 Stochastic Operations Research (3:3:0) Prerequisite: STAT 344, MATH 351, or equivalent. Survey of probabilistic methods for solving decision problems under uncertainty, probability review, decision theory, queuing theory, inventory models, reliability, Markov chain models, and simulation are covered. Emphasis on modeling and problem solving. s

481/MATH 446 Numerical Methods in Engineering (3:3:0) Prerequisites: MATH 213 or 215, and MATH 203 or 322; or equivalent. Modern numerical methods and software. Emphasis on problem solving through software and assessing the quality of solutions obtained. Topics include computer arithmetic, linear equations and least squares data fitting, interpolation, nonlinear optimization, and differential equations. Involves extensive computer use. f,s

498 Independent Study in Operations Research (1–3:0:0) Prerequisite: 60 credits; must be arranged with instructor and approved by department chair before registering. Directed self-study of special topics of current interest in operations research. May be repeated for maximum 6 credits if topics substantially different. f,s,sum

499 Special Topics in Operations Research (3:3:0) Prerequisites: 60 credits and permission of instructor; specific prerequisites vary with nature of topic. Topics of special interest to undergraduates. May be repeated for maximum 6 credits if topics substantially different. f,s,sum

540/SYST 540 Management Science (3:3:0) Prerequisites: MATH 108, and STAT 250 or OM 200; or equivalent. Operations research techniques and their application to managerial decision making. Mathematical programming, Markov processes, queuing theory, inventory models, PERT, CPM, and computer simulation are covered, as well as use of contemporary computer software for problem solving. Case-study approach to problem solving is used. OR/MS and SE/MS majors do not receive credit. f,s

541 Operations Research: Deterministic Models (3:3:0) Prerequisite: MATH 203 or equivalent. Survey of deterministic methods of solving “real world” decision problems. Covers linear programming model and simplex method of solution, duality, and sensitivity analysis, transportation and assignment problems; shortest path, minimal spanning tree, and maximal flow problems; and an introduction to integer and nonlinear programming. Emphasis on modeling and problem solving. Students who have taken OR 441/MATH 441 will not receive credit.

542 Operations Research: Stochastic Models (3:3:0) Prerequisite: STAT 344 or MATH 351, or equivalent. A survey of probabilistic methods for solving decision problems under uncertainty, probability theory review, reliability, queuing theory, inventory systems, Markov chain models, and simulation. Emphasis on modeling and problem solving. Students who have taken OR 442/MATH 442 do not receive credit.

635 Discrete System Simulation (3:3:0) Prerequisite: OR 542, or STAT 354 or 344, or equivalent; and knowledge of scientific programming language. Computer simulation as a scientific methodology in operations analysis, with emphasis on model development, implementation, and analysis of results. Discrete-event models, specialized software, input modeling, and output statistics are covered. Extensive computational work is required.

640 Global Optimization and Computational Intelligence (3:3:0) Prerequisites: MATH 203 or equivalent, and knowledge of a scientific programming language. Introduction to global optimization of nonconvex mathematical programs and numerical methods for the solution of such problems. Topics covered include high-level survey of traditional mathematical programming algorithms; critical comparison of metaheuristics and artificial intelligence (AI) algorithms to traditional mathematical programming algorithms; probabilistic search, multistart methods, statistical tests of performance and confidence, simulated annealing, genetic algorithms, neural networks, Tabu search, homotopies and tunneling; the traveling salesman problem, the Steiner problem, Stackelberg-Cournot-Nash mathematical games and other classical nonconvex optimization problems.

641 Linear Programming (3:3:0) Prerequisite: OR 541, or permission of instructor. In-depth look at the theory and methodology of linear programming: Computational enhancements of the revised simplex method; sparse—matrix techniques, bounded variables and the dual simplex method. Alternative interior point methods described and computational complexity of various algorithms analyzed. f

642 Integer Programming (3:3:0) Prerequisite: OR 541, or permission of instructor. Cutting plane and enumeration algorithms for solution of integer linear programs; bounding strategies and reformulation techniques; heuristic approaches to the solution of complex problems; knapsack problems, matching problems, setting covering and partitioning problems; applications to problems in OR/MS, such as capital budgeting, facility location, political redistricting, engineering design, and scheduling. s

643 Network Modeling (3:3:0) Prerequisite: OR 541, or permission of instructor. Introduction to network problems in operations research, computer science, electrical engineering, and systems engineering. Solution techniques for various classes of such problems are developed. Topics include minimal-cost network flow, maximal flow, shortest path, and generalized networks; plus stochastic networks, network reliability, and combinatorially based network problems. Complexity of each problem class analyzed. f

644 Nonlinear Programming (3:3:0) Prerequisites: MATH 213 or equivalent, and OR 541; or permission of instructor. Nonlinear optimization theory and techniques applicable to problems in engineering, economics, operations research,
and management science. Covers convex sets and functions, optimality criteria and duality; algorithms for unconstrained minimization, including descent methods, conjugate directions, Newton-type and quasi-Newton methods; and algorithms for constrained optimization, including active set methods and penalty and barrier methods.

645/STAT 645 Stochastic Processes (3:3:0) Prerequisite: OR 542, STAT 544, or permission of instructor. Selected applied probability models including Poisson processes, discrete- and continuous-time Markov chains, renewal and regenerative processes, semi-Markov processes, queuing and inventory systems, reliability theory, and stochastic networks. Emphasis on applications in practice as well as analytical models.

647 Queuing Theory (3:3:0) Prerequisite: OR 542, STAT 544, or permission of instructor. Unified approach to queuing, organized by type of model. Single- and multiple-channel exponential queues; Erlangian models, bulk and priority queues, networks of queues; general arrival and/or service times; and statistical inference and simulation of queues are covered. Extensive use of computational software.

648 Production and Inventory Systems (3:3:0) Prerequisites: OR 541 and 542, or permission of instructor. An analysis of production and inventory systems. Use of mathematical modeling for solutions of production planning and inventory control problems is introduced. Also included are stochastic inventory systems of lot-sized reorder type; periodic review and single-period models; application of dynamic programming theory to deterministic and stochastic cases; and static and dynamic production-planning models.

649 Topics in Operations Research (3:3:0) Prerequisite: permission of instructor. Advanced topic chosen according to interests of students and instructor from dynamic programming, inventory theory, queuing theory, Markov and semi-Markov decision processes, reliability theory, decision theory, network flows, large-scale linear programming, nonlinear programming, and combinatorics. May be repeated for maximum 6 credits if topics are substantially different.

651 Military Operations Research I: Cost Analysis (3:3:0) Corequisite: OR 541 or 542. While drawing on other disciplines (managerial accounting, econometrics, systems analysis), cost analysis uses operations research to assist decision makers in choosing preferred future courses of action by evaluating selected alternatives on the basis of their costs, benefits, and risks. Cost analysis is distinctly different from cost estimating in that projecting future courses of action almost always requires mathematical modeling. Topics include analysis overview, economic analysis, estimating relationships (factors, simple and complex models), acquiring and verifying cost data, cost progress curves, life cycle costing, scheduling estimating, effectiveness and risk estimation, relationship of effectiveness models and measures to cost analysis.

652 Military Operations Research Modeling II: Effectiveness Analysis (3:3:0) Corequisite: OR 541 or 542. Examines issues and modeling underlying military decisions at the Military Service, Joint Staff, and Department of Defense level. Analytical methods with applications to theater campaign analysis, equipment and weapon system modernization, force structure development, strategic mobility and deployment, small scale contingency operations, logistics, and requirements determination are considered. Optimization, simulation, and statistical techniques are stressed. Realistic problems presented and solved as case studies. Display of results and presentation techniques for military decision makers emphasized.

660/SYST 660 Air Transportation Systems Modeling (3:3:0) Prerequisite: SYST 460/560, or permission of instructor. Introduces range of current issues in air transportation, including public policy toward the industry, industry economics, system capacity, current system modeling capability, human factors considerations, safety analysis and surveillance systems, and new technological developments. Students expected to develop broad understanding of contemporary and future issues. Knowledge evaluated through class discussions, a take-home midterm exam and a term project to be completed by the end of the semester.

671/SYST 671 Judgment and Choice Processing and Decision Making (3:3:0) Prerequisite: STAT 510 or equivalent, or permission of instructor. How do people make judgments and decisions? Course presents an initial review of scientific literature directed toward answering this question, and emphasizes its importance when performing decision analysis and designing systems to support judgment and decision processes.

674/SYST 674 Dynamic Programming (3:3:0) Prerequisites: OR 442 or OR 542 or permission of instructor. This is a course on the theory and practice of dynamic programming, i.e. optimal sequential decision making over time in the presence of uncertainties. The course will stress intuition, the mathematical foundations being for the most part elementary. It will introduce the theory, applications (finance, engineering, and biology), and computational aspects of dynamic programming for deterministic and stochastic problems.

675/STAT 678/SYST 675 Reliability Analysis (3:3:0) Prerequisite: STAT 544 or 554, or permission of instructor. Introductions to component and system reliability, their relationship, and problems of inference. Topics include component lifetime distributions and hazard functions, parameter estimation and hypothesis testing, life testing, accelerated life testing, system structural functions, and system maintainability.

677/STAT 677/SYST 677 Statistical Process Control (3:3:0) Prerequisite: STAT 544 or 554, or permission of instructor. Introduces concepts of quality control and reliability. Acceptance sampling, control charts, and economic design of quality control systems are discussed, as are system reliability, fault-free analysis, life testing, repairable systems, and the role of reliability, quality control and maintainability in life-cycle costing. Role of MIL and ANSI standards in reliability and quality programs also considered.

680 Project Course in Operations Research (3:3:0) Prerequisites: 21 graduate credits in OR or SYST. Capstone course for both the master’s program in operations research and certificate in computational modeling. Can also be used in lieu of the project in master’s program in systems engineering. Focus is on model development and implementation involved in the practice of operational modeling. Key activity is completion of a major applied group project. Work includes project proposal planning, completion, documentation, and presentation. To be taken in last spring semester of studies.
681/SYST 573 Decision and Risk Analysis (3:3:0) Prerequisites: OR 542 or MBA 638. Application of analytic reasoning and skills to practical problems in decision-making. Topics include problem structure, analysis and solution implementation, emphasizing contemporary approaches to decision analytic techniques.

682/CSI 700 Computational Methods in Engineering and Statistics (3:3:0) Prerequisites: MATH 203 and 213 or equivalent, and modern numerical methods and software. Numerical methods have been developed to solve mathematical problems that lack explicit closed-form solutions or have solutions that are not amenable to computer calculations. Examples include solving differential equations or computation probabilities. Discusses numerical methods for such problems as regression, analysis of variance, nonlinear equations, differential and difference equations and nonlinear optimization. Applications in statistics and engineering are emphasized. Involves extensive computer use.

683/SYST 680/ECE 670 Principles of Command, Control, Communications, Computing, and Intelligence (C4I) (3:3:0) Prerequisite: ECE 528, OR 542, or SYST 611; or equivalent. Fundamental principles of C4I are developed from descriptive, theoretical, and quantitative perspectives. Principles and techniques applicable to wide range of civilian and military situations. Topics include C2 process; modeling and simulation for combat operations; detection, sensing, and tracking; data fusion and situation assessment; optimal decision making; methodologies and tools of C4I architectures; tools for modeling and evaluations of C4 systems such as queuing theory.

690 Optimization of Supply Chains (3:3:0) Prerequisites: graduate standing, mathematics through linear algebra, and STAT 344. Focuses on both supply chain optimization from an enterprise-wide perspective, and supply chain optimization from a business-to-business e-commerce concern. Concerned with optimizing the value of goods and services and assuring a reasonable return on such sales. Describes both heuristic and exact algorithms for scheduling, production, inventory management, logistics, and distribution. New software that enables such optimization is presented, as are manufacturing and service examples from the public and private sectors. New techniques to handle risk, quality of data, and robustness of solutions are presented. Students perform case studies using state-of-the-art software.

719/STAT 719/CSI 775 Computational Models of Probabilistic Reasoning (3:3:0) Prerequisite: STAT 652 or 664, or permission of instructor. Introduction to theory and methods for building computationally efficient software agents that reason, act, and learn environments characterized by noisy and uncertain information. Covers methods based on graphical probability and decision models. Studies approaches to representing knowledge about uncertain phenomena, and planning and acting under uncertainty. Topics include knowledge engineering, exact and approximate inference in graphical models, learning in graphical models, temporal reasoning, planning, and decision-making. Practical model-building experience provided. Students apply what they learn to a semester-long project of their own choosing.

735/IT 735/OR 735 Advanced Stochastic Simulation (3:3:0) Prerequisite: OR 635 or permission of instructor. Special topics and recent developments in Monte Carlo simulation methodology for discrete-event stochastic systems. Contents vary; possible topics include statistical analysis of simulation output data, random number and random variate generation, variance reduction techniques, sensitivity analysis and optimization of simulation models, distributed and parallel simulation, object-oriented simulation, and specialized applications. May be repeated for credit when topics are distinctly different.

741 Advanced Linear Programming (3:3:0) Prerequisites: OR 541 and 641. Recent developments in linear programming. Highlights advances in interior point methods and also addresses developments in the simplex method. Projective methods, affine methods, and path-following methods are examined, including Karmarkar’s original work. Discusses relationships between these methods, and relationships to methods in nonlinear programming. Also discussed are advances in data structures and other implementation issues. Students test software and solve large-scale linear programs.

750 Advanced Topics in Operations Research (3:3:0) Prerequisites: OR 541 or 542, and 600-level course that varies with content of course. Special topics, applications, or recent developments in operations research. Contents vary and may include topics in optimization, stochastic methods, or decision support that are not covered in the standard OR curriculum. May be repeated for credit when topics are distinctly different.

751 Advanced Topics in Operations Research for Planning, Scheduling, and Network Design (3:3:0) Prerequisite: OR 642, 643, or 690. Introduces network and combinatorial optimization problems in logistics, computer science, electrical engineering, and systems engineering. Solution techniques for various classes of such problems are developed. Topics include scheduling algorithms, capital budgeting, minimal cost network flow, optimal routings, and generalized networks. Scheduling algorithms, network reliability, stochastic networks and combinatorially-based network problems are discussed.

763/IT 763/SYST 763 Empirical Methods in Information Technology (3:3:0) Prerequisite: STAT 354. Examines alternative paradigms of scientific research and their applicability to research in information technology. Topics include the fundamental elements of scientific investigation, basic principles of experimental design and statistical induction, philosophy of science and its relation to the information technology sciences, and case studies of information technology research.

780/IT 780 Queuing Modeling of Computer-Communication Networks (3:3:0) Prerequisite: OR 645 or 647, or ECE 542; or equivalent. Studies analytical modeling of computer and communication networks and performance evaluations. Topics include Markovian systems, open networks, closed networks, approximations, decomposition, simulation, sensitivity analysis, and optimal operation of systems. Presents local area networks, manufacturing systems, and other applications.

782/IT 782 Advanced Topics in Combinatorial Optimizations (3:3:0) Prerequisites: OR 641 and 642. Studies problems using most recent developments. Topics include cutting plane procedures based on polyhedral combinatorics; column-generation procedures for large, complex problems; heuristic approaches such as genetic algorithms, simulated annealing, and tabu search; study of special structures;
reformulation techniques; and bounding approaches. Topics stress most recent developments in field. May be repeated for credit when topics are distinctly different.

783/IT 983 Advanced Networks (3:3:0) Prerequisites: OR 643. Recent developments in solving optimization problems on networks. Prepares doctoral students to perform advanced research on network-related problems. Topics include linear, discrete, nonlinear, and stochastic problems. Several aspects of problems also studied, including computational complexity, exact algorithms, heuristics, solvable special cases, and computer implementation issues.

784/IT 784 Advanced Topics in Nonlinear Programming (3:3:0) Prerequisite: OR 644. Studies theory and algorithms for solving nonlinear optimization problems. Contents vary; possible topics include large-scale and parallel-unconstrained optimization, theoretical issues in constrained optimization, duality theory, Lagrangian and sequential quadratic programming methods. May be repeated for credit when topics are distinctly different.

842/IT 842 Models of Probabilistic Reasoning (3:3:0) Prerequisites: STAT 544 and OR 681. Survey of alternative views about how incomplete, inconclusive, and possibly unreliable evidence might be evaluated and combined. Discusses Bayesian, Baconian, Shafer-Dempster, and Fuzzy systems for probabilistic reasoning.

888/ECE 753/IT 888 Distributed Estimation and Multi-sensor Tracking and Fusion (3:3:0) Prerequisite: ECE 734 or SYST 611. Centralized and distributed estimation theory, hierarchical estimation, tracking and data association, multisensor multitarget tracking and fusion, distributed tracking in distributed sensor networks, track-to-track association and fusion, and Bayesian networks for fusion.

944/IT 944 The Process of Discovery and Its Enhancement in Engineering Applications (3:3:0) Prerequisite: IT 842 or permission of instructor. Studies ingredients of imaginative reasoning as it concerns efficient discovery of new ideas and valid evidential test of them. Topics include different interpretations of Peirce’s theory of abductive reasoning and other forms of reasoning, Hintikka’s analysis of process of inquiry, and current attempts to design systems that provide assistance in discovery-related or investigative activities.

981 Optimization in Medicine (3:3:0) Prerequisites: OR 641, OR 642, OR 643, or OR 644. This course will focus on applications of optimization to medicine. Focus is on modeling used in the applications, as well as solution approaches to the optimization problems generated. We will pay particular attention to algorithms and methodology that are not discussed in other optimization courses. Optimization topics covered will include nonlinear integer programs, large scale nonlinear and integer programs, problems governed by differential equations and more.

Organizational Learning—See LRNG

Parks, Recreation, and Leisure Studies (PRLS) School of Recreation, Health, and Tourism

110 Exploring Outdoor Adventure (2:1:1) Provides students with an introduction to outdoor adventure activities and the leadership theory involved to properly plan the activities. This class aims to bridge the gap between theory and practice as it pertains to outdoor adventure activities.

This class focuses on developing introductory skills in a variety of outdoor recreation activities, including rock climbing, canoeing, orienteering, and caving. Traditional classroom and in-the-field instruction will be used during the various activities.

115 Introduction to Fly Fishing (1:1:0) A practical course designed for students with little or no knowledge of fly fishing. The course will involve activities to teach students the basics of fly fishing to include terms and equipment, casting, knot tying, aquatic entomology, fly selection, reading water, wading techniques and safety, and fly fishing tactics. In addition to the one-hour classes required during the week, a full day on a stream will be included.

116 Introduction to Indoor Rock Climbing (1:1:0) Fee required. Introduces equipment, techniques, safety, and planning related to basic rock climbing.

117 Rock Climbing (2:2:0) Fee required. This course is for individuals who have never done any formal rock climbing. The course will involve activities to teach students basic climbing terms, techniques, equipment, and safety practices for top rope and lead climbing and rappelling. We will build on communication skills and trust.

118 Intermediate Rock Climbing (2:2:0) Prerequisite: PRLS 117. Fee required. This intermediate course is for individuals who have some prior skills in rock climbing looking to further increase their skill level. The course will involve teaching students climbing terms, advanced knots, equipment, safety practices for redirect belay and top rope belay, as well as setting up techniques using rope and webbing. Special emphasis on anchor building will also be included. Ability to climb and rappel at least at the beginner’s level will be required. This is not a certification course.

119 Trap and Skeet Shooting (2:2:0) This course is designed to educate the student on gun and range safety. Includes hands-on learning of the games trap and skeet, where competitors fire at clay targets (approximately 4¼ inches in diameter and 1½ inches in height) launched from a trap at varying angles.

120 Introduction to Backpacking (2:2:0) Fee required. This practical and experiential course is designed for students with little or no knowledge of backpacking. Involves discussions, demonstrations, and activities to teach students the basics of backpacking. Topics covered include equipment selection and use, map and compass skills, backcountry cooking, staying healthy in the outdoors, safety and emergency procedures, backcountry ethics (Leave No Trace), and natural history. Application of these skills will be realized over a four-day backpacking trip. Not only will students have the opportunity to practice these skills, but they will also develop their leadership abilities by working in a collaborative team environment.

121 Intermediate Trap and Skeet Shooting (2:2:0) Prerequisite: PRLS 119 or permission of instructor. This course is designed to increase the skill competencies in trap shooting. Includes hands-on learning of the different trap games (16-yard, handicap, doubles, and Olympic trap shoot on a wobble trap) where competitors fire at clay targets (approximately 4¼ inches in diameter and 1½ inches in height) launched from a trap at varying angles. Gun and range safety will also be emphasized.
122 Introduction to Horsemanship (1:1:0) Introduces the basics of horseback riding and horsemanship. Emphasis will be on learning how to care for a horse, tack a horse, and basic riding skills. Students will learn how to walk, trot, and jump small obstacles.

170 Introduction to Whitewater Kayaking (1:1:0) Fee required. This course is designed to provide students with an overview and entry-level skills and knowledge necessary to navigate rapids up to Class II difficulty and plan and execute trips on moving water. Include instruction in, but not limited to, paddle strokes and maneuvers, boat handling, basic terminology, equipment, proper clothing, kayak design, trip planning, river safety, self and group rescue techniques, water reading, river etiquette, and environmental ethics. A high priority is placed on emphasizing safety aspects.

173 Basic Coastal Kayaking (2:2:0) Fee required. This course is designed to provide students with the core skills and knowledge necessary to safely paddle sea/coastal kayaks and execute trips on rivers and coastal environments. Includes instruction in, but not limited to, boat handling, terminology, kayak design, trip planning, marine hazards and safety, rules of the nautical road, weather and tides, and environmental ethics. There will be several trips within 50 miles of Mason.

174 Open Water Coastal Kayaking (2:2:0) Prerequisite: PRLS 173 or permission of instructor. Fee required. This course is designed to provide experienced coastal kayaking students with an introduction to advanced strokes and maneuvers, open water rescues, on-water navigation, and safety concerns related to open water.

175 Introduction to Rowing (1:1:0) This course is designed to provide students with the skills and knowledge necessary to row successfully in an eight-oared rowing shell. Includes instruction in, but not limited to, proper handling of rowing equipment, basic terminology, the proper execution of the rowing stroke, water safety, and team building.

180 Whitewater Canoeing (2:2:0) Prerequisite: Ability to swim fully clothed for five minutes and put on a PFD in water. A practical course designed for students with little or no knowledge or skills in moving water and white water canoeing. Involve activities to teach basic terms, rules, techniques for river safety, paddle strokes, boat control and maneuvering, reading river currents and conditions, self-rescue techniques, ethics and river etiquette, and running rivers up to Class II+ in difficulty. There will be one classroom and four all-day paddling sessions on regional rivers.

181 Whitewater Canoeing II (2:2:0) Prerequisite: PRLS 180 or permission of instructor. A practical methods course to advance and refine the student’s whitewater canoeing skills with regard to paddle strokes, turns, maneuvers, boat control, and safety rescue skills.

190 Downhill and Cross-Country Skiing (1:1:0) Basic skills and techniques of downhill skiing are taught and refined. Includes becoming familiar with use of ski equipment, terminology, and safety rules. Includes lecture and field experience to improve downhill skiing skills.

191 Snowboarding (1:1:0) Basic skills and techniques of snowboarding are taught and refined. Includes becoming familiar with use of equipment, terminology, and safety rules. Includes lecture and field experience to improve snowboarding skills. This course also consists of demonstrations, discussions, and videos.

195 Introduction to Hot Air Ballooning (2:2:0) The course will include history, FAA regulations, equipment, weather, instruments, flight planning, balloon operations, and medical factors. Laboratory includes skill development as a crewmember and pilot, using an AX-8 hot air balloon. FAA student pilot certificates will be offered to all students. Although this is an introductory course, those completing it with a B or better grade will be eligible to sit for the FAA written examination for lighter-than-air, free balloon, a requirement for the private pilot certificate.

210 Introduction to Recreation and Leisure (3:3:0) Open to nonmajors. Traces the development of current concepts of recreation and leisure and their implications and consequences. Covers influences of philosophy, religion, science, economics, sociology, and politics on discretionary time and its uses.

214 Field Study in Natural History (3:3:0) This course provides an introduction to natural history and its application in natural area interpretation through field study investigation of the environment. Fundamentals of bird, plant, animal, and rock identification, as well as sky and landscape interpretation, will be covered.

220 Experiential Education Theory and Application (3:3:0) Provides a broad theoretical, as well as practical, background in teaching and learning experientially. Concepts presented, experienced, and discussed in this course include the basic premises of experiential learning according to a wide variety of educators and philosophers. The content and experience of this course applies to recreation, education, development, and therapeutic settings.

221 Challenge Course Facilitator Field Work (2:2:0) Prerequisite: PRLS 220; CPR and first aid certifications. Fundamental principles and techniques of challenge course facilitation. Consolidate classroom learning in an experiential setting through leading youth groups in the field. Introduction to specific safety, skills, and facilitation techniques for the Hemlock Overlook challenge course, including all low elements, mechanics of operating the zip wire complex, and belay and safety for the Total Team Challenge™.

241 Practicum (3:0:3) Open to majors and minors only. Prerequisites: PRLS 210 and 310 for majors; PRLS 210, 310, 316, 327, and corequisite PRLS 410 for minors. Paid or voluntary work experience in a park and recreation agency. Minimum period of 10 to 12 weeks of part-time employment or experience. Capstone course for minors, allowing for integration and application of course work, theories, and research to a work setting. Work sites chosen among four approved sites. Includes meetings and assignments prior to and during the practicum. Pass/fail.

250 Wilderness Travel and Sustainability (2:2:0) Prerequisite: PRLS 120. This experiential course is designed for students with prior backpacking experience. Involves discussions, demonstrations, and activities that teach students wilderness skills, safety and judgment, leadership and teamwork, and environmental ethics. Topics covered include basic wilderness first-aid, hazard evaluation, emergency procedures, expedition behavior, self awareness, judgment and decision making, campsite selection, shelter and stove use, fire building, sanitation and hygiene, cooking, nutrition and rationing, equipment care and selection, staying warm and dry, route finding and navigation, Leave No Trace backpacking, weather, natural history, and wilderness ethics.
Application of these skills will occur during the 14-day off-trail backpacking trip in a remote wilderness area. Not only will students practice these wilderness skills, but they will also develop leadership abilities by working in a collaborative team environment.

**253 Florida Everglades Canoe Expedition (3:2:1)** This course focuses on developing the knowledge and skills necessary to plan, manage, and participate in extended wilderness excursions by canoe in remote locations, while exploring a region’s natural history. Students will be engaged in classroom preparation; training in canoeing and wilderness travel/living skills; group leadership; and environmental education in the Everglades National Park ecosystem. The class will travel and camp for 6 days/nights in the Everglades back country by canoe as a self-contained group. Students will perform a service project in the park. For students planning careers in outdoor recreation; interpretation; and natural resources management and planning; and students with a general interest in the course topics.

**300 People with Nature (3:3:0)** Traces philosophical evolution of perceptions of and attitudes toward nature. Examines role of philosophers, scientists, nature-writers, and artists in the shaping of environmental thought. Includes extensive reading of Emerson, Thoreau, Muir, Leopold, Carson, Wilson, and others.

**302 Park Management and Operations (3:3:0) Prerequisite: PRLS 300.** Focuses on management and operations of park resources, including the management of visitors and recreation development. Emphasizes understanding of contemporary threats to park integrity and preservation of resources. Also covers maintenance management systems.

**310 Program Planning and Design (3:3:0) Prerequisite: PHED 200, PRLS 210, SPMT 201, or TOUR 200.** Fundamental principles and techniques of the planning process for health, fitness, and recreation programs. Covers specifying an area of need; goals, objectives, and mission statement; generating solutions; and selecting a program design for implementation.

**316 Outdoor Education and Leadership (3:3:0)** Focuses on promotion of lifelong health and fitness via non-competitive and informal outdoor activities. Introduces safety, skills, and leadership techniques. Covers sustainable use, conservation, and stewardship of natural resources.

**317 Social Psychology of Play and Recreation (3:3:0)** Applies social psychological theories and research to the study of leisure, play, and recreation behavior, including correlates, antecedents, and consequences of and constraints to these concepts.

**327 Foundations of Therapeutic Recreation (3:3:0)** Covers nature and perceptions of disability and their consequences; problems of stigma, stereotype, and labeling; and principles of normalization and inclusion. Introduces therapeutic recreation model and activity assessment.

**360 Bill of Rights Issues in Parks, Schools and Public Places (3:3:0)** Examines issues, particularly those involving First Amendment free speech and freedom of religion issues such as political protests, religious displays, and use permits.

**402 Human Behavior in Natural Environments (3:3:0) Prerequisites: PRLS 210 and 300, or permission of instructor, and 60 credits.** Applies social and behavioral theories to management for recreational users of land and water resources. Examines deterioration and pollution of land and water, noise, crowding, and conflicts among users. Discusses strategies for mitigation of deleterious impacts and detriative behaviors, and attitudes toward resource conservation, preservation, and use.

**405 Planning, Design, and Maintenance of Leisure Facilities (3:3:0) Prerequisites: PRLS 310 or permission of instructor, and 60 credits.** Covers quantity, location, and design standards for facilities. Includes safety, functionality, durability, and maintenance demand criteria in planning and design; programmatic and operational objectives to be met, including user comfort and convenience, crowd management, and traffic flow, and space relationships. Includes field study of local facilities.

**410 Administration of RHT Organizations I (3:3:0) Prerequisite: 60 credits.** Focuses on operation and management of health, fitness, and recreation services organizations. Covers management and leadership theories and techniques, problem-solving and decision making, organizational communications, design of organizational structures, and budgeting.

**411 Administration of RHT Organizations II (3:3:0) Prerequisites: PRLS 310 and 410, and 60 credits.** Focuses on planning techniques for health, fitness, and recreation organizations. Covers program and organizational marketing principles and strategies; service quality assessment and organizational evaluation techniques; and organizational financing.

**416 Issues and Trends in Therapeutic Recreation (3:3:0) Prerequisite: PRLS 327.** Explores the role of leisure in human development with a specific focus on needs, demands, and services for people with disabilities and illness. Presents concepts associated with leisure, aging, physical challenge, targeting leisure services, research, and public policy. Field experience required.

**418 Assessment in Therapeutic Recreation (3:3:0) Prerequisite: PRLS 327 and 416.** Presents methods of assessment, development of treatment program plans, and evaluation of all components. Extends program design by developing competencies in the planning approaches, individual and group assessment techniques, program evaluation, and documentation strategies for people with disabilities and illness. Field experience required.

**450 Research Methods (3:3:0) Prerequisites: HEAL 323 and STAT 250, and 60 credits.** Covers the development of empirical research designs for both practical and theoretical problems in health, fitness, and recreation resources management. Includes literature review of hypothesized relationships, and formulation of research proposals.

**460 Sport and Recreation Law (3:3:0) Prerequisite: 60 credits.** Emphasizes safety, liability, and risk. Covers current law and liability issues for administrators of RHT facilities and programs.

**480 Special Topics in Parks, Recreation, and Leisure Studies (3:3:0) Prerequisite: 60 credits.** Selected topics reflecting interest in specialized areas of parks and outdoor recreation or therapeutic recreation.

**490 Internship (12:0:12) Prerequisites: 90 credits; HEAL 205 and 323; PHED 200; and PRLS 210, 310, 316, and 410.** Paid or voluntary work experience in a park and recreation
agency for a minimum period of 10–12 weeks of full-time employment, and 480 hours for therapeutic recreation students. Applies course work, theories, and research to work settings. Work sites are chosen by students after approval of faculty supervisors. Includes meetings and assignments before and during internship. Pass/fail.

499 Independent Study (1–3:0:0) Prerequisite: 90 credits. Individual study of topic area in leisure research, theory, or practice under direction of faculty.

501 Introduction to Natural Resources Law (3:3:0) Prerequisite: PRLS 460 and 90 credits, graduate status, or permission of instructor. Selected legal issues involving conflicting use and preservation demands on our nation’s limited natural resource base, particularly those involving public lands, open space, and recreation resources. Uses case studies of recent court decisions.

503 Disability Rights Law in Sport and Recreation (3:3:0) Prerequisite: PRLS 460 and 90 credits, or graduate status; or permission of instructor. Overview of several major law and policy issues related to the provision of community recreation services to special populations. Primary focus is the Americans with Disabilities Act and related federal legislation.

526 Environmental Education and Resource Interpretation (3:3:0) Prerequisites: PRLS 402 or permission of instructor, and 90 credits. Provides methods for communicating and disseminating information pertaining to the use of natural recreation resources. Covers design and implementation of educational materials and programs to enhance understanding and appreciation of cultural, historical, and natural resources.

531 Natural Resources Recreation Planning (3:3:0) Origins and evolution of recreation use philosophy, policies, and service of public estate management. Examines planning for a spectrum of opportunities, from wilderness to developed settings. Work sites are chosen by students after approval of faculty member. May be repeated. No more than 3 credits may be earned.

Philosophy (PHIL)

Philosophy

100 Introduction to Philosophy (3:3:0) Introduction to the nature of philosophical reasoning and some of the main problems of philosophy.

111 Individual and Society (3:3:0) Examines philosophical issues revolving around the relationship between the individual and society, drawing from Plato, Hobbes, Locke, Rousseau, and Marx. Issues include the concept of individual rights, the legitimacy of political authority, and the competing demands of individual liberty, equality, and the common good.

112 Ethics and the Cybersociety (1:1:0) Examines ethical issues associated with new developments in information technology, including privacy rights, intellectual property rights, and the effect of information technology on society.

151 Introduction to Ethics (3:3:0) Considers some perennial issues in ethical theory.

156 What Is Art? (3:3:0) Introduction to philosophical reflection on the arts by looking at the critical issues in the history of aesthetics. Applies considerations to specific works and exploring these works in terms of their historical contexts and influences. Concentrates on one form of art or one period and always emphasizes questions of critical evaluation and art historical analysis.

173 Logic and Critical Thinking (3:3:0) Basic concepts and techniques of deduction, emphasizing the modern treatment of such topics as quantification and rules of inference, with study of the classical treatment. Basic principles of induction, informal fallacies, and uses of logic in everyday life.

180 Logic and Law (3:3:0) What are the standards of reasoning that guide decision-making in the law? This question draws attention to the criteria for a sound argument, a topic that is central to logic. In this course, students examine how lawyers rely on such criteria to persuade jurors of the merits of their case. Standards of reasoning associated with work of jurors also examined.

253 Philosophy and Literature (3:3:0) Examines differences and relations between literary and philosophical texts. Examines texts from a given period in the history of literature and philosophy. Topics include the presence of common issues in literary and philosophical writings, the influence of philosophical ideas on the production of literary texts and literary theory, and the development in literary texts of issues that are possible objects of philosophical inquiry.

254 Contemporary Ethical Problems (3:3:0) Topics include homosexuality, abortion, drugs, civil disobedience, capital punishment, and rights of individual versus the rights of society.

301 History of Western Philosophy: Ancient (3:3:0) Classical Greek philosophy, including pre-Socratic, Socrates, Plato, and Aristotle.

302 History of Western Philosophy: Medieval (3:3:0) Figures and problems of medieval philosophy. Study of leading thinkers from the 5th to the 15th centuries.
303 History of Western Philosophy: Modern (3:3:0)
Figures and problems of modern philosophy. Study of philosophers such as Descartes, Locke, Berkeley, Hume, Kant, and Hegel.

305 Business Ethics (3:3:0)
Examines some moral problems that arise with regard to the responsibilities of various segments of the business community, including employers, management, stockholders, to one another, to the consumer, and to society at large.

306 Business Ethics Internship (1:0:0)
Working independently or in teams, students participate in evaluation of organizations nominated for National Capitol Business Ethics Award. With no scheduled class meetings but working with the professor, students learn ethical standards and practices for business and how ethics can be incorporated into organizational culture. They gain understanding of ethics codes, leadership skills that develop ethical behavior, and management techniques that support an ethical environment in business.

309 Bioethics (3:3:0)
Prerequisite: completion or concurrent enrollment in all other general education courses. Examines some major moral issues involved in practice and research in medicine and health care. Topics to be chosen from medical experimentation, definition of death, physician assisted dying, genetics and human reproduction, distribution of scarce resources, fertility and organ transplants.

311 Philosophy of Law (3:3:0)
Prerequisite: 3 credits of philosophy, or permission of instructor. Investigation of theories of natural law, legal positivism, and legal realism as they pertain to some of the central philosophical questions about law.

312 Philosophy of Technology (3:3:0)
Prerequisite: 3 credits of philosophy, or permission of instructor. Philosophical examination of modern technology in its broadest human context. Several alternative philosophies of technology are examined. Examines the relationships between technology and religion, economics, and politics. Ethical issues raised by the use of technology are also examined. Typically, the course focuses on the ethical issues raised by the use of one kind of technology.

313 Philosophy of Religion (3:3:0)
Prerequisite: 3 credits of philosophy, or permission of instructor. Study of classical appeals to philosophy in support of belief in god’s existence (Philo, Augustine, Anselm, Aquinas, Descartes); the fideism of Hume and the metaphysical agnosticism of Kant; the concept of religious experience in the philosophies of Hegel, Schleiermacher, and Kierkegaard; and the problem of religious language in contemporary empirical philosophy.

323 Classical Western Political Theory (3:3:0)
Prerequisite: GOVT 101, or 3 credits of philosophy. Exploration through lecture and discussion of developments in the Western tradition of political thought from the time of the Greek city-state to late medieval Christendom, focusing on such topics as the nature and purpose of politics, the relationship between the individual and the state, the political significance of religion and tradition, and the concept of natural law.

324 Modern Western Political Theory (3:3:0)
Prerequisite: GOVT 101, or 3 credits of philosophy. Exploration through lecture and discussion of developments in the Western tradition of political thought from the Renaissance to the middle of the 19th century, focusing on such topics as the rise of individualism in political theory, early developments in social contact theory, theories of radical popular sovereignty, and early criticisms of liberal theory.

325 Karl Marx’s Social and Political Thought (3:3:0)
Prerequisite: 3 credits of philosophy, or permission of instructor. Study and evaluation of Marx’s social and political ideas based on writings selected from several phases of his career. Examination of relation of Marx’s thought to post-Marxist socialist theory and practice.

327 Contemporary Western Political Theory (3:3:0)
Prerequisite: GOVT 101, or 3 credits of philosophy. Exploration through lecture and discussion of recent developments in the Western tradition of political thought from the middle of the 19th century to today. Different sections of this course will focus on one or another of the various political theories that have been influential during this period, such as liberal, libertarian, conservative, communitarian, Marxist, feminist, and postmodern thought. This course can be retaken for credit when the subject matter is different.

332 Twentieth-Century Analytic Philosophy (3:3:0)
Prerequisites: 3 credits of logic and PHIL 303, or permission of instructor. Examination of the attempts of 20th-century philosophers to solve philosophical problems by an analysis of language. Figures and movements covered include Russell, Moore, Wittgenstein, logical positivism, and ordinary language philosophy.

333 Nineteenth-Century Philosophy (3:3:0)
Prerequisite: 3 credits of philosophy, or permission of instructor. Development of German Romanticism and Idealism during a brilliant period in the history of the West rivaled only by ancient Greece. Kant, Fichte, Hegel, Kierkegaard, Schopenhauer, and Nietzsche mount a revolt against the rationalism and scientism of the modern world.

336 Twentieth-Century Continental Thought: Existentialism (3:3:0)
Prerequisite: 3 credits of philosophy, or permission of instructor. Examination of existential philosophy from its 19th-century origins to its 20th-century expressions. Philosophers studied include Kierkegaard, Nietzsche, Sartre, De Beauvoir, and Buber.

337 Twentieth-Century Continental Thought: Phenomenology (3:3:0)
Prerequisite: 3 credits of philosophy, or permission of instructor. Examines phenomenological way of doing philosophy, its findings in regard to the “life-world,” questions of “first philosophy,” and the subject matter of the social sciences, as well as critical difficulties in its development. Texts by Husserl, Heidegger, Merleau-Ponty, Sartre, Schutz, and Derrida.

338 Woman: The Philosophical Questions (3:3:0)
Prerequisite: 3 credits of philosophy, or permission of instructor. Exploration of the meaning and politics of the question of woman that puts the idea of woman into question. Recognizing the historical context of this issue, the ways in which the structures of patriarchy situate woman as the other and determine the meanings of sexuality, subjectivity, the body, and language are examined. One overriding theme is relationship between the “woman” question and other central issues of contemporary philosophy.

340 Hermeneutic Philosophy (3:3:0)
Prerequisite: 3 credits of philosophy, or permission of instructor. Study of the development of hermeneutic philosophy in works by
Heidegger, Gadamer, and Ricoeur, as an effort toward coming to terms with the historicity of human experience. Implications for interpretive understanding of artworks, institutions, events, texts, and the human condition.

343 Issues in Environmental Ethics (3:3:0) Prerequisite: Completion or concurrent enrollment in all other required general education courses. Philosophical examination of issues in environmental ethics, such as moral status of animals, moral significance of nature, duties to protect wilderness areas, economics and environment protection, and environmental justice.

349 Christian Ethics (3:3:0) Examines the foundations of Christian and Jewish ethics from the Hebrew Bible and studies the meaning of Christian teachings. Examines Catholic, Orthodox, and Protestant texts as the framework to explore various Christian positions on major ethical issues such as war, embryonic stem cell research, abortion, and euthanasia in order to understand the meaning of the Christian life as it is faithfully practiced by members of the major Christian groups.

351 Philosophy Business Ethics Internship (3:3:3) This internship will develop self-directed learning skills in which the student will gain a better understanding and appreciation of both ethics and its application in the business world. Students will learn appropriate ethical standards for business; develop an appreciation of the need for an ethical culture; and experience the day-to-day activities of a business organization where they learn how ethics is incorporated into the culture. Students will gain understanding of ethics codes, leadership skills that rely on ethics, and management techniques that encourage and support an ethical environment in business.

355 Theories of Ethics (3:3:0) Prerequisite: Three credits in philosophy or permission of instructor. A critical examination of a variety of different types of classical, modern, and contemporary ethical theories, including consequentialist theories, deontological theories, and virtue theories.

356 Philosophy of Art (3:3:0) Prerequisite: 3 credits of philosophy, or permission of instructor. Basic problems that arise from an inquiry into meaning and value of art and our response to art.

357/SOCI 599 Philosophy of the Social Sciences (3:3:0) Prerequisite: 3 credits of philosophy, or permission of instructor. Philosophical issues relating to competing methodologies for the social sciences. Analysis and critique of mainstream positivism and behaviorism; paradigm theory and scientific revolutions; interpretive understanding and hermeneutical science; phenomenology and the social construction of reality; ethnomethodology and situational meaning; analytic philosophy and action theory; the “idea” of a social science; sociology of knowledge and theory of ideology; and Western Marxism and critical theory.

371 Philosophy of Natural Sciences (3:3:0) Prerequisite: 3 credits of philosophy, or permission of instructor. One semester of logic recommended. Study of aims and methodology of science. Among the questions of concern are, What constitutes a good scientific explanation? What grounds are used for comparing rival theories? Is there a special method of scientific discovery?

372 Philosophical Methods (3:3:0) Prerequisite: 3 credits of philosophy, or permission of instructor. Study of the relationship between a philosopher’s method, doctrine, and concept of truth. Philosophers studied may include representatives from among the empirical, analytical, phenomenological, hermeneutical, and structuralist movements.

373 Theory of Knowledge (3:3:0) Prerequisite: 3 credits of philosophy, or permission of instructor. Discussion of basic problems concerning the nature of knowledge, with study of the relation of knowledge to perception, belief, and language.

374 Philosophy of Mind (3:3:0) Prerequisite: 3 credits of philosophy, or permission of instructor. Investigation of such theories as dualism, behaviorism, and materialism as they pertain to some of the central philosophical questions about mind.

375 Metaphysics (3:3:0) Prerequisite: 3 credits of philosophy, or permission of instructor. Study of basic problems concerning being in general and foundations of individual being; traditional treatments of such problems and criticism of possibility of such knowledge. Selected readings from Plato, Aristotle, Aquinas, Spinoza, Leibniz, Kant, Bradley, Heidegger, and others.

376 Symbolic Logic (3:3:0) Prerequisite: PHIL 173 or MATH 110, or permission of instructor. Study of predicate calculi by means of a step-by-step construction of artificial languages. Topics include procedures for constructing a calculus, proof techniques, significant properties of predicate calculi, and procedures for recognizing phrases.

377 Darwin: Biology and Beyond (3:3:0) Prerequisite: completion or concurrent enrollment in all other required general education courses. Introduction to and philosophical examination of the theory of evolution in its historical perspective. Examines Darwin’s theory of evolution as a scientific theory, connect it to its context in the history of science, and survey its wider cultural impact. In particular, examine implications of the theory of evolution for religion and morality.

378 Reason, Science and Faith in the Modern Age (3:3:0) Prerequisite: completion or concurrent enrollment in all other required general education courses, or permission of instructor. Historical examination of the rise of sciences in the modern age (1500–present) and the impact this has had on religion, drawing from such thinkers as Luther, Bacon, Galileo, Newton, Pascal, Hume, Darwin, Kierkegaard, and James.

391, 392 Special Topics in Philosophy (3:3:0), (3:3:0) Examines topics of current interest, such as death and dying, rights of children, or philosophical controversies in modern physics.

421 Seminar (3:3:0) Prerequisite: 9 credits in philosophy. Students with fewer credits in philosophy may be admitted, at the discretion of the professor, if the topic is sufficiently close to their field of study. May be repeated for credit.

422 Honors Seminar (3:3:0) Prerequisite: 9 credits in philosophy and acceptance to the honors program in philosophy. Seminar for students enrolled in the honors program in philosophy.

425 Independent Study (3:0:0) Prerequisites: 60 credits, including 15 credits in philosophy and permission of department. May be repeated for credit.
427 Feminist Political Thought (3:3:0) Prerequisite: GOVT 101 or WMST 200, or 3 credits of philosophy; or permission of instructor. Explores feminist political thought in historical context. Topics include feminist political movements, feminist critiques of political philosophy, and feminist contributions to political theory.

428 GOVT 428 Advanced Democratic Theory (3:3:0) Prerequisites: GOVT 101 or one course in philosophy. Explores various theoretical approaches to nature and justification of democracy. Topics may include liberal, communitarian, pluralist, and deliberative theories and their critics; constitutionalism; role of markets; and transnational democracy.

429 International Ethics (3:3:0) Prerequisite: course in philosophy, or GOVT 101. Examines key value issues in international affairs, including global justice and poverty, human rights and the extension of democracy, and preservation of environment in view of economic globalization, persistence of nationalism, and new forms of war and terrorism.

470 Seminar: Philosophical Examination of Social Issues and the Law (3:3:0) Prerequisite: 3 credits in philosophy, or permission of instructor. Philosophical study of social issues that are subject to legislation and judicial review. Analysis of the purpose and function of law in society lays the groundwork for reflection on specific issues such as abortion, euthanasia, capital punishment, divorce, child care, and health care.

471 Honors Seminar (3:3:0) Prerequisite: 9 credits in philosophy and acceptance to the honors program in philosophy. Honors version of PHIL 470.

510 Seminar in Ethics of Health Care (3:3:0) Prerequisite: 90 credits, graduate standing, or permission of instructor. Examines moral dilemmas within the health care profession on ethical theories and principles. Special emphasis on patients’ rights, social justice of health care, and evolving health care technologies.

602 Plato: Selected Dialogues (3:3:0) Prerequisite: graduate standing. A study of the central issues in the philosophy of Plato through a close reading of selected dialogues. Issues investigated will include the questions of the possibility of knowledge, the nature of being, and of the good. May be repeated for credit.

603 Aristotle: Selected Works (3:3:0) Prerequisite: graduate standing. Close study of Aristotle’s work and its place and future in history of philosophy. Topics vary by semester, and include Aristotle’s metaphysics, natural sciences, ethics, political thought, logic, epistemology, and psychology. May be repeated once with permission of department when topics and readings differ significantly.

604 Augustine and Aquinas (3:3:0) Prerequisite: graduate standing. Critical examination of philosophies of Augustine and Aquinas with special attention to the mode of argument of each.

605 Mind-Body Problem in Early Modern Philosophy (3:3:0) Prerequisite: graduate standing. Examines views of major early modern philosophers on issues such as mind and body interaction, personal identity, and freedom of the will, as well as of interpretations of these philosophers by historians of philosophy.

608 Hegel’s Phenomenology of the Spirit (3:3:0) Prerequisite: graduate standing. A study of the philosophy of Hegel through a reading of the text that presents an introduction to his system. Special attention is paid to Hegel’s background in the work of Kant and the German Idealists.

611 Philosophy of Law (3:3:0) Prerequisite: graduate standing, or permission of instructor. Examines major jurisprudential theories that underpin law in Western society. After examining the theories, students apply them to contemporary social and political problems.

615 Postmodern Thought (3:3:0) Prerequisite: graduate standing, or permission of instructor. In recent decades, the term “postmodern,” first used by art critics in the late 19th century, has been taken up by prominent contributors to the arts, social thinkers, and philosophers, to describe developments as well as the current period. This course examines three thematic concerns found in work that is identified with postmodern issues: what modernity defines itself in contrast to or against, the status of “man,” and status of “subjectivity.”

616 Phenomenology (3:3:0) Prerequisite: graduate standing. This major approach in philosophy is studied in regard to its basic features, the tasks to which it has been set by major contributors, certain findings of phenomenology in practice, as well as crucial problems that develop as phenomenology proceeds and how they are addressed by phenomenologists.

617 Movements and Issues in the History of Political Philosophy (3:3:0) Prerequisite: graduate standing. Explores themes, movements, and periods in the history of political theory.

618 Contemporary French Feminism (3:3:0) Prerequisite: graduate standing. Examines philosophical contexts of existential-phenomenological and psychoanalytic French Feminist. It explores the ways in which French feminist thought has influenced continental philosophical thinking and international feminist theory.

621 Philosophy of Science (3:3:0) Prerequisite: graduate standing. Explores whether and how scientific advances can be achieved. Special attention is paid to relativism and rationalism debates and to the role of technology in science.

631 Freud and Philosophy (3:3:0) Prerequisite: 6 credits of philosophy, course in personality theory, or permission of instructor. Explores philosophical aspects of Freud’s thought, focusing on Freud’s philosophy of human nature and culture, and influence on contemporary thought.

632 Twentieth Century Logical Positivism (3:3:0) Prerequisite: graduate standing. Examines 20th century logical positivism and its place in the history of philosophy. Topics include Russell’s logical atomism and theory of descriptions, program of the Vienna Circle, attempts to formulate empiricist criteria of meaning, and legacy left by the movement.

640 History of Ethical Theory (3:3:0) Prerequisite: graduate standing. Examines history of Western ethical theory from ancient Greece to the present day, including virtue theory, consequentialism, deontological theory and contemporary feminism.

641 Ethics and the Professions (3:3:0) Prerequisite: graduate standing, or permission of instructor. A philosophical analysis of the concept of profession as a category
of the world of work. Professional codes of ethics are examined to determine their effectiveness as guides for professional conduct.

642 Biomedical Ethics (3:3:0) Prerequisite: graduate standing, or permission of instructor. Explores the application of ethical theories and principles to issues in contemporary health care. Cases central to the development of the field will be examined.

643 Environmental Ethics (3:3:0) Prerequisite: graduate standing. An examination of human interactions with the natural environment from an ethical perspective. Emphasis will be placed on the strengths and weaknesses of various ethical theories and the different conceptions of the proper relationship between humans and their environment.

644 Business and Organizational Ethics (3:3:0) Prerequisite: graduate standing. Examines organizational culture as necessary for ethical development and of the application of ethics in business and organizational settings.

646 International Ethics (3:3:0) Prerequisite: graduate standing, or permission of instructor. Considers normative issues in international affairs, including global distributive justice, just war, foundations of human rights, harms to women, cultural and national identities, possibilities for transnational democracy, responsibilities of global corporations, and environmental ethics.

658 Feminist Theory (3:3:0) Prerequisite: graduate standing, or permission of instructor. Analysis of the critique of patriarchy offered by contemporary continental feminist philosophers. Examines contemporary moral, political, and epistemological issues in feminist theory.

673 Current Issues in Theory of Knowledge (3:3:0) Prerequisite: graduate standing. Advanced exploration of conditions and limits of knowledge, from the perspective of contemporary philosophy. Is there any infallible, or fallible but at least reasonable, foundation for achieving an understanding of the world and of our minds? This question is examined from the perspective of sense datum theory, coherentism, and various naturalized epistemologies. The nature of a priori knowledge (from mathematics and logic) is also examined.

681 Philosophical Figures (3:3:0) Prerequisite: graduate standing. Examines major philosophical author of crucial philosophical texts and their influence on philosophical thought. May be repeated for maximum 6 credits.

691 Special Topics in Philosophy (1–6:1–6:0) Prerequisite: graduate standing, or permission of instructor. Topics vary. May be repeated for credit.

693 Directed Readings in Philosophy (3:0:0) Directed readings and research on specific topic in philosophy chosen by student and instructor. May be repeated for maximum 6 credits.

719 Phenomenology of World (3:3:0) Prerequisite: previous course in phenomenology, or permission of instructor. Studies one of the most fully deployed and enduring themes in phenomenological philosophy, namely, sense of “world.” Philosophers covered include Husserl, Heidegger, and Merleau-Ponty.

720 Nietzsche and his Readers (3:3:0) Prerequisite: graduate standing. Reading of major texts of Nietzsche and some of his most influential interpreters and critics.

721 Advanced Seminar in Philosophy (3:3:0) Prerequisite: graduate standing. Close study of selected topics in current philosophical discourse. May be repeated for credit.

733 Current Issues in Cognitive Science (3:3:0) Prerequisite: admission to master’s program in philosophy or permission of instructor. Examines current areas of investigation in cognitive science and philosophy of mind, such as nature of consciousness, and representational and connectionist theories of mind. May be repeated for credit.

799 Thesis (1–6:0:0) Prerequisite: completion of 24 credits, approval of the thesis proposal, and permission of instructor (thesis director). Develop research and write an original thesis under the direction of their thesis director.

Physical Education (PHED)

School of Recreation, Health, and Tourism

103 Fencing I (1:1:0) Gives the beginning student basic knowledge of the sport of fencing and teaches the fundamental movements required in the sport. Students should expect to learn some officiating and etiquette of the sport and acquire the ability to fence at the novice level. The instructor will use any combination of the following: instructional videos, written handouts, guest fencers for demonstrations, drills, and group and individual instruction.

105 Aerobics and Basic Conditioning (1:1:0) Introduce students to fitness and healthy lifestyles. The course is designed to provide students with four lectures and multiple cardiovascular workouts. The lectures include cardiovascular endurance, cardiovascular diseases, body composition, nutrition, and weight management. The class also teaches students how to use cardiovascular equipment and how to design an aerobic fitness program. The course is geared for beginners, yet all students will be helped on an individual basis (therefore advanced individuals can also participate).

107 Social Dance (1:1:0) Provides a knowledge base of dance fundamentals and skill development in various ballroom dances and includes basic rhythms, dance positions, floor alignments, techniques of leading and following, and maintenance of dance frame in partner dancing.

108 Weight Training and Body Conditioning (1:1:0) Introduces students to fitness and healthy lifestyles. The course is designed to provide students with an overview of the various types of weight training but primarily emphasizes circuit weight training method. There will usually be a brief lecture each week with a longer one two or three times during the semester. The lectures include the five health-related components of physical fitness, nutrition, and weight management. The class also teaches students how to use resistance and cardiovascular equipment, and how to design fitness programs. The course is designed for beginners, yet all students will be helped on an individual basis (therefore advanced individuals can also participate).

110 Beginning Swimming (1:1:0) Develops a knowledge base and basic swimming skills for the weak swimmer and nonswimmer, and make them water safe. These skills include, but are not limited to, locomotion and propulsive movements in a prone and supine position, breath control, rhythmic breathing, and beginning diving techniques; personal safety, and rescue skills to maintain a water-safe environment.
113 Latin Dance (1:1:0) Provides students with a knowledge base of dance fundamentals and skill development in various Latin dances and includes basic rhythms, dance positions, floor alignments, techniques of leading and following, and maintenance of dance frame in partner dancing.

114 Social Dance II (1:1:0) Provides a review of dance fundamentals and dance patterns of the five dances learned in PHED 107 Social Dance. Builds on social dance by offering two additional dance patterns in each of the five dances and adding a sixth dance, the tango, to improve and expand students’ dancing skills.

118 Advanced Life Guarding (1:1:0) Prerequisite: PHED 150 or permission of instructor. Introduces and develops skills and knowledge necessary to become an American Red Cross-certified lifeguard. Focus is on training participants in aquatic facility and patron safety, in-water rescue skills, and physical conditioning. It teaches the lifeguard candidates to prevent, recognize, and respond to aquatic-related emergencies.

127 Social Dance II (1:1:0) Prerequisite: PHED 107 or permission of instructor. Provides an introduction to the tango and additional patterns for the fox trot, waltz, cha-cha, rumba, and Eastern swing.

128 Fencing II (2:2:0) Prerequisite: PHED 103 or permission of instructor. Reviews the advanced footwork and handwork techniques learned in Fencing I and expands on the third component of the sport, strategic tactics. Students are introduced to the rules and protocol of competitive fencing and use electric scoring equipment and electric fencing gear.

129 Introduction to Yoga (1:1:0) Introduces students to the practice of Hatha yoga. Class emphasis will be on learning yoga asanas (postures) and pranayama (breathing exercises) to enhance physical fitness and mental concentration.

130 Intermediate Yoga (1:1:0) Prerequisite: PHED 129 or permission of instructor. Expands on the yoga practices taught in PHED 129. Class emphasis will be on mastering yoga asanas (postures) and pranayama (breathing techniques) to enhance physical fitness and mental concentration. Students will learn 10 new yoga poses and practice the complete Sun Salutation.

134 Self-Defense for Men and Women (1:1:0) Fee required. A practical self-defense course designed for students with little or no background in martial arts or self-defense. Defensive and offensive techniques are taught to prepare students for any potentially dangerous event they may encounter. The course will also improve student’s physical and mental fitness.

135 Self-Defense for Men and Women II (1:1:0) Prerequisite: PHED 134. Fee required. A continuing practical self-defense course designed for students with a basic self-defense skill level or minimal martial arts experience. More advanced defensive and offensive techniques will be taught building on the student’s previous training. Continued improvement in the student’s physical and mental fitness will also be emphasized.

136 Tae Kwon Do (1:1:0) Fee required. A beginner-level course designed to develop basic skills of Tae Kwon Do, a Korean martial art that predominantly emphasizes kicking.

137 Intermediate Tae Kwon Do (1:1:0) Prerequisite: PHED 136 or permission of instructor. Fee required. An intermediate-level course that continues to develop basic skills of Tae Kwon Do. Course instruction continues to focus on the student’s mental development, as well as physical training.

138 Brazilian Jiu-Jitsu (1:1:0) Fee required. A practical self-defense course instructing students in Brazilian Jiu-Jitsu techniques designed for students who have no prior experience in martial arts or Brazilian Jiu-Jitsu. Brazilian Jiu-Jitsu’s primary goal is to give advantage to those who use correct form, posture, and technique over strength.

139 Brazilian Jiu-Jitsu II for Men and Women (2:2:0) Prerequisite: PHED 138 or permission of instructor. Fee required. A beginner-to-intermediate-level course teaching techniques in Brazilian Jiu-Jitsu. Students will learn specific defensive techniques to be used against an attacker along with escapes and submissions from a variety of different attacks. Students will participate in basic sparring with particular attention to safety. Students will also undergo an intensive training and conditioning routine.

140 Golf (1:1:0) Fee required. A practical course designed for students with little or no golf knowledge. The course involves activities to teach students basic golf terms, rules, and techniques for the full swing, putting, chipping, and pitching, as well as playing on a golf course.

144 Intermediate Golf (2:2:0) Prerequisite: PHED 140 or permission of instructor. Fee required. A practical course designed for students with basic golf knowledge and skills. The course will include course strategies, course management, the proper use of the rules, club selection, speed of play; skill building, and different golf formats.

145 Beginning Judo for Men and Women (1:1:0) Fee required. This is an introduction to Judo in which students will learn basic body mechanics of throwing, sweeping, grappling, and submission. Students will learn the fundamentals in these areas both for self-defense and sport. The history of judo, rules of the sport, and proper safety and falling techniques will be presented.

146 Introduction to Badminton (1:1:0) A practical course designed as an introduction to badminton. Students learn badminton terms, scoring rules, and techniques for forehand and backhand strokes, and the serve. Students are also introduced to basic strategy for singles and doubles play.

147 Advanced Tae Kwon Do (2:2:0) Prerequisite: PHED 137 or permission of instructor. Advanced-level course that continues to enhance and refine skills of Tae Kwon Do. Students develop more extensive jump and spin kicks, as well as combinations of the same. This course provides brown to black belt levels of promotion and continues to focus on each student’s mental development and physical training.

149 Tai Chi (1:1:0) A beginner-level course designed to increase awareness of the mind and body. Students will be introduced to basic principles of Chi (energy) and Yin Yang (polarity) and how these apply to their bodies through practicing the T’ai Chi Chih® movements.

150 Intermediate Swimming (1:1:0) A course designed to build on basic-level swimming skills by providing practice for confidence, refinement of coordination, and improvement of other aquatic skills. Presents more advanced swimming
strokes and focuses on physical conditioning and aquatic safety.

151 Introduction to Tennis (1:1:0) A practical course designed as an introduction to tennis. Involves activities to teach students tennis terms, rules, scoring, techniques for the forehand and backhand ground strokes, volley, overhead, and serve, as well as basic strategy for singles and doubles.

153 Intermediate Tennis (1:1:0) Prerequisite: PHED 151 or demonstrated ability. A practical course designed for the novice tennis player. Involves such activities as control of pace, direction, and depth on forehand and backhand ground strokes; the use of topspin and under spin; tactical use of the volley; styles of play; and strategy for singles and doubles.

155 Introduction to Springboard Diving (2:2:0) Prerequisite: PHED 150 or permission of instructor. A beginner-level course designed to increase awareness of the sport of diving, safety issues pertaining to competitive and recreational diving, competition formats, and history and evolution of the sport and scoring systems. Students will be introduced to fundamental skill progressions leading to basic dives.

156 Intermediate Springboard Diving (2:2:0) Prerequisite: PHED 155 or permission of instructor. Students build on the fundamental skill progressions and perform more advanced skills and dives than in the introductory course (PRLS 155). This course is also designed to increase awareness of the sport of diving, safety issues pertaining to competitive and recreational diving, competition formats, history and evolution of the sport, and scoring systems.

157 Aikido for Men and Women (1:1:0) Designed for students who have no prior experience in martial arts, this course can benefit those with a solid martial arts background. Mind-body techniques useful to all athletes and students are taught in a classical martial art self-defense context. Each class involves mind-body coordination exercises, and solo and partner practice. This active close contact class gives all students a chance to execute throws, locks, and pins, both as the thrower and the one who takes falls.

158 Underwater Hockey (1:1:0) Prerequisite: PHED 150 or permission of instructor. Fee required. Designed to provide basic instruction in the fundamentals of underwater hockey. Students learn free diving and snorkeling activities in preparation for underwater hockey. They will learn about and experience physiological reactions to aquatic submersion. Significant attention throughout this course will be given to safety issues related to underwater training, emphasizing current and lifelong skills.

159 Advanced Swimming (1:1:0) Prerequisite: PHED 150 or permission of instructor. Fee required. A course designed to build on intermediate-level swimming skills by providing practice to refine and perfect swimming strokes, so that students swim with more ease, efficiency, power, and smoothness over greater distances. Focuses on developing a higher level of fitness and maintaining better physical conditioning. Introduces other aquatic activities to enrich the class and broaden the horizons of the participant.

160 Intermediate Tai Chi (1:1:0) Prerequisite: PHED 149 or permission of instructor. A second-level course for students to learn Tai Chi Weapon (Tai Chi Straight Sword), as well as practice the basic principles of Tai Chi. Students will increase awareness of the mind and body.

162 Introduction to Bowling (1:1:0) Fee required. Students will learn the sport of 10-pin bowling. Topics covered are bowling etiquette, history of bowling, playing rules for league members, scoring, different approaches to the game, and the appropriate equipment for these approaches. Inexperienced and experienced bowlers are welcome to participate.

163 Karate (1:1:0) American Kenpo Karate is the combination of art and science. Emphasizes techniques, forms (kata), and sets (drills). All the techniques are related by motion and principles. Each technique builds on the previous one, creating a web of knowledge.

164 Intermediate Karate (1:1:0) Prerequisite PHED 163 or permission of instructor. Second-level course in American Kenpo Karate. Students review information and refine skills developed in the introductory class, as well as learn new forms and techniques to increase skill performance at the next level.

165 Introduction to Racquetball (1:1:0) A practical course designed as an introduction to racquetball. Involves activities to teach students basic racquetball terms, rules, scoring, safety, and techniques for the forehand, backhand, overhead, and serve, as well as singles and doubles.

166 Intermediate Racquetball (1:1:0) Prerequisite: PHED 165 or permission of instructor. A practical course designed for the novice racquetball player. Course involves activities to teach students intermediate skills, including ceiling shots, kill shots, passing shots, back wall strokes, advanced serves, court positions, and tactics and strategies for singles and doubles.

201 Developmental Motor Patterns (3:3:0) Analyzes motor-skill development and prescription of activities from immature to mature stages.

202 Teaching Skilful Movement (3:3:0) Covers planning and presenting lessons on numerous motor skills using varied teaching strategies in a peer teaching setting.

230 Asian Martial Arts: Origin and Development (3:3:0) Introduction to martial arts of East, South, and Southeast Asia. Lectures address martial arts from a historical, philosophical, biographical, warfare, and sport perspective.

250 Water Safety Instruction (2:2:0) Prerequisite: PHED 150 and instructor evaluation. Fee required. Introduces planning, organizing, and executing American Red Cross Swimming and Water Safety courses. Focus is on educational methods, approaches, and skill development applicable to swimming and water safety instruction.

255 Basic Scuba Diving (2:2:0) Fee required. Provides training toward certification as an open water SCUBA diver. The course emphasizes the learning of snorkeling (free diving introduction) and SCUBA skills. Safe diving skills, the physics of diving, equipment care and maintenance, diving fitness, underwater navigation, record keeping, and other basic SCUBA knowledge will be covered in the course. On successful completion of the course, students will be qualified for open water certification by Scuba Schools International (SSI).
273 Net and Target Games (2:0:2) Open to BPRE and BSED PHED majors only. Skill and content knowledge in net and target games. Includes skill progression, strategies, officiating, and authentic assessment in games such as volleyball, golf, tennis, and badminton.

274 Dance and Educational Gymnastics (2:0:2) Open to BPRE and BSED PHED majors only. Skill and content knowledge in dance, rhythms, and educational gymnastics.

275 Field and Invasion Games (2:0:2) Open to BPRE and BSED PHED majors only. Skill and content knowledge in field and invasion games. Includes skill progression, strategies, officiating, and authentic assessment in activities such as softball, basketball, soccer, field events, and Ultimate Disc.

300 Kinesiology (3:3:0) Prerequisite: BIOL 124 and 125. Covers anatomical and mechanical study of human movement.

304 Sport, Culture, and Society (3:3:0) Prerequisite: PHED 200, or permission of instructor. Analyzes sport from educational, political, economic, and cultural perspectives.

306 Psychomotor Learning (3:3:0) Prerequisite: BSED status. Analyzes psychological aspects, learning theory, and practice conditions for learning motor skills.

308 Adapted Physical Education (3:3:0) Prerequisites: BSED status, and BIOL 124 and 125. Introduces disabilities in public schools. Covers national standards, federal legislation, IEPs, and developmental inclusion models.

364 Strength Training: Concepts and Applications (3:3:0) Prerequisites: BIOL 124 and BIOL 125. Provides students with an opportunity to develop an in-depth understanding of the principles of strength training and conditioning, including anatomical and physiological considerations, lifting techniques, equipment selection, program development/evaluation, and weightlifting safety.

365 Measurement and Evaluation of Physical Fitness (3:3:0) Prerequisites: BIOL 124 and 125. Covers selection, administration, evaluation, and construction of measurements and evaluation instruments and techniques in physical education. Also covers statistical analysis of data and survey of selected instruments.

404 Middle and High School Instruction in Physical Education (3:3:0) Prerequisites: PHED 201, 202, 273, 274, 275, 306, and 403; and BSED status. Examines school curriculum, assessment, content, and teaching practices for middle and high school physical education programs. Requires field experience.

410 Social/Psychological Aspects of Health and Fitness (3:3:0) Covers research, trends, and techniques of health and fitness from a behavioral perspective.

415 Student Teaching in Physical Education (12:0:12) Prerequisites: Completion of all courses in approved program, and acceptance into student teaching. Provides supervised clinical experience for a full semester in approved schools. Requires experiences in elementary (seven weeks) and secondary (seven weeks) school settings. Includes participation of one week in preservice workshops and related activities, and weekly seminar sessions.

442 Practicum in Physical Education (1–3:0:1–3) Prerequisite: 90 credits, or 60 credits and permission of instructor. Provides supervised professional practice in a selected area of interest. Students may repeat this course, but no more than 3 credits may be given. Each credit requires a minimum of 60 hours of participation in the specialty over a period of six weeks. Areas selected with faculty advisor approval.

450 Physiology of Exercise (4:3:1) Prerequisites: BIOL 124 and 125, and PHED 300. Covers human physiological responses to environmental changes and exercise.

480 Special Topics (3:3:0) Prerequisite: 60 credits. See course description in the Schedule of Classes. Selected topics reflect interest in specialized areas of exercise science or health promotion.

499 Independent Study in Physical Education and Fitness (1–3:1–3:0) Prerequisites: 90 credits, and permission of instructor. Study of a problem area in physical education research, theory, or practice under direction of faculty member. May be repeated, but no more than 3 total credits may be earned.

670 Analysis of Teaching in Physical Education (3:3:0) Presents variety of research techniques for studying teacher and learner behaviors in physical education, engaging the teacher as researcher and grant writer. Goal is to prepare teachers to be leaders in their field.

672 Curriculum and Assessment in Physical Education (3:3:0) Provides knowledge of curriculum models and assessment strategies in standards-based physical education program. Studies curriculum models such as sport education and adventure education. Examines traditional and alternative assessment.

673 Motor Development for Special Populations (3:3:0) Provides knowledge that focuses on individuals with orthopedic, sensory, and learning disabilities in physical education setting. Areas of focus include development of motor patterns and skills assessment, and planning and instruction for students with disabilities.

680 Mentoring and Supervising in Physical Education (3:3:0) Prerequisite: PHED 670. Prepares mentors and supervisors of preservice and in-service teachers in physical education. Topics include professional dispositions, assessment and evaluation, adult learners, counseling and communication, providing feedback, and reflection and inquiry into the profession.

**Physical Sciences (PSCI)**

**College of Science**

701 Frontiers of Physical Sciences (3:3:0) Prerequisite: admission to physical sciences doctoral program. Each semester, the course will cover between four and six topics considered to be at the frontiers of the physical sciences—the key questions that are of interest to researchers today. The topics will be chosen from interdisciplinary areas, such as nanoscience, astroparticle physics, nonlinear dynamics, and neuroscience. Approximately two to three weeks will be spent on each topic, and the specific topics may vary each semester. The course includes guest lectures given by faculty who are doing research in each area. Assignments include
readings from the current literature as well as projects and class presentations.

702 Research Methods (3:3:0) Prerequisite: admission to physical sciences doctoral program. This course trains students in research methodologies, techniques, and data analysis methods in the physical sciences. Covers approaches for outlining and synthesizing a problem, techniques for measurement and analysis, and methods used for data analysis and interpretation.

703 Frontiers of Physical Sciences (1:1:0) Prerequisite: admission to physical sciences doctoral program. This course combines invited seminars from faculty (internal and external) with graduate student seminars. Presentation at a seminar is a requirement for advancement to candidacy in the physical sciences doctoral program. May be repeated three times.

998 Dissertation Proposal (1–12:0:0) Prerequisite: permission of advisor. Covers development of a research proposal under the guidance of a dissertation director and the doctoral committee. The proposal forms the basis for the doctoral dissertation. May be repeated as needed, but no more than a total of 24 credits in PSCI 998 and 999 may be applied toward satisfying doctoral degree requirements. Out of 24, no more than 12 credits of PSCI 998 may be applied.

999 Doctoral Dissertation (1–12:0:0) Prerequisite: admission to candidacy in physical sciences doctoral program. Doctoral research performed under direction of dissertation director. May be repeated as needed, but no more than a total of 24 credits in PSCI 998 and 999 may be applied toward satisfying doctoral degree requirements.

Physics (PHYS)

Physics and Astronomy

101 Light and Sound in Our World (3:3:0) Nature of light, color, sound, electromagnetic spectrum, optical instruments, mechanisms of vision and hearing, color addition and subtraction, synthesis of musical sounds, interference of waves, polarization, Doppler effect, lasers, holography.

102 Sports Physics (3:3:0) Introduction to laws of physics in context of sports. Physics topics to be studied include two-dimensional motion, forces, conservation of energy, and momentum in the application to sports. Sports include football, basketball, baseball, swimming, and tennis.

103 Physics and Everyday Phenomena 1 (4:3:3) For nonscience majors. The course uses basic physics concepts from the areas of mechanics and thermodynamics to explain a wide range of everyday phenomena, such as how we walk and drive, how a ship floats, how clothing keeps us warm, and why it rains when we have a low pressure system.

104 Physics and Everyday Phenomena 2 (4:3:3) Prerequisite: either PHYS 103 or permission of instructor. For nonscience majors. The course uses basic physics concepts from the areas of light, sound, electricity, magnetism, and modern physics to explain a wide range of everyday phenomena. Topics include how we speak, hear, and see, what to do if the circuit breaker keeps tripping, how your computer stores and displays data, how rainbows and northern lights form, and the basic nature of matter.

121 Uses of Physics (1:1:0) Introductory course intended for both majors and nonmajors. Describes the uses of physics to a number of disciplines and professions, including medicine, information technology, energy, and environmental technology.

122 Inside Relativity (1:1:0) Introductory course describing Einstein's theories of special and general relativity intended for majors and nonmajors.

123 Inside the Quantum World (1:1:0) Introductory course describing quantum theory intended for majors and nonmajors.

124 Experimental Explorations in Physics (1:0:2) Introductory nonmathematical course intended primarily for physics majors. Experimental studies of phenomena in mechanics, electricity and magnetism, and optics. Stresses development of familiarity with methods and techniques of measurement and with data evaluation.

161 University Physics I Laboratory (1:0:3) Corequisites: PHYS 160 and MATH 114. Experiments in mechanics.

225 Problems in Physics 1 (1–3:0:0) Prerequisite: 24 credits, and 2.50 GPA in physics and mathematics. Individual study of physics problems of current interest. May be taken three times for credit.

243, 245 College Physics (3:3:0), (3:3:0) PHYS 243 is prerequisite to PHYS 245. Two-semester basic physics course with emphasis on topics of classical and modern physics of particular importance to science majors. Principles of mechanics, heat, electricity, magnetism, optics, and atomic and nuclear physics are discussed.

244, 246 College Physics Lab (1:0:3), (1:0:3) Corequisites: PHYS 243 for 244, and 245 for 246. Laboratory portion of two-semester basic physics course.

251 Introduction to Computer Techniques in Physics (3:3:0) Prerequisite: PHYS 160. Introduction to using computers in physics based on examples from mechanics and astronomy.

260 University Physics II (3:3:0) Prerequisite: PHYS 160 with grade of C or better (2.00); corequisite: Math 213. Waves, electricity, and magnetism.

261 University Physics II Laboratory (1:0:3) Corequisites: MATH 213 and PHYS 260. Experiments in mechanics, electricity, and magnetism.

262 University Physics III (3:3:0) Prerequisite: PHYS 260 with grade of C or better (2.00); corequisite: MATH 214. Thermodynamics, optics, and modern physics.

263 University Physics III Laboratory (1:0:3) Prerequisite: PHYS 261; corequisite: PHYS 262. Experiments in optics and modern physics.

265 Advanced University Physics II Laboratory (2:0:3) Corequisites: MATH 213 and PHYS 260. Credit may be received for PHYS 261 or 265. Experiments in mechanics, electricity, and magnetism with emphasis on data analysis using spreadsheets and Matlab.

266 Introduction to Thermodynamics (1:1:0) Prerequisite: PHYS 260. Students may not receive credit for both PHYS
262 and 266. Laws of thermodynamics, kinetic theory of gases, heat engines, and entropy.

303 Classical Mechanics (3:3:0) Prerequisites: PHYS 262; MATH 214 or permission of instructor. Motion of a particle in one, two, and three dimensions; systems of particles; noninertial coordinate systems; and equations of Lagrange and Hamilton.

305/ECE 305 Electromagnetic Theory (3:3:0) Prerequisite: PHYS 260; corequisite: MATH 214. Interaction of static charges, interaction of stationary currents, electromagnetic induction, and Maxwell’s equations.

306 Wave Motion and Electromagnetic Radiation (3:3:0) Prerequisite: PHYS 262; corequisite: MATH 214. Vibrating string, plane waves, interference, diffraction, polarization, electromagnetic waves, dispersion, and relativity.

307 Thermal Physics (3:3:0) Prerequisite: PHYS 262. Classical concepts of energy and temperature, basic definitions, first and second laws of thermodynamics, properties of pure substances, and equations of state. Introduction to classical and quantum statistics and their application to physical systems.

308 Modern Physics with Applications (3:3:0) Prerequisite: PHYS 262; corequisite: MATH 214. Study of modern physics with emphasis on applications. Topics include introductory quantum physics; modern optics; lasers; binding and energy bands in solids; electrical, thermal, and magnetic properties of solids; semiconductors; radioactivity; nuclear reactions; radiation detectors; and applications of nuclear physics to other sciences.

310 Physics of Semiconductor Materials and Processing (3:3:0) Prerequisites: PHYS 160, 260, and 262; or permission of instructor. Survey of the electronic and structural properties of semiconductors and the physics of semiconductor processing. Topics to be discussed include crystal growth, crystal defects, thin films, thermal properties, lithography, and characterization.

326 Problems in Physics II (1–3:0:0) Individual study of physics problems of current interest. May be taken three times for credit.

328/ASTR 328 Introduction to Astrophysics (3:3:0) Prerequisites: PHYS 262 and MATH 214. Topics include physical concepts; magnitudes of stars; Hertzsprung-Russell diagram; stellar radiation; stellar structure and stellar evolution; white dwarfs, red giants, supernovas, neutron stars, black holes; interstellar matter, dust, and molecules; cosmic rays and magnetic fields; galactic structure, galaxies, quasars, and intergalactic matter; high energy astrophysics, cosmology, and general relativity; and models of the universe.

390 Topics in Physics (1–4:0:0) Selected topics in physics not covered in fixed content courses.

402/PHYS 402 Introduction to Quantum Mechanics and Atomic Physics (3:3:0) Prerequisite: PHYS 308, or permission of instructor. Experimental basis of quantum mechanics; the wave function; systems in one, two, and three dimensions.

405, 406 Honors Thesis in Physics (3:0:0) Prerequisites: 21 credits of physics courses including PHYS 262, 305, and 308; and admission to Physics Department Honors Program. PHYS 405 is a prerequisite for PHYS 406. Project chosen and completed under the guidance of a faculty member, which results in a thesis. An oral progress report is required for PHYS 405. Oral and written presentations are required for PHYS 406. Students may receive no more than 6 credits of PHYS 405, 406, 408, and 409.

407 Senior Laboratory in Modern Physics (3:0:9) Prerequisite: 21 credits of physics courses, and PHYS 305 and 308. Experiments in modern physics involving advanced techniques in electronics, optics, nuclear physics, and solid state. Typical experiments include the Frank Hertz Experiment, Hall Effect, electron paramagnetic resonance, and Mössbauer Effect. This course meets the writing-intensive requirement.

408 Senior Research (2–3:0:0) Prerequisite: 21 credits of physics courses. Work under guidance of faculty member on research project in experimental or theoretical physics. May be taken twice with permission of the Physics Department. Students may receive no more than 6 credits of PHYS 405, 406, 408, and 409.

409 Physics Internship (3:0:0) Prerequisites: 75 credits, 21 credits of physics courses, and permission of department. See department for other requirements and application procedures prior to enrollment. On-the-job experience for physics majors in industry or government laboratories including summer programs. Students may receive no more than 6 credits of PHYS 405, 406, 408, and 409.

416 Special Topics in Modern Physics (1:2:0) Prerequisite: 21 credits of physics courses. Topics of current interest in modern physics with emphasis on the breadth of physical understanding needed to approach many of today’s problems. The course will also review all of undergraduate physics through assigned problems from the GRE test.

417/GEOL 417 Geophysics (3:3:0) Prerequisites: GEOL 101, 102, 201, 301; MATH 113, 114; and PHYS 160. Corequisites: MATH 213 and PHYS 260, 261. Seismological and gravitational theory and application to an understanding of the Earth’s interior. Geology requirement may be waived for physics and engineering students with sufficient background.

428/ASTR 428 Relativity and Cosmology (3:3:0) Prerequisite: PHYS 214; and PHYS 303, 305, and 262; or permission of instructor. Special relativity; four-dimensional space-time; general relativity; non-Euclidean geometries, geodesics, and field equations; tests of general theory of relativity; black holes; cosmology; models of the universe; remnant blackbody radiation; big bang cosmology; thermodynamics; and the universe.

502/PHYS 402 Introduction to Quantum Mechanics and Atomic Physics (3:3:0) Prerequisite: PHYS 308, or permission of instructor. Experimental basis of quantum mechanics, the wave function, and systems in one, two, and three dimensions.

510 Computational Physics I (3:3:0) Prerequisites: PHYS 303 and 305. Study and development leading to computer simulations of various physical systems. Requires the study and development of computational techniques and numerical algorithms to obtain both numerical results and visualization of these results. Application to individual physical processes taking place in a variety of physical systems. In computational physics research, individual physical processes are only components of a larger simulation.
512/CSI 687 Solid State Physics and Applications (3:3:0)  
Prerequisite: PHYS 402 or 502. Crystal structures, bonding, lattice vibrations, the free electron model, metals, semiconductors and semiconductor devices, superconductivity, and magnetism.

513 Applied Electromagnetic Theory (3:3:0)  
Prerequisites: PHYS 305, 308; and MATH 313, 314 or equivalent. Classical electromagnetic theory with applications. Topics include electrostatics, magnetic fields and materials, electromagnetic wave propagation, waveguides, transmission lines, radiation, and antennas.

533/CHEM 620 Modern Instrumentation (3:3:0)  
Prerequisites: PHYS 513 and an electronics course. Topics include sensors for radiation, particles, electric and magnetic fields, pressure, and motion; electronic instruments, computer data collection, instrumentation noise and noise reduction methods, and specialized instrumentation systems for various areas of applied physics.

540 Nuclear and Particle Physics (3:3:0)  
Prerequisite: PHYS 402 or 502. Accelerators, detectors and related electronics; nuclear and elementary particle structure; symmetries and conservation laws; the electromagnetic, weak, and hadronic interactions; nuclear models; the quark model; and nuclear science and technology.

575/CSI 655 Atmospheric Physics I (3:3:0)  
Prerequisites: PHYS 305, 308; and MATH 313 or equivalent. Introduces basic physical and chemical processes that operate in the Earth’s atmosphere. Emphasis on those concepts that provide a global description of the current atmospheric state and those processes that relate to global change and atmospheric evolution. Topics include equilibrium structure, radiative transfer models, thermodynamics of various atmospheric layers, and the various processes defining these layers.

590 Selected Topics in Physics (1–6:0–6:0)  
Prerequisite: graduate standing, or permission of instructor. Selected topics from recent theoretical or experimental developments and applications. Satisfies needs of professional community to keep abreast of current developments.

600 Special Topics in Physics (1–6:0–6:0)  
In-service course to strengthen and update teachers’ knowledge of physics and astronomy.

611 Electro-optics (3:3:0)  
Prerequisites: PHYS 502 and 513. Optical modulators, display devices, types and operation of lasers, mode locking, Q-switching, photodetectors, optical fibers.

612 Physics of Modern Imaging (3:3:0)  
Prerequisite: PHYS 513. Study of imaging methods using acoustic and electromagnetic waves to probe extended objects, and mathematical transformations to produce images from scattered waves. Topics include classical imaging, physical optics, Fourier transform, holography, tomography, seismic mapping, underwater acoustic imaging and mapping, side-looking radar, antenna arrays, applicable computer methods.

613/CSI 780 Computational Physics II (3:3:0)  
Prerequisites: PHYS 303, 305, and 510; PHYS 502 or equivalent recommended. Study of diverse physical systems with emphasis on modeling and simulation. Study and development of numerical algorithms and techniques to obtain both numerical results and visualization of these results. Projects undertaken will draw from such areas as many-body orbital dynamics, molecular interactions, quantum systems, radiative transfer in high-temperature plasmas, stellar interiors, hydrodynamics, and cosmology.

614 Thermodynamics and Kinetics of Materials (3:3:0)  
Prerequisites: MATH 113, 114, 213, 307; PHYS 262 or 266, or permission of instructor. Advanced thermodynamics and physical kinetics with applications to materials science. The course covers an axiomatic formulation of thermodynamics, theory of phase transformations, kinetic theory of reactions and diffusion processes in solids, and interface phenomena. Possible applications considered in the course include processing and fabrication of semiconductor materials, metal oxidation, and corrosion. Diffusion-controlled phase growth in solid solutions, shape memory alloys, and small-size effects in physical properties of materials.

620 Continuum Mechanics (3:3:0)  
Prerequisite: PHYS 510. Study of continuum mechanics; topics include physical concepts, mathematical formulation and solution, elastic materials, ideal fluids, viscous fluids, waves in continuous media, turbulence, thermal convection, stability considerations, high-temperature gas flows, radiative processes for momentum and energy transport, shocks, and computational fluid dynamics.

630/BINF 740: Introduction to Biophysics (3:3:0)  
Prerequisite: undergraduate degree in physics or permission of instructor. Introduces biophysics, focusing on physical and chemical concepts and their relation to rapidly expanding interdisciplinary interfaces among biology, chemistry, and physics. Reveals multiscale nature of biophysics, and includes exploration of macroscopic and microscopic applications.

660/ASTR 660 Space Weather (3:3:0).  
Prerequisite: graduate standing, or permission of instructor. Overview of space weather including sun, heliosphere, magnetosphere, and ionosphere.

676 Atmospheric Physics (3:3:0)  
Prerequisites: PHYS 303, 305, and 308; and MATH 314. Covers the basic conservation laws of mass, momentum, and energy, and a scaling analysis of the equations of motion and thermodynamics. Balanced flows in the atmosphere are discussed. Concepts of circulation and vorticity; the role of the atmospheric boundary layer in mass, momentum, and energy transfer; synoptic scale motions; and the role of gravity and Rossby waves in controlling the general circulation of the atmosphere are covered.

684 Quantum Mechanics I (3:3:0)  
Prerequisites: PHYS 305, 308; MATH 313 and 314, or equivalent. Fundamental concepts, including one-dimensional solutions of Schrödinger’s equations, operators in Hilbert space, observables, propagators, and harmonic oscillators.

685 Classical Electrodynamics I (3:3:0)  
Prerequisites: PHYS 305, 308; MATH 313 and 314, or equivalent. Deals with static and dynamic properties of electromagnetic fields as described by Maxwell’s equations. Covers electrostatics, magnetostatics, boundary value problems, multipoles, time dependent fields, propagating wave solutions, and resonant structures.

701 Theoretical Physics (3:3:0)  
Prerequisites: PHYS 502, 510, and 513; or permission of instructor. Study of the physical basis for selection of particular mathematical tools in physics; topics include curvilinear coordinates, tensors, matrices, differential equations, special functions, complex variables, and group theory.
703 Seminar in Physics (1:1:0) Prerequisite: permission of instructor. A general seminar course that combines invited seminars from faculty (both internal and external) with graduate student seminars.

705 Classical Mechanics (3:3:0) Prerequisites: PHYS 502, 510, and 513; or permission of instructor. Study of classical mechanics; topics include variational principles, constrained motion, Lagrangian and Hamiltonian mechanics, canonical transformations, and applications (central forces, rigid-body motion, oscillations).

711/Chem 730/CSI 782 Statistical Mechanics (3:3:0) Prerequisites: PHYS 502 and 510, or permission of instructor. Topics include thermodynamics, kinetic theory, ensemble theory, quantum statistics, and applications.

728/CSI 788 Simulation of Large-Scale Physical Systems (3:3:0) Prerequisites: PHYS 613 or equivalent, and FORTRAN or other high-level language programming. Study of diverse large-scale physical systems with emphasis on the modeling and simulation of these multifaceted systems. Study and development of numerical algorithms and techniques to obtain both numerical results and visualization of these results. Projects will be drawn from such areas as many-body dynamics, molecular dynamics and interactions, atmospheric structure and dynamics, high-temperature plasmas, stellar structure, hydrodynamics systems, galactic structure and interactions, and cosmology.

736/Chem 736/CSI 783 Computational Quantum Mechanics (3:3:0) Prerequisite: PHYS 502 and 510, or permission of instructor. Study of the fundamental concepts of quantum mechanics from a computational point of view, review of systems with spherically symmetric potentials, many-electron-atom solutions to Schrodinger’s equation, electron spin in many-electron systems, atomic structure calculations, algebra of many-electron calculations, Hartree-Fock self-consistent field method, molecular structure calculations, scattering theory computations, and solid-state computations.

760/ASTR 760 Space Plasma Physics (3:3:0) Prerequisite: PHYS 622 or 513, or permission of instructor. Covers plasma processes involved in today’s space physics research, including different regimes of plasma; basic concepts in kinetic, fluid, and MHD plasmas; and existent waves in these media. Also covers basics of shocks, discontinuities, transport and acceleration of particles such as cosmic rays, reconnection, and MHD instabilities.

780/CSI 789 Advanced Selected Topics in Physics (3:3:0) Prerequisite: permission of instructor. Selected topics in physics not covered in fixed-content physics courses. May be repeated for credit as needed.

784 Quantum Mechanics II (3:3:0) Prerequisites: PHYS 684, or permission of instructor. Advanced topics in quantum mechanics. Covers rotations, angular momentum, 3D solutions to Schrodinger’s equations, symmetries, conservation laws, approximate methods, and spin mechanics.

785 Classical Electrodynamics II (3:3:0) Prerequisite: PHYS 685, or permission of instructor. Advanced topics in electrodynamics. Covers radiation, scattering and diffraction, special relativity, relativistic particle dynamics, Lorentz transformation, 4-vectors, transformation of fields, charges and currents, Thomas precession, retarded potentials, and radiation from moving charges.

796 Directed Reading and Research (1–6:0:0) Prerequisite: admission to master’s program, and permission of instructor. Reading and research on a specific topic in physics or related field under the direction of a faculty member. May be repeated as needed.

798 Research Project (3:0:0) Prerequisites: 9 graduate credits, and permission of instructor. Project chosen and completed under the guidance of a graduate faculty member, which results in an acceptable technical report. Graded S/NC.

799 Master’s Thesis (1–6:0:0) Prerequisites: 9 graduate credits, and permission of instructor. Project chosen and completed under the guidance of a graduate faculty member, which results in an acceptable technical report and oral defense. Graded S/NC.

998 Doctoral Dissertation Proposal (1–12:0:0) Prerequisites: admission to physics doctoral program and permission of advisor. Covers development of a research proposal under the guidance of a dissertation director and the doctoral committee. The proposal forms the basis for the doctoral dissertation. May be repeated as needed; however, no more than 24 credits in ASTR/Phys 998 and ASTR/Phys 999 may be applied toward satisfying doctoral degree requirements in the physics PhD program. Out of the 24, no more than 12 credits of ASTR/Phys 998 may be applied.

999 Doctoral Dissertation (1–12:0:0) Prerequisites: admission to doctoral candidacy in physics doctoral program and permission of advisor. Doctoral research performed under direction of dissertation director. May be repeated as needed; however, no more than 24 credits in ASTR/Phys 998 and ASTR/Phys 999 may be applied toward satisfying doctoral degree requirements in the physics PhD program.

Psychology (PSYC)

Psychology

100 Basic Concepts in Psychology (3:3:0) Prerequisite to all 200-, 300- and 400-level courses in psychology. Introduces psychology as a scientific discipline. Examines concepts and methods in learning, motivation, development, personality, and measurement.

110 Seminar in General Psychology (1:1:0) Corequisite: PSYC 100. Explores applications, implications, methods, and findings of psychology. Students must be enrolled concurrently in PSYC 100. In-class work includes discussion that enriches the PSYC 100 lecture material, exploration of controversial issues in psychology, use of technology to broaden knowledge of psychology, and in-depth discussions of topics on which instructor has special expertise. Short papers are required.

211 Developmental Psychology (3:3:0) Prerequisite: PSYC 100 or permission of instructor. Review of major developmental theories including perspectives of childhood, adolescence, adulthood, and old age.

231 Social Psychology (3:3:0) Prerequisite: PSYC 100 or permission of instructor. Study of human behavior development in a social matrix, including such topics as socialization, cultural behavior, group norms, and attitude formation.

260 Basic Research Methods in Psychology (1–3:0:0) Prerequisite: 6 credits of psychology or permission of instructor and department. Introduction to research methods.
in psychology in the context of assisting faculty with research; individualized sections by arrangement with faculty. Methods taught vary but generally include basic data collection and recordkeeping methods in research. Course culminates in a paper describing techniques learned. No more than six credits in PSYC 260, 350, and 460 can be used toward a psychology major.

300 Statistics in Psychology (4:3:2) Prerequisites: 6 credits of psychology and 3 credits of mathematics course work; or permission of instructor. Students are strongly encouraged to take PSYC 301 concurrently. Descriptive and inferential statistics in design, analysis, and interpretation of psychological research with practical application using computers in laboratory.

301 Research Methods in Psychology (3:2:2) Prerequisite: 6 credits of psychology, including PSYC 300 as prerequisite or corequisite, or permission of instructor. Students are strongly encouraged to take PSYC 300 concurrently. General research design in psychology, with an emphasis on experimental design and control. Topics include use of human participants in research, reliability and validity, observational methods, and survey and longitudinal designs. Laboratory work will include designing and running research studies and writing manuscripts using appropriate style and format. PSYC 301 is a writing-intensive course.

304 Principles of Learning (4:3:2) Prerequisite: PSYC 300 with grade of C or better, or permission of instructor. Principles of animal learning, including such topics as classical and operant conditioning, discrimination learning, and animal cognition. Laboratory projects require working with animal subjects. PSYC 304 is a writing-intensive course.

309 Sensation, Perception, and Information Processing (4:3:2) Prerequisite: PSYC 300 and PSYC 372, or permission of instructor. Principles of perception, including topics such as psychophysics, perceptual organization, perceptual learning, and perceptual constancies. Laboratory projects demonstrate and investigate perceptual phenomena. PSYC 309 is a writing-intensive course.

313 Child Psychology (3:3:0) Prerequisite: 6 credits of psychology or permission of instructor. Study of human psychological development from conception to adolescence including such topics as genetic factors, emotional and intellectual growth, and environmental influences.

314 Adolescent Psychology (3:3:0) Prerequisite: 6 credits of psychology or permission of instructor. Study of the biological and cultural changes accompanying adolescence, including the effect of these changes on emotional, intellectual, and social development.

317 Cognitive Psychology (3:3:0) Prerequisite: 6 credits of psychology or permission of instructor. An in-depth overview of important topics in cognitive psychology, including memory, attention, pattern recognition, problem solving, reasoning, and psycholinguistics.

320 Psychological Tests and Measurements (4:3:2) Prerequisite: PSYC 300 with grade of C or better, or permission of instructor. Examination and application of principles underlying the theory, interpretation, and administration of psychological tests, including a study of tests of intelligence, achievement, and ability.

321 Counseling Psychology (3:3:0) Prerequisite: PSYC 325 or permission of instructor. Review of the theories and methods in psychological counseling.

322 Behavior Modification (3:3:0) Prerequisite: PSYC 324 or permission of instructor. Examination of experimental principles of human and animal learning within theoretical framework of applied behavior analysis, including design, implementation, and evaluation of operant intervention programs across a wide variety of human situations.

323 Clinical and Social Psychology Research Techniques (4:3:2) Prerequisite: PSYC 300 with grade of C or better, or permission of instructor. Review and application of research techniques including interviewing, survey analysis, and process analysis. PSYC 323 is a writing-intensive course.

324 Personality Theory (3:3:0) Prerequisite: PSYC 100 or permission of instructor. Introduction to classical and contemporary theories of personality, and comparative evaluation of major theories in terms of relevant studies.

325 Abnormal Psychology (3:3:0) Prerequisites: PSYC 100, and one of PSYC 211, 231, or 324; or permission of instructor. Study of development of abnormal behavior patterns, including such topics as methods of diagnosis and prevention of serious mental disorders such as psychosomatic disorders, psychoses, character disorders, and mental retardation.

326 Therapeutic Communication Skills (3:3:0) Prerequisite: PSYC 325 or permission of instructor. Introduction to understanding and use of basic therapeutic communication skills used in clinical and counseling psychology.

327 Psychology in the Community (3:3:0) Prerequisite: psychology major with minimum 6 psychology credits, and permission of associate chair for undergraduate studies. Corequisite: Enrollment in psychology course for which this is service learning component. Course comprises one-hour service learning component linked to selected psychology courses. Maximum 6 credits of PSYC 327, 328, 421, 422, 548, and 549 can be applied to the psychology major.

328 Psychology in the Community Laboratory (1:0:0) Prerequisite: psychology major with minimum 6 psychology credits and permission of course instructor and associate chair for undergraduate studies. Corequisite: Enrollment in psychology course for which this is service learning component. Course comprises one-hour service learning component linked to selected psychology courses. Maximum 6 credits of PSYC 327, 328, 421, 422, 548, and 549 can be applied to the psychology major.

330 Psychology of Adjustment (3:3:0) Prerequisite: PSYC 100 or permission of instructor. PSYC 330 cannot be taken for credit by psychology majors. Nature of effective and faulty patterns of adjustment. Factors in healthy and unhealthy personality development, unique motivation patterns of individuals, and influence of personally significant groups on adjustment. Resources for personal growth and application of contemporary psychological principles to achievement of increased intellectual, emotional, and social competence.

333 Industrial and Organizational Psychology (3:3:0) Prerequisite: PSYC 100, 300. Examination of application of psychological principles and methods to problems commonly encountered in business and industry.
350 Directed Reading and Research in Psychology (1–3:0:0) Prerequisites: PSYC 100 and 300, and permission of instructor and department. Library research in psychology, culminating in a substantial formal paper; individualized sections by arrangement with faculty. No more than six credits in PSYC 260, 350, and 460 can be used toward psychology major.

362 Psychology of Women (3:3:0) Prerequisites: PSYC 100 and BIOL 103, 104; or permission of instructor. Behavior and attitudes of women; influence of chromosomes and hormones on behavior, influence of culture on sex role differentiation, and theories of sex role development.

372 Physiological Psychology (3:3:0) Prerequisites: PSYC 100 with grade of C or better, and BIOL 103 and 104; or permission of instructor. Survey of neuroscience, including basic neuroanatomy, neural and synaptic transmission, neural mechanisms underlying normal and abnormal behavior, and biological mechanisms of drug action.

373 Psychological Physiology Laboratory (1:0:2) Prerequisite or corequisite: PSYC 372 or permission of instructor. Functional anatomy and physiology of the brain, including dissection of brain and eye, and a demonstration and practice in research methods for studying physiological mechanisms underlying behavior.

375 Brain and Behavior I (3:3:0) Prerequisites: PSYC 100 with grade of C- or better, and BIOL 103, 104; or permission of instructor. First half of comprehensive survey of neuroscience, including basic neuroanatomy, neural and synaptic transmission, neural mechanisms underlying normal and abnormal behavior, and biological mechanisms of drug action. Students may earn credit for 372 and either 375 or 376, but they may not earn credit for all three.

376 Brain and Behavior II (3:3:0) Prerequisites: PSYC 100 with grade of C- or better, and BIOL 103, 104; or permission of instructor. Second half of comprehensive survey of neuroscience, including basic neuroanatomy, neural and synaptic transmission, neural mechanisms underlying normal and abnormal behavior, and biological mechanisms of drug action. Students may earn credit for 372 and either 375 or 376, but they may not earn credit for all three.

379 Applied Cross-Cultural Psychology (3:3:0) Prerequisite: PSYC 100, or permission of instructor. A review of important landmarks in cross-cultural research, showing how this research impacts psychology as a discipline. Emphasizes an empirical approach to cross-cultural study and includes topics such as theoretical and empirical developments in cross-cultural psychology, development of coherent schemas to guide cross-cultural research and interventions, comparison of psychology's goals and assumptions in Western and other cultures, and integration of course materials into educational and career goals of students.

414 Behavior Disorders of Childhood (3:3:0) Prerequisites: PSYC 313 and 325, or permission of instructor. Review of the theories, methods, and research dealing with emotional and behavioral disorders of children.

415 Psychological Factors in Aging (3:3:0) Prerequisite: PSYC 100 or permission of instructor. Examination of the sensory, perceptual, intellectual, and personality changes that occur in older people. Common adjustment problems as well as more serious adjustment difficulties are discussed. Applications of various personality theories of aging.

418/518 Death, Dying and Grieving (3:3:0) Prerequisite: PSYC 100. Advanced survey of processes of grieving and their relationship to death and dying. Topics include ways of dying, effects of death on loved ones, and care for the terminally ill.

421, 422 Undergraduate Practicum in Psychology (3:3:0), (3:3:0) Prerequisites: PSYC 325 and 326, and permission of Clinical Review Committee. No more than 6 credits in PSYC 327, 328, 421, 422, 548, and 549 can be used toward psychology major. Supervised experience in application of psychological principles requiring work in a nonclassroom situation.

423 Group Psychotherapy Techniques (3:3:0) Prerequisite: PSYC 324 or permission of instructor. Review of theory and methods of group therapy with emphasis on humanistic and interpersonal approaches, including applications to family therapy, alcoholism, and drug abuse.

435 Personnel Training and Development: A Psychological Perspective (3:3:0) Prerequisite: PSYC 230; prerequisite or corequisite: PSYC 320, or permission of instructor. Overview and critique of training methods used in industry from viewpoint of psychological theory, including simulations, on-the-job training, supervisory/leadership skills training, computer-assisted instruction, and programmed texts. Principles of needs analysis, program development, and program evaluation are discussed within framework of industrial psychology.

460 Independent Study in Psychology (1–3:0:0) Prerequisites: 18 credits of psychology including PSYC 301, with grade of C or better; 2.50 GPA in psychology; and written proposal approved before registration by instructor and department. No more than 6 credits in PSYC 260, 350, and 460 can be used toward psychology major. Advanced research methods in psychology in context of individual student projects or assisting with research on faculty projects; individual sections by arrangement with faculty.

461 Special Topics (3:3:0) Prerequisite: see course description in Schedule of Classes. Selected topics reflecting interest in specialized areas. Announced in advance.

465 History and Systems in Psychology (3:3:0) Prerequisite: 18 credits in psychology including PSYC 317, with grade of C or better, or permission of instructor. Historical background and major theoretical systems in modern psychology. Approaches include behaviorism, cognitive/information processing approaches, and psychodynamic theories.

466 Psychology of Intimate Relationships (3:3:0) Prerequisite: PSYC 100, 231; PSYC 324 recommended. Advanced survey of theories and research related to intimate relationships, including romantic relationships and those among family members and friends.

476 The Psychology of Working in Groups and Teams (3:3:0) Prerequisite: 60 credits including PSYC 100, or permission of instructor. Teaches knowledge and the skills to meet communication, interpersonal, and task-related challenges that arise when functioning in work teams. Through readings, classroom activities, and applied problem-solving exercises, students acquire or refine team-related competencies. Students study theory of group and team processes while
gaining insight from feedback on their behavior in exercises to become more effective team members.

472 Advanced Physiological Psychology (3:3:0) Prerequisite: PSYC 372, or permission of instructor. Rotating topics. Physiological mechanisms underlying behavior. Selected topics include neuronal bases of learning and memory, and biological bases of reinforcement and addiction. May be repeated once with approval of instructor.

490 Psychology Honors I (3:3:0) Prerequisite: admission to Psychology Department honors program. Review of topics and issues in psychology, including historical overview, theory and supporting data, and influences on behavior. Topics vary. May not be repeated.

491 Psychology Honors II (3:3:0) Prerequisite: PSYC 300, 301, and 490. Introduces advanced statistics, research methodologies, statistics packages, computing and information technology, and library technology appropriate for psychological research and pedagogy. Students required to complete proposal in preparation for admission to Psychology Honors III. May not be repeated.

492 Psychology Honors III (3:3:0) Prerequisite: PSYC 491, and approval of proposal for final honors project or thesis. Completion of final honors project or thesis. Students must complete project or thesis, and present oral defense to committee and poster to class. Students also expected to prepare proposal to present project or thesis at regional or national conference, or prepare manuscript for publication in appropriate journal. May not be repeated.

499 Senior Thesis (3:0:0) Prerequisite: psychology major with 90 credits, experimental psychology lab course, 3.00 GPA in psychology, PSYC 460, permission of instructor, and prior approval of thesis proposal. Directed research on topic agreed on by student and advisor. Students should take PSYC 460 with same advisor to develop thesis proposal before registering for PSYC 499. Students must complete thesis and defend it orally before advisor and two faculty members. With permission of department, students may take a second semester for maximum 6 credits.

506 Theories of Personality (3:3:0) Prerequisite: PSYC 324 or permission of instructor. Comparative review of prevalent theories of personality with special emphasis on fundamental models, and similarities and differences.

527 Introduction to Neurobiology (2:2:0) Prerequisite: completion of 60 credits, including PSYC 372 or BIOL 213 and 303. Introduction to neurobiology with overview of embryological development of nervous system in evolutionary context. Introduces regional and systems neuroanatomy by studying mammalian visual system with comparative perspective.

530 Cognitive Engineering: Cognitive Science Applied to Human Factors (3:3:0) Prerequisite: experimental lab course, or permission of instructor. Application of cognitive theory to understand and predict interactions among human cognition, artifact, and task. Discusses recent research and case studies that emphasize empirical research, analytical modeling techniques, systems design, and development of tools and methods.

531 Mammalian Neurobiology (3:2:3) Prerequisite: PSYC 327. Functional anatomy of brains of mammals, with emphasis on regional and systems neuroanatomy of humans. Anatomy correlated with material from clinical neuroscience where possible. Laboratory component includes brain dissections and clinical correlations.

541 Survey Research (3:3:0) Prerequisite: PSYC 300 or SOCI 221, or permission of instructor. Introduces theory, method, and practice of survey research; students complete survey research project.

548, 549 Practicum in Gerontology (3:0:0), (3:0:0) Prerequisite: completion of three of the required courses in gerontology certificate program, or permission of instructor. No more than 6 credits in PSYC 327, 328, 421, 422, 548, and 549 can be used toward psychology major. Practical experience in gerontological setting under supervision of qualified professional for 150 contact hours per 3 credits.

552 Histology/Histochemistry of the Brain (5:3:2) Prerequisite: PSYC 372 or equivalent. Explores conceptual basics and provides hands-on experience in techniques for studying brain tissue, including stereotaxic surgery, perfusion, sectioning, Nissl and myelin stains, enzyme histochemistry, immunohistochemistry, in situ hybridization, and quantitative receptor autoradiography.

556 Chemistry and the Brain (3:3:0) Prerequisite: PSYC 372, or permission of instructor. Fundamentals of general chemistry, atoms, molecules, and reactions, with emphasis on water solutions. Organic compounds and functional groups, biosynthesis and properties, and examples from nervous system. Also includes biopolymers and their roles in cellular and neuronal organization, ionic channels, neurotransmitter receptors, and psychoactive substances.

557 Psychometric Methods (3:3:0) Prerequisites: PSYC 611 and 612, or permission of instructor. Examines concepts of psychological measurement with emphasis on predictor test and criterion development. Discusses reliability, validity, and specialized techniques to develop tests of ability, interest, and personality.

558 Neuronal Bases of Learning and Memory (3:3:0) Prerequisite: PSYC 372, or permission of instructor. Examines neuronal mechanisms involved in learning and memory, in animals ranging from invertebrates to humans.

559 Behavioral Chemistry (3:3:0) Prerequisite: PSYC 372, or permission of instructor. Neurochemistry and neuroendocrinology, including neurotransmitter synthesis, genetic aspects of neural functioning, mechanisms of action of neurotransmitters and second messenger systems, regulation of neuroendocrine systems, neuroendocrine effects on behavior, and neuroimmunology.

560 Advanced Applied Social Psychology (3:3:0) Prerequisite: PSYC 231, or permission of instructor. Study of major trends in social psychological research with emphasis on ethical and practical problems posed by human experimentation. Topics include attitude measurement and change, conformity, social perception, and small group interaction.

561 Behavioral Biology of Substance Abuse (3:3:0) Prerequisite: PSYC 372 or equivalent. Overview of biological effects of substance abuse, and biological mechanisms underlying addiction. Topics include alcohol, cocaine,
marijuana, and other drugs; genetics of addiction; and neural systems underlying addiction and withdrawal.

591 Professional Seminar (1–3:1–3:0) Prerequisite: MA students in psychology. Each section limited to students in one concentration of MA program. See area coordinator for requirements for section in each track. May be repeated for total 3 credits only. Graded S/NC.

592 Special Topics (3:3:0) Special topics reflecting interests in specialized areas. Topic announced in advance.

597 Directed Reading and Research (1–3:0:0) Prerequisite: permission of instructor. Directed reading or research for MA students in psychology. Independent reading or research on topic agreed on by student and faculty member. May be repeated for maximum 6 credits. Maximum 9 credits of 597, 792, 798, and 799 may be applied to master’s degree.

611 Advanced Statistics (4:3:2) Prerequisite: screening test given on first evening of class. Test must be passed to take course. Open only to degree students. Integrates basic psychological statistics with overview of research methodology including experimental, quasi-experimental, field approaches, and measurement issues from advanced perspective. Lab work includes using computer packages for data handling and analyses. Students must enroll in 611 and 612 in sequential semesters.

612 Advanced Statistics (4:3:2) Prerequisite: grade of A or B in PSYC 611. Open only to degree students. Integrates basic psychological statistics with overview of research methodology including experimental, quasi-experimental, field approaches, and measurement issues from advanced perspective. Lab work includes use of computer packages for data handling and analyses. Students must enroll in 611 and 612 in sequential semesters.

614 The Psychology of Aging (3:3:0) Prerequisites: PSYC 100, and undergraduate or graduate course in aging. Review of the experimental literature in psychology of aging, including intellectual functioning, personality and adjustment, minor and major adjustment problems, and role changes in later life.

615 Language Development (3:3:0) Prerequisite: 3 credits of graduate development psychology, or permission of instructor. Seminar covering theory and research on acquisition of language, including biological and environmental influences and constraints; research methods; role of parents; individual and cultural differences; links between language and other domains of development including cognitive, behavioral, social, and emotional; language and the brain; animal language; bilingualism; and atypical language development.

617 Child Psychopathology (3:3:0) Prerequisites: PSYC 313 or 211, and 325. Intensive survey of major types of psychopathological disturbances of infancy and childhood.

619 Applied Behavior Analysis: Principles, Procedures, and Philosophy (3:3:0) Focuses on basic principles and procedures of applied behavior analysis; identification of factors that contribute to behavioral problems and improved performance; and procedures that can be used to minimize behavioral problems, improve performance, teach new behaviors, and increase probability of behaviors occurring under appropriate circumstances.

621 Applied Behavior Analysis: Empirical Bases (3:3:0) Focuses on basic content of applied behavior analysis, and teaches how to implement behavioral procedures and develop behavioral programs for clients with fundamental behavioral needs.

623 Applied Behavior Analysis: Assessments and Interventions (3:3:0) Prerequisites: PSYC 619 and 621, or EDSE 619 and 621. Further expands on basic content of applied behavior analysis, and teaches how to implement behavioral procedures and develop behavioral programs for clients with fundamental behavioral needs.

624 Applied Behavior Analysis: Applications (3:3:0) Prerequisites: PSYC 619 and 621, or EDSE 619 and 621. Expands capability to deal with more complex behavioral situations, enabling ability to relate to more sophisticated professional issues and environments.

625 Applied Behavior Analysis: Verbal Behavior (3:3:0) Prerequisites: PSYC 619 and 621, or EDSE 619 and 621. Further expands capability to deal with more complex behavioral situations, enabling ability to relate to more sophisticated professional issues and environments.

630 Developmental Disabilities (3:2:1) Prerequisite: 3 credits of graduate developmental psychology courses, or permission of instructor. Lectures, seminars discuss state-of-the-art and evidence-based information about developmental disabilities across life span with emphasis on mental retardation. Includes epidemiology, etiology, diagnoses, risk factors, treatment, supports, and prevention of developmental disabilities. Pertinent philosophical, ethical, and legal issues concerning this special needs population will be discussed. In addition to course work and assigned reading, students sign up for a 20-hour per semester practicum.

631 Industrial and Personnel Testing and Evaluation (3:3:0) Prerequisites: PSYC 300 and 320. Study of administration, scoring, and interpretation of standard tests used by industry for selection and assessment of personnel.

633 Evaluative Research in Psychology (3:3:0) Prerequisite: PSYC 300 or permission of instructor. Examines research techniques specifically designed to evaluate human effectiveness of organizations and mental health programs.

636 Survey of Industrial Psychology (3:3:0) Prerequisite: PSYC 300 or permission of instructor. Intensive survey of historical and current issues in major areas of applied (non-clinical) psychology.

638 Training: Psychological Contributions to Theory, Design, and Evaluation (3:3:0) Prerequisite: PSYC 636, or permission of instructor. Focuses on applying learning principles derived from psychological research in development of training models and techniques of skill acquisition. Discusses research designs and empirical results appropriate to training evaluation.

639 Survey of Organizational Processes (3:3:0) Prerequisite: PSYC 230 or 632. Trains at conceptual/theoretical and empirical levels in organizational processes. Includes individual, interpersonal, intragroup, and intergroup phenomena as they exist in context of organizational settings.

640 Techniques in Industrial/Organizational Psychology (3:3:0) Prerequisite: PSYC 300, or permission of instructor. Skills-oriented course enabling students to construct instruments and perform functions critical to both researchers and practitioners in industrial/organizational psychology. Focuses
on conducting job analysis interviews, developing and scoring task inventories, using critical incident and KSAO methods, and constructing performance appraisal and selection instruments.

645 Research Methods in Human Factors and Applied Cognition (3:3:0) Prerequisites: PSYC 330 and 611. Hands-on approach to selected current or classical human factors/applied cognition research methods; exact methods announced in advance. Potential methods include cognitive task analysis, usability evaluation methods, critical incident analysis, reliability analysis, workload measures, verbal protocol analysis, and engineering models of human performance. May be repeated for credit.

646 Issues and Methods in Longitudinal Developmental Research (3:3:0) Prerequisites: PSYC 611 and 612, and 6 credits of graduate developmental psychology. Examines techniques for measuring developmental change across lifespan.

648 Developmental Psychopathology (3:3:0) Prerequisite: 6 credits of graduate developmental psychology. In-depth look at emerging discipline of developmental psychopathology. Discusses specific disorders and contexts to illustrate how knowledge of normal development, deviant development, and maladaptive behavior illuminates principles underlying adaptive functioning.

652 Quantitative Methods II: Analysis of Variance (3:3:0) Prerequisites: PSYC 300 and either 304, 305, or 309. Basic concepts in experimental design, fundamental assumptions in analysis of variance, and analysis of variance and covariance designs. Reviews multiple comparison tests.

654 Naturalistic Methods in Psychology (3:3:0) Prerequisites: PSYC 300 and either 304, 305, or 309. Theory and techniques involved in studying people in their natural environment. Primary emphasis on quasiexperimental designs and methods of systematic observation.

666 Cognitive and Perceptual Development (3:3:0) Prerequisites: 6 credits of child psychology, and course in experimental psychology; or permission of instructor. Survey of theory and research on development of perception, memory, concepts, problem solving, intelligence, and academic skills in children.

667 Behavior in Small Groups and Teams (3:3:0) Prerequisite: PSYC 231. Theories, methods, and topics relevant to individual behavior in small group setting. Includes effects of individual on group, effects of group on individual, and interaction effects among individuals.

668 Personality: Theoretical and Empirical Approaches (3:3:0) Prerequisite: PSYC 324, or permission of instructor. Presents comprehensive overview of current theoretical and empirical approaches to personality. Emphasizes areas of special relevance to clinical, developmental, and industrial/organizational psychology.

669 Social and Emotional Development (3:3:0) Prerequisite: 6 credits of developmental psychology, or permission of instructor. Surveys theory and research relevant to development of social relationships, emotional expressiveness and regulation, aggressive and altruistic behaviors, sex roles, and morality. Emphasizes influences on such development, including parents, other adults, peers, siblings, and broader culture.

671 Role and Function of the School Psychologist (3:3:0) Open only to school psychology MA students, or by permission of instructor. Considers roles, functions of school psychologist in educational environment, including certification and ethical standards, issues, and trends.

673 Consultation and Behavior Modification (3:3:0) Open to practicing school psychologists and students in school psychology, or by permission of instructor. Examines theory and practice of behavior modification and consultation in school environment.

678 Topics in School Psychology (1–6:0:0) Open to practicing school psychologists and advanced students in school psychology, or by permission of instructor. Selected topics reflecting specialized area of school psychology. Content varies. May be repeated for total 9 credits.

684 Psychological Counseling Techniques (3:3:0) Open to practicing school psychologists or psychology graduate students with prior course in counseling. Application of various counseling approaches and techniques to school-age child and adolescent. Students gain experience in counseling techniques used in schools and contemporary practice.

685 Cognitive Neuroscience (3:3:0) Provides an overview of the neural basis of human mental functions. Uses neuroimaging (PET, fMRI, ERP's, TMS, etc.), computational, and information-processing methods to examine functions such as attention, memory, language, emotion, and decision making.

701 Cognitive Bases of Behavior (3:3:0) Open only to degree students. Surveys concepts in learning, cognitive, and affective processes, including theories and supporting data and their influences on behavior.

702 Biological Bases of Human Behavior (3:3:0) Open only to degree students. Surveys biological bases of behavior, including such topics as neural conduction, role of specific neurotransmitters, cortical functioning, and brain disorders.

703 Social Bases of Behavior (3:3:0) Open only to degree students. Surveys social influences on behavior, including group processes, person perception, and attitude formation.

704 Life-Span Development (3:3:0) Open only to degree students. Surveys theories and research regarding lifespan development and personality formation.

705 Historical and Philosophical Issues in Psychology (3:3:0) Open only to degree students. Important historical and systematic approaches to psychology and their relationship to the philosophy of science, structure of theory, and philosophical issues in psychology.

709 The Measurement of Intelligence (4:3:2) Open only to school psychology MA student. Prerequisites: department permission, and PSYC 617 or 822 and PSYC 320 or equivalent. Corequisite: PSYC 611. Administration, scoring, and interpretation of major infant, child, and adult intelligence tests, with emphasis on individual tests. Development of IQ tests, theories of intelligence, and current trends and developments in intellectual assessment.

710 Psychological Assessment (4:3:2) Open only to school psychology MA students. Prerequisites: satisfactory completion as certified by the School Psychology Committee; PSYC 617, 709, 822, or 810; and permission of department. Study
of major instruments used in clinical assessment and nature, problems, and predictive value; administration and scoring of major techniques for evaluation of personality; and principles of interpretation of these procedures.

712 Child Neuropsychological Assessments (3:3:0) Open to practicing school psychologists, school psychology graduate students, PhD developmental students, or by permission of instructor. Survey of basic theoretical and applied knowledge of conceptualization and assessment procedures of brain-behavior relationship in school-age child and adolescent. Problems involved in diagnostic assessment of children with various handicapping conditions such as learning disabilities, retardation, and emotional disturbances.

730 Practicum in Applied Psychology (1–6:0:0) Open only to degree students in psychology. Prerequisite: permission of department. Apply in writing to area coordinator 60 days prior to beginning of semester. Practical experience in organizational setting as assigned. PhD students may repeat course for maximum 15 credits; MA students for maximum 6 credits. Graded S/NC.

732 Attention and Performance (3:3:0) Prerequisite: PSYC 530, graduate experimental course in psychology, or PSYC 701. Human factors seminar focusing on theories, concepts, issues, methods, techniques, and research in the area of attention and performance.

733 Issues in Personnel Psychology (3:3:0) Prerequisite: PSYC 636 or permission of instructor. Examines psychological literature on job analysis, job evaluation and compensation, performance appraisal, training, and EEOL selection issues. Methodological and psychometric issues in interpretation and evaluation of personnel psychology research receive particular attention.

734 Seminar in Human Factors and Applied Cognition (6:3:0) Prerequisite: 6 graduate credits in human factors and applied cognition, or permission of instructor. Emphasizes current research and application of human factors, ergonomics, applied cognition, and applied perception. May be repeated for credit.

735 Psychological Perspectives on Organizational Development (3:3:0) Prerequisite: 3 graduate credits in industrial/organizational psychology, or permission of instructor. Theories and methods in industrial/organizational psychology as they relate to organizational change and development. Actual training in organizational diagnosis, change through supervised field work.

736 Research in Human Performance Assessment (3:3:0) Prerequisite: 3 graduate credits in industrial/organizational psychology, or permission of instructor. Reviews taxonomic issues in description and prediction of human performance. Discusses concepts and methods in assessment of human abilities. Emphasizes cognitive, psychometric, physical, and sensory-perceptual capacities required to perform human tasks.

737 Psychology of Human-Technology Interaction (3:3:0) Prerequisite: 6 graduate credits in human factors and applied cognition, or permission of instructor. Emphasizes current research and development in human-computer interaction, cognitive systems engineering, cognitive ergonomics, and cognitive engineering. May be repeated for credit.

739 Seminar in Industrial/Organizational Psychology (3:3:0) Prerequisites: PSYC 230 and 636, or permission of instructor. Rotating topics such as leadership theories and management development, and performance appraisal. Topics announced in advance. May be repeated for credit.

741 Psychology of Work Motivation (3:3:0) Prerequisite: PSYC 230 or permission of instructor. Examines psychological literature of need, cognitive, and reinforcement theories of motivation; organizational attachment (commitment, absenteeism, and turnover); job design and quality of work issues. Emphasizes methodological and psychometric issues in interpreting and evaluating work motivation research.

750 School Psychology Practicum (1–6:0:0) Open only to school psychology MA students. Prerequisite assessment courses: PSYC 709, 710, and 722; and testing experience in the Psychological Clinic. Apply in writing for permission of department 60 days prior to beginning of semester. Practical experience in school psychology.

754 Quantitative Methods III: Psychological Applications of Regression Techniques (3:3:0) Prerequisites: PSYC 611 and 612. Reviews psychological applications of regression techniques in variety of contexts including experimental, field, and survey settings.

756 Quantitative Methods IV: Multivariate Techniques in Psychology (3:3:0) Prerequisites: PSYC 611 and 612, or equivalent; PSYC 755 recommended. Surveys multivariate statistical techniques as applied to psychological research. Emphasizes analysis of complex designs and interpretation of multivariate data analyses resulting from computer processing.

757 Advanced Topics in Statistical Analysis (3:3:0) Prerequisite: PSYC 754. Focuses on noncognitive individual differences that predict performance. Published work discussed in seminar format with emphasis on conceptual development, methodological adequacy, and new directions.

758 Dispositional Predictors of Performance (3:3:0) Prerequisite: PSYC 636. Focuses on individual differences other than cognitive ability that predict performance. Papers discussed in seminar format with eye toward conceptual development and empirical review.

759 Applied Decision Making (3:3:0) Prerequisite: PSYC 611/612. Covers “basic applied” decision-making research. First half of course reviews basic psychological research on judgment and decision making; second half applies research to various practical problems. Overarching goal is to understand how basic decision-making literature can better inform applied research and practice.

766 Advanced Topics in Sensation and Perception (3:3:0) Prerequisite: PSYC 530 or 701. Emphasizes current research in sensation and perception. May be repeated for credit.

768 Advanced Topics in Cognitive Science (3:3:0) Prerequisite: PSYC 530 or 701. Emphasizes current research in cognitive science. Topics may include computational cognitive models, nature of expertise, diagrammatic reasoning, display-based problem solving, visual attention, decision
Making, goal-based versus event-based cognition, and situated action. May be repeated for credit.

780 Applied Developmental Psychology (3:3:0) Prerequisites: PSYC 704, or 3 credits of other graduate developmental psychology courses, and permission of instructor. Examines how developmental theory, knowledge base, and methodology can be used to promote health and welfare of individuals across lifespan. Topics include contemporary social issues and child development, research in applied settings, developmental assessment and intervention, and program evaluation.

786 Assessment and Treatment in Gerontology (3:3:0) Prerequisite: course in the psychology of aging, PSYC 320 and 423, or equivalent courses. Functional assessment of older adults including conceptual and methodological problems involved. Examines intervention strategies with older adults, including interviewing, group work with older persons, milieu therapy, reality therapy, and design of supportive environments.

790 School Psychology Internship (3–12:0:0) Prerequisite: completion of required courses in school psychology, and permission of program coordinator. Supervised field experience of one school year. Advanced school psychology student functions as full-time staff member in school system. Student completes paper on practical research project involving alternative school psychology role in school system. Enrollment is for total 9 credits (thesis option) or 12 credits (nonthesis option) in increments of 3 credits according to placement. Students enrolled in PSYC 799 are not required to complete the practical research project.

792 Practicum in Developmental Psychology, Biopsychology, and School Psychology (1–6:1:0) Prerequisites: 3 credits of graduate developmental psychology or biopsychology or advanced standing in school psychology. Open to degree students in developmental psychology, biopsychology, or school psychology MA or PhD programs. Interested students must apply to area coordinator 60 days before registration. Supervised experience in developmental psychology, biopsychology, or school psychology. Graded S/NC.

798 Thesis Proposal (1–6:0:0) Prerequisite: permission of instructor. Work on a proposal for master’s thesis. May not be repeated for credit. No more than 6 credits of 798 and 799 may be applied to master’s degree. Minimum 9 credits of 798, 799, 597, or 792 may be applied toward master’s degree. Graded S/NC.

799 Master’s Thesis (1–6:0:0) Research on approved master’s thesis topic under direction of thesis committee with approval of chair. Graded S/NC.

810 Psychological Assessment I (4:3:2) First of required two-course sequence that provides comprehensive coverage of principles, strategies, and techniques of psychological assessment. Emphasizes empirically supported methods. Open only to clinical psychology PhD students.

811 Psychological Assessment II (4:3:2) Second of required two-course sequence that provides comprehensive coverage of principles, strategies, and techniques of psychological assessment. Emphasizes empirically supported methods. Open only to clinical psychology PhD students.

816 Neuropsychological Assessment (3:3:0) Prerequisites: PSYC 702, 810, and 811; or 709 and 710. Nature of brain-behavior relationships in adults and children. Concentrates on major assessment techniques including Luria Nebraska, Halstead-Reitan, and Michigan Neuropsychological batteries.

822 Scientific Foundations of Clinical Psychology I (3:3:0) First of required two-course sequence that provides comprehensive coverage of major psychological problems, including review of empirically supported interventions. Open only to clinical psychology PhD students.

823 Scientific Foundations of Clinical Psychology II (3:3:0) Second of required two-course sequence that provides comprehensive coverage of major psychological problems, including review of empirically supported interventions. Open only to clinical psychology PhD students.

830 History, Systems, and Theories of Personality and Psychotherapy (3:3:0) Review of history, systems, and theories of clinical psychology emphasizing traditional theories of personality and psychotherapy.

831 Social-Cognitive Interventions in Clinical Psychology (3:3:0) Open only to clinical psychology PhD students. Survey of procedures for altering emotional distress and behavioral dysfunction within the conceptual framework of social cognitive theory and cognitive behavioral therapy.

832 Group, Marital, and Family Psychotherapy (3:3:0) Open only to clinical psychology PhD students. Prerequisites: PSYC 822, 823, and 830. Introduces major models of group, marital, and family functioning as well as current approaches to group, marital, and family psychotherapy.

833 Social And Cognitive Foundations Of Clinical Psychology (3:3:0) Open only to clinical psychology PhD students. Review of theory and research in social psychology (particularly social cognition) relevant to understanding psychological adjustment, adjustment problems, and clinical interventions.

840 Community Psychology I (3:3:0) First of required two-course sequence. Comprehensive coverage of history, concepts, and practice of community-clinical psychology, including community mental health theory, consultation, prevention, program planning and evaluation, and human services management.

841 Community Psychology II (3:3:0) Second of required two-course sequence. Comprehensive coverage of history, concepts, and practice of community-clinical psychology, including community mental health theory, consultation, prevention, program planning and evaluation, and human services management. Includes implementation of consultation project.

850 Teaching Practicum in Psychology (1:1:0) Workshop in effective teaching of selected undergraduate psychology courses. Required of and designed to guide graduate teaching assistants assigned to teach undergraduate course (not a lab) for first time. Topics include course planning, syllabus development, lecture resources, effective lecturing skills, use of audio visuals, leading of classroom discussion, construction and grading of exams, student writing, instructional technology, and handling of student questions and problems. Individual critiques of teaching.

880 Clinical Foundations (3:3:0) Open only to clinical psychology PhD students. Focus on basic clinical and interac-tional skills, including basic therapy skills, psychodiag-
notic interviewing, mental status exam, and interview management skills.

881 Practicum in Clinical Psychology (3:0:0) Supervised clinical work in a professional psychological services setting. Usually includes practice in psychological assessment and clinical interventions, but can also include supervision, consultation, and program evaluation.

885 Clinical Externship (0:0:0) Open only to clinical psychology PhD students in the third year or more of training. Individual placements in psychological assessment or psychotherapy service settings.

888 Clinical Supervision: Theory, Research, and Practice (3:3:0) Prerequisite: 6 credits of PSYC 881. Introduces students to theory, research, and practice of clinical supervision, with an emphasis on supervision of psychotherapy. Focuses on selecting effective supervision strategies, establishing and maintaining a positive supervisory relationship, and applying supervisory practices in accordance with current research and standards. Includes didactic and applied components.

890 Seminar in Professional Psychology (1–3:1–3:0) Open only to degree students. Each section limited to students in one concentration of PhD program. See area coordinator for requirements for section in each track. May be repeated for credit. Graded S/NC.

892 Special Topics in Psychology (3:3:0) Open only to PhD students. Selected topics reflecting specialized areas in psychology. Content varies. May be repeated.

897 Directed Reading and Research (1–3:0:0) Clinical psychology PhD students may not take this course for elective credit. Independent reading on topic agreed on by student and faculty member. May be repeated. May not be repeated for degree credit by students who also register for PSYC 799.

998 Doctoral Dissertation Proposal (variable credit) Work on research proposal that forms basis for doctoral dissertation. May be repeated. No more than 24 credits of PSYC 998 and 999 may be applied to doctoral degree requirements. Graded S/NC.

999 Doctoral Dissertation (variable credit) Research on approved dissertation topic under direction of dissertation committee. May be repeated. No more than 24 credits of PSYC 998 and 999 may be applied to doctoral degree requirements. Graded S/NC.

Public Administration (PUAD)

502 Administration in Public and Nonprofit Organizations (3:3:0) Graduate introduction to field of public administration. Focuses on structure, functions, and processes of executive branch agencies of national, state, and local governments. Emphasizes nonprofit organizations as co-actors with government in policy-making/policy implementation nexus.

504 Managing in the International Arena: Theory and Practice (3:3:0) Theoretical and empirical examination of international system that both affects and is affected by decisions, behaviors, and subsystems of state and nonstate (organizational) actors.

509 Justice Organizations and Processes (3:3:0) Examines structures, practices, and performance of organizations involved in administration of justice (law enforcement, courts and legal agencies, corrections, regulatory and related agencies, private organizations) Explores applicability of various theoretical perspectives on organizational processes, and considers extent to which processes operate as a system. Focuses on comparing formal goals and system expectations to actual practice.

510 Policing in a Democratic Society (3:3:0) Topics include police mission; impact of police subculture; defining, recognizing, and measuring good police work; moral hazards of policing such as corruption, brutality, and deception; promotion of integrity, discretion, and control; impact of police practices on crime and disorder; securing public support; and legitimacy of police, community policing, and other reforms.

611 Problem Solving and Data Analysis I (3:3:0) Prerequisite: passing grade on screening exam. Techniques, skills for public managers to solve policy-related problems or analyze policy-related data. Focuses on problem definition, research design, and problem solving under conditions of uncertainty in public sector.

612 Problem Solving and Data Analysis II (3:3:0) Prerequisite: PUAD 611. Techniques and skills for public managers to solve policy-related problems or analyze policy-related data. Focuses on data gathering and analysis, use of computers, systems theory and analysis, and operations research.

613 Economic Analysis in Public Administration (3:3:0) Prerequisite: PUAD 611. Covers major economic issues about role of markets and government in global world. Applies fundamental economic concepts such as cost benefit analysis to public sector.

615 Administrative Law (3:3:0) Covers law as guiding and controlling force in public-sector operations. Includes application of legal processes to administrative practices and situations, and administrative determination of private rights and obligations.

620 Organization Theory and Management Behavior (3:3:0) Considers behavior in context of public organization, and consequent changes required in management. Focuses on such issues as perception, attitude formation, motivation, leadership, systems theory, communication and information flow, conflict theory, and decision theory.

622 Program Planning and Implementation (3:3:0) Prerequisite: PUAD 620. Practical exploration of implement-
632 The NGO: Policy and Management (1–3:3:0)

Explores unique aspects of nonprofit organizations operating in intergovernmental management and network management. Introduces concepts and communications issues of nonprofit organizations and their effect on the sector and society as a whole.

633 Hazard Mitigation Policy (3:3:0)

Examines the complex interplay and policy approaches to hazard prevention and public goods and services through contracts. Emphasizes coordinating tasks and resources required for effective program implementation.

634 Management of International Security (3:3:0)

Examines intergovernmental management and network management during, response, recovery, and mitigation phases. Explores the principles and practices that promote effective disaster response operations and management. Examines nature of hazards, models for response operations in the United States and roles and responsibilities of various emergency management-related organizations.

635 Emergency Preparedness: Interagency Communication and Coordination (3:3:0)

Considers complex relationships between governments and across sectors and levels of government for effective emergency management in planning, response, recovery, and mitigation phases. Explores intergovernmental management and network management theories and research to understand the nature of interorganizational problems and potential models for collaboration.

636 The NGO: Policy and Management (1–3:3:0)

Explores unique aspects of nonprofit organizations operating in international, philanthropic, and socioeconomic environments, particularly in relief and development work. Examines relationships between NGO and U.S. and foreign governments. Covers international philanthropy; cross-cultural understanding; and key managerial concerns such as communications, planning, human resource management, control, group process, and project evaluation.

640 Public Policy Process (3:3:0) Prerequisite: PUAD 502.

Processes of making public policy, including detection of public issues, consideration of alternatives, and adoption and implementation of solutions. Highlights major actors in policy process, and environment within which they work.

642 Environmental Policy (3:3:0) Prerequisite: PUAD 640.

In-depth examination of environmental policymaking. Examines U.S. efforts from 1970 to present to mitigate pollution of nation’s air, land, and water; and addresses issues of global concern including biodiversity loss, ozone depletion, and climate change.

643 Public Policy Research (3:3:0) Prerequisite: PUAD 640.

Examines major concepts, designs, and methods used in applied policy research. Explores underlying logic of policy inquiry, and use of quantitative and qualitative techniques. Includes case applications of major styles of inquiry; and steps in planning, administering, and reporting policy research.

644 Public Policy Models (3:3:0) Prerequisite: PUAD 640.

Approaches to modeling policy problems. Includes analysis and comparison of dominant paradigms in policy sciences. Reviews assumptions and implications of different models and their utility for analysis, implementation, and evaluation.

651 Virginia Politics, Policy, and Administration (3:3:0) Prerequisite: PUAD 502.

Covers governmental agencies, legislative functions, executive leadership, staff agencies, state-local relationships, intrastate regionalism, administrative customs peculiar to Virginia.

652 Nonprofit Leadership and Change (3:3:0) Prerequisite: PUAD 502 or 505.

Examines the principles of leadership and the process of change within the context of the nonprofit sector and its role in the community. Looks at current changes and challenges within the nonprofit sector and their effect on the sector and society as a whole.

654 The Community, Marketing, and Public Relations (3:3:0) Prerequisite: PUAD 502 or 505.

Focuses on marketing concepts and communications issues of nonprofit organization as they apply to identifying market, ability to formulate public image and reputation, and capability to raise money and retain membership or volunteers.

655 Philanthropy and Fund Raising (3:3:0) Prerequisite: PUAD 502 or 505.

Examines history of philanthropy and relationship to nonprofit, government, and commercial sectors in United States. Studies principles of financial development including governance, development of organizational capacity, and identification of funding sources and donor motivations. Provides understanding of fundraising techniques that generate financial support for nonprofits, and context in which these methods may be used.

657 Association Management (3:3:0) Prerequisite: PUAD 502 or 505.

Practical application of management theory in context of professional and trade associations. Covers legal structures, tax-exempt status, and general organizational.
structure. Topics include volunteer management, budgeting and accounting practices in associations, fundraising, media relations, media and event planning, and human resource management.

659 Nonprofit Law, Governance, and Ethics (3:3:0)  
**Prerequisite:** graduate standing. Overview of nonprofit governance as well as basic contract, labor, and tax law issues within nonprofit corporation law. Covers relationship between board and executive, and ethics topics typical to nonprofit organizations such as self-dealing, fiduciary responsibility, and human resource issues.

660 Public and Nonprofit Accounting and Finance (3:3:0)  
**Prerequisite:** course open only to admitted MPA or association/nonprofit management certificate students. Studies fundamental normative debates in public and nonprofit financial management arena with focus on resulting implementation principles and techniques in governmental accounting, financial reporting, budget and revenue decisions, debt management, cash and investment management, pensions and employee benefits, and risk management.

661 Public Budgeting Systems (3:3:0)  
Survey focusing on policy and theoretical framework of revenue and expenditure choices at all levels of government. Topics include development, theories, structure of budgeting: political, economic, and managerial aspects of public budgeting; public policy implications; and budgetary reform movements and successes and failures.

662 National Budgeting (3:3:0)  
Examines formulation of overall national fiscal policy and budgetary priorities through presidential and congressional budget processes, including decisions over spending and revenues.

663 State and Local Budgeting (3:3:0)  
Introduces state and local government budgeting including principal actors and institutions inside and outside state and local governments that play role in budget development, appropriation, implementation, and auditing.

664 Nonprofit Financial Management (3:3:0)  
**Prerequisite:** course open only to admitted MPA or association/nonprofit management certificate students. Covers nonprofit financial management with attention to conflicts between social mission and financial entrepreneurship. Topics include mission, budgeting, fund raising, commercial programs, investments, accounting and information systems, financial reporting, auditing, and internal control.

670 Human Resources Management in the Public Sector (3:3:0)  
**Prerequisite:** PUAD 502. Overview of range and complexity of functions, responsibilities, and expectations of human resource staff and line managers in public sector. Focuses on human resources management in context of political, legal, and managerial systems. Human resource functions, such as hiring, performance, and development, are also presented.

671 Public Employee Labor Relations (3:3:0)  
Public employee labor relations, including unionization, representative elections, bilateral policy negotiations, administration of agreements, management rights, union and membership security, strike issue and grievance procedures, impact on public administration, and assessment of future developments.

680 Managing Information Resources (3:3:0)  
**Prerequisite:** admission to MPA program, or permission of instructor. Examines how managerial and analytical functions in public organizations can be performed via end-user computer applications. Provides in-depth coverage of selected database and decision support packages, and gives attention to logic and integration of application software.

691 Justice Program Planning and Implementation (3:3:0)  
**Prerequisites:** PUAD 502 and 509. Covers development and construction of organizational systems to implement government policies and programs. Emphasizes dealing with real-world challenges, constraints, and opportunities to create feasible plans, performance-monitoring systems, and secure multiple agency coordination. Applications of planning and implementation principles to actual projects in justice agencies.

700 Ethics and Public Administration (3:3:0)  
**Prerequisite:** admission to MPA program, and 18 credits. Topics of ethical dimensions including constitutionalism, democratic values and traditions, standards of conduct and ethics, and conflicting values of public officials and social equity of public programs.

701 Cross-Cultural and Ethical Dimensions of International Management (3:3:0)  
To be taken in final two semesters of MPA program. Examines normative issues in management of programs in international context. Emphasizes interplay of cultural, sociopolitical, legal, and ethical factors, and management and policy problems arising from conflicting goals, values, and inequities among nations and regions.

703 Third-Party Governance (3:3:0)  
**Prerequisites:** PUAD 502, 620, and 9 graduate credits. Examines design and management of government programs relying on other levels of government and private sector for delivery, with focus on such governmental tools as contracts, grants, loans, regulation, and tax credits.

720 Performance Measurement (3:3:0)  
Methods used by managers to systematically assess performance. Includes practical tools such as focus groups, survey research, cost/benefit analysis, benchmarking, and comparison methods for revealing outcomes and impacts. Prepares managers to use information more effectively in developing programs and services and formulating policy, and covers reporting techniques to communicate performance results.

727 Seminar in Risk Assessment and Decision Making (3:3:0)  
**Prerequisite:** 12 graduate credits. Examines decision making under risk and uncertainty. Readings introduce major intellectual perspectives on topic and are drawn from variety of disciplines, including biology, economics, law, and psychology. Emphasizes making actual decisions under uncertainty.

729 Issues in Public Management (1–3:1–3:0)  
**Prerequisites:** PUAD 502, and 9 graduate credits. Current issues in management of public organizations in contemporary American government. Includes practical applications of theories and analysis to managerial problems. Emphasizes competence in improving management in selected government settings. May be repeated with different topic.

730 Professional Development Workshop (1–3:1–3:0)  
Explores external and internal factors reshaping public and nonprofit organizations. Investigates processes and techniques that managers and staff can use to respond to rapid environmental change. Emphasizes case studies, and application of techniques and processes.
731 Homeland/Transportation Security Administration (3:3:0) Examines the terrorist attacks of 9/11, the vulnerabilities of the aviation security system at that time, reasons why elected leaders and officials did not act more decisively to improve security before 9/11, and the policy and administration responses to the 9/11 attacks, including the creation of the Transportation Security Administration and the Department of Homeland Security. Includes the development of radical Islam and the rise of Osama bin Laden and Al Qaeda.

738 Issues in International Security (1–3:3:0) Prerequisites: PUAD 504, and 9 graduate credits. Examines issues of topical interest in general area of international security. Possible topics include nuclear strategy, disarmament, American defense policy, and international terrorism. May be repeated with different topic.

739 Issues in International Management (1–3:3:0) Prerequisites: PUAD 502, and 9 graduate credits. Examines significant current issues in public international management. Emphasizes practical applications of theories and analysis of problems in public international management arena, and competence in improving management practices in international management settings.

741 Policy Analysis (3:3:0) Prerequisites: PUAD 502, 611, and 640. Introduces concepts and techniques for formal policy analysis, development of skills in applying policy analysis techniques through case studies, and exploring legitimacy and utility of policy analysis.

742 Program Evaluation (3:3:0) Prerequisites: PUAD 502 and 611. Practical exploration of assessment techniques used in studying results of public programs and policies, including evaluation of implementation strategies and impacts. Draws on multiple approaches such as cost analysis, field research, experiments, productivity analysis, surveys and questionnaires, and qualitative studies.

743 Conduct of Justice Organizations at the Street Level (3:3:0) Prerequisite: PUAD 622. Examines the terrorist attacks of 9/11, the vulnerabilities of the aviation security system at that time, reasons why elected leaders and officials did not act more decisively to improve security before 9/11, and the policy and administration responses to the 9/11 attacks, including the creation of the Transportation Security Administration and the Department of Homeland Security. Includes the development of radical Islam and the rise of Osama bin Laden and Al Qaeda.

744 Internship (1–6:0:0) Prerequisite: 12 PUAD credits or permission of instructor. Contact internship coordinator one semester before enrollment. Credit determined by the department.

745 Leadership in Justice and Security Organizations (3:3:0) Prerequisite: PUAD 623. Examines leadership theories, and explores how changes have been successfully and unsuccessfully implemented in the past, and what change strategies appear to be most effective.

746 Directed Readings and Research (1–3:0:0) Prerequisites: 18 PUAD credits and permission of instructor. Reading and research on specific topic under direction of faculty member. Written report is required; oral exam covering research and report may be required. May be repeated once.

747 Changing Justice and Security Organizations (3:3:0) Prerequisite: JTCP 740/PUAD 790, or permission of instructor. Examines changes of changing justice organizations, how changes have been successful and unsuccessfully implemented in the past, and what change strategies appear to be most effective.

748 Environmental Politics (3:3:0) Evolution and current state of environmental policymaking. Includes history, strengths, and weaknesses of key U.S. environmental laws and central international environmental agreements. Introduces analytical approaches, including cost-benefit and risk analysis. Discusses economic incentives and normative considerations.

749 Issues in Justice Administration (1–3:3:0) Prerequisites: PUAD 502, and 9 graduate credits. Examines contemporary problems such as education, criminal justice, transportation, land use, economic development, and environmental impact. May be repeated with different topic.

750 Federalism and Intergovernmental Relations (3:3:0) Prerequisites: PUAD 502 and 9 graduate credits. Examines broad trends in governance, including theory and practice of federalism, with particular focus on intergovernmental relations and changing roles of federal, state, and local governments. May include privatization, devolution, mandating, regulatory reform, and comprehensive federalism reform.

751 Issues in International Management (1–3:3:0) Prerequisites: PUAD 502, and 9 graduate credits. Examines significant current issues in public international management. Emphasizes practical applications of theories and analysis of problems in public international management arena, and competence in improving management practices in international management settings.

752 Issues in Local Government Administration (1–3:3:0) Prerequisites: PUAD 502, and 9 graduate credits. Examines contemporary problems such as education, criminal justice, transportation, land use, economic development, and environmental impact. May be repeated with different topic.
821 Doctoral Seminar in Theories of Organization and Bureaucracy (3:3:0) Prerequisite: PUAD 620 or equivalent, or permission of instructor. Examines key issues in organization theory and behavior. Issues include organization design; interorganizational coordination, intelligence and decision-making systems; leadership and motivation theories; and theories or organizations as agents of political and social change. Uses case studies.

840/PUBP 840 Research Seminar in Policy Governance I (2:2:0) to (4:3:1) (variable credit) Prerequisite: admission to doctoral program or permission of instructor. Surveys major institutions that formulate and implement public policy in United States. Examines translation of public preferences into public policy, and decisions about which societal and economic functions are most appropriately carried out by governments, and which are best accomplished by private institutions and individuals.

841/PUBP 841 Research Seminar in Policy Governance II (2–4:2–3:0–1) Prerequisite: admission to doctoral program. Second of two-semester sequence (PUAD 840, 841) in governance and public management policy concentration. Focuses on division of responsibilities among several levels of government, and between public and private sectors. Explores impact of these divisions on development of public policy in several policy areas, such as urban governance, environmental policy, and health care.

998 Doctoral Proposal Research (1–6:0:0) Prerequisite: permission of advisor. Work on a research proposal that forms basis for doctoral dissertation.

999 Doctoral Dissertation (1–24:0:0) Prerequisite: permission of participant’s dissertation committee. Registration for total credits may be spread over a multisemester contiguous period. PhD candidates must register for at least 3 credits each semester until dissertation completed.

Public Policy (PUBP)

School of Public Policy

501 Policy and Organizational Analysis (4:3:0) Prepares students to engage in systematic analysis, both qualitative and quantitative, and constitutes the basis for advanced analytical techniques. Emphasis on research design, information acquisition, application of data analysis techniques, and presentation, including writing for professional and lay audiences.

502 Governance and Policy Processes (4:3:0) Assesses governance processes in public and private organizational settings on the basis of economic and political standards such as efficiency, accountability, and responsiveness to societal needs in a rapidly changing global environment. Using cases, simulations, and fieldwork, students learn to evaluate the quality of institutional governance in specific venues and appraise implications for public policy.

503 Culture, Organization, and Technology (4:3:0) Focuses on the influence of culture in societal, political, economic, and technological processes, nationally and internationally. Culture is seen as dynamic and interactional. Using case studies, students learn pertinent approaches to the study of culture, from the analysis of organization and social networks to that of belief systems and identities. Students also develop practical skills in observation, participation, and intervention.

511 Quantitative Methods in Public Policy (3:3:0) Introduces students to the range of quantitative methods used for public policy analysis. Provides a broad foundation to prepare students for doing statistical analysis on the master’s level.

533 Topics in Public Policy Processes (1–3:3:0) Focuses on selected topics in public policy processes and procedures on an introductory level.

550 Topics in Public Policy (1–3:3:0) Focuses on selected topics in public policy not covered in fixed-content public policy courses.

555 Economics Math Workshop Short course covering math and calculus skills required for master’s level managerial economics course PUBP 720.

556 Writing Workshop A limited enrollment, noncredit, one-day workshop designed for master-level public policy students who want to improve their writing skills. Aimed at good writers who want to move to the next level of effectiveness. Taught by professional writers.

601 Theory and Practice of Regional Economic Development (3:3:0) Helps students develop real-world skills to be a successful economic developer, consultant, policymaker, or change agent in this rapidly changing environment. Designed to provide a framework for understanding regional and national economic growth and prosperity, and provide tools to conduct concrete analyses to help decision makers, clients, and constituents make better-informed decisions.

602 Regional Economic Development: Strategies and Applications (3:3:0) Introduces range of methods for tracking the performance of metropolitan economies, identifying opportunities for economic development, and assessing effectiveness of public and private investments designed to achieve region’s economic growth. Also examines strategies and case results of economic development plans and projects.

605 State and Local Government Policy and Economic Development (3:3:0) Examines state and local government policies and processes to promote local economic development, including institutional arrangements, financing and tax incentives, nonfinancial strategies and approaches, land use, environmental and other relevant regulations, and relationships across government and nongovernmental organizations.

650 Peace Operations I (3:3:0) First course of two-semester sequence on international peace operations. Focuses on emerging theory of peace operations, including peace-making activities of United Nations and other diplomatic initiatives; peace-building activities of international organizations and nongovernmental organizations; and peace support provided by international militaries.
651 Peace Operations II (3:3:0) Second course of two-semester sequence on international peace operations. Focuses on application of emerging theory of peace operations, including peace-making activities of United Nations and other diplomatic initiatives; peace-building activities of international organizations and nongovernmental organizations; and peace support provided by international militaries. Several guest lectures from past and present peace operations provide practical information for future staff of peace operations.

700 Theory and Practice in Public Policy (3:3:0) Theories of public policy emphasizing historical intellectual development, and role theory and ethics may play in public policy making. Assumptions made by policy professionals examined against broad range of philosophical, social, political, and economic imperatives affecting public policy environment.

702 Comparing Political Institutions (3:3:0) Examines political institutions and processes from comparative and international perspectives, and role of political environment in economic trade and investment policy decisions. Examines how generalizability, objective knowledge and understanding, and nature of evidence impact public policy.

703 Organizational Informatics in Public Policy (3:3:0) Helps policy professionals develop proficiency in technological skills necessary for effective practice by teaching latest developments in organizational informatics and web-based student-teacher interaction. Uses information technology to understand real-world policy problems.

704 Statistical Methods in Policy Analysis (3:3:0) Prerequisite: PUBP 501. Graduate-level introduction to statistical methods and techniques used in policy sciences. Topics include descriptive statistics, sampling and probability theory, graphical data display, estimation and significance testing, contingency tables, bivariate regression and correlation, and multiple regression, with introduction to computer-based statistical analysis.

705 Advanced Statistical Methods in Policy Analysis (3:3:0) Prerequisite: PUBP 704 or equivalent. Covers classical regression methods and their application to public policy analysis. Includes simple and multiple regression, analysis of variance, time series, and simultaneous equation structural models. Problems associated with applications include specification error, multicollinearity, qualitative variables, heteroskedasticity, serial correlation, and structural identification. Course develops analysis skills by discussing sample empirical studies and models using advance statistical computer software.

706 Environmental Decisions: Modeling Rational Judgment (3:3:0) Prerequisite: PUBP 705. Discusses decision aids for environmental or other policy makers to make and defend decisions soundly and economically. Integrates public policy and environmental science with decision analysis; for example, prescriptive models that quantify knowledge and values person or institution brings to bear on a decision. Applies simple aids, based on decision theory, to real consulting cases.

707 Budget Decision Making: Concepts and Practices in Economic and Financial Analyses (3:3:0) Studies analytical concepts and techniques used in public-sector overall budgetary and specific project decision making. Includes conceptual concerns and quantitative techniques used in benefit-cost analysis, capital budgeting, financial analysis, and various specialty applications, such as economic and fiscal impact analysis. These are all interrelated by the desire to measure the benefits versus the costs of various alternative public decisions. Attention is given to measuring results over time and the use of present value techniques. Assesses strengths and weaknesses of analytical techniques. Emphasizes the process of defining the appropriate stakeholders affected by decisions, the sources and quality of data, and the rigor of conducting studies.

709 Research Design and Writing (3:3:0) Helps students revise a draft scholarly paper into form acceptable in refereed public policy journal. Focusses on how to find researchable question, identify appropriate methods, build bibliography, outline argument, and find supporting evidence.

710 Topics in Public Policy (1–3:3:0) Focuses on selected topics in public policy not covered by fixed-content public policy courses.

711 Modeling Policy in Dynamic Environments (3:3:0) Introduces basics of policy making and decision analysis, with major focus on hands-on development and use of systems dynamics-based models.

712 Policy Systems Analysis and Management Science (3:3:0) Introduces analytical models and analysis to support decisions. Primary emphasis on understanding techniques of operation research and management science, cost benefits, and cost effectiveness for public decision-making. Using mathematical details of algorithms to solve models not emphasized except as it contributes to understanding reliability and validity of methodologies. Through case studies and computer solutions, offers appreciation of when, where, and how to use models. Students demonstrate their understanding of techniques by applying them to term research project on government program.

713 Policy and Program Evaluation (3:3:0) Examines how programs of public agencies are proposed, established, operated, and evaluated. Covers role of research in program evaluation process, including alternative methodologies for policy assessment. Considers demand estimation, supply and pricing of publicly produced goods and services, and role of subsidies in nonmarket environments.

714 Topics in Transportation Policy, Operations and Logistics (1–3:3:0) Issues in transportation policy, operations, and logistics in United States and abroad. Includes practical applications of theories and analysis to policy problems, and emphasizes competence in improving policy in selected domains. May be taken up to three times and simultaneously for sections addressing different subject matter.

715 Introduction to Transportation Systems (3:3:0) Transportation is a service that contributes substantially to well-being of advanced economies. Resource requirements and byproducts of transportation also pose sobering environmental challenges for society. Course examines history and development of transportation systems; contribution to and impact on society; institutions and practices that govern planning, design, construction, operation, maintenance, and retirement from service; and policy and managerial challenges, and tools and techniques for addressing them.

716 Transportation Operations and Logistics (3:3:0) Provides survey of issues, methods, problems, and strategies.
Topics include origins of logistics, industry structure, pricing, underwriting, rate making, compliance, inventory effects, just-in-time inventory management (JIT), materials requirements planning (MRP), customer service and order processing, sales functions and operations, dispatch and fleet manager functions and operations, rate-setting among three parties, typical electronic and paper document flow, routing and scheduling, route selection, satellite load tracking through dispatch-customer web inquiry, role of ITS in route selection, toll system use, congestion, training activities, and logistics markets.

717 Analysis for Transportation Managers (3:3:0) Introduces basic methods of transportation analysis and evaluation relating them to policy framework. Covers descriptive statistics, hypothesis testing, contingency tables (Chi-Square analysis), regression, optimization, demand elasticities, and gravity model. Also covers sources of transportation data and research design. Teaches mathematical base and logic of each technique, but primary emphasis is applying methods to relevant policy and management problems. Students required to complete series of assignments along with research proposal focused on applying one or more methods to problem of their own interest.

718 Transportation Planning and Policy (3:3:0) Introduces highway, rail, air, and water transport planning in the United States. Teaches legislative, organizational, fiscal, and political environment within which planning for transportation facilities and services takes place. Introduce technical and analytical methods for transportation planning. Focus is largely on public sector, but also considers commercial transport planning and role of private sector in helping to design, manage, and finance transport systems.

719 Transportation Law (3:3:0) Examines legal environment of transport. Topics include basic legal concepts and institutions, history and evolution of price and service regulation, environmental law and regulation, labor relations, and property.

721 Transportation Economics (3:3:0) Provides basis for understanding economics of transport system, and how transportation relates to urban and regional development. Treats transport generically, but includes case studies of specific modes.

722 Practicum in Transportation Policy, Operations, and Logistics (3:3:0) In-depth field study of ongoing transportation policy, operations, or logistics situations; and design and delivery of actions to manage or resolve problems and opportunities. Range of application areas depends on interests of student body and opportunities faculty identify for "clients" or real-world projects. Illustrative domain areas include surface transportation (highways and transit), airports, and aviation.

723 Metropolitan Transportation Policy (3:3:0) Recent changes in federal legislation have led to renewed importance for transportation policy and planning. Considerations of clean air, economic development, and changing urban form have greatly increased importance of well-planned transportation facilities and policies. Course introduces basic methods of transportation policy analysis and evaluation. Topics include data collection, simplified demand estimation techniques, transportation choice modeling, transportation supply analysis, and ex-ante and ex-post evaluation methods.

724 Intelligent Transportation Systems and Technology (3:3:0) Overview of intelligent transportation systems (ITS), which include wide range of information technology applications to surface transportation. ITS categories include traffic management, traveler information, fleet control, commercial vehicle regulation, transit, rural, and vehicle-control systems. Key institutional and policy issues involve the appropriate federal role in ITS; state and local government collaboration; public-private partnerships; how privacy interests can be protected as ITS surveillance and enforcement technologies become increasingly sophisticated; and how driver information systems, including cell phones, can be used to optimal advantage without burdening drivers with information overload.

725 International Transportation Logistics (3:3:0) Focuses on making efficient match between new demands on transportation, and ways demands can be met. Topics embody multidisciplinary approach to international transportation logistics drawing on economics, law, information technology, and network analysis. Includes international supply-chain management, global performance indicators, international intermodal transportation, air-freight logistics, new technologies, and border-crossing issues.

726 Telecommunications Policy (3:3:0) Examines salient issues associated with telecommunications and electronic commerce in context of public policy questions facing decision makers-in government, education, and business. Examples include privacy, electronic signatures, digital divide, bandwidth auctions, IP telephony, CRM, Bluetooth, and Internet taxation.

727 Transportation Evaluation (3:3:0) Transportation impinges on many aspects of life: economic, social, and political. Provision and operation of transportation services involves a wide range of trade-offs. Course looks at range of evaluation techniques and concepts applied in making decisions over such matters as transportation investments, transportation operating strategies, and public policy as it affects transportation. Considers theory and concepts as well as more detailed assessments of standard evaluation methods used in United States and elsewhere. Case studies reviewed in depth.

728 Fleet Operations (3:3:0) Overview of most important factors affecting fleet operations today. Topics include goals for government fleet operations and privately owned fleets, proforma cost analysis, fleet operations including route and vehicle and operator selection, asset-based versus non-asset based fleets, fleet design and make-up based on multiple objectives, scheduled maintenance requirements and trade-offs, shared capacity issues, reverse logistics policies, costs, operations, environmental constraints on fleets, fuel logistics, fleet decision-making, competitive and market challenges, and opportunities in fleet management.

729 Transportation Asset Management (3:3:0) Introduces main elements that have attracted significant attention over the past decade. Several developments have challenged traditional framework for transportation service delivery, including changes in transportation environment; shift in public’s attitude toward provision of public goods; and
extraordinary advances in communication and computer technologies. Adoption of transportation asset management poses significant challenges on both organizational structure and existing knowledge base within transportation agencies. Course provides overview of these challenges, and introduces theoretical frameworks within which challenges may be analyzed.

730 National Policy Systems and Theory (3:3:0) Provides inquiry into policy-making environment, organized around U.S. federal system. Examines nation’s policy systems and key components: actors, institutions of governance, outside groups, and other influential interests. Special emphasis on dynamic character of policy making. In addition, different policy theories discussed in context of current political realities.

731 Macroeconomic Policy Assessment (3:3:0) Covers monetary theory, theories of consumption and saving, budget deficits, economic growth, international finance, and monetary and fiscal policy. Investigates national income and product accounts, savings, employment, and investment, and alternatives to Keynesian principles. Evaluates theories of inflation, investment, capital accumulation, and nonproportional growth.

732 Transport and the Environment (3:3:0) Multi-disciplinary course examines implications of transportation and how public policy has attempted to handle them, and how policy may move in future. Looks at all modes of transportation and at most environmental ramifications. In addition to two faculty members, several guest speakers provide wider perspectives on particular issues.

734 Administrative Law and Public Policy (3:3:0) Covers administrative discretion, rule-making and agency proceedings, public participation, political accountability, regulatory processes, oversight, formal adjudication and informal action, lobbying agency administrators, and political and legal nature of the administrative process.

735 Lobbying and Interest Representation (3:3:0) To work effectively within a democratic political environment, policy analyst must understand contemporary methods used to influence policy. Course focuses on roles and techniques of organized influence, and its impact on policy.

736 The Global Information Economy and the Digital Divide (3:3:0) Discusses institutional, social, and policy issues involved in development of global information economy and society. Economic development needs, public institutional capacity, nongovernmental networks examined critically; course deals with implications of universal access to Internet and equality of use in areas such as online delivery of government services, privacy, online voting, and e-government. Focuses on efforts to ameliorate digital divide sponsored by major multilateral agencies. Emphasizes development of public policies for democratic governance in a complex networked world.

737 Cases and Concepts in E-Government (3:3:0) Electronic government has become a significant public policy issue worldwide. It offers the prospect of dramatic improvements in delivering government services, but also portends major debate about government intrusion. Course covers emerging public policy issues associated with electronic government: job displacement in public sector, privacy, procurement and supply chain management, voter profiling, scope of government services, challenges to “digital democracy,” Internet-based voting, land management, the “digital divide,” and others.

738 Information, Technology, and Institutional Change (3:3:0) Examines role and character of information in institutions as foundation to understanding role of IT in economy, society, and politics. Considers theories of and practice of information in institutions, organizations and markets, and assesses effects of information technology changes on key economic, social and political institutions such as firms, markets, communities, nonprofit organizations, and government.

739 Media and Public Policy (3:3:0) Explores complex relationship between media and public policy. Examines how these forces collide in our modern media, how coverage decisions regarding public policy are made in newsrooms, how advocates use and rely on the media to advance message, and how different media reflect different strengths and vulnerabilities.

741 U.S. Financial Policy Processes and Procedures (3:3:0) Examines design and operation of expenditure and revenue systems at federal, state, and local levels of U.S. government. Stresses mobilizing and allocating resources through planning, adoption, and execution of budget. Includes theory and policy objectives of tax and spending regimes and review of financial controls, performance measurement, cash and debt management, and accounting and financial reporting systems.

742 Transportation Safety and Security (3:3:0) Examines transportation safety and security from multimodal perspective for both passenger and freight. Topics include historical context and policy framework, regulation, institutional issues, new security arrangements for preventing organized terrorist attacks, infrastructure design, vehicle design, operating protocols, and information systems.

743 National Security Management and Policy (3:3:0) Examines hierarchies in national security from the president to military establishment, including National Security Council, secretary of defense, joint chiefs of staff, commanders-in-chief of unified and specified commands, and intelligence agencies. Covers policies involving national defense, peacekeeping operations, embargoes and other sanctions, defense conversion, and military acquisition policy. Also covers significant legislation affecting national security, such as National Security Act of 1947 and Goldwater-Nichols Act of 1986.

744 Federal Institutions and Management (3:3:0) Covers management and policy in federal government, examining policy problems within context of national system of governance, including political environment, evolution and constitutional framework of American government, U.S. Congress, executive branch from White House to agencies, and role of interest groups and political parties. Special attention to implementing legislation, regulatory process, and intergovernmental relations.

745 Transportation and the Environment (3:3:0) Multi-disciplinary examination of implications of transportation and ways public policy has attempted to handle them, and how policy may move in the future. Explores all modes of transportation and most environmental ramifications.

746 Maritime Transportation Policy, Operations and Logistics (3:3:0) Examines how international maritime
transportation system has evolved, and discusses current challenges and options for future developments. Maritime shipping is an ancient enterprise that has dominated transport since long before industrialization led to the development of steam propulsion, railways, motor trucks, and airplanes. Topics include globalization, e-commerce, just-in-time manufacturing, quick response capabilities, integrated logistic systems, and relevance of maritime transportation in light of emerging technological advances.

747 Air Transportation Policy, Operations and Logistics (3:3:0) Reviews evolution of various forms of air transport such as airlines, general aviation, and military aviation; and includes basics of airline economics, especially as they intersect with airline operations and the management of hub and spoke networks; air traffic control technologies and operations and their intersection with airline economics; safety and security technologies and regulations; future of various elements of air transportation; and effects of deregulation on air travel.

748 Public Transportation Policy, Operations and Logistics (3:3:0) Provides general system description for components comprising typical publicly funded transit property. Topics include organizational structure, historical context, budget development including operating and capital budgets, personnel and labor relations, regulatory framework, operations management (bus and commuter rail), reporting structure, customer service, and contracted operations. Also discusses current topics of interest, such as security of transit systems and transit’s role in air quality.

749 Highway Transportation Policy, Operations and Logistics (3:3:0) Highways have played central role in development of U.S. transportation system. Interstate highway system has revolutionized both freight and passenger transport. Course examines history and development of highway system, institutions responsible for development and ongoing operation, environmental impacts and efforts to mitigate them, the emerging emphasis on operations and management of highway system, and role in freight logistics and supply chain management system.

750 History of Military Operations Other than War (3:3:0) Focuses on history of military activity in support of noncombat missions. Uses historical examples of early days of United States and colonial histories of Western and Eastern powers. Also touches on use of military force in support of multinational peace operations.

751 International Police Operations (3:3:0) Analyzes role of international police monitors and domestic police forces in international peace operations. Focuses on how using international police monitors and developing indigenous law-enforcement capabilities can improve prospects for success of international peace operations. Examines origins, mandates, planning, and deployment of international civilian police forces; problems of coordinating international police operations with international military forces and local security forces; international role in developing democratically oriented police forces; relationship of police to the entire judicial system; and the need to continue assistance to all parts of the judicial system beyond initial intervention.

752 Infrastructure Finance (3:3:0) Covers planning, budgeting, and financing of infrastructure, including air, water and surface transportation, public utilities, and other major public works. Focuses on private capital markets for projects funding as well as domestic and international loan and grant programs.

753 Ethics in Public Policy (3:3:0) Inquiry into ethical and moral issues in public policy. Explores issues that are controversial and often confusing to public policy makers such as health care, secrecy in government, surrogate motherhood, and disability. Perspectives are national as well as global, and deal with impact of culture and politics on ethical dilemmas confronting society. Also looks at processes by which specific ethical systems are incorporated into governing bodies. Larger issues, such as war and peace, just and unjust wars, capital punishment, medical and legal ethics, and communitarian vs. individual liberties are also included, with emphasis on how they affect public policy.

754 Geographic Information Systems and Spatial Analysis for Public Policy (3:3:0) Introduces GIS including analytical tools to manipulate and study spatial data. Run mainly as a laboratory, with extensive hands-on experience. Focuses on public policy applications.

755 National Security Decision-Making Policy (3:3:0) Applies behavioral, economic, strategic, and other decision theories to U.S. government and other actors in historical national security crisis cases and current policy issues. Explores tension in decisions between rational goal seeking by actors vs. organizational process, and aims to develop usable decision tools.

756 Geostategic Assessment Policy (3:3:0) Geopolitical assessment of global threats to international order and security. First half of course focuses on geopolitical theories; elements of military power; and global social, demographic and political trends. Second half analyzes regional, political, military, economic, and social trends.

757 Public Policy in Global Health and Medical Practice (3:3:0) Introduces international medical policy. Covers globalization of health and medical policies directed at removing disparities, financing, ethical considerations of biomedical research, and use of emerging technologies.

758 Global Threats and Medical Policies (3:3:0) Explores medical and health governance, biosecurity and biosafety, health and natural and human-made disasters, humanitarian and emergency assistance, vaccine development, behavior and health, critical infrastructures, bioethics and resource allocations in global context.

760 Science and Technology Policy in the 21st Century (3:3:0) Investigates roles dynamic scientific research and technological innovation play in contemporary society. Focuses on design and analysis of alternative public policies intended to influence rate and direction of technological change in societies, and use of scientific and technical knowledge in public policy making. Uses historical and international comparative approaches to assess politics and pragmatics of science and technology policy. Includes material from policy evaluation and analysis, organization theory, economics of innovation, and sociology of science and technology. Applications focus on areas of concern to “new economy” such as biotechnology, networked telecommunications and computing, and globalization of technology-based production.

761 Social Capital and Public Policy (3:3:0) Looks at the literature on social capital, including classic works such as
Courses

Toqueville’s Democracy in America that, in effect, made use of the concept long before sociologist James Coleman brought it into wider use in the 1980s. One objective is to address questions such as the following: Is the concept merely a passing intellectual fad, or is social capital a useful concept for understanding political and economic behavior? Are there measures of social capital? Can the concept be plugged into economic models? Can social capital be introduced to improve our ability to fashion or improve specific social policies for crime, education, family, or social welfare?

762 Social Institutions and Public Policy (3:3:0) Limited government involvement in social policies changed drastically during the 1960s, with an explosion of social programs designed to ameliorate poverty, reduce crime, and eliminate racial segregation. These new social policies affect many institutions, including family, schools and colleges, criminal justice system, and government agencies. Many of these policies have been controversial, with debates over efficacy and whether they have cured or exacerbated social problems. Course examines evolution and status of selected American social policies, including civil rights policies, education reform, family policy, crime prevention, and other topics chosen by students. Readings and discussions on policy issues linked to readings and discussions on social theories and value systems that underpin social policies.

768 Education and Public Policy (3:3:0) Explores current issues and policy initiatives in education policy at federal, state, and local levels, with emphasis on education reform. Issues and topics vary. Typical policy issues include raising academic standards, high-stakes testing, alternative governance including school choice and voucher policies, teacher quality and certification, role of school resources in academic outputs, and equity topics.

770 Topics in Regional and Urban Development Policy (3:3:0) Explores leadership and institutional development in regional economic development. First part involves presentations by faculty members on conceptual, theoretical, and methodological traditions regarding leadership and institutional development. Second part focuses on issue of leadership in context of regional economic development.

771/SYST 691/EEP 601 Introduction to Enterprise Engineering and Policy (3:3:0) Provides overview of extended enterprise integration. Lectures focus on SAP architecture and R/3 standard software solution. Laboratory requires students to complete end-to-end implementation project with Great Plains Software midrange ERP solution, Dynamics C/S +. For modeling, students must demonstrate complete proficiency in Architecture of Information Systems (ARIS) methodology and supporting ARIS Toolset.

772/SYST 692/EEP 602 Decision Support for Enterprise Integration (3:3:0) Prerequisite: SYST 542 and 691 or equivalent. Lectures focus on using business intelligence to enhance competitive advantage, developing information-driven set of controls to improve profitability, and creating balanced business with aligned corporate direction and strategic intent. Examines solutions provided in ERP systems.

773/SYST 693/EEP 603 Supply Chain Integration and Management (3:3:0) Prerequisite: SYST 691 or equivalent. Lectures focus on two issues: supply chain integration from information technology perspective, and supply chain management from decision support perspective. Course motivation is merging of enterprise computing with operations research, primarily through customer and supply chain management systems. Topics include ERP/Web integration, advanced planning, and customer relationship management.

774/SYST 694/EEP 604 E-Commerce Architectures (3:3:0) Prerequisite: SYST 691 or equivalent. Introduces network and system architectures that support high-volume business to consumer web sites and portals. Provides insight into structure of modern web enabled storefront. Critical business and technology issues include Storage Area Networks (SANs), server clustering, load balancing techniques at server and network level, fault tolerance, and recovery of database and application servers.

775/SYST 695/EEP 605 Economics of Electronic Commerce (3:3:0) Prerequisite: SYST 691 or equivalent. Focuses on gaining competitive advantage through electronic commerce implementation; identification and growing of new market opportunities and electronic enabling of existing business relationships; and business-to-consumer relationships and economics of strategic procurement, ERP hosting, customer relationship management, catalog hosting, portal operations, and supplier management.

776/SYST 696/EEP 606 Customer Relationship Management (3:3:0) Prerequisite: SYST 691 or equivalent. Focuses on front office integration with back office, and value creation process that results. Modern world of e-commerce extends intraenterprise integration as implemented in Enterprise Resource Planning (ERP) systems to include external constituents such as customers, partners, and suppliers. Course focuses on modern system support for demand chain.

777/SYST 697/EEP 607 Critical Information Technology Infrastructures (3:3:0) Prerequisite: SYST 694 or equivalent. Design and implementation of high-speed network and application services in support of modern Enterprise Resource Planning (ERP) systems. Critical technologies include high-speed data communication, switched vs. routed data flow, workflow engines, business rule and web application servers, and load balancing technologies. Large-scale, web-enabled ERP system architecture examined in detail.

780 Evolution of the Washington Metropolitan Economy (3:3:0) Includes historical context, role of federal spending, tourism, technology sector, international business, regional organizations, local government policies, and forecasts. Evaluates development patterns in Washington, D.C., Northern Virginia, and suburban Maryland.

781 Entrepreneurship and Economic Development (3:3:0) A knowledge spillover theory of entrepreneurship is employed to link between theories of entrepreneurship and theories of innovation and regional development. Other interconnections are explored at the regional level as firms forge networks, clusters, and specialized markets. The public policy issues of these constructs, including competition policy, industrial policy, and cluster policy, are examined within a regional and global context.

782 International Financial Policy (3:3:0) Addresses theory of international finance, application to financial policy such as exchange rate regimes, and institutions of international finance. Covers operations of International Monetary Fund and World Bank, development of European Monetary Union, and debate over “international financial architecture.”
783 Global Governance (3:3:0) Surveys important issues in global governance given changes in contemporary world. Explores dynamics and complexity of formal and informal actors, institutional arrangements, organizations, and roles in process of governance in international sphere. Considers states, governmental and nongovernmental organizations, international regimes, social movements, regional associations, and multinational corporations as actors bearing on transnational authority. Examines various vehicles for international coordination and conflict in terms of relevance and opportunities for global governance.

784 Entrepreneurship, Economics, and Public Policy (3:3:0) To demonstrate that global capitalism is a process driven by entrepreneurship, students study the Austrian school of economics, which views capitalism as a process of creative destruction, as well as other economists who emphasize entrepreneurship and change. The course reviews the history of capitalism, focusing on the so-called industrial revolutions in Britain, Germany, Japan, and the United States, and on particular historical and current entrepreneurs.

785 Urban Development Economics (3:3:0) Examines changing structure and functions of urban economy, and develops skills and knowledge for evaluating and remedying conditions inhibiting local economic development. Includes case studies of redevelopment strategies, programs, and outcomes for inner-city neighborhoods, central and suburban business districts, waterfronts, and surplus military bases.

791 Advanced Field Research for Policy: Theory and Method (4:3:0) Teaches how to analyze the framing of policy questions and examine culture and organization at group, organizational, interorganizational, and societal levels. Covers case study research, open-ended interviewing, participant-observation, social network analysis, and historical and archival research.

792 Advanced Economic Analysis for Policy Research (4:3:0) Prerequisite: PUBP 720 or equivalent. Builds analytical skills in economic analysis for policy research for students with competence in elementary calculus. Reviews mathematical techniques and covers consumer theory, demand estimation and forecasting, production theory, cost-benefit analysis, technological change and productivity analysis, growth theory, market structure and competition, game theory, capital budgeting, and public sector’s role in the economy.

793 Large-Scale Database Construction and Management for Policy Research (4:3:0) Explores data resources for macro-comparative policy research, and how to use these to inform decision making and evaluate policy performance. Emphasizes how social science data is generated, coded, and managed; and methods for successful presentation of evidence in support of policy recommendations.

794 Internship (1–6:0:0) Prerequisite: 12 PUBP credits, or permission of instructor. Open only to students in SPP degree program requiring internship. Contact appropriate program director one semester before enrollment. Work-study programs with specific employers. Credit determined by appropriate degree program.

795 Final Project (1–3:0:0) Writing of capstone paper related to student’s program concentration, under guidance of three-person committee.

796 Directed Readings and Research (1–3:3:0) Independent reading and research at master’s or doctoral level on specific topic related to public policy as agreed to by student and faculty member.

799 Master’s Thesis (1–6:0:0) Prerequisites: degree candidacy in public policy master’s program; completion of required credits of graduate course work; and approval of thesis proposal by faculty advisor, two committee members, and program director. Individualized section form required. Original research endeavor related to student’s program concentration. Research must result in document meeting public policy and university standards. Graded S/NC.

800 Culture and Policy (2:2:0 to 4:3:1) Comparative overview of institutions and culture, focusing on ways United States is exceptional when compared with other mature industrial societies. Presents culture and social structure as explanatory variables in accounting for these differences. Provides overview of analytical methods used in comparative public policy research, and background on political environment in which international trade and investment decisions are made.

801 Macro Policy (2:2:0 to 4:3:1) Demonstrates how macroeconomic, technological, demographic, and social forces affect supply and demand for governmental services. Counterpart analysis of the impact of shifts in patterns of international trade, demographic composition of population, and trends in social structure. Builds awareness of need to factor alternative assumptions about macro environment into policy planning; shows how macro events can affect social welfare and policy performance indicators; and suggests how national income accounting analysis and simple macroeconomic models can help pinpoint impending trouble spots for public policy.

802 The Logic of Policy Inquiry (1–4:3:0) Prerequisite: enrollment in doctoral program in public policy. Defines policy research problems, questions, and hypotheses. Explores modes of policy research, analysis, and rhetoric, including interdisciplinary research strategies. Uses information sources to emphasize written communication of policy research results. Also discusses professional practice issues.

804 Multivariate Statistical Analysis in Public Policy (4:3:0) Prerequisite: PUBP 704 or equivalent. Explores multivariate techniques of contingency table analysis, reliability and validity assessment, factor analysis and scaling, multivariate regression and path analysis, analysis of variance and covariance, and other selected multivariate techniques. Emphasizes applying these techniques to real policy data using sophisticated statistical packages.

805 Public Policy Systems and Theory (4:3:0) Prerequisite: PUBP 730 or equivalent. Theories of public policy making, emphasizing discipline’s historical, intellectual and international development. Focuses on policy systems’ political and social dimensions, including agenda-setting, policy design, rationality, incrementalism, systems theory, scientific methods, and public choice theory. Applies theories to comparative systems of governance.

806 Advanced Management Science for Public Organizations (4:3:0) Prerequisite: PUBP 712 or equivalent. Primary emphasis is to understand techniques of operations research and management science, cost benefits, and cost effectiveness for public policy decision-making. Some familiarity with
elementary calculus and linear algebra helps with understanding mathematical basis of algorithms used to solve models, and reliability and validity of these techniques. Case studies and computer solutions help students understand when and how to use OR models.

810 Regional Development and Transportation Policy (2:2:0 to 4:3:1) Introduces and critiques theory and methods used in regional and transportation policy analysis. Explores central place, growth pole, and economic base theories as well as other theoretical constructs used in regional policy analysis. Introduces and examines methodological tools such as regional econometric modeling, multiobjective programming, shift-share analysis, economic base analysis, location quotient analysis, and input-output analysis. Examines selected regional and transportation public issues using theoretical and methodological constructs introduced in first part of course.

811 Applied Methods in Regional Development and Transportation Policy (2:2:0 to 4:3:1) Prerequisite: PUBP 810. Students develop research papers that investigate aspect of regional and transportation policy, with goal of producing publishable papers. Students develop focus of paper based on work done in first semester, and are expected to prepare two-page proposal followed by detailed proposal and finally, completed paper. Each is critiqued in the seminar, which is organized to conform to process of review and critique. Instructor works with students individually as well as in seminar sessions.

817 Policy Research Topics: Transportation Policy (2:2:0 to 4:3:1) Research workshop examining development of policy research and relevant methodologies linked directly to faculty and student interests. Students identify cutting-edge policy concerns and execute research program. The 4-credit version of course requires discussion section and research laboratory.

820 Technology, Science, and Innovation: Institutions and Governance (2:2:0 to 4:3:1) First of two-semester core seminar sequence required for public policy PhD students in science and technology policy concentration. Explores how political and economic institutions and cultural values shape policy, organization, and benefits of technological innovation and scientific research. Special emphasis on interaction between national institutions, and values and processes of globalization.

821 Analytic Methods for Technology, Science, and Innovation Policy (2:2:0 to 4:3:1) Second of two-semester core seminar sequence required for public policy PhD students in science and technology policy concentration. Covers major methodological approaches to study of technology, science, innovation, and public policy. Focuses on analytical inputs to policy-making, and assesses practical consequences in such areas as security, energy, environment, and health.

830 Comparative Socioeconomic Policy (1–4:3:0) Throughout the past century, numerous socioeconomic theories have competed for primacy. This course compares, contrasts, and analyzes some of the leading socioeconomic theories and policies and places them in a global context. The role of these theories in shaping current public policy is explored.

833 Topics in Public Policy (1–4:3:0) Focuses on selected topics in public policy not covered in fixed-content public policy courses.

834 Entrepreneurship, Growth, and Public Policy (1–4:3:0) Focuses on a closer consonance among entrepreneurship, geography, and economic growth. Studies the creation and incubation of new knowledge and features three theoretical fields: the new growth theory; the new economic geography; and the new economics of innovation. Develops a knowledge spillover theory of entrepreneurship. Examines public policy issues arising from these constructs, including competition, within a regional and global context.

835 Entrepreneurship, Creativity, and Innovation (1–4:3:0) Provides multidisciplinary foundation for the study of entrepreneurship, creativity, and innovation, and their effects on regional and national economic growth. Draws from seminal thinkers and emphasizes creativity and innovation. Examines how organizational change, institutional structure, and geographic clustering drive the development of regional and national economies. Explores these issues through the lens of the three Ts of economic growth: technology, talent, and tolerance.

840 U.S. Policymaking Institutions (2:2:0 to 4:3:1) First of two-semester sequence in governance and public management policy concentration. Examines major institutions that formulate and implement policy at national level. Emphasizes presidency, Congress, and executive branch bureaucracies. Also considers agenda-building institutions such as media, interest groups, political parties, and elections.

841 U.S. Policy-Making Processes (2:2:0 to 4:3:1) Second of two-semester sequence in governance and public management policy concentration. Analyzes major U.S. public policy processes. Attention to major instruments for implementing policy, including regulation, grants, tax policy, and market-based mechanisms; and how different methodologies are appropriate for understanding aspects of policy inquiry. Covers ethical and accountability aspects of policy, including federalism, intergovernmental relations, and state and local governance.

850 Seminar in Public Policy (1:1:0) Weekly colloquium series, required of public policy PhD students. Features variety of speakers from universities, government, and nonprofit sectors. Topics include policy formulation and analysis, and theoretical and methodological foundation.

860 Social Theory, Culture, and Public Policy (2:2:0 to 4:3:1) Covers major social and cultural theories that underlie public policies. Selections from classical and contemporary social theorists relevant to studying social change, social capital, and social organization. Focuses on interplay among culture, social institutions, social processes, and policy.

861 Culture and Social Policy Analysis (2:2:0 to 4:3:1) Applies social and cultural theories to policy topics, including methodological approaches and empirical studies. Emphasizes linkage between theory and empirical research, and methods appropriate for social policy study. Policy topics may include poverty and inequality, family, education, crime and corruption, immigration, and health.

862 Institutional Analysis and Policy (4:3:0) Policy analysts are increasingly cognizant of the influence of societal institutions in shaping public policy, not only in terms of policy design, but also as a determinant of implementation. This course reviews the growing literature regarding institutional analysis; furthermore, it considers the ways in which institutions help shape the policies that emerge within a given society and the context by which they are evaluated.
870 Organizational and Policy Aspects of Informatics (1–4:3:0) Examines effects of informatics on national and international policy; setting international policy on informatics; ethical and social change in governments and organizations; shaping national policy in informatics; industry growth; and research methods from various scientific disciplines.

871 Organizational and Information Technology Challenges of the Knowledge Society (1–4:3:0) Prerequisite: PUBP 870. Explores links of policy, managing organizations, and information technologies in postmodern era. Includes issues related to contradictions among conventional models of organizational and process design, policy and regulatory structures, ideologies, and information technologies. Provides framework for becoming more sophisticated analyst of policy, organizations, and information technology.

872 Managing Knowledge-Based, Information-Intensive Organizations (4:3:0) Deals with challenges of planning, creating, integrating, and managing contemporary information-technology enabled public and private sector organizations, and managing relationships between public and private enterprises enabled by information technology initiatives.

880 Global and International Public Policy I (4:3:0) Explores multiple dimensions of globalization and internationalization relative to public policy processes and consequences. Offers substantive insight into contemporary public policy dynamics from global and comparative perspectives. Accordingly, it examines a broad range of international cultural, political, technological, and economic policy issues, and their interactions and implications at all levels of analysis. Engages relevant theoretical and methodological approaches and debates to provide tools for analyzing various world problems and policies.

881 International Trade Policy (4:3:0) Addresses international trade theory, trade policy analysis, regional economic integration, and institutional arrangements governing world trade. Covers World Trade Organization (including constituent agreements in goods, services, intellectual property and trade-related investment measures), regional trade agreements such as NAFTA, dispute settlement regimes, and relations between trade and the environment.

997 Field Statement (1:1:0) Requires work on field statement in preparation for field exam. Must register in semester during which field exam will be taken. Requires permission of field committee chair. May not be repeated. Does not apply to credit degree requirements.

998 Research/Proposal for Dissertation (1–9:0:0) Requires work on research proposal that forms basis for doctoral dissertation. May be repeated, but no more than 24 credits of PUBP 998 and 999 may be applied to doctoral degree requirements.

999 Dissertation (1–9:0:0) Requires research on approved dissertation topic under director on dissertation committee. May be repeated, but no more than 24 credits of PUBP 998 and 999 may be applied to doctoral degree requirements.

Reading Education (EDRD)

300 Literacy and Curriculum Integration (3:3:0) Note: This course is intended as an introduction to educational issues and is not applicable in Mason’s graduate-level teacher education programs. Introduces K–12 content area reading, writing, and language arts. Emphasizes integration of reading and other language arts across curriculum. Field experience required.

301 Facilitating Literacy in School or Community Settings (3:3:0) Corequisite: Requires 45 clock hours of school-based field experience during course. Provides knowledge, teaching strategies, and support for students working with developing readers and writers. Emphasizes implementation strategies that foster literacy development; incorporation of trade books and technology resources into individual and small group work; and reflection. School-based field experience required.

419 Literacy in the Content Areas (3:3:0) Prerequisites: EDCI 473 and EDCI 483. Corequisite: EDCI 490. Assists students in understanding the language and literacy process as it applies to teaching in middle and high schools. Focuses on instructional strategies to support literacy development, including adaptations for culturally diverse and exceptional learners.

500 In-Service Educational Development (1–6:1–6:0) Prerequisite: employment in professional capacity by sponsoring division or agency. Offered at request of school division or other educational agency. Content varies; may be repeated for credit.

501 Literacy and Curriculum Integration, PK–12 (3:3:0) Introduces PK–12 content area reading, writing, and language arts. Emphasizes integration of reading and other language arts across curriculum; instructional planning; needs of diverse learners. Field experience in public schools required.

558 Literacy in the Content Areas, PK–12 (3:3:0) Focuses on research-based introduction to PK–12 content area reading, writing, and language arts that meet state and national guidelines. Enables teachers to understand literacy needs of their students in content areas, and provide appropriate instruction.

597 Special Topics in Education (1–6:1–6:0) Prerequisite: admission to program in Graduate School of Education. Provides advanced study on selected topic or emerging issue in American or international education. May be repeated for credit with GSE permission.

614 Teaching Reading in the Secondary School (3:3:0) Emphasizes reading and writing in content areas; reading and writing causes, classroom diagnosis, and remediation of reading problems; study skills; and rates of reading.

615 Reading/Writing for Multilingual Students (3:3:0) Prerequisite: EDCI 516 and 519, or permission of instructor or advisor. Develops instructional competencies in reading and writing approaches for students from culturally and linguistically diverse backgrounds. Examines teaching reading and writing across curriculum, biliteracy acquisition, historical and current approaches for second language learners, preliteracy skills for younger and older English language learners, and special issues in developmental and diagnostic reading for language minority students.

619 Literacy in Content Areas (3:3:0) Prerequisites: Methods I (EDCI 567, 569, 572, or 573) and Methods II (EDCI 667, 669, 672, or 673). Corequisite: EDCI 790 Internship. Offers understanding of language and literacy process as it applies to teaching in secondary schools. Emphasizes reading and writing in content areas, and instruc-
620 Reading/Writing in Foreign/World Languages (3:3:0)
Prerequisite: EDCI 516 and 519, or permission of instructor or advisor. Introduces reading and writing processes in foreign and second languages, research on reading comprehension, and effective teaching and assessment approaches for students in PK–12 schools. Topics include reading goals and standards for foreign language learning, sociocultural perspectives, multimedia computer-assistance, research on related strategies and skills, and performance-based assessments.

630 Advanced Literacy Foundations and Instruction, Birth to Middle Childhood (3:3:0)
Prerequisite: admission to the literacy emphasis, or permission of program coordinator. Advanced study of literacy theory, research, and practice as it relates to younger learners. Addresses sociocultural, cognitive, linguistic, psychological, and developmental influences on children’s literacy. Includes reading, writing, and oral communication.

631 Advanced Literacy Foundations and Instruction, Adolescence through Adulthood (3:3:0)
Prerequisites: EDRD 630 and admission to the literacy emphasis, or permission of program coordinator. Advanced study of literacy theory, research, and practice as it relates to adolescents and adults. Addresses sociocultural, cognitive, linguistic, psychological, and developmental influences on literacy. Includes reading, writing, and oral communication.

632 Literacy Assessments and Interventions for Groups (3:3:0)
Prerequisites: EDRD 630 and 631; admission to literacy emphasis, or permission of the program coordinator. Provides literacy assessments and interventions for groups of learners. Includes exploration of assessment tools for classrooms and large populations. Class members conduct related practica in their own classrooms or specified field settings.

633 Literacy Assessments and Interventions for Individuals (3:3:0)
Prerequisites: EDRD 630, 631, and 632; admission to literacy emphasis; or permission of program coordinator. Provides literacy assessments and interventions for individuals. Includes diagnosis and remediation for learners who find reading and writing difficult. Requires assigned practicum experience.

634 School-Based Leadership in Literacy (3:3:0)
Prerequisites: EDRD 630, 631, 632, and 633; admission to literacy emphasis or permission of program coordinator. Prepares reading specialist as a school leader. Expands knowledge of literacy gained in prerequisite courses, and applies it to professional development work with teachers at their own site.

635 School-Based Inquiry in Literacy (3:3:0)
Prerequisites: EDRD 630, 631, 632, 633, and 634; admission to literacy emphasis; or permission of program coordinator. Capstone course in literacy emphasis focusing on research-based inquiry related to literacy in school settings. Includes review of literature and teacher inquiry project.

636 Supervised Literacy Practicum I (1:1:0)
Prerequisites: EDRD 630, 631; corequisite: EDRD 632. Supervised literacy practicum that requires students to engage in 30 practicum hours and five seminar hours.

637 Supervised Literacy Practicum (2–3:2–3:0)
Prerequisites: EDRD 630, 631, 632; Corequisite: EDRD 633. Supervised literacy practicum that requires students to conduct assessments of and provide instruction to struggling readers.

658 Advanced Reading Methods and Language Acquisition, Elementary (3:3:0)
Prerequisite or corequisite: EDRD 558. Provides research-based introduction to literacy for children in grades K–6. Emphasizes oral language, reading process, literacy development, integration of reading across the curriculum, culture connections, and families and literacy.

797 Advanced Topics in Education (1–6:1–6:0)
Advanced study of selected topics in education for students preparing for doctoral studies or who have been admitted to the PhD program in education. May be repeated for credit with CEHD approval.

829 Advanced Foundations of Literacy Education (3:3:0)
Prerequisite: EDUC 800, EDRS 810, or permission of instructor. Examines foundational theory, research, and methodology related to literacy. Includes historical and theoretical foundations; research methodologies; and issues such as literacy acquisition, beginning reading, comprehension, struggling readers, and language diversity.

830 Foundations of Literacy: Birth through Later Childhood (3:3:0)
Prerequisites: EDUC 800 and EDRS 810. Explores theory, research, and practice related to emergent literacy and literacy development during childhood. Topics include literacy acquisition and development; historical trends in theories of literacy development; psychological and linguistic, sociocultural, and instructional influences on literacy development; vocabulary development; role of narrative and scripts on linguistic development; authentic tasks and assessment and early literacy; and development in academically diverse children.

831 Foundations of Literacy: Adolescence through Adulthood (3:3:0)
Prerequisites: EDUC 800 and EDRS 810. Explores theory, research, and practice related to adolescent and adult literacy. Topics include influences on adolescents’ and adults’ literacy practice and development, current and historical understanding of literacy, connections between literacy and learning in the content areas, and needs of diverse learners. Students review common core research literature and topics of individual interest.

832 Seminar in Emerging Trends and Issues in Literacy (3:3:0)
Prerequisites/corequisites: EDUC 800, EDRS 810, or permission of instructor. Explores emerging trends and issues related to literacy research methods, processes, practices, and policies. Students analyze literacy research and develop a research proposal on a topic of personal interest.

Religious Studies (RELI)

Religious Studies

100 The Human Religious Experience (3:3:0)
Examines main forms of religious expression as embodied in several important religious traditions in contemporary world. Investigates religious experience; myth and ritual; teachings and
scripture; ethical, social, and artistic aspects of religion; and nature and function of religion in human society.

211 Religions of the Near (Middle) East (3:3:0) Focuses on Judaism, Christianity, and Islam from historical, comparative, and cross-cultural perspectives. May also include modern developments of those faiths such as Mormonism and Baha’ism, as well as Zoroastrianism and religions of ancient Near Eastern cultures.

212 Religions of the Orient (3:3:0) Surveys religions of India, Hinduism, Jainism, Sikhism, Buddhism, and the religions of the Far East, China, and Japan, including Daoism, Confucianism, Shinto, from origins to present.

231 Religion in America (3:3:0) Religious heritage in American culture, growth of denominations and sects, and interrelationship of religion and sociopolitical life.

235 Religion and Literature (3:3:0) Explores the relationship between religion and literature in different times and cultures, the influence of religion on literary works, and how literature expresses major religious themes such as death and immortality, divine will and justice, suffering and human destiny, and religion and state.

272 Islamic Religious Life (3:3:0) Introduces basic religious beliefs and practices of Islam, with view to diverse manifestations of Islamic culture in different ethnic and social contexts. Provides overview of essential rituals of Islamic life, mystical practices of Sufis, certain popular forms of religious practice, sources and application of Islamic law, and distinctive Islamic artistic and literary forms.

317 The Daoist Tradition (3:3:0) Explores philosophical ideas, spiritual orientation, religious practice, and social and political values in Daoist tradition reading classic Daoist texts including Dao De Jing, Chuang-tzu, and other sources. Discusses Daoism in light of comparative and cross-cultural studies for global understanding of issues on concepts of nature, human nature, and good and evil.

337 Mysticism: East and West (3:3:0) Prerequisite: 3 credits in religious studies, or permission of instructor. Comparative treatment of major expressions of mysticism in East and West through exploration of various ways of understanding mystical experience. Readings and discussion emphasize one or more of the Eastern (Hinduism, Buddhism, Taoism, Zen) and Western (Judaism, Christianity, Islam) traditions.

341 Global Perspectives on Spirituality and Healing (3:3:0) Prerequisite: RELI 211, or permission of instructor. Cross-cultural investigation of human understandings of relationship between spirituality and health. Beliefs about spiritual causes of sickness and health and spiritual techniques of healing in variety of world cultures placed in context of religious beliefs of those cultures.

350 Religion and History of Ancient Israel (3:3:0) Prerequisite: RELI 211, or permission of instructor. Examines religion and history of ancient Israel from origins around 1250 BCE to Babylonian Exile in 587 BCE. Topics include debate on historical value of Biblical narratives, extra-Biblical texts mentioning Israel, move from polytheism to monotheism, archaeology and artifacts, and development of Israel’s unique religious and historical self-understanding.

351 Religions of the Ancient Near East (3:3:0) Examines religions of ancient Near East, ancient Egypt, Mesopotamia, Levant (Syria-Palestine), or Asia Minor. Selection of religion depends on instructor.

352 Judaism from Exile to Talmud (3:3:0) Prerequisite: RELI 211, or permission of instructor. Examines Jewish religion, history, and literature from the Babylonian Exile to third century C.E. Special attention to development of Hebrew Bible, Apocalyptic and Apocryphal literature, belief in resurrection and final judgment, Dead Sea Scrolls, Jewish sects, and emergence of Christianity and Rabbinic Judaism.

356 Jesus and the Gospels (3:3:0) Prerequisites: 3 credits in philosophy and religious studies, or permission of instructor. Examines Gospel accounts of Jesus in context of first century Christianity. Applies variety of historical and literary methods to gain understanding of Jesus and history and theology of early church.

370 Judaism: Life and Thought (3:3:0) Prerequisite: RELI 211 or 251, or permission of instructor. Studies Judaism from ancient times to present. Covers topics such as religious, historical, and literary origins of Judaism B.C.E., Rabbinic Judaism, Jews in Mediaeval Christian and Islamic societies, Kabbalistic (mystical) Judaism, Jews and the Enlightenment, persecutions of Jews culminating in Holocaust of 20th century, contemporary American Judaism, and relations among Jews, Christians, and Muslims.

371 Classic Jewish Texts (3:3:0) Jewish life and practice have always been centered on ongoing interpretation of classic texts, such as Tanakh (“Old Testament”), Talmud (Oral Law), Midrash (readings of the Bible) and the Kabbalah (mystical teachings) Course provides survey and introduction to major texts of Judaism.

372 American Judaism (3:3:0) Surveys Jewish religious life focusing on various types of American Judaism such as orthodox, conservative, reform, reconstructionist, as they have developed historically and continue to evolve. Emphasizes issues and challenges facing contemporary Judaism.
373 Varieties Of Jewish Expression (3:3:0) Investigates different ways Jews have addressed religious, historical, and existential situations, with special reference to literature, philosophy, historical and polemical writing. Also includes visual arts and new media. Course may cover one theme or problem in several different periods, or concentrate on one geographical/linguistic area or historical period. Topics may include Holocaust, Jews in Muslim Spain, Post-War American Judaism. May be taken more than once with permission of instructor.

374 Islamic Thought (3:3:0) Prerequisite: RELI 211, 3 credits in religious studies, or permission of instructor. Examines Islamic views on fundamental issues in religious thought, such as nature of God, nature of man, and relationship between God and man as reflected in both divine revelation and human religious vocation. Investigates intellectual approaches to these problems within Islamic tradition, including those of theological, philosophical, and mystical thinkers.

375 Qur'an and Hadith (3:3:0) Prerequisites: 3 credits in philosophy and religious studies, or permission of instructor. Explores two primary sources of Islamic belief and practice: Qur’an and Hadith. Discusses thematic structure and literary quality, and examines theological and moral issues. Also introduces various methods of interpretation and critical analysis applied to texts in both Islamic and Western scholarship. Lecture and discussion.

376, 377 Special Topics in Religious Thought (3:3:0), (3:3:0) Prerequisite: 3 credits in philosophy or religious studies, or permission of instructor. Selected topics from a philosophical perspective.

381 beginnings of Christianity (3:3:0) Examines early Christian church from time of Jesus to 700 C.E. Covers internal development of Christianity as it formed official doctrines and institutions, and external relations of Christians with followers of other religions in Roman Empire. Special attention to reasons for success of Christianity in Roman world.

401 Death and the Afterlife in World Religions (3:3:0) Prerequisites: 60 credits including 6 credits in religious studies or permission of instructor. Examination of the rituals, practices and beliefs regarding death and the afterlife in world religions past and present. Emphasis placed on cross-cultural and comparative aspects.

402 Religious Fundamentalism and Violence (3:3:0) Prerequisite: 60 credits including 6 credits in religious studies, or permission of instructor. Studies origins and development of fundamentalism and violence in global religions, with special emphasis on contemporary manifestations and potential for resolution.

403 Scripture and Authority in World Religions (3:3:0) Prerequisites: 60 credits including 6 credits in religious studies, or permission of instructor. Examines origins, development, and role of Scripture (religious texts) in world religions, concentrating on issues of divine inspiration, authority, authenticity, and canon.

405 Religion, Values, and Globalization (3:3:0) Prerequisite: 60 credits including 6 credits of religious studies, or permission of instructor. Explores diverse value systems, ethical norms, and teaching found in different religious traditions and cultures. Examines assumption that globalization is attempt to universalize Western culture.

407 Women in the World’s Religions (3:3:0) Prerequisites: 60 credits, 6 credits of philosophy or religious studies. Seminar course offering theoretical and comparative study of role of women in six of the major religious traditions of the world—Judaism, Christianity, Islam, Hinduism, Buddhism, and Chinese religions.

408 Ritual and Drama in Global Religions (3:3:0) Prerequisites: 60 credits including 6 credits in religious studies, or permission of instructor. Explores religious rituals and drama in selected world religions. Emphasizes ritual and drama spanning divine and human realms, actualizing myth, presenting beliefs and shaping lives of believers. May consider religious themes in modern drama.

420, 421, 422, 423 Seminar (3:3:0) Limited to students in the religious studies track of philosophy major, but others may be admitted if topic is sufficiently close to field of study. Topics vary.

425, 426 Independent Study (3:3:0), (3:3:0) Limited to students in religious studies track with 60 credits and 15 credits of religious studies, and permission of department.

490 Comparative Study of Religions (3:3:0) Prerequisite: 9 credits in religious studies including RELI 211 and 212, or permission of instructor. Cross-cultural examination of comparative aspects of religious phenomena. Examines significance of religious phenomena from diverse religious and cultural perspectives, and investigates patterns of religious phenomena that have appeared in world cultures and civilizations. Can be repeated for credit when specific topics are different.

591 Special Topics in Religious Studies (3:3:0) Special topics in religious studies of central interest in that field: historical, current, interdisciplinary, and cross-cultural. Topics selected by importance in field of religious studies, and pertinence to role of religion in social, political, and ethical concerns.

630 Approaches to the Study of Religion (3:3:0) Prerequisites: graduate standing, or permission of instructor. Examines study of religion as academic discipline. Evaluates various intellectual approaches and methods used in study of religious phenomena.

631 Sacred as Secular in Modern Spirituality (3:3:0) Prerequisite: graduate standing, or permission of instructor. Investigates nature of sacred and categories of sacred and secular in human experience. Both duality and interconnectedness of sacred and secular explored to facilitate fresh understanding of essential unity of human religiosity and spirituality.

632 World Religions in Conflict and Dialogue (3:3:0) Prerequisite: graduate standing or permission of instructor. Explores reasons for instances of global religious conflicts and examines ways of engaging in interreligious dialogue. Investigates religious pluralism as an effective means for dialogue.

633 Ethical Perspectives of World Religions (3:3:0) Prerequisite: graduate standing, or permission of instructor. Examines how perceptions of ultimate reality shape ethical values and behaviors of various religious traditions. Addresses problems in interpretation of authoritative foun-
dalional teachings in contemporary contexts. Special attention to non-Western religions.

634 Christianity and the Cultures of Rome (3:3:0) Prerequisite: graduate standing, or permission of instructor. Investigates rise of Christianity from small Jewish sect to official state religion of Roman Empire. Considers internal development, and relations with other religions and cultures in Roman world.

635 World Religions in Transition and Transformation (3:3:0) Explores transitions and transformations in selected world religions as they respond to and influence forces of cultural change, social values, and the crises of history. Fresh or modified constructions of the sacred and their relationship to world and humans will be examined. May be repeated for up to 6 credits.

636 Religion and the Natural Environment (3:3:0) Explores contemporary religious thought on the morality and ethics of environmental responsibility. Begins with an exploration of this issue in Western Christian thought and examines religious approaches to the environment in the traditional and contemporary thought of other major world religions, including Judaism, Islam, Hinduism, Buddhism, and the Chinese traditions.

641 Drama in the World’s Religions (3:3:0) Prerequisite: graduate standing, or permission of instructor. Examines how drama is used in religions of world, past and present, to enact myths, convey concepts, and involve worshippers. Studies ritual dramas, mystery, morality, passion plays, plays that explore profoundly religious themes.

642 Sacred Language, Scripture, and Culture (3:3:0) Prerequisite: graduate standing, or permission of instructor. Explores how sacred languages and scriptures develop in major global religious traditions: study of grammar, syntax, and morphology of sacred languages; issues of inspiration, authority and canon. Also examines cultural dimensions of sacred language. May be repeated once when languages are different.

Russian (RUSS)
Modern and Classical Languages

Placement: See Academic Testing section of Admission chapter.

101 Elementary Russian I (3:3:1) For students with no knowledge of Russian. Introduces elements of grammar, vocabulary, oral skills, listening comprehension, and reading. Lab work required.

102 Elementary Russian II (3:3:1) Prerequisite: RUSS 101 or permission of department. Continuation of RUSS 101. Lab work required.

110 Elementary Russian (6:6:1) Introduces elements of grammar, vocabulary, oral skills, listening comprehension, and reading. Students may not receive credit for RUSS 110 if they have received credit for RUSS 101, 102, or 109. Lab work required.

109 Intensive Elementary Russian (6:6:2) Equivalent to RUSS 101 and 102 taught in single semester. Recommended for students who desire intensive introduction. May not be taken for credit in combination with RUSS 101 and 102. Lab work required.

199 Russian Language and Culture for Students and Professionals (3:0:0) Designed for English-speaking specialists in humanities, sciences, and business studies in Russia. Covers range of topics, including elementary Russian phonetics and grammar, basic conversation, and Russian etiquette. Course theme is language needs of foreigners who happen to be traveling and conducting business activities in Russia. Acquaints students and professionals with cultural framework that forms indispensable backdrop to daily activities in Russia. Students become increasingly confident and effective in their ability to engage Russians from all walks of life in daily informal and professional conversation in the Russian language.

201 Intermediate Russian I (3:3:1) Prerequisite: RUSS 102, 109, appropriate placement score, or permission of department. Further development of skills in listening, speaking, reading, and writing. RUSS 201 and 202 must be taken in sequence. Lab work required.

202 Intermediate Russian II (3:3:1) Prerequisite: RUSS 201, appropriate placement score, or permission of department. Application of language skills to reading, composition, and discussion. Lab work required.

209 Intensive Intermediate Russian (6:6:2) Prerequisite: RUSS 102, 109, appropriate placement score, or permission of department. Equivalent to RUSS 201 and 202 taught in a single semester. May not be taken for credit in combination with RUSS 201 or 202. Lab work required.

210 Intermediate Russian (3:3:1) Prerequisite: RUSS 110 or appropriate placement score. Continuation of the development of basic components of the language, with focus on listening, speaking, reading, and writing skills. Introduces students to the cultures and histories of Russian-speaking regions. Lab work required.

250 Gateway to Advanced Russian (3:3:0) Prerequisites: RUSS 210, appropriate placement score, or permission of department. Integration of advanced intermediate-level Russian grammar, reading, writing, listening and speaking skills with the development of research skills and critical thinking about authentic texts from contemporary media. Taught in Russian.

302 Russian Conversation and Composition (3:3:0) Prerequisite: RUSS 202, or permission of instructor. Development of students’ ability to express themselves orally on topics of current interest and everyday situations; composition provides practice in more difficult forms of expression.

303 Russian Advanced Conversation (3:3:0) Prerequisite: RUSS 202 or equivalent. Development of oral proficiency, including current colloquial expressions.

310 Readings in Russian Literature (3:3:0) Prerequisite: RUSS 202, or permission of instructor. Readings of Russian literary works in original language with lectures, discussions, and exam in Russian.

311 Contemporary Russian Short Fiction (3:3:0) Prerequisite: RUSS 202 or equivalent. Reading and discussion of recent short stories by best-known Russian writers of today. Readings in original language, with lectures and discussion in Russian.

325 Major Russian Writers (3:3:0) Prerequisite: ENGL 101 or equivalent, or permission of instructor. Study of works of major Russian writers in translation. Course work in English. Writers to be studied vary. May be taken toward
fulfilling general requirement in literature for baccalaureate degrees. May be repeated once for credit when course content is different.

326, 327 A Survey of Russian Literature (3:3:0), (3:3:0) Prerequisite: 60 credits, or permission of instructor. RUSS 326 surveys Russian literature from its beginning to 1880. RUSS 327 surveys Russian literature of late 19th and 20th centuries. Course work in English. May be taken toward fulfilling general requirement in literature for baccalaureate degrees.

353 Russian Civilization (3:3:0) Prerequisite: 60 credits, and completion or concurrent enrollment in all other required general education courses. Civilization and culture of Russia and former Soviet Union. Includes films, slides and music in addition to readings and lectures. Course work in English.

354 Contemporary Post-Soviet Life (3:3:0) Prerequisite: 60 credits, or permission of instructor. For non-Western majors. Reading, translation, and discussion of Russian materials in fields of history, politics, geography, and sociology.

401 Readings in the Social Sciences (3:3:0) Prerequisite: 15 credits of Russian or equivalent. Reading, translation, and discussion of Russian materials in fields of history, politics, geography, and sociology.

407 Russian Drama and Theater (3:3:0) Prerequisite: 60 credits, or permission of instructor. Development of Russian theater including directing techniques in Moscow Art Theater. Reading and discussion of major Russian plays of 19th and 20th centuries. Course work in English; knowledge of Russian not required.

410 Russian Poetry (3:3:0) Prerequisite: 15 credits of Russian or equivalent. Historical development of Russian poetry and representative works of major poets. Reading in Russian; course work in English and Russian.

470 Topics in (Post) Soviet Film (3:3:0) Prerequisite: 60 credits, or permission of instructor. Russian, Soviet, and post-Soviet films selected by type, period, or director with emphasis varying from year to year. Required viewings, student discussion, and written critiques. May be repeated once with permission of department or film studies advisor.

480, 481 Fourth-Year Russian (3:3:0) Prerequisite: RUSS 380, 381, or equivalent; or permission of instructor. Advanced work in major grammatical and lexical topics of Russian. Application of theoretical principles in guided written and oral exercises.

490, 491 Independent Study (1–3:0:0), (1–3:0:0) Prerequisites: Russian studies major with 90 credits and permission of instructor. Research and analysis of selected problem in language, literature, or culture in consultation with member of Russian studies faculty.

499 Seminar on Russian Literary and Critical Bibliography (3:3:0) Prerequisites: Russian studies major with 90 credits and permission of instructor. Comprehensive bibliographic survey of major primary and secondary works of Russian literature and criticism.

School of Management (SOM)

100 Business in American Society (3:3:0) Provides students with a foundation for understanding the role of business in society by exploring the nature and history of business enterprise, the social context of business, and the interaction of individuals with business by selecting current events in business and analyzing the content as well as the impact of the reported activities.

301 Business Models: A Learning by Writing Introduction (3:3:0) Prerequisites or corequisites: C or better in OM 210, and ACCT 203. Introduces fundamentals of business models, and writing as learning tool. Interrelationships among accounting, finance, information systems, marketing, and operations are subject of several “learning by writing” deliverables. Fulfills writing intensive requirement for SOM majors. Taught in lecture/recitation format; requires attendance at weekly lecture and weekly recitation.

492 Undergraduate Internship (3:3:0) Opportunity to gain practical, professional experience in conjunction with academic development. Internship is an important part of academic and career preparation. May be used as elective credit, but may not be repeated.

498 Capstone Course: Advanced Business Models (3:3:0) Prerequisites: ACCT 301, BULE 302, OM 301, FNAN 301, MGMT 301, MIS 301, and MKTG 301; and senior standing. Advanced integrated exploration of business models and industry dynamics that uses case analyses to assess competition, organizational strategy, and firm performance. Students examine strategic change in organizations from multiple perspectives, integrating knowledge from core course work into several papers and major presentation. Students receive coaching from area business leaders as they complete their presentations. Fulfills synthesis requirement for SOM majors.

Social Work (SOCW)

Social Work

110 Global Perspectives on Human Rights (3:3:0) Open to social work and nonsocial work majors; does not count toward the social work degree requirements. Explore awareness about human rights issues around the world. Students will become familiar with current debates about human rights, especially whether rights should be culturally determined. The role of the United Nations, governmental, and nongovernmental organizations including social service organizations will be presented. Emerging issues including the rights of children; the rights to food, shelter and health care; and racial and economic equality will be emphasized.

200 Introduction to Social Work (3:3:0) Introduces historical roots of social work profession and social welfare. Person-in-environment perspective discussed as framework for social work knowledge, values, and skills. Initial course in social work curriculum introduces social work profession, professional values, ethics, fields of practice, and settings in which social workers are employed. Highlights profession’s commitment to diverse and at-risk populations and social
and economic justice. Presentations by social work professionals in different fields of practice supplement classroom lecture, discussion, and small-group exercises.

301 Laboratory in Interpersonal Communication (4:4:0) 
Prerequisites: SOCI 101, PSYC 100, and sophomore standing; or permission of instructor. Emphasizes experiential learning of biological, psychological, social, and cultural influences on behavior of those who need and those who give help. Students examine their own behavioral and learning patterns, values, ethics, and attitudes to increase ability to understand and help clients. Service learning of at least 60 hours required.

323 Human Behavior in the Social Environment I (3:3:0) 
Prerequisites: SOCI 101, BIOL 103, and PSYC 100; or permission of instructor; completion or concurrent enrollment in all other required general education courses work. Social systems approach unifying and integrating concepts and knowledge from biology, anthropology, sociology, and psychology about human behavior. Applications to professional practice, from social work literature to field experience.

324 Human Behavior in the Social Environment II (3:3:0) 
Prerequisite: SOCW 323 with a minimum grade of C, or permission of instructor. Examines social systems theories as they pertain to study of macro systems. Focus of study involves families, social group, formal organization, and community. Student apply theoretical concepts to contemporary social problems.

351 Social Policy and Social Justice I (3:3:0) 
Prerequisites: SOCI 101 and GOVT 103; or permission of instructor. Introduces social welfare policy, including historical development, central concepts, institutional nature, and origins of social work as profession. Analyzes service delivery systems and role of social work profession in bringing about social and economic change.

352 Social Policy and Social Justice II (3:3:0) 
Prerequisite: SOCW 351 with minimum grade of C, or permission of instructor. Analyzes various social welfare policies and their development; examines how policies have emerged in response to social problems arising out of changing social, political, economic, and cultural influences.

357 Methods of Social Work Intervention I (3:3:0) Open to majors only. Prerequisites: SOCI 101, 200 (or corequisite), and PSYC 100; or permission of instructor. Social work practice from systems perspective. Particular emphasis on problem-solving activities with Microsystems. Analyzes common core of knowledge, values, and skills essential to social work practice to gain insight into social work functions and role of social worker as change agent.

358 Methods of Social Work Intervention II (3:3:0) Open to majors only. Prerequisite: 60 credits, or permission of instructor. Continues generic problem-solving model, focusing on group and macro intervention systems, settings, and skills. Emphasizes working with both treatment and task groups. Group processes, such as goal formulation, contract setting, composition, and termination necessary for effective worker intervention, are part of knowledge base. Field service of 40 hours required.

359 Junior Seminar (1:1:0) Prerequisite: SOCW 301; corequisite: must be taken simultaneously with SOCW 358. Provides opportunity to integrate theory, research, and practice in area of group work. Time is allotted to process successes and obstacles, and to share issues, knowledge, and skills learned in service learning site. Forty hours of service learning are required.

400 Legal and Ethical Issues in Human Services (3:3:0) 
Prerequisite: 45 credits, or permission of instructor. Overview of ethical and legal issues related to human services professions. Topics include responsibility, competence, duty to warn, confidentiality, professional relationships, and research. Emphasizes models of ethical decision making and critical thinking.

410 Alcohol and Substance Abuse: Policies and Programs (3:3:0) 
Prerequisite: 45 credits, or permission of instructor. Primary issues related to alcoholism and drug abuse including key concepts, theories, policies, and research regarding use and abuse of alcohol and other drugs. Emphasizes impact of policies and programs on well-being of ethnic minority and disadvantaged service populations.

415 Child and Family Welfare (3:3:0) 
Prerequisite: 45 credits, or permission of instructor. Emphasizes viewing human development and child and family welfare services critically, holistically, and contextually. Integrates ecological systems, human rights, and empowerment perspectives for understanding delivery systems and persons in relation to their environment across levels from individual to global. Provides overview of existing child welfare system with focus on current issues, challenges, and at-risk populations.

417 Integrative Methods in Social Action and Social Change (3:3:0) For social work majors only. Prerequisites: SOCW 301, 357, 358, 359, 452, 453. Uses generalist social work practice concepts with large systems and provides students with a hands-on opportunity to apply concepts and principles of intervention with large systems. Students will work with organizations and communities on a local, national, or global level to promote social action and social change. The course will also focus on evaluating interventions addressing the social justice needs of diverse, at-risk and oppressed populations.

423 Social Work with Children and Adolescents (3:3:0) 
Prerequisites: 45 credits, or permission of instructor. Major needs of children and adolescents, and implications for social work practice. Problems of family and peer group relationships, occupational choice, sexual and scholastic adjustment, and special problems of racial and cultural alienation, alcohol and drug abuse, and delinquency. Reviews various theoretical orientations and evidence from research. Analyzes both individual and group approaches to counseling and treatment.

425 Planning and Organizing for Community Change (3:3:0) 
Prerequisite: 45 credits, or permission of instructor. Designed for senior social work students with interest in pursuing community organization as professional career specialty. Provides basic understanding of community organization and planning, with special emphasis on conducting needs assessment in community. Students examine environmental context in which administrative and community practice occurs. Explores role of social workers as planners and agents of social change.

430 Social Work and the Law (3:3:0) 
Prerequisite: 45 credits, or permission of instructor. Introduces social worker’s role in legal system, and familiarizes students with
Courses

legal processes and application to issues of interest to social workers and clients, including child abuse, foster care, reproductive rights, juvenile justice, and legal rights of the poor, women, and minorities.

435 An Intergenerational Approach to Aging (3:3:0)
Prerequisites: 45 credits, or permission of instructor. Surveys issues related to working with aged, their families, and care providers. Studies biological, psychological, and sociocultural aspects of aging, and unique problems with service delivery to aged persons. Examines forces that impinge on aged person, and explores critical issues related to extended life span, family changes, institutionalization, and role of aged persons in society. Students increase their sensitivity and knowledge of aged individuals through intergenerational lens.

452 Senior Seminar I (2 credits)
Open only to social work majors. Prerequisites: SOCW 200, 301, 323, 324, 351, 352, 357, 358, and 359 with grade of C or better and recommendation of faculty. Concurrent with Senior Practicum I (SOCW 453), provides integrative team experience to support field experience and provide opportunities to demonstrate required competencies through special assignments.

453 Senior Practicum I (3 credits)
Open only to social work majors. Prerequisites: SOCW 200, 301, 323, 324, 351, 352, 357, 358, and 359 with grade of C or better and recommendation of faculty. Supervised learning experience (practicum) under guidance of qualified faculty liaisons and professional staff designated and approved by director of field education. Designed to facilitate practice with individuals, families, groups, and communities. Students spend two full days weekly in practicum sites. Requires concurrent seminar (SOCW 452) participation and faculty-agency visits.

454 Senior Seminar II (2 credits)
Prerequisites: SOCW 452, 453, 471. Concurrent with Senior Practicum II (SOCW 456), continuation of integrative team experience designed to support practicum experience and provide opportunities to demonstrate required competencies through special assignments.

456 Senior Practicum II (3 credits)
Prerequisites: SOCW 452, 453, 471. Continuation of supervised learning experience (practicum) begun in SOCW 453. Students spend two full days weekly in practicum sites supervised by faculty liaisons and qualified professional staff designated and approved by director of field education. Requires concurrent seminar participation (SOCW 454) and faculty-agency visits.

471 Research in Social Work (3:3:0)
Prerequisites: SOCI 313 or PSYC 300; 6 credits of social work courses; senior standing; or permission of instructor. Must be completed with minimum grade of C. Principles and theory underlying scientific inquiry. Emphasizes use of research in social work practice, steps in conducting research, and research efforts in developing and evaluating social work knowledge and skills.

475 Selected Topics in Social Work Policy (3:3:0)
Prerequisite: 45 credits, or permission of instructor. In-depth study of special areas of social work of interest to students, faculty, and social work community. Topics vary.

483 Selected Approaches to Social Work Intervention (3:3:0)
Prerequisite: 45 credits, or permission of instructor. Opportunity to examine personal use of different approaches to social work intervention currently employed in practice settings. Students use technical skills with clients that these approaches require. May be taken more than once for credit. Topics vary.

499 Independent Study in Social Work (1–3:0:0)
Prerequisites: 60 credits and research proposal approved by instructor before enrollment. Investigates research problem in field of social work.

598 Special Topics in Social Work (1–6:1–6:0)
Prerequisite: upper-level undergraduate or graduate standing.

623 Human Behavior and Social Systems I (3:3:0)
Prerequisite: graduate standing. Ecological approach to behavior of individuals, families, groups, organizations, and communities. Integrates and applies theories from psychology, sociology, biology, and anthropology to study of infants, children, and adolescents. Emphasizes human diversity.

624 Human Behavior and Social Systems II (3:3:0)
Prerequisite: SOCW 623. Continues study of human behavior and diversity by exploring application of development theory and ecological principles to those in young adulthood, middle adulthood, and older adulthood.

630 Forensic Social Work Practice (4:4:0)
Prerequisites: SOCW 624, 652, 658, and 673. Explores the social work role in legal processes relating to such issues as family violence, child custody, behavioral health, disabilities, aging, and juvenile/criminal justice. Apply skills in forensic interviewing, risk assessment, expert testimony, mitigation, mediation, treatment, victim advocacy, and multidisciplinary collaboration.

640 Advanced Clinical Practice (4:4:0)
Prerequisites: SOCW 624, 652, 658, and 673. Prepares students at the advanced level to apply diagnostic, assessment, prevention, treatment and intervention skills with individuals, families and groups in clinical mental health and health settings. Trains students in Differential Diagnosis and Assessment using the Revised Diagnostic and Statistical Manual (DSM IV-TR). Currently accepted treatment interventions within the context of contemporary social work theory are also presented.

645 Community-Centered Clinical Practice (4:4:0)
Prerequisites: SOCW 624, 652, 658, and 673. Students use an ecosystems framework for assessment, risk-reduction, prevention, and intervention with communities in a local, national, or international context. Possible areas of exploration include violence prevention and intervention, suicide prevention and intervention, emergency response efforts, and behavioral health or wellness interventions at the community level.

651 Social Policies, Programs, and Services (3:3:0)
Prerequisite: graduate standing. History of American social welfare policy and social work profession. Explores political, economic, social, cultural, and ideological influences on policy-making with emphasis on consequences for populations at risk. Introduces historical policy analysis.

652 Influencing Social Policy (3:3:0)
Prerequisite: SOCW 651. Introduces students to the knowledge, skills, and values needed to influence policy outcomes. Explores the role of social workers in electoral politics and policy advocacy. Students gain skills in legislative research, coalition building, testifying, constituent organizing, and lobbying, while
developing strategies for promoting social justice through policy change.

657 Direct Social Work Practice I (3:3:0) Prerequisites: graduate standing and open only to students enrolled in MSW degree program. Corequisite: SOCW 672. Introduces role of social workers as change agents and the core knowledge, values, and skills that guide social work practice with individuals, families, small groups, organizations, and communities.

658 Direct Social Work Practice II (3:3:0) Prerequisites: SOCW 657 and graduate standing. Open only to students enrolled in MSW degree program. Corequisite: SOCW 673. Continuation of social work theory and practice with individuals, families, groups, organizations, and communities. Emphasizes intervention, evaluation, follow-up and termination, with attention to incorporating social work knowledge, values, and skills.

670 Communication and Technology for Social Work Practice (3:3:0) Prerequisite: graduate standing. Studies various forms of written communication pertinent to social work practice. Examines impact of audience, status, culture, and purpose on effective professional writing.

671 Research Methods for Social Workers (3:3:0) Prerequisite: SOCW 624 and 652. Examines role of scientific inquiry in social work. Emphasizes construction and use of measurement instruments, data collection, analysis, and interpretation, and application of computer technologies relevant to social work practice.

672 Foundation Field Practicum and Seminar I (3:0:0) Corequisite: SOCW 657. Supervised social work learning experience in human service agencies. Students complete 20 hours per week in field practicum, and attend monthly seminar in which they share learning and integrate theory with practice.

673 Foundation Field Practicum and Seminar II (3:0:0) Prerequisite: SOCW 672. Corequisite: SOCW 658. Continuation of supervised social work learning experience begun in SOCW 672. Students spend 20 hours per week in field practicum, and attend monthly seminar in which they share learning, process experiences, and integrate theory with practice.

675 Selected Topics in Clinical Practice (3:3:0) Prerequisites: 30 credits or permission of instructor. In-depth study of special topics related to clinical social work practice at the individual, family, small group, or community level.

676 Selected Topics in Social Work and Social Change (3:3:0) Prerequisite: 30 credits or permission of instructor. Critical examination of special topics related to understanding and improving community and societal conditions through policy practice, program development, and social action.

680 Clinical Field Practicum (6:0:0) Prerequisites: SOCW 673, 630, 640, 643, and 688. Supervised social work learning experience four days per week. Students placed in public, nonprofit or for-profit mental health and health venues reflecting specific interests in advanced clinical practice with individuals, families and groups, community-centered clinical practice or forensic social work.

681 Clinical Field Seminar (3:0:0) Corequisite: SOCW 680. Assists students in critically analyzing their field experiences in the application of mental health assessment and interventions, working with individuals, families, groups, and communities. Students are expected to apply social work knowledge, values, and skills from their advanced clinical course work.

684 Social Work and the Law (4:3:0) Prerequisites: SOCW 624, 652, 658, and 673. Students engage in close analysis of judicial opinions to explore the role of the courts in creating public policy. Areas of inquiry include the role of social workers in the legal system, the nature of legal proceedings, and how the law shapes policy in relation to issues affecting children, youth, families, older adults, women, minorities, people in poverty, and other vulnerable populations.

685 Organizational Leadership for Social Workers (4:3:0) Prerequisite: SOCW 624, 652, 658, and 673. Examines functions and structure of human service organizations in context of service delivery. Development of theoretical knowledge, professional ethics, and skills in administration, leadership, management, organization, and supervision.

687 Empowering Communities for Change (4:3:0) Prerequisite: SOCW 624, 652, 658, and 673. Explores social work interventions at community level, including organizing, planning, and development. Strategies for mobilizing community members, using community organizations, formulating coalitions, engaging in participatory planning, and social and economic development.

688 Advanced Research in Social Work (3:3:1) Prerequisites: SOCW 624, 652, 658, 671, and 673. Explores social work intervention research, needs assessment, formative and summative program evaluation, and cost analyses. Discusses applications of systematic inquiry at the practice, organizational, and policy levels. Addresses ethical, pragmatic, and political considerations; qualitative approaches; quality performance; evidence from empirical research; and evaluation design.

690 Social Change Field Practicum (6:0:0) Prerequisites: SOCW 673, 684, 685, 687, and 688. Supervised social work learning experience four days per week. Students placed in public, nonprofit, or for-profit venues reflecting specific interests in agency supervision, organizational management, community change, electoral policies, or social policy.

691 Social Change Field Seminar (3:0:0) Corequisite: SOCW 690. Processing of field practicum experiences; analysis of successes and challenges; application of social work knowledge, values, and skills from across the curriculum. Culminates in professional presentations by students.

697 Thesis Project Seminar (3:3:0) Provides structured opportunity for students to work with each other and faculty in developing their final MSW thesis projects. Integrates and applies learning from all previous course work, emphasizing knowledge, skills, and values related to research, clinical practice, policy, community practice, and organizational leadership. Social work ethics, empowerment of populations at risk, and systems transformation will be explored. In addition to group meetings, students will meet individually with their faculty mentors.

699 Independent Study in Social Work (1–3:0:0) Prerequisite: graduate standing. Investigates research problem in field of social work.
Sociology (SOCI)

Sociology and Anthropology

101 Introductory Sociology (3:3:0) Introduction to basic sociological concepts. Examines aspects of human behavior in cultural framework including: individual and group interaction, social mobility and stratification, status and class, race and gender relations, urbanism, crime and criminology, and social change and reform.

102 Introduction to Sociological Inquiry (3:3:0) Offers introduction to sociology through conduct of original student research, informed by small group and classroom discussion of sociological ideas and methods exemplified by seminal texts. Especially recommended for students considering majoring in sociology, as well as students interested in studying sociology as a liberal art. Students may not receive credit for both SOCI 101 and 102.

120 Globalization and Society (3:3:0) Examines and analyzes important global issues and processes. Considers historical development of globalization, and implications for different societies and cultures. Investigates perceptions of global processes by different cultures and nations, and efforts of international institutions to address social, political, economic, and cultural changes in global society. Students may not receive credit for both SOCI 120 and GLOA 101.

300 Social Control and Human Freedom (3:3:0) Examines how various social institutions function to organize and regulate society. Topics include family, education, ideology, law, media, work, governmental planning, and stratification. Serves as a foundation of many specialized courses offered by department, especially those that focus on control of crime and delinquency.

301 Criminology (3:3:0) Focuses on causes and meaning of crime, with emphasis on adults. Patterns of criminal behavior, including property crimes, violent crimes, organized crime, white-collar crime, and victimless crime. Critical assessment of criminal justice system as a response to crime.

302 Sociology of Delinquency (3:3:0) Examines social factors involved in development of delinquency, including family, political economy, schooling, community environment and culture. Examines various theories of delinquency; rates of delinquency in relation to age, race, gender and social class; and legal system that addresses causes, consequences, and policies of punishment and rehabilitation.

303 Sociological Research Methodology (3:3:0) Prerequisite: SOCI 101 or 102, or permission of instructor. Introduces empirical design in sociological research: historical development, research design, sampling, methods of gathering data, sociometric scales, analysis and interpretation of results, and research reporting.

304 Sociology of Work and Occupations (3:3:0) Analysis of how societies structure work and allocate economic functions among different groups and classes. Topics include historical and cross-cultural variations in work, human consequences of industrialization, and impact of transition to post-industrial society. Special emphasis on changing position of professional employees and social factors that affect distribution of opportunity among various groups, and growing significance of technology for the nature of work.

305 Sociology of Small Groups (3:3:0) Characteristics, structure, and processes of small group dynamics; theories and models of group analysis, techniques of observation and research in small groups; research theory and application of small group knowledge to such natural groups as mutual aid self-help groups, families, juvenile delinquent gangs, and task groups in work sites.

307 Social Movements and Political Protest (3:3:0) Explores process by which people organize to resist current social arrangements and create alternative institutions, policies, or leadership. Historical and contemporary case studies of domestic and global change used to explore how, why, and to what effect various groups have organized to reject status quo and create social change.

308 Racial and Ethnic Relations (3:3:0) How race and ethnicity have been shaped by the policies and practices in Western and non-Western societies. Background given on evolution of racial and ethnic sentiments from Western colonial period in African, Asian, Middle Eastern and Latin American countries as well as contemporary U.S. racial and ethnic relations. Explores how changing demographic racial patterns may affect future definitions of race and ethnicity.

309 Marriage, Families, and Intimate Life (3:3:0) Focuses on family in history and family forms in contemporary societies. Looks at interaction within families, and relationship between society and families.

310 Sociology of Deviance (3:3:0) Analyzes macro- and microlevel deviance-producing processes, meaning and control of deviance, and major theoretical approaches to deviance.

311 Classical Sociological Theory (3:3:0) Prerequisite: 9 credits of sociology including SOCI 101, or permission of instructor. Explores sociological tradition through readings and discussions of ideas drawn from writings of selected sociological thinkers such as Comte, Marx, Weber, Durkheim, and others.

312 Qualitative Research Methods (3:3:0) Prerequisite: 9 credits of sociology including SOCI 101 or 102, or permission of instructor. Introduces ethnography, fieldwork methods, interviewing, life histories, and other qualitative methods to generate data about cultures in which various groups and classes are immersed. Students learn by applying qualitative methods to term projects, developed under guidance of instructor.

313 Statistics for the Behavioral Sciences (4:3:2) Prerequisite: SOCI 101, or permission of instructor. Fundamentals of applied statistics as used in behavioral science to include descriptive statistics, inferential statistics, correlation-regression, analysis of variance, factor analysis, nonparametric statistics, and practical experience with calculators in applying statistical analysis to actual problems of the behavioral sciences.

314 Sociology of Culture (3:3:0) Contemporary examination of culture as aspect of symbolic order, social institutions, and everyday practices of social life. Introduces range of different approaches to sociological study of culture with emphasis on problems of cultural difference and narrative aspects of culture in institutions of democratic society.

315 Sex and Gender in Contemporary Society (3:3:0) Changing conceptions of sex roles, both female and male, in contemporary society. Using historical and comparative data,
considers differential socialization of males and females in relation to changing social structure in which it takes place.

320 Social Structure and Globalization (3:3:0) While focusing on nature and process of change in human society, considers social impact of political, economic, and environmental change and how lives are shaped by complexities of global social forces. Examines specific global issues such as conflict and security; economic disparity; ecological deterioration; populations and migration; legitimization of commerce; diffusion of innovations; and impact of class, status, and power in modern societies.

326 Armed Conflict and Conflict Resolution (3:3:0) Examines political, economic, and sociocultural reasons why countries engage in armed conflict. Conflicts within and between states are explored with special focus on consequences for global, regional and local instability, loss of life and limb, and fragmentation of social, political, and economic fabric of societies. Examines various approaches to conflict resolution.

332 Sociology of Urban Communities (3:3:0) Urban community: historical development, demography, and ecology of metropolitan areas; urbanism as a way of life; emergence of suburbia; and future of cities.

340 Power, Politics, and Society (3:3:0) Analyzes how power is defined, attained and sustained in society. Students analyze political power as related to social realities such as democratic elections, class conflict, elite networks, power-sharing, protest, and revolution.

350 Community, Diversity, and Democracy: A Practicum (3:3:0) Develops practical skills for reducing prejudice and building community within diverse workplaces, educational and civic organizations and local neighborhoods. Specific skills taught empower individuals to be effective communicators across differences, work with controversial issues and build multicultural coalitions.

352 Social Problems (3:3:0) Sociological analysis of the problems of modern society, including those related to stratification, urbanism, family and kinship, cultural change, and deviant behavior.

355 Social Inequalities (3:3:0) Studies class structures and implications for individuals and groups in U.S. society. Explores issues of race and ethnicity, language and immigration status, sex and gender, social class, age, and sexual orientation. Students critically examine theory and research that explores construction, experience, and meaning of such differences.

360 Youth Culture and Society (3:3:0) Introduces sociology of youth and youth culture. Investigates social, economic, and political realities of youth as a group and different groups of youth, including youth cultural production, formation of youth culture, and youth identities in variety of social settings.

373 The Community (3:3:0) Examines small to moderately sized communities ranging through village, rural community, small town, and city subcommunity. Latter category includes city localities, ethnic villages, and suburban communities.

377 Art and Society (3:3:0) Introduces the many ways in which art reflects social tendencies, comments on social problems, and contributes to discussions about wide range of social issues. Students attend theatrical performances and visit exhibition spaces on campus, and learn to analyze what they experience through both aesthetic and sociological approaches. Explores contemporary issues such as debates about artistic freedom and public morality, commercialization of art, and relationship between cultural and social hierarchies.

382 Education in Contemporary Society (3:3:0) Studies education as social institution and its function as socialization agency for social stability and social change. Emphasizes influences of social class elements on educational process, and social organization of the U.S. public school system.

383 Human Services in Society (3:3:0) Analyzes human services emphasizing government-sponsored, nonprofit organizations and informal voluntary services, and their interrelationships with health care and welfare systems. Comparative analysis of services in other societies. Observation in service agencies.

390 Sociology of Health, Illness, and Disability (3:3:0) Examines social context of health, illness, and disability; relationships of health care professionals and patients; and structure and delivery of health care in different medical systems.

395 Issues in Sociology (3:3:0) Prerequisites: 90 credits, and 12 credits of sociology. Opportunity to apply to contemporary relevant issues the theoretical perspectives and methodological skills previously learned.

399 Independent Study (1–3:0:0) Open to sociology majors only. Prerequisites: 6 credits of sociology including SOCI 101, and approval of written proposal. Individual study of sociological topic of interest to student.

402 Sociology of Punishment and Corrections (3:3:0) Prerequisite: 6 credits of sociology including SOCI 101, or permission of instructor. Theories explaining forms of punishment systems; punishment and corrections as products of historical, cultural, and political changes; differences by race and gender in punishment and corrections. Problems of social control and violence in prisons, alternative rehabilitation, and community prevention strategies.

405 Analysis of Social Data (4:3:3) Prerequisite: 60 credits, SOCI 313 or permission of instructor. Overview of management and analysis of empirical social science data, including file construction, scaling and measurement, data transformation, and treatment of missing data. Emphasizes manipulation, management, and analysis of data sets using computers.

410 Social Surveys and Attitude and Opinion Measurements (3:3:0) Prerequisites: SOCI 303 and 313 or equivalents, or permission of instructor. Surveys research methods and techniques to collect, measure, and analyze social data, attitudes, and opinions with special emphasis on using computer software, Internet, and other information technologies for social research. Highlights ethical issues for social research, computing, and information technology.
412 Contemporary Sociological Theory (3:3:0) Prerequisite: 12 credits of sociology including SOCI 101 and 311, or permission of instructor. Analyzes contemporary sociological theorists such as Parsons, Merton, Mills, Berger, and Gouldner in terms of their relationship to major schools of contemporary sociological theory.

414 Sociology of Language (3:3:0) Prerequisites: 60 credits and 3 credits of sociology, or permission of instructor. Interaction of language and social structure. Focuses on language as revealing culturally specific rules of interpretation; sex, class, race, and setting of specific uniformities in producing talk; and language as it constrains individuals.

416 Internship in Sociology (3:0:0) Prerequisite: 21 credits of sociology, including Research Methods, or permission of instructor. Intended to promote learning in application of sociological knowledge, and build skills in different work settings. Students work in approved setting as applied sociologists. Required: minimum 40 hours of work for each credit.

421 Field Work in Social Change (3:3:0) Prerequisite: 6 credits of sociology or permission of instructor. In-depth investigation of planned social change through field work internship with change organization of student’s choice. Groups may be involved in influencing peace, environment, civil rights, consumer protection, poverty, or other public issues. Topics include ideologies, targets, organizational structures, opposition, and strategies of change.

441 The Sociology of Aging (3:3:0) Prerequisite: 6 credits of sociology, or permission of instructor. Aging from a sociological perspective. Topics include demographic trends and aging population in America, social construction of life stages and creation of “old age,” cultural labeling, and human resistance.

450 The Holocaust: The Construction of Social History through Survivor Testimonies (3:3:0) Prerequisite: 60 credits, or permission of instructor. Examines Holocaust, destruction of European Jewry, through testimonies of survivors and narratives of historians. Topics include historical and cultural circumstances that encouraged German anti-Semitism; rise of Nazism; ghettoization of Jews in Poland; Jewish life in ghettos; European Jews under Nazi occupation; Jewish resistance; Christian rescuers; invasion of Russia and mobile killing units; life in hiding and passing, forced labor camps and concentration camps; responses of United States and world; and reflections on Holocaust today. Also considers eyewitness testimony, memory, narrative, and literature.

471 Prevention and Deterrence of Crime (3:3:0) Prerequisite: 60 credits, in-service status, or permission of instructor. Theoretical and practical strategies for crime prevention and deterrence. Social, environmental, and mechanical developments. Police, courts, and correctional elements of law enforcement in terms of current effectiveness and future potential for crime prevention.

475/575 Women and the Law (3:3:0) Prerequisite for 475: 60 credits, or permission of instructor. Prerequisite for 575: undergraduate senior status in sociology or graduate standing. Analyzes changing position of women in law from legal and sociological perspectives. Focuses on how law defines and regulates women’s rights in variety of areas such as employment, marriage and divorce, reproduction and control of one’s body, and violence against women. Explores social and economic consequences of various legal doctrines, and compares laws and policies in United States with those in other countries.

480, 481 Honors Seminar in Sociology I, Honors Seminar in Sociology II (3:0:0), (3:0:0) Prerequisite: admission to sociology honors program, and permission of instructor. Linked, sequential courses, normally given by the same instructor. SOCI 480 involves application of theoretical and methodological knowledge to analysis of social issue that serves as course’s central theme. SOCI 481 culminates in preparation and presentation of substantive research paper.

482 Honors Internship in Sociology (3:0:0) Prerequisites: admission to Sociology Honors Program and permission of instructor. Provides hands-on experience in sociology and opportunity to do research in approved work settings. In addition to 120 hours of field work (for 3 credits), students meet at discretion of instructor to plan their research and share ongoing field work experiences.

483 The Sociology of Higher Education (3:3:0) Prerequisite: 60 credits. Exposes students to sociological theory and research on evolution of higher learning in United States; explores social forces that have shaped the distinctively American approach toward higher education and have led to transformation of higher education in contemporary society. Particular attention to relation between universities and elites within surrounding society; linkage between education and industry; norms and values that are presupposed by educational institutions; and bearing of sports on values and traditions of higher education.

492 Sociology of Organizations (3:3:0) Theories, analysis of types of organizations from informal voluntary associations to large complex ones. Explores nonprofit organizations and alternatives to bureaucracies, such as feminist collectives, cooperatives, self-help groups, and social movement organizations. Students do field work in organizations applying theories and concepts to observations.

499 Independent Research in Sociology (1–4:0:0) Prerequisite: 18 credits of sociology including SOCI 311, 313, and 412; 3.00 GPA in sociology; and research proposal approved by instructor and department chair before enrollment. Investigation of sociological problem according to individual interest, with emphasis on research.

503 Sociology of Law (3:3:0) Prerequisite: undergraduate senior status in sociology, graduate standing, or permission of instructor. Classical and contemporary sociological theories applied to law and legal institutions. Social relations between law and community, special group interests, social change, and social deviance. Case studies. Consideration of legal profession.

505 Sociology of Sex and Gender (3:3:0) Prerequisite: undergraduate senior status in sociology, graduate standing, or permission of instructor. Advanced study of sex roles in contemporary society. Using historical and comparative data, examines perceived, prescribed, and actual sex differentiation in social, political, and economic roles.

515 Applying Sociology (3:3:0) Prerequisite: undergraduate senior status in sociology or graduate standing. Overview of the ways sociologists have applied theoretical and methodological skills and understanding in sociological practice in nonacademic settings.
516 Internship in Sociology (1–6:1–6:0) Prerequisites: 21 credits of sociology including research methods, or permission of instructor. Learning experience in the application of sociological knowledge and skills in different work settings. Students work in approved setting as applied sociologists. Minimum 40 hours of work for every 1 credit.

523 Racial and Ethnic Relations: American and Selected Global Perspectives (3:3:0) Prerequisite: undergraduate senior status in sociology, graduate standing, or permission of instructor. Demographic purview of U.S. racial and ethnic groups; racial and ethnic groups as human-social-minority groups. Factors making for minority status including personality factors, group cultural factors; reactions of racial, ethnic minorities to minority status; programs, methods, social movements, and philosophies seeking to change minority group status.

530 Methods and Logic of Social Inquiry (3:3:0) Prerequisite: undergraduate senior status in sociology, or graduate status and undergraduate statistics and research methodology, or permission of instructor. Emphasizes gathering, interpreting, and evaluating scientific evidence. Develops critical-thinking skills by using set of rules and logical criteria for evaluating social science research. Covers logic of scientific inquiry, including various data collection methods, such as observational research and experiments, types of variables, causality, and how to distinguish between good and bad research in published literature.

531 Statistical Reasoning (3:3:0) Prerequisite: graduate standing and undergraduate statistics and research methodology, or permission of instructor. Intermediate treatment of statistical methods used in analyzing social data. Topics include sampling, inference, hypothesis testing, analysis of variance, linear regression, and correlation. Introduces logic of multivariate analysis.

550 The Holocaust (3:3:0) Prerequisite: undergraduate senior status in sociology, or graduate status. Examines Holocaust, destruction of European Jewry, through testimonies of survivors and narrators of historians. Topics include historical and cultural circumstances that encouraged German anti-Semitism; rise of Nazism; ghettoization of Jews in Poland; Jewish life in ghettos; European Jews under Nazi occupation; Jewish resistance; Christian rescuers; invasion of Russia and mobile killing units; life in hiding and passing, forced labor camps, and concentration camps; responses of United States and world; and reflections on Holocaust today. Also considers eyewitness testimony, memory, narrative, and literature.

590 Gender, Race, and the Natural World (3:3:0) Prerequisites: undergraduate seniors, graduate standing, or permission of instructor. Advanced study of links among gender, race, and nature using social-psychological framework, original sources, and seminar discussion format. Analyzes ideologies that underpin interlocking narratives of gender, race, and nature; and examines role of science in production of those ideologies.

599/NURS 611 Issues in Sociology (3:3:0) Prerequisite: undergraduate senior status in sociology, or graduate status. Contemporary topics in sociology including sociological theory, crime and delinquency, advanced research methods, social and cultural change, urban sociology, medical sociology, sociology of aging, and rural sociology. May be taken only once for credit.

605 Gender and Social Structure (3:3:0) Reviews theories explaining the development and maintenance of gender. Using historical and comparative data, examines perceived, prescribed, and actual sex differentiation in social, political, and economic roles. Begins with gender as a social structure and then examines contemporary research as support or refutation for variety of theoretical paradigms. Includes discussion of gender in intimate relationship and the public sector.

607 Criminology (3:3:0) Prerequisite: graduate standing, or permission of instructor. Crime and crime causation. Topics include social basis of law, administration of justice, and control and prevention of crime.

608 Juvenile Delinquency (3:3:0) Prerequisite: graduate standing, or permission of instructor. Sociology of adolescent behavior. Sociological factors that determine which behaviors and social categories of adolescents are likely to be labeled and treated as delinquent.

609 Sociology of Punishment and Corrections (3:3:0) Prerequisite: graduate standing, or permission of instructor. Explores development of modern penal system as interpreted by various perspectives, including Durkheim, Marx, Weber, Foucault, Elias, and Garland. Explores recent trends and problems, including social control and violence in prisons, race and gender disparities in punishment, alternative rehabilitation, and prevention strategies.

611 Classical Sociological Theory (3:3:0) Prerequisite: graduate standing or permission of instructor. In-depth examination of major issues in classical (pre-1930) sociological theory. Analyzes Durkheim, Marx, Weber, Mead, and others; and emphasizes social and intellectual context of their theories.

612 Contemporary Sociological Theory (3:3:0) Prerequisite: graduate standing, or permission of instructor. Examines schools in contemporary sociological theory such as structural-functionalism, conflict, exchange, symbolic interactionism, ethnomethodology, humanist sociology, and critical theory. Analyzes contemporary theorists in relation to schools.

614 Sociology of Culture (3:3:0) Prerequisite: graduate standing, or permission of instructor. Analyzes 20th century debates in American culture and cultural politics, with emphasis on art and popular culture, news media, and competing notions of “the public.” In-depth readings in cultural sociology cover variety of theoretical and methodological approaches.

616 Internship in Sociology (1–6:1–6:0:0) Prerequisite: graduate standing. Provides learning experiences in application of sociological knowledge and skills in different work settings. Students work in approved setting as applied sociologists. Each credit requires minimum of 40 hours of work.

619 Conflict and Conflict Management: Perspectives from Sociology (3:3:0) Prerequisite: graduate standing in sociology or conflict analysis and resolution, or permission of instructor. Deals with sociology of conflict. Presents major sociological theories of conflict such as those of Marx, Weber, Simmel, Dahrendorf, Coser, and Collins. Stresses role that sociological conflict theory plays in undergirding conflict management practices.
620 Methods and Logic of Social Inquiry (3:3:0) Prerequisite: undergraduate statistics and research methodology, or permission of instructor. Emphasizes gathering, interpreting, and evaluating scientific evidence. Covers logic of scientific inquiry, including the application of various research designs and data collection methods. Develops critical-thinking skills by using set of rules and logical criteria for evaluation of social science research. Focus both on how results are obtained and disseminated via research reports.

630 Analytic Techniques of Social Research (3:3:0) Prerequisite: graduate standing and undergraduate statistics and research methodology, or permission of instructor. Focuses on general linear model and multiple regression analysis in nonexperimental data. Topics include logic of causal analysis, multicollinearity, influential observations, categorical independent and dependent variables, violation of assumptions, missing data, structural equation and measurement models, and discrete multivariate analysis.

631 Survey Research (3:3:0) Prerequisites: SOCI 530 and 531, or permission of instructor. Introduces theory, method, and practice of survey research design and analysis. Students complete survey research project.

632 Evaluation Research for Social Programs (3:3:0) Prerequisite: SOCI 530 and 531, or permission of instructor. Studies methodological issues related to evaluation of social programs. Explores conceptual and research design issues in relation to social programs, particularly delivery of social services. Includes examination of methods used to assess need for programs, impact of delivery systems, and efficiency and effectiveness of social programs.

633 Special Topics in Sociology (3:3:0) Prerequisite: graduate standing, or permission of instructor.

634 Qualitative Research Methods (3:3:0) Prerequisite: graduate standing, or permission of instructor. Examines basic research methods involving observational techniques and procedures used in description and analysis of patterns, configurations, ethos, eidos, structures, functions, and styles typical of whole societies and cultures. Emphasizes case studies, unobtrusive methods, participant observation, long-term residence, choices of observer status role, recording data, uses of technical equipment, key informants, interviewing techniques, and ethical considerations in employing such methods and procedures.

635 Environment and Society. (3:3:0) Prerequisite: graduate standing. Overview of human ecology and environmental sociology, emphasizing selected topics. Focuses on theory, since theory makes it possible to generalize from understandings derived in an analysis of a particular problem and apply them to other problems.

636 Statistical Reasoning (3:3:0) Prerequisite: undergraduate statistics and research methodology, or permission of instructor. Intermediate treatment of quantitative analytic techniques used in sociology. Topics include sampling, inference, hypothesis testing, analysis of variance, and bivariate and multiple correlation and regression. Introduces logic of multivariate analysis. Focus on how results are obtained and disseminated via research reports.

640 Social Theory and Social Policy (3:3:0) Prerequisite: graduate standing, or permission of instructor. Major theories of social organization and social change as means of understanding social policy development. Concentration is on social policies in American society.

650 Issues in the Sociology of Health, Illness, and Disability (3:3:0) Prerequisite: graduate standing, or permission of instructor. Social context of disease and medical care, position of professions in medical care structure, delivery of medical care, and physician-patient relationship under different systems of practice.

651 (551) Health Care Systems (3:3:0) Prerequisite: graduate standing, or permission of instructor. Changing health care systems are rapidly affecting patient providers and health and quality of life of society. Offers analysis and theories of change in health care systems, and impacts on society and various stakeholders. Examines for-profit and nonprofit organizations and their impacts, and offers comparative cross-cultural analysis of health care systems.

660/860 Historical and Comparative Sociology (3:3:0) Prerequisite: graduate standing, or permission of instructor. Seminar in theory and methods of historical and comparative sociology, primarily for students with background in sociological theory and methods. Examines basic approaches and research data of history and sociology, surveys development of field, and analyzes exemplary studies.

686 Sociology of Aging (3:3:0) Prerequisite: graduate standing, or permission of instructor. Analyzes sociological issues in aging, including class and cultural factors, problems of work, retirement, attachment and loss, and ageism. Examines different theories of aging.

692 McDonilization of Organizations (3:3:0) Prerequisite: graduate standing, or permission of instructor. Examines classical and contemporary theories and analysis governing formal organizations, their development, and characteristics and relationships to society. Considers alternative conceptualizations to bureaucracy such as learning organizations, self-help groups, feminist collectives, cooperatives, and social movement organizations. Nonprofit, governmental, and business organizations are dissected.

696, 697 Independent Study (3:0:0), (3:0:0) Prerequisite: graduate standing, or permission of instructor. Offers analysis and research literature chosen by student and instructor.

711 Classical Sociological Theory (3:3:0) In-depth examination of major issues in classical (pre-1930) sociological theory. Analyzes Durkheim, Marx, Weber, Mead, and others; and emphasizes social and intellectual context of their theories.

712 Contemporary Sociological Theory (3:3:0) Examines schools in contemporary sociological theory such as structural-functionalism, conflict, exchange, symbolic interactionism, ethnmethodology, humanist sociology, and critical theory. Analyzes contemporary theorists in relation to schools.

730 Analytic Techniques of Social Research (3:3:0) Prerequisite: undergraduate statistics and research methodology, or permission of instructor. Introduces multiple regression and causal analysis to sociological researchers, with a focus on obtaining and disseminating results. Moves from linear regression to the general linear model with several variables, its extensions, assumptions, and regression diagnostics. Examines the use of dummy variable and the analysis of interaction effects. Considers systems of equations and nonlinear outcomes.
797 Sociology Colloquium (3:3:0) Prerequisite: graduate standing or permission of instructor. Public forum for the presentation and discussion of contemporary sociological research.

799 Thesis (1–6:0:0) Graded S/NC.

800 Studies for the Doctor of Philosophy in Education (variable credit) Prerequisite: admission to PhD in education program to study in sociology. Program of studies designed by student’s discipline director and approved by student’s doctoral committee, which brings student to participate in current research of discipline director and results in paper reporting original contributions of the student. Enrollment may be repeated.

801 Proseminar in Public and Applied Sociology (3:3:0) The first of a two-semester core sequence devoted to the philosophical, historical, theoretical, and methodological dimensions of public and applied sociology within the United States. Traces the evolution of the field during the 20th century, from its inception in the Chicago school and the studies of W.E.B. Du Bois to more recent formulations, as these bear on the interplay between social scientific knowledge and public decisions and debates.

802 Proseminar in Public and Applied Sociology, II (3:3:0) The second in a two-semester sequence that provides students with an introduction to the theories, methods, and practice of public and applied sociology as they are relevant to issues of societal and community importance. Builds on the historical and contextual understandings of the first semester by examining contemporary issues and challenges such as university and community relationships, activism and research, ethical dilemmas of engaged research, and methodological debates.

803 Institutions and Inequality (3:3:0) Analyzes the interrelations between social inequalities and institutional structures, including markets, the press, prisons, mental institutions, cultural organizations, and corporations.

804 Sociology of Globalization (3:3:0) Addresses the social, political, cultural, and economic process of globalization. Explores the limits on globalization during the precapitalist era, the relation between the internal structure of imperialist societies, theoretical debates over the contemporary world system, the relation between cities and globalization, and the link between globalization and social inequality within both developed and developing societies.

805 Sociology of Development (3:3:0) Examines the connections among inequality, conflict, social justice, and human rights in an age of globalization. Drawing on case studies from around the world, examines institutional and structural violence and inequality as they relate to state, corporate, and military power; international law and order; welfare and social policy; global justice; regionalism, multilateralism, and transnationalism; environmental protection; gender inequality; ethnic conflict; resource wars; and national security policy before and after September 11th.

807 Sociology of Human Rights (3:3:0) Examines the connections among inequality, conflict, social justice, and human rights in an age of globalization. Drawing on case studies from around the world, examines institutional and structural violence and inequality as they relate to state, corporate, and military power; international law and order; welfare and social policy; global justice; regionalism, multilateralism, and transnationalism; environmental protection; gender inequality; ethnic conflict; resource wars; and national security policy before and after September 11th.

998 Doctoral Dissertation Proposal (1-6:0) Prerequisite: successful completion of all course work and doctoral comprehensive exams. Work on research proposal for doctoral dissertation. Course may be repeated once for credit for total of 6 credits. Graded S/NC.

999 Doctoral Dissertation (1-12:0) Prerequisite: Successful completion of SOCI 998. Doctoral dissertation research and writing on approved dissertation topic under direction of committee. Maximum of 12 credits may be applied toward degree. Graded S/NC.
Sociology and Anthropology (SOAN)

500 Communicating across the Disciplines (3:3:0) Prerequisite: admission to MAIS concentration in global interaction. Provides an introduction to the range of disciplinary perspectives and their combinations necessary for analyzing and acting on critical research policy needs in the global arena. Using case examples from recent and contemporary events, students will analyze data, assess alternative policy and program approaches, and evaluate the relative contributions of different disciplines and fields, including the way those disciplines and fields vary across different national traditions and between the national and international levels.

510 Culture and Globalization (3:3:0) Prerequisite: SOAN 500. Provides continuing exposure to the range of disciplinary perspectives necessary for understanding crucial issues in the global arena. Through case examples, focuses on the intersections of culture and globalization. Analyzes existing data and assesses alternative policy and program approaches; illuminates interactions between globalization and culture.

670 Special Topics in Sociology and Anthropology (4–8: 0–8:0–8) Prerequisite: graduate standing, or permission of instructor. Provides cross-disciplinary, pedagogical format in Department of Sociology and Anthropology. Covers variety of pedagogical formats, such as combining ethnographic field techniques taught in anthropology with sociological-based urban issues, or providing archaeological laboratory analyses with grounding in statistical techniques proposed by department faculty.

Software Engineering (SWE)

Computer Science

332 Object-Oriented Software Design and Implementation (3:3:0) Prerequisite: CS 211. In-depth study of software design and implementation using a modern, object-oriented language with support for graphical user interfaces and complex data structures. Topics covered will be specifications, design patterns, and abstraction techniques, including typing, access control, inheritance, and polymorphism. Students will learn the proper engineering use of techniques such as information hiding, classes, objects, inheritance, exception handling, event-based systems, and concurrency.

421 Software Requirements and Design Modeling (3:3:0) Prerequisite: CS 211. An introduction to concepts, methods, and tools for the creation of large-scale software systems. Methods, tools, notations, and validation techniques to analyze, specify, prototype, and maintain software requirements. Introduction to object-oriented requirements modeling, including use case modeling, static modeling, and dynamic modeling using the Unified Modeling Language (UML) notation. Concepts and methods for the design of large-scale software systems. Fundamental design concepts and design modeling using UML notation. Students participate in a group project on software requirements, specification, and object-oriented software design.

432 Design and Implementation of Software for the Web (3:3:0) Prerequisite: MATH 125 and CS 211. Teaches how to develop software for web applications. Covers client-server computing, theories of usable graphical user interfaces, and models for web-based information retrieval and processing. Goals are to understand how to design usable software interfaces and implement them on web, learn how to build software that accepts information from users across web and returns data to user, and understand how to interact with database engines to store and retrieve information. Specific topics are HTML, CGI programming, Java, Java applets, Javascripts, and Java servlets.

437 Software Testing and Maintenance (3:3:0) Prerequisites: CS 211 and Math 125. Concepts and techniques for testing and modifying software in evolving environments. Topics include software testing at the unit, module, subsystem, and system levels; developer testing; automatic and manual techniques for generating test data; testing concurrent and distributed software; designing and implementing software to increase maintainability and reuse; evaluating software for change; and validating software changes.

443 Software Architectures (3:3:0) Prerequisite: SWE 421. This course teaches how to design, understand, and evaluate software systems at an architectural level of abstraction. By the end of the course, students will be able to recognize major architectural styles in existing software systems, describe a system’s architecture accurately, generate architectural alternatives to address a problem and choose from among them, design a medium-sized software system that satisfies a specification of requirements, use existing tools to expedite software design, and evaluate the suitability of a given architecture in meeting a set of system requirements.

510 Object-Oriented Programming in Java (3:3:0) Prerequisites: undergraduate courses or equivalent knowledge in programming in a high-level language. This course introduces students to programming in the Java language. Topics include problem-solving methods and algorithm development, program structures, abstract data types, simple data and file structures and program development in a modular, object-oriented manner. Introductory use of OO language features, including data hiding, inheritance, polymorphism, and exception handling. Goals include design and development of Java classes and class type hierarchies. An introduction to Java servlets and applets is included. Emphasis on program development is reinforced through several programming projects. Credit cannot be applied to a graduate degree in the Volgenau School or the BS degree in computer science.

619 Object-Oriented Software Specification and Construction (3:3:0) Prerequisites: SWE foundation courses or equivalent. In-depth study of software construction using modern, object-oriented language with support for graphical user interfaces and complex data structures. Specifications, design patterns, and abstraction techniques, including procedural, data, iteration, type, and polymorphic. Information hiding, classes, objects, and inheritance. Exception handling, event-based systems, and concurrency.

620 Software Requirements Analysis and Specification (3:3:0) Prerequisites: SWE foundation courses or equivalent. In-depth study of methods, tools, notations, and validation techniques for analysis, specification, prototyping, and maintenance of software requirements. In-depth study of object-oriented requirements modeling, including use case modeling, static modeling and dynamic modeling with Unified Modeling Language (UML) notation. Students participate in a group project on software requirements, specification, and object-oriented software design.
prerequisite in group project on software requirements and specification using modern method.

621 Software Modeling and Architectural Design (3:3:0)
Prerequisite: SWE 619, with 620 recommended, or permission of instructor. MSCS students may substitute CS 540 and 571 for SWE 619. Concepts and methods for architectural design of large-scale software systems. Introduces fundamental design concepts and design notations. Presents, compares several design methods. In-depth study of object-oriented analysis and design modeling using the Unified Modeling Language (UML) notation. Students participate in group project on object-oriented software design.

622 Distributed Software Engineering (3:3:0)
Prerequisites: SWE foundation courses or equivalent. Hands-on introduction to techniques and programming interfaces for distributed software engineering. Networking protocols at several layers. Construction of distributed and concurrent software using network protocol services. Applications of Internet and Web-based software.

623 Formal Methods and Models in Software Engineering (3:3:0)
Prerequisites: SWE 619, or permission of instructor. Formal mechanisms for specifying, validating, and verifying software systems. Program verification through Hoare’s method and Dijkstra’s weakest preconditions. Formal specification via algebraic specifications and abstract model specifications, including initial specification and refinement towards implementation. Integration of formal methods with existing programming languages, and the application of formal methods to requirements analysis, testing, safety analysis, and object-oriented approaches. Formal methods using the Object Constraint Language (OCL).

625 Software Project Management (3:3:0)
Prerequisites: SWE foundation courses or equivalent. Lifecycle and process models; process metrics; planning for a software project; mechanisms for monitoring and controlling schedule, budget, quality, and productivity; and leadership, motivation, and team building.

626 Software Project Laboratory (3:3:0)
Prerequisites: SWE 619, 620, and 621; or permission of instructor. Covers requirements analysis, design, implementation, and management of software development project. Students work in teams to develop or modify software product, applying sound principles of software engineering. Uses both Industrial, academic standards to assess quality of work products.

630 Software Engineering Economics (3:3:0)
Prerequisite: SWE 625. Covers quantitative models of software lifecycle, cost-effectiveness analysis in software engineering, multiple-goal decision analysis, uncertainty and risk analysis, software cost estimation, software engineering metrics; and quantitative lifecycle management techniques.

631/CS 631 Object-Oriented Design Patterns (3:3:0)
Prerequisite: SWE 619 or 621, or CS 540 or 571; or graduate course in object-oriented programming or equivalent. Principles of object-oriented design through design patterns. Studies selection of appropriate object-oriented structure after system requirements or requirements specification of software system have been developed. Design patterns created in logic view of software system. Studies generalized design solutions for generalized software design problems, and reuse of design patterns. Once developed, design patterns may be specified in any object-oriented language.

632 User Interface Design and Development (3:3:0)
Prerequisite: SWE 619, or CS 540 and 571, or permission of instructor. Principles of user interface design, development, and programming. Includes user psychology and cognitive science, menu system design, command language design, icon and window design, graphical user interfaces, web-based user interfaces.

637 Software Testing (3:3:0)
Prerequisite: SWE 619, or permission of instructor. Concepts and techniques for testing software and assuring its quality. Topics cover software testing at the unit, module, subsystem, and system levels; automatic and manual techniques for generating and validating test data; testing process; static vs. dynamic analysis; functional testing; inspections; and reliability assessment.

641/SYST 621 Systems Architecture for Large-Scale Systems (3:3:0) See SYST 621.

642 Software Engineering for the World Wide Web (3:3:0)
Prerequisites: SWE 619, or CS 540 and 571, or permission of instructor. Detailed study of engineering methods and technologies for building highly interactive web sites for e-commerce and other Web-based applications. Presents engineering principles for building Web sites that exhibit high reliability, usability, security, availability, scalability, and maintainability. Teaches methods such as client-server programming, component-based software development, middleware, and reusable components.

645 Component-Based Software Development (3:3:0)
Prerequisite: SWE 619, or CS 540 and 571, or permission of instructor. Introduces concepts and foundations of software component and component-based software. Detailed study of engineering principles of modeling, designing, implementing, testing, and deploying component-based software. Also explores state-of-the-art component technologies.

699 Special Topics in Software Engineering (3:3:0)
Prerequisite: permission of instructor. Special topics not occurring in regular SWE sequence. May be repeated for credit when semester topic is different.

720 Advanced Software Requirements (3:3:0)
Prerequisites: SWE 620 and 621. State-of-the-art and state-of-the-practice in software requirements engineering. In-depth coverage of selected methods, tools, notations, or validation techniques for the analysis and specification of software requirements. Includes project investigating or applying approaches to requirements engineering.

721 Reusable Software Architectures (3:3:0)
Prerequisites: SWE 620 and 621. Investigates software concepts that promote reuse of software architectures. Studies influence of object technology on software design and reuse. Investigates Domain Modeling methods, which model the application domain as a software product family from which target systems can be configured. Covers reusable software patterns including architecture patterns and design patterns, software components, and object-oriented frameworks.

723 Precise Modeling (3:3:0)
Prerequisite: SWE 621. Discusses ongoing advances in modeling techniques for software design, including precision, performance, security and safety aspects; and UML, its meta-models, and proposed enhancements such as Object Security Constraint Language,
Object Temporal Constraint Language, QoS Profiles and the theory behind them.

727 Quality of Service for Software Architectures (3:3:0)
Prerequisite: SWE 621 or permission of instructor. This course builds on acquired skills for modeling architectures, and focuses on the relationship between architectural patterns and qualities of service (QoS). By the end of the course, students will be able to elicit the QoS preferences of stakeholder; recognize major architectural styles and the QoS tradeoffs that each presents; design for, and reconcile competing QoS requirements; and evaluate a given architecture with respect to a set of QoS requirements.

763 Software Engineering Experimentation (3:3:0)
Prerequisite: SWE 619, or permission of instructor. Detailed study of scientific process, particularly using experimental method. Examines how empirical studies are carried out in software engineering. Reviews distinction between analytical techniques and empirical techniques. Other topics include experimentation required in software engineering, problems that can be solved using experimentation, methods used to control variables and eliminate bias in experimentation, and analysis and presentation of empirical data for decision making.

781 Secure Software Design and Programming (3:3:0)
Prerequisites: SWE 619, or permission of instructor. Theory and practice of software security, focusing in particular on some common software security risks, including buffer overflows, race conditions and random number generation, and on identification of potential threats and vulnerabilities early in design cycle. Emphasizes methodologies and tools for identifying and eliminating security vulnerabilities, techniques to prove absence of vulnerabilities, ways to avoid security holes in new software, and essential guidelines for building secure software: how to design software with security in mind from the ground up and to integrate analysis and risk management throughout the software life cycle.

796 Directed Readings in Software Engineering (3:3:0)
Prerequisite: permission of instructor. Analysis and investigation of contemporary problem in software engineering. Requires prior approval by faculty member who supervises student’s work. Written report also required. Maximum 6 credits may be earned. To register, students must complete independent study form, available in department office. It must be initialed by faculty sponsor and approved by department chair.

798 Research Project (3:3:0)
Prerequisite: 18 credits applicable toward MS. Master’s degree candidates undertake a project using knowledge gained in MS program. Topics chosen in consultation with a faculty sponsor. Prior approval required by faculty sponsor who supervises student’s work. To register, students must complete an independent study form, available in department office. It must be initialed by the faculty sponsor and approved by the department chair. Research project is chosen under guidance of full-time graduate faculty member, resulting in written technical report.

799 Thesis (6:0:0)
Prerequisite: permission of advisor. Research project completed under supervision of faculty member, which results in technical report accepted by three-member faculty committee. Report must be defended in oral presentation. To register, students must complete independent study form, available in department office. It must be initialed by faculty sponsor and approved by department chair.

825/IT 825 Special Topics in Web-Based Software (3:3:0)
Prerequisite: SWE 642. Advanced topics in specifying, designing, modeling, developing, deploying, testing, and maintaining software written as web applications and web services. May be repeated with change in topic.

Spanish (SPAN)

Modern and Classical Languages

101 Elementary Spanish I (3:3:1)
For students with no knowledge of Spanish. Introduction to Spanish, including elements of grammar, vocabulary, oral skills, listening comprehension, and reading. Lab work required.

102 Elementary Spanish II (3:3:1)
Prerequisite: SPAN 101, appropriate placement score, or permission of department. Continuation of SPAN 101. Lab work required.

105 Review of Elementary Spanish (3:3:1)
Prerequisite: appropriate placement score, or permission of department. Review of elements of Spanish for students who have studied Spanish previously. May not be taken for credit in combination with SPAN 102 or 109. Lab work required.

109 Intensive Elementary Spanish (6:6:2)
Equivalent to SPAN 101 and 102 taught in a single semester. Recommended for students who desire an intensive introduction to Spanish. May not be taken for credit in combination with SPAN 101, 102, or 105. Lab work required.

110 Elementary Spanish (6:6:1)
Introduces elements of grammar, vocabulary, oral skills, listening, speaking, reading, and writing. Students may not receive credit for SPAN 110 if they have received credit for SPAN 101, 102, or 109. Lab work required.

201 Intermediate Spanish I (3:3:1)
Prerequisite: SPAN 102, 105, 109, appropriate placement score, or permission of department. Further development of skills in listening, speaking, reading, and writing. SPAN 201 and 202 must be taken in sequence. Lab work required.

202 Intermediate Spanish II (3:3:1)
Prerequisite: SPAN 201, appropriate placement score, or permission of department. Application of skills to reading, composition, and discussion. Lab work required.

209 Intensive Intermediate Spanish (6:6:2)
Prerequisite: SPAN 102, 105, 109, appropriate placement score, or permission of department. Equivalent to SPAN 201 and 202 taught in a single semester. May not be taken for credit in combination with SPAN 201 or 202. Lab work required.

210 Intermediate Spanish (3:3:1)
Prerequisite: SPAN 110 or appropriate placement score. Continuation of the development of basic components of the language, with focus on listening, speaking, reading, and writing skills. Introduces students to the cultures and histories of Spanish-speaking regions. Lab work required.

250 Gateway to Advanced Spanish (3:3:0)
Prerequisites: SPAN 210, appropriate placement score, or permission of department. Integration of advanced intermediate-level Spanish reading, writing, listening, and speaking skills, as well as the development of critical thinking about authentic texts from around the globe. Taught in Spanish.
301 Grammar and Syntax (3:3:0) Prerequisite: SPAN 202, 209, appropriate placement score, or permission of instructor. In-depth review of Spanish grammar and syntax. Extensive practice in controlled and free writing with emphasis on fundamental difficulties and points of interference that exist between English and Spanish.

302 Reading and Writing Skills Development (6:6:0) Prerequisites: SPAN 202 or 209, appropriate placement score, or permission of instructor. Development of ability to write on topics of current interest. Readings provide examples of each topic and the necessary vocabulary for compositions. Introduces reading strategies and provides practice in the reading of different kinds of texts.

305 Spanish in Context I (3:3:0) Prerequisites: SPAN 250 or equivalent, or permission of instructor. Students cannot receive credit for SPAN 305 if they receive credit for SPAN 309. Integrated content-based approach to the study of Spanish, designed to promote oral and written abilities, as well as critical understanding of Latin American, Latino, and/or Spanish histories and cultures. Includes vocabulary-building activities, grammar review and practice, assigned readings in a variety of genres, critical cultural analysis, in-class discussions, written essays, and the viewing of films. Conducted in Spanish.

306 Spanish in Context II (3:3:0) Prerequisites: SPAN 305 or equivalent, or permission of instructor. Students cannot receive credit for SPAN 306 if they receive credit for SPAN 309. Continuation of SPAN 305.

309 Intensive Spanish in Context (6:6:0) Prerequisites: SPAN 250 or equivalent, or permission of instructor. Students cannot receive credit for both SPAN 309 and SPAN 305 or 306. Intensive content-based approach to the study of Spanish, designed to promote oral and written abilities, as well as critical understanding of Latin American, Latino, and/or Spanish histories and cultures. Includes vocabulary-building activities, grammar review and practice, assigned readings in a variety of genres, critical cultural analysis, in-class discussions, written essays, and the viewing of films. Conducted in Spanish.

315 Spanish for Heritage Speakers (3:3:0) Prerequisites: appropriate placement score or permission of instructor. Designed for students who have some communicative ability in Spanish, normally acquired in the home, who want to improve their reading and writing abilities while developing a critical understanding of Latin American, Latino, and/or Spanish histories and cultures. Course components include orthography and vocabulary activities, grammar review and practice, assigned readings in a variety of genres, critical cultural analysis, in-class discussions, written essays, and the viewing of films.

321 Introduction to Spanish Culture (3:3:0) Prerequisite: ENGL 101 or equivalent, or permission of instructor. Designed for nonmajors. History, culture, economic and social development, and scientific and artistic achievements that have contributed to the formation of modern Latin America. Course work in English. Credit may be earned in either SPAN 322 or 461, but not in both.

322 Introduction to Latin American Culture (3:3:0) Prerequisite: ENGL 101 or equivalent, or permission of instructor. Designed for nonmajors. History, culture, economic and social development, and scientific and artistic achievements that have contributed to the formation of modern Latin America. Course work in English. Credit may be earned in either SPAN 322 or 461, but not in both.

323 Field Study in Hispanic Culture (1–3:6:0) Prerequisite: 60 credits or permission of instructor. Study tour to area of Spanish-speaking world. Students must attend a series of lectures before the tour, and must consult with the designated faculty member on a research project on a topic in Hispanic culture resulting in paper or report.

324 Study Abroad in Spanish (3:3:0) Prerequisite: SPAN 202, 209 or equivalent, or permission of instructor. Study at an academic institution in a Spanish-speaking country including classroom studies with professors from the host country and field experiences.

325 Major Hispanic Writers (3:3:0) Prerequisite: ENGL 101 or equivalent, or permission of instructor. Designed for nonmajors. Study of the works of major Hispanic writers in translation. Writers studied vary. Course work in English. May be taken toward fulfillment of the general requirement in literature for baccalaureate degrees. May be repeated for credit with permission of department.

326 Treasures of Spanish American Literature (3:3:0) Prerequisite: advanced oral and written proficiency in Spanish, to be determined by the instructor. Designed for nonmajors. Introduction to the major themes, trends, and cultural context of Latin American literature. Writers studied vary. May be repeated for credit with permission of the department.

329 Special Topics in Spanish and Latin American Literature (3:3:0) Prerequisite: ENGL 101, or permission of instructor. Designed for nonmajors. Course work in English. May be taken toward fulfillment of the humanities requirement in literature for baccalaureate degrees. May be repeated once for credit.

351 Oral Spanish (3:3:0) Prerequisite: SPAN 202, 209 or equivalent; appropriate placement score; or permission of instructor. Development of oral expression on topics of current interest and everyday situations, including written assignments. Not open to native speakers.

370 Spanish Writing and Stylistics (3:3:0) Prerequisites: SPAN 306 or 309, or 315, or permission of instructor. Improves writing skills by covering formal and stylistic concepts of the Spanish language. Includes practice and exposure to different textual genres in an interdisciplinary fashion. Includes common doubts concerning spelling, expression, and style; business Spanish; journalistic Spanish; academic Spanish; and creative writing. Conducted in Spanish.

385 Introduction to Spanish Linguistics (3:3:0) Prerequisite: SPAN 301, 302, or advanced ability in Spanish; or permission of instructor. Introduces study of Spanish linguistics, including phonetics, phonology, morphology, syntax, pragmatics, historical linguistics, and sociolinguistics. Combines discussion of theoretical issues with linguistic analysis of Spanish. Conducted in Spanish.

388 Introduction to Latina/o Studies (3:3:0) Prerequisites: SPAN 335 or 336, and SPAN 370, or equivalents. Completion or concurrent enrollment in all other required general education courses. Interdisciplinary approach to the study of U.S. Latina/o cultural production, designed to promote critical thinking in understanding Latina/o histories, literature, and cultures. Conducted in Spanish.
390 Introduction to Hispanic Literary Analysis (3:3:0)  
Prerequisite: SPAN 302, or permission of instructor.  
Required course that prepares students for the study of Hispanic literatures. Introduces basic terminology of literary analysis and provides practice in the examination of texts in the major genres: poetry, narrative, and drama.

400 Spanish for the Professions (3:3:0)  
Prerequisites: SPAN 302, or permission of instructor. Advanced study of the language needed for use in a specific profession, such as translation, business, social service, or health professions. May be repeated for credit with change of topic.

425, 426 Independent Study (1–3:0:0), (1–3:0:0)  
Prerequisites: Spanish major with 90 credits, and permission of instructor. Research and analysis of a selected problem in literature or linguistics in consultation with a department member. Maximum of 6 credits of independent study may be applied to fulfillment of major requirements.

430 Spanish in the United States (3:3:0)  
Prerequisites: SPAN 302 and 351, or advanced ability in Spanish, or permission of instructor. Covers both formal and sociolinguistic aspects of Spanish spoken in the United States. Gives a foundation in issues such as linguistic variation, language choice, the relationship among race, ethnicity, and language; official language policies; individual and societal bilingualism; and language diversity in education.

451 Advanced Oral Spanish (3:3:0)  
Prerequisites: 9 credits of SPAN at 300 level or above, or permission of instructor. Development of vocabulary and strengthening of conversational skills through class discussions and oral and written reports based on contemporary themes. Not open to native speakers.

452 Advanced Written Spanish (3:3:0)  
Prerequisites: 9 credits of SPAN at 300 level or above, or permission of instructor. Development of skills required in writing Spanish. Guided and original compositions. Grammatical structures reviewed and supplemented with individual corrections.

455 Spanish-English Translation (3:3:0)  
Prerequisites: SPAN 370 and ENGL 302, or permission of instructor. Introduction to the history, theory, analysis, and practice of Spanish-English and English-Spanish translation. Includes literal versus free translation; denotation and connotation; Spanish-English and English-Spanish translation. Includes a discussion of sociocultural and political issues surrounding the teaching of Spanish in the United States. Covers learning objectives, critical pedagogy, course design, grammar instruction, task-based language teaching, computer-assisted language learning, materials evaluation, and assessment.

480, 481 Special Topics in Spanish (3:3:0), (3:3:0)  
Prerequisites: SPAN 452, or permission of instructor. Study of a selected theme in Hispanic literature, culture, or linguistics. May be repeated for credit with change of topic.

483, 484 The Literature of Spain I, II (3:3:0)  
Prerequisites: SPAN 390 and 452 or permission of instructor: SPAN 483. Examines the main periods, trends, genres, and most representative works of the Spanish peninsular literature from its beginnings to the end of the Golden Age. SPAN 484 studies Spanish literature from 1700 to the present.

488 The Literature of Spanish America (3:3:0)  
Prerequisites: SPAN 390 and 452, or permission of instructor. Survey of the literature of Spanish America. Study of texts that are representative of the colonial, romantic, modernista, avant garde, and contemporary periods.

490 Internship in Spanish (1–6:0:0)  
Prerequisites: 9 credits in Spanish at the 300 level, or permission of instructor. Qualified students work with area schools, social service programs, government agencies, interest groups, museums, or corporations. Specific arrangements must be made with, and approved by, a member of the Spanish faculty during the semester prior to enrollment.

497, 498 Senior Honors Tutorial (3:0:0), (3:0:0)  
Prerequisites: Spanish major with 90 credits, cumulative GPA of 3.00, and GPA of 3.00 in major field. Students meeting these requirements are admitted to candidacy on submission of a letter of application to the department Honors Committee in the second half of the junior year. A faculty recommendation and an interview by the Honors Committee are also required. First semester involves weekly meetings with a faculty member to discuss readings from a comprehensive list prepared by the Spanish faculty. In the second semester, independent research and completion of an honors essay under the supervision of a member of the Spanish faculty are required.

500 History of the Spanish Language (3:3:0)  
Scientific study of the evolution of the Spanish language from its origin in Vulgar Latin to its present forms.
501 Applied Spanish Grammar (3:3:0) Analysis of Spanish grammar as a basis for teaching language skills. Terminology and methodology for the teaching of syntax are stressed.

502 Hispanic Sociolinguistics (3:3:0) Introduction to sociolinguistics with emphasis on bilingualism and language contact in the Spanish-speaking world including the United States.

505 Applied Spanish Stylistics (3:3:0) Study of creative writing, its form and expression, through text analysis from selected genres: novel, essay, drama, short story, and poetry. Practice in creative writing through exercises, composition, and workshops.

510 Introduction to The Graduate Study of Literature in Spanish (3:3:0) Prerequisite: graduate standing in master’s program in foreign languages, or permission of instructor. Study of the nature of literary work and analysis of critical approaches to literature with an emphasis on texts written in Spanish. Course is a requirement for master’s students of Spanish in their first year of study.

520 Studies in Medieval Spanish Literature (3:3:0) Study of a major work or a literary genre of this period.

525 Studies in Renaissance Literature (3:3:0) Study of a literary movement or selected authors of the Spanish Renaissance.

530 Studies in the Literature of the Golden Age (3:3:0) Study of a literary genre or a major author of Spanish literature of the Golden Age.

540 Studies in 20th-Century Literature (3:3:0) Study of a writer, genre, theme, or movement of this period.

545 Studies in Hispanic Literature (3:3:0) Study of major writers in a particular generation or movement.

551 Special Topics in Spanish (3:3:0) Special studies in Spanish or Latin American language, literature, or culture. Specific topics are announced in advance. May be repeated for credit with permission of department.

560 Studies in Spanish American Poetry (3:3:0) Study of major poets of a given period. Literary and social atmosphere of the period are emphasized.

565 Studies in Spanish American Drama (3:3:0) Study of playwrights who have made a major contribution to the development of the genre.

576 Advanced Translation (3:3:0) Prerequisite: graduate standing or permission of instructor. Advanced work in translation of selected texts from diverse fields. Comparative terminology, sight translation, and précis writing. Emphasis on the function and technique of documentation in translation. Translation from Spanish to English and from English to Spanish.

580 Contemporary Hispanic Institutions (3:3:0) Study of 20th-century cultural, social, and political institutions in Spain and Spanish America with emphasis on language and terminology used to describe their functions, regulations, and conditions.

635 Seminar in Don Quixote (3:3:0) Study of Don Quixote and major critical approaches to the work.

650 Seminar in Twentieth-Century Drama (3:3:0) Study of major dramatists in the generation of 1898 and contemporary theater.

655 Seminar in Twentieth-Century Prose (3:3:0) Study of major writer, theme, or movement in novel or essay.

670 Seminar in Spanish American Prose (3:3:0) Study of a selected theme, movement, or author in the novel, short story, or essay.

675 Seminar in Literature and Art (3:3:0) Comparative analysis of a literary theme or style in relation to other media (painting, architecture, film) for an integral understanding of the arts.

680 Seminar in Literature and Society (3:3:0) Study of a literary topic, a genre, or selected authors in relation to a given economic, social, or political system in Spain or Latin America.

685 Seminar in Literature and Ideas (3:3:0) Study of major ideological-philosophical themes and their artistic expression in literature.

798 Directed Reading and Research (3:0:0) Open only to degree students who have completed at least 18 credits. Reading and research on a specific project under the direction of a department member. Oral or written report required.

799 Thesis (1–6:0:0) Students who take SPAN 798 and then elect thesis option receive 3 credits for SPAN 799 on completion of thesis. Students who do not take SPAN 798 receive 6 credits for SPAN 799 on completion of the thesis. Graded S/NC.

800 Studies for the Doctor of Philosophy in Education (variable credit) Prerequisite: admission to PhD in education program to study in Spanish. Studies designed by student’s discipline director and approved by student’s doctoral committee that prepare student for research and writing in area of interest in discipline. Enrollment may be repeated. See also FRLN course listings.

Special Education (EDSE)
Graduate School of Education

401 Introduction to Special Education (3:3:0) Provides a survey of current knowledge on individuals with disabilities within the context of human growth and development across the life span. Content includes historical factors, legislation, etiology, characteristics, needs, educational strategies, assessment, and support services of and for individuals with disabilities ranging from mild and moderate to severe levels of varying disabilities. Includes the impact of disabilities on academic, social, and emotional performances. Field experience required.

402 Classroom Management and Applied Behavior Analysis (3:3:0) Focuses on identifying, recording, evaluating, and changing social and academic behaviors of special and diverse populations. Explores theories of classroom management and various approaches to management, including use of technological advances. Emphasizes developing classroom and individual behavior management plans.

403 Language Development and Reading (3:3:0) Prerequisites: EDSE 401 and EDSE 440. Identifies literacy skills for typical students, and describes reading, language,
and writing instruction for students with mild disabilities who access the general curriculum. Topics include emergent literacy skills, phonemic awareness, vocabulary development, and comprehension.

411 Characteristics of Students with Visual Impairments (1:1:0) Provides an overview of the characteristics of and services to persons with visual impairments, including the impact of visual impairment on infants’ and children’s growth and development, child and adolescent emotional and social development, and family interaction patterns. Considers the educational, conceptual, psychosocial, and physical implications of a visual impairment. Course delivered online.

412 Braille Code (3:3:0) Prerequisite: EDSE 411 (may be taken concurrently). Provides understanding of the literary code of Braille and its implications for educational/literacy programs for students with a visual disability. Practice experiences will enable students to better understand the Braille code and how to teach it to students with a visual disability. Delivered online.

414 Orientation and Mobility (2:2:0) Prerequisite: EDSE 511 (may be taken concurrently). Provides the foundation for understanding the components and essence of orientation and mobility (O&M). Establishes how the need for independent travel in the blind population created the field of O&M. Explores the philosophy and history of orientation and mobility, including cane instruction, dog guides, and methods of travel. Addresses techniques in developing orientation skills and basic mobility instruction. Motor and concept skill development are emphasized. Delivered online.

415 Early Intervention for Infants and Toddlers with Disabilities (3:3:0) Explores current public policy initiatives for coordinating services for infants and toddlers. Covers models of services delivery and approaches to family-centered service.

418 Curriculum and Assessment of Students with Visual Impairments (3:3:0) Prerequisite: EDSE 511 (may be taken concurrently). Provides students with knowledge and understanding of the educational assessment of students with visual impairments and additional disabilities including deaf-blindness. Students practice assessing and planning educational programs for students with visual impairments. Addresses assessment of technology for students with visual impairments. Examines determination of learning needs and appropriate learning media, relationship of assessment, IEP development, and placement. Delivered online.

422 Augmentative Communication (3:3:0) Focuses on alternative language, literacy, and communication techniques for children with severe language and speech impairments.

428 Elementary Reading, Curriculum, and Strategies for Mild Disabilities (3:3:0) Applies research on teacher effectiveness, teacher accountability, instructional approaches, and advances in technology at the elementary level for individuals with emotional disturbance, learning disabilities, and mental retardation. Includes curriculum and instructional strategies in reading, language arts, mathematics, science, social studies, and social skills; cognitive strategies in self-regulation, study skills, attention, memory, and motivation; and peer-mediated instruction including cooperative learning and peer tutoring.

429 Secondary Curriculum and Strategies for Mild Disabilities (3:3:0) Applies research on teacher effectiveness, teacher accountability, instructional approaches, and technological advances at the secondary level for individuals with emotional disturbance, learning disabilities, and mental retardation. Includes curriculum and instructional strategies in reading, language arts, math, science, social studies, and social skills; cognitive strategies in self-regulation, study skills, attention, memory, and motivation; peer-mediated instruction including cooperative learning and peer tutoring; and self-advocacy and strategies for facilitating transition to community, workplace, and post-secondary environments.

431 Transition and Community-Based Instruction (3:3:0) Addresses issues in transition for youth with severe disabilities. Covers self-determination, development and implementation of a transition plan, post-secondary opportunities including education and community-based instruction, and vocational environments.

432 Positive Behavior Supports (3:3:0) Focuses on concepts and skills to design, implement, and evaluate behavior support programs derived from functional assessment; use effective teaching strategies; address relevant replacement skills; facilitate generalization and maintenance of skills and incorporate individually designed crisis intervention procedures.

434 Communication and Severe Disabilities (3:3:0) Introduces professionals to augmentative and alternative communication (AAC) for individuals with severe speech and language impairments. Addresses knowledge and skills needed to assess the potential AAC user, make team decisions, develop and implement instruction, and evaluate the effects of instruction, aimed at motivating, building, and expanding communication, choice-making, and social interaction.

440 Characteristics of Students with Disabilities Who Access the General Curriculum (3:3:0) Covers theories and specific conditions in learning disabilities and emotional disorders. Includes the impact of these learning and behavioral differences on academic and social and emotional performances. Addresses diversity within student populations. Experiential, observational, and interactive strategies, including use of technological advances, are used to facilitate fulfillment of the outcomes established for the course. May require field experience.

442 Characteristics of Students with Mental Retardation (3:3:0) Covers theories and specific conditions in mental retardation, and provides advanced study of persons with mental retardation, ranging in age from preschool to adult. Topics include historical development of the field of mental retardation; theoretical models of mental retardation; etiological factors; characteristics; models of assessment and intervention, including technological advances; and issues and trends, including legislation and litigation. Includes the study of the impact of mental retardation on academic and social and emotional performances. Field experience required.

447 Medical and Developmental Risk Factors for Children with Disabilities (3:3:0) Examines nature and causes of disabling or special health conditions. Examines screening and evaluation techniques, characteristics, and educational implications.
456 Language Development and Communication for Diverse Infants and Toddlers (3:3:0) Provides understanding of early language development in terms of each of the five major components of language. Speech, language, and communication are discussed, particularly in terms of their interrelatedness with cognitive and sociocultural development. Explores importance of adult-child interaction, and impact of bilingualism, cultural diversity, cognitive ability, and language disorder.

457 Language Development and Emergent Literacy for Diverse Learners (3:3:0) Addresses first and second language acquisition and its application in the various contexts in which children develop. Explores the impact of disability and second language acquisition, and the inter-relationship of speaking, listening, and writing. Includes review of characteristics and etiology of children with language disabilities. Also addresses the diversity of communication styles in families, communities, and cultures. Field experience required.

458 Physical and Sensory Disabilities: Developmental, Education, and Medical Aspects (3:3:0) Focuses on physical, sensory, medical, and health aspects of child development, including etiology and symptomatology of developmental disabilities affecting physical development. Emphasizes positioning, handling, adaptive strategies, and understanding of assistive technology devices. Focuses on the understanding of roles of related disciplines in collaborative planning and service delivery. Field experience required.

459 Curriculum and Methods: Early Childhood Special Education (3:3:0) Emphasizes planning, organizing, implementing, and evaluating programs for young children with special needs.

500 In-Service Educational Development (1–6:1–6:0) Prerequisite: employment in professional capacity by sponsoring division or agency. Offered at request of school division or other educational agency. Content varies; may be repeated for credit.

501 Introduction to Special Education (3:3:0) Survey of current knowledge on individuals with disabilities within the context of human growth and development across the life span. Includes historical factors, legislation, etiology, characteristics, needs, educational strategies, assessment, and support services for individuals with disabilities ranging from mild and moderate to severe. Includes the impact of disabilities on academic, social, and emotional performances. Field experience required.

502 Classroom Management and Applied Behavior Analysis (3:3:0) Explores how to identify, record, evaluate, and change social and academic behaviors of special and diverse populations. Explores theories of classroom management and various approaches to management including use of technological advances. Emphasizes developing classroom and individual behavior-management plans.

503 Language Development and Reading (3:3:0) In-depth coverage of reading instruction for students with special needs. Topics include language development and emergent literacy skills; reading subskills including auditory discrimination, phonemic awareness, decoding and word reading; reading comprehension; and use of technological advances in the teaching of reading.

510/EDIT 510 Introduction to Assistive Technology (3:3:0) Provides an understanding of assistive technology and application in instructional programs, career tasks, and life skills for persons with disabilities. Presentation and demonstration experiences enable students to better use assistive technology in education, work, community, and home environments. Knowledge and awareness components may be delivered via distance education.

511 Characteristics of Students with Visual Impairments (1:1:0) Provides an overview of the characteristics of and services to persons with visual impairments, including the impact of visual impairment on infants’ and children’s growth and development, child and adolescent emotional and social development, and family interaction patterns. Considers the educational, conceptual, psychosocial, and physical implications of a visual impairment. Course delivered online.

512 Braille Code (3:3:0) Prerequisite: EDSE 511 (may be taken concurrently). Provides understanding of the literary code of Braille and its implications for educational/literacy programs for students with a visual disability. Practice experiences enable students to better understand the Braille code and how to teach it to students with a visual disability. Delivered online.

513 Medical and Educational Implications of Visual Impairments (3:3:0) Prerequisite: EDSE 511 (may be taken concurrently). Provides an introduction to anatomy and physiology of the visual system and the educational implications of visual pathology. Topics include anatomy of the human eye, normal visual development, pathology of the eye, examination procedures for the identification of visual pathology, and the effects of pathology on visual learning and development. Delivered online.

514 Orientation and Mobility for Students with Visual Impairments (2:2:0) Prerequisite: EDSE 511 (may be taken concurrently). Provides the foundation for understanding the components and essence of orientation and mobility (O&M). Establishes how the need for independent travel in the blind population created the field of O&M. Explores the philosophy and history of orientation and mobility, including cane instruction, dog guides, and methods of travel. Addresses techniques in developing orientation skills and basic mobility instruction. Motor and concept skill development are emphasized. Delivered online.

517 Computer Applications for Special Populations (3:3:0) Prerequisite: graduate standing, or permission of instructor. Lecture and laboratory course for teachers of special populations in applications of computer technology for instructional programs and computer skills. Students learn to use computer technology designed for special populations.

518 Curriculum and Assessment of Students with Visual Impairments (3:3:0) Prerequisite: EDSE 511 (may be taken concurrently). Provides students with knowledge and understanding of the educational assessment of students with visual impairments and additional disabilities including deaf-blindness. Students practice assessing and planning educational programs for students with visual impairments. Addresses assessment of technology for students with visual impairments. Examines determination of learning needs and appropriate learning media, relationship of assessment, IEP development, and placement. Delivered online.
522 Assistive Technology for Individuals with Sensory Impairments (2-3:2–3:0) Focuses on professionals or students interested in serving visually impaired/blind or hearing-impaired/deaf populations. Heights awareness of participants to specific technology and resources available to enhance and improve ability of individuals with disabilities.

523 Accessibility/Input Modification (1–3:1–3:0) Provides overview of accessibility/input modifications and strategies. Students explore various input devices and their application and use by individuals with disabilities.

524 Assistive Technology for Individuals with Learning Disabilities (2:2:0) Focuses on strategies and techniques for implementing software and other technologies in lives of individuals age three to adult with learning disabilities. Students develop and implement plans for assistive technology. Requires practicum.

525 Software for Individuals with Special Needs (1-2:1–2:0) Focuses on software evaluation and design for individuals with disabilities. Explores existing software resources, and identifies design features to meet individual’s special needs. Students create software program for person with disabilities (credit 2).

526 Web Accessibility and Design (3:3:0) Develops understanding of principles of universal web design. Students apply understanding by designing and developing accessible web site using web-authoring tools.

527 Adapted Sports, Recreation, and Leisure (1:1:0) Introduces tools for adapting sports, recreation, and leisure activities to promote the benefits of active participation, relaxation, health, and well-being for individuals with differing abilities. Students participate in simulations, research, and design. Knowledge and awareness components may be delivered via distance education.

528 Low-Tech Assistive Technology Solutions (1:1:0) Focuses on functional applications of low-technology solutions within the areas of self-care; mobility and transfer communication; stability and support; sports, recreation, and leisure; and academic and work environments. Includes explorations, design, and create low-tech devices for children and adults. Knowledge and awareness components may be delivered via distance education.

529 Internet as an Assistive Technology Tool (2:2:0) Prerequisite: HTML experience. Provides overview of the web and Internet as an educational tool for students with disabilities. Focuses on presentation of strategies, accommodations, assistive technology, and Internet resources for educators. Students review and evaluate web sites, and develop an accessible Internet lesson plan or web site.

530 Policy Perspectives Affecting Diverse Young Learners and Their Families (3:3:0) Provides understanding of historical and current trends and issues involving legislation and policy in early childhood education, bilingual education, early childhood special education, and multicultural education. Focuses on historical role of social advocacy, development of advocacy skills, and collaboration and consultation with other professionals and staff in the field of early childhood education.

531 Transition and Community-Based Instruction (3:3:0) Addresses issues in transition for youth with severe disabilities. Covers self-determination, development, and implementation of a transition plan, post-secondary opportunities including education and community-based instruction, and vocational environments. Course is equivalent to EDSE 544 for students in the severe disabilities program.

532 Positive Behavior Supports (3:3:0) Designed for professionals working with individuals with severe disabilities. Focuses on concepts and skills needed to design, implement, and evaluate behavior support programs derived from functional assessment. Covers effective teaching strategies; addresses relevant replacement skills; facilitates generalization and maintenance of skills; and incorporates individually designed crisis intervention procedures. Course is equivalent to EDSE 620 for students in the severe disabilities program.

533 Curriculum and Assessment in Severe Disabilities (3:3:0) Addresses best practices in curriculum and assessment for individuals with severe disabilities. Covers the design of assessment and evaluation techniques and procedures for the severe-needs population, including adaptations and accommodations. Covers IEP formulation and implementation with linkage to assessment. Course is equivalent to EDSE 649 for students in the severe disabilities program.

534 Communication and Severe Disabilities (3:3:0) Introduces professionals to augmentative and alternative communication (AAC) for individuals with severe speech and language impairments. Addresses the knowledge and skills needed to assess the potential AAC user, make team decisions, develop and implement instruction, and evaluate the effects of instruction, aimed at motivating, building, and expanding communication, choice-making, and social interaction.

540 Characteristics of Students with Disabilities who Access the General Curriculum (3:3:0) Examines the characteristics of students with mild disabilities. Emphasis on etiology, contributing factors, conditions that affect learning, the challenges of identifying students with disabilities, and the need for academic, social, and emotional accommodations and support.

542 Characteristics of Students with Mental Retardation (3:3:0) Covers theories and specific conditions in mental retardation, and provides advanced study of persons with mental retardation, ranging from preschool to adult. Topics include historical development of the field of mental retardation; theoretical models; etiological factors; characteristics; models of assessment and intervention, including technological advances; and issues and trends, including legislation and litigation. Includes the study of impact of mental retardation on academic and social and emotional performances. Requires field experience.

544 Adapted Instructional Methods and Transition for Secondary Learners (3:3:0) Provides strategies for teaching functional academics and social/life skills, facilitating the transition to postsecondary environments. Focuses on all aspects of transition and alternative assessments for secondary learners with disabilities.

547 Medical and Developmental Risk Factors for Children with Disabilities (3:3:0) Examines nature and causes of disabling or special health conditions. Covers screening and evaluation techniques, characteristics, and educational implications.
551 Classroom Management: Theory and Practice (3:3:0)
Focuses on identifying, recording, evaluating, and changing social and academic behaviors of diverse student populations. Explores theories of classroom management, and presents various approaches to instructional, behavioral, and environmental management. Addresses the development of Individualized Education Programs and their impact on management issues. May require field experience in public schools.

553 Teaching Mathematics to Students with Special Needs (3:3:0)
Covers techniques for assessing and remediating difficulties in mathematics.

555 Language Development and Emerging Literacy (3:3:0)

556 Language Development and Communication for Diverse Infants and Toddlers (3:3:0)
Provides understanding of early language development in terms of each of the five major components of language. Discusses speech, language, and communication, particularly in terms of their interrelatedness with cognitive and sociocultural development. Explores the importance of adult-child interaction and the impact of bilingualism, cultural diversity, cognitive ability, and language disorders.

557 Language Development and Emergent Literacy for Diverse Learners Ages 3–5 (3:3:0) Prerequisite: admission to a Mason graduate program.
Addresses first and second language acquisition and its application in the various contexts in which children develop. Explores the impact of disability and second language acquisition, and the interrelationship of speaking, listening, and writing. Includes review of characteristics and etiology of children with language disabilities. Also addresses the diversity of communication styles in families, communities, and cultures. Requires field experience.

558 Physical and Sensory Disabilities: Developmental, Educational, and Medical Aspects (3:3:0) Prerequisite: admission to a Mason graduate program.
Focuses on physical, sensory, and medical and health aspects of child development, including etiology and symptomatology of developmental disabilities affecting physical development. Emphasizes positioning, handling, adaptive strategies and understanding of assistive technology devices. Focuses on the understanding of roles of related disciplines in collaborative planning and service delivery. Requires field experience.

560 Workshop in Education (1–6:1–6:0)
Offers full-time workshops and weekend seminars on selected topics in education and education tour seminars. May be repeated for credit.

561 Designing Adaptive Environments (2:2:0) Prerequisite: EDSE/EDIT 510. Overview of environmental adaptations for people with disabilities to increase their access to community, workplace, and school activities. Covers legal issues within the ADA for adapting environments, and addresses programmatic and physical access issues. Knowledge and awareness components may be delivered via distance education.

562 Special Needs Students in International Schools (3:3:0) Prerequisite or corequisite: admission to FAST TRAIN program for graduate course work, and EDSE 501.
Focuses on students with special learning needs at international schools in the regular classroom environment. Enhances understanding of current issues within the field of special education in the international schools in an increasingly global community.

563 Teaching Methods for Students with Visual Impairments (3:3:0) Prerequisite: EDSE 511 (may be taken concurrently).
Explores methods of teaching compensatory skills, the core curriculum, and technology for use by students who are blind and visually impaired. Addresses curriculum development, adaptations, and teaching methodology for individuals with visual impairments. Provides information on adaptations within various educational programs and adaptation of general education classroom materials and procedures for use with blind and low vision children and youth. Delivered online.

565 Early Intervention for Infants and Toddlers with Disabilities (3:3:0)
Explores current public policy initiatives for coordinating services for infants and toddlers. Covers models of services delivery and approaches to family-centered service.

566 Braille Reading and Writing (3:3:0) Prerequisite: EDSE 512; EDSE 511 (may be taken concurrently).
Provides basic instruction on transcription of advanced Braille codes, including music, foreign language, chemistry, computer Braille, and Nemeth code (Braille math code). Introduces techniques for teaching skills in each code. Explores technology tools used to create Braille and tactile materials in addition to other assistive technologies used for instruction in math and science. Delivered online.

569 Applied Behavior Analysis: Principles, Procedures, and Philosophy (3:3:0) Prerequisite: Admission to applied behavior analysis graduate certificate program.
Focuses on basic principles and procedures of applied behavior analysis; identification of factors that contribute to behavioral problems and improved performance; and procedures that can be used to minimize behavioral problems, improve performance, teach new behaviors, and increase probability of behaviors occurring under appropriate circumstances.

570 Managing Severely Challenging Behaviors and Applied Behavior Analysis (3:3:0) Prerequisites: graduate standing and permission of advisor.
Focuses on applying behavior analysis principles and social learning theory to increase learning by students with special needs. Emphasizes single subject research designs.
621 Applied Behavior Analysis: Empirical Bases (3:3:0)  
Prerequisite or corequisite: EDSE 619. Focuses on basic content of applied behavior analysis. Teaches how to implement behavioral procedures and develop behavioral programs for clients with fundamental behavioral needs.

623 Applied Behavior Analysis: Assessments and Interventions (3:3:0)  
Prerequisites: EDSE 619. Further expands on basic content of applied behavior analysis and teaches how to implement behavioral procedures and develop behavioral programs for clients with fundamental behavioral needs.

624 Applied Behavior Analysis: Applications (3:3:0)  
Prerequisite or corequisite: EDSE 623. Expands capability to deal with more complex behavioral situations and enables students to relate to more sophisticated professional issues and environments.

625 Applied Behavior Analysis: Verbal Behavior (3:3:0)  
Prerequisite: EDSE 623. Further expands capability to deal with more complex behavioral situations, and enables students to relate to more sophisticated professional issues and environments.

626 The Inclusive Classroom (3:3:0)  
Introduces instructional procedures for facilitating inclusive instruction for students with disabilities in general education classes. Includes characteristics of students with disabilities and with effective strategies for adapting curriculum materials, designing instructional procedures, and evaluation methods to accommodate students with disabilities within general education inclusive environments.

627 Psychoeducational Assessment (3:3:0)  
Offers knowledge and experiential learning activities related to psychoeducational assessment of students with mild disabilities. Includes statistical and psychometric concepts in assessment. Addresses norm-referenced, criterion-referenced, and curriculum-based measurement, as well as informal testing. Provides experiences in administering, scoring, and interpreting academic and behavior assessment instruments commonly used in special education, with emphasis on writing reports and developing the Individualized Education Program using existing and emerging technologies. Considers use of assessment results for instructional and placement decisions.

628 Elementary Reading, Curriculum, and Strategies for Students with Mild Disabilities (3:3:0)  
Applies research on teacher effectiveness, teacher accountability, instructional approaches, and advances in technology at the elementary level for individuals with emotional disturbance, learning disabilities, and mental retardation. Includes curriculum and instructional strategies in reading, language arts, mathematics, science, social studies, and social skills; cognitive strategies in self-regulation, study skills, attention, memory, and motivation; and peer-mediated instruction including cooperative learning and peer tutoring.

629 Secondary Curriculum and Strategies for Students with Disabilities who Access the General Curriculum (3:3:0)  
Applies research on teacher effectiveness, accountability, and instructional approaches at the secondary level for individuals with mild disabilities. Includes instructional methods necessary for teaching reading, writing, math, and other content areas across the curriculum.

631 Policy Perspectives Affecting Diverse Young Learners (3:3:0)  
Prerequisite: admission to a Mason graduate program. Provides understanding of historical and current trends and issues involving legislation and policy in early childhood education, bilingual education, early childhood special education, and multicultural education. Focuses on historical role of social advocacy, development of advocacy skills, and collaboration and consultation with other professionals and staff. Addresses continuum of services and the context of service delivery. Requires field experience.

632 Characteristics of Students with Autism (3:3:0)  
Describes varying characteristics of students labeled with a type of autism who receive special education services. Examines definitions, eligibility criteria, incidence rates, and etiology. Perspectives from students, families, educational, community, and career personnel are described.

633 Interventions for Students with Autism (3:3:0)  
Research-based interventions that promote progress in the areas of communication, social, academic, behavior, and sensory motor skills for students with autism are described. Methods for monitoring the impact of interventions are identified and a variety of service delivery models are described.

634 Characteristics of Students with Autism (3:3:0)  
Describes varying characteristics of students labeled with a type of autism who receive special education services. Examines definitions, eligibility criteria, incidence rates, and etiology. Perspectives from students, families, educational, community, and career personnel are described.

635 Interventions for Students with Autism (3:3:0)  
Research-based interventions that promote progress in the areas of communication, social, academic, behavior, and sensory motor skills for students with autism are described. Methods for monitoring the impact of interventions are identified and a variety of service delivery models are described.

636 Introduction to Psycho-Educational Assessment (3:3:0)  
Prerequisite: EDSE 540. Introduces basic statistical procedures and test characteristics. Appropriate terminology and practices related to formal and informal assessment applied throughout the course. Students practice administering, scoring, and interpreting tests, including the impact of multicultural diversity on assessment.

637 Advanced Clinical Psycho-Educational Assessment in Special Education (3:3:0)  
Prerequisite: EDSE 648 is required for ED/LD students. Focuses on advanced issues in administering, scoring, and interpreting education evaluation instruments with emphasis on writing reports and developing the Individualized Education Program. Considers using assessment results for instructional and placement decisions.

638 Curriculum Methods: Elementary ED/LD (3:3:0)  
Applies research on teaching effectiveness, teaching accountability, and instructional approaches with specific attention to reading, language arts, social skills, and cooperative learning. May require field experience in public schools.

639 Assessment of Diverse Young Learners, Ages 3–5 (3:3:0)  
Provides understanding of the forms, functions, methods, and roles of assessment for planning and implementing effective early childhood programs for children ages 3 to 5 from diverse cultures and with varied learning needs. Students learn to use qualitative and quantitative approaches to evaluation and assessment. They also learn about technological adaptations, and gain an understanding of appropriate strategies for conducting, reporting, and decision-making related to specific functions of assessment. Course also covers assessment strategies necessary for second-language learners, and adaptations for children with disabilities.

640 Curriculum and Methods: Early Childhood Special Education (3:3:0)  
Prerequisite: permission of advisor. Emphasizes planning, organizing, implementing, and evaluating programs for young children with special needs.
661 Curriculum and Methods: Severe Disabilities (3:3:0)
Focuses on current best practices in curriculum, and methods for students with severe disabilities, including specific strategies for teaching students with severe disabilities, general strategies for working with heterogeneous groups of students in inclusive settings, and methods for adapting the general education curriculum to include students with severe disabilities.

662 Consultation and Collaboration (3:3:0)
Prerequisite: admission to Mason graduate program.
Provides advanced graduate students with opportunities for in-depth study, analysis, and discussion of original intervention research in special education practice and policy. Familiarizes students with current issues in special education and the group experimental, single subject, and qualitative research designs used to address these current issues. Students evaluate research studies in terms of their methodological strengths and weaknesses and their part in providing convergent bodies of evidence that can be used for defining practice and policy.

663 Consultation and Collaboration (3:3:0)
Prerequisite: admission to PhD in education program, or permission of instructor.
Prerequisite and corequisite for doctoral studies or who have been admitted to the PhD program in education.
Provides advanced graduate students with opportunities for in-depth study, analysis, and discussion of original intervention research in special education practice and policy. Familiarizes students with current issues in special education and the group experimental, single subject, and qualitative research designs used to address these current issues. Students evaluate research studies in terms of their methodological strengths and weaknesses and their part in providing convergent bodies of evidence that can be used for defining practice and policy.

664 Consultation and Collaboration (3:3:0)
Prerequisite: admission to PhD in education program, or permission of instructor.
Prerequisite and corequisite for doctoral studies or who have been admitted to the PhD program in education.
Provides advanced graduate students with opportunities for in-depth study, analysis, and discussion of original intervention research in special education practice and policy. Familiarizes students with current issues in special education and the group experimental, single subject, and qualitative research designs used to address these current issues. Students evaluate research studies in terms of their methodological strengths and weaknesses and their part in providing convergent bodies of evidence that can be used for defining practice and policy.

665 Collaboration with Families of Children with Special Needs (3:3:0)
Focuses on strategies for developing culturally appropriate family-professional partnerships to benefit children with special needs. Explores theories and research that support a family-centered approach. Includes a focus on family and professional rights and responsibilities in the special education process.

666 Collaboration and Consultation (3:3:0)
Prerequisite: admission to Mason graduate program.
Provides advanced graduate students with opportunities for in-depth study, analysis, and discussion of original intervention research in special education practice and policy. Familiarizes students with current issues in special education and the group experimental, single subject, and qualitative research designs used to address these current issues. Students evaluate research studies in terms of their methodological strengths and weaknesses and their part in providing convergent bodies of evidence that can be used for defining practice and policy.

667 Cognitive Development of Diverse Young Children (3:3:0)
Prerequisite: admission to Mason graduate program.
Explores conflicting views about how young children think and learn. Addresses cognitive theoretical approaches of leading researchers, and emphasizes their relevance to educational practice. Addresses characteristics of children with cognitive disabilities, children from multilingual and multicultural backgrounds, and those living in poverty, along with the educational implications of those characteristics. Requires field experience.

668 Sensory and Motor Disabilities (3:3:0)
Focuses on understanding the roles of related disciplines in collaborative planning and service delivery.

669 Interdisciplinary Approach for Children with Sensory and Motor Disabilities (3:3:0)
Emphasizes positioning, handling, and adaptive strategies. Focuses on understanding the roles of related disciplines in collaborative planning and service delivery.

701 Legal Issues and Special Populations (3:3:0)
Offers a study of the impact of legislation and litigation on the education of special populations emphasizing IDEA and Section 504. Topics of study include emerging trends in special education based on interpretation of landmark court cases related to disability, legal updates on policies and procedures for exceptional learners, and discussion of the guiding principles of special education law when addressing the needs of special populations.

702 Managing Resources for Special Education Programs (3:3:0)
Examines the specialized skills necessary to develop and deliver programs for exceptional learners. Topics of study include use of Individualized Education Plans (IEPs) to support curriculum access and service delivery via Universal Design, financial planning and budget issues, acquisition of external funding, utilization of technological resources, recruitment and retention of staff human resource development, effective supervision, and evaluation and documentation of student outcomes.

703 Creating a Collaborative Culture (3:3:0)
Provides leaders in school settings with an opportunity to gain the skills needed to facilitate collaborative environments supportive of all learners. Topics of study include the impact of diversity on educational settings, developing a vision of educationally engaging and coteaching techniques, family professional partnerships, implementing schoolwide change initiatives, alternative dispute resolution, and maintaining a positive school climate.

743 Leadership in Special Education Administration (3:3:0)
Examines leadership issues and applies them to the administration of special education programs. Explores current challenges in the delivery of services for exceptional children through case studies and projects.

744 Current Issues in Special Education (3:3:0)
Helps students develop an understanding of the role of convergent research evidence in addressing current issues in special education policy and practice. Familiarizes students with current issues in special education and the group experimental, single subject, and qualitative research designs used to address these current issues. Students evaluate research studies in terms of their methodological strengths and weaknesses and their part in providing convergent bodies of evidence that can be used for defining practice and policy.

782 Comprehensive Topics in Special Education: Trends and Issues (3:3:0)
Prerequisite: majority of course work.
Focuses on current trends and issues in special education based on interpretation of landmark court cases related to disability, legal updates on policies and procedures for exceptional learners, and discussion of the guiding principles of special education law when addressing the needs of special populations.

790 Internship in Special Education (1–6:1–6:0)
Prerequisite: passing scores on Praxis I prior to final internship, and permission of advisor.
Supervised internships that apply university course work to instruction of children and their families in school and community settings. Students enroll in two separate internships appropriate to the area of study for a total of 6 credits. Applications for field internships are due on February 15 for fall; September 15 for spring; and March 1 for summer.

791 Midpoint Portfolio (1:1:0)
Prerequisite and corequisite: must be taken concurrently with fourth EDSE prefix course or concurrently with fourth or fifth EDSE prefix course in program. Opportunity for students to develop their portfolio. Serves as the vehicle to assess whether they are meeting the standards of their professional organization, the Council for Exceptional Children.

792 Final Portfolio (1:1:0)
Corequisite: must be taken concurrently with last EDSE 790 internship or the last EDSE course in the program. Opportunity for students to develop their portfolio. Serves as the vehicle to assess whether they are meeting the standards of their professional organization, the Council for Exceptional Children.

794 Special Topics (1–6:1–6:0)
Advanced study of selected topics in education for students preparing for doctoral studies or who have been admitted to the PhD program in education.

797 Advanced Topics in Education (1–6:1–6:0)
Advanced study of selected topics in education for students preparing for doctoral studies or who have been admitted to the PhD program in education. May be repeated for credit with CEHD approval.

841 Intervention Research in Special Education (3:3:0)
Prerequisite: admission to PhD in education program, or permission of instructor.
Provides advanced graduate students with opportunities for in-depth study, analysis, and discussion of original intervention research in special education.
tion. Emphasizes analyzing research methodology, coding original intervention research, analyzing results, synthesizing findings, formulating future research questions relevant to individuals with disabilities, and gaining an understanding of the submission process for conferences and publications.

842 Application of Research Methodology in Special Education (3:3:0) Prerequisite: admission to PhD in education program, or permission of instructor. Provides knowledge and skills in the application of research methodology in special education. Topics include methods for conducting survey research, experimental and quasi-experimental research, research involving correlation and regression, and qualitative research. Emphasizes application to specific issues in special education research.

843 Leadership in Special Education Administration (3:3:0) Prerequisite: admission to PhD in education program, or permission of instructor. Examines leadership issues and applies them to the administration of special education programs. Explores current challenges in the delivery of services for exceptional children through case studies and projects.

844 Current Issues in Special Education (3:3:0) Prerequisite: admission to PhD in education program, or permission of instructor. Develops understanding of the role of convergent research evidence in addressing current issues in special education practice and policy. Describes current issues in special education and the group experimental, single subject, and qualitative research designs used to address these current issues. Students evaluate research studies in terms of methodological strengths and weaknesses, and their part in providing convergent bodies of evidence that can be used for defining practice and policy.

Sport Management (SPMT)

School of Recreation, Health, and Tourism

201 Introduction to Sport Management (3:3:0) Open to nonmajors. Introduces sport management profession. Primary focus is on sport industry, including professional sport entertainment, amateur sport entertainment, for-profit sport participation, nonprofit sport participation, sporting goods, and sport services.

241 Practicum (3:0:3) Open to majors and minors only. Prerequisite: SPMT 201. Paid or voluntary experience in sport industry setting. Work sites chosen by students after receiving approval of faculty supervisors.

302 Sport and Ethics (3:3:0) Prerequisites: SPMT 201 and 60 hours or permission of instructor. Investigates moral issues in sport and judgments about right and wrong behavior among athletes, coaches, spectators, and others.

304 Sport, Culture, and Society (3:3:0) Prerequisite: PHED 200 or permission of instructor. Analyzes sport from educational, political, economic, and cultural perspectives.

318 Gender and Racial Issues in Sport (3:3:0) Investigates dominant gender and racial ideologies, and their influence on sport.

320 Psychology of Sport (3:3:0) Psychological theories of personality, motivation, and anxiety explored in sport environment. Examines social-psychological research on audience effects, team cohesion, leadership, and fan behavior.

405 Sport Operation and Planning (3:3:0) Principles and techniques of planning and operating sport facilities. Emphasizes principles and concepts of organization and administration including communication, personnel management, management of physical resources, and risk management. Examines variety of sport operations such as indoor stadiums, athletic field complexes, and managing recreation and intramural activities.

412 Sport Marketing and Finance (3:3:0) Prerequisites: SPMT 201 and PRLS 411, or permission of instructor. Investigates principles and processes in sport marketing and finance. Focuses on research and development, sport promotion, sport sponsorships, advertising, merchandising, and distribution of sporting goods.

420 Economics and Finance in the Sport Industry (3:3:0) Prerequisites: Completion of 60 hours, including SPMT 201, or permission of instructor. Examines the principles of economics, budgeting, and finance as it applies to the sport industry.

430 Sport Communication (3:3:0) Prerequisites: 60 hours, including SPMT 201, PHED 200, and the general education communication requirement, or permission of instructor. Provides a senior-level exploration of the role of sport communication in contemporary cultures. Readings and discussions address questions about how communication about/in sports highlights the importance of sports, the cultural identities of those who engage in sport communication, and the pervasiveness of sport communication practices in industry.

440 Global Perspectives in Sport (3:3:0) Prerequisites: 60 hours, including SPMT 304, or permission of instructor. This course is an interdisciplinary examination of sport as a global phenomenon. Historical, cultural, economic, and governance perspectives are considered.

455 Governance and Policy in Sport Organizations (3:3:0) Prerequisite: 60 hours, including SPMT 201, or permission of instructor. Examines sport organizations focused on both professional and amateur governance structures and processes. The study of policy in educational, nonprofit, and professional sport venues is also addressed.

475 Sport Management Professional Development Seminar (3:3:0) Prerequisites: 90 hours, including SPMT 241 and PHED 200, and a minimum of 40 hours in SRHT. This is a seminar format in which students synthesize and apply theories, concepts, and practices in the leadership and management of sport organizations.

480 Special Topics in Sport Management (3:3:0) Prerequisite: 60 credits. See course description in the Schedule of Classes. Selected topics reflecting interest in specialized areas of sport management. Announced in advance.

490 Internship (12:0:12) Prerequisites: 90 hours (pass/fail), HEAL 323, PHED 200, PRLS 410, SPMT 304, and SPMT 403. Paid or voluntary work experience in sport industry settings. Requires minimum period of 10 to 12 weeks of full-time employment. Applies course work, theories, and research to work settings. Work sites chosen by students after approval of faculty supervisors. Includes meetings and assignments before and during the internship.

499 Independent Study (1–3:1–3:0) Faculty-directed independent study of approved topics in sport management.
Statistics (STAT)

Statistics

250 Introductory Statistics I (3:3:0) Prerequisite: high school algebra. Elementary introduction to statistics. Topics include descriptive statistics, probability, and estimation and hypothesis testing for means and proportions. Statistical software used for assignments. f, s, sum

344 Probability and Statistics for Engineers and Scientists I (3:3:0) Prerequisite: MATH 213. Introduction to probability and statistics with applications to computer science, engineering, operations research, and information technology. Basic concepts of probability, random variables and expectation, Poisson process, bivariate distributions, sums of independent random variables, correlation and least squares estimation, central limit theorem, sampling distributions, maximum likelihood and unbiased estimators, confidence interval construction, and hypothesis testing. f,s,sum

346 Probability for Engineers (3:3:0) Prerequisite: MATH 213. Introduction to probability with applications to electrical and computer engineering, operations research, information technology, and economics. Basic concepts of probability, conditional probability, random variables and moments, specific probability distributions, multivariate distributions, moment generating functions, limit theorems, and sampling distributions. f,s

350 Introductory Statistics II (3:3:0) Prerequisite: STAT 250. Emphasis on applications. Topics include analysis of variance, multiple regression, and nonparametric inference. A statistical computer package is used for data analysis. f,s

354 Probability and Statistics for Engineers and Scientists II (3:3:0) Prerequisite: STAT 344. Continuation of STAT 344. Multivariate probability distributions, variable transformations, regression, analysis of variance, contingency tables, and nonparametric methods. Applications to quality control, acceptance sampling, and reliability. s

362/IT 362 Introduction to Computer Statistical Packages (3:3:0) Prerequisite: STAT 250 or equivalent. Use of computer packages in statistical analysis of data. Topics include data entry, checking, and manipulation; and use of computer statistical packages for regression and analysis of variance. s

435 Analysis of Experimental Data Using SPSS (3:3:0) Prerequisite: STAT 250 or equivalent. Statistical methods for analysis of experimental data, including ANOVA and regression. Parametric and nonparametric inference methods appropriate for a variety of experimental designs are presented along with data analysis using SPSS. Intended primarily for researchers in the natural, social, and life sciences. f

455 Experimental Design (3:3:0) Prerequisites: STAT 350 or 354, and STAT 362 or 501. Principles of analysis of variance and experimental design. Topics include computation and interpretation of analysis of variance; multiple comparisons; orthogonal contrasts; and design of experiments, including factorial, hierarchical, and split plot designs. Optional topics may include analysis of covariance; partial hierarchical designs; incomplete block designs; principles of blocking and confounding in 2**n experiments; or estimation of variance components. Computer statistical packages are used to perform computations. ir

457 Applied Nonparametric Statistics (3:3:0) Prerequisites: STAT 350 or 354, or equivalent. Introduction to nonparametric methods with applications to the decision and information sciences and operations analysis. Topics covered are testing and estimation for one- and two-sample problems, independent and paired samples, location and dispersion problems, one- and two-way layouts, tests for independence, regression, and discussion of efficiency. ir

463 Introduction to Exploratory Data Analysis (3:3:0) Prerequisite: STAT 350 or 354, or equivalent. Introduction to modern exploratory data analysis techniques. Topics include graphical techniques, such as box plots, parallel coordinate plots, and other graphical devices, re-expression and transformation of data, order statistics, influence and leverage, and dimensionality reduction methods such as projection pursuit. ir

474 Introduction to Survey Sampling (3:3:0) Prerequisite: STAT 350 or 354 and STAT 362 or permission of instructor. Introduction to design and analysis of sample surveys. Sample designs include simple random sampling; systematic sampling; stratified, cluster, and multistage sampling. Analytical methods include sample size determination, ratio and regression estimation, imputation for missing data, and nonsampling error adjustment. Practical problems encountered in conducting a survey are discussed. Methods applied to case studies of actual surveys. Class project may be required. Recommended for students of decision, information, social sciences, and mathematics. f

498 Independent Study in Statistics (1–3:0:0) Prerequisites: 60 undergraduate credits; must be arranged with instructor and approved by the department chair before registering. Directed self-study of special topics of current interest in statistics. May be repeated for maximum 6 credits if topics are substantially different.

499 Special Topics in Statistics (3:3:0) Prerequisites: 60 undergraduate credits and permission of instructor; specific prerequisites vary with nature of topic. Topics of special interest to undergraduates. May be repeated for maximum 6 credits if topics substantially differ.

501 SAS Language and Basic Procedures (1:1:0) Prerequisite: course in statistics and experience with Microsoft OS. Introduction to the SAS Data Step and Base SAS Procedures. Preparation for graduate students in use of SAS for other graduate courses offered by department. Topics include observation and variable structures, data interfaces, formats, functions, and procedures for summarizing and displaying data. At most, one of STAT 501–503 can be applied to certificate programs in statistics. s

502 Introduction to SAS/GRAPH (1:1:0) Prerequisite: STAT 501. Introduction to SAS/GRAPH. Continued preparation beyond STAT 501 for graduate students in the use of SAS for other graduate courses offered by department. Topics include SAS/GRAPH and SAS/GRAPH procedures, SAS/GRAPH output options and in-depth coverage of the GOPTIONS, GDEVICE, GCHART, GPLOT, and GSLIDE procedures. At most, one of STAT 501–503 can be applied to certificate programs in statistics. s

503 SAS Macro Language (1:1:0) Prerequisite: STAT 501. Introduction to SAS Macro Language. Continued preparation beyond STAT 501 for graduate students in use of SAS for other graduate courses offered by department. Topics include macro language processing, macro variables, defining and
calling macro variables, macro quoting, macro facility error messages, and examples of efficient code using macros. At most, one of STAT 501–503 can be applied to certificate programs in statistics.

535 Analysis of Experimental Data Using SPSS (3:3:0)
Prerequisite: STAT 250 or equivalent. Statistical methods for analysis of experimental data, including ANOVA and regression. Parametric and nonparametric inference methods appropriate for a variety of experimental designs are presented along with data analysis using SPSS. Intended primarily for researchers in the natural, social, and life sciences. Can be used to satisfy requirements for certificates in federal statistics and biostatistics, but not MS in statistical science. Certificate program students granted credit for only one of STAT 535 or 554.

544 Applied Probability (3:3:0)
Prerequisite: Math 213 and STAT 344, or permission of instructor. Course in probability with applications in computer science, engineering, operations research, and statistics. Random variables and expectation, multivariate and conditional distributions, conditional expectation, order statistics, transformations, moment generating functions, special distributions, limit theorems.

554 Applied Statistics (3:3:0)
Prerequisite: STAT 344 or equivalent, or permission of instructor. Application of basic statistical techniques. Focus is on the problem (data analysis) rather than on the theory. Topics include one and two sample tests and confidence intervals for means and medians, descriptive statistics, goodness-of-fit tests, one- and two-way ANOVA, simultaneous inference, testing variances, regression analysis, and categorical data analysis. Normal theory is introduced first with discussion of what happens when assumptions break down. Alternative robust and nonparametric techniques are presented. Certificate program students granted credit for only one of STAT 535 or 554.

574 Survey Sampling I (3:3:0)
Prerequisite: STAT 354 or 554; corequisite: STAT 362 or permission of instructor. Design and implementation of sample surveys. Covers components of a survey; probability sampling designs to include simple random, systematic, Bernoulli, proportional to size, stratified, cluster and two-stage sampling; and ratios and regression estimators. Discusses practical problems in conducting a survey. Methods applied to case studies of actual surveys. Class project required.

634 Case Studies in Data Analysis (3:3:0)
Prerequisite: STAT 534 and 501, or permission of instructor. Examination of a wide variety of case studies illustrating data-driven model building and statistical analysis. With each case study, various methods of data management, data presentation, statistical analysis, and report writing are compared.

645/OR 645 Stochastic Processes (3:3:0)
Prerequisite: OR 542 or STAT 544, or permission of instructor. Selected applied probability models, including Poisson processes, discrete- and continuous-time Markov chains, renewal and regenerative processes, semi-Markov processes, queuing and inventory systems, reliability theory, and stochastic networks. Emphasis on applications in practice, as well as analytical models.

652/CSI 672 Statistical Inference (3:3:0)
Prerequisite: STAT 544, ECE 528, or equivalent. Fundamental principles of estimation and hypothesis testing. Topics include limiting distributions and stochastic convergence, sufficient statistics, exponential families, statistical decision theory and optimality for point estimation, Bayesian methods, maximum likelihood, asymptotic results, interval estimation, optimal tests of statistical hypotheses, and likelihood ratio tests.

655 Analysis of Variance (3:3:0)
Prerequisite: STAT 554 and 501, or permission of instructor. Single and multivariate analysis of variance, planning sample sizes, introduction to the design of experiments, random block and Latin square designs, and analysis of covariance.

656 Regression Analysis (3:3:0)
Prerequisites: STAT 554, STAT 501, and matrix algebra; or permission of instructor. Simple and multiple linear regression, polynomial regression, general linear models, subset selection, step-wise regression, and model selection. Also covered are multicollinearity, diagnostics, and model building. Both the theory and practice of regression analysis are covered.

657 Nonparametric Statistics (3:3:0)
Prerequisite: STAT 544 and 554. Distribution-free procedures for making inferences about one or more samples. Tests for lack of independence, association or trend, and monotone alternatives are included. Measures of association in bivariate samples and multiple classifications are discussed. Both theory and applications are covered. Students are introduced to appropriate statistical software.

658/CSI 678 Time Series Analysis and Forecasting (3:3:0)
Prerequisite: STAT 544 or equivalent. Modeling stationary and nonstationary processes, autoregressive, moving average and mixed model processes, autocovariance functions, autoregression functions, partial autocorrelation functions, spectral density functions, identification of models, estimation of model parameters, and forecasting techniques.

660 Biostatistical Methods (3:3:0)
Prerequisites: STAT 554 or STAT 535 and a working knowledge of a statistical software package, such as SAS or SPSS. Focuses on biostatistical aspects of design and analysis of biomedical studies, including epidemiologic observational studies and randomized clinical trials. Topics include randomization principle, confounding, ethics in human experimentation, methods of randomization, stratification, primary outcome analyses, covariate-adjusted analyses, epidemiologic measures, and sample size and power computation.

662 Multivariate Statistical Methods (3:3:0)
Prerequisites: STAT 554 or STAT 535 and 501; or permission of instructor. Standard techniques of applied multivariate analysis. Topics include review of matrices, T square tests, principle components, multiple regression and general linear models, analysis of variance and covariance, multivariate ANOVA, canonical correlation, discriminant analysis, classification, factor analysis, clustering, and multidimensional scaling. Computer implementation via a statistical package is an integral part of the course.

663/CSI 773 Statistical Graphics and Data Exploration (3:3:0)
Prerequisite: A 300-level course in statistics. (STAT 554 is strongly recommended.) Exploratory data analysis provides a reliable alternative to classical statistical techniques that are designed to be the best possible when stringent assumptions apply. Topics include graphical techniques such as scatter plots, box plots, parallel coordinate plots and other graphical devices, re-expression and transformation of data, influence and leverage, and dimensionality reduction methods such as projection pursuit.
664/SYST 664 Bayesian Inference and Decision Theory (3:3:0) Prerequisite: STAT 544, 554, or equivalent. Introduces decision theory and relationship to Bayesian statistical inference. Teaches commonalities, differences between Bayesian and frequentist approaches to statistical inference, how to approach a statistics problem from the Bayesian perspective and how to combine data with informed expert judgment in a sound way to derive useful and policy-relevant conclusions. Teaches necessary theory to develop firm understanding of when and how to apply Bayesian and frequentist methods, and practical procedures for inference, hypothesis testing, and developing statistical models for phenomena. Teaches fundamentals of Bayesian theory of inference, including probability as a representation for degrees of belief, likelihood principle, use of Bayes Rule to revise beliefs based on evidence, conjugate prior distributions for common statistical models, and methods for approximating the posterior distribution. Introduces graphical models for constructing complex probability and decision models from modular components. af

665 Categorical Data Analysis (3:3:0) Prerequisites: STAT 554 or equivalent, STAT 656, and STAT 501. Analyzes cross-classified categorical data in two and higher dimensions. Familiarity with the basic test for two-way contingency tables and elementary regression and analysis of variance as presented in STAT 554 is presumed. Topics include association tests and measures of association in two- and three-dimensional contingency tables, logistic regression, and loglinear models. Computer statistical package used extensively for data analysis. as

668 Survival Analysis (3:3:0) Prerequisites: STAT 544, 554 or 555, and STAT 501, or a working knowledge of SAS. Survival Analysis is a class of statistical methods for studying the occurrence and timing of events. In medical research, the events may be deaths, and the objective is to determine factors affecting survival times of patients following treatment, usually in the setting of clinical trials. Methods can also be applied to the social and natural sciences and engineering where they are known by other names (reliability, event history analysis). Concepts of censored data, time-dependent variables, and survivor and hazard functions are central. Nonparametric methods for constructing computational models for survival data in the Cox regression model (proportional hazards model), Weibull model, and the accelerated failure time model are studied in detail. Concepts are applied to analysis of raw data from major medical studies using SAS software. af

673 Statistical Methods for Longitudinal Data Analysis (3:3:0) Prerequisites: STAT 544, STAT 656, and working knowledge of a statistical software package. Presents modern statistical approaches to the analysis of longitudinal data, i.e., data collected repeatedly on experimental units over time (or other conditions). Topics include linear mixed effects models, generalized linear models for correlated data (including generalized estimating equations), and computational issues and methods for fitting models. as

674 Survey Sampling II (3:3:0) Prerequisites: STAT 501, 554, and 574. Continuation of STAT 574. Regression estimators for complex sampling designs, domain estimation, two-phase sampling, weighting adjustments for nonresponse, imputation, nonresponse models, measurement error models, introduction to variance estimation. Applications to case studies of actual surveys. as

677/OR 677/SYST 677 Statistical Process Control (3:3:0) Prerequisite: STAT 544 or 554, or permission of instructor. Introduces concepts of quality control and reliability. Acceptance sampling, control charts, and economic design of quality control systems are discussed, as are system reliability, fault-tree analysis, life testing, repairable systems, and the role of reliability, quality control, and maintainability in life-cycle costing. Role of MIL and ANSI standards in reliability and quality programs also considered. ir

700 Advanced Quantitative Data Analysis for Health Care Research II (3:3:0) Prerequisite: STAT 535 or HSCI 799. Multivariate analysis of variance (MANOVA, MANCOVA), multiple regression, and logistic regression. Students apply multivariate statistical methods using statistical software to analyze and interpret data in health care research. Cannot be used to satisfy requirements for MS in statistical science. ir

701 Advanced Multivariate Statistics and Data Analysis in Health Care Research (3:3:0) Prerequisites: STAT 700, HSCI 800, or equivalent. Coverage of discriminate analysis, canonical correlation analysis, structural analysis (LSREL and path analysis), and factor analysis. Cannot be used to satisfy requirements for MS in statistical science. ir

719/OR 719/CSI 775 Computational Models of Probabilistic Reasoning (3:3:0) Prerequisites: STAT 652 or SYST/STAT 664, or permission of instructor. Introduces theory and methods for building computationally efficient software agents that reason, act, and learn environments characterized by noisy and uncertain information. Covers methods based on graphical probability and decision models. Students study approaches to representing knowledge about uncertain phenomena, and planning and acting under uncertainty. Topics include knowledge engineering, exact and approximate inference in graphical models, learning in graphical models, temporal reasoning, planning, and decision-making. Practical model building experience is provided. Students apply what they learn to semester-long project of their own choosing. ir

751/CSI 771 Computational Statistics (3:3:0) Prerequisites: STAT 544, STAT 554, and STAT 652. Covers basic computationally intensive statistical methods and related methods, which would not be feasible without modern computational resources. Covers nonparametric density estimation including kernel methods, orthogonal series methods and multivariate methods, recursive methods, cross-validation, nonparametric regression, penalized smoothing splines, the jackknife and bootstrapping, computational aspects of exploratory methods including the grand tour, projection pursuit, alternating conditional expectations, and inverse regression methods. af

753 Computer Intrusion Detection (3:3:0) Prerequisite: STAT 554 or 663, or permission of instructor. Statistical approach to computer intrusion detection. Networking basics, TCP/IP networking, network statistics, evaluation, intrusion
758 Advanced Time Series Analysis (3:3:0) Prerequisite: STAT 658. Mathematical modeling and methods for model identification and forecasting of nonstationary and seasonal time series data (ARIMA models), multivariate time series, and state-space models.

760 Advanced Biostatistical Methods (3:3:0) Prerequisites: STAT 544, STAT 652, working knowledge of statistical programming language. Advanced statistical methods in the drug development process. Provides the theoretical statistical basis for the design and analysis of pharmaceutical clinical trials. Topics include the theory of randomization, randomization-based inference, restricted, response-adaptive, and covariate-adaptive randomization, the modern theory of group sequential monitoring, statistical aspects of determination of dose-response relationships.

779 Topics in Survey Design and Analysis (1–3;1–3:0) Prerequisite: STAT 674 or permission of instructor. Specialized advanced topics in survey sampling building on foundations in STAT 574 and 674. Topics vary according to interest and availability of instructors, but may include administrative records in analysis of data, adaptive sampling, calibration estimators, capture-recapture models, data security, establishment surveys, model-based inference, measurement error models, nonresponse models, imputation, multivariate analysis of survey data, record linkage, small area estimation, spatial sampling, survey errors and costs, telephone survey methods, variance estimation, web-based survey methods. Topics may be offered in form of modules from 1 to 3 credits, with 1-credit module offered over five weeks. Up to three modules may be offered in single semester for maximum 3 credits. Students may earn up to 6 credits under different topics.

781/SYST 781 Data Mining and Knowledge Discovery (3:3:0) Prerequisite: One of the following courses: CS 687, CS 650, INFS 614, STAT 663, STAT 664, or permission of instructor. Statistical and computational methods and systems for deriving user-oriented knowledge from large databases and other information sources, and applying knowledge to support decision making. Information sources can be in numerical, textual, visual, or multimedia forms. Covers theoretical and practical aspects of current methods and selected systems for data mining, knowledge discovery, and knowledge management, including those for text mining, multimedia mining and web mining. Content may vary from semester to semester.

789 Advanced Topics in Statistics (1–6;1–6:0) Prerequisite: permission of instructor. Topics in statistics not covered in regular statistics sequence. May be repeated for credit.

796, 797 Directed Reading and Research (1-3:0:0) Prerequisite: admission to PhD program in Statistical Science. Reading and research on specific topic in statistics under direction of faculty member.

798 Master’s Essay (3:0:0) Prerequisites: 9 graduate credits, and permission of instructor. Project chosen and completed under guidance of graduate faculty member that results in acceptable technical report.

799 Master’s Thesis (1–6;0:0) Prerequisites: 9 graduate credits, and permission of instructor. Project chosen and completed under guidance of graduate faculty member that results in acceptable technical report and oral defense.

871/IT 871 Statistical Data Mining (3:3:0) Prerequisite: STAT 554 or 663, or permission of instructor. Covers basic concepts, computational complexity, data preparation and compression, databases and SQL, rule-based machine learning and probability, density estimation, exploratory data analysis, cluster analysis and pattern recognition, artificial neural networks, classification and regression trees, correlation and nonparametric regression, time series, and visual data mining.

875/IT 875/CSI 703 Scientific and Statistical Visualization (3:3:0) Prerequisite: CS 652, STAT 554, STAT 663, or STAT 751; or permission of instructor. Covers visualization methods used to provide new insights and intuition concerning measurements of natural phenomena, and scientific and mathematical models. Presents case studies from myriad disciplines. Topics include human perception and cognition, introduction to graphics laboratory, elements of graphing data, representation of space-time and vector variables, representation of three-dimensional and higher dimensional data, dynamic graphical methods, and virtual reality. Work on a visualization project required. Emphasizes software tools on Silicon Graphics workstation, but other workstations and software may be used.

876/IT 876/CSI 876 Measure and Linear Spaces (3:3:0) Prerequisites: STAT 544 and MATH 315. Measure theory and integration; convergence theorems; theory of linear spaces and functional analysis; and probability theory. The theory of linear spaces includes normed linear spaces, inner product spaces, Banach and Hilbert spaces, Sobolev spaces, and reproducing kernels. Topics include wavelets, applications to stochastic processes, and nonparametric functional inference.

877/IT 877/CSI 877 Geometric Methods in Statistics (3:3:0) Prerequisite: STAT 751 or permission of instructor. Develops foundations of geometric methods for statistics. Topics include n-dimensional Euclidian geometry; projective geometry; differential geometry, including curves, surfaces, and n-dimensional differentiable manifolds; and computational geometry, including computation of convex hulls, tessellations of two-, three-, and n-dimensional spaces, and finite element grid generation. Examples include applications to scientific visualization.

971/IT 971 Probability Theory (3:3:0) Prerequisite: STAT 544 and MATH 315. A rigorous measure-theoretic treatment of probability. Includes expectation, distributions, laws of large numbers and central limit theorems for independent random variables, characteristic function methods, conditional expectations, martingales, strong and weak convergence, and Markov chains.

972/IT 972/CSI 972 Mathematical Statistics I (3:3:0) Prerequisites: STAT 652/CSI 672 or equivalent, and either STAT 876/IT 876/CSI 876 or STAT 971/IT 971. Focuses on theory of estimation. Includes method of moments, least squares, maximum likelihood, and maximum entropy methods. Details methods of minimum variance unbiased estimation. Topics include sufficiency and completeness of statistics, Fisher information, Cramer-Rao bounds, Bhattacharyya bounds, asymptotic consistency and distributions, statistical decision theory, minimax and Bayesian decision rules, and applications to engineering and scientific problems.
973/IT 973/CSI 973 Mathematical Statistics II (3:3:0)
Prerequisite: STAT 972/IT 972/CSI 972. Continuation of STAT 972/IT 972/CSI 972. Concentrates on theory of hypothesis testing. Topics include characterization of decision process, simple versus simple hypothesis tests, Neyman-Pearson Lemma, uniformly most powerful tests, unbiasedness and invariance of tests, and randomized and sequential tests. Applications of testing principles made to situations in normal distribution family and other families of distributions. s

998 Doctoral Dissertation Proposal (1–12:0:0) Work on research proposal that forms basis for doctoral dissertation. May be repeated. No more than 24 credits of STAT 998 and 999 may be applied to doctoral degree requirements.

999 Doctoral Dissertation (1–12:0:0) Prerequisite: Admission to candidacy. Formal record of commitment to doctoral dissertation research under direction of faculty member in statistics. May be repeated as needed; no more than 24 credits of STAT 998 and 999 may be applied to doctoral degree requirements.

Systems Engineering (SYST)

Systems Engineering and Operations Research

101 Understanding Systems Engineering (3:3:0) Introduces systems engineering and curriculum for BS in field. Introduces large and small systems, and explains them through some hands-on experiences. Key concepts include understanding requirements for system and translation of system-level requirements to component-level requirements. Several different kinds of example systems presented and discussed: objectives, major components, how system works, and major design issues. Each student gives similar presentation on system of choice. Students working in groups design, develop and test system, and give oral presentation. Students responsible for writing several short papers on curriculum and presentations they have heard. s

198 Independent Study in Systems Engineering (1–3:0:0) Must be arranged with instructor and approved by department chair before registering. Directed self-study of special topics of current interest in systems engineering. May be repeated for maximum 6 credits if topics are substantially different. f,s,summer

210 Systems Design (3:3:0) Prerequisite: SYST 101, or permission of instructor. Systems engineering design and integration process, development of functional, physical, and operational architectures. Emphasizes requirements engineering, functional modeling for design, and formulation and analysis of physical design alternatives. Introduces methods, software tools for systems engineering design. f

220 Dynamical Systems I (3:3:0) Prerequisite: MATH 114; corequisite: Math 214, 203; PHYS 260, 261. Introduces modeling of dynamical systems. Formulation of mathematical models from system descriptions, including computer, biological, economic, transportation, and mechanical systems. Analytical and numerical methods for solving models and studying their behavior. Discrete-time and continuous-time systems. Linear and nonlinear systems. Introduction to computer modeling using MATLAB. s

221 Systems Modeling Laboratory (1:0:3) Corequisite: SYST 220. Companion laboratory to SYST 220. Emphasizes system design and analysis using computer modeling environment MATLAB. Simulation and numerical solutions of continuous dynamic systems. Use of built-in functions and construction of macros. Graphical presentation of results. s

320 Dynamical Systems II (3:3:0) Prerequisite: SYST 220, MATH 203, 214; PHYS 260, 261. Continuation of SYST 220 with emphasis in continuous-time systems. Translational, rotational, and electrical systems. Block diagrams and state-variable models. Systems analysis in time domain and frequency domain. Analysis of control systems. f

330 Systems Methods (3:3:0) Prerequisite: MATH 114; corequisites: CS 112, STAT 346, and SYST 320. Analysis methods of system engineering design and management. Decision analysis, economic models and evaluation, optimization in design and operations, probability and statistical methods, queuing theory and analysis, management control techniques, reliability and maintainability analysis, and economic and life-cycle cost analysis. Laboratory exercise with different software programs included. s

335/OR 335 Discrete Systems Modeling and Simulation (3:3:0) Corequisites: CS 112, STAT 346, SYST 320 or CS 310, or permission of instructor. Introduces basic concepts of modeling complex discrete systems by computer simulation. Topics include Monte-Carlo methods, discrete-event modeling, specialized simulation software, and statistics of input and output analysis. s

371 Systems Engineering Management (3:3:0) Prerequisite: SYST 210; corequisite: SYST 330. Study of basics of systems engineering management. Includes engineering economics, planning, organizing, staffing, monitoring, and controlling process of designing, developing, and producing system to meet stated need in effective and efficient manner. Discusses management tools, processes, and procedures, including various engineering documentation templates, managerial processes, and dealing with personnel issues. f

420 Network Analysis (3:3:0) Prerequisite: OR 441 and MATH 213. Network nomenclature. Elementary graph theory. Linear and nonlinear network models: multicommodity flow, mathematical games and equilibria on networks, network design and control; dynamic network models; applications to transportation, telecommunications, data communications, and water resource systems. f

421/ECE 421 Classical Systems and Control Theory (3:3:0) Prerequisite: grade of C or better in ECE 220. Introduction to analysis and synthesis of feedback systems. Functional description of linear and nonlinear systems. Block diagrams and signal flow graphs. State-space representation of dynamical systems. Frequency response methods: Root Locus, Nyquist, and other stability criteria. Application to mechanical and electromechanical control systems. f,s,summer

460 Introduction to Air Traffic Control (3:3:0) Prerequisites: SYST 210, 335; STAT 346. This course is intended as an introduction to Air Traffic Control (ATC) for those who plan professions in the air transportation industry. It is a necessary introduction for students who will later specialize and take more in-depth courses. The course will survey the entire field, presenting the history of ATC and how it came to be as it is, the technology on which the system is based, the procedures used by controllers to meet the safety and efficiency goals of the system, the organizational structure of the FAA, challenges facing the system, and means under investigation to meet these challenges. Some fieldwork
will be required to acquire and analyze airport operational data. A brief introduction to airport design will be discussed.

461 Air Transportation System Engineering (3:3:0) Prerequisite: SYST 460 or permission of instructor. This is a course on the theory and practice of system engineering a national air transportation system. The course will stress the application of mathematical techniques to analyze and design complex network transportation systems, airports, airspace, airline schedules, and traffic flow.

465/ECON 496/Math 493 Pricing in Optimization and Game Theory (3:3:0) Prerequisites: Math 203 or 216, and OR 441, or permission of instructor. Allocation of limited resources among competing activities to maximize the outcome or minimization of expenses required to produce a given assortment of goods and services are two typical problems faced by any economic institution. Mathematical modeling of such problems and finding efficient mathematical tools for solving them are two main goals of modern optimization theory. Pricing limited resources, goods, and services is the key instrument for theoretical analysis of complex economical systems. Pricing theory can also give rise to numerical methods for finding optimal solutions and economic equilibrium. Fundamental tools in pricing theory are the classical Lagrangian and Lagrange multipliers for constrained optimization. In this course we will cover the basic ideas and methods of linear programming and matrix games. Particular emphasis to pricing for both theoretical analysis and numerical methods.

469 Human Computer Interaction (3:3:0) Prerequisites: IT/STAT 250, IT 108. Covers principles of human-computer interaction, including information processing design, cognitive models, ergonomics, and design metaphors. Students learn to evaluate interface design in terms of effectiveness, efficiency, and cost. Students who receive credit for SYST 470 may not receive credit for this course.

470 Human Factors Engineering (3:3:0) Prerequisites: SYST 210, STAT 346, and STAT 354. Human information processing, inferential analysis, biases and heuristics in human information processing, support systems to aid in human information processing, human-system interaction, and software systems engineering considerations.

473 Decision and Risk Analysis (3:3:0) Prerequisite: STAT 346. Studies analytic techniques for rational decision making that address uncertainty, conflicting objectives, and risk attitudes. Covers modeling uncertainty; rational decision-making principles; representing decision problems with value trees, decision trees, and influence diagrams; solving value hierarchies, decision trees and influence diagrams; defining and calculating the value of information; incorporating risk attitudes into the analysis; and conducting sensitivity analyses.

480/ECON 440 Economic Systems Design I: Principles and Experiments (3:3:0) Prerequisite: OR 441; corequisite: SYST 465. Introduces design principles used in developing systems used to allocate resources. Students required to participate in experiment demonstrations of different allocation mechanisms. In addition, students exposed to experimental methods in economics and market design.

481/ECON 441 Economic Systems Design II: Case Studies and Analysis (3:3:0) Prerequisite: SYST 480. Students required to design and develop mechanism to a specific allocation problem. Analytical and working engineering models of mechanism must be developed.

490 Senior Design Project I (3:2:1) Prerequisite: SYST 335, 371, and 90 satisfactory credits toward BS in systems engineering; corequisites: SYST 470, 473, and OR 441. First part of capstone course in systems engineering program. Students apply knowledge they have gained to group project. During first semester, students perform concept definition and requirements analysis. Plan for carrying out project is developed, culminating in proposal presented to faculty at end of semester.

491 Industrial Project (1–3:0:3–9) Prerequisites: 75 credits toward BS in systems engineering; SYST 330; GPA of at least 3.00; must be arranged with instructor and approved by department faculty chair before registering. Semester-long work experience in systems engineering in industrial or governmental organization. Work supervised jointly by systems engineer from sponsoring organization and department faculty member. Project and arrangements for supervision must be approved by student’s faculty advisor. Periodic reports, written final report, and presentation are required.

495 Senior Design Project II (3:1:2) Prerequisite: SYST 490. Second part of capstone course. Design project plans formulated in SYST 490 are reviewed and modified. Additional instruction on documentation and project management is given. Design project completed; formal report prepared, presented, and evaluated.

498 Independent Study in Systems Engineering (13:0:0) Prerequisites: 60 credits toward BS in systems engineering and GPA of at least 3.00; must be arranged with instructor and approved by department chair before registering. Directed self-study of special topics of current interest in systems engineering. May be repeated for maximum 6 credits if topics are substantially different.

499 Special Topics in Systems Engineering (3:3:0) Prerequisites: 60 credits toward BS in systems engineering; specific prerequisites vary with topic. Topics of special interest to undergraduates. May be repeated for maximum 6 credits if topics are substantially different.

500/CSI 600 Quantitative Foundations for Systems Engineering (3:3:0) Prerequisite: MATH 203, 213. Provides quantitative foundations necessary for core courses in systems engineering and operations research master’s program, and certificate program in C4I. Topics include vectors and
matrices, infinite series, partial differentiation, multiple integrals, differential and difference equations; linear systems; Laplace and Z-transforms, and probability theory. Students receive graduate credit for this course which, when used on plan of study, extends minimum credit requirements for degree. f

510 Systems Definition and Cost Modeling (3:3:0) Prerequisite: graduate standing. Comprehensive examination of methods and processes for the identification and representation of system requirements. Investigation of the system's acquisition life cycle with emphasis on requirements definition, including functional problem analysis. Examination of the systems engineering definition phase including requirements, problem analysis, definition, and functional economics. Specification of functional and nonfunctional requirements, and associated requirements proto-typing. Functional economic analysis, including the use of prevailing cost estimation models and planning and control of common operating environments. Lecture and group project including creation of requirements and use of cost estimation model. f, s

513 Total Systems Engineering, Reengineering and Enterprise Integration (3:3:0) Prerequisite: SYST 510 or 520. Principles of strategic quality, including TQM. Quality standards including ISO9000 and 14000. Organizational leadership, cultures, and process maturity, reengineering. Quality, organization learning and reengineering approaches to enable information integration and management and environment and framework integration in the systems engineering of knowledge intensive systems. Emphasis is placed on the role of integrated product and process design teams, standard and commercial off-the-shelf products in enterprise integration. Architecture driven system characteristics are studied, as is transition management of legacy systems.

520 System Engineering Design (3:3:0) Prerequisite: Graduate standing. System design and integration methods are studied and practiced, including structured analysis and object-oriented based techniques. Life cycle of systems is addressed, including definition and analysis of life cycle requirements. Software tools are introduced and used for the systems engineering cycle. Identification of preliminary architectures. Students are expected to develop a system design for a system of their choice using both the structured analysis and object-oriented techniques presented in class and they will make presentations on these designs. f, s

521/OR 643 Network Analysis (3:3:0) Prerequisites: MATH 213 and 203 or equivalent; OR 441 or 541. Network nomenclature. Elementary graph theory. Linear and nonlinear network models: multi-commodity flow, mathematical games and equilibria on networks, network design and control. Dynamic network models. Applications to transportation, telecommunications, data communications, and water resource systems. f

530 System Management and Evaluation (3:3:0) Prerequisite: graduate standing. Provides techniques for evaluating cost and operational effectiveness of system designs and systems management strategies. Discusses performance measurement, work breakdown structures, cost estimating, quality management, configuration management, standards, and case studies of systems from different application areas. f, s

540/OR 540 Analysis for Systems Management (3:3:0) Prerequisites: MATH 108 and STAT 250 or DESC 210; or equivalent. Operations research techniques and their application to managerial decision making. Mathematical programming, Markov processes, queuing theory, inventory models, PERT, CPM, and computer simulation are covered, as well as use of contemporary computer software for problem solving. Case-study approach to problem solving is used. OR/MS and SE/MS majors do not receive credit. f, s

542/EEP 602 Decision Support Systems Engineering (3:3:0) Prerequisite: SYST 301 or graduate standing. Studies design of computerized systems to support individual or organizational decisions. Teaches systems engineering approach to decision support system (DSS) development. DSS is end product of development process, and process is key to successfully integrating DSS into organization. Any DSS is built on a theory (usually implicit) of what makes for successful decision support in given context. Empirical evaluation of specific DSS and the underlying theory should be carried on throughout development process. Course examines prevailing theories of decision support, considers issues in obtaining empirical validation for theory, and discusses empirical support that exists for theories considered. Students design decision support system for semester project. f

560 Introduction to Air Traffic Control (3:3:0) Prerequisite: graduate standing. Introduction for those who plan careers in aviation industry. Survey of entire field, presenting history of ATC and how it came to be, technology on which system is based, procedures used by controllers to meet safety and efficiency goals, organizational structure of the FAA, challenges facing system, and means under investigation to meet these challenges. Involves some field work for data collection and analysis. Class project requiring system simulation required. f

563 Research Methods in Systems Engineering and Information Technology (3:3:0) Prerequisites: STAT 346 and 354, or equivalent. Provides foundation for one of the most important activities in systems engineering: information gathering to support drawing conclusions and making decisions about design options and process improvements. Develops understanding of scientific process, use of empirical evidence to support and refute scientific hypotheses, and use of scientific information in decision-making. Covers different sources of scientific evidence: designed experiments, quasi-experiments, field studies, surveys, and case studies. Discusses process of formulating testable hypotheses, and methods of measurement including approaches to measuring soft, hard-to-quantify factors. Presentation of results is discussed. Students do project involving empirical research. f

571 Systems Engineering Management (3:3:0) Prerequisite: SYST 471 or 530. Study of more advanced topics in systems engineering management. Seminar style; students expected to read selections from current literature as well as make presentations and produce papers on engineering management topics. Examines issues such as multiproject management, quality programs, and the impacts of process change on the organization. Focuses strongly on the practical impacts of various systems engineering management techniques and practices on projects, organizations, and personnel. f
573 Decision and Risk Analysis (3:3:0) Prerequisite: STAT 346 or equivalent. Study of analytic techniques for rational decision making that address uncertainty, conflicting objectives, and risk attitudes. Covers modeling uncertainty; rational decision-making principles; representing decision problems with value trees, decision trees, and influence diagrams; solving value hierarchies, decision trees, and influence diagrams; defining and calculating the value of information; incorporating risk attitudes into the analysis; and conducting sensitivity analysis. (Offered concurrently with SYST 473. Students may not receive credit for both SYST 473 and 573. f,s)

611 System Methodology and Modeling (3:3:0) Prerequisite: SYST 500 or equivalent. Provides broad yet rigorous introduction to methodologies. Emphasizes systems modeling and performance. Topics include system model and behavior analysis linear and nonlinear systems, discretization and linearization, optimization, dynamic programming and optimal control. Methodologies address system performance issues, and assist in the evaluation of alternative system designs. Resource allocation for planning and control introduced. f,s

619/ECE 672 Introduction to Architecture Based Systems Engineering. (3:3:0) Prerequisites: SYST 510 or 520, or permission of instructor. Lifecycles in systems engineering and the role of systems integration and architecting in these. Conceptual frameworks for systems architecting. Structure, function, and purpose of systems architecting and integration. Risk management and systems architecting and integration. User requirements and functional specifications in systems architecting. f

620/ECE 673 Discrete Event Systems (3:3:0) Prerequisites: SYST 611 or ECE 521, or equivalent. Introduces modeling and analysis of discrete event dynamical systems. Course covers elements of discrete mathematics and then focuses on Petri Net models and their basic properties. Relation to other discrete event models of dynamical systems. f

621/ECE 674 Systems Architecture Design (3:3:0) Prerequisites: SYST 520 and SYST 620/ECE 673. Intensive study of relationships between different types of architecture representations and methodologies used to obtain them. Approaches based on systems engineering constructs, such as structured analysis and software engineering constructs, including object orientation, are used to develop architecture representations or views and to derive an executable model of the information architecture. Executable model is then used for behavior analysis and performance evaluation. Roles of systems architect and systems engineer are discussed. Examples from current practice including the C4ISR architectures are used. s

631/ECE 678 Systems Engineering of Information Architectures (3:3:0) Prerequisites: SYST 520 and SYST 619 / ECE 672. An intensive study of the relationships between different types of architecture representations and the methodologies used to obtain them. Approaches based on systems and software engineering constructs, such as object orientation and structured analysis are used to develop architecture representations or views. The roles of the systems architect and the systems engineer are discussed. The function of executable model of the information architecture in deriving requirements is presented. Examples from current practice including C4ISR architectures are included. This course does not meet the requirements for the MS/SE degree.

632/ECE 679 System Integration and Architecture Evaluation (3:3:0) Prerequisites: SYST 631/ECE 678. Examines the system integration problem and its human, organizational, societal cultural, and technological aspects. The role of architectures in systems integration. Integration in a system of systems and a federation of systems. Measures of performance and effectiveness. Analysis of alternatives. This course does not meet the requirements for the MS SE degree.

659 Topics in Systems Engineering (3:3:0) Prerequisite: permission of instructor. Topics not covered in department’s regular systems engineering offerings. Course content may vary each semester depending on instructor and the perception of students’ needs. Course may be repeated once for credit. f,s

660/OR 660 Air Transportation Systems Modeling (3:3:0) Prerequisite: SYST 460/560 or permission of instructor. Introduces wide range of current issues in air transportation. Issues include public policy toward industry, industry economics, system capacity, current system modeling capability, human factors considerations, safety analysis and surveillance systems, and new technological developments. Develops broad understanding of contemporary and future issues. Knowledge evaluated through class discussions, take-home midterm exam, and term project to be completed by end of semester. s

664/STAT 664 Bayesian Inference and Decision Theory (3:3:0) Prerequisite: STAT 544 or 554, or equivalent. Introduces decision theory and relationship to Bayesian statistical inference. Teaches commonalities, differences between Bayesian and frequentist approaches to statistical inference, how to approach statistics problem from Bayesian perspective, and how to combine data with informed expert judgment in a sound way to derive useful and policy relevant conclusions. Teaches necessary theory to develop firm understanding of when and how to apply Bayesian and frequentist methods; and practical procedures for inference, hypothesis testing, and developing statistical models for phenomena. Teaches fundamentals of Bayesian theory of inference, including probability as a representation for degrees of belief, likelihood principle, use of Bayes Rule to revise beliefs based on evidence, conjugate prior distributions for common statistical models, and methods for approximating the posterior distribution. Introduces graphical models for constructing complex probability and decision models from modular components. s

671/OR 671 Judgment and Choice Processing and Decision Making (3:3:0) Prerequisite: STAT 510 or equivalent, or permission of instructor. How do people make judgments and decisions? Course presents initial review of scientific literature directed toward answering this question, and emphasizes importance when performing decision analysis.
674/OR 674 Dynamic Programming (3:3:0) Prerequisites: OR 442 or OR 542 or permission of instructor. This is a course on the theory and practice of dynamic programming, i.e., optimal sequential decision making over time in the presence of uncertainties. Stresses intuition, the mathematical foundations being for the most part elementary. It will introduce the theory, applications (finance, engineering, and biology), and computational aspects of dynamic programming for deterministic and stochastic problems.

677/OR 677/STAT 677 Statistical Process Control (3:3:0) Prerequisites: STAT 510, 554, or 544; or equivalent. Introduces concepts of quality control and reliability. Acceptance sampling, control charts, and economic design of quality control systems are discussed, as are system reliability, fault-free analysis, life testing, repairable systems, and role of reliability, quality control, and maintainability in life-cycle costing. Role of MIL and ANSI standards in reliability and quality programs considered.

680/ECE 670/OR 683 Principles of Command, Control, Communications, Computing, and Intelligence (C4I) (3:3:0) Prerequisite: ECE 528, SYST 611, or OR 542; or equivalent. Broad introduction to fundamental principles of command, control, communications, computers, and intelligence (C4I). Principles and techniques applicable to wide range of civilian and military situations. Discusses modeling and simulation of combat operations. Studies in detail sensing, fusion, and situation assessment processes. Derives optimal decision-making rules; discusses concepts of C4 architectures; and develops tools to evaluate and design C4 systems such as queuing theory.

683 Modeling, Simulation, and Gaming (3:3:0) Prerequisites: MATH 213, SYST 500 or equivalent, and graduate standing. Developing methods for designing combat models and games. Existing combat models critical to the C4I process. Exercises and games demonstrate value of properly developed C4I modules in a combat simulation.

685 Estimation and Tracking: Principles and Techniques (3:3:0) Prerequisite: ECE 528, OR 542, STAT 544, or equivalent. Principles and estimation techniques for static and dynamic systems, linear and nonlinear, discrete and continuous time. Estimation for kinematic models, track initiation, bearing-only tracking, tracking maneuvering targets with adaptive filtering, MM (Multiple Model) and interactive MM algorithms. Tracking single target in clutter, nearest neighbor algorithm, tracking and data association, Multiple hypothesis tracking. Tracking performance evaluation.

691/PUBP 777 Introduction to Enterprise Engineering: Engineering and Policy (4:3:1) Prerequisite: INF5 614, or equivalent. Provides overview of Extended Enterprise Integration. Lectures focus on the SAP architecture and the R/3 standard software solution. Laboratory requires students to complete an end-to-end implementation project with the Great Plains Software midrange ERP solution, Dynamics C/S+. For modeling, students must demonstrate complete proficiency in the Architecture of Information Systems (ARIS) methodology, and the supporting ARIS Toolset.

692/PUBP 772 Decision Support for Enterprise Integration (3:3:0) Prerequisite: SYST 542 and 691. Focuses on use of “business intelligence” to enhance competitive advantage; developing an information driven set of controls to improve profitability; and emphasizing the creation of a balanced business with aligned corporate direction and strategic intent. Solutions provided within ERP systems examined.

693/PUBP 773 Supply Chain Integration and Management (Business-to-Business Electronic Commerce) (3:3:0) Prerequisite: SYST 691. Lectures focus on two issues: Supply chain integration from an information technology perspective, and supply chain management from a decision support perspective. The motivation for the course is the merging of enterprise computing with operations research, primarily through customer/supply chain management systems. Topics include ERP/web integration, advanced planning, and customer relationship management.

694/PUBP 774 E-Commerce Architectures (Business-to-Consumer Electronic Commerce) (3:3:0) Prerequisite: ECE 670, OR 674, or ECE 528, SYST 611, or OR 542; or permission of instructor. Design and developing C4I modules in a combat simulation.

695/PUBP 775 Economics of Electronic Commerce (3:3:0) Prerequisite: SYST 691. Focuses on gaining competitive advantage through electronic commerce implementation; the identification and growing of new market opportunities, as well as the electronic enabling of existing business relationships; business-to-consumer relationships, as well as the economics of strategic procurement, ERP hosting, customer relationship management, catalog hosting, portal operations, and supplier management.

696/PUBP 776 Customer Relationship Management (3:3:0) Prerequisite: SYST 691. Focuses on the “front office” and its integration with the “back office.” The modern world of e-commerce extends intra-enterprise integration as implemented in Enterprise Resource Planning (ERP) systems to include external constituents, such as customers, partners, and suppliers. This course is focused on modern system support for the demand chain and the value creation process that results from integrating the front office systems with the back office systems.

697/PUBP 777 Critical Information Technology Infrastructures (3:3:0) Prerequisite: SYST 694. Design and implementation of high-speed network and application services in support of modern enterprise resource planning (ERP) systems. Critical technologies include high-speed data communication, switched versus routed data flow, workflow engines, business rule and web application servers, and load-balancing technologies. A large-scale web-enabled ERP system architecture examined in detail.

698 Independent Study and Research (3:3:0) Prerequisites: graduate standing, completion of at least two core courses, permission of instructor. Study of a selected area
in systems engineering or C3I under the supervision of a faculty member. Written report required. f,s,summer

735/OR 735 Topics in Stochastic System Simulation (3:3:0) Prerequisite: OR 635 or permission of instructor. Special topics and recent developments in Monte Carlo simulation methodology for discrete-event stochastic systems. Contents vary; possible topics include statistical analysis of simulation output data, random number and random variate generation, variance reduction techniques, sensitivity analysis and optimization of simulation models, distributed and parallel simulation, object-oriented simulation, and specialized applications. May be repeated for credit when topics are distinctly different.

760 Special Topics in Command, Control, Communications, Computing, and Intelligence Systems Engineering (3:3:0) Prerequisite: SYST 680. Special topics in the C4I area, with different content in different terms. Representative areas include quantitative evaluation of C4 systems, applications of artificial intelligence in C4 systems, and military communications systems.

763/OR 763 Empirical Methods in Information Technology (3:3:0) Prerequisite: STAT 554. Examines alternative paradigms of scientific research and their applicability to research in information technology. Topics include fundamental elements of scientific investigation, basic principles of experimental design and statistical induction, philosophy of science and its relation to the information technology sciences, and case studies of information technology research.

774/IT 774 Advanced Dynamic Programming (3:3:0) Prerequisite: OR674/SYST674 or permission of instructor. Covers advanced topics on the theory and practice of dynamic programming, i.e., optimal sequential decision making over time in the presence of uncertainties. Stresses the mathematical foundations, and introduces the theory, computational aspect, and applications of dynamic programming for deterministic and stochastic problems.

781/INFS 781/STAT 781: Data Mining and Knowledge Discovery (3:3:0) Prerequisite: SYST/STAT644, or CS 650 or INFS 623, or equivalent. Methods and systems for deriving user-oriented knowledge from large databases and other information sources, and applying knowledge to support decision making. Information sources can be in numerical, textual, visual, or multimedia forms. Covers theoretical and practical aspects of current methods and selected systems for data mining, knowledge discovery, and knowledge management, including those for text mining, multimedia mining, and web mining.

798 Systems Engineering Project (3:0:0) Prerequisite: 21 graduate credits, including SYST 611. Capstone project course for MS/SE program. Key activity is completion of major applied team project resulting in an acceptable technical report, and oral briefing. Students should plan to take course in last semester of studies.

799 Master’s Thesis (1–6:0:0) Prerequisites: 21 graduate credits and permission of instructor. Research project chosen and completed under the guidance of a graduate faculty member, which results in a technical report acceptable to a three-member faculty committee, and an oral defense.

842/IT 842/OR 842 Models of Probabilistic Reasoning (3:3:0) Prerequisites: STAT 544 and OR 681. Survey of alternative views about how incomplete, inconclusive, and possibly unreliable evidence might be evaluated and combined. Discusses Bayesian, Baconian, Shafer-Dempster, and Fuzzy systems for probabilistic reasoning.

850/IT 850 Systems Integration Engineering (3:3:0) Prerequisite SIST 510 or 520. Covers lifecycles; large systems comprising heterogeneous components; human, organizational, and technological basis for integration; societal and cultural basis; conceptual frameworks; structure, function, and purpose of industry; risk management; user requirements and functional specifications; bid and proposal process; systems integration and federal government; standards; integration of systems and federations of systems; integrated process and product development; architectures; systems management and cost estimation; reengineering; quality management; increasing returns to scale, network effects, and path dependency issues; and systems integration ecology and evolutionary systems integration.

888/ECE 753/IT 888/OR 888 Distributed Estimation and Multisensor Tracking and Fusion (3:3:0) Prerequisite: ECE 734 or SYST 611. Centralized and distributed estimation theory, hierarchical estimation, tracking and data association, multisensor multitarget tracking and fusion, distributed tracking in distributed sensor networks, track-to-track association and fusion, and Bayesian networks for fusion.

944/IT 944 The Process of Discovery and Its Enhancement in Engineering Applications (3:3:0) Prerequisite: SIST 842 or permission of instructor. Studies ingredients of imaginative reasoning as they concern efficient discovery of new ideas and valid evidential test of them. Topics include different interpretations of Peirce’s theory of abductive reasoning and other forms of reasoning, Hintikka’s analysis of process of inquiry, and current attempts to design systems that provide assistance in discovery-related or investigative activities.

Systems Engineering and Operations Research (SEOR)

Systems Engineering and Operations Research

998 Doctoral Dissertation Proposal (1–12:0:0) Work on research proposal that forms basis for doctoral dissertation. May be repeated. No more than 24 credits of SEOR 998 and 999 may be applied to doctoral degree requirements.

999 Doctoral Dissertation (1–12) Prerequisite: admission to doctoral candidacy. Formal record of commitment to doctoral dissertation research under direction of faculty member approved by SEOR Department. May be repeated as needed.

Technology Management (TECM)

School of Management

610 Communications and Leadership (2:2:0) Prerequisite: admission to the Technology Management Program. Distinguishes between leadership and management, and focuses on the critical roles and functions of leadership, including communication ability, use of power and influence, providing direction, aligning an organization’s systems, motivating a workforce, and creating a culture for effectiveness. It also focuses on strategies for developing oneself as an effective leader.
Courses

615 Decision Making Using Accounting and Financial Data (3:3:0) Prerequisite: admission to Technology Management Program. Provides managers with an overview of the purpose and importance of accounting within the organization and the financial valuation of information technology companies, projects, and product lines. Students focus on the economics and analysis of business transactions and their related financial reporting issues from internal and external stakeholder perspectives. Students improve their skills in analyzing financial issues and presenting results in a case analysis framework.

620 Economics of Technology Management (2:2:0) Prerequisite: admission to Technology Management Program. Enables students to build and evaluate economic and business models that can be used to analyze real managerial questions that affect all types of institutions, especially firms in the information technology industry. Students develop a better understanding of the operation of markets in general and the use of various quantitative and qualitative methods when making decisions within the firm. The use of economic analysis allows students to identify and evaluate decision alternatives, the competitive environments of firms, and the factors that influence firm performance, especially in the information technology industry.

635 Metrics and Statistics for Quality and Project Management (2:2:0) Prerequisite: admission to Technology Management Program. Explores current metrics and metric development for quality, intangible assets, and project management as required within information technology companies. Applies statistical tools of best use with these metrics.

640 Management of Consulting and Technical Professionals (3:3:0) Prerequisite: admission to Technology Management Program. Students gain insight into conflict resolution, teamwork, communication, power and influence, career development, and ethics. This course also helps students understand themselves and those they manage, as they work to be as effective as possible in modern organizations.

660 Negotiation, Conflict Resolution and Group Decision Making (2:2:0) Prerequisite: admission to Technology Management Program. Techniques for making group decisions and resolving internal team conflicts, as well as negotiating effectively with outside parties. Applications include technology assessments, outsourcing decisions, project bidding, and contract negotiations.

700 Business Engineering and Change Management (2:2:0) Prerequisite: admission to Technology Management Program. Visualizing, planning, and implementing transitions in an organization or business unit is fast becoming a key source of competitive advantage. Course provides theory and practice of change management and strategic planning including organizational development and organizational transformation.

702 Interpersonal Dynamics and Teamwork (3:3:0) Prerequisite: admission to Technology Management Program. Develops behavioral skills integral to effective teamwork and interpersonal relationships in work environments. Covers techniques for making group decisions and resolving internal team conflicts, as well as negotiating effectively with outside parties.

703 Technology Assessment, Evaluation, and Investment (3:3:0) Prerequisite: admission to Technology Management Program. Prepares students to be educated consumers of information technology to maximize strategic advantage of IT to an organization. Information technologies, architectures, and products are categorized and analyzed with a view to develop and maintain the most favorable IT asset portfolio to successfully carry out business goals and strategies. Techniques for making group technology assessments, outsourcing decisions, project bidding, and contract negotiations.

704 Planning and Control of Projects (3:3:0) Prerequisite: admission to Technology Management Program. Examines advanced topics in project and program management, with specific attention to the issues that managers face to effectively manage programs. This involves managing resources (both internal and external to the organization) and managing within an existing organizational structure. Specific program management topics include advanced topics for project management, program alignment with strategic objective, management of stakeholders, and development and organization of the program office. Strategic and operational tools and metrics also are discussed.

720 Analysis of IT Industries (2:2:0) Prerequisite: admission to Technology Management Program. Provides students with an understanding of the impact of information technology on firms and industries and equips them to develop and execute appropriate strategies. Although the emphasis is on information technology firms and industries, a key goal of the course is to better prepare students to respond to a diverse array of information technology challenges. Course work covers the demand and the supply side of information technology, as well as the development of frameworks and analytical tools to help put events, behaviors, and processes into understandable contexts.

735 Technology Management Capstone Project (2:2:0) Prerequisite: admission to Technology Management Program. Teams undertake a strategic evaluation and plan for IT-driven business initiatives. Presentation includes analysis of competitive forces and the value chain; recommendations, including changes in goals and organizational design; plan of action integrating marketing, human resource development, organizational design, finance, and information technology; and implementation plan using theories of communication and change management, to include business case and business plan.

740 Management of Client Relationships (3:3:0) Prerequisite: admission to Technology Management Program. Prepares students to be educated consumers of information technology to maximize strategic advantage of IT to an organization. Information technologies, architectures, and products are categorized and analyzed with a view to develop and maintain the most favorable IT asset portfolio to successfully carry out business goals and strategies. Techniques for making group technology assessments, outsourcing decisions, project bidding, and contract negotiations.

745 Business Functions and Operations: Client Industries (2:2:0) Prerequisite: admission to Technology Management Program. Explores best practices in the IT industry. Students analyze practices in terms of gaining competitive advantage in an industry where the scarcity economic model for products no longer applies. Course work focuses on leading an organization with the IT function.

750 Global IT Management (3:3:0) Prerequisite: admission to Technology Management Program. Students spend a week in an international residency. Emphasizes dealing with
technological changes across international markets and amid global developments, virtual organizations, and project management across cultures. Corporate site visits combined with presentations by professors from universities outside the United States and relevant practitioners.

Telecommunications (TELE)
School of Public Policy

694 Telecommunications Internship (3–6:1–2:0) Prerequisite: graduate standing, and permission of MA in telecommunications program director. Students work in approved professional-level telecommunications position, meeting regularly with agency and university internship supervisors. Paper and journal are required, as well as minimum 60 hours work for each credit of enrollment. Usually, students enroll in internships at end of program of study.

730 Telecommunications Management (3:3:0) Prerequisite: graduate standing. Surveys strategic and organizational issues in field of telecommunications management. Focuses on strategic management; oriented toward executive management level of telecommunications firms.

750 Coordinating Seminar (3:3:0) Prerequisite: open only to students in MA or MS in telecommunications programs with at least 18 credits of course work. Topics include specific telecommunications problems in management, law, engineering, education, and communication. Focuses on ways a problem in one area can create or solve a problem in other areas.

798 Directed Readings and Research (3:3:0) Prerequisite: graduate standing in telecommunications, 15 graduate credits completed, and permission of department. Specialized course designed for students who seek to explore telecommunications topic in greater depth than through current course work provided in curriculum. Written report required; oral or written exam may also be required.

799 Thesis (1–6:0:0) Prerequisite: degree candidacy in MA in telecommunications, completion of 24 credits of graduate course work, and approval of thesis proposal by faculty advisor and telecommunications director. Individualized section form required. Original research related to student’s concentration in telecommunications. Research must result in document meeting university standards. Graded S/NC.

Telecommunications (TCOM)
The Volgenau School of Information Technology and Engineering

500/ECE 540 Modern Telecommunications (3:3:0) Prerequisite: TCOM 575, or equivalent. Comprehensive overview of telecommunications, including current status and future directions. Topics include review of evolution of telecommunications; voice and data services; basics of signals and noise, digital transmission, network architecture and protocols; local area, metropolitan and wide area networks and narrow band ISDN; asynchronous transfer mode and broadband ISDN; and satellite systems, optical communications, cellular radio, personal communication systems, and multimedia services. Examples of real-life networks illustrate basic concepts and offer further insight.

501 Data Communications and Local Area Networks (1.5:1.5:0) Prerequisite: graduate standing. Network concepts; Open Systems Interconnection (OSI) reference model and layering; data coding; analog/digital communications review; Physical layer and data link control; switching and multiplexing; commercial digital link standards; Data Link Layer Control (DLC) functions. DLC protocols; flow control; error control; link management; common link protocols. Local Area Networks (LANs); basics, definitions, media access control; LAN performance; LAN standards, rings and buses; bridging and frame relay.

502 Wide Area Networks and Internet (1.5:1.5:0) Prerequisite: graduate standing. OSI reference model review; packet network layer functions; connection-oriented and connectionless packet switching; X.25 and X.75 standards; SONET and Packet-over SONET; circuit-switched networks and control signaling; congestion control and traffic management; virtual private networks; introduction to network management; routing methods; internetworking; introduction to Internet Protocol concepts; OSI transport layer client-server model; domain name systems; and telnet.

503 Fiber Optic Communications (1.5:1.5:0) Prerequisite: TCOM 500. Introduction and overview of optical fiber communications systems. Course covers basic elements of fiber optic networks: semiconductor light sources (light emitting diodes and laser diodes), fiber optic waveguides, network system design issues, link budget analysis, and component requirements. Additional topics may include wavelength-division multiplexed and Time-Division Multiplexed networks and optical switching systems.

504 Asynchronous Transfer Mode Networks (1.5:1.5:0) Prerequisites: TCOM 500, 501, 502, or equivalent. Asynchronous Transfer Mode (ATM) concept, protocols, services, and applications. The emphasis is on the standards and technology of ATM for local and wide area networks. Relations to broadband ISDN; ATM switching, multiplexing and transport; user-network and network-network interface aspects; ATM Adaptation layer; Access switching; ATM Wide Area Network switches; design and practice of networks based on ATM technology.

505 Networked Multicomputer Systems (1.5:1.5:0) Prerequisites: TCOM 500, 501, or equivalent. Introduces systems engineering of a networked multicomputer system. Studies distributed multicomputer architectures, architecture of a network operating system, and key system components. The focus of this course is on the development of a thin-client/server system, requirements analysis of a client/server web computing, system planning and implementation. Includes a study of example multi-computer systems and a discussion of future directions.

506 Personal Communication Systems (PCS) (1.5:1.5:0) Prerequisites: TCOM 500, 501, 551, and 552 or equivalent. Introduces Personal Communication Systems (PCS). Topics include multiple technical layers of the PCS systems; data link level and network layer protocols, including implementation; mobile station operation and base station operation; and how voice and data services work. Also discusses vital issues of user authentication, privacy, and data or voice encryption.

509 Internet Protocols (1.5:1.5:0) Prerequisites: TCOM 501 and 502. The Internet Protocol (IP) Suite: principles, protocols, and architecture; Internetworking; Internet
addressing; IP; routing protocols (RIP, OSPF, BGP); Internet Control Message Protocol; Internet Group Management Protocol; User Datagram Protocol; Transmission Control Protocol; Client-Server Model; Domain Name System; Socket Interface; Internet applications (TELNET, FTP, SNMP, HTTP); Internet security; Internet multicasting; quality-of-service in the Internet (RSVP, DiffServ, MPLS); Mobile IP; Next Generation Internet (IPv6)

510 Client-Server Architectures and Applications (1.5:1.5:0) Prerequisite: TCOM 500. Fundamentals of application engineering for Client/Server (C/S) Internet environments. Review of C/S application architectures and system perspective on C/S middleware. Study of web-based middleware, distributed data managers and SQL middleware, distributed transaction processing middleware, and C/S object technology.

513 Optical Communications Networks (1.5:1.5:0) Prerequisite: TCOM 503. Introduction and overview of current developments in Optical Communication Networks. Emphasizes underlying technologies that make all-optical networks possible. Specific topics include components needed for Wavelength Division Multiplexed Systems and Dense Wavelength Division Multiplexed Systems; tunable wavelength lasers, wavelength add/drop multiplexers, space division switching, and wavelength-routing networks; optical LAN, MAN, and WAN concepts; passive and active wavelength filters, switches and routers; free-space optical networks.

514 Basic Switching: Lecture and Laboratory Course (3:1.5:1.5) Prerequisites: TCOM 501 and 502. Basic switching techniques and protocols for low and high speed digital packet networks (Ethernet, Frame Relay, ATM, X.25) are taught within a half semester lecture series, followed by hands-on laboratory for remainder of semester. Real-life scenarios taught in the laboratory element through exercises that involve configuring switches and routers.

515 Internet Protocol Routing: Lecture and Laboratory Course (3:1.5:1.5) Prerequisites: TCOM 501, 502, and 509. Internet Protocol (IP) routing overview; static routing; dynamic routing; default routing; access lists; route redistribution; RIP, IGRP, EIGRP, IS-IS, and BGP protocols submitted for comment. Real-life scenarios taught in the laboratory element through exercises that involve configuring routers as network elements.

516 Global Positioning System (GPS) (1.5:1.5:0) Prerequisite: TCOM 500. Background in long-range navigation developments; early global systems; space based systems; GPS and GLONASS systems; system architecture; spacecraft and earth station characteristics; design concepts of the CA and P GPS signal modes; frequencies, modulation, and other design aspects; clock issues; range and accuracy calculations and limitations; advanced concepts.

517 Introduction to Propagation Effects (1.5:1.5:0) Prerequisite: TCOM 500. Introduction to radiowave propagation effects in wireless communications systems. Propagation effects on terrestrial point-to-point (line of sight), satellite (fixed service, mobile, and direct broadcast), and cellular services are evaluated. Clear air, multipath atmospheric and terrestrial), diffraction, refraction, tropospheric and ionospheric scintillation, rain attenuation, ice crystal and rain depolarization, and low angle fading effects are covered. Impact of climate and path geometries on fade margin assessed, and mechanisms for reducing potentially adverse effect of propagation conditions discussed.

518 Third Generation Cellular Telephony (1.5:1.5:0) Prerequisites: TCOM 506, 531, and 552. Introduction to post-second generation cellular systems; benefits and features of third generation (3G) systems; review of air interface standards currently approved for 3G; review of 3G technologies; analysis of competing multiple access methods; transition plans and backward compatibility between G, 21/2G, and 3G systems; possible fallback plans.

519 Voice over IP (1.5:1.5:0) Prerequisites: TCOM 501, 502, and 509. Concept of transporting voice over Packet Switched Network; typical VoIP network scenarios (campus, multi-site private network, calling nationwide and international); communications protocols for VoIP (RTP, RTCP, RFC 1889, H.323); conferencing and security issues; quality issues (delay, mean opinion scores); VoIP network design.

520 Economics of Telecommunications (3:3:0) Prerequisite: TCOM 500. Management of telecommunications networks; economic concepts in changing climate of telecommunications ownership, deregulation, and privatization; resource allocation fundamentals based on internal rate-of-return, net present value, opportunity costs; valuation of potential acquisitions in broad telecommunications market; financial modeling techniques.

521 Systems Engineering for Telecommunications Management (3:3:0) Prerequisite: TCOM 500. Advanced software principles, techniques, and processes for designing and implementing complex telecommunication systems. Planning and implementation of telecommunications systems from strategic planning through requirements, initial analysis, general feasibility study, structured analysis, detailed analysis, logical design, and implementation. Current system documentation through use of classical and structured tools and techniques for describing flows, data flows, data structures, file designs, input and output designs, and program specifications. Practical experience gained through project.

526 Advanced Global Positioning System (GPS) (1.5:1.5:0) Prerequisite: TCOM 516. Advanced concepts in global navigation satellite systems (GNSS) such as the American GPS (global positioning system), the European’s Galileo and the Russian’s GLONASS (GLOBAL Navigation Satellite System) System level description, architecture and design of a wide area augmentation system (WAAS) comprising geostationary satellites overlaying GPS satellites and its vast network of monitoring and control ground stations. The equivalent EGNOS (European Geostationary Navigation Overlay Service), a precursor to Galileo and the Japanese MSAS (Multi-transport Satellite-based Augmentation System) Updates on evolving GNSS technology and GNSS backup alternatives.

529 Advanced Internet Protocols (1.5:1.5:0) Prerequisite: TCOM 509 or a strong background in networking protocols. Presents Link-State Routing Protocols (OSPF, IS-IS); functionality, features, design criteria; TCP Performance Tuning; Routing Architectures: routing vs. forwarding tables, shortest path routing algorithms, Internet architecture; Routing Between Peers: BGP/IGP interactions; Internet Security: IPsec, SSL protocols; Internet Multicasting: Layer 2 and 3 Multicast, functionality and features, IGMP and multicast routing protocols; Mobile IP: mobility, routing and address-
ing; Next Generation Internet (IPv6): functionality and features, pros and cons; Internet Applications: DNS, TELNET, FTP, SNMP, HTTP, etc.)

539 Advanced Voice Over IP (1.5:1.5:0) Prerequisite TCOM 519. Presents VoIP Applications using Softswitches: The Softswitch paradigm, advanced functionality and features. Different use of the Softswitch architecture; VoIP QoS: QoS components, protocols, trade-offs. VoIP Security: Aspects of VoIP vulnerabilities, industry-standard remedies; VoIP network design considerations, traffic forecasting, product and vendor selection criteria; case studies: Enterprise and service provider implementations. Vonage example; Advanced Topics: e.g., vendor interoperability issues, business case analysis, and future of VoIP.

540 Telecommunications Network Optimization: Routing, Flow Management, and Capacity Modeling (1.5:1.5:0) Prerequisite: TCOM 500. Provides state-of-the-art knowledge and techniques to apply operations research knowledge to optimal dimensioning, design and use of telecommunication networks. Includes review of traffic models in telecommunication networks including models for particular streams and multiplexing, as well as multirate and multishort models. Theory, algorithms and computational aspects of linear, network, and integer programming; formulation of telecommunication problems as optimization models, and review of solution strategies. Topics include maximum flow, shortest paths, minimum cost flows; data structure for trees and graphs; applications, modeling, theory and algorithms for optimal location of service facilities (concentrators, multiplexers) in telecommunication networks.

541 Network Design and Pricing (1.5:1.5:0) Prerequisite: TCOM 500. Capacity planning, capital budgeting and reliability modeling for determining optimal design. Economic models of pricing alternative telecommunications systems, project selection evaluation, and mechanisms for determining reliability of complex networks. Concentrates on modeling and evaluation. Software tools provided and tested throughout course.

542 Stochastic Models in Telecommunications (1.5:1.5:0) Prerequisite: TCOM 500. Review of teletraffic theory: Erlang’s loss formula, equivalent random method, delay and delay-loss systems; complex simulation modeling and statistical analysis of outputs. Parameter estimation, evaluation of quality.

545 Reliability and Maintainability of Networks (3:3:0) Prerequisite: TCOM 500. Stochastic modeling of network reliability, simulation modeling, modeling replacement strategies. Introduces quality control, sampling for accep- tance, economic design of quality control systems, and system reliability. Also covers faulty tree analysis, life testing, repairable systems and role of reliability, quality, and maintainability in life-cycle costing.

547 Project Management in Telecommunications (3:3:0) Prerequisite: graduate standing. Develops integrated approach to managing major telecommunications projects; evaluates and uses tools and software for project management, with specific goals of containing costs and time overruns; introduces elements for resolving conflict resolution and applying motivation within project team, and gaining the ability to monitor and control projects in changing environment; develops understanding of unique attributes of major telecommunications systems such as interoperability requirements and international technical standards.

548 Security and Privacy Issues in Telecommunications (1.5:1.5:0) Prerequisite: graduate standing. Introduces philosophy of secure data and voice communications. Topics include cryptography, cipher systems, practical security schemes, confidentiality, authentication, integrity, access control, nonrepudiation, and their integration across telecommunications network. Reviews threats and vulnerabilities in distributed systems.

549 Advanced Topics: e.g., vendor interoperability issues, business case analysis, and future of VoIP.

550 Digital Communication Systems (3:3:0) Prerequisite: TCOM 500. Digital transmission of data, voice, and video. Covers signal digitization; modulation and demodulation; error correction coding; multiple access methods; multiplexing; synchronization; channel equalization; frequency spreading; encryption; transmission codes; digital transmission using bandwidth compression techniques; elements of information theory; and development of link budget evaluation such as system noise temperature, Nyquist filter concepts, antenna gain, and filter bandwidth.

551 Introduction to Mobile Communications Systems (3:3:0) Prerequisites: TCOM 500 and 551. Introduces mobile communication system design and analysis. Topics include mobile communication channel, access and mobility control, mobile network architectures, connection to fixed network, and signaling protocols for mobile communication systems. Offers examples of mobile communication systems including pan-European GSM system, North American DAMPS system, and Personal Communication Systems.

552 Carrier Telecommunications (1.5:1.5:0) Prerequisite: TCOM 500. Sampled signals; delta modulation; adaptive delta modulation; pulse amplitude modulation; pulse code modulation. Sampling theorem; quantization; quantization noise; aliasing; time division multiplexing; North America / Japan T carriers; European Ecarriers. Introduction to digital communications: data codes; baseband line codes; noise and its effects; modulation and demodulation methods Amplitude shift keying; frequency shift keying; phase shift keying; differential phase shift keying; multilevel signaling; hybrid signaling; comparative performance.

553 Network Management Foundations and Applications (3.0:3.0:0) Prerequisites: TCOM 500, 501, and 502. Defines and explains techniques that network managers utilize to maintain and improve performance of telecommunications network; network management system; five tasks tradition-
ally involved with network management (fault management, configuration management, performance management, security management, and accounting management); theoretical background in transmission systems sufficient to understand network parameters such as capacity and response times; and specific network management products. Also explores how network performance data should be used for management and when considering upgrades in network architecture.

556 Applied Cryptography (1.5, 3.0: 0) Prerequisites: TCOM 500 and 548. Broad overview of cryptographic algorithms and mechanisms, and application in today's communication networks. Discusses modern cryptographic techniques such as public key cryptography, digital signatures, secret key management, key escrow, public key certificates, and public key infrastructure. Covers cryptography on Internet including secure electronic mail, secure WWW, and electronic commerce. Compares, analyzes software implementations of cryptographic algorithms.

562 Network Security Fundamentals (3, 3: 0) Prerequisite: TCOM 500. Introduces full spectrum of network security. Topics include taxonomy such as language commonality in incident handling, national strategy to secure cyberspace and cybersecurity organizations; organizational structure for network defense; best practices, security policy, and threats; actors and tools, countermeasures, vulnerability identification/correction, intrusion detection, and impact assessment; firewalls and intrusion detection systems; antivirus software; active defense; disaster recovery; and law enforcement and privacy issues. Reviews threats and vulnerabilities in network systems based on reports, case studies available in the literature, and actual experience.

575 Quantitative Foundations for Telecommunications (3, 3: 0) Prerequisite: graduate standing. Provides quantitative foundations in mathematical and electrical concepts to permit registration for courses in telecommunications MS degree and certificate programs. Topics include polynomials, exponentials, linear and quadratic equations, graphs and functions, trigonometric functions, radial measure and sine/cosine functions, exponentials and logarithms, basic probability and statistics, fundamentals of matrix algebra and vectors, basic Boolean logic; circuit elements (resistor, capacitor, inductor), basic electrical circuits, units, ohm's law, kirchhoff's law, decibel notation. Note: Course cannot be used for credit in any IT&E graduate degree program.

590 Selected Topics in Telecommunications (1, 3, 3: 0) 1, 5, 3.0: 0) Prerequisite: permission of instructor; specific prerequisites vary with the subject of the topic. Selected topics from recent developments and applications in various engineering disciplines within specialty modules 1, 2, and 3 of the TCOM program. The course is designed to help the professional engineering community keep abreast of current developments. The 1.5-credit course lasts for one-half semester (approximately seven weeks); the 3-credit course lasts for full semester.

598 Independent Study in Telecommunications (1, 5, 3.0: 0) 1, 5, 3.0: 0) Prerequisites: graduate standing; approval of program director. Directed self-study of special topics in telecommunications that relate to specialty modules 1, 2, and 3. Topics must be arranged with instructor and approved by program director before registering. May be taken for either 1.5 credits, or 3.0 credits in fall and spring semesters. NOTE: No more than total 6 credits may be taken from combination of TCOM 598, 599, 696, and 697 courses for credit in TCOM program.

599 Independent Study in Telecommunications (1, 5, 3.0: 0) 1, 5, 3.0: 0) Prerequisites: graduate standing; approval of program director. Directed self-study of special topics in telecommunications that relate to specialty modules 4 and 5. Topics must be arranged with instructor and approved by program director before registering. May be taken for either 1.5 credits, or 3 credits in fall and spring semesters. Note: No more than total 6 credits may be taken from combination of TCOM 598, 599, 696, and 697 for credit in TCOM program.

603 Standards for Advanced Optical Networks (3, 3: 0) Prerequisites: TCOM 503 and 513. Introduces current and upcoming global optical networking standards. Introduces currently deployed optical networking standards, primarily SONET, and proceeds with evolution of next generation optical networks as envisioned by various standards bodies. Covers standard work on Automatic Switched Optical Networks being worked on at ITU, and Generalized Multi-Protocol Label Switching being worked on at IETF. Also covers evolution of Ethernet from local area networking to wide area networking, specifically the G.Etna standard that is being developed by ITU, and T1.X1 committee and 802.xxx developed by IEEE.

606 Advanced Mobile Communications Systems (3, 3: 0) Prerequisite: TCOM 532. Introduction to post-second generation cellular systems; benefits and features of third generation (3G) systems and personal communications services (PCS); review of air interface standards and transmission technologies for mobile and quasi-stationary wireless systems, including cellular networks, satellite networks, indoor systems (Wi-Fi, Personal Local Area Networks, Orthogonal Frequency Multiplexing, Ultra Wide Band technologies); review of network control strategies; investigation of user authentication, privacy, and data and voice encryption aspects. Evolving technology, analysis of competing multiple access methods, transition plans, and backward compatibility between 2G, 21/2 G, 3G, and future systems, with possible fallback plans.

607 Satellite Communications (3, 3: 0: 0) Prerequisite: TCOM 551. Topics include introduction to satellite communications systems; historical aspects; orbital mechanics and launchers; satellite components such as payload, orbital maneuvering systems, cooling systems, and antennas; look angle predictions; link budget; overall link design; multiple access such as TDMA, CDMA, ALOHA, TDMA, and MF-TDMA; error control for digital satellite links; propagation effects on satellite links; elements of VSAT systems and nongeostationary satellite systems; and direct broadcast satellite services.
609 Interior Gateway Protocol (IGP) Routing (3:3:0)
Prerequisites: TCOM 509 and 515, or equivalent. Discusses development of Interior Gateway Protocols, including standards documents; interaction between various interior and exterior gateway protocols; design procedures and implementation aspects; field trial issues; and analysis of latest RFC information posted on IETF web site.

610 Border Gateway Protocol (BGP) Routing (3:3:0)
Prerequisites: TCOM 509 and 515, or equivalent. Discusses development of Border Gateway Protocol and its application in today’s Internet routing architecture. Covers evolution of Internet, BGP routing standard specifications (RFCs), interaction between various routing protocols, network BGP routing design principals and procedures for enterprise and ISP networks, BGP’s real-world implementation and configuration syntax, network scalability and convergence issues, and the latest extension and proposals for new standards.

611 Multi-Protocol Label Switching (MPLS) (3:3:0)
Prerequisites: TCOM 609 or 610. Develops full understanding of MPLS theory, technology, and implementation aspects through detailed analysis of MPLS routing concepts and protocol stacks, and completion of major project to reinforce understanding of MPLS.

660 Network Forensics (3:3:0)
Prerequisites: TCOM 509, and working knowledge of computer programming. Deals with collection, preservation, and analysis of network-generated digital evidence so it can be successfully presented in civil or criminal court of law. Examines relevant federal laws and private sector applications. Examines capture/intercept of digital evidence, analysis of audit trails, recordation of running processes, and reporting of such information.

661 Digital Media Forensics (3:3:0)
Prerequisites: TCOM 548 and 556, or TCOM 562, and working knowledge of computer operating systems; or permission of instructor. Deals with collection, preservation, and analysis of digital media so this evidence can be successfully presented in civil or criminal court of law. Examines relevant federal laws and private sector applications. Examines seizure, preservation, and analysis of digital media.

662 Advanced Secure Networking (3:3:0)
Prerequisites: TCOM 509 and 562, and a working knowledge of network routing protocols. Advanced technologies in network security that can be applied to enhance enterprise and ISP’s network security. Covers network perimeter defense concept and various components for complete layered defense system. Examines each component and its technologies, including TCP/IP protocol vulnerabilities, router access control list (ACL), dynamic ACL, firewall, network address translation (NAT), virtual private network (VPN), IPSec tunnels, intrusion detection system (IDS), routing protocol security, denial-of-service (DOS) attack, DOS detection and mitigation techniques.

663 Operations of Intrusion Detection and Forensics (3:3:0)
Prerequisites: TCOM 509 and 529 and a working knowledge of computer programming. Introduces students to network and computer intrusion detection and its relation to forensics. It addresses intrusion detection architecture, system types, packet analysis, and products. It also presents advanced intrusion detection topics such as intrusion prevention and active response, decoy systems, alert correlation, data mining, and proactive forensics.

690 Advanced Topics in Telecommunications (3:3:0)
Prerequisite: permission of instructor; specific prerequisites vary. Advanced topics from recent developments and applications in various engineering disciplines in specialty modules 1, 2, and 3 of TCOM program. Advanced topics chosen so that they do not duplicate existing TCOM courses. Active participation of students encouraged in form of writing and presenting papers in various research areas of advanced topic. Enhances professional engineering community’s understanding of breakthrough developments in specific areas.

691 Advanced Topics in Telecommunications (3:3:0)
Prerequisite: permission of instructor; specific prerequisites vary. Advanced topics from recent developments and applications in various engineering disciplines in specialty modules 4 and 5 of TCOM program. Advanced topics are chosen in such a way that they do not duplicate existing TCOM courses. Active participation of students encouraged in form of writing and presenting papers in various research areas of advanced topic. Enhances professional engineering community’s understanding of breakthrough developments in specific areas.

696 Independent Reading and Research (1.5, 3.0: 1.5, 3.0:0)
Prerequisites: graduate standing; approval of program director. Study of selected area in specialty modules 1, 2, or 3 under supervision of faculty member. Written report required. Note: No more than total 6 credits may be taken from combination TCOM 598, 599, 696, and 697 for credit in TCOM program.

697 Independent Reading and Research (1.5, 3.0: 1.5, 3.0:0)
Prerequisites: graduate standing; approval of program director. Studies selected area in specialty modules 4 or 5 under supervision of faculty member. Written report required. Note: No more than total 6 credits may be taken from combination TCOM 598, 599, 696, and 697 for credit in TCOM program.

698 Telecommunications Projects Course (3:3:0)
Prerequisite: graduate standing. To be taken toward end of degree program within any of modules 1, 2, or 3. Primary activity is completing major applied project, preferably with group of two to three people. Secondary goal is consolidating training before graduation so that, in some cases, it may act as capstone course. Students and outside telecommunication industry managers present ideas for projects and, through grouping of students, new skills and approaches may be learned. Some class time used for discussion of projects, either to monitor progress or explore alternative approaches. Readings, class-time discussion of current trends, difficulties, and new opportunities for industry most relevant to module. Concludes with presentations of projects to department faculty.

699 Telecommunications Project Course (3:3:0)
Prerequisite: graduate standing. Capstone of degree program under the specialty modules 4 or 5. To be taken toward end of degree program. Primary activity is completion of major applied project, preferably as two- to three-person group. Secondary goal is consolidation of training before graduation. Students, outside telecommunication industry managers present ideas for projects. From these ideas, group projects selected. Some classroom time used to discuss projects, either to monitor progress, or explore alternative approaches. Readings, class-time discussion of current trends, difficulties, and new
opportunities for the industry. Projects presented to department faculty at end of semester.

707 Advanced Link Design (3:3:0) Prerequisite: TCOM 551. Topics include advanced satellite link design such as VSAT optimization, intersatellite systems, and propagation mitigation trade-offs; radar link design such as primary and secondary radars, range ambiguities, false alarms, Doppler radar, FM radar, radar tracking, radar transmitters and receivers, and phased array radars; terrestrial wireless link design including line of sight, LMDS, and nonlinear of sight; optical link design including laser options, diffraction limits, lidar and communications links, tracking limitations, and GEO and LEO intersatellite link design; Wi-Fi link design; and directed energy systems.

750 Coordinating Seminar (3:3:0) Open only to students in MA or MS in telecommunications programs with at least 18 credits of course work prior to registration. Topics include specific telecommunications problems in management, law, engineering, education, and communications. Focuses on ways a problem in one area can create or solve a problem in other areas.

Theater (THR)

College of Visual and Performing Arts

101 Theatrical Medium (3:3:0) Introduces medium of theatrical performance and its role in contemporary society, and investigates components of production from conception through performance to ensuing criticism. Lectures, demonstrations by theater professionals. Students required to attend theatrical performances on and off-campus, and submit a written report on each.

150, 151 Drama, Stage, and Society I and II (3:3:0), (3:3:0) First semester covers development of Western drama and theater from its beginnings through Shakespeare. Second semester brings study to present day. Considers readings in dramatic literature and history of theater in social context.

190 Special Topics (1–3:1–3:0) Rotating topic. Introductory seminar in areas of special interest. May be repeated for maximum 12 credits.

200 Play Production Practicum (1:0:0) Academic credit awarded for satisfactory participation in departmental (GMU Players) or Theater of the First Amendment productions. One credit is awarded for each assignment up to total 4 credits; fulfills theater BA requirement. See departmental listing for more information. May be repeated for total 4 credits. Graded S/NC.

201 Stage Management (1:1:0) Theory and technique of stage management for theater. Special emphasis on problem-solving skills.

202 Literary Management (1:1:0) Principles of literary management and dramaturgy for regional/resident theater. Directed primarily toward developing new work.

203 Production/Company Management (1:1:0) Techniques of production and company management applied to university and professional theater productions.

210 Acting I (3:3:0) Introduces contemporary acting techniques through individual and group exercises, incorporating tools such as observation, sense and emotion memory, improvisation, given circumstances, and actions and objectives. Considers history and development of acting theory, selected examples of various cultural contexts, and basic types of stage configurations. Students develop appreciation of theater and its basic elements through attendance of live performances on- or off-campus, in-class critical evaluation, and oral and written reflection.

230 Introduction to Technical Theater (3:3:0) Theory, practice, and historical context of physical production component of theater. Studies current trends in technical theater, and explains how they developed from earlier technology. Lectures and hands-on experience.

235 Fundamentals of Costume Construction (3:3:0) Basic flat pattern development, theatrical sewing techniques, and organization of the costume construction process. Includes lab study and practical experience in garment construction and related costume crafts as used in theater costume design.

300 Voice and Speech Fundamentals (3:3:0) Prerequisite: THR 210 or permission of instructor. Basic techniques in breathing, vocal production, and articulation for the actor.

301 Voice and Speech for the Performer (3:3:0) Prerequisite: THR 300 or permission of instructor. Integration of text and performance problems with voice and speech fundamentals begun in THR 300. Advanced work in vocal production and character-specific sounds.

303 Movement for the Actor I (3:3:0) Develops physical side of actor’s instrument emphasizing free and responsive expression of impulse and intention.

304 Movement for the Actor II (3:3:0) Advanced work in techniques established in THR 303.

305 Stage Combat (3:3:0) Prerequisites: THR 210 and 310, or permission of instructor. Studies safe, effective techniques for performing unarmed stage fights, falls, and rolls. Emphasizes acting the fight, safety, and storytelling.

310 Acting II (3:3:0) Prerequisite: THR 210 or permission of instructor. Extends principles begun in THR 210 through scene study, audition technique, and work in analysis, characterization, and relationships.

314 Lighting Stagecraft (3:3:0) Prerequisites: THR 230 or permission of instructor; must be concurrently enrolled in THR 200. Practical and theoretical instruction on becoming theatrical electrician. Includes ideas on workplace safety, basic electrical procedures, theatrical electrical production, integrating with other theater professionals, and professionalism.

320 Beginning Modern Acting (3:3:0) Prerequisites: THR 210 and 310, or permission of instructor. Builds on existing skills in observation, sense memory, relaxation, and improvisation. Students learn variety of methods for scene preparation to apply to their own acting process.

321 Acting Shakespeare (3:3:0) Prerequisites: THR 210 and 310, or permission of instructor. Develops understanding of challenges of performing Shakespeare by building on body of acting skills and knowledge. Focuses on how structure of language in plays reflects, reveals, and expresses character’s emotional life. Students use detailed script analysis, expansion of vocal range, and use of actions and objectives to achieve experience of transforming Shakespeare’s language into powerful theatrical expressions.
329 Directing I (3:3:0) Prerequisite: THR 150–151, 210, or 350; or permission of instructor. Introduces text analysis, rehearsal procedure, staging techniques, and development of production idea. Students direct exercises and short scenes, and prepare written production notes.

330 Seminar in Technical Theater (3:3:0) Prerequisite: THR 230 or permission of instructor. Rotating topic. Offered periodically; addresses selected topic in design or technical theater on advanced level. May be repeated for total 24 credits.

331 Drafting and Model Making (3:3:0) Prerequisite: THR 230 or permission of instructor. Studies conventions and techniques of drafting and model making as methods of communication in the theatrical production process.

332 Seminar in Costume History (3:3:0) Explores evolution of fashion and styles of dress. Students study silhouette, color, fabric, accessories, and make-up appropriate to development of clothing during specific historical era. Offers broader understanding of context relating to sociological and psychological factors influencing Western dress. Historical era studied will rotate. May be repeated for total 9 credits if specific course content differs.

333 Stage Design (3:3:0) Prerequisite: THR 230 or permission of instructor. Fundamentals of creating, developing, and communicating design idea through sketches, plans, rendering, or models. Analysis of text from designer’s perspective.

334 Lighting Design (3:3:0) Prerequisite: THR 230 or permission of instructor. Study of lighting design as art that defines space and reveals form. Introduces tools, equipment, and process of lighting design. Analyzes text from designer’s perspective.

335 Costume Design (3:3:0) Prerequisite: THR 230 or permission of instructor. Project-oriented class emphasizing process of designing and building. Costume design studied in relation to historical periods and artistic demands of script. Includes lecture, lab in fundamentals of costume design for stage.

336 Advanced Theater Technology (3:3:0) Prerequisite: THR 230 or permission of instructor. Continuation of work begun in THR 230, stressing contributions of costumes, sound, and props to theatrical production. Intensive work in drafting for theater. Participation in theater division productions required.

340 Directing II (3:3:0) Prerequisite: THR 329 or permission of instructor. With techniques developed in THR 329, students analyze and stage extended scenes or one-act plays. Emphasizes collaborative process and production organization.

342 Makeup Design (3:3:0) Prerequisite: THR 230 or permission of instructor. Project-oriented class emphasizing makeup for different performance spaces, character age analysis, facial anatomy, and specialized application for theater, opera, dance, film, and television.

343 Costume Draping and Drafting (3:3:0) Pattern development through draping and drafting. Laboratory study and practical experience in construction of stage costumes.

345 Puppetry: History and Technique (4:2:4) In context of comprehensive and intensive exploration of world puppetry, course experiments with building and performance styles. Emphasizes hand and rod puppets, shadow work, toy theater, and bunraku-style figures. Students develop, build, and present original work.

350 Script Analysis (3:3:0) Critical analysis of dramatic literature as preparation for production and performance. Examination of plot, character, theme, audience impact, and cultural context, and the transformation of intellectual ideas into physical theatrical production elements. Writing-intensive course.

351 Dramatic Theory and Criticism (3:3:0) Chronological study of development of dramatic theory and criticism from Plato and Aristotle through modern movements. Students read plays, theoretical works, and critical responses, and write original criticism of performances or texts.

352 Dramatic Literature Seminar (3:3:0) Rotating topic. Intensive study of particular topic, period, or genre in dramatic literature. May be repeated for a total of 9 credits if specific course content differs.

355 Moral Vision in American Theater (3:3:0) Prerequisite: THR 101, theater major, or permission of instructor. Examines vision of American society created and presented in contemporary American theater. Subject defined as “moral” vision because focus is on how we perceive ourselves in relation to others and society’s value standards. Perspectives include sociology, theory of culture, practical theater craft, and literary criticism. Features plays by range of American playwrights.

359 World Stages (3:3:0) Introduces variety of theatrical traditions and performance theories from around the world, with special emphasis on those not covered in introductory Western drama survey courses, 150 and 151. Students read and discuss dramatic texts, performance theory, and video clips to understand variety of theatrical traditions in cultural and historical contexts. Requirements include two team presentations (taking turns as writer and presenter), one midterm paper, and one solo presentation with accompanying paper.

365 Characterization (3:3:0) Prerequisite: THR 210. Explores method and approach of understanding and creating characters for theater modeled on people from personal experience and observation, imagination, dreams, and other media. Transforms that information into detailed, specific, and vivid physical manifestations. Through presentations of characters drawn from personal experience, students shift understanding of characterization from “outward directed” physical adjustments to physical characteristics and personality character traits that are immediate, familiar, and completely realized from “inner driven” connections to their own lives.

380 Playwriting I (3:3:0) Explores to principles of dramatic writing, including character, plot, dramatic structure, dialogue, exposition, setting, and creating theatrical images using examples from plays, screenplays, and students’ own work.

381 Playwriting II (3:3:0) Prerequisite: THR 380 or permission of instructor. Intensive continuation of work begun in THR 380.

382 Screenplay Workshop (3:3:0) Studies screenwriting as dramatic form of 20th, 21st centuries. Explores story, plot structure, three act-structures, mythic structures, fundamental story patterns, character, thinking, and writing visually.
395 Theater as the Life of the Mind (3:3:0) Traces four subjects (battle of the sexes, good gifts, cyclical tragedy, and eschatology) from ancient theater to contemporary plays, television, and movies, using literary criticism, history, political theory, comparative religion, sociology, and anthropology.

420 Advanced Modern Acting (3:3:0) Prerequisite: THR 210 and 310, or permission of instructor. Advanced scene study to build on skills from previous acting courses. Students assigned actor’s approach, midterm sonnet presentation, and final scene.

421 One-Person Show (3:3:0) Prerequisites: THR 210 and THR 310 or permission of instructor. Students work with designated faculty in creative writing, staging, and performance culminating in the successful writing, rehearsing, and performing of a one-person show.

423 Audition Techniques: Stage and Camera (3:3:0) Prerequisite: THR 310 or equivalent, or permission of instructor. Professional directors, coaches, and casting directors offer perspectives on what makes an effective and honest audition. Students prepare a repertoire of pieces for stage and camera auditions.

424 Contemporary Women Playwrights (3:3:0) Prerequisite: junior standing, or permission of instructor. Explores identity and culture, sexuality and gender, work, relationships, and power through the eyes of female dramatists and performance artists. Analyzes texts and issues through readings, videos, and live performances.

425 Verse Speaking (3:3:0) Prerequisite: THR 210 and 310, or permission of instructor. Explores verse literature and mechanics of verse structure through reading, discussing, and reciting major verse plays of Western drama from the Middle Ages through the 20th century. Focuses on various verse forms, paying particular attention to vocal clues within verse structure, the meaning of rhythm, and practicing vocal techniques used in speaking texts in class. Students also prepare weekly presentations of playwrights, and historical backgrounds of plays and their periods.

434 Advanced Lighting Design (3:3:0) Prerequisite: THR 230 and 334, or permission of instructor. In-depth study of lighting design. Work with lighting distribution, composition, and color to create compelling visual pictures and moods. Extensive work with script analysis as related to lighting, drafting of light plots, and the generating associated paper work used by lighting designer.

440 Advanced Studies in Directing/Dramaturgy (3:3:0) Prerequisites: junior or senior standing; completion of or concurrent enrollment in all general education courses; THR 150 or THR 151, and THR 329; or permission of instructor. Examines theory and practice of collaborative development of production ideas by director and dramaturg teams. Students draw from extensive study in field to support production ideas from classical and modern repertoire to be presented as written and oral projects before faculty panel. Meets university general education synthesis requirement.

480 Advanced Playwriting (3:3:0) Prerequisite: THR 381, or permission of instructor. Advanced playwriting workshop in which students explore their own voice in theatrical writing.

482 Advanced Screenplay Workshop (3:3:0) Prerequisite: THR 382 or permission of the instructor. Screenwriting workshop emphasizing student development in screenplay form, structure, and storytelling with emphasis on craft, character, and story culminating in a screenplay.

490 Special Topics in Drama (1–6:1–6:0) Rotating topic. Advanced seminar in topics of special interest, including dramatic writing or other media, and feminism in contemporary theater. May be repeated for a total of 24 credits provided specific course content differs.

491 Major’s Seminar on the Profession (3:3:0) Prerequisite: junior standing or higher. Explores professional issues with students of all stages. Course content varies from year to year and is designed to help students prepare for the demands of the profession. May be repeated for a total of 4 credits.

494 Field Experience (1–6:0:0) Experience in a theatrical organization to provide opportunity to apply classroom training, knowledge, skills, and theory in a professional situation. Activity must be approved by department chair. May be repeated for a total of 12 credits. Graded S/NC.

495 Senior Synthesis Project (3:3:0) Prerequisite: junior standing or higher. Students design advanced-level project, with supervision of faculty advisor, representing culmination of studies in major. May reflect work in one or more specialized areas, such as acting, directing, playwriting, dramaturgy, design, puppetry, or technical production. Synthesis project must include intellectual component and public presentation, with discussion of work with faculty panel. Students encouraged to incorporate work in one or more disciplines and collaborate. Projects assessed on demonstrated ability to communicate effectively in oral and written forms.

496 Text in Production (3:3:0) Prerequisites: completion or concurrent enrollment in all theater core courses and all other required general education courses, and junior standing; or permission of instructor. In-depth investigation of collaborative nature of theatrical arts. Examines discrete creative disciplines; acting, directing, dramaturgy, and design as discussed by distinguished professionals and scholars. In-depth exploration of one selected playscript for the entire semester. Students will work collaboratively in small groups to research, design, direct, and perform scenes from selected text.

497 Independent Study (1–6:0:0) Open only to theater majors with 90 credits and special permission of department chair. Individual research and creative project in close consultation with instructor. Selection from projects in performance, directing, technical theater and design, playwriting, or theater history and criticism. May be repeated for a total of 24 credits, provided suffix citing specific course content is different.

571 Advanced Playwriting Workshop (3:3:0) Prerequisite: undergraduate degree or equivalent, or permission of instructor. Advanced playwriting workshop in which students explore their own voice in theatrical writing.

599 Independent Study (1–6:1–6:0) Prerequisite: undergraduate degree or equivalent, or permission of instructor. Independent reading, performance, or research on a specific project under direction of selected faculty member. May include attendance in a parallel undergraduate course. May be repeated for a total of 6 credits.
Tourism and Events Management (TOUR)
School of Recreation, Health, and Tourism

190 Wedding Planning (3:3:0) Introduction to the planning and management of weddings. Explores social, political, economic, cultural, religious, and historical influences on wedding planning decision-making and business strategies. Reviews practices relevant to successful wedding planning, and consultancy for diverse clients and settings.

200 Introduction to Travel and Tourism (3:3:0) Open to nonmajors. Introduction to travel and tourism from local to international levels. Overview of the scale, scope, and organization of the industry, with emphasis on the development of natural, cultural, heritage, and recreational resources of tourism. Identifies issues related to the economic, technological, legal, and political aspects of tourism.

210 Global Understanding through Travel and Tourism (3:3:0) Open to nonmajors. Approved general education requirement. Examines tourism as a global industry and human activity that promotes and facilitates understanding of historical and cultural values, and of international institutions that characterize the broader global system.

220 Introduction to Event Management (3:3:0) Explores principles and practices of managing medium- and large-scale events including festivals, conventions, concerts, shows, sporting events, and ceremonies. Emphasizes organization, site preparation, communications, personnel, and security as well as evaluation and innovation.

221 Event Implementation and Evaluation (3:3:0) Prerequisite: TOUR 220, or permission of instructor. Introduction to event implementation and evaluation through involvement in on-site event delivery and analysis. Studies participant motivation and economic, social, environmental, and cultural impacts in relation to an event’s products and services.

241 Practicum (3:0:3) Prerequisites: TOUR 200. Open to majors and minors only. Pass/fail. Provides practical experience in the travel and tourism environment through selective fieldwork, job placement, and seminar or conference attendance.

311 Women and Tourism (3:3:0) Open to nonmajors. Approved general education requirement. Focuses on women as hosts and guests. Using social theory, explores issues regarding the history and evolution of tourism as a gendered system. Addresses family, solo and business travel, and employment, taking into consideration issues related to more and lesser developed countries as they relate to the roles of women in international tourism.

312 Ecotourism (3:3:0) Prerequisite: TOUR 200, or permission of instructor. Analyzes tourism that is nature-based and entails a learning component while striving for environmental and sociocultural sustainability within the context of financial viability. Considers markets, role of protected areas, impacts, business aspects, external environments, organizations and policies, and research trends and needs.

330 Resort Management (3:3:0) Prerequisite: TOUR 200, or permission of instructor. Surveys effective practices in the management of resort recreation enterprises. Examines basic resort operations, including front desk, food and beverage, amenities, and housekeeping. Covers management of a variety of resort types, such as ski resorts, beach resorts, dude ranches, business retreats, adventure camps, health spas, and golf resorts.

340 Sustainable Tourism (3:3:0) Prerequisite: TOUR 200, or permission of instructor. Considers the characteristics of environmentally, economically and socioculturally sustainable tourism, and assesses the possibilities and limitations for its implementation in a variety of destination and product settings. Emphasizes conventional “mass” tourism as well as small-scale “alternative” tourism.

352 Heritage and Cultural Tourism (3:3:0) Prerequisite: TOUR 200, or permission of instructor. Examines historical and cultural attractions, including museums, canals, monuments, pilgrimage sites, military sites, and cultural and heritage landscapes. Covers presentation and interpretation, African-American and Native American heritage, management and operational considerations, and marketing.

362 Cultural and Environmental Interpretation (3:3:0) Prerequisite: PRLS 300, PRLS 328, or TOUR 352; or permission of instructor. Focuses on communication processes and practices used by professionals to explain and interpret special characteristics of cultural and environmental resource sites for visitors. Discusses conceptual principles for planning interpretive programs, as well as techniques for analyzing and disseminating information and entertainment through various media. Examines delivery of interpretive messages across a variety of audiences, strategies for programming interpretive services, and the administration and evaluation of interpretive services at tourism, event, and recreation sites.

400 Meetings and Conventions (3:3:0) Prerequisites: TOUR 200 and at least 9 hours of TOUR credits. Principles of planning and policy that apply to integrated and sustainable tourism development at the international, national, state, regional, local, and site scale. Considers government, industry, and community perspectives.

412 Tourism and Events Marketing (3:3:0) Prerequisite: TOUR 200 and PRLS 410, or permission of instructor. Provides understanding and tools for marketing and management of financial resources in entrepreneurial tourism enterprises. Includes market planning, business planning, feasibility assessment, investment analysis, basic accounting, and operational control.

414 Tourism and Events Finance (3:3:0) Prerequisite: TOUR 200, or permission of instructor. Develops skills and competencies for the management of financial resources in tourism and events management enterprises. Students learn about business planning, feasibility assessment, investment analysis, and basic accounting and operational control, with special emphasis on application to this unique industry.

420 Tourism Planning/Policy (3:3:0) Prerequisite: at least 9 hours of TOUR credits. Principles of planning and policy that apply to integrated and sustainable tourism development at the international, national, state, regional, local, and site scale. Considers government, industry, and community perspectives.

430 Tourism on Public Lands (3:3:0) Prerequisite: at least 9 hours of TOUR credits. Evolution, status, and management of tourism on federal, state, and municipal lands, including USDA Forest Service, Bureau of Land Management, National Park Service, and state forest jurisdictions. Emphasizes supply and demand, multiple-use issues, policy and management, funding, tourism impacts, jurisdictional coordination, and the role of adjacent private lands.

440 Meetings and Conventions (3:3:0) Prerequisites: TOUR 200 and at least 9 hours of TOUR credits, or permission of instructor. Analyzes meetings, incentives, conventions, and exhibitions with respect to business environment...
and structure, industry suppliers, site and facility selection, human resource management, legal and financial issues, marketing and promotion, and event organization.

470 Senior Seminar (1:1:0) Only for TOUR majors with senior status. Capstone educational experience focuses on current issues in tourism and event management, and career development strategies.

480 Special Topics (1–3:1–3:0) Selected topics reflect interest in specialized area of tourism and events management. Announced in advance.

490 Internship (12:0:12) Prerequisites: 90 hours, of which at least 12 credits must be in TOUR, including TOUR 241. Open only to majors. Supervised professional experience provides a continuous and structured opportunity to apply principles and skills developed in the classroom to the solution of practical problems in the tourism and events management industry. Provides a paid or voluntary full-time work experience in an approved tourism or event management setting for a minimum of 10 to 12 weeks. Includes meetings and assignments before and during the internship. Graded Pass/Fail.

499 Independent Study (1–3:1–3:0) TOUR majors only. Prerequisites: TOUR 200 and 220, and 90 credits. Faculty-directed independent study of approved topics in tourism and events management.

540 Sustainable Tourism Management (3:3:0) Examines components and interrelationships within tourism systems and assesses the potential economic, sociocultural, and environmental impacts associated with this sector. Considers managerial strategies that minimize the negative impacts and maximize the positive impacts, thereby attaining sustainable tourism.

University/Interdisciplinary Studies (UNIV)

Student Academic Affairs

190 Freshman Seminar (3:3:0) Prerequisite: Freshman standing; enrollment is by minimum 3.30 cumulative high school GPA and invitation. Broad interdisciplinary subjects taught by Robinson Professors; topics vary. Courses may be repeated for up to 12 credits.

301 Great Ideas in Science (3:3:0) Nontechnical introduction to ideas that have shaped the growth of science, from the building of Stonehenge to modern theories of the Big Bang. The idea behind each major advance is treated in its historical context, with special attention to its importance in mankind’s understanding of the nature of the universe. Intended for nonscience majors; uses little mathematics.

342 The George Mason Debates in Current Affairs (3:3:0) In-depth investigation of one or more contemporary public policy issues. Examines the selected topics as discussed by scholars, public interest groups and think tanks, government officials, and the news media. Texts and guest lecturers presenting a wide range of perspectives are an important feature.

342 The George Mason Debates in Current Affairs (3:3:0) Interdisciplinary seminar offering a window on the latest advances and research related to cognitive science, an interdisciplinary field of inquiry that seeks to understand the nature, basis, and origins of human consciousness, thinking, and cognition.

University Transition (UNIV)

Student Academic Affairs

100 University: Freshman Transition (1–2:1–2:0) Helps freshmen transition to college life, focusing on adjusting academically, developing decision-making skills, and learning about services and opportunities for involvement. Although all classes have a core body of knowledge, each class specializes in a particular aspect of college life. Team development at Hemlock Overlook is a component of most sections.

200 University: Sophomore Transition (2:2:0) Focuses on transition issues for students at second-semester freshman standing or higher. Main focus is career exploration and choosing a major. Section topics include self-assessment, values clarification, skill development, career and major research, and options for experiential learning.

300 University: Junior Transition (1:1:0) Focuses on transition issues for students at second-semester sophomore standing or higher. Features three tracks: assisting new transfer students with first-semester academic and transition issues, career readiness for internships and research assistantships, and peer leadership.

400 University: Senior Transition (1:1:0) Transition issues for students at second-semester junior standing or higher. Focuses on development for the professional workplace, skills for graduate school preparation, and readiness for life responsibilities. Includes skill preparation for work, development of field-of-study expertise, resume and portfolio development, job-search strategies, money management, career and alumni networks, interview strategies, and final-year planning.

Urban and Suburban Studies (USST)

Public and International Affairs

301 Urban Growth in a Shrinking World (3:3:0) Examines process of urbanization historically and comparatively. For major world regions, attention is given to the political economy of urbanization and its impact on social and economic relations. Examines growing globalization of the world economy, implications for urban life, and urban political economy of the future.

390 Special Topics in Urban and Suburban Studies (3:3:0) Subject varies according to specialization of instructor.

401 Seminar: The Future of Metropolitan America (3:3:0) Prerequisite: 12 credits of USST-approved courses, including USST 301. Examines trends in the development of American metropolis, including impact of information economy and technological developments on metropolitan form and life, continuing outward growth and increasing decentralization of metropolitan areas, changing functional organization of urban space, and continued social segregation in metropolitan areas. Analyzes contemporary predictions about future of metropolitan life in America, and explores how alternative public policies can shape that future. Students work on research projects in metro area.

490 Internship (3:0:0) Prerequisite: open only to students with 12 credits of USST; see USST coordinator. Approved work-study programs that focus on urban and suburban issues with an approved agency or firm. Placement depends on
student qualifications and availability of positions. Students work with onsite supervisor and coordinator of Urban and Suburban Studies.

Women and Gender Studies (WMST)

Women and Gender Studies Program

100 Representations of Women (3:3:0) Explores ways women are portrayed in advertising, television, film, photographs, cartoons, performance arts, literature, religious texts, and news media from various worldwide sources. Through interdisciplinary study students will evaluate the powerful effects these representations have on the political, economic, and social lives of women throughout the world.

200 Introduction to Women’s Studies (3:3:0) Prerequisites: 30 credits. Interdisciplinary introduction to women’s studies, encompassing key concepts in the field, history of women’s movements and women’s studies in America, cross-cultural constructions of gender, and a thematic emphasis on the diversity of women’s experience across class, race, and cultural lines.

300 Current Issues in Women’s Studies (3:3:0) Study of selected topics central to contemporary women’s studies. Topics vary but include subjects such as women and violence, women and international development, women’s myth and ritual, the history and politics of sexuality, psychoanalysis, and religion.

301 Sex and Gender in Contemporary Society (3:3:0) Prerequisite: 6 credits, or permission of instructor. Changing conceptions of sex roles, both female and male, in contemporary society. Using historical and comparative data, course considers the differential socialization of males and females in relation to the changing social structure in which it takes place.

302 Cultural Constructions of Sexualities (3:3:0) Prerequisite: 6 credits of 200-level English courses. Introductory survey of cultural, literary, and theoretical constructions of sexuality that seeks to complicate traditionally fixed categories of identity. Examination of various representatives of human sexuality, with particular attention to its intersections with gender, race, ethnicity, nationality, and class.

303 Psychology of Women (3:3:0) Prerequisites: PSYC 100, and BIOL 103 and 104; or permission of instructor. Behavior and attitudes of women, influence of sex chromosomes and sex hormones on behavior, influence of culture on sex role differentiation, and theories of sex role development.

304 Women and Media (3:3:0) Prerequisite: COMM 302 or permission of instructor. Introduction to the concepts of the power and influence of the mass media. Allows students to see themselves as products of media influence and gives them a sense of women’s roles as media professionals, as well as consumers.

305 Women and Literature (3:3:0) Prerequisite: 6 credits of 200-level English courses. An exploration of the experience of women as both authors of and subjects in imaginative literature. May be repeated once for credit when subtitle is different, with permission of department.

306 Topics in Communication and Gender (3:3:0) Prerequisite: 60 credits. Exploration of selected topics involving gender and communication. Topics may include women in media, women as rhetors, male/female communication, and communication and sex roles. Specific interests are examined in a seminar setting. Course may be repeated with approval of department.

330 Feminist Theory Across the Disciplines (3:3:0) Prerequisite: WMST 200, or permission of instructor. Examination of feminist critique and transformation of the theories, methods, and methodologies of the sciences and humanities.

340 Internship in Women’s Studies (1–3:0:0) Prerequisite: completion of 60 credits, including WMST 200, or permission of instructor. Community- or campus-based service or experiential learning related to women’s or gender issues. Independent course in which students develop, in consultation with a faculty member, individual contracts defining the learning and competencies they plan to gain from the experience. May be repeated for credit up to 6 credits.

341 Experiential Learning in Women’s Studies (1–3:0:0) Prerequisite: concurrent enrollment in women’s studies course. Community- or campus-based service or experiential learning as it relates to a specific WMST course, taken at the same time. Students develop, in consultation with faculty member, individual contracts defining learning and competencies they plan to gain from the experience. May be repeated for credit up to total 6 credits, but only 3 credits of WMST 400 or 401 may be applied toward the women’s studies interdisciplinary minor.

410 Feminist Approaches to Social Research (3:3:0) Prerequisite: 60 credits, including 9 credits of WMST course work, or permission of instructor. Introduction to feminist approaches to social research for advanced undergraduate students. Students learn the techniques for collecting, analyzing, and writing-up research data as they examine many of the central methodological issues and questions raised by feminist scholars undertaking social research. Because an understanding of how to conduct social research is best gained through experience in the social world, this course emphasizes a learning-by-doing approach.

427 Feminist Political Thought (3:3:0) Prerequisite: GOVT 101, WMST 200, 3 credits of philosophy, or permission of instructor. Explores feminist political thought in historical context. Topics include feminist political movements, feminist critiques of political philosophy, and feminist contributions to political theory.

490 Independent Study in Women’s Studies (1–3:0:0) Prerequisite: 9 WMST credits including WMST 200, or permission of instructor. Reading or research on a specific topic related to women and/or gender issues, under the direction of a faculty member. May involve a combination of reading assignments, tutorials, papers, presentations, or off-campus activities. May be repeated for credit up to a total of 6 credits.

600 Special Topics (3:3:0) Study of selected topics central to contemporary women’s studies. Topics vary but include representation and images, violence, public policy, international development, transmigration of labor, myth and ritual, history and politics of sexuality, psychoanalysis, and religion.
610 Feminist Approaches to Social Research (3:3:0)  
Prerequisites: graduate standing and 3 credits of 600-level WMST course work, or permission of instructor. Provides an introduction to feminist approaches to social research. Students collect, analyze, and write-up research data as they examine many of the central methodological issues and questions raised by feminist scholars. These include feminist critiques of positivism, feminist standpoint theory, social action research models, and feminist engagements with ethical concerns in doing research with human subjects. Emphasizes a learning-by-doing approach to prepare students to conduct research.

611 Gender Research Project (3:3:0) Prerequisites: WMST 610 or SOCI 634. Students work as part of a research team and undertake a semester-long project investigating the significance of gender to the social and academic life of students at Mason. Enhances understanding of techniques for collecting, analyzing, and writing up empirical material. Involves in-depth investigation of and critical engagement with ethical, interpretive, and representational considerations relating to feminist research.

630 Feminist Theories across the Disciplines (3:3:0)  
Multidisciplinary course examines the central issues of feminist theory and explores the various strategies of feminist theorists. Analyzes the ways in which feminist theories have challenged established disciplinary boundaries and contested the traditional assumptions of the humanities, the social sciences, and the sciences.

640 Women and Global Issues (3:3:0) Prerequisites: graduate standing. Multidisciplinary course explores the complex issues women face in different regions of the world. Addresses women’s diverse and shared global concerns and provides students with the tools to analyze and understand women in a global context.

690 Directed Readings and Research in Women’s Studies (3:3:3–6) Prerequisite: graduate standing and permission of instructor. Advanced individualized study of gender through readings, discussion, research, and/or projects under the direction and supervision of a member of the women’s studies faculty. May be repeated for total 9 credits.

699 Capstone Portfolio (0:0:0) Prerequisites: students must have completed their course work for women’s studies certificate, or be in the last semester of their course work. Prior to graduation and in consultation with their advisor, students will reflect on and synthesize their work in the Women’s Studies certificate program by selecting three items taken from their work in the program and discussing these items in a 7–10 page essay. Work selected may include course papers, videos of their performances, exhibit photos, music recordings, and other items as agreed upon by student and advisor.
Administration and Faculty

Board of Visitors
Membership as of December 2007

Ernst Volgenau, Rector, PhD, University of California at Los Angeles; Fairfax, Va.
J. Knox Singleton, Vice Rector, BS, University of North Carolina; MHA, Duke University; Oakton, Va.
Carol Merchant Kirby, Secretary, BA, University of West Florida; Washington, D.C.
Anne K. Altmann, BS, George Mason University; Oakton, Va.
Terri Cofer Beirne, BA, JD, George Mason University; Richmond, Va.
Kathleen de Laski, BA, Duke University; MA, Harvard University; Reston, Va.
C. Gibson Dunn, BA, University of Virginia; MD Harvard Medical School; Great Falls, Va.
Dennis Garcia, BA, George Washington University; MA, George Washington University; Alexandria, Va.
Harry F. Hopper III, BA, University of California at Berkeley; JD, Berkeley’s Boalt Hall School of Law; Alexandria, Va.
Glenn C. Lewis, BA, University of Miami; JD, George Mason University; Vienna, Va.
Byron F. Marchant, BS, U.S. Naval Academy; JD, University of Virginia; Arlington, Va.
Charlie H. Mills, BS, U.S. Naval Academy; Sterling, Va.
Long Nguyen, BS, North Carolina State University; MS, University of Virginia; PhD, Iowa State University; McLean, Va.
Brian S. Painter, (student representative), undergraduate student in the College of Humanities and Social Sciences; Fairfax, Va.
Kate E. Pisano, (student representative), undergraduate student in the School of Management; Fairfax, Va.
Sudhakar Shenoy, BTech, Indian Institute of Technology; MS, MBA, University of Connecticut; Great Falls, Va.
William Soza, BBA, University of Texas, Austin; Annandale, Va.
D. Jean Wu, BS, University of Virginia; MA, George Mason University; Arlington, Va.

Administration
University President: Alan G. Merten, PhD
Chief of Staff: J. Thomas Hennessey Jr., PhD
Provost and Executive Vice President for Academic Affairs: Peter N. Stearns, PhD

Vice Presidents
Senior Vice President: Maurice W. Scherrens, JD, EdD
Vice President for Facilities: Thomas G. Calhoun, BE, MS
Vice President for Information Technology: Joy R. Hughes, PhD
Vice President for Metropolitan Relations: Stanley E. Taylor, MArch
Vice President for Ras Al Khaimah: Sharon Siverts, PhD
Vice President for Regional Campuses: Lawrence D. Czarda, PhD
Vice President for Research: Matthew J. Kluger, PhD, MBA
Vice President for University Development and Alumni Affairs: Marc Broderick, BA
President, GMU Foundation Inc.: David Roe, MBA
Vice President for University Life: Sandra Hubler, EdD
Vice President for University Relations: Christine M. LaPaille, MA

Deans and Directors
Director, Institute for Conflict Analysis and Resolution: Sara Cobb, PhD
Dean, College of Education and Human Development: Jeffrey Gorrell, PhD
Dean, College of Health and Human Services: Shirley Travis, PhD
Dean, College of Humanities and Social Sciences: Jack Censer, PhD
Dean, The Volgenau School of Information Technology and Engineering: Lloyd J. Griffiths, PhD
Director, Krasnow Institute for Advanced Study: James Olds, PhD
Dean, School of Law: Daniel Polsby, JD
Dean, School of Management: Richard I. Klimoski, PhD
Dean, School of Public Policy: Kingsley Haynes, PhD
Dean, College of Science: Vikas Chandhoke, PhD
Dean, College of Visual and Performing Arts: William F. Reeder, MM
Assistant to the President and Director of Office of Equity and Diversity Services: Camille Hazer, MA

Academic Affairs
Vice Provost for Academic Affairs: Linda A. Schwartzstein, JD, PhD
Associate Provost for Education Improvement and Innovation: Kimberly Eby, PhD
Associate Provost for Global Education: Yehuda Lukacs, PhD

**Mary Catherine Bateson**, BA, PhD, Professor Emerita of Anthropology and English  
**Richard Baum**, PhD, Associate Professor Emeritus of Computer Science  
**Guy O. Beale**, BS, MS, PhD, Associate Professor Emeritus of Electrical and Computer Engineering  
**Barry K. Beyer**, BA, MA, PhD, Professor Emeritus of Education  
**Peter Black**, BA, MS, PhD, Professor Emeritus of Anthropology  
**W. Murray Black**, BEE, MSEE, PhD, Professor Emeritus of Electrical and Computer Engineering  
**John Blaha**, BS, MA, PhD, Associate Professor Emeritus of Psychology  
**A. Richard Bolstein**, BA, MS, PhD, Associate Professor Emeritus of Statistics  
**C. Alan Boneau**, BA, MA, PhD, Professor Emeritus of Psychology  
**John Bonfadini**, BS, MEd, EdD, Associate Professor Emeritus of Education  
**Thomasina Borkman**, BA, MA, PhD, Professor Emerita of Sociology  
**Ted Bradley**, BS, MA, PhD, Professor Emeritus of Environmental Science and Policy  
**Brack Brown**, AB, MA, PhD, Professor Emeritus of Public and International Affairs  
**Stephen J. Brown**, BA, MA, PhD, Professor Emeritus of English  
**James Buchanan**, BS, MA, PhD, Distinguished Professor Emeritus of Economics  
**Mary Kay Cabell**, BA, MA, PhD, Associate Professor Emerita of Mathematical Sciences  
**Le Cao**, BS, MBA, DBA, Associate Professor Emerita of Accounting  
**Rita Carty**, BSN, MSN, DNSc, Dean Emerita, College of Nursing and Health Science
Ernest Cassara, AB, BD, PhD, Professor Emeritus of History
Peter Ceperly, BA, MS, PhD, Professor Emeritus of Physics
Arthur H. Chickering, AB, AMT, PhD, Professor Emeritus of Education
Jae W. Chung, BC, MC, MA, PhD, Professor Emeritus of Economics
Martin B., Cohen, BA, MA, PhD, Assistant Professor Emeritus of History
Virginia Collier, BA, MA, PhD, Professor Emeritus of Education
John Henry Cooper, BA, MA, DPE, Chair Emeritus of Health, Sport, and Leisure Studies
Anne Cordero, MA, PhD, Associate Professor Emerita of French
Edward Clark Dobson, BME, MS, PhD, Associate Professor Emeritus of the Graduate School of Education
Stephen Early, BA, MA, PhD, Professor Emeritus of Government and Politics
Albert W. Edgemon, BAE, MA, EdD, Professor Emeritus of Education
Esther Elstun, BA, MA, PhD, Professor Emerita of German
Michael G. Emsley, BS, ARCS, PhD, Professor Emeritus of Biology
Carl Ernst, BS, MEd, PhD, Professor Emeritus of Environmental Science and Policy
John Evans, BS, MS, PhD, Professor Emeritus of Astronomy
Edwin A. Fleishman, BS, MA, PhD, DSc (Honorary), Professor Emeritus of Psychology
James Fletcher, BA, MA, PhD, Professor Emeritus of Philosophy
Martha P. Francescato, Martha P., BA, AM, PhD, Professor Emerita of Spanish
Arnold D. Gabriel, BS, MS, DMus (Honorary), Professor Emeritus of Music
Helen S. Garson, BA, MA, PhD, Professor Emerita of English
Martha M. Giles, BMEd, MMed, DMEd, Associate Professor Emeritus of Music
Robert L. Gilstrap, BS, MEd, EdD, Professor Emeritus of Education
Barbara Knight Given, BS, MEd, PhD, Associate Professor Emerita of Education
James Godfrey, PhD, Professor Emeritus of Accounting
Louis Golomb, BS, MA, PhD, Associate Professor Emeritus of Anthropology
Thomas Goodale, AAS, BS, MS, PhD, Professor Emeritus of Health, Fitness, and Recreation Resources
Harold Gortner, AB, MPA, MA, PhD, Professor Emeritus of Public and International Affairs
Vernon Gras, PhD, Professor Emeritus of English
Henry Hamburger, PhD, Professor Emeritus of Computer Science
Joseph Harsh, BA, MA, PhD, Associate Professor Emeritus of History
Jayne Hart, BA, MS, PhD, Professor Emerita of Biology
Nand Hart-Nibbrig, AB, MA, PhD, Associate Professor Emeritus of Government and Politics
Peter Henriques, BA, BD, PhD, Associate Professor Emeritus of History
Thomas H. Hill, BM, MM, DMA, Professor Emeritus of Music
Robert Holt, BA, MA, PhD, Associate Professor Emeritus of Psychology
Lorna Irvine, BA, MA, PhD, Professor Emerita of English
Evelyn Jacob, BA, PhD, Professor Emerita of Education
Helen Jenkins, MSN, PhD, Professor Emerita of Nursing
Ronald Jensen, BA, MA, PhD, Associate Professor Emeritus of History
George W. Johnson, BA, MA, PhD, President Emeritus, Professor Emeritus of English
Hazel W. Johnson-Brown, BS, MS, PhD, Professor Emerita of Nursing
Joseph Kanyan, BS, MM, DMA, Associate Professor Emeritus of Music
Don E. Kash, BA, MA, PhD, Emeritus Professor of Public Policy
Irving Kayton, BA, JD, LLM, JSD, Professor Emeritus of Law
Donald Preston Kelso, BS, MS, PhD, Professor Emeritus of Environmental Science and Policy
Emelia-Louise Kelby, BA, BS, MA, PhD, Professor Emerita of Health and Physical Education
Barbara Knight, BA, MA, PhD, Associate Professor Emerita of Public and International Affairs
Thelma Z. Lavine, AB, AM, PhD, Professor Emerita of Philosophy and American Culture
Raymond G. LePage, BA, MA, PhD, Associate Professor Emeritus of French
Jack Levy, BA, MA, PhD, Professor Emeritus of Education
Seymour M. Lipset, BA, PhD, Eminent Scholar and Virginia E. Hazel and John T. Hazel Jr. Professor Emeritus
Sara Looney, BA, MA, PhD, Associate Professor Emerita of Communication
Catherine Malloy, BSN, MPH, DrPH, Professor Emerita of Health, Fitness, and Recreation Resources
Bruce Manchester, BS, MA, PhD, Professor Emeritus of Communication
Henry G. Manne, BA, JD, JSP, LLB, LLD, Dean Emeritus of the School of Law
William R. Martin, BA, MA, PhD, Professor Emeritus of Education
Michael J. McDermott, AB, PhL, Associate Professor Emeritus of Philosophy and Religious Studies and Registrar Emeritus
Gustavo Melander, AB, MA, PhD, DHL, Dean Emeritus of the Graduate School of Education
Barbara Melosh, BA, MA, PhD, Professor Emerita of English
Henry P. Meyer, BA, MA, PhD, Associate Professor Emeritus of French
Eugenie V. Mielezarek, BS, MS, PhD, Professor Emerita of Physics
Christopher Mitchell, BSc, PhD, Professor Emeritus of Conflict Analysis and Resolution
Mary S. Montebello, BSc, BA, MS, PhD, Professor Emeritus of Conflict Analysis and Resolution
Winston Moore, JD, Associate Dean Emeritus of the School of Law
Walter Moretz, AB, BD, PhD, Associate Professor Emeritus of Psychology
Collin Owens, BA, MA, PhD, Professor Emeritus of English
Josephine F. Pacheco, BA, MA, PhD, Professor Emerita of History
James D. Palmer, BS, MSEE, PhD, Professor Emeritus of Information Technology and Engineering
Anthony F. Palmieri, BA, MA, PhD, Associate Professor Emeritus of English
Samuel H. Phillips Jr., BA, MA, PhD, Professor Emeritus of Economics
Conrad Philos, Professor Emeritus of Law
John Barnet Radner, AB, BA, PhD, Associate Professor Emeritus of English
Coleman Raphael, BCE, MCE, PhD, Dean Emeritus of Business Administration
Georgine Redmond, BSN, MN, EdD, Associate Professor Emeritus of Nursing
David Rine, BS, MS, PhD, Professor Emeritus of Computer Science
Robert O. Ruhling, BS, MA, PhD, FACS, Professor Emeritus of Physical Education
Robert Rugel, BA, PhD, Associate Professor Emeritus of Psychology
Mian M. Saeed, BS, MA, PhD, Professor Emeritus of History
Andrew P. Sage, BSEE, SSEE, PhD, DENG, Founding Dean Emeritus, The Volgenau School of Information Technology and Engineering
Ben F. Sands Jr., MBA, DBA, Associate Professor Emeritus of Management
David H. Schaefer, BS, Associate Professor Emeritus of Electrical and Computer Engineering
Betty J. Schuchman, BS, MS, EdD, Associate Professor Emeritus of Education
Carol J. Sears, BS, MS, PhD, Associate Professor Emeritus of Education
Linda Seligman, AB, MA, PhD, Professor Emerita of Education
Jay Shaffer, BS, PhD, Professor Emeritus of Biology
Mary Silva, BS, MS, PhD, Professor Emeritus of Nursing
Judith Skog, BS, MS, PhD, Professor Emerita of Environmental Science and Policy
James G. Smith, BM, MM, DMA, Professor Emeritus of Music
Kitty Parker Smith, BSN, MSN, Associate Professor Emeritus of Nursing and Health Services
Vernon L. Smith, BSEE, MA, PhD, University Professor Emeritus
William P. Snavely, BA, MA, PhD, Professor Emeritus of Economics
John P. Soder, BA, MA, PhD, Associate Professor Emeritus of History
Mark Spikell, BA, MEd, EdD, Professor Emeritus of Education
Frank Spindler, Professor Emeritus of History
Melissa Stanley, BS, MA, PhD, Professor Emerita of Biology
Eileen Sypher, AB, PhD, Professor Emeritus of English
Daniel Tabak, BSEE, MS, PhD, Professor Emeritus of Electrical and Computer Engineering
Stephen R. Taub, AB, PhD, Professor Emeritus of Biology
Anita Taylor, BS, MS, PhD, Professor Emerita of Communication
Wayne Thomas, BA, MEd, PhD, Professor Emeritus of Education
Hale Tongren, MBA, DBA, Professor Emeritus of Management
Zita Tyer, PhD, Professor Emerita of Psychology

Harry Van Trees, BSc, MS, ScD, University Professor Emeritus of Electrical Engineering
Karen Vaughn, BA, MA, PhD, Professor Emerita of Economics
Irmgard Wagner, MA, PhD, Professor Emerita of German
Dorothy J. Walker, BSNE, MSNE, PhD, JD, Professor Emerita of Nursing
Gerald Wallace, BS, MEd, EdD, Professor Emeritus of Education
C. Robert Walter Jr., BA, PhD, Professor Emeritus of Chemistry
John Warfield, AB, BSEE, MSEE, PhD, Professor Emeritus of Public Policy and Integrative Studies
Keith Q. Warner, Professor Emeritus of French
Inge Wekerle, BA, AM, PhD, Assistant Professor Emerita of German
Louise White, PhD, Professor Emerita of Public and International Affairs
William Scott Willis, BA, MA, PhD, Professor Emeritus of French
Norman A. Yance, BS, BD, ThM, MPA, PhD, Associate Professor Emeritus of Religious Studies
George A. Zaphiriou, Professor Emeritus of Law

**Instructional and Administrative Faculty 2008–09**

The faculty list reflects appointments as of the end of the fall 2007 semester.

Abdalla, Wagida, Physician and Executive Director, Student Health Services. MD 1972, Alexandria University, Egypt; Diplomate of the American Board of Pediatrics, 1982.

Abramson, Alan J., Professor, Department of Public and International Affairs. BA 1977, Wesleyan University; MA 1977, M.Phil 1979, Ph.D. 1990, Yale University.

Acs, Zoltan J., University Professor of Public Policy. BA 1972, Cleveland State University; MA 1974, PhD 1980, The New School.

Addleson, Mark S., Associate Professor, School of Public Policy. BA 1972, 1973, Rhodes University; MA 1980, University of Natal, Pietermaritzburg; PhD 1992, University of Witwatersrand.

Agnarsson, Geir, Assistant Professor of Mathematical Sciences. BS 1990, University of Iceland; PhD 1996, University of California, Berkeley.

Agouris, Peggy, Professor, Earth Systems and Geoinformation Sciences. Dipl Eng 1986, National Technical University of Athens, Greece; MS 1987, PhD 1992, Ohio State University.

Aharonov, Yakir, Distinguished Professor of Theoretical Physics. BS 1956, Technion University, Haifa, Israel; PhD 1966, Bristol University.

Ahmad, Firzana J., Associate Director of Operations, Undergraduate Admissions. BA 1998, George Mason University.
Ahn, Changwoo, Assistant Professor, Environmental Science and Policy. BS 1992, MS 1996, Seoul National University; PhD 2001, Ohio State University.

Aksob, Pelin A., Assistant Professor of Applied Information Technology. BS 1994, MS 1997, Ankara University, Turkey; PhD 2005, George Mason University.

Albanese, Denise, Associate Professor of English. BA 1978, New York University; PhD 1987, Stanford University.

Albright, Daniel M., Associate Professor, Economics. MA 1988, Hunter College, City University of New York; MS 1966, PhD 1969, University of Pennsylvania.

Aldrich, Margaret, Associate Registrar for Distributed Campuses. BS 1970, University of Vermont; MEd 1996, George Mason University.

Aleem, Farrokh, Professor of Health Administration and Policy. BS 1976, MS 1978, PhD 1983, University of Wisconsin.

Allen, A. Scott, Instructor of Geography. BA 1995, Mary Washington College; MA 1996, SUNY at Stony Brook; MS 2001, George Mason University.

Allen, Melissa, Core Faculty Member, English Language Institute. BA 1975, MA 1979, San Francisco State University.

Allen, Pamela A., Assistant Dean of Academic and Career Services, School of Management. BS 1972, University of Illinois; MA 1988, Hunter College, City University of New York.

Alligood, Kathleen T., Professor of Mathematical Sciences. BA 1970, George Washington University; MS 1974, PhD 1979, University of Maryland.

Allnutt, Jeremy E., Professor, Electrical and Computer Engineering. BSc 1966, PhD 1970, Salford University.

Almond, Sonya, Term Instructor of Nursing. BSN 2001, Norfolk State University; MSN 2006, George Mason University.

Al-Ubaydli, Omar, Assistant Professor of Economics. BA 2001, MA 2003, PhD 2007, University of Chicago.

Ambeaugnkar, Jatin, Assistant Professor of Athletic Training. BS 1998, T. N. Medical College, India; MS 2003, Springfield College; PhD 2006, University of North Carolina, Greensboro.

Amireh, Amal, Associate Professor, English. BA 1983, Birzeit University, Palestine; MA 1987, PhD 1997, Boston University.

Ammann, Paul E., Associate Professor, Computer Science. AB 1983, Dartmouth College; MS 1985, PhD 1988, University of Virginia.

Anderson, Daniel M., Associate Professor of Mathematical Sciences. BA 1989, St. Olaf College; PhD 1993, Northwestern University.

Anderson, David S., Professor of Education. BS 1971, Duke University; MA 1973, Ohio State University; Virginia Polytechnic Institute and State University.

Anderson, Dawn, Associate Registrar for Operations. BBA 1994, Marymount University.

Anderson, LeKesha N., Advising Coordinator, Department of Communication. BS, University of Virginia’s College at Wise; MA, East Tennessee State University.

Anderson, Nancy M., Special Education Policies and Procedures Coordinator. BA 1982, Gallaudet University; MEd 1985, Western Maryland College/McDaniel University.

Andronikov, Sergei, Associate Professor, Information Systems and Operations Management. MSc, Moscow State University; PhD, Russian Academy of Sciences.

Apostolos, Robert J., Police Technical Advisor, Administration of Justice. BA 1974, California State University; MS 1977, San Diego State University.

Arabandi, Bhavani, Instructor, Sociology. MSW 1995, Tata Institute of Social Sciences; MA 2000, George Mason University; ABD University of Virginia.

Araujo, Robyn P., Research Associate, Center for Applied Proteomics, Molecular Medicine. BEng 1997, University of Southern Queensland; PhD 2003, Queensland University of Technology, Australia.

Arciszewski, Tomasz, Professor, Civil, Environmental, and Infrastructure Engineering. BSc 1970, MSc 1970, PhD 1975, Warsaw University of Technology.

Armor, David J., Professor, School of Public Policy. BA 1961, University of California, Berkeley; PhD 1966, Harvard University.

Arthurs, Joshua W., Postdoctoral Teaching Fellow, History and Art History. BA 1997, Wesleyan University; MA 1999, PhD 2007 University of Chicago.

Ascencio, Mario A., Reference and Liaison Librarian, University Libraries. BA 1966, CSU Northridge; MLIS 1999, UCLA.

Ascoli, Giorgio A., Professor, Department of Molecular Neuroscience. BS 1991, Scuola Normale Superiore, Italy; MS 1993, Pisa University, Italy; PhD 1996, Scuola Normale Superiore.

Ashcraft, Thomas D., Associate Chair and Associate Professor, Art and Visual Technology. BA 1978, University of South Florida; MFA 1982, Indiana University.

Atkins, David C., Director, Johnson Center and Student Union Operations. MA 1998, George Mason University.

Atkinson, Jennifer H., Associate Professor, English. BA 1978, Wesleyan University; MA 1985, MFA 1984, University of Iowa.
Auerswald, Philip E., Assistant Professor and Director, Center for Science and Technology Policy, School of Public Policy. BA 1988, Yale University; MA 1995, PhD 1999, University of Washington.

Auffret, Jean-Pierre, Assistant Professor of Information Systems and Operations Management. BS 1979, Duke University; MBA 1982, Colgate Darden School of Business University of Virginia; PhD 1999, American University.

Austin, Clayton, Chair, Department of Theater; Associate Professor of Theater. BA 1973, Brandeis University; MFA 1986, Yale School of Drama.

Avrukh, Kevin Andrew, Professor of Conflict Resolution and Anthropology. BA 1972, University of Chicago; MA 1973, PhD 1978, University of California, San Diego.

Axtell, Robert, Associate Professor, Department of Computational Social Science, Krasnow Institute for Advanced Study. BS 1983, University of Detroit; PhD 1992, Carnegie Mellon University.

Aydin, Hakan, Associate Professor, Computer Science. BSc 1991, MSc 1994, Istanbul Technical University; PhD 2001, University of Pittsburgh.

Baghi, Heibatollah, Associate Professor of Global and Community Health. BA 1974, University of Isfahan; MS 1976, PhD 1980, Iowa State University; PhD 1988, Florida State University.

Bai, Chunhong, Assistant Research Associate, Life Science. BS 1987, Peking University; MS 2004, State University of New York at Albany.

Bailey, Charles, Distinguished Professor of Biology. BS, MS, PhD, Oklahoma State University.

Bailey-Page, Jo Lynn, Public Relations and Outreach Coordinator, Music. BM 2001, George Mason University.

Baker, Ann C., Associate Professor and Director, Organizational Development and Knowledge Management. BS 1966, College of Charleston; MPA 1975, University of Tennessee; PhD 1995, Case Western Reserve University.

Baker, Max A., Executive Director of the Patriot Club. BS 1995, Virginia Polytechnic Institute and State University.

Baker, Pamela H., Assistant Professor of Special Education. BS 1984, MEd 1987, College of William and Mary; EdD 2002, Bowling Green State University.

Baker, Robert E., Associate Professor of Education. BS 1979, MS 1985, Pennsylvania State University; EdS 1986, EdD 1995, College of William and Mary.

Bakhash, Shaul, Robinson Professor of History; BA 1959, MA 1968, Harvard University; PhD 1972, Oxford University.

Balakerskaia, Anna, Term Professor of Music. MM 1969, DMA 1974, St. Petersburgh State Conservatory, Russia.

Baldwin, Carry L., Assistant Professor of Psychology. BA 1987, University of Nebraska-Lincoln; MA 1994, PhD 1997 University of South Dakota.

Balint, Peter John, Assistant Professor of Environmental Policy and Government and Politics. BA 1971, Haverford College; MA 1972, University at Albany, SUNY; MS 1998, PhD 2000, University of Maryland.

Bannan-Ritland, Brenda, Associate Professor of Education. BS 1986, Millersville University; MS 1991, Bloomsburg University; PhD 1996, Pennsylvania State University.

Banville, Dominique, Associate Professor of Physical Education. BPE 1990, MSc 1994, PhD 1998, Laval University, Canada.

Baranova, Anna, Associate Professor of Biology. MS 1995, PhD 1998, Moscow State University; DSci 2004, Vavilov Institute of General Genetics, Russian Academy of Sciences.

Barbara, Daniel, Professor, Computer Science. BS 1975, Universidad Metropolitana, Caracas, Venezuela; MSc 1981, PhD 1985, Princeton University.

Barcher, Peter, Associate Dean. BA 1968, MA 1972, PhD 1973, Syracuse University.

Barna, Adrienne M., Associate Director, Counseling and Psychological Services. AB 1970, Drew University; MEd 1972, Rutgers University; MA 1976, PhD 1980, University of Maryland.

Barnes, Steven, Assistant Professor, History and Art History. BA 1993, Harvard University; MA 1997, PhD 2003, Stanford University.

Barnhart, Melinda N., Executive Director, Finance and Administration, The Volgenau School of Information Technology and Engineering. BA 1973, Miami University; MEd 1992, George Mason University.

Barreto, Ernest, Associate Professor, Physics and Astronomy. BS 1990, University of Chicago; MS 1995, PhD 1996, University of Maryland.

Bartoldus, Mary, Research Assistant Professor, Environmental Science and Policy. BA 1978, MS 1985, City University of New York; PhD 1990, George Mason University.

Bartoli, Andrea, Drucie French Cumbie Professor of Conflict Analysis and Resolution. Laurea 1980, University of Rome; Dottorato di Ricerca 1994, University of Milan.

Bauer, Colleen, Associate Registrar. BS 1982, Indiana State University.

Bauer, Scott, Associate Professor, Education Leadership. BS 1981, MS 1983, PhD 1996, Cornell University.

Baum, Evan S., Director of Undergraduate Academic Programs, College of Humanities and Social Sciences. BA 2003, University of Richmond; MA 2005, University of Maryland, College Park.

Baylor, David M., Audience Services Manager, College of Visual and Performing Arts. BA 1989, George Mason University.

Beach, David R., Term Instructor, English. BA 1993, Marymount University; MA 1995, George Mason University.

Beach, Sheryl L., Associate Professor, Earth Systems and Geoinformation Sciences. BA 1982, California State University; MA 1984, PhD 1990, University of Minnesota.

Beck, Cynthia L., Term Assistant Professor of Biology. BS 1980, Michigan State University; MS 1992, PhD 2000, George Mason University.

Becker, Peter A., Professor of Astrophysical, Planetary, and Space Sciences; Associate Dean for Graduate Programs, College of Science. BA 1982, Rutgers University; MS 1985, PhD 1987, University of Colorado at Boulder.

Bedore, Joani, Term Assistant Professor, Communication. BA 1979, St. Leo College; MA 1984, University of Baltimore; PhD 1994, University of Oklahoma.

Behrmann, Michael Mits, Helen A. Kellar Professor of Special Education. BS 1971, MEd 1972, University of Cincinnati; EdD 1978, Teachers College, Columbia University.

Bell, Kristine L., Associate Professor, Statistics. BSEE 1985, Rice University; MSEE 1990, PhD 1995, George Mason University.

Bemak, Frederick P., Professor of Education. BA 1970, Boston University; MED 1971, EdD 1975, University of Massachusetts.

Benitez, Alexander V., Assistant Professor, Sociology and Anthropology. BA 1992, University of Arizona, Tucson; MA 1999, PhD 2006, University of Texas at Austin.

Benjamin, Lehn, Assistant Professor, Public and International Affairs. BA 1990, University of Minnesota; MRP 1998, PhD 2004, Cornell University.

Bennett, James T., William P. Snavely Professor of Economics. BS 1964, MS 1966, PhD 1970, Case Western Reserve University.

Bennington, Tammy L., Assistant Professor of Economics, and Program on Social and Organizational Learning. BA, MA 1984, Washington University; PhD 1995, SUNY at Binghamton.

Benson, Brien, Research Associate Professor of Public Policy. BA Harvard University; MBA Stanford University; PhD 1998, George Mason University.

Bentley, Callan, Instructor, Environmental Science and Policy. MS 2004, University of Maryland-College Park.

Berg, Scott, Term Assistant Professor, English. BA 1992, University of Minnesota; MA 1995, Miami University; MFA 1997, George Mason University.

Berger, Jennifer Garvey, Associate Professor of Education. BA 1991, St. Mary’s College of Maryland; MEd 1992, EdD 2002, Harvard University.

Bergman, Rachel, Assistant Professor of Music. BA 1992, Skidmore College; PhD 2001, Yale University.

Bergoffen, Debra Beth, Professor, Philosophy. AB 1962, Syracuse University; MA 1966, PhD 1974, Georgetown University.

Bernard, Elizabeth R., Director, Freshman Center. MA 1991, Ohio State University.

Bernard, Robert, Term Assistant Professor of New Century College. BA 1989, George Washington University; MA 1997, George Mason University.

Berroa, Rei, Associate Professor of Spanish. BA 1970, Catholic University of Puerto Rico; MA 1977, Middlebury College; MA 1980, PhD 1983, University of Pittsburgh.

Berry, Alok K., Associate Professor, Electrical and Computer Engineering. BS 1967, MS 1969, University of Delhi; MS 1981, PhD 1985, University of Missouri.

Best, Amy L., Associate Professor, Sociology. BA 1992, Ithaca College; MA 1995, PhD 1998, Syracuse University.

Bethea, Robert Harrison, Assistant Professor of Communication. BA 1988, JD 1991, University of Oklahoma; LLM 1999, Georgetown University.

Bever, David L., Associate Professor of Health Education. BS 1970, University of Dayton; MA 1973, Ball State University; PhD 1978, Purdue University.

Bickford, Andrew, Assistant Professor, Sociology and Anthropology. BA 1993, George Mason University; MA 1995, Columbia University; PhD 2002, Rutgers University.

Billingham, Lisa A., Associate Professor of Music. BM 1986, Indiana University; MM 1994, University of Missouri-Kansas City Conservatory; DMA 2001, University of Arizona.

Binninger, Pamela, Career Consultant, Career Services. BA 1970, Georgia State University; MED 1979, George Mason University.

Birchard, Geoffrey French, Associate Professor of Biology. BA 1975, Colorado College; MA 1979, University of Montana; PhD 1985, Dartmouth Medical School.

Bishop, Barney, Assistant Professor of Biochemistry. BS 1991, College of William and Mary; Ph.D 1997, University of North Carolina, Chapel Hill.

Bittler, Doris, Associate Professor, Psychology; Associate Dean for Student Academic Affairs, College of Humanities and Social Sciences and College of Science. BA 1982, Dickinson College; MA 1984, Hollins College; PhD 1991, American University.

Blackwell, Kim Avrama, Professor, Department of Molecular Neuroscience, Krasnow Institute for Advanced Study. BS 1981, Boston University; VMD 1986, MRE 1987, PhD 1988, University of Pennsylvania.

Blaisten-Barajas, Estela, Professor of Computational Sciences and Informatics, Physics and Chemistry. BS 1964, Universidad Tecnologica de Tucuman; MS 1970, PhD 1974, Universite de Paris VI.

Blasser, Christine, Term Instructor of Nursing. BSN 1993, MSN 1997, George Mason University.

Bockman, Johanna K., Assistant Professor of Global Affairs and Sociology. BA 1991, University of California, Los Angeles; MA 1995, PhD 2000, University of California, San Diego.

Boehm-Davis, Deborah A., Chair, Department of Psychology, and Professor of Psychology. AB 1975, Rutgers University; MA 1977, PhD 1980, University of California, Berkeley.

Boettke, Peter J., University Professor of Economics. BA 1983, Grove City College; PhD 1989, George Mason University.

Bohn, Debbie, Academic Advisor. BA 1998, University of Utah; MED 2002, George Mason University.

Boicu, Mihaia, Assistant Professor of Applied Information Technology. PhD 2002, George Mason University.
Boileau, Don Michael, Professor of Communication. AB 1964, Stanford University; MA 1965, PhD 1972, University of Oregon.

Boland, M. Lucille, Assistant Professor of Nursing. BSN 1968, University of Maryland; MSN 1977, Catholic University of America.

Bon, Susan C., Associate Professor. BA 1989, Toleda University; JD 1992, PhD 1996, Ohio State University.

Born, Timothy Lee, Associate Professor of Chemistry. BS 1990, Calvin College; PhD 1996, Mayo Graduate School.

Borne, Carl, Professor, Communication. BA 1972, Western Michigan University; MA 1982, PhD 1985, Wayne State University.

Bott, Leslie D., Director, Financial Education Center for Women Entrepreneurs at the Community Business Partnership. BS 2004, University of Hawaii (Laie).

Bottoms, D. Michael, Assistant Professor, History and Art History. BA 1993, University of California, Berkeley; MA 1998, PhD 2005, University of California, Los Angeles.

Boudinot, Patricia, Instructor, Geography. BS 1976, MS 1978, University of Nice.

Boudreaux, Donald J., Professor and Chair, Economics. BA 1980, Nicholls State University; MA 1982, New York University; PhD 1986, Auburn University; JD 1992, University of Virginia.

Bousel, Paul, Assistant Director, Academic Advising Center. BA 1975, Hofstra University; MA 1977, George Washington University.

Bowden, Paul C., Director of Compliance, Intercollegiate Athletics. BA 1991, Hampton University.

Boybayi, Zafer, Associate Professor, Earth Systems and Geoinformation Sciences. BS 1984, Istanbul Technical University; MS 1990, San Jose State University; PhD 1993, North Carolina State University.

Boyd, Beverly Taylor, Assistant Professor of Nursing. BSN 1966, MNEd 1969, University of Pittsburgh.

Bradshaw, Duane D., Associate Director for Career Development and Alumni Relations, School of Public Policy. BA 1996, MEd 1998, Clemson University.

Braithwaite, Michele L., Director of Student Media, University Libraries. MA 1971, University of Minnesota; MS 1975, Brooklyn College of City University of New York.

Brayley, Russell E., Professor of Tourism and Events Management. BS 1977, MA 1986, Brigham Young University; PhD 1990, Texas A&M University.

Brazier, David S., Associate Professor of Education. AB 1979, MA 1986, PhD 1988, Stanford University.

Breglia, Lisa, Assistant Director of Global Affairs Program, Assistant Professor of Global Affairs. BA 1994, MA 1996, University of Florida; PhD 2003, Rice University.

Brenkus, Rosemarie, Assistant Professor of Nursing. BSN 1964, Wilkes College; MAEd 1976, Virginia Polytechnic Institute and State University.

Brigham, Frederick J., Associate Professor of Education. BS 1978, MEd 1983, Bowling Green State University; PhD 1992, Purdue University.

Bristol, Joan C., Associate Professor, History and Art History. BA 1990, Bryn Mawr College; MA 1994, San Francisco State University; PhD 2001, University of Pennsylvania.

Britt, Thomas, Term Assistant Professor, Film and Video Studies. BA 2002, Emory & Henry College; MFA 2005, Ohio University.

Brkic, Courtney A., Assistant Professor, English. BA 1994, College of William and Mary; MFA 2001, New York University.

Brock, Elizabeth A., Associate Vice President and Controller, Fiscal Services. MA 1992, Georgetown University.

Broderick, Marc, Vice President for University Development and Alumni Affairs. BA 1993, George Washington University.

Brodsky, Alexander, Associate Professor, Computer Science. BSc 1982, MSc 1983, PhD 1991, Hebrew University.

Bronzini, Michael S., Dewberry Chair and Chair of Civil, Environmental, and Infrastructure Engineering. BS 1967, Stanford University. MS 1969, PhD 1973, Pennsylvania State University.

Brouse, Peggy S., Associate Professor, Systems Engineering and Operations Research. BS 1978, American University; MBA 1986, Marymount University; PhD 1992, George Mason University.

Brown, Lorraine Anne, Professor of English. BA 1951, MA 1961, University of Michigan; PhD 1968, University of Maryland.

Brown III, William Thomas, Instructor; Baseball Coach; and Assistant Manager, Recreation Sports Complex. BA 1980, George Mason University.

Brozo, William, Professor of Education. BA 1977, University of North Carolina; MEd 1979, PhD 1982, University of South Carolina.

Bruce, Heidi A., Director of Development, College of Humanities and Social Sciences. BA 1995, Morgan State University; CFRM 2002, Indiana University; MBA 2005, University of Phoenix.

Bruno, Irene, Assistant Professor, Applied Information Technology. BS 1994, University of Pittsburgh; MEd 1991, Pennsylvania State University; PhD 2003, Capella University.

Bryant, Rebecca, Assistant Professor, Sociology and Anthropology. BA 1988, MA 1992, PhD 1998, University of Chicago.
Buchanan, Phillip G., Associate Professor of Accounting. BS 1970, Susquehanna University; MS 1973, Pennsylvania State University; PhD 1982, Temple University; CPA, New York and Pennsylvania.

Buehl, Michelle, Assistant Professor of Education. BA 1997, Hollins University; MA 2002, PhD 2003, University of Maryland.

Buffardi, Louis C., Associate Professor of Psychology. AB 1964, University of Rochester; MA 1966, Fordham University; PhD 1970, Kansas State University.

Bullard, Beth Alice, Assistant Professor of Music. AB 1960, Oberlin College; AM 1963, Harvard University; PhD 1987, University of Pennsylvania; PhD 1998, University of Maryland, Baltimore County.

Buot, Felix, Research Professor, Computational and Data Sciences. PhD 1970, University of Oregon.

Burke, Bridget J., Head, Special Collections and Archives. BA 1984, MSL 1986, University of Wisconsin; MA 2001, Wesleyan University.

Burns, John Barclay, Associate Professor, Religious Studies. MA 1964, St. Andrew’s University, Scotland; BD 1967, Glasgow University, Scotland; PhD 1971, St. Andrew’s University, Scotland.

Burns, M. Susan, Associate Professor of Education. BS 1974, Pennsylvania State University; MA 1980, PhD 1983, Vanderbilt University.

Burr, Zofia A., Director, Honors Program in General Education; Associate Professor, English. BA 1982, Sonoma State University; MFA 1987, MA 1990, PhD 1992, Cornell University.

Burroughs, James N., Term Assistant Professor, Department of Public and International Affairs. BS 1977, James Madison University; JD 1981, College of William and Mary; MPA 1994, George Mason University.

Bursten, Andrew, Director of Finance and Administration and Chief Financial Officer, College of Visual and Performing Arts. BA 1979, Grinnell College; MBA 1981, American University.

Busheé, Gerald R., Term Assistant Professor of Government and Politics. BA 1969, University of Maryland at College Park; MA 1979, American University; PhD 1987, University of Rochester.

Bushey, Keith R., Assistant Vice President for Special Projects, University Operations. MA 1995, Marymount University.

Butler, Ann B., Professor of Molecular Neuroscience, Krasnow Institute for Advanced Study. BA 1967, Oberlin College; PhD 1971, Case Western Reserve University.

Butler, Douthard R., Associate Athletic Director for Academics, Intercollegiate Athletics. PhD 1992, George Mason University.

Butler, Frieda R., Professor of Nursing and Global and Community Health. BSN 1956, Catholic University of America; MPH 1973, Johns Hopkins University; PhD 1980, University of Maryland, College Park.

Butler, Lawrence E., Associate Professor of Art History. BA 1978, MA 1980, Oberlin College; PhD 1989, University of Pennsylvania.

Cadenas, Hortensia B., Executive Director Early Identification Program, University Life BA 1980, MA 1993, George Mason University.

Cai, Xiaomei, Assistant Professor, Communication. BA 1993, Jilin University; MA, Peking University; MA 1998, PhD 2001, Indiana University.

Calhoun, Thomas G., Vice President, Facilities. BE 1978, Vanderbilt University; MS 1987, Stanford University.

Cambridge, Darren, Assistant Professor, New Century College. BA 1996, Wabash College; MA 1998, PhD 2003, University of Texas-Austin.

Camelli, Fernando, Assistant Professor of Computational and Data Sciences. PhD 2002, George Mason University.

Campbell, Charvis V., Assistant Dean, University Life, Prince William Campus. BA 1993, Howard University; MA 2003, New York University.

Camphouse, Mark D., Professor of Music. BM 1975, MM 1976 Northwestern University.

Campo, Lisa, Term Instructor of Nursing. BSN 1985, Lynchburg College; MSN 1994, Seton Hall University.

Camus, Adele C., Instructor of English as a Second Language. BA 1969, University of South Wales, Cardiff, U.K.; MA 1982, University of Texas, Austin.

Cangelosi, Pamela R., Assistant Professor, College of Health and Human Services. BSN 1989, Shenandoah University; MSN 1994, Marymount University; PhD 2002, George Mason University.

Canterbury, Shelly L., Instructor of Finance. BA 1985, George Mason University; MBA 1995, Virginia Polytechnic Institute and State University.

Cantor, Joshua, Director of Parking and Transportation. BA 1994, Cornell University; MA 1997, University of Kentucky.

Caplan, Bryan, Assistant Professor of Economics. BA 1993, University of California, Berkeley; MA 1995, PhD 1997, Princeton University.
Caraballo, Sharon, Assistant Dean for Academic Affairs, The Volgenau School of Information Technology and Engineering, Associate Professor, Applied Information Technology. BA 1994, Rutgers University; ScM 1996, PhD 2001, Brown University.

Carbonneau, Suzanne, Professor of Performance Studies. BA 1976, Bates College; MA 1978, American University; CMA 1979, Laban Institute of Movement Studies; PhD 1990, New York University.

Carle, Andrew J., Assistant Professor of Health Administration and Policy. BS 1981, SUNY at Buffalo; MHSA 1985, George Washington University.

Carr, Daniel B., Professor, Statistics. BA 1968, Whitman College; MEd 1972, Idaho State University; MS 1972, Oregon State University; PhD 1976, University of Wisconsin.

Carreño-Rodríguez, Antonio, Assistant Professor, Modern and Classical Languages. BA 1997, Trinity College; MA 1998, Middlebury College; MPhil, MA 2001, PhD 2005, Yale University.

Carretta, Patricia J., Assistant Vice President, University Life. BA 1968, MA 1974, Binghamton University; MA 1977, University of Iowa.

Carroll, James Robert, Associate Professor of Music. BM 1977, MM 1980, Indiana University.

Carton, Benedict, Associate Professor, History and Art History. BA 1987, Wesleyan University; MA 1994, PhD 1996, Yale University.

Cartwright, William, Assistant Professor of Health Administration and Policy. BA 1967, Rutgers University; MA 1972, Indiana University; PhD 1980, Indiana University.

Carver, Richard H., Associate Professor, Computer Science. BS 1982, Ohio State University; MS 1985, PhD 1989, North Carolina State University.

Casagrande, John, Visiting Associate Professor of Music. BS 1963, MS 1967, Ithaca College.

Casalini, Riccardo, Term Research Associate in Chemistry. BS 1994, Universita di Pisa, Italy; PhD 1998, University of Durham, UK.

Casey, John, Director, Fairfax Small Business Development Center, Mason Enterprise Center. BA 1979, Colgate University; MS 1985, George Washington University.

Casey, Michael J., Assistant Professor, Civil, Environmental, and Infrastructure Engineering. BS 1997, Rutgers University; MS 1999, PhD 2005, University of Maryland.

Castle, Sharon D., Associate Professor of Education. BA 1975, William Penn College; MS 1978, Iowa State University; PhD 1989, University of Maryland.

Cashon, Cara, Assistant Professor, Psychology. BS 1995, University of Iowa; MA 1999, PhD 2004, University of Texas-Austin.

Caswell, Shane Vincent, Assistant Professor of Athletic Training. BS 1999, SUNY at Brockport; MS 2000, PhD 2003, Ohio University.

Cattaneo, Lauren, Assistant Professor of Psychology. BA 1992, University of Michigan, Ann Arbor; MA 1997, PhD 2001, University of Maryland, College Park.

Cebral, Juan R., Associate Professor, Computational and Data Sciences. BS 1991, University of Buenos Aires; PhD 1996, George Mason University.

Censer, Jack Richard, Professor of History and Dean, College of Humanities and Social Sciences. AB 1968, Duke University; MA 1971, PhD 1973, Johns Hopkins University.

Censer, Jane Turner, Professor of History. BA 1973, Transylvania University; MA 1975, PhD 1980, Johns Hopkins University.

Cervone, Guido, Assistant Professor, Earth Systems and Geoinformation Sciences. BS 1998, Catholic University; MS 2000, PhD 2004, George Mason University.

Chalker, Peggy O’Hara, Associate Director, Student Academic Affairs. BS 1979, MEd 1980, University of Cincinnati; PhD, American University.

Chamberlain, Jeffrey T., Chair, Department of Modern and Classical Languages, Associate Professor of French, and University Marshall. BA 1971, Capital University; MA 1973, University of Rhode Island; PhD 1982, University of Illinois, Urbana-Champaign.

Chandhoke, Vikas, Professor of Biology and Dean, College of Science. BPharm 1986, MSc 1986, Birla Institute of Technology and Science; PhD 1991, University of Maine.

Chang, K.C., Professor, Systems Engineering and Operations Research. BS 1979, National Chiao-Tung University; PhD 1983, PhD 1986, University of Connecticut.

Chang, Michael G., Associate Professor, History and Art History. AB 1992, Princeton University; PhD 2001, University of California at San Diego.

Chang, Shih-Chun, Associate Professor, Electrical and Computer Engineering. BS 1970, National Cheng Kung University; PhD 1977, University of Hawaii.

Chang, Yoonmee, Assistant Professor, English. BA 1992, Tufts University; PhD 2003, University of Pennsylvania.

Chao, Frederick S., Head Coach Men’s Volleyball, Assistant Coach Women’s Volleyball, Intercollegiate Athletics. BA 1994, George Mason University.

Chavez, Peter, Senior Research Professor of Public Policy. BA 1967, Denison University; MA 1968, Rutgers University.

Chen, Chien-Yu, Assistant Professor, Information Systems and Operations Management. BA 1989, National Taiwan University; MS 1995, University of Maryland; PhD 2003, University of Maryland.

Chen, Chun-Hung, Professor, Systems Engineering and Operations Research. BS 1987, National Chiao-Tung University; MS 1989, National Taiwan University; PhD 1994, Harvard University.
Chen, Jim X., Professor, Computer Science. BS 1983, MS 1986, Southwest Jiaotong University; PhD 1995, University of Central Florida.

Chen, Minder, Associate Professor of Information Systems and Operations Management. BS 1979, National Taiwan University; MBA 1963, National Chiao-Tung University; PhD 1988, University of Arizona.

Chen, Songqing, Assistant Professor, Computer Science. BS 1997, MS 1999, Huazhong University; PhD 2004, College of William and Mary.

Cherubin, Rose M., Associate Professor of Philosophy. BFA 1984, School of Visual Arts, New York City; PhD 1996, Graduate School of the City University of New York.

Cheuse, Alan, University Professor of English. BA 1961, PhD 1974, Rutgers University.

Chew, Timothy, Associate Professor of Theater. BFA 1983, Southwest Missouri State University; MFA 1987, University of Georgia.

Chiu, Long, Associate Professor, Earth Systems and Geoinformation Sciences. BS 1974, University of Miami; ScD 1980, Massachusetts Institute of Technology.

Chollar, Richard, Associate Director, Diversity Programs and Services for Lesbian, Gay, Bisexual, Transgender, and Questioning Student Affairs. BA 1978, Wittenberg University; MSW 1982, University of Michigan; LCSW 1999, Commonwealth of Virginia.

Chong, Elizabeth, Associate Professor of Nursing. BSN 1975, MSN 1977, PhD 1981, University of Texas.

Christensen, Alan H., Associate Professor of Biology. BS 1977, Buena Vista College; PhD 1983, Michigan State University.

Christensen, Julie A., Associate Professor of Russian. BA 1970, University of Iowa; MA 1972, PhD 1978, University of California, Berkeley.

Christophe, Stephen, Associate Professor of Finance. BA 1980, Colby College; MBA 1982, College of William and Mary; PhD 1992, University of North Carolina.

Chrosniak, Linda D., Term Associate Professor of Psychology. BA 1981, University of Texas at Dallas; PhD 1991, George Washington University.

Chuck, Emil T., Term Assistant Professor of Biology and Health Professions Advisor. BSE 1993 Duke University; PhD 1998 Case Western Reserve University.

Chung, Myung-Chul, 1998 Case Western Reserve University; Health Professions Advisor. BSE 1993 Duke University; PhD 1988, University of Arizona.

Chung, Rita Chi-Ying, Associate Professor of English. BA 1985, College of William and Mary; MA 1987, University of Kentucky; PhD 1993, University of North Carolina, Chapel Hill.

Clark, Keith S., Associate Professor of Education. BS 1989, MS 1991, North Carolina State University; PhD 1994, Pennsylvania State University.

Clark, Paul G., Term Instructor of Social Work. BA 1981, Christopher Newport College; MSW 1985, Norfolk State University; ABD 2005, Virginia Commonwealth University.

Clark-Talley, Christine, Associate Vice President of Alumni Affairs. BS 1984, James Madison University; MEd 1986, University of South Carolina.

Cleaveland, Carol, Assistant Professor of Social Work. BA 1980, American University; MSS 1994, PhD 2002, Bryn Mawr.

Cobb, Sara, Director, Institute for Conflict Analysis and Resolution. BA 1973, Albertus Magnus College; MEd 1980, University of Puget Sound; PhD 1988, University of Massachusetts-Amherst.

Coester, William H., Administrator, School of Public Policy. BBA 1975, Gonzaga University; MS 1988, University of LaVerne.

Coffinberger, Richard L., Associate Professor of Business Legal Studies. BA 1970, University of Florida; MS 1979, Virginia Polytechnic Institute and State University; JD 1974, Wake Forest University.

Cohen, Daniel J., Assistant Professor, History and Art History; Director, Center for History and New Media. BA 1990, Princeton University; MTS 1992, Harvard University; PhD 1999, Yale University.

Cohen, Lori D., Director, University Life, Arlington Campus. BA 1988, Washington University; MA 2000, University of Minnesota.

Coleman, Colandra, Director of Development and Community Relations, University Life. BA 1990, George Washington University.

Colgan Bartoldus, Candy, Research Assistant Professor, Environmental Science and Policy. BA 1978, MS 1985, Queens College-CUNY; PhD 1990, George Mason University.

Collier, Daniel L., Director of Information Technology, College of Humanities and Social Sciences. BA 1990, University of Tennessee; MFA 1994, George Mason University.

Collins, Susan Alice, Associate Professor; Senior Associate Athletic Director of Athletics. BS 1970, University of Dayton; MS 1973, Northern Illinois University.

Conant, James K., Professor of Government and Politics. BA 1971, MA 1974, PhD 1983, University of Wisconsin, Madison.

Congleton, Roger D., Professor of Economics. PhD 1978, Virginia Polytechnic Institute and State University.
Coniglio, Jamie, Head of Reference, Fenwick Library, University Libraries. BA 1974, Saint Mary College; MLS 1976, Indiana University.

Conlan, Timothy J., University Professor of Public and International Affairs. AB 1974, University of Chicago; PhD 1982, Harvard University.

Constantine, Lynne M., Term Assistant Professor of Art and Visual Technology; Associate Chair, Art and Visual Technology. BA 1973, Canisius College; MA 1975, MPhil 1977, Yale University.

Conwell, Nancy C., Director, Facilities Planning and Special Projects, College of Science. BA, Sweet Briar College.

Cook, George, Distinguished Fellow, Affiliate Professor, School of Public Policy. BS 1957, George Washington University.

Cook, Gerald, Earle C. Williams Professor of Information Technology and Electrical Engineering. BS 1961, Virginia Polytechnic Institute and State University; SM 1962, ScD 1965, Massachusetts Institute of Technology.

Cooke, Benson George, Assistant Professor; Counselor, Counseling Center. BA 1975, Morehouse College; MS 1978, EdD 1981, University of Massachusetts.

Cooley, Mark, Assistant Professor, Art and Visual Technology. BFA 1995, University of Southern Maine; MFA 1998, East Carolina University.

Coppage, Diane, Director of Foundation Relations, University Development. BA, MA, George Mason University.

Cooper, Bruce B., Instructor; Assistant Athletic Director, Facilities, Intercollegiate Athletics. BS 1967, North Carolina State University.

Cooper, Jamie S., Associate Dean of Graduate Academic Affairs, College of Humanities and Social Sciences. BS 1995, MA 1996, Tennessee Tech University; MS 1998, PhD 2001, Virginia Tech.

Cooper, Julia Nord, Term Assistant Professor, Environmental Science and Policy. BS 1981, University of Birmingham; MS 1984, University of Minnesota, Duluth; PhD 1989, City University of New York, Brooklyn College.

Cooper, Paul D., Assistant Professor of Chemistry and Biochemistry. PhD, University of Western Australia.

Copelman, Dina, Associate Professor of History. AB 1975, Barnard College; MA 1977, University of Warwick, England; MA 1980, PhD 1985, Princeton University.

Copley, Steve, Instructor of English as a Second Language, English Language Institute. BS 1982, Georgetown University; MED 1995, George Mason University.

Coppage, Diane, Director of Foundation Relations, University Development. BA 2002, MA 2006, George Mason University.

Cortina, Jose M., Professor of Psychology. BA 1989, Tulane University; MA 1991, PhD 1994, Michigan State University.

Cosgrove, Laura R., Associate Director of Operations, Office of Admissions. BA 1997, Ohio State University; MS 2002, Miami University.

Coss, Marcia C., Term Assistant Professor, Medical Technology Program Director, Biology Department. BS 1988, George Mason University; PhD 1993, George Washington University.

Costello, Bernadette, Term Assistant Professor, English. BSW 1982, Southern Illinois University; MPA 1988, University of North Carolina.

Couch, Robin, Assistant Professor of Chemistry. BSc 1994, PhD 1999, University of Calgary.

Coughter, Jerald, Director, Life Sciences Management. BS 1982, Clemson University; MS 1986, Virginia Commonwealth University; MBA 1992, Shenandoah University.

Cowan, Friedgard, Cataloging Librarian, Bibliographic Services Department. BA 1975, MA 1979, University of Calgary; MLS 1994, Catholic University of America.

Cowen, Tyler, Professor of Economics. BS 1983, George Mason University; PhD 1987, Harvard University.

Cox, Cara, Term Instructor of Nursing. BSN 1979, Valparaiso University; MSN 1986, Indiana University.

Cox, Daniel N., Assistant Professor, Molecular and Microbiology. BS 1992, Wake Forest University; PhD 1999, Duke University.

Cozart, Sherry Conrad, Assistant Professor of Education. BA 1992, University of North Carolina, Charlotte; PhD 1999, University of North Carolina, Chapel Hill.

Cozzens, Robert Francis, Professor of Chemistry. BS 1963, PhD 1966, University of Virginia.

Cramton, Catherine D., Associate Professor of Management. AB 1979, Harvard University; PhD 1994, Yale University.

Crawford, Paula, Associate Professor of Art and Visual Technology. BFA 1983, MFA 1988, San Francisco Art Institute.

Cressey, Hillary B., Term Associate Professor of Biology. BA 1971, Dunbarton College of Holy Cross; MS 1976, Georgetown University; DA 2002, George Mason University.

Cressman, John R., Assistant Professor of Physics. BS 1995, Union College; PhD 2003, University of Pittsburgh.

Crew, Spencer, Clarence J. Robinson Professor of History. BA 1971, Brown University; MA 1973, PhD 1979, Rutgers University.

Crocker, I. Caroline, Term Assistant Professor of Biology. BS 1979, University of Warwick; MS 1993, University of Birmingham; PhD 1999, University of Southampton.

Crockett, John H., Jr., Professor of Finance. BA 1970, Washington and Lee University; PhD 1975, University of North Carolina.
Cronin, Matthew, Assistant Professor, Management. BA 1993, Rutgers University; MA 1997, Columbia University; MS 2000, PhD 2004, Carnegie Mellon University.

Cronmiller, Sonia, Term Instructor, Dance. BFA 1994, University of Louisiana; MFA 1997, Florida State University.

Cui, Shanshan, Assistant Professor of Art and Visual Technology. BFA 1985, MFA 1988, Sichuan Institute of Fine Arts, China; MFA 1998, Iowa State University.

Cupo, Doreen, Term Assistant Professor of Biology. BS 1981, State University of New York at Stony Brook; PhD 1985, Dartmouth College.

Curtin, Kevin M., Associate Professor of Geography. BA 1994, MA 1995, University of Illinois at Chicago; PhD 2002, University of California at Santa Barbara.

Cusumano, Vincent, Faculty Director, Semester in Washington, BS, Bradley University; MA, PhD, University of Kentucky.

Czarda, Lawrence D., Vice President for Regional Campuses. BA 1974, Bridgewater College; MPA 1977, American University; PhD 1997, George Mason University.

Dabbagh, Nada, Associate Professor of Education. BA 1976, Iona College; MS 1978, Columbia University; PhD 1996, Pennsylvania State University.

Dakake, Maria, Associate Professor, Religious Studies. BA 1990, Cornell University; MA 1998, PhD 2000, Princeton University.

Dalal, Reeshad S., Assistant Professor of Psychology., BA 1998, Hanover College; MA 2001, PhD 2003, University of Illinois, Urbana-Champaign.

Dale, John G., Assistant Professor, Sociology and Anthropology. BA 1987, Wheaton College; MA 1991, New School for Social Research; PhD 2003, University of California, Davis.

D’Andrea, Paul Philip, Robinson Professor of Theater and English. BA 1960, MA 1962, PhD 1966, Harvard University.

Daniels, Barbara, Virtual High School Faculty Coordinator. BA 1982, George Washington University; MEd 2002, George Mason University.

Daniels, Brian, Term Assistant Professor, French. BA 1998, University of Idaho; MA 1996, University of Washington; PhD 2004, Ohio State University.

Daniels, Margaret, Associate Professor of Tourism and Event Management. BA 1991, Miami University of Ohio; MA 1993, University of Georgia; PhD 2002, Clemson University.

Danner, Kara M., Director, Portal Project Management, University Life. BS 1994, University of Wisconsin; MS 2003, George Mason University.

Darnall, Nicole, Assistant Professor, Environmental Science and Policy. BA 1991, New Mexico State University; MA 1995, University of Texas; MS 1998, Vanderbilt University; PhD 2002, University of North Carolina, Chapel Hill.

Das, Sidhartha R., Associate Professor of Information Systems and Operations Management. BS 1979, India; MS 1980, University of Mississippi; MBA 1985, PhD 1987, University of Houston.

Davidson, Michele R. McPhee, Associate Professor of Nursing. Marymount University; BS 1993, George Mason University; MSN 1995, Case Western Reserve University; PhD 1998, George Mason University.

Davies, Keith Maurice, Professor of Chemistry. BSc 1964, PhD 1967, University of Wales.

Davies, David F., Research Assistant Professor, School of Public Policy. BS 1972, Colorado School of Mines; MS (Applied Mathematics) 1981, MS (Operations Research) 1981, Naval Postgraduate School.

Davies, Linda, Associate Professor and Associate Chair, Statistics. BS 1979, George Mason University; MS 1981, PhD 1983, Rutgers University.

Davies, Mary Lou, Term Instructor of Nursing. BSN 1997, SUNY Institute of Technology; MSN 1999, State University of New York.

Davies, Molly E., Associate Professor; Director of Field Instruction, Social Work Program. BA 1971, Louisiana State University; MSW 1973, Tulane University; EdD 1984, Florida State University.

Daviss, Rick, Associate Provost; Artistic Director, Center for the Arts/Theater of the First Amendment; Professor of Theater. BA 1980, Lawrence University; MFA 1983, DFA 2003, Yale School of Drama.

Davis, Shannon N., Assistant Professor, Sociology and Anthropology. BA 1997, University of North Carolina, Asheville; MS 2000, PhD 2004, North Carolina State University.

Davis, Stephen L., Associate Professor of Chemistry; Associate Chair, Chemistry Department. AB 1972, Washington University; MS 1973, PhD 1976, Yale University.

Day, Monimalika, Assistant Professor of Education. BA; MEd Jadavpur University, in India; PhD, University of Maryland, in College Park.

DeCaro, Robert D., Associate Professor, History and Art History. BA 1992, Loyola Marymount University; MA 1995, PhD 1999, University of California at Los Angeles.

Decker, Warren Dale, Professor of Communication. BA 1968, Kansas State Teachers College of Emporia; MA 1969, Southwest Missouri State College; PhD 1977, Temple University.

De Jong, Kenneth A., Professor, Computer Science. BA 1966, Calvin College; MA 1967, PhD 1975, University of Michigan.

Del Popolo, Mary, Term Assistant Professor, Art and Visual Technology. BA 1980, Marymount University; MFA 1988, Virginia Commonwealth University.

DelSole, Timothy, Associate Professor of Climate Dynamics. PhD 1993, Harvard University.
deMonsabert, Sharon, Associate Professor, Civil, Environmental, and Infrastructure Engineering. BS 1979, University of Maryland; PhD 1982, Purdue University.

Demory, M. Yvonne, Assistant Professor of Business Legal Studies. BA 1987, University of Virginia, JD 1990, Columbus School of Law; Catholic University of America, LLM 1994, Georgetown University Law Center.

DeMulder, Elizabeth K., Associate Professor of Education. BS 1984, Wright State University; PhD 1989, St. John’s College, Cambridge University.

Denham, Susanne Ayers, University Professor of Psychology; Director, Applied Developmental Psychology Program. BA 1972, Western Maryland College; MA 1974, Johns Hopkins University; PhD 1985, University of Maryland, Baltimore County.

Denis, Milagros, Instructor, History and Art History. BA 1995, University of Puerto Rico; MPS 1999, Cornell University.

Dennis, Rutledge M., Professor of Sociology. BA 1966, South Carolina State College; MA 1969, PhD 1975, Washington State University.

De Nys, Martin John, Associate Professor of Philosophy. AB 1967, MA 1969, PhD 1974, Loyola University, Chicago.

De Nys, Mary, Term Assistant Professor of English. BS 1967, MA 1971, Loyola University, Chicago; PhD 1981, George Washington University.

Dere, Kenneth, Research Professor, CEORS. BA 1969, MS 1971, Cornell University; PhD 1980, Catholic University of America.

Descalzo de Blas, Alberto, Term Assistant Professor, Spanish. MA 1995, PhD 2003, University of Salamanca.

Deshmukh, Marion F., Associate Professor, of History and Art History. BA 1966, University of California, Los Angeles; MA 1967, PhD 1975, Columbia University.

Di, Liping, Professor, Earth Systems and Geoinformation Sciences. BS 1982, Zhejiang University; MS 1985, Chinese Academy of Sciences; PhD 1991, University of Nebraska at Lincoln.

Diao, Guoqing, Assistant Professor, Statistics. BE 1998, MS 2001, University of Science and Technology of China; PhD 2005, University of North Carolina at Chapel Hill.

Dickerson, Michael A., Term Instructor and Internship Coordinator. Department of Communication. BFA 1960, Ohio University; MA 1974, Loyola University; MA 1979, U.S. Army War College.

Dickerson, Nancy A., Director, Academic Advising Center. BFA, Ohio University; MS 1976, Shippensburg State University.

Dickman, Kathleen, Term Instructor of Nursing. BSN 1975, Georgetown University; MSN 1996, George Mason University.

Dincapoli, Constance, Assistant Professor of Dance. BA 1983, Stanford University.

Domeniconi, Carlotta, Associate Professor, Computer Science. BSc 1992, University of Milano; MSc 1997, International Institute for Advanced Scientific Studies, Salerno, Italy; PhD 2002, University of California, Riverside.

Donini, Patricia, Employee Relations Director/Deputy Director HR/Payroll. BA, College of New Rochelle.

Donohue, George L., Professor, Systems Engineering and Operations Research. BSME 1967, University of Houston; MS 1968, PhD 1972, Oklahoma State University.

Dorick, Lucy B., Director of Development, Institute for Conflict Analysis and Resolution. BS 1974, George Mason University; MEd 1979, Lesley College.

Douthett, Edward B., Assistant Professor, Accounting. BA 1979, Pennsylvania State University; MBA 1991, PhD 1995, University of Georgia.

Drake, Diane C., Head Coach, Women’s Soccer. BA 1993, University of Dayton; MS 1996, Louisiana State University.

Druckman, Daniel, Professor of Government and Politics. BA 1961, Michigan State University; MS 1965, PhD 1966, Northwestern University.

Drumme, David G., Associate University Counsel. BS 1996, JD 1999, George Mason University.

Du, Tai C., Term Instructor, Communication. BS 1998, Northern Arizona University; MA 1999, Ball State University.

Duck, Lloyd Earl, Associate Professor of Education. AB 1966, College of William and Mary; MAT 1968, PhD 1974, University of Virginia.

Dudley, Robert L., Professor of Government and Politics; Chair of Public and International Affairs. BA 1970, Western Illinois University; MA 1974, PhD 1980, Northern Illinois University.

Duckett, Colin, Assistant Professor of Political Science. BA 1990, MA 1993, University of Saskatchewan; MPhil 1995, Oxford University; PhD 2001, Princeton University.
Dumas, Theodore, Assistant Professor of Molecular Neuroscience. BS 1991, University of Connecticut; MS 1996, PhD 1997, University of Virginia.

Dumont, Jean-Paul, Robinson Professor of Anthropology. Licence es Lettres 1964, Sorbonne, Paris; PhD 1972, University of Pittsburgh.

Dunham, Nancy, Assistant Director of Master’s Student Services, School of Public Policy. BA/BBA 2000, The College of William and Mary; MS 2005, Northwestern University.

Dunklee, Dennis R., Associate Professor of Education. BME 1961, Wichita State University; MED 1969, Washburn University; PhD 1985, Kansas State University.

Dunne, Kelly B., Term Assistant Professor of Integrative Studies. BA 1991, College of William and Mary; MA 1997, George Mason University.

Duric, Zoran, Associate Professor, Computer Science. BS 1982, MS 1986, University of Sarajevo, Bosnia and Herzegovina; PhD 1995, University of Maryland.

Dutta, Amitava, Eakin Chair in E-Commerce, Professor of Decision Sciences and Operations Management. BS 1976, Indian Institute of Technology; MS 1978, University of California, Santa Barbara; PhD 1981, Purdue University.

Dworzecka, Maria, Professor of Physics and Astronomy. Senior Associate Dean, academic planning and facilities, College of Science. MSc 1954, PhD 1969, Warsaw University, Poland.

Dyre, Leslie S., Director, Finance and Human Resources, College of Humanities and Social Sciences. BS 1980, University of Virginia; CPA 1980.

Dzama, Mary Ann, Associate Professor of Education. BA 1964, Carlow College, Pittsburgh; MED 1968, Duquesne University; DEd 1972, University of Virginia.

Earley, Penelope McGraw, Professor of Education Policy. BA 1967, University of Michigan; MED 1984, University of Virginia; PhD 1994, Virginia Tech.

Eby, Kimberly K., Associate Provost for Educational Improvement and Innovation; Associate Professor, New Century College; Affiliate, Department of Psychology. BA 1989, Indiana University; MA 1992, PhD 1996, Michigan State University.

Eck, Elizabeth C., Director of PhD Student Services, School of Public Policy. BS 1993, Georgetown University; MA 1998, University of London.

Eckenwiler, Lisa, Associate Professor of Philosophy, Associate Professor of Health Administration and Policy, Director of Health Care Ethics. BA 1989, University of Wisconsin-Madison; MA 1991, PhD 1997, University of Tennessee-Knoxville.

Edwards, Cody, Assistant Professor, Environmental Science and Policy. BS 1995, MS 1997, Angelo State University; PhD 2000, Texas Tech University.

Ehrlich, Robert, Professor of Physics and Chair, Department of Physics and Astronomy. BS 1959, Brooklyn College; PhD 1964, Columbia University.

Ellsworth, Robert Waldo, Professor of Physics and Astronomy. BS 1960, Yale University; PhD 1966, University of Rochester.

Elston, Ken D., Assistant Professor of Theater. BA 1988, Temple University; MFA 1996, Ohio State University.

Emelianenko, Maria, Assistant Professor of Mathematical Sciences. BS 1999, MS 2001, Moscow State University; MA 2002, PhD 2005, Pennsylvania State University.

Emerson, Jill V., Assistant Dean of Student Services, School of Public Policy. BA 1995, George Mason University; MSW 2000, Virginia Commonwealth University.

Endebrock, Robert N., Director, Facilities Construction. BS 1962, Tulane University; MS 1968, Pennsylvania State University.

Endress, Edgar, Assistant Professor, Art and Visual Technology. BS 1992, Universidad Tecnologica Metropolitana, Chile; BA 1997, Artes de las Comunicaciones, Chile; MFA 2001, Syracuse University.

Entrikin, Richard Lee, Associate Professor of Marketing. BA 1966, Western Illinois University; MS 1967, Northern Illinois University; PhD 1976, St. Louis University.

Ephraim, Yariv, Professor, Electrical and Computer Engineering. BSc 1977, MSc 1979, DSc 1984, Technion, Haifa, Israel.

Ercolano, Adriana A., Director of Development, University Libraries. BA 1986, College of William and Mary; MA 1992, Catholic University of America.

Ericson, Carolyn, Assistant Professor, Physics and Astronomy. BA 1969, Clark University; MSW 1973, PhD 1998, University of Maryland.

Ericson, Rebecca J., Term Instructor, Physics and Astronomy. BA 1970, Macalester College; MS 1975, Creighton University.

Ermler, Walter, Research Professor, Academic Administrative and Student Services. BS 1969, Northern Illinois University; MS 1970, PhD 1972, Ohio State University; Master of Engineering 1989, Stevens Institute of Technology.

Evans, Cathy, Director, Summer Term. BS 2001, George Mason University; MBA 2006, Walden University.

Ewell, Mary S., Term Instructor of Physics and Astronomy. BS 1994, George Mason University.

Fahey, Sheryl, Technical Assistance Specialist. BS 1971, Syracuse University; MA 1972, George Washington University.

Falconer, Allan, Chair and Professor, Geography. BS 1965, PhD 1970, University of Durham.
Falco, Renee, Associate Professor of Education. BEd, University of Durham, Institute of Education, U.K.; MEd 1987, University of South Carolina; PhD 1998, Utah State University.

Falen, Douglas, Assistant Professor, Sociology and Anthropology. BA 1992, Emory University; PhD 2003, University of Pennsylvania.

Fang, Adriane, Assistant Professor of Dance. BA 1994, University of Wisconsin-Steven’s Point.

Fanshaw, Charles W., Director, Facilities Administration. BS 1982, Virginia Military Institute; ME 1990, University of Florida.

Farina, John, Associate Professor of Religious Studies. BA 1972, Vassar College; MD 1976, Yale University; Ph.D. 1979 Columbia University; JD 1996, New York University School of Law.

Farnsworth, Steve, Assistant Professor of Communication BA 1983, Dartmouth College; BA 1990, University of Missouri; MA 1993, PhD 1997, Georgetown University.

Farrell, Peter J., Director, Business Development, The Volgenau School of Information Technology and Engineering. BS 1979, MBA, 1985, George Mason University.

Fauntroy, Michael K., Assistant Professor, School of Public Policy. BA 1988, Hampton University; MA 1993, Howard University; PhD 2001, Howard University.

Fearnides, Jack, Senior Research Associate, School of Public Policy. BS 1962, MS 1964, Drexel University; PhD 1971, University of Maryland.

Feerick, Peggy, Associate Professor of Art and Visual Technology. BFA 1976, Rochester Institute of Technology; MA, MFA 1989, University of New Mexico.

Fena, David W., Executive Director, Association of Writers and Writing Programs. MA 1981, University of Iowa.

Fernandez, Alexander, Deputy Director, Legal Research and Writing. BA, Florida International University; JD, Georgetown University.

Ferrin, Marshall, Director, International Business Development, School of Public Policy. MA 1978, American University.

Folliot, Sheila, Professor of Art History. AB 1967, Vassar College; PhD 1979, University of Pennsylvania.

Finkelstein, James H., Vic Dean and Professor of Public Policy. BS 1974, Miami University; MA 1977, PhD 1980, Ohio State University.

Finn, Andrew, Term Associate Professor, Communication. BS 1972, St. John Fisher College; MA 1977, SUNY Geneseo; MA 1981, PhD 1983, Washington University, St. Louis.

Fisk, J., Associate Professor of Education. BA 1996, College of William and Mary; MSLIS 1999, University of Illinois, Urbana-Champaign.

Fisher, Klaus Gunter, Professor of Mathematical Sciences; Chair, Department of Mathematical Sciences. BS 1966, Lafayette College; MA 1968, Syracuse University; PhD 1973, Northwestern University.

Flagel, Andrew, Associate Vice President for Enrollment Development; and Dean, Admissions. BA 1990, MA 1994, George Washington University; PhD in progress, Michigan State University.

Flagel, Jennifer R., Director of Technical Projects, Office of the Provost. BBA/MBA 1997, University of Michigan, Flint.

Flannery, Aimee, Associate Professor, Civil, Environmental, and Infrastructure Engineering. BS 1993, MS 1994, Wayne State University; PhD 1998, Pennsylvania State University.

Fleck, Daniel, Instructor, Computer Science. BS 1997, University of Texas; MS 2001, George Mason University.

Flinn, Jane M., Associate Professor of Psychology. BA 1960, Oxford University; MSc 1962, University of California; PhD 1969, Catholic University of America; PhD 1974, George Washington University.

Fontana, Judith L., Technical Assistance Specialist, Kellar Institute for Human disAbilities. BA 1969, Niagara University; MEd 1973, University of Rochester; PhD 2003, George Mason University.

Forcier, Mary Frances, Director, Colonial Academic Alliance. BA 1983, Lehigh University; MS 1989, PhD 2005, Carnegie Mellon University.

Ford, Martin Eugene, Senior Associate Dean and Professor of Education. BS 1975, Pennsylvania State University; PhD 1980, University of Minnesota.

Foreman, Joel Edward, Associate Professor of English; Associate Professor, Program on Social and Organizational Learning. BA 1967, Loyola College of Baltimore; MA 1968, Johns Hopkins University; PhD 1975, George Washington University.

Forkner, Rebecca, Assistant Professor, Environmental Science and Policy. BS 1993, University of Cincinnati; PhD 1998, University of Georgia.

Fortney, Amanda, Research Associate, Center for Bioresource Development. BS 2001, George Mason University.

Foster, Gregory D., Chair and Associate Professor of Chemistry. BS 1978, University of California, Davis; MS 1981, California State University, Hayward; PhD 1985, University of California, Davis.

Foster, John Burt, Jr., University Professor of English. BA 1967, Harvard University; MPhil 1971, PhD 1974, Yale University.

Fowler, Lisa A., Research Assistant Professor, School of Public Policy. BS 1994, Wake Forest University; MPP 2000, University of Maryland; PhD 2006, George Mason University.

Fox, Donna M., Assistant Dean for Undergraduate Academic Affairs, College of Humanities and Social Sciences. BS 1985, Kansas State University; MS 1992, George Mason University.

Fox, Rebecca, Associate Professor of Education. AB 1972, Randolph-Macon Women’s College; MA 1993, PhD 1999, George Mason University.

Frazier, Wendy, Assistant Professor of Education. BA 1992, Rice University; MEd 1997, University of Houston; EdD 2001, Columbia University.

Frederick, Helen, Professor of Art and Visual Technology. BFA 1967, MFA 1969, Rhode Island School of Design.

Frendak-Blune, Allison, Assistant Professor, School of Public Policy. BA 1989, Seton Hall University; MA 1998, Montclair State University; PhD 2004, George Mason University.

Frenn, Chawky, Associate Professor of Art and Visual Technology. BFA 1985, Massachusetts College of Art; MFA 1988, Temple University.

Friedley, Sheryl Ann, Professor, Communication. BS 1971, MA 1972, Ball State University; PhD 1977, Purdue University.

Fritschler, A. Lee, Professor of Public Policy. BA 1959, Union College; MPA 1960, Syracuse University; PhD 1965, Maxwell School of Citizenship and Public Affairs, Syracuse University.

Froman, Wayne J., Associate Professor, Philosophy. BA 1966, Yale University; MA 1975, Fordham University.

Fryxell, Karl J., Associate Professor of Biology. BA 1975, BS 1975, University of Texas, Austin; PhD 1983, California Institute of Technology.

Fu, Shimin, Research Assistant Professor, Psychology. BS 1991, Beijing Normal University; MS 1994, Chinese Academy of Sciences; PhD 1998, University of Science and Technology of China.

Fuchs, Cynthia J., Associate Professor of English. BA 1984, MA 1985, University of Pennsylvania; PhD 1989, University of Connecticut.

Fulcher, Amie, Director of Academic Operations. BS 1985, East Carolina University; MEd 1997, PhD 2007, George Mason University.

Fuller, Stephen F., University Professor of Public Policy; Dwight C. Schar Endowed Faculty Chair; Director, Center for Regional Analysis. BA 1962, Rutgers University; MCP 1964, University of Mississippi; PhD 1969, Cornell University.

Fyfe, Laura, Assistant Professor of French. BA 1992, Syracuse University; MA 1994, Syracuse University; PhD 2003, University of Illinois, Urbana-Champaign.

Gabel, Michael Randy, Associate Professor of Interdisciplinary and Integrative Studies; Associate Professor of Mathematical Sciences. BS 1965, Massachusetts Institute of Technology; MA 1968, PhD 1972, Brandeis University.

Gaffney, Kathleen F., Professor of Nursing. BS 1967, St. Joseph College; MS 1971, PhD 1984, University of Maryland.

Gaj, Krzysztof, Associate Professor, Electrical and Computer Engineering. MS 1988, PhD 1992, Warsaw University of Technology.

Gallagher, Catherine A., Associate Professor, Administration of Justice. BA 1991, College of Wooster; MA 1996, PhD 2000, University of Maryland.

Gallehr, Donald Raymond, Associate Professor of English. BA 1964, St. Bonaventure University; MA 1966, Fordham University; PhD 1974, Catholic University of America.

Galluzzo, Gary R., Professor of Education. BA 1973, Utica College; MS 1975, PhD 1983, Syracuse University.

Ganesan, Rajesh, Assistant Professor, Systems Engineering and Operations Research. BS 1996, National Institute of Technology, India; MS 2002, MA, PhD 2005, University of South Florida.

Ganley, Kristine F., TTAC Early Childhood Coordinator. BS 1967, University of Maryland, MEd 1989, George Mason University.

Gantley, Megan, Research Assistant Professor, Administration of Justice. BS 2005, MS 2007, George Mason University.

Gantz, Donald Thomas, Professor and Chair, Applied Information Technology. AB 1966, Fordham University; MA 1971, PhD 1974, University of Rochester.

Gao, Yuan, Assistant Professor, Finance. BS 1995, Wuhan University; MS 1998, MA 2004, PhD 2005 Cornell University.

Gardner, James E., Chair, Department of Music, Professor of Music. BM 1975, Oklahoma City University; MM 1978, DMA 1982, Southwestern Baptist Theological Seminary.

Garner, Pamela W., Associate Professor, New Century College. BSW 1982, University of Tennessee; MA 1988, University of Houston; PhD 1992, Texas A&M University.

Garreau, Joel, Term Professor, School of Public Policy. BA 1969, University of Notre Dame.

Gaston, Whitney, Academic Advisor and Term Instructor, Student Affairs and Enrollment Management, College of Health and Human Services. BA 1990, MPH 1993, University of South Florida.

Gentle, James, University Professor, Computational and Data Sciences and Statistics. BS 1966, University of North Carolina; MA 1969, Louisiana State University; MCS 1973, PhD 1974, Texas A&M University.

Gentry, Anne G., Associate University Counsel. BA 1991, College of William and Mary; 1994 JD, George Mason University.

George, Cindy L., Instructor of Education. BA 1979, Peabody College.

Gerard, Andrew L., Head Coach, Men’s Track and Cross Country. BS 1992, Colgate University.
Gerber, Naomi Lynn H., Professor and Director, Center for the Study of Chronic Illness and Disability. BA 1965, Smith College; MD 1971, Tufts University School of Medicine.

Gerber, Steven, Reference and Liaison Librarian, University Libraries. BA 1973, University of Minnesota-Duluth; MA 1975, University of California at San Diego; MLS 2003, University of Buffalo.

Gero, Edward, Associate Professor of Theater. BA 1976, Montclair State College.

Gewa, Constance, Assistant Professor of Global and Community Health. BS 1994, Egerton University, Kenya; MS 1998, University of Nairobi, Kenya; MPH 2003, PhD 2006, University of California at Los Angeles.

Gibson, J. Craig, Associate University Librarian for Public Services. BA 1976, West Texas State University; MA 1980, University of Massachusetts; PhD 1984, University of Denver.

Gibson, Timothy A., Associate Professor, Communication. BA 1992, Evergreen State College; MA 1995, University of Massachusetts; PhD 2001, Simon Fraser University.

Gifford, Jonathan L., Professor of Government and Politics. BS 1976, Carnegie Mellon University; MS 1979, PhD 1983, University of California, Berkeley.

Gillette, Brian, Coordinator and Term Instructor, Student Affairs and Enrollment Management, College of Health and Human Services. BS 1992, Radford University; MEd 2002, George Mason University.

Gillette, Kathy, Director of Classroom Technologies. BS 1978, George Mason University.

Gillevet, Patrick M., Affiliate Professor, Bioinformatics and Computational Biology; Associate Professor of Environmental Science and Policy. BS 1976, University of Toronto; PhD 1982, University of Manitoba.

Gillyard, Angelisa E., Assistant Professor, Information Systems and Operations Management. BS 1996, Spelman College; MS 1998, Georgia Institute of Technology; PhD 2003, The Ohio State University.

Giozzi, Mario, Assistant Professor, Physics. Laurea 1994, PhD 1999, Torino University, Italy.

Goldberg, C. Noel, Program Manager, Center for the Advancement of Public Health. BA 1993, MS 1995, West Virginia University.

Goldin, Mark G., Associate Professor of Spanish. BS 1965, PhD 1968, Georgetown University.

Goldin, Rebecca F., Associate Professor of Mathematical Sciences. BA 1993, Harvard University; PhD 1999, Massachusetts Institute of Technology.

Goldman, Neil, Associate Professor, Physics and Astronomy; Associate Professor of Mathematical Sciences. BS 1962, College of the City of New York; MS 1964, University of Nebraska; PhD 1982, Rensselaer Polytechnic Institute.

Goldstone, Jack A., Hazel Professor of Public Policy, School of Public Policy. BA 1976, MA 1979, PhD 1981, Harvard University.

Gomaa, Hassan, Professor and Chair, Computer Science. BSc 1967, University College, London University; DIC 1968, PhD 1976, Imperial College, London University.

Gomez, Richard B., Research Professor, Computational and Data Sciences, and Earth Systems and Geoinformation Sciences. PhD 1976, New Mexico State University.

Gomez-Moran, Dolores, University Ombudsman. BA 1987, University of Oviedo, Spain; MA 1990, Boston College.

Goodale, Mark, Assistant Professor, Institute for Conflict Analysis and Resolution. BA 1990, University of California, Los Angeles; MSc 1991, London School of Economics; JD 1994, University of the Pacific, McGeorge School of Law; LLM 1998, University of Wisconsin Law School; PhD 2001, University of Wisconsin.

Goodman, Lisa Y., Director, Women’s Business Center. BS 1992, Clemson University; MA 1997, Webster University.

Goodson, Nicole, Term Instructor of Dance. BFA 1996, The University of the Arts.

Goodwin, Stephen Hardy, Professor of English. AB 1965, Harvard University; MA 1969, University of Virginia.

Gopin, Marc, James H. Laue Professor of World Religions, Diplomacy, and Conflict Resolution. BA 1979, Columbia University; MA 1988, PhD 1992, Brandeis University.

Gorrell, Jeffrey, Dean and Professor of Education, College of Education and Human Development. BA 1968, Vanderbilt University; MA 1970, PhD 1975, University of Florida.

Gorreta, Francesco, Term Research Associate, Center for Bioresource Development. BS 2000, University of Milan, Italy.

Gould, Jon B., Associate Professor, Administration of Justice. AB 1985, University of Michigan; JD/MPP 1989, Harvard University; PhD 1999, University of Chicago.

Graff, Heidi, Director, Mason LIFE Program. BS 1986, State University of New York; MA 1987, Long Island University; PhD 2007, George Mason University.

Granfield, Patricia G., Term Instructor, Department of Mathematical Sciences. BA 1972, Swarthmore College; JD 1978, University of Virginia School of Law; MS 2003, George Mason University.

Grant, Geraldine M., Associate Professor, Biology. BA 1987, Trinity College, Ireland; PhD 1993, Dublin City University, Ireland.

Grant, Rachel, Associate Professor of Education. BA 1973, Howard University; MA 1977, University of the District of Columbia; PhD 1990, University of Maryland.

Gray, Laurel, Instructor of Dance. BA 1975, Occidental College; MA 1976, University of Waterloo.

Green, Judith A., Director, Office of International Programs and Services. B.A. 1978, University of Massachusetts, Amherst; M.Ed. 1979, Framingham State College.
Greenwood, Pamela, Research Associate Professor, Psychology. BS 1969, University of Illinois; PhD 1977, State University of New York at Stony Brook.

Grefenstette, John J., Professor, Bioinformatics and Computational Biology. BS 1975, Carnegie Mellon University; PhD 1980, University of Pittsburgh.

Gregg, Christopher A., Term Assistant Professor, Art History. BA 1989, University of Georgia; MA 1991, PhD 2000, University of North Carolina, Chapel Hill.

Griffiths, Lloyd J., Dean, The Volgenau School of Information Technology and Engineering. BS 1963, University of Alberta; MS 1965, PhD 1968, Stanford University.

Gring-Pemble, Barbara, Lecturer of English. BA 1971, LaSalle University; MA 1976, Purdue University.

Grotophorst, C. Wally, Associate University Librarian for Automated Systems, University Libraries. BA 1976, Western Carolina University; MSLS 1977, University of Tennessee at Knoxville; MA 1982, Central Michigan University.

Guagnano, Gregory, Associate Professor of Sociology. BS 1971, Pennsylvania State University; PhD 1986, University of California, Davis.

Guardia, Juan, Assistant Director, Diversity Programs and Services. BS 1997, MS 2001, Florida State University.

Guilford, Renate H., Assistant Provost for Enrollment, Planning, and Administration. MA 1995, George Mason University.

Guillory, John, Senior Contract Professor of Computational Sciences and Informatics and Space Sciences. BS 1962, Rice University; PhD 1970, University of California.

Gusterson, Hugh, Professor of Anthropology. BA 1980, Cambridge University; MA 1982, University of Pennsylvania; PhD 1992, Stanford University.

Ha, Hye-Young, Term Research Scholar, School of Public Policy. BA 1994, Ajou University; MS 1996, University of Seoul.

Haack, Barry Norbert, Professor of Geographic and Cartographic Sciences. BS 1969, University of Wisconsin; MA 1972, San Diego University; PhD 1977, University of Michigan.

Habib, Anna S., Term Assistant Professor, English. BA 2003, MFA 2006, George Mason University.

Habib, Muhammad K., Associate Professor, Statistics. BS 1968, Ain Shams University; PhD 1979, University of North Carolina, Chapel Hill.

Habila, Helon, Assistant Professor, English. BA 1995, University of Jos; PhD 2006, University of East Anglia.

Hackler, Darrene L., Associate Professor of Government and Politics. BA 1992, Alberty College of Idaho; MA 1996; PhD 2000, Claremont Graduate University.

Haddad, Bassam, Assistant Professor, Department of Public and International Affairs. BA 1992, George Mason University; MA 1994, PhD. 2002, Georgetown University.

Hadley, Jack, Professor of Health Administration and Policy. BA 1968, Brandeis University; PhD 1975, Yale University.

Haegele, Tennille J., Assistant Director of Graduate Admissions, School of Public Policy. BA 1999, Minnesota State University; MA 2003, San Diego State University.

Hahn, Joyce, Assistant Professor of Nursing. BA 1976, Mercy College; BSN 1982, State University of New York; MSN 1997, PhD 2004, George Mason University.

Haines, David W., Associate Professor of Anthropology. BA 1971, Denison University; MA 1973, PhD 1976, American University.

Haley, Marjorie H., Professor of Education. BS 1974, Hampton Institute; MEd 1976, Towson State University; PhD 1986, University of Maryland.

Hall, Tina, Term Instructor of Nursing. AAS 1998, Northern Virginia Community College; MSN 2005, George Mason University.

Halden, Jill, K., Instructor of Geography. BA 1993, University of Colorado at Boulder; MA 1999, Michigan State University.

Hallows, Karen, Assistant Professor of Finance. BS 1973, Central Missouri State; MAT 1984, Purdue University; PhD 1988, University of Nebraska.

Hamdani, Sumaiya A., Associate Professor of History. BA 1984, Georgetown University; MA 1989, PhD 1995, Princeton University.

Hamner, Christopher H., Assistant Professor, History and Art History. AB 1995, Dartmouth College; MA 1998, PhD 2004, University of North Carolina at Chapel Hill.

Hanley, Mary, Assistant Professor of Education. BA 1975; MEd 1987; PhD 1998, University of Washington.

Hannan, Heather Groves, Prince William Campus Librarian, University Libraries. BA 1975, University of Virginia; MA 1990, MLS 1994, Catholic University of America.

Hanrahan, Nancy Weiss, Director, Women and Gender Studies, Associate Professor of Sociology. BA 1976, Wesleyan University; MA 1989, PhD 1994, New School for Social Research.

Hanson, Robin D., Associate Professor of Economics. BS 1981, University of California at Irvine; MS, MA 1984, University of Chicago; PhD 1997, California Institute of Technology.

Hanweek, Gerald Alfred, Professor of Finance. BA 1964, Stanford University; MA 1967, PhD 1971, Washington University, St. Louis.

Harber, Linda, Associate Vice President for Human Resources and Chief Human Resources Officer. BA 1974, Indiana University; MS 1978, University of Kansas.

Harbin, Andrea R., Term Assistant Professor, English. BA 1987, University of California, Davis; MA 1994, California
State University, Sacramento; PhD 2006, Catholic University of America.

**Harbour, Frances V.** Associate Professor of Government and Politics. BA 1975, Barnard College; MA 1977, PhD 1986, Columbia University.

**Hardiman, William R.** Director, Purchasing and Accounts Payable. BS, MPS, Western Kentucky University.

**Hardy, Shanon.** Assistant Professor of Education. BEd 1972, University of South Florida; MEd 1974, University of Miami; PhD 2001, George Mason University.

**Hare, Heather.** Associate Director, Center for Leadership and Community Engagement. BA 1988, MA 1989, Columbia University; MS 2004, George Mason University.

**Harlan, Stephen S.** Associate Professor of Geology. BS 1980, Evergreen State College; MS 1986, Montana State University; PhD 1992, University of New Mexico.

**Harmon, Laurlyn.** Assistant Professor of Parks, Recreation, and Leisure Studies. BS 1991, MS 1999, Michigan State University; PhD 2005, Pennsylvania State University.

**Harr, David J.** Senior Associate Dean, School of Management. BBA 1968, University of Wisconsin at Madison; MS 1969, Naval Postgraduate School; PhD 1978, University of Wisconsin at Madison; CPA, Virginia.

**Hart, David.** Associate Professor. BA 1983, Wesleyan University; PhD 1995, Massachusetts Institute of Technology.

**Harvey, Diane Hollern.** Term Assistant Professor of Government and Politics. BA 1993, Frostburg State University; MA 1995, PhD 1998, University of Maryland.

**Harvey, Tamara.** Assistant Professor, English. BA 1988, Harvard University; MA 1991, University of Wisconsin-Madison; PhD 1998, University of California-Irvine.

**Harvey, James William.** Associate Professor of Marketing. BS 1966, University of Illinois, Urbana-Champaign; MBA 1968, University of Miami; PhD 1977, Pennsylvania State University.

**Hasan, Abul R.** Associate Dean, Ras al-Khaimah Campus. BS 1975, University of Engineering and Technology; MS 1994, University of North Dakota; PhD 1988, University of Wyoming.

**Hathaway, Dawn.** Instructor of Education. BS 1986, Purdue University; MEd 2003, George Mason University.

**Hatton, Kimi S.** Term Associate Professor of Chemistry. BS 1979, George Mason University; PhD 1983, Ohio State University.

**Hawk, Byron K.** Associate Professor, English. BA 1990, MA 1995, PhD 2000, University of Texas at Arlington.

**Haynes, Christine.** Term Faculty, Communication. BA 2004, George Mason University; MA 2007, Texas State University-San Marcos.

**Haynes, Kingsley E.** Ruth D. Hazel and John T. Hazel, M.D. Faculty Chair in Public Policy; University Professor and Dean, School of Public Policy. BA 1964, Western Michigan University; MA 1965, Rutgers University; PhD 1971, Johns Hopkins University.

**Hazan, Robert M.** Robinson Professor of Earth Sciences. BS 1970, SM 1971, Massachusetts Institute of Technology; PhD 1975, Harvard University.

**Heazur, Camille.** Assistant to the President and Director, Office of Equity and Diversity Services. BA 1968, Dunbarton College of Holly Cross of Washington, DC; MA 1980, Xavier University.

**Hecko, Hugh.** Robinson Professor of Public Affairs. AB 1965, George Washington University; MA 1967, Manchester University, England; PhD 1970, Yale University.

**Heerschap, Marcelle.** Dean, Student Academic Affairs and Advising. BA 1977, Brock University; MA 1980, University of South Florida.

**Heineman-Pieper, Jessica.** Assistant Professor, School of Public Policy. BA 1994, Oxford University; MA 1997, PhD 2005, University of Chicago.

**Heiner, Ronald A.** Professor of Economics. PhD 1975, University of California, Los Angeles.

**Heishman, Ricci.** Instructor, Computer Science. BS 1982, University of Cincinnati; MS 1997, American University; PhD 2007, George Mason University.

**Heller, Kenneth H.** Professor of Accounting. BSBA 1969, MA 1972, University of Florida; PhD 1977, University of Texas, Austin; CPA, Virginia.

**Henderson, Thomas (Tim).** Term Instructor of Health Administration and Policy. BA 1974, North Carolina State University; MS 1979, University of North Carolina; MA 1986, University of Florida.

**Hennessey, James T., Jr.** Chief of Staff. BA 1965, MPA 1973, Eastern Kentucky University; PhD 1997, George Mason University.

**Herbert, Paul.** Affiliate Professor, Administration of Justice. BA 1979, University of Akron.

**Hero, Gregory S.** Executive Director/Professor, Center for Urban and Real Estate Studies; and Research Professor, Civil, Environmental, and Infrastructure Engineering. BA 1978, University of Virginia; MBA 1981, George Washington University.

**Herrity, Frances L.** Codirector, Transfer Center. MA 1996, DA 2000, George Mason University.

**Hevey, Gary R.** Term Professor of Research. BBA 1963, University of Wisconsin at Madison.

**Hicks, Mark A.** Associate Professor of Education. BA 1983, Oklahoma City University; MA 1993, PhD 1998, Teachers College, Columbia University.

**High, Jack C.** Professor of Economics, School of Public Policy. BA 1972, University of Utah; MA 1975, PhD 1980, University of California at Los Angeles.

**Hill, Christopher T.** Professor of Public Policy and Technology, School of Public Policy. BS 1964, Illinois Institute of Technology, Chicago; MS 1966, PhD 1969, University of Wisconsin, Madison.

**Hilmi, Sana.** Term Instructor, Modern and Classical Languages. BA 1998, MA 2002, George Mason University.

Hinton, Roy W., Director of Executive MBA Program. BA 1970, Southern Illinois University; MBA 1975, Pepperdine University; PhD 1981, Northwestern University.

Hitz, Kenneth J., Associate Professor, Electrical and Computer Engineering. BSEE 1967, Purdue University; MSEE 1979, PhD 1981, University of Virginia.

Hirsch, Susan E., Associate Professor of Conflict Resolution. BA 1982, Yale College; PhD 1990, Duke University.

Hjalmarsen, Margret, Assistant Professor of Education. BA 1998, Mount Holyoke College; MS 2000, PhD 2004, Purdue University.

Hobson, Daniel, Production Manager, College of Visual and Performing Arts. BA 1984, George Mason University.

Hodges, Devon Leigh, Professor of English; Associate Director of the Honors Program in General Education. BA 1972, University of California, Berkeley; MA 1977, PhD 1979, SUNY-Buffalo.

Hodzie, Saidha, Associate Professor, Women and Gender Studies. MA 2002, Cologne University, Germany; PhD 2006, University of California, Berkeley and San Francisco.

Holisky, Dee Ann, Senior Associate Dean, College of Humanities and Social Sciences; Associate Professor of English. BA 1969, MA 1974, PhD 1980, University of Chicago.

Holleman, Willem, F.S., Term Research Scholar, School of Public Policy. BS 1980, Utrecht University; MS 1985, Erasmus University.

Holloway, Debra Y., Recreation Program Specialist. 1977, Howard University.

Holman, Emmett Lou, Associate Professor of Philosophy. BS 1963, Pennsylvania State University; MA 1967, PhD 1973, University of Maryland.

Holt, Mack P., Professor of History. BA 1971, MA 1973, Georgia State University; PhD 1982, Emory University.

Honeychuck, Robert V., Associate Professor of Chemistry. BS 1977, Ohio State University; MS 1982, PhD 1984, Michigan State University.

Hoover, Catherine M., Director, Prince William Professional Center, Office of Continuing Professional Education. MA 1986, Virginia Tech.

Hopson, Mark C., Assistant Professor, Communication. BS 1993, Western Michigan University; MA 2002, PhD 2005, Ohio University.

Hosek, Timothy J., Instructor of Geography. BA 1984, SUNY Stony Brook; MS 2004, George Mason University.

Houck, Mark H., Professor, Civil, Environmental, and Infrastructure Engineering. BES 1972, PhD 1976, Johns Hopkins University.

Houser, Daniel E., Professor, Economic Science Laboratory. BA 1989, University of Wisconsin at Madison; PhD 1998 University of Minnesota.

Houser, Paul, Associate Professor, Climate Dynamics. BS 1992, PhD 1996, University of Arizona.

Howard, Tiffany, Assistant Professor of Conflict Resolution and Public Policy. BA 2001, Florida A&M University; MA 2004, PhD 2006, University of Michigan.

Howell, Keith, Associate Dean for Research and Program Evaluation; Professor of Global and Community Health. BS 1967, Pikeville College; MA 1968, Eastern Kentucky University; PhD 1973, University of Toledo.

Howell, Peter, Jr., Research Assistant Professor, Shared Research Instrumentation Facility. BA 1990, Cornell University; PhD 2002, Florida State University.

Hsich, Jim, Assistant Professor, Finance. BS 1991, National Chiao Tung University, Taiwan; MBA 1996, MS 1997, University of Rochester and Carnegie Mellon University; PhD 2002, Ohio State University.

Hsu, Vernon, Associate Professor of Information Systems and Operations Management. BS 1982, Fujian Normal University; MA 1989, PhD 1993, University of Iowa.

Huang, Bohua, Associate Professor, Climate Dynamics. BS 1982, MS 1985, Peking University; PhD 1992, University of Maryland.

Huang, Mei-Ling, Assistant Director, English Language Institute. BA 1961, National Taiwan University; MA 1970, University of Hawaii, Manoa.

Hubler, Sandy, Vice President, University Life. BA 1980, College of Wooster; MA 1983, Ohio State University; EdD 1998, University of San Francisco.

Hudgins, Nicole, Postdoctoral Teaching Fellow, History and Art History. BA 1996, Northwestern University; MA 1998, PhD 2003, University of Virginia.

Huffman, Adam C., General Manager. BS 1994, Longwood College; MS 1997, James Madison University.

Hughes, Allen A., Term Assistant Professor of Management Information Systems. BS 1975, University of Virginia; MS 1981, PhD 1990, Carnegie Mellon University.

Hughes, Joy R., Vice President for Information Technology. PhD 1990, Union Institute.

Hughes Hallett, Andrew, Professor of Public Policy and Economics. BA 1969, University of Warwick; MSc 1971, London School of Economics; DPhil 1976, University of Oxford (Nuffield College).

Huheey, Cynthia A., Director., OCPE-Herndon. BS 1969, MS 1971, Purdue University.

Humbertson, Donald, Lecturer of English. BA 1970, MA 1975, University of Maryland; DAEd 1988, George Mason University.

Hunt, Dennis J., Affiliate Professor of Psychology. BA 1969, University of Texas at Austin; MPhil 1986, PhD 1988, George Washington University.

Hurley, Michael E., Term Assistant Professor of Psychology, Undergraduate Advisor. BA 1984, Hofstra University;
Hussan, Abul, Associate Professor of Chemistry. BSc 1975, MSc 1976, University of Dacca; PhD 1982, University of Pittsburgh.

Hussein, Khaled, Term Assistant Professor of Geography. BS 1981, MS 1988, PhD 1994 University of Minia, Egypt.

Hutchison, James, Assistant Professor, DMIS. BS 1972, Louisiana State University; MBA 1982, PhD 1990, University of Houston.

Hwang, David D., Assistant Professor, Electrical and Computer Engineering. BS 1997, MS 2001, PhD 2005, University of California, Los Angeles.

Hwang, Hyun-Min, Postdoctoral Research Scientist, Chemistry. BS 1993, MS 1995, Hanyang University, Korea; PhD 2001, Texas A&M University.

Iaccoletti, Michelle, Term Assistant Professor, Physics and Astronomy. BS 1993, Mumbai University (India); PhD 2003, University of Delaware.

Iannaccone, Laurence R., Professor of Economics. BS 1975, Stanford University; MS 1977, University of Chicago; MA 1982, PhD 1984, University of Chicago.

Ihara, Emily, Assistant Professor of Social Work. AB 1990, University of California, Berkeley; MSW 1993, University of California, Los Angeles; PhD 2002, Brandeis University.

Ingram, Karen, Coordinator LIFE Program. BIS 2001, George Mason University.

Ioannou, D.E., Professor, Electrical and Computer Engineering. BS 1974, University of Thessaloniki; MS 1975, PhD 1978, University of Manchester.

Isenberg, Joan P., Associate Dean and Professor of Education. BS 1963, MS 1968, Wheelock College; EdD 1978, Rutgers University.

Islam, Khondkar, Instructor of Applied Information Technology. BS 1988, George Mason University; MS 1992, American University.

Jacobs, Mark D., Associate Professor of Sociology. BA 1968, Columbia College at Columbia University; MA 1977, PhD 1987, University of Chicago.

Jacobs, Michael, Assistant Research Associate, Center for Secure Information Systems. BS, George Mason University.

Jafri, M. Saleet, Professor, Chair, Department of Bioinformatics and Computational Biology. BS 1986, Duke University; MS 1988, New York University; PhD 1993, CUNY/Mount Sinai School of Medicine.

Jajodia, Sushil, Professor, Applied Information Technology. BA 1969, MS 1971, Southern Illinois University; PhD 1977, University of Oregon.

Jaju, Anupam, Assistant Professor, Marketing. BE 1994, Regional Engineering College, India; MTech 1996, Indian Institute of Technology, India; PhD 2002, University of Georgia.

Jamison, D. Curtis, Affiliate Faculty, Bioinformatics and Computational Biology. BS 1985, University of Colorado, Boulder; PhD 1992, University of Denver.

Jang, Soojin, Instructor of Education. BA 1997, Seoul Women’s University; MEd 2006, Dankook University.

Jann, Rosemary, Professor of English. BA 1971, Duke University; MA 1972, PhD 1975, Northwestern University.

Jazaeri, Amin, Assistant Professor, Physics and Astronomy. BS 1991, George Mason University; MS 1994, University of Southern California; MS 1996, PhD Candidate, George Mason University.

Jeong, Ho-Won, Professor of Conflict Resolution. BA 1981, Hankuk University; MA 1988, PhD 1993, Ohio State University.

Jiang, Xuxian, Assistant Professor, Computer Science. PhD 2006, Purdue University.

Jin, Emilia K., Research Assistant Professor of Climate Dynamics. PhD 2005, Seoul National University.

Johnsen-Neshati, Kristin, Dramaturg/Artistic Associate, Theater of the First Amendment, College of Visual and Performing Arts; Associate Professor of Theater. BA 1987, Swarthmore College; MFA 1992, Yale School of Drama.

Johnson, Devon, Assistant Professor, Administration of Justice. BA 1994, University of California-Santa Cruz; MA 1996, PhD 2002, University of California-Los Angeles.

Johnson, Susan, Director, Hemlock Overlook. BS 1979, University of North Carolina; MS 1982, Pennsylvania State University.

Johnson, Wallace, Director, Mentor-Protege Program, the Mason Enterprise Center for Regional Analysis and Entrepreneurship, School of Public Policy. BSc 1961, University of Oklahoma; MBA 1973, Alabama A&M University.

Johnston, Joyce, Lecturer of English. BA 1969, Dickinson College; MA 1971, Emory University.

Johnston, Robert Dail, Associate Professor of Finance. BS 1966, MS 1967, PhD 1974, University of Alabama.

Johannott, Edwin, Term Professor of Music.

Joiner, Christopher, Associate Professor, Marketing. BA 1988, Duke University; MBA 1992, Wake Forest University; PhD 1997, University of Minnesota.

Jonas, Robert B., Associate Professor of Environmental Science and Public Policy. BS 1971, University of Miami; PhD 1981, University of North Carolina.
Jones, Charles, Associate Professor of English. BA 1979, St. John’s College, Maryland; PhD 1985, University of Massachusetts.

Jones, Garrett, Assistant Professor of Economics. BA 1992; MPA, 1993; MA 1994; PhD 2000, University of California, San Diego.

Jones, Keith, Assistant Professor, Accounting. BA 1995, Brigham University; PhD 2004, University of Arizona.

Jones, R. Christian, Professor of Environmental Science and Public Policy. BA 1973, Rice University; MA 1977, Vanderbilt University; PhD 1980, University of Wisconsin.

Jones, Susan II, University Registrar. BA 1968; MEd 1971, University of Delaware; MS 1977, State University of New York College at Brockport.

Jordan, Yvette Richards, Associate Professor, Women and Gender Studies. BA 1982, College of William and Mary; MA 1988, 1990; MPhil 1991, PhD 1994, Yale University.

Joshi, Mahesh P., Associate Professor, Management. BS 1981, Diploma in Business Management 1984, St. Xavier’s College, India; PhD 1996, Temple University.

Joyce, James D., Assistant Professor of Dance. BFA 1983, North Carolina School of the Arts; MFA 2003, George Mason University.

Justus, Marianne D., Director, Office of Continuing Professional Education/Herndon. BA, University of British Columbia; MA, Simon Fraser University of British Columbia.

Kafatos, Menas, University Professor, College of Science. AB 1967, Cornell University; PhD 1972, Massachusetts Institute of Technology.

Kaffenger, Carol, Associate Professor of Education. BA 1967, Douglass College; MEd 1973, American University; PhD 1999, George Mason University.

Kalbfleisch, M. Layne, Pomata Term Professor in Cognitive Neuroscience. BA 1991, Kent State University; MEd 1995, PhD 2001, University of Virginia.

Kamenitzer, Richard, Director, Master of Arts in Arts Management; Associate Professor of Arts Management. BS, MBA, Seton Hall; JD, La Salle University.

Kaplan, Deborah, Chair, English; Associate Professor, English. BA 1972, Sarah Lawrence College; MA 1974, PhD 1979, Brandeis University.

Kaplan, Seth, Assistant Professor, Psychology. BS 1998, University of Florida; MS 2003, PhD 2006, Tulane University.

Karametou, Maria, Assistant Professor, Art and Visual Technology. BA 1974, University of Maryland; MFA 1979, Maryland Institute College of Art.

Karton, Alissa, Assistant to the Vice President, University Life. BA 1992, MA 1993, University of Rochester.

Karush, Matthew B., Associate Professor, History and Art History. BA 1990, Columbia University; MA 1992, PhD 1997, University of Chicago.

Kashdan, Todd, Assistant Professor, Psychology. BS 1996, Cornell University; MA 2000, PhD 2004, State University of New York at Buffalo.

Katona, Peter G., Professor, Electrical and Computer Engineering. BS 1960, University of Michigan; MS 1962, PhD 1965, Massachusetts Institute of Technology.

Katz, Mark N., Professor of Government and Politics. BA 1976, University of California, Riverside; MA 1978, Johns Hopkins University; PhD 1982, Massachusetts Institute of Technology.

Kaufmann, David, Associate Professor of English. AB 1980, Princeton University; PhD 1989, Yale University.

Kayler, Mary A., Assistant Professor of Education. BS 1979, State University of New York at Oswego; MS 1992, PhD 1999, Syracuse University.

Keaney, Winifred Gleson, Associate Professor of English. BA 1964, Good Counsel College; MA 1966, Duquesne University; PhD 1975, University of Maryland.

Keenan, John A., Director, Small Business Development Center, Center for Enterprise Research and Development, School of Public Policy. BS 1986, College of William and Mary; MBA 1990, La Salle University.

Keene, Deborah M., Director, Law Library. BA 1974, MLS 1975, Vanderbilt University; JD 1980, University of Tennessee.

Kehoe, Kathleen M., Associate Director, Development Office. BS 1969, University of Dayton; MEd 1997, EdD 2000, George Mason University.

Kehoe, Susan S., Director of Educational Media and Executive Producer, GMU-TV. BA, Illinois College; MS Northwestern University; DA 2000, George Mason University.

Keith, Sarah, Assistant Professor, English. BA 1996, Bucknell University; MFA 2000, University of Iowa.

Keleher, Anne K., Technical Operations Manager, Center for Biodefense and Infectious Diseases. BS 1993, American University.

Kelley, Michael R., Executive Director, Capitol Connection; Distinguished Service Professor. BA 1962, MFA 1965, PhD 1970, Catholic University of America.

Kello, Christopher T., Associate Professor, Psychology. BA 1990, University of Rochester; PhD 1996, University of California, Santa Cruz.

Kelly, Anthony Eammon, Professor of Education. BA 1979, St. Patrick’s College, Dublin; MA 1984, California State University; PhD 1988, Stanford University.

Kelly, T. Mills, Associate Professor, History and Art History. BA 1981, University of Virginia; MA 1988, PhD 1996, George Washington University.

Kendrick, Patricia A., Head Coach, Women’s Volleyball. BS 1983, George Mason University.

Ker-Hackman, Kelly, Term Associate Professor of Music. BM 1982, Cincinnati Conservatory; MM 1985, New England Conservatory; DMA 1993, University of Memphis.

Kerschberg, Larry, Professor, Computer Science. BS 1964, Case Institute of Technology; MS 1966, University of Wisconsin; PhD 1969, Case Western Reserve University.

Kettlewell, Gail, Research Professor, Culture and Arts Management, College of Visual and Performing Arts. BA
Kingston, William, Associate Professor, Center for the Study of Chronic Illness and Disability. BS 1979, MA 1981, Kent State University; PhD 1985, University of Toledo.

Khan, Shahamat U., Research Affiliate Professor, Chemistry. BSc 1957, Agra University, India; MSc 1959, Aghar Muslim University, India; MSc 1964, PhD 1967, Alberta University, Canada.

Khater, Polly, Director of Technical Services, University Libraries. BA 1990, LaSalle University; MLS 1992, University of Pittsburgh.

Kianpour, Ahmad, Lecturer of Chemistry. BS 1945, College of Technology; MS 1950, University of Oklahoma; PhD 1953, University of Colorado.

Kidd, Donna L., Associate Vice President of Budget and Planning. BA 1972, College of William and Mary; MPA 1994, George Mason University.

Kidd, Julie, Associate Professor of Education. BA 1980, University of Richmond; MEd 1992, James Madison University; PhD 1992, Virginia Polytechnic Institute and State University.

Kidd, Mark A., Associate Dean, University Life; Affiliate Professor of Higher Education. BS 1988, MBA 1989, University of Southern Mississipi; PhD 1997, University of Missouri.

Kiley, William Thomas, Associate Professor of Mathematical Sciences. BS 1960, St. Mary's College; PhD 1969, Brown University.

Kilmer, Claudia, Instructor, English Language Institute. BS 1975, Virginia Polytechnic Institute and State University; MEd 1996, George Mason University.

Kim, Steven, Lecturer, Art and Visual Technology. BA 1996, George Mason University.

Kim, Tacha, Assistant Professor, DMIS. BA 1993, MBA 1996, Seoul National University, Korea; PhD 2002, University of Arizona.

Kinas-Jerome, Marci, Assistant Professor of Education. BS 1999, College of New Jersey; MEd 2001, PhD 2008, George Mason University.

King, Eden, Assistant Professor, Psychology. BA 2001, MA 2004, PhD 2006, Rice University.

King, Sara M., Term Assistant Professor, English. AB 1983, Cornell University; MFA 1989, University of Arkansas.

King-Sears, Margaret (Peggy) F., Professor of Education. BS 1977, Valdosta State College; MA 1980, University of North Florida; PhD 1989, University of Florida.

Kingston, William, Affiliate Research Professor. BA 1948, MA 1949, University College at Dublin.

Kinnaman, Theodore, Chair, Department of Philosophy, and Associate Professor of Philosophy. BA 1985, Carleton College; MA 1988, PhD 1995, University of Wisconsin at Madison.

Kinser, Jason M., Associate Professor, Bioinformatics and Computational Biology. BA 1985, William Jewell College; MS 1987, University of Alabama, Huntsville; DSc 1993, South Eastern Institute of Technology.

Kinter, James L., III, Associate Professor, Climate Dynamics. PhD 1984, Princeton University.

Kirkland, Connie J., Director, Sexual Assault Services, University Life. BS 1968, Bowling Green State University; MA 1972, Ohio State University; MA (abt) 1989, George Mason University.

Kirsch, Vicki, Associate Director, Women and Gender Studies. BA 1978, Georgetown University; MA 1980, The University of Chicago; Ph.D.1990, Emory University; MSW 1997, Boston University.

Kitsantas, Anastasia, Associate Professor of Education. BA 1992, BS 1992, MS 1993, Queens College, City University of New York; MA 1995, PhD 1996, Graduate School and University Center, City University of New York.

Kitsantas, Panagoita, Assistant Professor of Health Administration and Policy. BA 1996, Queens College (CUNY); MS 1999, James Madison University; MS 2000, PhD 2003, Florida State University.

Klappert, Peter, Professor of English. AB 1964, Cornell University; MA 1967, MFA 1968, University of Iowa.

Klein, Alexander, Research Professor, Systems Engineering and Operations Research. BS 1978, Moscow State University; PhD 1982, Institute of Mechanics.

Klein, Daniel B., Professor of Economics, BS 1983, George Mason University; PhD 1990, New York University.

Klein, Margaret L., Technical Assistance Specialist, Kellar Institute for Human disAbilities. MA 1982, Marymount University.

Klein, Steven M., Term Instructor of Communication. BA 1989, University of Wisconsin; MA 1997, Michigan State University.

Klmoski, Richard J., Dean, School of Management; Professor of Psychology, Director of Applied Experimental Doctoral Program, Director of Applied Experimental Program. BA 1965, University of Massachusetts; MS 1968, PhD 1970, Purdue University.

Klimov, Dmitri, Assistant Professor, Bioinformatics and Computational Biology. MS 1989, PhD 1992, Moscow State University.

Klinger, Barry, Associate Professor, Climate Dynamics. BS 1985, Massachusetts Institute of Technology; PhD 1992, Massachusetts Institute of Technology and Woods Hole Oceanographic Institution.
Kluger, Matthew J., Vice President for Research and Economic Development. BS 1967, Cornell University; MS 1969, University of Illinois; PhD 1970, University of Illinois; Postdoctoral 1972, Yale University; MBA 1997, Anderson Schools of Management, University of New Mexico.

Knight, G. Diane, Assistant Professor; Counselor, Counseling and Psychological Services. BA 1966, Bethany College; MDiv 1970, Yale University; MS 1978, Loyola College; PhD 1985, University of Maryland.

Koblenz, Gregory D., Assistant Professor of Government and Politics and Deputy Director of Biodefense. BA 1996, Brown University; MPP 1999, Harvard University; PhD 2004, Massachusetts Institute of Technology.

Kocache, Malda, Term Assistant Professor of Biology. BS 1984, American University of Beirut; 1989 PhD, Georgetown University.

Koch, Lisa, Term Associate Professor of English. BA 1987, Washington University; MA 1992, University of Maryland; PhD 2000, University of Maryland.

Kodadek, Marie, Assistant Professor of Nursing. BSN 1974, College of St. Teresa; MSN 1976, University of Colorado, Boulder; PhD 1988, University of Texas, Austin.

Kohn, Ellen, Core Faculty Member, English Language Institute. AB 1972, University of Michigan; MS 1979, Georgetown University.

Koizumi, Naoru, Assistant Professor of Public Policy. BA 1992, Aoyama-Gakuin University; MA 1994, PhD 2002, University of Pennsylvania; PhD 2005, Hyogo Medical College.

Kopf, Jennifer, Instructor of Geography. BA 1989, Miami University; MA 1993, University of Texas at Austin.

Korjus, Jennifer L. W., Director, Learning Support Services, DoIT. BA 1985, Baylor University; JD 1998, University of Texas; MEd 21001, George Mason University.

Korostelina, Karyna, Research Professor, Institute for Conflict Analysis and Resolution. BA 1990, MA 1991, National Kiev University; PhD 1994, Odessa State University; Dr.of Sc. 2003, Ukrainian Academy of Science.

Kosecka, Jana, Associate Professor, Computer Science. MSE, EECS 1988, Slovak Technical University, Bratislava, Slovakia; PhD 1996, University of Pennsylvania.

Koslowsky, Meni, Term Professor, Psychology. BA 1968, City College of New York; PhD 1972, Columbia University.

Koucheravy, Suzanne, Instructor of Dance. BS 1994, Kansas State University.

Kozhevnikov, Maria, Associate Professor, Psychology. BS 1988, Moscow Institute of Physics and Technology, Russia; MS 1991 Uzhgorod State University, the Ukraine; MS 1998 Technion–Israel Institute of Technology; PhD University of California.

Kozlowski, James, Associate Professor of Parks, Recreation, and Leisure Studies. BA 1972, Johns Hopkins University; MA 1973, University of Chicago; MS 1976, University of Illinois; JD 1980, University of Maryland School of Law; PhD 1986 University of Maryland.

Kraus, Richard T., Assistant Professor, Environmental Science and Policy. BS 1994, College of Charleston; MS 1998, College of William and Mary; PhD 2003, University of Maryland.

Kravitz, David A., Associate Professor of Management. BA 1974, Carleton College; MA 1978, PhD 1980, University of Illinois at Urbana-Champaign.

Kravitz, Edward Walter, Professor of Art and Visual Technology. BFA 1964, School of the Art Institute of Chicago; MFA 1967, Syracuse University.

Krekeler, Mark, Assistant Professor, Environmental Science and Policy. BS 1995, MS 1998, University of Cincinnati; PhD 2003, University of Illinois-Chicago.

Kreps, Gary, Chair and Eileen P. and Steve A. Mandell Term Professor of Health Communication. BA 1975, MA 1976, University of Colorado; PhD 1979, University of Southern California.

Krishnan, Gopal V., Associate Professor of Accounting; VSCPA Northern Chapter Professorship in Public Accounting. MBA 1982, Sam Houston State University; PhD 1986, University of North Texas. Chartered Accountant, India; CMA; CPA, Virginia; CISA.

Krisnamurthy, V., Contract Professor of Climate Dynamics. PhD 1985, Massachusetts Institute of Technology.

Kronenfeld, Barry, Assistant Professor, Geography. BS 1993, Cornell University; PhD 2004, State University of New York-Buffalo.

Kuebrich, David Lawrence, Associate Professor of English. AB 1966, Washington University; MA 1969, PhD 1973, University of Chicago.

Kulesza, John S., Professor of Mathematical Sciences. BS 1978, Bucknell University; MA 1981, PhD 1987, State University of New York, Binghamton.

Kulick, Jeffrey, Instructor of Marketing. BA 1970, Oakland University; MBA 1977, Keller Graduate School of Management.

Kulkarni, Rajendra, Research Instructor, School of Public Policy. BS 1979, Karnataka Regional Engineering College, India; MS 1994, George Mason University.

Kysar-Mattietti, Giuseppina, Assistant Professor of Earth Science/Geology. BS 1989, Universita’ degli Studi di Roma; MPhil, 1997, George Washington University; PhD 2001, George Washington University.

Laenmerzahl, Arndt, Instructor, Environmental Science and Public Policy. BS 1983, MS 1990, George Mason University; MS, Texas Tech University.

Lair, Meredith H., Assistant Professor, History and Art History. BA 1994, Ohio University; PhD 2004, Pennsylvania State University.
Lamb, Jennifer, Director of Development. The Volgenau School of Information Technology and Engineering. BA 1989, University of Maryland-College Park; MS 1993, University of Pennsylvania.

Lamb, Harbir, Associate Professor of Mathematical Sciences. BA 1988, Cambridge University; PhD 1993, Bristol University.

Lamothe, Winnie, Term Instructor, Spanish. JD 1987, Universidad San Martin de Porres; MA 1996, Monterey Institute of International Studies.

Lancaster, Roger N., Director, Cultural Studies Program; Professor of Anthropology and Cultural Studies. BA 1982, University of North Carolina; MA 1983, PhD 1987, University of California, Berkeley.

Landsberg, Alison, Associate Professor, History and Art History. BA 1989, Williams College; MA 1991, University of Chicago; PhD 1996, University of Chicago.

Langfred, Claus W., Associate Professor, Management. BS 1993, Washington University in St. Louis; MS 1995, Northwestern University; PhD 1998, Northwestern University.

Langley, Christena, Associate Professor of Nursing. BSN 1970, Georgetown University; MPH 1974, Johns Hopkins University; PhD 1997, George Mason University.

LaPaille, Christine, Vice President for University Relations. BA 1981, Eastern Illinois University; MA 1989, University of Illinois.

Lapel, Christina M., International Tax Coordinator, OIPS. BM 1983, Missouri State University, Springfield, MO.

La Porte, Todd M., Associate Professor, School of Public Policy. BA 1980, Swarthmore College; MA, PhD 1989, Yale University.

Lapple, Judith, Term Professor of Music. BM 1975, Eastman School of Music; MM 1977, Northeast Louisiana University.

Largen, Kim, Term Assistant Professor, Environmental Science and Policy. BA 1980, University of Virginia; MS 1988, PhD 2000, George Mason University.

Larrengana, James J., Head Coach, Men’s Basketball. BA 1971, Providence College.

Laskey, Kathryn Blackmond, Associate Professor, Systems Engineering and Operations Research. BS 1976, University of Pittsburgh; MS 1978, University of Michigan; PhD 1985, Carnegie Mellon University.

Lathbury, Roger Delaire, Professor of English. BA 1967, Middlebury College; MA 1968, Indiana University.

Lattanzi Shutika, Debra L., Associate Professor, English. BSN 1987, West Virginia University School of Nursing; MA 1993, George Mason University; MA 1998, PhD 2001, University of Pennsylvania.

Lawrence, James Franklin, Professor of Mathematical Sciences. BS 1972, Oklahoma State University; PhD 1975, University of Washington.

Lawrence, L. Brian, Professor of Mathematical Sciences. BA 1976, PhD 1984, State University of New York, Binghamton.

Lawrence, Susan, Assistant Professor, English. BA 1982, College of William and Mary; MA 1993, University of Wisconsin, Madison; PhD 2005, Carnegie Mellon University.

Lawrey, James D., Professor of Biology. BS 1971, Wake Forest University; AM 1973, University of South Dakota; PhD 1977, Ohio State University.

Lee, Chi-Hyon, Assistant Professor of Management. BA 1987, University of California; MBA 1991, University of Southern California; PhD 2001, Boston University.

Lee, Fu-Lin Y., Assistant Professor; Counseling Psychologist, Counseling Center. BA 1982, National Taiwan University; MA 1986, PhD 1991, University of Illinois, Urbana-Champaign.

Lee, Hugh, Instructor of Dance.

Lee, Hun, Associate Professor of Management. BS 1986, Georgia Institute of Technology; MBA 1988, Thunderbird School of Global Management; PhD 1995, University of Maryland.

Lee, Un J., Director, Conferences, Association of Writers and Writing Programs.

Leeman, Jennifer, Associate Professor, Modern and Classical Languages. BA 1986, University of Pennsylvania; MA 1988, New York University; MAT 1993, PhD 2000, Georgetown University.

Lees, Peter, Assistant Professor of Economics. BA 2001; PhD 2005, George Mason University.

Lei, Zhike, Assistant Professor, Management. BA 1997, Beijing Institute of Business; MBA 2000, Illinois State University; PhD 2005, University of North Carolina at Chapel Hill.

Leighton, Kimberly, Assistant Professor of Philosophy. BA 1989, Sarah Lawrence College; PhD 2003, University of Massachusetts-Amherst.

Leitch, Pauline, Director, Business Finance Center, Mason Enterprise Center. BA 1967, St. Mary’s College.

Leon, Sharon, Research Instructor, History and Art History. BA 1997, Georgetown University; ABD 2000, University of Minnesota.

Lepore, Jim, Professor of Dance. BA 1987, State University of New York; MFA 1989, Temple University.

Leslie, Timothy, Assistant Professor of Geography. BA 2002, University of Miami; MA 2004, PhD 2007, Arizona State University.

Levine, James Steven, Associate Professor of Russian. BA 1971, BA 1972, State University of New York, Buffalo; MA 1974, PhD 1977, University of Illinois, Urbana-Champaign.

Levy, David M., Professor of Economics. BA 1966, University of California, Berkeley; MA 1970, PhD 1979, University of Chicago.

Levy, Lynn W., Administrative Coordinator for FAST TRAIN. BIS 1997, MS 2000, George Mason University.

Lewis, Edward Miller, Director, of Technology Management Program. BS 1973, University of Maryland; MS 2001, Virginia Polytechnic Institute and State University.

Lewis, Virginia Ann, Director, Retention Initiatives. BS 1975, Towson State University; MA 1979, University of Maryland.

Li, Fei, Assistant Professor, Computer Science. BSc 1997, Jilin University; MS 2002, PhD 2007, Columbia University.

Li, Qiliang, Assistant Professor, Electrical and Computer Engineering. BS 1996, Wuhan University; MS 1999, Nanjing University; PhD 2004, North Carolina State University.

Lichter, Samuel, Professor, Communication. BA 1969, University of Minnesota; PhD 1977, Harvard University.

Lieb, Bernard Joseph, Jr., Professor of Physics and Astronomy. BS 1965, MS 1967, PhD 1971, College of William and Mary.

Lien, Jyh-Ming, Assistant Professor, Computer Science. BS 1999, National Cheng-Chi University; PhD 2006, Texas A&M University.

Light, Andrew, Associate Professor, Philosophy. BA 1989, Mercer University; MA 1992, University of California, Riverside; PhD 1996, University of California, Riverside.

Lim, Teck Cheong, Associate Professor of Mathematical Sciences. BS 1972, Nanyang University; MA 1971, PhD 1974, Dalhousie University.

Lin, Baochuan, Research Assistant Professor, Center for Bioresource Development. BSc 1986, Yang Ming Medical College, Taiwan; MSc 1991, Tsing Hua University, Taiwan; PhD 1998, George Washington University.

Lin, Jeng-Eng, Associate Professor of Mathematical Sciences. BS 1969, National Tsing Hua University; PhD 1976, Brown University.

Lin, Jessica H., Assistant Professor, Computer Science. BS 1999, MS 2002, PhD 2005, University of California, Riverside.

Linehan, Tere, Aignore Development, College of Science. BS 1970, Colorado State University.

Linner, Barry L., Outreach Coordinator, Department of Civil, Environmental, and Infrastructure Engineering. 1996, George Mason University.

Ling, Yan, Assistant Professor, Management. BA 1997, Central University of Finance and Economics; PhD 2004, University of Connecticut.

Linton, Harold, Chair, Department of Art and Visual Technology, and Professor. BFA 1969, Syracuse University; MFA 1972, Yale University.

Liotta, Lance, Codirector, Center for Applied Proteomics and Molecular Medicine, University Professor of Molecular and Microbiology. BA 1969, PhD 1974, MD 1976, Case Western Reserve University.

Liss, Cynthia A., Term Instructor of Nursing. BSN 1978, Lewis University; MHSA 1987, Georgetown University.

Lister, Lisa M., Term Assistant Professor, English. BA 1997, Lewis and Clark College; MFA 2005, American University.

Listokin, Siona R., Assistant Professor of Public Policy. BS 2000, University of Pennsylvania; PhD 2007, University of California, Berkeley.

Litchfield, Carol, Research Associate Professor, Environmental Science and Policy. BSMT 1958, MS 1960, University of Cincinnati; PhD 1969, Texas A&M University.

Little, Anne Miller, Virtual High School Student Coordinator. BS 1985, Purdue University; MEd 1999, George Mason University.

Liu, Yifan, Assistant Professor, Systems Engineering and Operations Research. BS 1998, Fudan University, Shanghai, China; MS 2005, PhD 2006 Stanford University.

Liu, Zhong, Research Associate Professor, Environmental Science and Policy. PhD 1995, Ohio State University.

Lobanova, Ekaterina, Assistant Research Associate, National Center for Biodefense and Infectious Diseases. MD 1998, State Pediatric Medical Academy.

Loerch, Andrew G., Associate Professor of Systems Engineering and Operations Research. BS 1974, Polytechnic Institute of Brooklyn; MS 1980, Naval Postgraduate School; MS 1989, PhD 1990, Cornell University.

Lohner, Rainald, Distinguished Professor of Fluid Dynamics, Department of Computational and Data Sciences. MS 1982, Technische Universitat, Braunschweig, West Germany; PhD 1984, University College of Swansea, Wales.

Long, Lauren, Director of the Office of Student Activities. BS 1994, State University of New York; MA 1996, Indiana State University.

Lont, Cynthia, Professor of Communication, Director of Film and Video Studies. BA 1974, SUNY; MA 1976, Southern Illinois University; PhD 1984, University of Iowa.

Lopez-Santana, Marically, Assistant Professor, Department of Public and International Affairs. BA 1997, University of Puerto at Rio Piedras; PhD 2006 University of Michigan.

Lowry, Beverly F., Professor of English. BA 1960, Memphis State University.
Loustaunau, Philippe, Affiliate Associate Professor of Mathematics. DEUG 1980, Universite de Paris; BA 1983, MS 1985, PhD 1988, University of Wisconsin.

Lowry, Beverly F., Professor of English. BA 1960, Memphis State University.

Lucas, Nance, Associate Dean, New Century College. BA 1982, MA 1984, Pennsylvania State University; PhD 1999, University of Maryland.

Ludwick, Ann M., Graduate Student Coordinator, Public and International Affairs Graduate Programs. BA 1988, Longwood University; MPA 1995 George Mason University.

Lukacs, Yehuda, Associate Provost for International Programs; Director, Center for Global Education; Professor Public and International Affairs. PhD 1989, American University.

Luke, Sean, Associate Professor, Computer Science. BS 1993, Brigham Young University; PhD 2000, University of Maryland.

Lum, Cynthia, Assistant Professor, Administration of Justice. BA 1995, University of California; MS 1996, London School of Economics and Political Science; PhD 2003, University of Maryland.

Lux, Justin, Program Resource Manager. BS 2006, George Mason University.

Lynch, Michael F., Director of University Police. BA 1978, University of Maryland; MA 1992, University of Baltimore; MS 1997, Johns Hopkins University.

Lyons, Michael, Instructor of Applied Information Technology. BAppSc, Chisholm Institute of Technology; MS, University of Maryland University College; Certificate in Coaching and Organizational Learning, George Mason University.

Lyons, Terrence P., Associate Professor, Institute for Conflict Analysis and Resolution. BA 1981, University of Virginia; MA 1985, Michigan State University; PhD 1993, Johns Hopkins University.

Lytton, Randolph Hoopes, Associate Professor of History. BA 1966, Pennsylvania State University; MA 1968, University of Washington; PhD 1973, Pennsylvania State University.

Macfarlane, Allison, Associate Professor, Environmental Science and Policy. BS 1986, University of Rochester; PhD 1992, Massachusetts Institute of Technology.

Madden, Charles, Term Assistant Professor of Biology. BS 1989, Kansas State University; PhD 1996, Louisiana State University.

Maddox, Peggy Jo, Professor and Chair, Health Administration and Policy. BSN 1974, University of Nevada; MSN 1981, Catholic University of America; EdD 1995, Columbia University.

Maddox, Tamara A., Instructor, Computer Science. BS 1987, George Mason University; JD 1991, College of William and Mary.

Maddux, James Eugene, Professor of Psychology; Director, Clinical Clinical Psychology Program. BA 1976, University of Richmond; MA 1979, PhD 1982, University of Alabama.

Magro, Anne M., Associate Professor, Accounting. BA 1987, The University of Michigan, Ann Arbor; MS 1991, The University of Illinois at Urbana-Champaign; PhD 1998, The University of Illinois at Urbana-Champaign.

Maguire, Edward R., Associate Professor, Administration of Justice. BS 1991, University of Massachusetts at Lowell; MA 1992, PhD 1997, University at Albany, SUNY.

Mahler, Julianne G., Associate Professor of Government and Politics. BA 1968, Macalaster College; MA 1970, PhD 1976, State University of New York, Buffalo.

Mahon, Margaret M., Associate Professor of Nursing. BSN 1980, Loyola University; MSN 1982, PhD 1992, University of Pennsylvania.

Maibach, Edward, Professor and Director of Center of Excellence in Climate Change Communication Research; PhD 1990, Stanford University.

Maiello, Anthony Joseph, University Professor of Music. BS 1965, MS 1967, Ithaca College.

Malawer, Stuart S., Distinguished Service Professor of Law and International Trade. BA, University of Buffalo; MA, PhD, University of Pennsylvania.

Malek, Sam, Assistant Professor, Computer Science. MS 2004, PhD 2007, University of Southern California.

Malone, Kirby, Term Assistant Professor, Art and Visual Technology. BA 1975, Antioch College; MFA 2005, George Mason University.

Manca, Germana, Assistant Professor of Geography. PhD 1998, University of Sassari, Italy.

Mancini, Terri A., Director, Sponsored Research Administration, The Volgenau School of Information Technology and Engineering. BS 1993, Strayer University.

Mandaville, Peter P., Assistant Professor, Public and International Affairs. MA 1994, University of St. Andrews, Scotland; MA 1995, PhD 1999, University of Kent at Canterbury, United Kingdom.

Mandes, Evans John, Professor of Psychology and Interdisciplinary Arts; Senior Associate Dean for Budget and Personnel, College of Science. AB 1961, MS 1963, PhD 1966, George Washington University.

Maness, Hilda M., Director of Development, School of Management. BIS 1991, George Mason University.

Mangus, Kathryn K., Term Instructor of Communication; Assistant Director for Student Media. BIS 1987, MAIS 1990, George Mason University.

Manitius, A.Z., Professor and Chair, Electrical and Computer Engineering Department. MSEE 1960, Academy of Mining and Metallurgy, Krakow, Poland; PhD 1968, Polytechnical School of Warsaw.

Mann, Troy, Shared Research Instrumentation Facility. BA 1997, St. Mary’s College.

Mantz, Jeff, Assistant Professor of Anthropology. BA 1993, University of Massachusetts; MA 1996, SUNY Binghamton; PhD 2003, University of Chicago.
Manuel Scott, Wendi N., Assistant Professor, History and Art History. BA 1994, College of Charleston; MA 1997, PhD 2003, Howard University.

Maradiegue, Ann, Assistant Professor of Nursing. BSN 1992, MSN 1995, PhD 2007, George Mason University.

Marcantonio, Carla, Assistant Professor, English. BA 1995, University of Colorado, Boulder; MA 1998, University of Colorado, Boulder; PhD 2007, New York University.

Marchant, Anne J., Associate Director, Mason Center for Conservation Studies; and Professor, Applied Information Technology. BA 1979, University of New Hampshire; MA 1982, PhD 1990, University of California, Berkeley

Marcus, Brian, Associate Dean, Development, and Associate Professor, Arts Management. BA, Brandeis University; MAT, Harvard University.

Mark, Brian L., Associate Professor, Electrical and Computer Engineering. BASc 1991, University of Waterloo; MA 1993, PhD 1995 Princeton University.

Marks, Michelle A., Associate Professor, Management. BS 1991, James Madison University; MA 1993, PhD 1997, George Mason University.

Markx, Francien, Assistant Professor of German. MA (Doctoraal Examen), 1994, MA (Doctoraal Examen), 1994, Universiteit van Amsterdam (The Netherlands); PhD, 2003, University of Illinois, Urbana-Champaign.

Marshall, Monty G., Research Professor, School of Public Policy. BA 1988, University of Colorado; MA 1990, University of Maryland; PhD 1996, University of Iowa.

Masters, Patricia, Term Assistant Professor, Sociology, BA 1990, George Mason University; MA 1993 PhD 1998 American University.

Martin, Melissa A., Assistant Professor of Marketing. BA, 1977, Bucknell University; MBA 1980, University of Pittsburgh; PhD 2004, Kenan-Flagler Business School, University of North Carolina.

Martin, Scott, Assistant Dean, Research, Technology, and Institutional Development, College of Visual and Performing Arts; Associate Professor of Arts Management. BM, MM, Johns Hopkins University; DMA, University of Maryland.

Martin-Vermilyea, Laurie, Term Instructor. BS 1985, Duke University; MS 1987, PhD 1992, University of South Carolina, Columbia.

Masters, Patricia, Term Assistant Professor, Sociology. BA 1990, George Mason University; MA 1993, PhD 1998, American University.

Mastrofski, Stephen D., Professor and Chair, Administration of Justice. BA 1969, University of Iowa; PhD 1981, University of North Carolina at Chapel Hill.

Mastropieri, Margo, University Professor of Education, BA 1978, MEd 1976, University of Massachusetts; PhD 1983, Arizona State University.

Matthews, Jessica, Term Assistant Professor, English. BS 1972, Drexel University; MA 1992, Austin Peay State University; PhD 2005, George Washington University.

Mattusch, Carol C., Mathy Professor of Art History. BA 1969, Bryn Mawr College; PhD 1975, University of North Carolina.

Matveev, Mikhail, Term Assistant Professor of Mathematical Sciences. MSc 1981, PhD 1985, Moscos “M. V. Lomonosov” State University.

Matz, Robert, Associate Professor of English. AB 1986, Cornell University; MA 1988, PhD 1994, Johns Hopkins University.

Maxwell, Joseph A., Professor of Education. BA 1965, Reed College; MA 1971, PhD 1986, University of Chicago.

Mayer, Jeremy D., Associate Professor, School of Public Policy. BA 1990, Brown University; PhD 1996, Georgetown University.

Mazumdar, Prosenjit, Assistant Professor of MIS and Decision Sciences. BSc (Honors) 1979, Presidency College, Calcutta; MS 1984, PhD 1986, University of Maryland, College Park.

Mcauley, William J., Professor, Communication. BA 1968, University of North Carolina-Charlotte; PhD, 1974 Pennsylvania State University.

McBride, Randolph A., Associate Professor of Geology. BA 1982, Wittenberg University; MS 1986, PhD 1997, Louisiana State University.

McCabe, Kevin A., Professor, Economic Science Laboratory. BS 1976, Villanova University; PhD 1985, University of Pennsylvania.

McCann, Cherie, Community Health Services Coordinator. 1999, George Mason University.

McCarthy, Corrine, Assistant Professor, English. BS 1996, University of Illinois, Urbana; MA 1999, University of Pittsburgh; PhD 2007, McGill University.

McClain, John, Deputy Director and Coordinator, Center for Regional Analysis. BS 1965, Duke University; Master’s Degree of City and Regional Planning 1968, University of North Carolina-Chapel Hill.

McCord, Theodore B., Term Assistant Professor of History. BA 1968; MA 1976; George Mason University; PhD 1991, American University.

McCreadie, Jennifer, Director of Program Evaluation and Assessment. BA 1970, University of Wisconsin-Madison; MS 1971, University of Wisconsin-Milwaukee; ABD, University of Illinois.

McCrohan, Kevin F., Professor of Marketing. BS 1967, New York University; MBA 1971, MBA 1974, Baruch College; PhD 1978, City University of New York.

McCutcheon, Megan E., Research Instructor, Sociology and Anthropology. BS 2000, Ohio State University; MA 2002, University of North Carolina at Charlotte.

McDade, Charles F., Senior Associate Athletic Director of Aquatics and Recreational Sports. University of Arkansas.
McDaniel, James Goodlett, Associate Dean and Associate Professor, College of Health and Human Services. BSN 1980, Bartlett College; MSN 1985, East Carolina University; EdD 1988, North Carolina State University; MBA 2002, Jacksonville University.

McDonald, Craig G., Research Assistant Professor, Psychology. BSc, MSc, PhD, University of Victoria.

McDonald, Heather, Term Associate Professor of Theater. BA 1981, Florida State University; MFA 1984, New York University.

McDonald, Michael P., Associate Professor of Government and Politics. BS 1989, California Institute of Technology; PhD 1999 University of California, San Diego.

McDow, Thomas F., Assistant Professor of History. BA 1993, MA 2003, PhD 2008 Yale University.

McElwain, Michal J., Program Development and Outreach Director of Continuing Education and Public Relations, Mason Enterprise Center, School of Public Policy. BA 1996; MA 1998, George Mason University.

McFerson, Hazel M., Associate Professor of Public and International Affairs. BA 1969, University of Massachusetts; MA 1970, Fletcher School of Law and Diplomacy, Tufts University; PhD 1976, Brandeis University.

McKnight, Patrick E., Assistant Professor Quantitative/ Clinical Psychology. BS 1988, University of Notre Dame; MS 1992, PhD 1997, University of Arizona.

McLaughlin, Cynthia, Instructor, Dance. BA 1992, Smith College; MFA 2000, George Mason University.

McNamee, Kevin W., Senior Associate Athletic Director for Intercollegiate Sports. MA 1977, Indiana University.

McNay, Curtis L., Director of Information Technology Security, ITU.

McNeely, Connie L., Associate Professor, School of Public Policy. BA 1973, MA 1976, University of Pennsylvania; MA 1985, PhD 1990, Stanford University.

McQuiggan, Lisa S., Assistant Sports Information Director, Sports Information Department. BS 1993, East Carolina University.

McVicker, Carrie, Events Coordinator, Prince William Campus. BA 1992, Bloomburg University of Pennsylvania.

Meamber, Laurie A., Associate Professor of Marketing. BA 1988, University of California, Davis; MBA 1991, University of California, Riverside; PhD 1997, University of California, Irvine.

Medford, Jeanne D., Assistant Athletic Director for Finance, Intercollegiate Athletics. BS 1982, George Mason University.

Megenigal, J. Patrick, Assistant Professor of Environmental Science and Public Policy. BS 1982, MS 1986, Old Dominion University; PhD 1996, Duke University.

Mehta, Kumar, Assistant Professor, Information Systems and Operations Management. BS 1993, Indian Institute of Technology; MS 1996, Southern Illinois University; PhD 2002, University of Illinois.

Meier, Lisa J., Term Assistant Professor, Psychology. BS 1984, Georgetown University; MA 1989, PhD 1993, George Mason University.

Meier, Robert, Research Professor, Academic Administrative and Student Services. BS 1962, Duquesne University; PhD 1966, University of Pittsburgh.

Meiners, Mark, Professor of Health Administration and Policy Director, Center for Health Policy, Research, and Ethics. BA 1969, University of Wisconsin; MA 1972, PhD 1978, Georgetown University.

Melmed, Arthur S., Research Professor, School of Public Policy. BEE 1950, City College of New York; MSEE 1956, Columbia University.

Menascé, Daniel A., Associate Dean for Research and Graduate Studies, The Volgenau School of Information Technology and Engineering, and Professor of Computer Science. BS 1974, MS 1975, Pontificia Universidade Catolica do Rio de Janeiro; PhD 1978, University of California at Los Angeles.

Merola, Linda M., Assistant Professor, Administration of Justice. BA 1995, Wesleyan University; JD 1998, George Washington University National Law Center; PhD 2007, Georgetown University.

Merten, Alan G., President. BS 1963, University of Wisconsin; MS 1964, Stanford University; PhD 1970, University of Wisconsin.

Meyer, Carrie A., Associate Professor of Economics. PhD 1988, University of Illinois.

Michals, Teresa, Term Associate Professor, English. AB, Cornell University; MA, The Johns Hopkins University; PhD 1996, The Johns Hopkins University.

Middle, Beverly, Term Instructor of Nursing. BS 1979, Radford University; MS 1988, Catholic University of America.

Mielkancie, Margaret, Assistant Professor of Nursing. BSN 1986, MSN 1992, PhD 2001, George Mason University.

Miller, Char R., Assistant Professor of Government and Politics. BA, BS 1990, Idaho State University; PhD 1999, Johns Hopkins University.

Miller, John James, Associate Professor, Statistics. AB 1968, University of Rochester; MS 1969, PhD 1974, Stanford University.

Miller, Katharine, Research Assistant, Life Sciences. BA 1999, University of Virginia.

Miller, Laurie, Instructor of English as a Second Language, English Language Institute. BS 1986, MA 1990, California
Miller, Linda Garner, Associate Dean, Academic Affairs., College of Visual and Performing Arts; Professor of Dance. BFA 1972, University of Cincinnati; MFA 1980, University of Hawaii.

Miller, Nikki, Technical Assistance Specialist. BA 1965, University of Denver; MA 1966, Ohio State University; EdD 1996, University of San Francisco.

Miller, William B., Term Associate Professor of English. BA 1973, University of North Carolina; MFA 1986, George Mason University.

Miller, William, G., Jr., Assistant Director of the Office of Code Compliance. Virginia Apprenticeship Program, George Mason University, Lord Fairfax Community College, and Northern Virginia Community College.

Mircea-Pines, Walter, J., Instructional Technologist and Language Lab Director, Modern and Classical Languages. BA 1985, University Babes-Bolyai; MA 1996, State University of New York at Buffalo.

Mishin, Yuri, Professor, Physics and Astronomy. MSc 1979, PhD 1985, Moscow Institute of Steel and Alloys.

Mitch, Sara R., Term Instructor, English. BA 2000, James Madison University; MA 2002, Penn State University.

Mobley, Phillip M., Lecturer of Geography. BA 1977, Kutztown University; MA 1980, University of Akron.

Mohr, Jonathan J., Assistant Professor, Psychology. BA 1988, University of California, Santa Cruz; MS 1995, California State University; PhD 2001, University of Maryland.

Moidu, Khalid, Associate Professor of Health Administration and Policy. MD 1972, University of Poona, India; MPhil 1989, PhD 1992, Linkoping University, Sweden.

Molloy, Suzanne B., Nurse Practitioner, Student Health Services. MA 1993, George Mason University.

Moloney, Deirdre, Coordinator for Postgraduate Fellowships and Scholarships. BA 1984, St. Lawrence University; MA 1989, PhD 1995, University of Wisconsin, Madison.

Moncure, Thomas, University Counsel. BA, Virginia Military Institute; MA, George Mason University.

Monk, Christopher A., Assistant Professor, Psychology. BA 1992, University of California, Santa Barbara; MA 1997, California State University; PhD 2004, George Mason University.

Monson, Linda Apple, Associate Professor, Associate Chair, Department of Music. BMed 1979, MM 1981, DMA 1986, Peabody Conservatory of Music of the Johns Hopkins University; Diploma (piano performance), Santiago de Compostela, Spain.

Montgomery, Jennifer, Director of Major Gifts, Patriot Club. BA 1999, University of Virginia; MA 2003, Georgetown University.

Moore, Jean Burley, Professor of Nursing. BSN 1964, University of North Carolina, Chapel Hill; MSN 1977, PhD 1984, Catholic University of America.

Moore, Joseph D., Director, Hampton Roads Procurement Technical Assistance Center, Mason Enterprise Center. BS 1975, Loma Linda University; MBA 1990, Webster University; MS 2002, Florida Institute of Technology.

Moraglio, Joseph, Instructor of Accounting. BS 1957, College of the Holy Cross.

Morelli, Julia G., Director of Operations, Capitol Connection. MA 1995, George Mason University.

Morgan, Glenda, Director of Technology and Learning Initiatives, College of Humanities and Social Sciences. BA 1986, University of Cape Town, South Africa; MA 1992, Rhodes University; PhD 2002, University of Minnesota.

Mori, Kyoko, Associate Professor, English. BA 1979, Rockefeller College; MA 1981, PhD 1984, University of Wisconsin-Milwaukee.

Morowitz, Harold J., Robinson Professor of Biology and Natural Philosophy. BS 1947, MS 1950, PhD 1951, Yale University.

Morozov, Victor, Research Assistant Professor, National Center for Biodefense. MS 1971, Kharkov State University; PhD 1976, ScD 1988, Moscow State University.

Morozova, Irina, Research Instructor, School of Public Policy. BA 1999, Pyatigorsk State Linguistic University; MA 2000, Central European University.

Morris, Walter D., Jr., Professor of Mathematical Sciences. BS 1980, Iowa State University; MS 1984, PhD 1986, Cornell University.

Mose, Douglas, Professor of Geochemistry. BS 1965, University of Illinois; MS 1968, PhD 1971, University of Kansas.

Moss, Margaret M., Term Instructor of Nursing. Diploma in Nursing 1965, Whidden Memorial Hospital School of Nursing; BSN 1982, MSN 1991, PhD 2007, George Mason University.

Motto, Amihai, Professor, Computer Science. BS 1972, Tel Aviv University; MS 1976, Hebrew University of Jerusalem; PhD 1981, University of Pennsylvania.

Mouri, Nacef, Assistant Professor of Marketing. BS 1993, Higher International Institute of Tourism Studies; MBA 1997, PhD 2005, University of Central Florida.

Moy, Christopher T., Director, Office of Disability Services. BS 1996, MS 1998, Boston University.
Moye, Allen R., Associate Director for Public Services, University Libraries. BA 1982, Howard University; JD 1990, University of Richmond; MLS 1999, Catholic University of America.

Moye, Neta A., Assistant Dean, Executive Education, School of Management. BS 1995, Florida State University; PhD 2001, University of Maryland.

Muir, Janette Kenner, Associate Professor, New Century College and Communication. BS 1979, Palm Beach Atlantic College; MA 1983, Wake Forest University; PhD 1986, University of Massachusetts.

Muir, Star A., Associate Professor of Communication. BA 1980, Wake Forest University; MA 1982, University of Central Florida; PhD 1990, University of Pittsburgh.

Mulvani, V.R., Professor, Electrical and Computer Engineering. MS 1983, PhD 1985, Oregon State University.

Murphy, James Owen, Jr., Instructor; Director of Intramural Recreation. BS 1975, George Mason University.

Murphy, Jennifer O., Assistant Vice President of Research and Economic Development, Director of Technology Transfer. MBA 1982, American University.

Murphy, Uma M., Associate Director, Development Office. BA 1989, Brooklyn College.

Murray, Kevin P., Managing Director, Theater of the First Amendment. BA 1975, University of Maryland.

Mushrush, George William, Professor of Chemistry; BS 1962, Indiana University of Pennsylvania; MS 1965, PhD 1968, George Washington University.

Muthuswamy, Nithya, Assistant Professor, Communication. BA 1996, Maharaja Sayajirao University, India; MA 1998, Tata Institute of Social Sciences, India; MA 2003, PhD 2005, Michigan State University.

Nadeau, Robert Lee, Professor of English. BA 1966, University of the South; MA 1967, PhD 1970, University of Florida.

Nagleri, Jack A., Professor of Psychology; Director, School Psychology Program. BA 1972, C.W. Post of Long Island University; MA 1975 St. John’s University; PhD 1979, University of Georgia.

Nakles, Robert E., Director, Information Technology Project Office, Information Technology Unit. BS, Indiana University of Pennsylvania; MS, Shippensburg University of Pennsylvania.

Nambari, Kannan, Advisor, Student Services. BA 1974, Herbert H. Lehman College, CUNY; MA 1979, PhD 1984, State University of New York, Stony Brook.

Nan, Susan H. Allen, Assistant Professor. BA 1992, University of Virginia; MS 1995, PhD 2000, George Mason University.

Nanian, Richard A., Term Assistant Professor of English. BA 1984, Simon’s Rock College; MA 1995, Salem State College; PhD 2000, University of Wisconsin-Milwaukee.

Naor, Michael, Assistant Professor, Information Systems and Operations Management. BS 1994, Israel Institute of Technology; MBA 1998, Tel-Aviv University; PhD 2005, University of Minnesota.

Napolean, Domenico, Assistant Professor of Mathematical Sciences. MS 1999, PhD 2005, George Mason University.

Nash, Stephen G., Professor, Systems Engineering and Operations Research. BSc 1977, University of Alberta, Canada; PhD 1982, Stanford University.

Nasser, Ilham, Assistant Professor of Education. BA 1985, MA 1987, Hebrew University, Jerusalem; PhD 1997, University of Maryland.

Nauright, John, Professor of Education. BA 1985, MA 1988, University of South Carolina; Ph.D. 1992 Queen’s University, U.K.

Ndura, Elavie, Associate Professor of Education. BA 1983, University of Burundi; MEd 1987, University of Exeter; EdD 1994, Northern Arizona University.

Neill, Sheri L., Assistant Professor of Music. BME 1970, Texas Tech University; MEd 1983, Stephen F. Austin University; PhD 1998, University of Missouri-Kansas City.

Nelson, Jill Karen, Assistant Professor, Electrical and Computer Engineering. BS 1998, Rice University; MS 2001, PhD 2005, University of Illinois at Urbana-Champaign.

Nemion, Howard, Assistant Professor, BA 1995, University of Michigan, MSW 1996, University of Michigan, PhD 2002, University of Pennsylvania.

Neuber, Kristine, Instructor of Education. BS 1992, Southeastern Connecticut State University; MEd 1997, George Mason University.

Ngalabak, Helen Habila, Assistant Professor, English. BA 1995, University of Jos.

Nguyen, Baotran, Assistant Director, English Language Institute. BA 1997, MA 2000, George Mason University.

Nguyen, Cuong T., Associate Professor of Religious Studies. BA 1970, Van Hanh University, Vietnam; MA 1979, University of California at Santa Barbara; AM 1982, PhD 1990, Harvard University.

Nguyen, Hung M., Associate Professor of Government and Politics. LLB 1960, University of Saigon; MA 1963, PhD 1965, University of Virginia.

Niblock, Janet R., Executive Director, Office of Continuing Professional Education. MA 1992, Virginia Tech.

Nichols, Melissa M., Assistant Professor, English. BA 1993, Northern Kentucky University; MFA 1999, George Mason University.

Nicogossian, Arnauld E.T., Distinguished Research Professor, School of Public Policy. BA 1956, Lycée Franco-Iranian Razi, Iran; MD 1964, Tehran University; MS 1972, Ohio State University.

Nicotera, Anne Maydan, Associate Professor, Communication. BA 1985, Utica College of Syracuse University; MA 1987, State University of New York at Albany; PhD 1990, Ohio University.

Nikoi, Andrea H., Director of Finance and Human Resources. BS 1987, MBA 1991, Louisiana State University, New Orleans.
Nicolova, Stanislava, Assistant Professor of Finance. BS 1998, State University of New York-Genesee; PhD 2004, University of Florida.

Nickens, Michael, Assistant Professor of Music. BM 1998, Manhattan School of Music; MM 2001, Yale University; DMA 2006, University of Michigan.

Norden, Luanne, Instructor and Coordinator of Student Teaching. BS 1981, MA 1984, University of Nebraska.

Nordstrom, David, Instructor, Computer Science. BA 1971, University of Michigan; PhD 1976, University of California, Berkeley.

Normile, Loretta A., Assistant Professor of Nursing. BSN 1972, MN 1977, University of Pittsburgh; PhD 1989, American University.

Norris, Eugene Michael, Associate Professor of Computer Science. BA 1962, University of South Florida; PhD 1969, University of Florida.

Norton, Priscilla, Professor of Education. BS 1972, Lewis and Clark College; MS 1978, Oregon College of Education; EdD 1982, United States International University.

Nuamah, Kukuwaa, Term Instructor, Dance. BA 1979, Université Nationale de Côte d’Ivoire.

Nuttall, Thomas J., Term Instructor, Mathematical Sciences. BS 1965, State University of New York at Oneonta; MS 1971, Rutgers University.

Nutter, Sarah E., Associate Professor of Accounting. BS 1980, Ferris State; MBA 1983, PhD 1993, Michigan State University.

Nye, John, Professor of Economics. BS 1981; MA 1983; PhD 1985, Northwestern University.

O’Beirne, Richard C., Term Instructor of Mathematics. BA 1971, Fordham University; MA 1972, St. John’s University.

O’Brien, Alison S., Assistant Professor and Associate Dean of Undergraduate Programs, School of Management. BS 1982, University of Florida; MBA 1986, Brenau College; BS 1995, MA 1998, PhD 2000, George Mason University.

O’Connor, John Sylvester, Professor, New Century College. AB 1968, University of Michigan; MA 1969, PhD 1974, University of Virginia.

Oerter, Robert N., Term Associate Professor, Physics and Astronomy. BA 1983, Swarthmore College; MS 1987, PhD 1989, University of Maryland.

O’Ffutt, A. Jefferson, Professor, Computer Science. BS 1982, Morehead State University; MS 1985, PhD 1988, Georgia Institute of Technology.

Oh, Kyeung Mi, Assistant Professor of Nursing. BA 1998, University of Newcastle; MS 1999, University of Sydney; PhD 2005, University of Sheffield.

O’Halloran, Brian, Term Assistant Professor, Physics and Astronomy. BS 1998, NUI-Maynooth; PhD 2003, University College-Dublin.

Olds, James, Director, University Professor of Neuroscience, Krasnow Institute for Advanced Study. BA 1978, Amherst College; PhD 1987, University of Michigan.

Olsen, Jon B., Postdoctoral Teaching Fellow, History and Art History. BA 1993, St. Olaf College; MA 1997, George-town University; PhD 2004, University of North Carolina at Chapel Hill.

O’Malley, Michael, Associate Professor of History. BA 1981, Temple University; MA 1984, PhD 1988, University of California, Berkeley.

Opher, Merav, Assistant Professor, Physics and Astronomy. BS 1992, PhD 1998, University of Sao Paulo.

Orens, John, Term Associate Professor of History. BS 1965, University of Wisconsin; MA 1968, PhD 1976, Columbia University.

Ostvold, Ludmila, Term Instructor of Mathematical Sciences. BS 1990, MS 1992, Moscow State Pedagogical University.

Osborne, Catherine J., Term Instructor, Modern and Classical Languages. BA 1995, Ohio Wesleyan University; MA 1999, University of Florida.

O’Shaughnessy, Thomas J., Research Assistant Professor, Center for Bioresource Development. BS 1990, Johns Hopkins University; MS 1992, PhD 1997, University of Virginia.

Osterling, Jorge P., Associate Professor of Education. BS 1971, Catholic University of Peru; MS 1973, PhD 1978, University of California, Berkeley.

Owen, Julie E., Assistant Professor of New Century College. BA 1993, College of William and Mary; M. Ed 1996, James Madison University.

Owens, Thomas C., Associate Professor of Music. BA 1991, University of North Carolina, Greensboro; MA 1994, PhD 1999, Yale University.

Owens Lawson, Sandra, Assistant Professor, Social Work.

Pachowicz, Peter W., Associate Professor, Electrical and Computer Engineering. MS 1981, PhD 1984, Stanislaw Staszic University of Mining and Metallurgy.

Paczynska, Agnieszka, Assistant Professor, BA 1989, New York University; MA 1991, New York University; PhD 2002, University of Virginia.

Paden, John, Robinson Professor of International Studies. BA 1959, Occidental College; MA 1961, Oxford University; PhD 1968, Harvard University.

Paden, Roger K., Associate Professor of Philosophy. BS 1974, MA 1977, PhD 1981, University of Illinois.

Paelinck, Jean P.H., Distinguished Term Professor, School of Public Policy. Doctor of Law, Master in Economics 1948–54, University of Liege, Belgium.
Palkovich, Ann M., Associate Professor of Anthropology. AB 1974, University of Chicago; MA 1976, PhD 1978, Northwestern University.

Palmer, Lene, Collection Development and Preservation Librarian. BA 1971, University of Maryland; MLS 1988, University of Maryland.

Pankova, Marianna, Term Assistant Professor, German. BA 1997, Lawrence University; PhD 2006, Georgetown University.

Pant, Ramesh R., Term Assistant Professor, Chemistry. BSc 1989, MSc 1993, Tribhuvan University, Nepal; MPhil 2000, Kathmandu University, Nepal.

Panniers, Teresa L., Associate Professor of Nursing. AAS 1972, Monroe Community College; BS 1976, Empire State College; MS 1979, PhD 1991, University of Rochester.

Paolitto, Anthony Jr., Associate Professor, Psychology. BS 1980, MA 1983, PhD 1988, University of Connecticut.

Papaconstantopoulos, Dimitrios A., Professor of Physics and Chair, Department of Computer and Data Sciences. BS 1961, University of Athens; DIC 1963, Imperial College of London; MS 1964, PhD 1967, University of London.

Parasuraman, Raja, University Professor, Psychology; Director, Human Factors/Applied Cognitive Psychology Program. BS 1972, University of London; MS 1973, PhD 1976, Aston University.

Parham, Candace S., Instructor of Athletic Training. BS 2003, University of Virginia; MS 2005, George Mason University.

Paris, Bernd-Peter, Associate Professor, Electrical and Computer Engineering. Dipl-Ing 1986, Ruhr University, Germany; PhD 1990, Rice University.

Park, Chong (Holly), Director of Fiscal Services. BS 1997, MBA 2001, Old Dominion University.

Park, Julie Kim, Term Assistant Professor of English. BA 1993, MS 1994, PhD 2000, University of Pennsylvania.

Park, Minkyoung, Assistant Professor of Tourism and Event Management. BA 1990, MA 1993, Han Yang University, Korea; MS 1996, Pennsylvania State University; PhD 2000, Texas A&M University.

Parker, Cindy W., Assistant Professor, Management. BS 1992, MA 1994, PhD 1998, George Mason University.

Parker, Dawn, Assistant Professor, Department of Computational Social Science. BA 1992, Lewis and Clark College; PhD 2000, University of California at Davis.

Parker, Shermita Rochelle, Director of Development, College of Education and Human Development. BA 1992, Boston College; JD 1995, University of Maine Law School.

Parsons, E.C.M., Term Associate Professor, Environmental Science and Policy. BA 1991, MA, Oxford University; PhD 1996, University of Hong Kong.

Pasnak, Robert, Professor of Psychology. BS 1964, University of Maryland; MS 1965, PhD 1969, Pennsylvania State University.

Patten, Meredith L., Research Assistant Professor, Administration of Justice. BA 1996, Occidental College; MS 1997, The American University.
Peters, Erin, Assistant Professor of Education. BS 1990, University of Illinois, Urbana-Champaign; MEd 2004, University of Virginia; PhD 2008, George Mason University.

Petersen, John E., Professor, School of Public Policy. BA 1962, Northwestern University; MBA 1964, PhD 1967, University of Pennsylvania-Philadelphia.

Peterson, Matthew S., Associate Professor of Psychology. BA 1992, University of Tennessee, Knoxville; MA 1994, PhD 1997, University of Kansas.

Peterson, Todd E., Affiliate Professor of Mathematics. AB 1983, MA 1987, PhD 1990, Cornell University.

Petricoin, Emanuel F., Professor, History and Art History. AB 1969, Cornell University; MFA 1973, University of Montana; MA 1979, PhD 1982, State University of New York at Batavia.

Pevzner, Mikhail B., Assistant Professor, Accounting. BS 1999, University of Minnesota; MSBA 2004, Washington University in St. Louis; PhD 2007, Washington University in St. Louis.

Pflueger, James P., University Professor, School of Public Policy. BA 1968, MA 1972, PhD 1975, University of Wisconsin, Madison.

Philippov, Alexander, Assistant Professor, Finance. MS 1996, University of Massachusetts, Amherst; PhD 2003, Boston College.

Philpot, Frank Allen, Assistant Professor of Marketing. BA 1967, Vanderbilt University; MA 1968, PhD 1972, Stanford University.

Pierce, Lorraine V., Associate Professor of Education. BS 1974, University of Texas, Austin; MA 1976, University of Texas, San Antonio; PhD 1984, Georgetown University.

Pihljan, Jean, Associate Professor of Geography. BA 1969, MA 1974, University of Ottawa; PhD 1983, Université de Montréal.

Platt, Brian W., Chair, Department of History and Art History; Associate Professor of History. BA 1992, Guilford College; PhD 1998, University of Illinois.

Pober, Peter M., Director of Forensics and Term Associate Professor of Communication. BA 1984, University of Pennsylvania; MA 1991, PhD 1996, University of Texas, Austin.

Poland, Arthur L., Research Scientist, Computational and Data Sciences, Physics and Astronomy. PhD 1969, Indiana University.

Polayes, Deborah, Assistant Professor, Molecular and Microbiology. BS 1978, University of Connecticut; PhD 1983, Michigan State University.

Pollard, Jeffrey, Director, Counseling Center. BA 1970, MS 1974, Old Dominion University; PhD 1978, University of Virginia.

Popov, Serguei, Professor, National Center for Biodefense and Infectious Diseases. MS 1972, PhD 1977, ScD 1992.

Pompeo, Taisia, Associate Professor, National Center for Biodefense and Infectious Diseases. BA 1972, Novosibirsk University; PhD 1986, All-Union Research Institute for Applied Molecular Biology.

Portillo, Shannon K., Assistant Professor, Administration of Justice. BA 2004, PhD, 2008, University of Kansas.

Powderly, Paul L., Professor, Director of MPA Program, Public and International Affairs. BA 1968, Miami University; MA, MPhil 1972, PhD 1995, Columbia University.

Powell, Gerald, Term Assistant Professor, Communication. MA 2000, PhD 1983, Howard University.

Price, Elizabeth, Chair of Dance Department and Associate Professor of Dance. BA 1972, Randolph-Macon Women’s College; MA 1978, New York University.

Price, James, Research Faculty, Conflict Analysis and Resolution. BA 1972, Lawrence University; MA 1976, PhD 1980, University of Chicago.

Pullen, J. Mark, Professor, Computer Science. BS 1970, MS 1972, West Virginia University; PhD 1981, George Washington University.

Qu, John, Associate Professor, Earth Systems and Geoinformation Sciences. BS 1983, Nanjing Institute of Meteorology; MS 1993, PhD 1997, Colorado State University.

Quesnell, Harris, Research Associate, Center for Secure Information Systems. BS 1973, San Diego State University.

Quinn, Patrick J., Director of Student Accounts. BA 1997, University of Phoenix; MBA 2001, Arizona State University.

Quinn, Robert T., Instructor of Applied Information Technology. AB, MBA, Fordham University.

Rabin, Lisa Marie, Associate Professor of Spanish. BA 1986, Pomona College; MA 1990, PhD 1993, Yale University.

Rader, Victoria Fries, Associate Professor of Sociology. BA 1966, University of California, Berkeley; MA 1968, PhD 1973, University of Chicago.

Raffel, Dorothy, Term Instructor, English. MA 1974, MBA 1978, University of California, Los Angeles.
Reinert, Kenneth J., Associate Professor of Public Policy. BA 1980, MA 1982 Boston University; MA 1985, PhD 1988 University of Maryland.

Reinsburg, Robin E., Associate Dean, College of Health and Human Services; Director and Professor, School of Nursing. BSN 1978, MSN 1982, University of North Carolina; PhD 1994, University of Maryland.

Rendler, Elaine, Visiting Associate Professor of Music. BMEd 1968, Immaculata College; MM 1972, DMA 1978, Catholic University.

Rennick, Walter L., Lecturer of Geography. BS 1965, Stanford University; MA 1973, University of California, Santa Barbara.

Resmini, Ronald G., Research Professor, Earth Systems and Geoinformation Sciences. BS 1984, Northeastern University; MA 1989, Boston College; PhD 1993, Johns Hopkins University.

Reybold, L. L. Earle, Associate Professor of Education. BA 1990, MA 1992, PhD 1996, University of Georgia.

Reynolds, Thomas, Director of Artistic Programming, Marketing and Audience Services, College of Visual and Performing Arts. 1979, Luther College.

Richards, Dana S., Associate Professor, Computer Science. MS 1976, University of Virginia; PhD 1984, University of Illinois.

Richards, Phillip, Research Professor of Physics. BS 1972, La Trobe University; PhD 1978, La Trobe University.

Richardson, Gary, Professor of Economics. BA 1988, PhD 1999, University of California at Berkeley.

Richardson, Margaret A., Term Assistant Professor, Art History. BA 1998, Mary Baldwin College; MA 2000, PhD 2005, Virginia Commonwealth University.

Ricouart, Janine M., Professor of French. Eng Lic 1973, Universite de Lille, France; PhD 1986, University of California, Davis.

Riggle, James D., Research Assistant Professor, School of Public Policy. BA 1978, MPA 1980, Northern Illinois University; PhD 2002, George Mason University.

Rikard, G. Linda, Associate Professor of Physical Education. BS 1970, Winthrop University; ME 1972, University of Georgia; EdD 1979, University of North Carolina, Greensboro.

Rieux-Bailey, Carmen, Instructor of Special Education. BA 1986, Marymount University; MEd 1997, George Mason University; EdD 2003, George Washington University.

Riskind, John Haskell, Professor of Psychology. BA 1970, University of Texas, Austin; PhD 1977, Yale University.

Ritchie, Dennis J., Elisabeth Shirley Enocks Chair in Child Welfare and Professor of Social Work. BA 1971, State University of New York at Stony Brook; MSW 1976, University of Pennsylvania; PhD 1981, Syracuse University.

Ro, Young-chan, Chair, Department of Religious Studies, and Associate Professor of Religious Studies. BTh 1965, MTh 1969, Yonsei University; MTh 1973, Union Theological Seminary; PhD 1982, University of California, Santa Barbara.

Roan, Jeanette, Assistant Professor, English. BA 1992, Brown University; MA 1997, PhD 2001, University of Rochester.
Robb, Charles S., Distinguished Professor of Law and Public Policy. BBA 1961, University of Wisconsin; JD 1973, University of Virginia.

Robb, Daniel, Director of Graduate Admissions. BA 1984, State University of New York at Albany; MA 1985, Columbia University; MBA 1997, University of Massachusetts-Boston.

Robbins, Suzanne, Assistant Professor, Public and International Affairs. BA 1990, University of Tennessee; MA 1997, University of South Carolina; MA 1999, PhD 2003, State University of New York at Stony Brook.

Roberts, Francine E., Assistant Professor of Nursing. BS 1967, Brigham Young University; MS 1971, State University of New York, Buffalo; PhD 1997, George Mason University.

Roberts, Russell D., Professor of Economics. BA 1975, University of North Carolina; PhD 1981, University of Chicago.

Robinson, David M., Director, Client Relations, ITU. MS 1976, University of Albany-SUNY.

Robinson, Iris M., Associate Registrar for Graduation. AB, Vassar College; MPA, State University of New York at Albany.

Rockmann, Kevin, Assistant Professor, Management. BS 1999, PhD 2004, University of Illinois at Urbana-Champaign.

Rockwood, Larry Lewis, Associate Professor of Biology and Environmental Science and Policy. BS 1965, PhD 1972, University of Chicago.

Rodgers, Ellen B. Drogin, Associate Dean, Associate Professor of Parks, Recreation, and Leisure Studies. BA 1982, Hood College; MA 1985, University of Maryland; PhD 1991, Pennsylvania State University.

Rodgers, R. Pierre, Associate Professor of Sports Management. BA 1964, University of Alabama; MA 1986, Memphis State University; PhD 1991, Pennsylvania State University.

Roe, David A., President, GMU Foundation Inc. MBA 1997, University of Massachusetts-Boston.

Roth, Lori A., Director of Training and Development, Human Resources. BA 1985, MA 1987, Michigan State University; PhD 2003, Virginia Polytechnic Institute and State University.

Rothbart, Daniel, Professor of Philosophy and Conflict Analysis. BA 1972, Fairleigh Dickinson University; BA 1975, SUNY at Binghamton; PhD 1978, Washington University.

Rouhana, Nadim, Henry Hart Rice Professor. BA 1972, University of Haifa, Israel; MA 1979, University of Western Australia; PhD 1985, Wayne State University.

Rowan, Katherine, Professor of Communication. BA 1975, George Mason University; MA 1978, University of Illinois; PhD 1985, Purdue University.

Rowe, Ellen W., Assistant Professor, Psychology. BA 1983, Davidson College; MA 1995, College of William and Mary; PhD 2005, University of Georgia.

Rowley, Charles, Professor of Economics. PhD 1964, University of Nottingham.

Royo, Paulette W., Associate Professor of Biology. BS 1967, MS 1971, American University; PhD 1974, University of Maryland.

Rozell, Mark, Professor and Director, MPP Program. BA 1982, Eisenhower College; MA 1983, PhD 1987, University of Virginia.

Rubenstein, Richard E., University Professor of Conflict Resolution and Public Affairs. BA 1959, Harvard University; MA 1961, Oxford University; JD 1963, Harvard University.

Rubin, Philip D., Associate Professor, Physics and Astronomy. AB 1976, University of Pennsylvania; MA 1980, MS 1986, PhD 1989, University of California, Los Angeles.

Rudder, Catherine E., Professor, School of Public Policy. BA 1969, Emory University; MA 1972, PhD 1973, Ohio State University.

Rudnicki, Mark S., Term Assistant Professor, English. BA 1991, St. Bonaventure University; MA 1993, University of Memphis; PhD 2003, SUNY, Buffalo.

Rudowski, Lorraine, Assistant Professor of Global and Community Health. BSN 1980, MSN 1983, George Mason University.

Ruiz, Valery, Instructor of English as a Second Language, English Language Institute. BA 1987, Oklahoma State University; MA 1992, George Mason University.

Rustici, Thomas, Term Instructor of Economics. BA 1985, MA 1987, George Mason University.

Ruth, Stephen Ruddy, Professor and Director, International Center for Applied Studies in Information Technology, School of Public Policy. BS 1955, U.S. Naval Academy; MS U.S. Naval Postgraduate School; PhD 1971, University of Pennsylvania.

Rutledge, Amelia Ann, Associate Professor of English. BA 1968, Michigan State University; MPhil 1972, PhD 1974, Yale University.

Rytikova, Ioulia, Assistant Professor, Applied Information Technology. BS, MS 1993, PhD 1997, Technological University, Moscow, Russia.

Saco, John F., Associate Professor of Government and Politics. BA 1965, PhD 1973, Pennsylvania State University; MPA 1968, New York University.

Sachs, Robert L., Professor, Mathematical Sciences. BA 1976, Harvard University; PhD 1980, Courant Institute, New York University.

Sage, Andrew P., Professor, Systems Engineering and Operations Research. University Professor and First American Bank Professor; Founding Dean Emeritus, The Volgenau School of Information Technology and Engineering. BSEE, Citadel; MSEEE, Massachusetts Institute of Technology; PhD 1960, Purdue University; DEng 1986, University of Waterloo; 1997, Dalhousie University.

Salamonowicz, Paul H., Instructor of Geography. BS 1976, Cornell University; ME 1983, Virginia Polytechnic Institute and State University; MS 1990, PhD 1999, George Mason University.

Samara, R. Tony, Assistant Professor, Sociology and Anthropology. BA 1992, St. Lawrence University; MA 1995, City University of New York; MA 1997, UCSB

Samaras, Anastasia P., Associate Professor of Education. BA 1972, MEd 1976, PhD 1990, University of Maryland.

Sample, Mark, Assistant Professor, English. BS 1994, Miami University; MA 1998, Georgetown University; MA 2000, PhD 2004, University of Pennsylvania.

Samuelian, Kristin F., Term Associate Professor, English. BA 1983, Catholic University of America; MA 1984, Boston University; PhD 1992, Boston University.

Samuels, Linda Bartman, Professor of Business Legal Studies. BA 1970, Queens College; MPA 1971, State University of New York, Albany; JD 1975, University of Virginia.

Sanchez, Sylvia Y., Associate Professor of Education. BS 1969, Long Island University; MS 1975, Brooklyn College; EdD 1985, University of Houston.

Sandell, Renee, Professor, Art and Visual Technology. BA 1972, City College of New York; MA 1974, PhD 1978, Ohio State University.

Sander, Evelyn, Associate Professor of Mathematical Sciences. BA 1990, Northwestern University; PhD, 1996, University of Minnesota.

Sandole, Dennis J.D., Professor of Conflict Resolution and International Relations. BA 1967, Temple University; PhD 1979, University of Strathclyde.

Sanford, James Francis, III, Associate Professor of Psychology; Associate Chair for Undergraduate Studies, Department of Psychology. BA 1966, Ohio Wesleyan University; MS 1968, PhD 1973, Kansas State University.

Sandhera, Kamaljeet, Instructor of Applied Information Technology. BA 1996, Delhi University; MS 2001, George Mason University.

Sanusi, Ramonu A., Assistant Professor, Modern and Classical Languages. BA 1992, Obafemi Awolowo University; MA 1994, University of Ibadan; PhD 2004, University of Oregon.

Saperstone, Stephen Harold, Professor of Mathematical Sciences. BEP 1962, Cornell University; MA 1965, PhD 1970, University of Maryland.

Satyapal, Shobita, Associate Professor. Physics and Astronomy. BA 1988, Bryn Mawr College; MA 1990, PhD 1995, University of Rochester.

Sauer, Timothy D., COS Distinguished Scholar; Professor of Mathematical Sciences. BS 1977, Michigan State University; PhD 1982, University of California, Berkeley.

Saunders, Catherine E., Term Assistant Professor of English. BA 1986, Harvard University; MA 1998, PhD Candidate, Princeton University.

Saunders, Karen L., Research Instructor, School of Public Policy. BA 1993, Tufts University; MA 2002, American University.

Scales, Rebecca P., Postdoctoral Teaching Fellow, History and Art History. BA 1998, Hollins College; MA 2000, University of Georgia; PhD 2006, Rutgers University.

Scarlata, Jessica, Assistant Professor, English. BA 1993, Tufts University; MA 1998, PhD 2004, New York University.

Schack, Frederick K., Associate Professor of Health and Physical Education. BA 1965, MA 1972, California State University; PhD 1976, Ohio State University.
Scheinfeldt, Joseph, Term Assistant Professor, History and Art History. PhD 2003, Oxford.

Scherrens, Maurice William, Associate Professor; Senior Vice President. BS 1970, MBA 1971, Central Michigan University; JD 1976, George Washington University; EdD 1986, University of Southern California.

Schintler, Laurie Ann, Associate Professor, School of Public Policy. BA 1989, University of Iowa; MA 1992, PhD 1995, University of Illinois at Urbana-Champaign.

Schneider, Beth Z., Instructor, Marketing. BA 1982, St. Bonaventure University; MBA 1992, University of Central Florida.

Schneider, Edwin K., Professor of Climate Dynamics. AB 1970, PhD 1976, Harvard University.

Schoeny, Mara L., Assistant Professor of Conflict Resolution. BA 1986, University of Virginia; MS 1996, PhD 2006, George Mason University.

Schrag, Zachary, Assistant Professor, History and Art History. BA 1992, Harvard University; MA 1997, MPhil 1999, PhD 2002, Columbia University.

Schrefels, John A., Associate Professor of Chemistry. PhD 1979, University of South Florida.

Schrum, Kelly, Term Assistant Professor, History and Art History. BA 1991, University of California, Berkeley; MA 1996, PhD 2000, Johns Hopkins University.

Schrum, Lynne R., Professor of Education. BS 1968, Southern Illinois University; MA 1976, University of Evansville; PhD 1991, University of Oregon.

Schum, David A., Professor, Systems Engineering and Operations Research. BA 1956, MA 1961, Southern Methodist University; PhD 1964, Ohio State University.

Schwartzstein, Linda A., Professor of Law; Vice Provost for Academic Affairs. AB 1973, Brandeis University; JD 1976, University of Michigan; LLM 1977, New York University; PhD 1994, George Mason University.

Scimecca, Joseph Andrew, Professor of Sociology. BA 1962, Hunter College; MA 1965, PhD 1972, New York University.

Scolaro, Margaret J., Term Instructor, English. BA 1994, Mary Washington College; MA 1996, George Mason University.

Scott, Laura, Term Associate Professor of English. BA 1986, Kent State University; MFA 1993, George Mason University.

Scott, Suzanne, Term Associate Professor, New Century College. BA, Eastern Mennonite College; MA, James Madison University; MFA, Goddard College.

Scruggs, Thomas, University Professor of Education, BA 1971, Pennsylvania State University; MEd 1978, Lesley College; PhD 1982, Arizona State University.

Scully, Randolph, Assistant Professor, History and Art History. BA, Williams College; PhD 2002, University of Pennsylvania.

Sczupak, Peter J., Assistant Manager OPS. 1999, University of Oregon.

Sebenick, Carole W., Assistant Professor; Counselor, Counseling Center. BA 1984, Dickinson College; MEd 1989, PhD 1998, University of Maryland.

Segerson, Keith B., Assistant Dean for Research Administration and Outreach, School of Public Policy. BBA 1980, MSc 1989, Houston Baptist University; MS 2001, George Mason University.

Self, Burl, Professor of Geography. BA, East Central State University; MA, PhD, University of Oklahoma.

Seligmann, Linda J., Professor of Anthropology. BA 1975, Pomona College; MA 1978, University of Texas at Austin; PhD 1987, University of Illinois, Urbana-Champaign.

Selinsky, Brian, Director, Registrar IT Services. BA 1969, MA 1971, Michigan State University.

Sengupta, Partha, Associate Professor, Accounting. BSc 1983, University of Calcutta; MA 1986, State University of New York at Stony Brook; PhD 1991, Virginia Polytechnic Institute and State University; PhD 1995, University of Florida.

Seshaiyer, Padmanabhan, Associate Professor of Mathematical Sciences. BA, MS 1994, Birla Institute of Technology & Science; PhD 1998, University of Maryland.

Setia, Sanjeev, Associate Professor, Computer Science. MS 1987 Birla Institute of Technology and Science (Pilani); MS 1990, PhD 1993, University of Maryland.

Seto, Donald, Associate Professor, Bioinformatics and Computational Biology. BA 1980, University of California, San Diego; PhD 1987, Johns Hopkins University.

Shafighi, Daryoush, Staff Instructor, Dean’s Office, School of Information Technology and Engineering. BA 1972, University of Isfahan; BS 1980, University of the District of Columbia; MS 1983, George Washington University.

Shaklee, Beverly, Professor of Education. BS 1975, MS 1981, University of Kansas; EdD 1985, Mississippi State University.

Shapiro, Jay A., Professor of Mathematical Sciences. BA 1971, Rider College; PhD 1975, Rutgers University.

Sharp, Joyce L., VATS I&R Coordinator. BS 1989, Longwood College.

Shaw, Lisa E., Undergraduate Student Services Coordinator and Advisor, Institute for Conflict Analysis and Resolution. BA 1994, Regis University; MS 2008, George Mason University.

Shedd, Juliette R. Rouge, Director of Student Services, Institute for Conflict Analysis and Resolution. BA 1998, George Washington University; MS 2005, George Mason University.

Sheehan, Sarah E., Social Sciences Reference/Liaison Librarian, University Libraries. BA 1988, MS 1990, Catholic University of America.
Shelton, Victoria, Sciences Reference and Instruction Librarian. BA 1984, Saint Petersburg State University, Russia; MLS 2000, School of Library and Information Studies, Texas Woman’s University.

Shen, Min, Assistant Professor, Accounting. BA 1998, Shanghai University of Finance and Economics; MS 2003, PhD 2005, Michigan State University.

Sheng, Hongwei, Assistant Professor of Computational and Data Sciences. PhD 1997, Shenyang National Laboratory for Materials Science, Chinese Academy of Sciences.

Sheridan, Kimberly, Assistant Professor of Education. BA 1992, Kalamazoo College; EdD 2006, Harvard University.

Sherrard, Donna O., Executive Assistant to the Associate Dean for Research, School of Public Policy. BS 1973, East Carolina University.

Sherwin, Martin J., University Professor of History and Public Policy. AB 1959, Dartmouth College; PhD 1971, University of California, Los Angeles.

Shields, Susan, Associate Professor of Dance. BA 1996, SUNY-Empire State College; MFA 2003, George Mason University.

Shiner, Whitney T., Associate Professor of Religious Studies. BA 1971, University of Chicago; MA 1980, University of Chicago Divinity School; PhD 1992, Yale University.

Shipley, Scott T., Affiliate Assistant Professor of Earth Systems Science. BA 1971, Beloit College; MS 1973, PhD 1978, University of Wisconsin.

Shiver, John M., Term Instructor of Health Administration and Policy. BS 1968, The Citadel; MS 1975, Virginia Commonwealth University, Medical College of Virginia.

Shockley, K. Gerald, Assistant Professor of Education. BA 1996, BS 1997, MED 1998, University of Cincinnati; PhD 2003, University of Maryland, College Park.

Short, Jerome L., Associate Chair for Graduate Studies, Associate Professor, Psychology. BA 1984, St. Norbert College; MA 1987, PhD 1990, Arizona State University.

Shortle, John F., Associate Professor, Systems Engineering and Operations Research. BS 1992, Harvey Mudd College; MS 1993, PhD 1996, University of California at Berkeley.

Shukla, Jagadish, University Professor of Climate Dynamics and Chair, Department of Climate Dynamics. BSc 1962, MSc 1964, PhD 1971, Banaras Hindu University; ScD 1976, Massachusetts Institute of Technology.

Sibbey, Edgar H., University Professor, Computer Science and School of Public Policy. BSc, University of London; SM, ME, ScD 1967, Massachusetts Institute of Technology.

Sikdar, Siddhartha, Assistant Professor, Electrical and Computer Engineering. BTEE 1997, Indian Institute of Technology; MS 2001, University of Washington; PhD 2005, University of Washington.

Simmons, Solon J., Assistant Professor of Conflict Resolution. BA 1991, University of Chicago; MS 1999, PhD 2005, University of Wisconsin-Madison.

Simon, Robert, Associate Professor, Computer Science. BA 1981, University of Rochester; PhD 1996, University of Pittsburgh.

Singer, Harvey, Assistant Professor of Information Systems and Operations Management. BA 1978, Queens College of the City University of New York; MA 1984, PhD 1987, Johns Hopkins University.

Singman, David H., Professor of Mathematical Sciences. BS 1972, MS 1976, PhD 1980, McGill University.

Sistek, Mark A., Advising Director, BIS. BFA 1979, Cleveland Institute of Art.

Sizemore, Rachna S., Term Assistant Professor, Administration of Justice. BA 1992, JD 1995, University of California, Berkeley.

Sizemore, Rachna S., Term Assistant Professor, Administration of Justice. BA 1992, JD 1995, University of California, Berkeley.

Skarew, Sandra, Core Faculty Member, English Language Institute. BA 1977, California State University, Northridge; MA 1985, George Mason University.

Skousgaard, Shannon McIntyre, Associate Professor of Philosophy. BA 1972, College of William and Mary; MA 1975, PhD 1981, University of Georgia.

Slayden, Suzanne Weems, Associate Professor of Chemistry. BS 1970, PhD 1976, University of Tennessee.

Sliuski, Carlos E., Professor of Global and Community Health, Institute for Conflict Analysis and Resolution, Krasnow Institute for Advanced Study. MD 1960, University of Buenos Aires School of Medicine.

Smith, Colin, Director of Corporate Relations, Intercollegiate Athletics. BA 2003, Lynchburg University.

Smith Cynthia B., Term Assistant Professor of New Century College. BS 1984, Kansas State University; MS 1989, University of Maryland; PhD 2004, George Mason University.

Smith, Glenn Edward, Professor of Music. BA 1968, MA 1969, California State University; DMusic 1973, Indiana University.

Smith, Kris M., Associate Provost for Institutional Research and Reporting. BS 1973, Northwest Missouri State University; MEd 1981, South Dakota State University; PhD 1992, University of Michigan.
Smith, Leila, Term Instructor of Integrative Studies, New Century College. BA, Cornell University; MA, State University of New York.

Smith, Lesley M., Associate Professor, New Century College. BA 1976, University of St. Andrews, Scotland; PhD 1980, Brasenose College, Oxford University, England; MFA 1998, George Mason University.

Smith, Robert F., Professor of Psychology, Director, Biopsychology Program. BS 1971, University of Florida; MA 1973, PhD 1976, University of Wisconsin.

Smith, Rodger, Visiting Instructor, Department of Communication; Faculty Advisor, WGMU. BS 1986, James Madison University, Harrisonburg, VA; MBA 1992, Shenandoah University, Winchester, VA.

Smith, Suzanne E., Associate Professor of History. BA 1986, University of California, Los Angeles; MA 1988, Carnegie Mellon University; PhD 1996, Yale University.

Smoczynski, Florence I., Assistant Professor of Nursing. BSN 1962, Villanova University; MSN 1978, Catholic University of America; EdD 1998, Virginia Polytechnic Institute and State University.

Snead, James E., Associate Professor of Anthropology. PhD 1995, University of California at Los Angeles.

Snodgrass, Paul, Technology and Communications Coordinator, Institute for Conflict Analysis and Resolution. BA 2003, University of Arizona; MS 2007, George Mason University.

Snow, Charles, Associate Professor and Associate Chair, Applied Information Technology. PhD 1998, McGill University.

Snyder, Amy M., Assistant Dean, University Life. BS 1995, Clarion University; MA 1997, Clemson University.

Snyder, R. Claire, Associate Professor of Government and Politics and Director of MAIS Program. BA 1986, Smith College; PhD 1997, Rutgers University.

Snyder, Sondra, Academic Advisor, Academic Support and Advising Services. BA 1960, MEd 1983, University of Maryland.

So, Paul T., Associate Professor of Physics and Astronomy. BA 1988, Scripps College; BS 1988, Harvey Mudd College; PhD 1995, University of Maryland.

So, Sufumi, Term Assistant Professor, Modern and Classical Languages. BA 1980, MA 1982, Seinan Gakuin University; MA 1989, University of Hawaii-Manoa; PhD 1997, University of Toronto.

Sobieralski, Joseph, Director of Finance, University Operations. BS 2001, MA 2003, University of South Carolina.

Sockett, Hugh T., Professor of Public and International Affairs. BA 1959, Christ Church, University of Oxford; MA 1963, University of Oxford; PhD 1974, University of London.

Sofer, Ariela, Professor, Systems Engineering and Operations Research; Chair, Department of Systems Engineering and Operations Research. BS 1972, MS 1979, Technion, Israel Institute of Technology; DSc 1984, George Washington University.

Solka, Jeffrey L., Contract Assistant Professor, Bioinformatics and Computational Biology. BS 1978, MS 1981, James Madison University; MS 1989, Virginia Polytechnic Institute and State University; PhD 1995, George Mason University.

Soltan, Valeriu, Professor of Mathematical Sciences. Foreign degree 1973, State University, Moldovia; Doctorate 1975, Mathematical Institute of the Academy of Sciences of Moldovia.

Sommer, Rainer, Associate Professor of Public Policy and Enterprise Engineering, School of Public Policy. BIS 1987, Virginia State University; MS 1989, PhD 1998, George Mason University; PhD 1991, Columbia Pacific University.

Sommers, William T., Research Professor, Co-Director, EastFIRE Laboratory, Earth Systems and Geoinformation Sciences. BS 1965, City College of New York; MS 1967, Massachusetts Institute of Technology; PhD 1972, State University of New York at Albany.

Sorrell, Jeanne L., Professor of Nursing. BSN 1962, University of Michigan; MSN 1975, University of Wisconsin; PhD 1987, George Mason University.

Sousa, Michele T., Associate Director of Development Systems. AA 1986, Albertus Magnus College.

Soyer, Valery N., Distinguished University Professor of Molecular Genetics. BA 1957, Timiryazev Agricultural Academy; MA 1961, Lomonosov State University; PhD 1964, Kurchatov Institute of Atomic Energy, Russia.

Spaine, Lawrence F., Director of the Physical Plant. BS, Virginia Polytechnic Institute and State University.

Spaldo, John L., Associate Vice President, University Operations. MA 1975, George Washington University.

Spencer, Vicky G., Learning Disabilities Coordinator. BS 1982, University of Texas at Dallas; MS 1986, Texas A&M–Commerce; PhD 2002, George Mason University.

Spousta, Robert F., Head Coach of Crew/Rowing Coordinator. 1976, University of Massachusetts.

Sprague, Debra R., Associate Professor of Education. BA 1984, Buffalo State College; MA 1991, PhD 1995, University of New Mexico.

Stafford, Sarah M., Associate Director of Corporate Relations, The Volgenau School of Information Technology and Engineering. BS 2000, University of Southern Indiana; MPA 2004, University of Evansville.

Stahel, Christof, Assistant Professor, Finance. MA 1997, PhD 2004, Ohio State University.

Stahley, Susan E., Director, Office of Alcohol, Drug, and Health Education. BSW 1979, University of Georgia; MSW 1985, University of Hawaii.

Stampp, James A., Director of Capital Finance, Budget Office. MA 1971, SUNY at Buffalo.

Stanley, Thomas T., Term Assistant Professor of Art and Visual Technology. BA 1981, Brown University; MA 2003, University of Maryland.

Starr, Don, Academic Advisor and Term Assistant Professor of Art and Visual Technology. BS 1993, University of Maryland.
Staulcup, Joy A., Senior Associate Registrar for Registration and Scheduling. BA 1992, Augusta State University; MA 1996, George Mason University.

Stavrou, Angelos, Assistant Professor, Computer Science. MSc 2001, National University of Athens, Greece; MS 2002, PhD 2007, Columbia University.

Stearns, Peter N., Provost and Executive Vice President for Academic Affairs. AB 1957, AM 1959, PhD 1963, Harvard University.

Stedman, Diann, Director, of Laboratory Safety, Environmental Health, and Safety Office. BA 1993, University of Pittsburgh; MS 1997, Virginia Commonwealth University.

Steeley, Sherry L., FAST TRAIN Program Field Coordinator. BA 1988, Mount St. Mary’s University; MA 1990, Johns Hopkins School of Advanced International Studies; PhD 2005, George Mason University.

Stefanidis, Anthony, Associate Professor, Earth Systems and Geoinformation Sciences. Dipl Ing 1986, National Technical University of Athens, Greece; MS 1988, PhD 1993, Ohio State University.

Stevens, Andrew, Web Services Librarian, University Libraries. BA, Ohio University; MLS, Indiana University.

Stevens, Jen, Reference and Liaison Librarian, University Libraries. BA 1993, University of Colorado; MA 1996, University of Colorado; MLIS 2000, University of Texas at Austin.

Stewart, Jeffrey C., Professor of History. BA 1971, University of California, Santa Cruz; MA 1974, PhD 1979, Yale University.

Stockwell, Susan V., Director, Administrative Services Director, ITU. BA 1978, University of Maryland.

Stoehr, Ana Marie, Term Instructor of Nursing. BSN 1998, MSN 2000, George Mason University.

Stoica, Andrei, Assistant Professor, Information and Software Engineering. BS 1997, Polytechnica University of Bucharest; MS 2000, PhD 2004, University of South Carolina.

Stone, Marissa Cachero, Reference and Instruction Librarian, University Libraries. BA 1991, Old Dominion University; MLS 1996, Catholic University.

Stough, Roger R., Northern Virginia Endowed Chair in Public Policy and Eminent Scholar; Associate Dean for Research, Development, and External Affairs, School of Public Policy; Director, Mason Enterprise Center, Director, State Economic Development Center. BS 1964, Ohio State University; MA 1971, University of South Carolina; PhD 1978, Johns Hopkins University.

Stratmann, Thomas, Professor of Economics. BA 1985, Free University of Berlin, Germany; MA 1988, PhD 1990, University of Maryland.

Straus, David M., Professor of Climate Dynamics. PhD 1977, Cornell University.

Strawn, Candace A., Assistant Professor of Education. BS 1969 Iowa State University; MA 1972, PhD 1999, Iowa State University.

Studd, Karen, Associate Professor of Dance. BS 1978, MS 1983, University of Oregon; CMA 1987, Laban Institute of Movement.

Stull, Peggy, Instructor of Education. BSW 1976, MEd 2007, George Mason University.

Sturgis, Jennifer, Staff Director, Krasnow Institute. BA 1984, Knox College; MLS 1986, MS 1988, University of Illinois.

Sturtevant, Elizabeth G., Professor of Education. BA 1972, State University of New York at Oswego; MS 1975, State University of New York at Albany; PhD 1992, Kent State University.

Suh, Hyeon-Sook (Joy), Government Documents Librarian, University Libraries. BA 1973, MA 1975, Ewha Women’s University; MA 1980, University of Wisconsin at Milwaukee; MLS 1995, University of Iowa.

Suh, Jennifer M., Assistant Professor of Education. BA 1994, MEd 1994, University of Virginia; PhD 2005, George Mason University.

Summerall, Marjorie, Program Coordinator, Dance. BA 1967, College of Notre Dame of Maryland.

Summers, Michael, Professor of Physics and Astronomy. BA 1976, Murray State University; MS 1987, University of Texas at Dallas; PhD 1985, California Institute of Technology.

Sun, Donglan, Assistant Professor, Earth Systems and Geoinformation Sciences. BS 1986, Nanjing University of Information Science and Technology; MS 1989, Chinese Academy of Meteorological Sciences; PhD 2003, University of Maryland, College Park.

Surina, Susan C., Term Instructor, Statistics. BA, BS, 1987, University of North Carolina-Wilmington; MS 1989, Georgia Institute of Technology.

Sussan, Fiona K., Assistant Professor, Marketing. BA, International Christian University, Japan; MPhil, City University of New York; MBA, PhD, Baruch College, City University of New York.

Suter, Janice L., Director, University Career Services. BA 1975, University of Delaware; MA 1977, Ohio State University; PhD 1991, University of Maryland.

Sutton, Clifton D., Associate Professor, Statistics. BS 1983, University of Virginia; MS 1985, PhD 1987, Stanford University.

Sutton, William G., Associate Professor of Electrical and Computer Engineering and Associate Chair. BSEE 1965, Syracuse University; MSEE 1968, Case Western Reserve University; PhD 1981, Air Force Institute of Technology.

Svetlana, Nazarenko, Assistant Research Associate, Life Sciences. MS 2001, Kahan State University.

Swearingen, Martha, Term Assistant Professor, English. BA 1976, California State University, Los Angeles; MA 1985, University of Wisconsin, Madison; PhD 1997, Stanford University.
Sweet, Colleen, Term Assistant Professor, Spanish. BA 2000, Roanoke College; MA 2004, Catholic University of America.

Swett, Susan J., Director of Graduate Admissions, College of Humanities and Social Sciences. AB 1972, Lafayette College; MA 1979, Lehigh University.

Szélenyi, Balázs A., Postdoctoral Teaching Fellow, History and Art History. BA 1990, University of Wisconsin-Madison; MA 1992, PhD 1998, UCLA.

Szulczewski, Melanie, Term Assistant Professor, New Century College. BA 1993, Cornell University; MS 1996, PhD 1999, University of Wisconsin-Madison.

Tabarrok, Alexander, Associate Professor of Economics. BA 1989, University of Victoria, Canada; PhD 1994, George Mason University.

Taboada, Ana, Assistant Professor of Education. BA 1991, Centro de Altos Estudios en Ciencias Exactas, Buenos Aires, Argentina; MEd 1998, Temple University; PhD 2003, University of Maryland.

Taciuch, Dean F., Term Associate Professor of English. BA 1985, Kent State University; MA 1988, Ohio University; PhD 1991, University of Southwestern Louisiana.

Takats, Sean, Assistant Professor of History. BA 1996, Yale University; PhD 2005, University of Michigan.

Talbot, Lee M., Term Professor of Environmental Science and Public Policy. AB 1953, MA 1963, PhD 1963, University of California, Berkeley.

Talkington, Brigit, Term Instructor and Basic Course Coordinator, Communication. BA 1995, MA 1997, Kansas State University.

Tallent, Eddie Kent, Director of Admissions. BFA 1985, Ringling School of Art and Design.

Talleyrand, Regine, Associate Professor of Education. BA 1991, University of Pennsylvania; MA 1993, PhD 2001, University of Maryland.

Tang, Liansheng, Assistant Professor, Statistics. BS 2000, University of Science and Technology of China; MS 2003, PhD 2005, Southern Methodist University.

Tangney, June Price, University Professor of Psychology. BA 1979, State University of New York, Buffalo; MA 1981, PhD 1985, University of California, Los Angeles.

Tate, Jeannine S., Director of Field Relations, College of Education and Human Development. BS 1972, Oklahoma State University; MEd 1973, University of Oklahoma; PhD 2002, George Mason University.

Taxman, Faye S., Professor, Administration of Justice. BA 1977, University of Tulsa; MA 1981, PhD 1982, Rutgers University.

Taylor, Angie, Head Coach of Women’s Track. BS 1987, Illinois State University.

Taylor, Eugene, Term Assistant Professor, English. BA 1990, Yale University; MA 2003, North Carolina State University; MFA 2006, George Mason University.

Taylor, George E., Jr., Professor, Earth Systems and Geoinformation Sciences. BS 1971, Randolph-Macon College; PhD 1976, Emory University.

Taylor, Stanley E., Vice President for Metropolitan Relations. BArch 1970, Hampton University; MArch 1976, University of Nebraska-Lincoln.

Tecuci, Gheorghe, Professor, Computer Science. MS 1979, PhD 1988, Politechnic Institute of Bucharest, Romania; PhD 1988, University of Paris South, Orsay, France.

Telford, Jennifer, Assistant Professor of Nursing. BSN 1999, University of Connecticut; MSN 2003, Yale University; PhD 2007, University of Virginia.

Tetrick, Lois, Professor of Psychology; Director of Industrial/Organizational Psychology Program. BA 1971, Drury College; MGA 1978, Georgia State University; MS 1981, PhD 1983, Georgia Institute of Technology.

Thach, Dzung, Research Assistant Professor, Center for Bioresource Development. BS 1996, Virginia Polytechnic Institute and State University; PhD 2001, Johns Hopkins University.

Thatchenkery, Tojo Joseph, Professor of Organization Development and Knowledge Management. BA 1980, MA 1982, University of Delhi; PhD 1993, Case Western Reserve University.

Thomas, Charles Leo, Associate Professor of Education. AB 1963, Harris Teachers College; MA 1966, St. Louis University; PhD 1971, Johns Hopkins University.

Thomas, Gary Lee, Research Assistant Associate, Center for Secure Information Systems. AA 1996, Solano Community College.

Thompson, James, Assistant Professor, Psychology. BA 1996, PhD 2002, Swinburne University of Technology in Melbourne, Australia.

Thompson, Julie E., Operations Manager, Center for the Arts. BA 1981, Lawrence University.

Thompson, Kenneth, Term Associate Professor of English. AB 1972, Williams College; PhD 1993, University of Virginia.

Thorbecke, Willem, Associate Professor of Economics. PhD 1988, University of California, Berkeley.

Thorup, Eva K., Associate Professor of Education. BA 1976, Northwestern University; MA 1977, EdD 1987, George Washington University.

Tian, Mingzhen, Assistant Professor of Physics. BS 1984, Nankai University; MS, Changchun Institute of Physics; PhD 1997, Paris-Sud University.

Tichy, Susan, Associate Professor of English. BA 1975, Goddard College; MA 1979, University of Colorado.

Titarchuk, Lev, Research Professor, Computational and Data Sciences. Dr. of Sc. 1972, Space Research Institute (Moscow).

Todd, Ellen Wiley, Associate Professor of Art History. BA 1969, Wells College; MA 1976, University of Colorado, Boulder; PhD 1987, Stanford University.

Toepfer, Stefan, Associate Professor of Government and Politics. PhD 1995, Free University of Berlin.

Tolchin, Susan, University Professor, School of Public Policy. BA 1961, Bryn Mawr College; MA 1962, University of Chicago; PhD 1968, New York University.

Tollaksen, Jeff, Assistant Professor, Computational and Data Sciences. PhD 2002, Boston University.
Tomasovic, Susan K., Term Instructor, Department of Communication. BS 1969, University of Missouri; MAIS 1990, George Mason University.

Tompkins, Catherine, Assistant Professor of Social Work and BSW Program Director. BA 1987, University of Maryland, College Park; MSW 1991; PhD 1995, University of Maryland, Baltimore.

Torzilli, Albert Phillip, Associate Professor of Biology. BA 1967, University of Connecticut; PhD 1976, University of Georgia.

Toulouse, Cheryl, Term Instructor of Nursing. BSN 1982, University of Tennessee; MSN 1998, George Mason University.

Toutant, Jody L., Assistant Professor of Administration and Faculty. BA 1976, University of California; MS 1998, George Mason University.

Troy, Susan, Associate Professor of Anthropology. BA 1969, Bard College; MA 1973, PhD 1983, University of Chicago.

Troxler, Darren, Director of Admissions Operations. BS 1993 East Carolina University; MEd 1995 University of Tennessee.

Tschirhart, Ambrose, Associate Professor of Educational Leadership. BS 1970, MEd 1972, George Washington University; PhD 1985, Virginia Tech.

Trocino, John A., Professor of Education. AB 1974, Brooklyn College, City University of New York; MA 1979, PhD 1982, George Mason University.

Trotman, Adria, Term Instructor of Nursing. BSN 1992, Capital University; MSN 1998, George Mason University.

Trotman, Scott D., Associate Professor of English. BA 1991, Carleton College; PhD 1998, Duke University.

Travis, Shirley, Dean and Professor, College of Health and Human Services. BS 1976, MS 1978, Georgia State University; PhD 1985, Virginia Tech.

Travis, Toni-Michelle C., Associate Professor of Government and Politics. AB 1969, Bard College; AM 1973, PhD 1983, University of Chicago.

Trefil, James, Robinson Professor of Physics. BS 1960, University of Illinois; BA, MA 1962, Oxford University, England; MS 1964, PhD 1966, Stanford University.

Trencher, Susan, Associate Professor of Anthropology. BA 1969, MA 1972, George Washington University; PhD 1993, Catholic University of America.

Trechter, Sherry, Core Faculty Member, English Language Institute. BA 1973, University of California, Irvine; MA 1982, University of California, Los Angeles.

Trefil, James, Robinson Professor of Physics. BS 1960, University of Illinois; BA, MA 1962, Oxford University, England; MS 1964, PhD 1966, Stanford University.

Trencher, Susan, Associate Professor of Anthropology. BA 1969, MA 1972, George Washington University; PhD 1993, Catholic University of America.

Trostman, Adria, Research Associate, Administration of Justice. BA 1999, Spelman College; MA 2004, University of Maryland.

Troxler, Darren, Director of Admissions Operations. BS 1993 East Carolina University; MEd 1995 University of Southern Mississippi.

Trump, Kathryn A., Associate Dean, International, University Life. BA 1968, Carroll College; MA 1982, George Mason University.

Tsvetovat, Maksim, Assistant Professor, Department of Computational Social Science, Krasnow Institute for Advanced Study. BS, MS, University of Minnesota; PhD, Carnegie Mellon University.

Turner, C. Allan, Research Professor of Administration of Justice. BA 1967, Frederick College; MA 1976, University of Missouri; MPA 1984, PhD 1995, University of Southern California.

Uchida, Craig D., Affiliate Faculty, Administration of Justice. BA 1976, University of California at San Diego; MA 1978, SUNY at Stony Brook; PhD 1982, SUNY at Albany.

Upperman, James, Associate Professor of Education. BA 1968, Bridgewater College; MEd 1973, University of Virginia; EdD 1995, Virginia Polytechnic Institute and State University.

Urban, Carol Q., Acting Assistant Dean for Undergraduate Programs, School of Nursing; Assistant Professor of Nursing. AA 1978, AS 1978, Glendale Community College; AA in Nursing 1980, Los Angeles Pierce College; BSN 1985, University of Phoenix; MSN 1991, PhD 2006, George Mason University.

Urgessa, Girum, Assistant Professor, Civil, Environmental, and Infrastructure Engineering. BSc 2000, Addis Ababa University, Ethiopia; MSc 2002, PhD 2006, University of New Mexico.

Vail, James D., Associate Professor of Nursing. BSN 1965, University of Arkansas; MSN 1970, Emory University; DNSc 1980, Catholic University of America.

Vaisman, Iosif, Associate Professor, Bioinformatics and Computational Biology. MS 1984, Moscow Institute of Chemical Engineering; PhD 1990, USSR Academy of Sciences.

Vakalahi, Halaevalu, Associate Professor of Social Work and MSW Program Director. BS 1988, Brigham Young University-Hawaii; MSW 1993, University of Hawaii; MEd 1997, PhD 1998, University of Utah.

Valls, Steven P., Professor, Chair of Sociology and Anthropology. BA 1973, Brooklyn College, City University of New York; MA 1977, PhD 1983, Rutgers University.

Vance, Walter, Instructor, Public and International Affairs. BS 1993, Miami University; MA 1996, University of Toledo; PhD candidate, George Mason University.

van Hock, Monique L., Assistant Professor, Molecular and Microbiology. BSc 1990, University of Victoria; PhD 1997, University of Virginia.

VanMeter, Amy J., Research Assistant, Life Sciences. BS 2003, George Mason University.

Velea, Luminita M., Research Assistant Professor, Center for Bioresource Development. MS 1993, Polytechnic University of Bucharest, Romania; PhD 2001, University of Mississippi.

Venigalla, Mohan M., Associate Professor, Civil, Environmental, and Infrastructure Engineering. BTech 1985, Sri Venkateswara University; MS 1988, Indian Institute of Technology, Chennai; MS 1990, PhD 1994, University of Tennessee, Knoxville.

Venzke, Margaret, Term Instructor of Nursing. BSN 1979, University of Virginia; MS 1983, Medical College of Virginia Commonwealth University.

Verardo, Stacey, Term Associate Professor of Geology. BS 1986, C.W. Post, Long Island University; PhD 1995, CUNY.

Verhicle, Joseph R., Head Coach, Softball. BS 1982, San Diego State University; MPe, Azusa Pacific University.
Verhoeven, Claudia, Assistant Professor, History and Art History. BA 1994, University of California, Santa Cruz; MA 1999, PhD 2004, University of California, Los Angeles.

View, Jenice, Assistant Professor of Education. BA 1980, Syracuse University; MPA-URP 1982, Princeton University; PhD 1997, Union Institute and University.

Villagran, Melinda, Associate Professor, Communication. BA 1995, University of Texas at Dallas; MA 1997, PhD 2001, University of Oklahoma.

Visvanathan, Gnanakumar, Assistant Professor, Accounting. BComm 1981, University of Madras, India; PhD 1996, New York University.

Vivancos Perez, Ricardo, Assistant Professor, Spanish. BA 1996, University of Málaga; MA 2002, Texas A&M University; PhD 2006, University of California-Santa Barbara.

Vlaiuc, Sorina O., Assistant Research Professor, School of Public Policy. MD 1996, Carol Davila University of Medicine and Pharmacy; MPH 2001, The George Washington University; PhD 2003, George Mason University.

Volberg, Mary Paul, Instructor of Dance.

Volovsek, Miguel E., Research Instructor, Biology. BS 1986, Duke University; PhD candidate, University of North Carolina at Chapel Hill.

Vukovic, Danica, Assistant Professor of English. BA 1993, Trent University; BLS 1999, University of Maine; MA 2002, Northeastern University; MFA 2005, Virginia Commonwealth University.

Waddington, Daniel, Research Assistant Professor, Administration of Justice. BS 1981, Brigham Young University; MPA 1987, California State University.

Wade, Rex A., University Professor of History. BA 1958, Southwestern College; MA 1960, PhD 1963, University of Nebraska.

Wage, Kathleen E., Associate Professor, Electrical and Computer Engineering. BS 1990, University of Tennessee at Knoxville; SM 1994, EE 1996, PhD 2000, Massachusetts Institute of Technology.

Wagner, Richard E., Harris Professor of Economics. BS 1963, University of Southern California; PhD 1966, University of Virginia.

Walker, Ava J., Associate Professor of Exercise Science. BS 1977, MS 1978, PhD 1991, University of Tennessee.

Walker, Laura M. B., Term Assistant Professor, Public and International Affairs. BA 1974, University of Cincinnati; JD 1977, University of Toledo.

Wallin, John F., Associate Professor of Computational Sciences and Space Sciences. BS 1984, Mankato State University; PhD 1989, Iowa State University.

Walsmsley, Janet M. C., Term Assistant Professor, History. BA 1978, University of Maine; MA 1989, State University of New York; PhD 2000, University of California, Riverside.

Walnut, David F., Professor of Mathematical Sciences. AB 1983, Haverford College; MA 1986, PhD 1989, University of Maryland.

Walsch, Daniel L., Press Secretary, Media Relations. BS 1972, University of Tennessee; MEd 1979, Bowie State University; MA 1982, Towson State University.

Walsh, John C., Associate University Librarian for Resources and Collection Management Services, University Libraries. BA 1979, Yale University; MA 1982, MLS 1987, University of Iowa.

Walters, Lawrence C., Associate Professor, Public and International Affairs. BA 1981, Brigham Young University; PhD 1987, University of Pennsylvania, Wharton School.

Walther, Brian E., Senior Associate University Counsel. AB 1991, Harvard University; JD 1994, George Washington University National Law Center.

Wan, Ming, Director of Global Affairs Program; Professor, Public and International Affairs. BA 1985, Beijing Foreign Languages Institute; MA 1988, Acadia University; PhD 1993, Harvard University.

Wang, Diane, 1-2-1 Coordinator for China. BS, Shen Yang Industrial University; MS, Queens College.

Wang, Pearl Yun, Associate Professor, Computer Science. BA 1971, Wheaton College; MA 1973, PhD 1980, University of Wisconsin, Milwaukee.

Wang, Shuangbao, Assistant Research Associate, Kellar Institute for Human disAbilities. BS 1984, MS 1992, Southwest Jiaotong University; PhD 1999, Tsinghua University; PhD 2004, George Mason University.

Wang, Xinynan (Frank), Assistant Professor, Computer Science. BS 1987, Peking University; MS 1990, Chinese Academy of Space Technology; PhD 2004, North Carolina State University.

Wang, Y. Diana, Assistant Professor, Applied Information Technology. MS 2002, PhD 2006, University of Maryland, Baltimore County.

Wanner, Thomas, Associate Professor of Mathematical Sciences. BSc 1989, MSc 1991, PhD 1993, Universität Augsburg.

Wanschura, Patricia B., Term Associate Professor of Psychology. BA 1969, St. Mary’s College; MA 1973, PhD 1974, University of Notre Dame.

Ward, Peter F., Head Coach, Men’s and Women’s Swimming and Diving. BA 1989, University of Arkansas.

Warfield, Wallace, Associate Professor of Conflict Resolution. BA 1962, Howard University; MPA 1986, University of Southern California; PhD 2001, George Mason University.

Warren, Jason, Term Instructor and Assistant Director of Forensics, Communication. BA 2004, Northwestern University; MA 2006, University of Texas at Austin.

Washington Pankey, Eric, Professor of English, Heritage Chair in Writing. BS 1981, University of Missouri; MFA 1983, University of Iowa.

Waters, Nigel, Director, Center for Excellence in Geographic Information Science, Professor of Geography. BA 1972, Cambridge University; MA 1973, PhD 1977, University of Western Ontario.
Wells, John L., Affiliate Professor of Chemistry. BS 1969, George Washington University; PhD 1974, University of California, Berkeley.

Wells, Mark D., Affiliate Professor of Business Administration. BS 1981, University of California, Berkeley; MBA 1983, University of California, Los Angeles.

Wells, William A., Affiliate Professor of Business Administration. BBA 1976, College of William and Mary; MBA, Virginia Polytechnic Institute and State University.

Wen, S. W., Affiliate Professor of Business Administration. BBA 1987, University of Virginia; MBA 1989, Yale University.

Wendt, Lourdes, Commissioner of Labor. MEd 1965, Southern Illinois University; EdD 1976, Florida State University; JD 1985, University of Florida.

Wendt, Robert C., Affiliate Professor of Business Administration. BS 1973, Texas A&M University; MBA 1975, Southern Methodist University.

Wendt, Thomas M., Affiliate Professor of Business Administration. BS 1977, University of Wisconsin-Madison; MBA 1978, Kellogg School of Management, Northwestern University.

Weatherspoon, Gerald L., Assistant Professor of Chemistry. BS 1984, Jackson State University; PhD 1995, University of California, Davis.

Weis, David, Affiliate Professor of Sociology. BS 1964, Cornell University; PhD 1970, Columbia University; Post-Doctoral Fellowship 1971, Yale Law School.

Weitzman, Lenore J., Robinson Professor of Sociology. BS 1966, Franklin and Marshall College; MS 1967, Lehigh University; PhD 1976, University of Pittsburgh.

Wejnert, John, Affiliate Professor of Business Administration. BS 1984, University of Maryland; MBA 1986, George Mason University.

Wheeler, Douglas J., Affiliate Assistant Professor of Geographic and Cartographic Sciences. BS 1977, MS 1980, Brigham Young University; PhD 1985, University of Utah.

Wheeler, Kathy D., Executive Director, Community Resource Center, Mason Enterprise Center. MBA, Troy State University.

White, E. Bernard, Associate Professor of Systems Engineering; Associate Dean for Undergraduate Studies, The Volgenau School of Information Technology and Engineering. BS 1966, Mississippi Industrial College; MS 1970, University of Illinois; MS 1973, Howard University; PhD 1984, University of Virginia.

White, Elizabeth L., Associate Professor, Computer Science. BS 1985, MS 1986, College of William and Mary; PhD 1994, University of Maryland.

White, Gail Scott, Associate Professor of Art and Visual Technology. BA 1978, Virginia Polytechnic Institute and State University; MFA 1983, Tufts University.

White, James F., Research Associate, Center for Bioscience Development. BS 1996, MA 2000, George Mason University.

White, Stephen, Professor of Education. BA 1974, Coe College; MA 1978, University of Minnesota; PhD 1985, Texas A&M University.

White, Tracy, Chief Financial Officer, GMU Foundation Inc., BBA 1993, College of William and Mary.

Whittington, Frank J., Associate Dean of Academic Affairs, College of Health and Human Services; Professor of Gerontology, Department of Global and Community Health. BA 1968, Mississippi State University; MA 1971, PhD 1975, Duke University.

Wiederhold, Eve, Assistant Professor, English. BA 1983, University of Illinois, Chicago; MA 1991, University of Illinois, Chicago; PhD 1999, University of Illinois, Chicago.

Wiest, Philip Ray, Associate Professor of Economics. BA 1966, Franklin and Marshall College; MS 1967, Lehigh University; PhD 1976, University of Pittsburgh.

Wiggins, Brenda P., Associate Professor of Parks, Recreation, and Leisure Studies. AB 1975, San Diego State University; MA 1981, University of Maryland; PhD 1994, University of Oregon.

Wiggins, David K., Professor of Physical Education. BA 1974, MA 1975, San Diego State University; PhD 1979, University of Maryland.

Wijesekera, Duminda, Associate Professor, Computer Science. BSc 1981, University of Colombo; MS 1989, PhD 1990, Cornell University; MS 1995, PhD 1997, University of Minnesota.

Wiley, Harolyn, Early Childhood and Special Education Specialist. BS 1979, Appalachian State University; MA 1984, Gallaudet University; PhD 1991, University of Illinois.

Willett, James A., Affiliate Professor, Administration of Justice. BA 1974, Monmouth College; MPA 1975, Pennsylvania State University; JD 1978, University of Richmond.
Willett, James D., Professor, Molecular and Microbiology, and Bioinformatics and Computational Biology. AB 1959, University of California, Berkeley; PhD 1965, Massachusetts Institute of Technology.

Williams, Herbertia, Equal Opportunity Specialist. BA 1991, University of Virginia; JD 1994, George Mason University School of Law.

Williams, K. Nicola, Assistant Professor of Education. BA 1993, MA 1993, University of Virginia; PhD 2003, University of Michigan.

Williams, Mary M., Professor of Education. BS 1977, Eisenhower College; MS 1983, State University of New York; EdD 1992, Boston University.

Williams, Stacy M., Director of Marketing and Communications, School of Management. BS 1999, Pennsylvania State University.

Williams, Thomas Rhys, Professor of Anthropology. BA 1951, Miami University; MA 1956, University of Arizona; PhD 1956, Syracuse University.

Williams, Walter E., John M. Olin Distinguished Professor of Economics; BA 1965, California State University; MA 1966, PhD 1972, University of California, Los Angeles.

Williams van Rooij, Shahron, Assistant Professor of Education. BA 1968, City College New York; MA 1970, American University of Beirut; PhD 1980, City University of New York Graduate Center; PhD 2007, George Mason University.

Willis, James J., Assistant Professor, Administration of Justice. BA 1991, Pennsylvania State University; PhD 2000, Yale University.

Willis, Odette P., Assistant Professor of Nursing. BSN 1973, Texas Woman’s University; MN 1981, University of California at Los Angeles; MBA 1996, Golden Gate University.

Wilsford, David, Professor of Government and Politics. BA 1977, University of South Carolina; MA 1984, PhD 1987, University of California, San Diego.

Wilson, Bart J., Associate Professor, Economics. BS 1992, University of Wisconsin-Eau Claire; MA 1993, PhD 1997, University of Arizona.

Wilson, David B., Associate Professor, Administration of Justice. BA 1983, Whitworth College; MA 1987, University of Nevada, Las Vegas; PhD 1995, Claremont Graduate School.

Wilson, Deborah J., Associate Athletic Director, Academic Services and Sports Psychologist. BS 1971, James Madison University; MA 1973, Ohio State University; PhD 1986, University of Maryland.

Wiltse, Cathy A., Associate Director, Virginia Small Business Development Center Network. BA 1986, Ursuline College; MPA 2003, George Mason University.

Winant, Peter, Assistant Professor of Art and Visual Technology. BS 1974, Skidmore College; MFA 1980, Indiana University.

Wingfield, Andrew, Assistant Professor, New Century College. BA 1988, Rutgers University; MA 1990, University of Chicago; MFA 1999, George Mason University.

Winkert, Catherine A., Budget Manager, Finance and Administration, College of Visual and Performing Arts. BA 1987, Marymount University.

Winkler, Martin M., Professor of Classics. BA 1977, West Virginia University; PhD 1982, University of Southern California.

Winsler, Adam, Professor of Psychology. BA 1988, University of New Mexico; PhD 1994, Stanford University.

Woitek, Kira M., Director of Annual Giving, Development Office. BS 1992, Babson College; MA 1999, Georgetown University.

Wolf, Paige P., Assistant Professor, Management. BA 1992, University of Delaware; MS 1994, PhD 1996, Virginia Polytechnic Institute and State University.

Wolf-Branigin, Michael, Associate Professor of Social Work. BA 1976, Western Michigan University; 1978, Stockholms Universitet; MSW 1979, University of Michigan; PhD 1999, Wayne State University.

Wolle, Cathy M., Director of Space Management. BS, MA 1985, State University of New York Buffalo; MS 2000, Drexel University.

Wolle, James W., Entrepreneur in Residence and Assistant Professor of Management. BS 1977, MBA 1979, JD 1981, Indiana University.

Wong, David, Professor of Geography and Chair Earth Systems and Geoinformation Sciences. Honour Diploma 1984, Hong Kong Baptist College; MA 1985, PhD 1990, State University of New York, Buffalo.

Wong, Shelley, Associate Professor of Education. BA 1971, University of California-Santa Cruz; MA 1986, University of California-Los Angeles; EdD 1990, Columbia University.

Wood, Kent, Senior Contract Professor, Earth Systems and Geoinformation Sciences. BS 1963, Stanford University; PhD 1973, Massachusetts Institute of Technology.

Wood, Thomas C., Associate Professor, New Century College; Affiliate Professor of Environmental Science and Policy. BS 1986, University of California, Davis; MS 1988, Louisiana State University; PhD 1996, George Mason University.

Woodcock, Alexander E.R., Professor, School of Public Policy. BS 1964, Exeter University; MS 1965, PhD 1968, University of East Anglia.

Wrubican, Sue, Assistant Professor of Art and Visual Technology. BA 1993, University of Pittsburgh; MFA 1996, Rhode Island School of Design.

Wright, Catherine, Term Professor, Communication. BS 1992, Phillips University; MA 1994, Texas Tech University; PhD 2005, Regent University.

Wrigley, Barbara, Executive Director, Women’s Business Center. BA 1976, Hope College; MS 1987, American University.

Wu, Chien-Yen (Jennie), Associate Professor of Nursing. BS 1973, Villanova University; MS 1982, DNSc 1989, George Mason University.

Wu, Yuntao, Assistant Professor, Molecular and Microbiology and Life Science. PhD 1998, Queen’s University.
Wulf, Douglas John, Assistant Professor of English. BA 1988, Northwestern University; MA 1993, Wright State University; PhD 2000, University of Washington.

Wulkhuhe, Julia D., Research Professor, Center for Applied Proteomics and Molecular Medicine. BA 1989, Grinnell College; PhD 1996, Purdue University.

Wyczalkowski, Anna K., Term Assistant Professor, Physics and Astronomy. BS 1988, MS 1990, PhD 1998, University of Maryland.

Xie, Fei, Assistant Professor, Finance. BS 1998, Tsinghua University; PhD 2005, Vanderbilt University.

Yadav, Alok, Associate Professor of English. BA 1986, University of Toronto; PhD 1993, Cornell University.

Yahya-Zadeh, Masoud, Associate Professor of Accounting. BS 1975, MS 1976, London School of Economics; PhD 1992, Syracuse University.

Yang, Chaowei, Assistant Professor, Earth Systems and Geoinformation Sciences. BS 1995, MS 1997, Northeastern University, China; PhD 2000, Peking University.

Yang, Chi, Associate Professor, Computational and Data Sciences. BS 1982, PhD 1988, Shanghai Jiao Tong University.

Yang, Ruixin, Associate Professor, Earth Systems and Geoinformation Sciences. BSc 1982, Tsinghua (QingHua) University of Beijing, China; MSc 1986, PhD 1990, University of Southern California, Los Angeles.

Yang, Susan Keun-Hang, Associate Professor, Earth Systems and Geoinformation Sciences. BA 1986, Ewha Womans University, Korea; MS 1999, PhD 2000, George Mason University.

Yang, Wenli, Assistant Professor, Earth Systems and Geoinformation Sciences. BS 1982, Zhejiang University, China; MS 1988, China University of Geosciences; PhD 1997, University of Nebraska-Lincoln.

Yang, Y. Tony, Assistant Professor of Health Administration and Policy. ScD 2006, Harvard University.

Yasai, Masoud, Professor of Management. BSc Imperial College of Science and Technology, London, 1972; MSc City University Business School, London, 1973; PhD 1979, City University Business School, London.

Yocom, Margaret Rose, Associate Professor of English. BA 1970, Pennsylvania State University; MA 1972, PhD 1980, University of Massachusetts.

Yoon, Yong, Term Associate Professor of Economics. B.S. 1967, Ph.D. 1977, Ph.D. 1986. Northwestern University.

Young, Adele E., Assistant Professor of Nursing. BS 1974, University of Pennsylvania. MSN 1984, PhD 1996, University of Maryland.

Young, Dennis P., Term Assistant Professor of English. BA 1978, MA 1982, University of Oklahoma; PhD 1988, University of Iowa.

Zaccaro, Stephen J., Associate Professor of Psychology. BA 1979, Fairfield University; MA 1980, PhD 1981, University of Connecticut.

Zagarri, Rosemarie, Professor of History. BA 1977, Northwestern University; MA 1978, M.Phil 1980, PhD 1984, Yale University.

Zamor, Mary E., Assistant Director of Institutional Assessment. MAT 1983, Webster University; MSFS 1967, George-town University.

Zawacki, Terry Myers, Assistant Professor of English. BS 1967, Southern Illinois University; MA 1981, New York Institute of Technology; DA 1995, George Mason University.

Zhang, Jie, Assistant Professor, Computational and Data Sciences. PhD 1999, University of Maryland.

Zhang, Karl Kuan, Assistant Professor of Chinese. BA 1982, MA 1985, Fudan University; PhD 1999, Stanford University.

Zhang, Kunming, Instructor of Accounting. BS 1992, East China Normal University; MBA 1998, Ohio State University; PhD, University of Minnesota.

Zhao, Xiaojie, Assistant Professor, Communication. BA 1993, Shaanxi Teacher’s University; MA 1996, Beijing University; MA 2001, Indiana University; PhD 2005, University of Pennsylvania.

Zhdanov, Alexei, Assistant Professor, Management. MS 1996, St. Petersburg State Technical University; MBA 1997, Leti-Lovanium International School of Management; ABD, University of Rochester.

Zhong, Yutao, Assistant Professor, Computer Science. BS 1997, ME 2000, Nanjing University, China; MS 2002, PhD 2005, University of Rochester.

Zhou, Quiping (Pearl), Assistant Professor of Nursing. Diploma in Nursing 1980, Zong Hou Nursing College; MSN 1994, University of Alberta; PhD 2001, University of Maryland.

Zhou, Ying, Assistant Director, Institutional Assessment. BA 1996, Beijing Foreign Studies University; MEd, PhD 2003, Pennsylvania State University.

Zietsman, Lizette, Assistant Professor of Mathematical Sciences. BSc 1990, MSc 1992, PhD 2000, University of Pretoria.

Zimmerman, Emily, Lab Coordinator, Center for Social Science Research, Sociology and Anthropology. BA 1989, MS 1993, PhD 2001, City University of New York.

Zolnik, Edmund J., Assistant Professor, Geography. BS 1985, Fairfield University, MA 2000, PhD 2004, University of Connecticut.

Zoltek, Stanley M., Associate Professor of Mathematics, Department of Computational and Data Sciences. BS 1970, St. John’s University; MA 1973, PhD 1976, SUNY.

Certificate in Gerontology  CERG-GERO

The graduate certificate program in gerontology combines theoretical and applied course work in aging with the student’s graduate curriculum in one of several departments. Because gerontology is by definition multidisciplinary, students are required to take course work outside their major field. Two other academic units participate in the program: the Department of Psychology and the Department of Sociology and Anthropology. The program is administered by CHHS and supervised by a committee with representatives from the participating academic units.

Certificate Requirements
Applicants must have a bachelor’s degree in nursing or a related discipline. Application is made through CHHS. Completion of the certificate requires 18 graduate credits. To earn the certificate, students must complete all courses with a 3.00 GPA.

Credits

Required Core Courses.................................................6
GCH 637 Normal Aging and Health Deviations..............3
SOCI 686 Sociology of Aging ........................................3

Gerontological Electives..............................................3
Select at least one of the following:
NURS 505 Case Management .................................3
PSYC 592 Death, Dying, and Grieving ......................3

Other Electives..........................................................3
Select at least one of the following:
EDCD 525 Advanced Human Growth and Development ...3
EDCD 605 Introduction to Counseling Theory and Practice .........................................................3
EDCD 607 Advanced Counseling and Development ......3
GCH 580 Alternative Health Care Practices .................3
PHED 630 Exercise, Health, and Fitness Program
Development ...........................................................3
SOCI 651 Health Systems Delivery

Practicum Requirements.............................................6
GCH 770 Gerontology Practicum I .............................3
GCH 771 Gerontology Practicum II ............................3

Total ...........................................................................18 credits

The Volgenau School of Information Technology and Engineering

Graduate Certificate in  CERG-FRED
Foundations in Real Estate Development

The principal focus of the certificate is to provide a fundamental understanding of real estate concepts. The graduate certificate will educate the student in the following: leadership and management challenges in real estate development, fundamentals of construction management, and economic evolution and development concepts.

The Center for Real Estate Entrepreneurship, in conjunction with the Volgenau School of Information Technology and Engineering, the School of Public Policy, and the School of Management, offers this foundations in real estate development certificate. The certificate is offered in conjunction with the school’s master of science in civil engineering at Mason.

Admissions Requirements
Applicants must hold a baccalaureate degree from an accredited institution and have earned a GPA of 3.00 or higher. Admissions decisions are based on holistic consideration of the applicant’s work experience, letters of recommendation, and application materials.

Certificate Requirements
Students must complete five courses, with an average grade of B or better, for a total of 15 credits of graduate study.

Required Courses
REAL 500 Real Estate Development Fundamentals

Any four of the following courses listed below:
REAL 502 Real Estate Client Leadership and Project Management
CEIE 610 Development and Construction Systems Management
GSOM 740 Real Estate Analysis and Valuation
PUBP 781 Entrepreneurship and Economic Development
PUBP 785 Evolution of the Washington Metropolitan Economy

Continued
Graduate Certificate in CERG-SENV
Sustainability and the Environment

The principal focus of this advanced certificate is to provide a detailed understanding of evolving real estate concepts, particularly as relating to land development, sustainability, and the impact of evolving development on the environment. The five course series will give the student a detailed understanding of land analysis and valuation, engineering concepts related to land development, the impact of the environment on development, and the key concepts of sustainable development. The degree is offered in conjunction with the school’s master of science in civil engineering at Mason.

Admissions Requirements
Applicants must hold a baccalaureate degree from an accredited institution and have earned a GPA of 3.00 or higher. In addition, this civil engineering/real estate graduate certificate requires students to have a basic understanding of real estate development, significant experience in the real estate industry, and/or completion of REAL 500 Real Estate Development Fundamentals.

Certificate Requirements
Students must complete five courses, with an average grade of B or better, for a total of 15 credits of graduate study.

Required Courses
REAL 502 Real Estate Client Leadership and Project Management
CEIE 500 Land Development Engineering
CEIE 555 Introduction to Environmental Engineering
CEIE 501 Sustainable Development
CEIE 673 Leading Engineering Innovation

Students currently enrolled in degree programs at Mason who desire to earn this certificate should contact the Civil Engineering Department in Science and Technology II, Room 109, 703-993-1675.
